Dr. Pearson having spent the last six years in New York, Philadelphia, Baltimore, London, and Paris, is prepared to supply at short notice, and at reasonable prices, Artificial Teeth on the most approved methods, including Vulcanite Rubber Work, rendering the Extraction of roots wholly unnecessary.

DR. PEARSON'S NERVINE

Cures the severest Tooth-ache, and serves as a temporary filling—any one can apply it by observing the directions. Price $1, sent by express.

ALL DENTAL OPERATIONS will receive the personal attention of Dr. Pearson, as he has no partner, and INTENDS having none in future. His office has been established thirteen years—being one of the oldest, if not the oldest Dental Office in the State of California.

SEED, PLANTS, ETC.

CHOICE GRAPES!

B. Kamp,

of SAN JOSE, offers the following Choice kinds of Grapes:

Grape-Vines, Cuttings, and Plants,

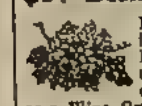
INCLUDING NINETY VARIETIES OF

NEW AND RARE KINDS!

For Wine---Rhine Grapes.

Black Gleffner, Kohlen Traube,
Johnisberger Riesling. Gray Gleffner,
Riesling Franken, Silvaner,
Traminer, Goodethel,
Rulander.

FOR THE TABLE:



Goodethel, Muscat Rose,
Black Hamburg, Muscat Alexandria,
Chasselas Musque, Golden Chasselas,
Charlesworth Tucay.

The above list embraces those that the Undersigned has proved. The WINE-GRAPES are the BEST OF THE RHINE, such as our Choice Rhine Wines are made from; and those for the Table are well known and approved. The Grapes will make Better Wine than our California Grapes, by a 100 per cent. Having cut down all my California Grapes, and instituted others, I know what I say to be true.

Orders for Rooted Vines or Cuttings at LOW PRICES, can be sent by Mail or left at the FARMER OFFICE, will be promptly attended to.

20-24-tf B. KAMP.

$5! Delaware Grape-Vines! $5!

PROPAGATED FROM VINES received in 1861, from Dr C. W. Grant, of Iona Island, near Peekskill, N. Y. One and two year-old Vines, from $1 00 to $2 00 each! The superiority of the Delaware as a Wine Grape, will doubtless induce unprincipled Dealers to flood the Market with a Spurious Article; and as mistakes sometimes UNINTENTIONALLY occur, which cause delay and trouble to the Purchaser—

☞ **WILL PAY IN GOLD COIN $5.**

(or the same amount in Lincoln, Lenoir, Union Village, Anna, or Diana Vines, at 50c each, or the IONA at $2 00 each) for each Vine purchased from me, for the DELAWARE, which proves untrue to name.

I have a few IONA VINES, one year old, propagated from a Vine presented to me from Dr. Grant, the Originator of the same, which, except upon the above conditions, I do not intend to offer in Market without his permission

Catawba Vines and Cuttings by the Hundred or Thousand, CHEAP!

Fine House and Garden in Sacramento City

A LARGE, SPACIOUS, AND GENTEEL House and other buildings, with fine Garden, all finely located in the upper part of the city, containing a full half block—will be sold a bargain and on liberal terms of payment if applied for soon. Real estate is rapidly improving in Sacramento, and this is a rare chance. Inquire of editor Farmer. 18

Literary Shrubbery.

PRAYER.

My soul was bowed in deepest gloom,
My cherished hopes had died;
And smiles no longer beamed, that once
Their light upon me shed;
My skies of life were overcast
With shadows dark and grey,
And friends I deemed sincere and true,
Had from me turned away.

I paced my room in bitter pain,
Till overcome by grief;
In hopelessness I bowed my head,
And sought in prayer relief;
And as the gentle dew descends
Upon the summer flower,
On the sweet wings of mercy, came
A balm with healing power.

I rose, no more with gloom oppressed,
Nor bowed with somber care;
For through the clouds the stars of Faith,
And Hope shone bright and fair,
O soul-felt prayer, how blest thou art,
How holy is thy power,
When o'er our hearts the somber shades
Of sorrow darkly lower!

"ARRAH, me darlint," cried James O'Flanagan to his loquacious sweetheart, who had given him no opportunity of answering her remarks during a two hours' ride behind the little bay nags in his oyster wagon, "are ye afther knowing why cheeks are like me ponies there?"

"Shure, and its they are red, is it?" quoth the blushing Bridget.

"Faith, and a better reason than that, mavourneen. Because there is one of them each side of a waggin' tongue!"

A midshipman asked a priest to tell him the difference between a priest and a jackass. The priest gave it up. "One wears a cross on his back, and the other on his breast," said the midshipman. "Now," said the priest, "tell me the difference between a midshipman and a jackass." The midshipman gave it up and asked what it was. The priest said he did not know of any.

Latour lost his leg at the battle of Leipsic. After he had suffered amputation with the greatest courage, he saw his servant crying, or pretending to cry, in the corner of the room. "None of your hypocritical tears, you idle dog," said his master, "you know you are glad, for now you will have only one boot to clean instead of two."

Greenbacks! Greenbacks!

We receive Greenbacks for subscriptions to the California Farmer, and allow the ruling premium on Gold!

It is a well known fact to all conversant with newspaper publishers, that since the war commenced the cost of publishing a paper has very greatly increased, so much so as to stop hundreds of papers, over the United States. Yet it has been our pride not to add cost to our *subscribers*, but to relieve them although we have made sacrifices of thousands to carry out our principles, and do what we esteemed our duty to uphold the credit of our country both by precept and example. From the first we announced that we would receive Treasury Notes at par for *Subscriptions to the Farmer*. But the notes were rejected, here, as currency and many of our subscribers have, in conformity with the custom, continued to pay us in gold; yet we have never refused greenbacks at their face value when sent us by subscribers, though it has subjected us to serious loss from our being obliged (from the rejection of the currency as mentioned), to pay gold in our disbursements. At the present cost of all articles, we could not do a paying business by receiving greenbacks at par, at our present rates. But to make the thing work equally for all our subscribers, as well as conform to what we think our duty, we propose to adopt the greenback basis, and raise our subscription price to $5 a year, payable in greenbacks.

As it is evident to us now that the people of California are determined to sustain the National Government and make Treasury Notes the medium of trade, generally, we announce as follows:

The price of subscription to the CALIFORNIA FARMER, hereafter, will be $5 a year, payable in U. S. Legal Tender notes; this being a safe and easy medium of transmission, by mail; and we will allow the ruling premium when gold is tendered in payment.

We also announce, to all who are indebted to us for *Subscriptions* to the CALIFORNIA FARMER, send along your *Greenbacks*. They will come to us with the glorious impress of our country's sovereignty, and every pecuniary sacrifice we may make we cheerfully lay upon the altar of that country whose faith stands pledged in these notes and whose integrity *we dare not question*.

We make this change in the terms of our subscription *not to advance the present cost* of our journal, but rather to make it cheaper to all, for at the *present nominal* value of the notes it will cost the subscriber but $3 25.

We do hope also that all to whom we have sent bills, all who are indebted to us, will now see how easy we make it for them to pay their dues. It must be remembered also that all who owe for this paper, a bill of six month's standing should, by the terms already heretofore announced, remit us $5, and g. b.'s to that amount will be very acceptable.

We shall now have the consciousness of having taken a true step to sustain the National Currency, and we shall know who will "go and do likewise."

We do hope that the friends of a good, sound National Currency will give us their aid and cooperate by sending us their names for the FARMER.

Ayer's Pills.

ARE YOU SICK, FEEBLE, AND COMPLAINING? Are you out of order with your system deranged and your feelings uncomfortable? These symptoms are often the prelude to serious illness. Some fit of sickness is creeping upon you, and should be averted by the timely use of the right remedy. Take Ayer's Pills, and cleanse out the disordered humors—purify the blood, and let the fluids move on unobstructed in health again. They stimulate the functions of the body into vigorous activity, purify the system from the obstructions which make disease. A cold settles somewhere in the body, and obstructs its natural functions. These, if not relieved, react upon themselves and the surrounding organs, producing general aggravation, suffering and disease. While in this condition, oppressed by the derangements, take Ayer's Pills, and see how directly they restore the natural action of the system, and with it the buoyant feeling of health again. What is true and so apparent in this trivial and common complaint is also true in many of the deep-seated and dangerous distempers. The same purgative effect expels them. Caused by similar obstructions and derangements of the natural functions of the body, they are rapidly and many of them surely cured by the same means. None who know the virtue of these Pills will neglect to employ them when suffering from the disorders they cure, such as Headache, Foul Stomach, Dysentery, Bilious Complaints, Indigestion, Derangement of the Liver, Costiveness or Constipation. As a Dinner Pill they are both agreeable and effectual.

Price 25 cents per box; or 5 boxes for $1.

Prepared by Dr. J. C. AYER & CO., Lowell, Mass

Price 25 cents per box. Five boxes for $1. Sold by Crane & Brigham, San Francisco; R. H. McDonald & Co., Sacramento, and all dealers in medicine. 6c4m

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] April 7.

Our market is less firm than last weeks' quotations. Supplies are more freely offered and buyers are less anxious. At present there is no demand, other than milling, for wheat. Shippers and *Speculators* having left the market the decline, although material, we think must soon be less. Our local demand is not sufficient to consume the offerings. If holders decide to sell, as they appear to be willing now to do, and continue to press the market, shippers' prices will soon be reached. In view of the bright and glorious prospects of the future crops (on account of which so much uneasiness was felt a short time since), and the positive information of a large surplus of the old crop on hand, have caused the croakers and timid to feel more easy, and in a measure dispel their anxiety and alarm. Feed and feed-grains are less active, prices having receded as will be noted by prices current, annexed.

Our exports are as follows: Per British Bark Torres, for Auckland, N. Z., 1640 sks Wheat; 650 sks Oats; 7360 qr-sks Flour; and 239 sks Bran.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 7283 sks, Barley 4335 sks, Oats 400 sks, Beans 422 sks, Potatoes 727 sks, Flour 2122 qr-sks, Bran 754 sks, Hay 1130 bales, Wool 73 bales, Corn 99 sks.

Also, Coastwise: Potatoes 3178 sks, Barley 1200 sks, Beans 604 sks, Wool 39 bales.

Those New Lamps.—Reader have you seen those new and beautiful lamps received by Stanford Brothers? To the student, the professional man, all who read, sew, or use a lamp, we say, by all means, go and provide a lamp, and the fluid that will not only be clear and brilliant but protect and preserve the eyes.

Prices at Pacific Fruit Market—Apr. 7.

Messrs. Addison Martin & Co. report to us the following prices as the ruling rates for fruit.

Apples 5@6c, A No. 1 8@10c ₱ lb. Dried Plums 15@20c ₱ lb Dried Peaches 10@15c ₱ lb Dried Nectarines 20@30c ₱ lb. California Dried Figs 30@50c ₱ lb. Strawberries 40@75c, good 75c@$1 00 ₱ lb. Raspberries $1 00@$1 50 ₱ lb. Lemons $7@$10 ₱ box, retail 50@75c ₱ doz. Oranges $2 50@$5 00 ₱ 100, retail 50@$1 00 ₱ doz. Chestnuts 30@40c ₱ lb. Black Walnuts 15@20c ₱ lb.

The Apples that arrived this week, per Sierra Nevada, and Pacific, sold for quite an advance over former lots: good to choice brought $2@$3 87, inferior $2 25@$2 80 ₱ box. Berries come in slowly this week.

TULARE TOBACCO.—The Visalia Delta says "Messrs. Williams & Lewis are now manufacturing in this place, a superior article of tobacco, of Tulare growth. They expect to manufacture this season, some fifteen thousand pounds at their factory, all of which they can dispose of at remunerating prices. Mr. Williams, last year, planted about ten acres of tobacco and forty acres of grain, with but little help, and will have about 7,000 pounds when manufactured from the ten acres. If our farmers will do likewise, we would hear less croaking about hard times and dry weather. Nearly every one has the means of irrigating a few acres. Why not plant tobacco, which pays better than any other crop?"

Triumph of Home Manufactures.—Some eight or ten years ago, a man of science from our "mother country," England, came to this city, and with his knowledge of chemistry experimented for sometime in the preparation of materials for burning fluid. At the first Mechanic's Fair held in this city, all will remember the brilliant "Benzole Light" of J. J. Hucks, Esq., and for years additional experiments were made, the result of which was new discoveries in another branch of business, that finally brought about successfully the famous Axle-grease, now known world-wide as the H & L Axle-grease, manufactured by Messrs Hucks & Lambert, Mission street, in this city, and which for excellence is not and cannot be equaled by any preparation ever yet made. The H & L Axle-grease is now the best in the world.

Photograph of Starr King.—Among the many that have been taken of this eminent man, none are more perfect likenesses, nor do we think any as perfect as those taken by Geo. H. Johnson, the Daguerrean artist on Clay street. Mr. Johnson's pictures have that artistic finish which makes good pictures, and infuses into them a life-like look that gives them the real value.

Two cases are noticed of teamsters going to sleep while in liquor, and sleeping the sleep that knows no waking, by freezing to death. They both occurred on the summit between here and Washoe.

The thirty-fourth Annual Conference of the Mormon Church convened April 6th in the tabernacle, in Salt Lake. The attendance at the anniversary is smaller than usual, on account of the bad condition of the roads.

☞ **Holloway's Pills and Ointment.—Atshma.** Though this disease has baffled the skill, and been pronounced by eminent medical men as irremediable, the numerous certificates daily received by Dr. Holloway, are a direct refutation to such ill-founded and fallacious conclusions. Coughs, colds, and asthma in all its ramifications of bronchial affections, diseases of the chest, throat, etc, have been cured in their worst stages by these expectorant and laxative remedies.

Sold by all Druggists, at 30c, 70c, and $1 10 per box or pot. 20

HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM, cor. Clay and Front streets, San Francisco, Cal.

☞ **There is no excuse** for those who drag their weary and disordered bodies into our company, when a few doses of AYER'S SARSAPARILLA would cleanse their murky blood and restore their health and vigor. Ye muddy victims of bilious disease, have some regard for your neighbors, if no for yourselves.

$2,500 Wanted on Real Estate.

THE SUM OF $2,500 is wanted on Real Estate in San Francisco County, upon land of undoubted title, worth double the amount. Address A. B C., Farmers Office.

Miller Wanted.

A good man can secure a good and permanent situation, and a very liberal salary. None need apply unless of education, pleasant address, and the most correct habits and character. For particulars address Editor Farmer. 7

English Steward, or Gardener.

A PERSON JUST ARRIVED FROM CANADA IS DESirous of securing a place as Steward or Superintendent of a Farm. The very best references can be given of his character and capability for the situations. Apply at the office of Editor of Farmer, or by letter 21-6

Situation Wanted as Superintendent of Farm.

A GENTLEMAN, every way qualified for the superintendence of a large Farm, who is now in the Eastern States, wishes a permanent situation. He is a man of family, and every way qualified for such a place. Any one wishing a No. 1 Superintendent, within a little time, can secure a valuable man for such a place by addressing the Editor of the Farmer.

For Sale!
A Fine Orchard and Garden.

A BEAUTIFUL ORCHARD AND GARDEN, FULL of Fruit Trees of rare kinds, a new Gothic Cottage House, with pleasant surroundings.

The place contains 150 acres of rich land, all in a high state of cultivation.

The estate is near Oakland, Contra Costa County, and is increasing in value every day. For particulars, inquire of the Editor of this journal. 8

A Fine, House, Orchard and Vineyard
NEAR SACRAMENTO—FOR SALE.

A FINE HOUSE AND OUTBUILDings, and 30 acres of Land in the highest state of cultivation, with good Orchard and Vineyard, in full bearing. The Gardens are fenced in the very best manner, and having new cisterns of water for garden, stock, and house. The Fruit from this place commands the very highest price.

The place will be sold on easy terms: a long time to pay the most of the money, and interest only 7 per cent per annum. A smart business manager can make the payments off the place every year. Inquire of Editor Farmer. 11

FOR SALE, TO LEASE, ETC.

A Fine Ranch
IN MENDOCINO COUNTY.

A FINE GRAIN AND STOCK RANCH of 800 acres under fence, in Mendocino County, will be offered at a bargain if applied for soon. Together with this is a Stock Ranch of some thousand acres of mountain land which goes with this Ranch, being Uncle Sam's land.

The Ranch is about 80 miles from Petaluma and on the great mill road to the Navarro, Albion, and Mendico & Noye's mills.

The location is pleasant, having the Redwood Hills for a back ground, with a fine valley tract—one hundred and sixty acres valley land, mostly under cultivation—yielding fine Barley, Oats, Wheat, Hay, Corn, etc. The crop of Hay is fine.

This Farm will sustain a herd of 300 Cattle, and is a grand Ranch for raising Stock, Horses Mules, or Hogs, and a good place to raise Poultry. There is an orchard of two acres of bearing Trees. Vegetables grow well.

There is on the place a fine two-story frame Building, in which was put 30,000 feet of lumber, also Granary, Smokehouse, and Barn. The vicinity to the Redwoods gives an opportunity to improve, as Lumber is cheap and Timber handy.

There are, at present, good Tools, Implements, Harvesters, Plows, etc, on the place; also some furniture. The House has been used as a Hotel and Store, and is also the Stage House. Hay, Grain, and Produce can always be sold at good prices.

There is also a herd of 100 head of Stock which will be sold at a bargain.

This is a rare chance, and worthy the attention of those who wish a good Home, a good Farm, and a profitable business. Prices reasonable. For particulars inquire of Editor Farmer. 21-1

A Fine Ranch in Contra Costa County.

A FINE RANCH IN THIS COUNTY IS NOW OFfered for sale at a Bargain, if applied for soon, as it will be sold at a price worthy special attention.

The Farm contains 208 acres; 70 acres of this are fenced—the balance is well and heavy timbered. This Farm will cut 2000 cords of wood, enough to pay for the Ranch.

It is an excellent Hay and Grain Ranch and the products sell well and at good prices on the spot, this being the head of navigation and near market: 8 miles from Martinez and 4 1-2 miles from Pacheco.

The Title is good and possession given immediately. The Buildings are common, but the Land is No 1. For Price and Terms inquire of the Editor of this paper who will give all particulars.

Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOma County, lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P Swift, Esq., containing fourteen thousand acres of land, is offered for sale in Lots or Farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality. It is accessible to market, being adjacent both to the Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State.

No better opportunity, it is believed, will ever be offered for the purchase of desirable farms at a low price and upon easy terms.

There is a very large amount of fencing on the tract, the entire body of land being enclosed.

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point.

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

The Sonoma Embarcadero is at one side, thus furnishing a convenient access to the San Francisco market at all seasons.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the office of Haight & Pierson, 622 Clay street, San Francisco, or at the store of Mr. Paole, Sonoma. WILLIAM BIHLER. 8

Fine Farms for Sale.

YOU WHO WANT GOOD FARMS CAN SECURE them by applying to the Editor of the Farmer. The following can now be had:

FOUR VERY FINE FARMS in the splendid San Joaquin District, within a few miles of Stockton, all very productive.

ONE FARM about 20 miles from Stockton—valuable.

ONE FARM capable of great improvement and valuable, in Contra Costa County, near Pacheco.

A GOOD RANCH in Santa Cruz County—a good bargain.

A FINE FARM AND VINEYARD in the region of Mt. Diablo—can be made valuable.

Several STOCK RANCHES in various parts of the State, from $1,500 to $25,000; in all these, good and permanent settlers can find bargains. Address by letter, or in person, for particulars to Col. Warren, Editor of the Farmer.

PATENT RIGHTS FOR SALE.

THE FOLLOWING PATENT RIGHTS OF NEW AND valuable inventions (of which we have models to show their value) are now offered for the States of California and Oregon, and Utah and Washington Territories.

NO. 1. THE MECHANIC'S SPIRIT LEVEL.

Patented September 13, 1859.

This Implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet out. Builders will do well to examine the model.

NO. 2. IMPROVED CLOTHES REEL AND BAR.

Patented January, 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery, or Chamber, and can be made plain or ornamental, standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines, neat when used and ornamental when not in use.

NO. 3. A CORN CULTIVATOR.

With this implement the soil is first thoroughly plowed and deeply pulverized, and on the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

NO. 4. A MUSKETO BAR.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be afforded very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

NO. 5. HYDE'S PATENT POST-DRIVER.

A most excellent labor and money-saving machine, for which we offer rights.

NO. 6. SEED-SOWER.

This is a new invention, and one of great importance to all who sow grain, or any garden seeds. The working model can be seen at the Farmer's Reading-room.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

COL. WARREN, Editor Farmer.

SEED, PLANTS, ETC.

FRESH SEEDS.

IMPORTED FROM THE MOST RELIABLE Seedsmen in the Eastern States and from Europe. For sale by

J. H. WRIGHT & CO.
16 Marysville

THREE PREMIUMS for BEST Varieties FOREIGN GRAPES.

150,000 Grape-Roots

From imported Foreign, and American Vines, of my own importation, FRUIT TREES, Etc., Etc.

Having imported myself from France, Germany, Italy, and Dr. Grant of N. Y., I offer for sale this season, as choice a lot of FOREIGN GRAPE-ROOTS and CUTTINGS as can be had in this State, and as cheap as any reliable nurseryman will sell. All the Vines and Trees have borne fruit with me, and I guarantee everything I sell to be TRUE TO NAME, or refund the money.

AMERICAN VARIETIES GRAPE-ROOTS, 1 and 2 years old, and Cuttings:

Delaware, Diana, Concord, Iona, Union Village, Lincoln, Anna (white), Catawba, Isabella, etc.

EUROPEAN VARIETIES GRAPE ROOTS, 1 and 2 years old, and countless numbers of Cuttings:

True black, red, and white Burgundy (Pineaux), Traminer, Rulander, Madeira Winegrape, Riesling, white, red, and black Frontignan, Malaga, Parsley, Cannon-Hall and White Muscat of Alexandria, and over 100 varieties more.

ALSO—10,000 rooted vines 2 and 3 years old, LOS ANGELES, very cheap, and any amount of Cuttings of all varieties.

Also a limited lot of
DOWNING'S EVER-BEARING MULBERRY TREES
1 year from bud, extra large;
French, German, and Swiss Prunes (Fellenberg's Zwetsche).

....ALSO....

Pear, Apple, Plum, Peach, etc; Lawton Blackberries, English Gooseberries, and all kinds of Trees, and Shrubs. Cions unlimited, and cheap, of the above.

I intend to close out the Nursery Business, and sell as low as the lowest. For prices or orders, send per Wells, Fargo & Co, or mail, to

Louis E. Miller's
Mountain Vineyard,
"SOLLAH,"
Rattlesnake Bar Postoffice, Placer Co
January 1, 1864. 20-20

1864. - - 1864.
American Seed Store
206 J STREET,
Sacramento.

I AM CONSTANTLY RECEIVING BY Isthmus Express from the best Eastern Seed Growers—

A LARGE AND SPLENDID COLLECTION OF

GARDEN,
FLOWER,
FRUIT,
TREE,
SHRUB, and
Agricultural Seeds,

I can confidently assert, that I have as large and fine a selection of SEEDS as have ever been imported into this State, and of the growth of 1863.

My assortment of GRASS and CLOVER SEEDS is large, consisting of—

White and Red Clover; Kentucky Blue Grass;
Alfalfa or Chile Clover; Orchard Grass;
Sainfoin Grass; Red-top Grass;
Lucerne; Hungarian Grass;
Rye Grass;
And other varieties for Lawns, &c, &c.

ALSO—Every variety of
Tobacco seed, Cotton seed, Madder seed, Opium seed.

I have also just received from Europe a splendid collection of BULBOUS ROOTS, such as

HYACINTHS, TULIPS, LILIES, CROCUS, NARCISUS, JONQUILS, GLADIOLUS, IRIS, IXIAS, BULBOCODIUMS, &c, &c, &c.

☞ Dealers furnished in Packages suitable for their trade, at the LOWEST RATES.

Gardeners and Ranchmen can be assured their orders will be filled at lowest prices. Catalogues of all our Seeds, etc, on application at store or by mail, or can be had at Farmer Office, San Francisco.

W. R. STRONG,
15-tapl 206 J street, Sacramento.

New Native Apples.

WE INVITE THE ATTENTION OF PLANTERS of California to our collection of

NEW
Native Apples,

Of which we have a remarkably fine and thrifty stock, embracing a large variety obtained from all parts of the South and West. It undoubtedly contains many varieties which will prove eminently suited to the soil and climate of California. Catalogues can be obtained at the office of the California Farmer.

☞ PACKING done in the best manner and shipments from New York, Philadelphia, or Baltimore.

EDWD. J. EVANS & CO,
6 YORK, Pennsylvania.

GOD MADE MAN, AND MAN MADE MONEY
God made Bees, and Bees made Honey;
Man and Money, and Honey and Bees,
There are spurious kinds of all these.
But if you want pure California Honey,
Come to Washington Market with your Money,
In all shapes you'll get it if you call,
At HOWARD & KNELLER'S HONEY STALL.
'Tis said, some folks their Honey mix,
But it is always pure at 76,
Now when your friends to market you bring,
Be sure and come to the Eastern Wing.

SAN FRANCISCO AND SAN JOSE RAILROAD.

Two Trains Daily, Each Way
CHANGE OF TIME.

ON AND AFTER FEBRUARY 15, 1864, the San Francisco and San Jose Railroad Company will run trains each way, daily, leaving the Depot on Branan street, between Third and Fourth, for San Jose and intermediate stations, as follows:

Leave San Francisco at 8 a. m., and 4 p. m.
Leave San Mateo at 8:55 a. m. and 4:55 p. m.
Leave Redwood City at 9:20 a. m. and 5:20 p. m.
Leave Santa Clara at 10:10 a. m. and 6:10 p. m.
Arriving at San Jose at 10:20 a. m. and 6:20 p. m.

RETURNING.

Leave San Jose at 7:30 a. m. and 3:30 p. m.
Leave Santa Clara at 7:40 a. m. and 3:40 p. m.
Leave Redwood City at 8:30 a. m. and 4:30 p. m.
Leave San Mateo at 8:55 a. m. and 4:55 p. m.
Arrive at San Francisco at 9:50 a. m. and 5:50 p. m.

FREIGHT.

Our road being completed from the City of San Francisco to the City of San Jose, we are prepared to take Freight from either end of the line, or to and from any Station on the Road, at the lowest rates.

COMMUTATION TICKETS.

Parties wishing to commute between here and San Jose or between Stations, can procure tickets at greatly reduced rates, by applying to any Station Agent, or at the office of the Company.

☞ Passengers can reach the Depot by either the Third or Fourth street lines of city cars.

A. H. HOUSTON,
21 3-3m General Superintendent

No Opposition until April 23d.

THE PEOPLE'S

☞ All letters on business connected with the office should be addressed to PUBLISHER CALIFORNIA FARMER, San Francisco, Cal.

Perpetual Motion.

PETALUMA, April 11th, 1864.

EDITOR CALIFORNIA FARMER:

Knowing you to be a natural, educational, and a practically scientific man, I take the liberty of asking you a few questions through the columns of your paper. Being in company with two or three gentlemen, quite recently, we got interested in a conversation upon the subject of "Perpetual Motion." Now, what I want to know is, what is "perpetual motion?" Is the blood coursing through the veins and arteries of an animal, the onward flow of a river to the ocean, the solar or planetary system—are they to be considered as a "perpetual motion?"—if so, then would a machine, if one could be so constructed, that when the last wheel, or the last spring or lever, or the last mechanical stroke be applied, should of itself revolve or be put in motion, and so continue until that machine is worn out—would that be termed by scientific men, "perpetual motion?"—if so, then will you tell me of the advantages, or some of the advantages, such a machine would be to the world, practically or scientifically? And again, like the man that bought the elephant and did not know what to do with him, supposing such a discovery could be brought about, what would be the proper course to pursue in order to secure the inventor the proper honors or rewards of such an invention, or in other words, how would a poor man with a rough model, procure a finished and elegant one without endangering his right? Upon such an important discovery, it would be dangerous to exhibit the draft or rough model, to show it to a rich man for the sake of getting money to procure a good model, or to a skillful mechanic would be attended with risk. Under those circumstances, will you explain through the columns of your paper, the proper or best course to pursue in order to secure with safety the full right to the discoverer, and oblige yours. "INDEX."

We give room to the inquiries of "Index," and lay them before our readers with the hope that others may reply to the writer—this we should prefer.

Perpetual Motion has been a theme for inventors and writers ever since Noah came out of the Ark, and it has been said by a sarcastic writer that the nearest approach to Perpetual Motion ever yet attained, was a Woman's tongue. What a wicked wretch!

It is however conceded that could such a thing as Perpetual Motion ever be found, the world of course would be immediately changed in all its forces; it would be applied to all machinery, all our manufactories, steamers, railway cars, carriages, etc. Coal, gas, horses, cattle, etc, would be useless as a motive power, for this *new power* would be applied.

The word *perpetual* as applied to motion or power, implies *ceaseless, eternal*. We ask "Index" if it is *possible* to construct any kind of machinery of material substances that could be perpetual? Wood, iron, steel, gold, silver, or copper, are all destructible either by decay in their own nature, or they must change in form, size, and substance, by the wear, tear, and friction, and thus in time they would cease their *regular* motion—cease to be *perpetual*.

We have never believed the fantasy of Perpetual Motion. The blood coursing in our veins, the flowing of our rivers, nor the Planetary system are Perpetual Motion—they all *change;* according to the health of the body the blood flows—according to the seasons or tides the rivers run—according to nature the planets in their courses move. These are the nearest approach to the phenomena of Perpetual Motion.

There may be inventions of great merit to advance motion and gain almost endless power. In case of valuable discoveries, ways can be devised to remedy the difficulty spoken of. Contracts for money and aid to advance such enterprises can always be made—this is the better way.

We hope some genius may respond fully to the queries of "Index."

A NEW BANK FOR CALIFORNIA.—English capital is soon to be sent to us by the millions. The capital is limited to $10,000,000. The names of the nobility, and the various bankers and capitalists of Europe are connected with it. Thus capital floods to our metropolitan city.

The Value of the Sewing Machine in our Country.

We do not believe the value of the "Sewing Machine" can be estimated, in all its bearings, as a *labor-saving* machine; and although its praises have been heralded far and wide, yet the half has not been told. To the real comforts of the "Family Circle," it has added very largely, giving release from hard, wearisome soul and body-destroying labor, and thereby giving opportunity for rest, recreation, and improvement of the mind, and more time for the real enjoyment of social life. To those who were dependent on the needle for bread, to hundreds of thousands of poor women, it has given them a new lease of life, and rescued them from degrading misery, and by this means it has saved tens of thousands of God's unfortunates from the alms-house, and an early grave. We give the following important data, which we have collected, and which has been obtained at the East, any elsewhere.

A Day in the Sewing-Machine Manufactory.

It is a wonder always to see what has been and can be done by ingenious mechanics. We do not know where ingenuity has been more developed than in the Wheeler & Wilson machine shops at Bridgeport.

We cannot describe all the curious processes by which a hundred or more machines are finished every day, but we will try to give some general idea of the wonderful art, skill, power, and appliance of machinery that go to the making of a sewing machine.

The least costly, though heaviest part of the machine, is cast iron. For instance, the legs, the treadle, the fly-wheel, the bed-plate, and several minor parts.

Let us suppose a load of pig-iron placed upon a cart at the Lehigh, Pa., mines, and run directly into the works, which are connected by a side track with the New York and New Haven Railroad, and from that into the furnace, thence into the moulds which cover the floor of one immense room, and which employ a score of men.

From the foundry the castings are taken upon small railways to the first floor of the finishing shop which is a three-story building, 36 feet wide and 550 feet long, with lines of shafting from end to end of each floor, which drive two or three tiers of machines upon the center of the floor, and lines along each well-lighted side. It is a glorious sight to look through all these windows from the cars which pass along the front, when all are ablaze with burning gas, which is made up on the spot, to supply the 600 burners required by the workmen.

Wonderful Accuracy of these Machines.

We may here state that one of the secrets of the superiority of the Wheeler & Wilson machines over all others is found in the fact of their superior manufacture, in point of absolute *accuracy*. It is this that renders them more simple and easy to operate than any others, and that makes them so durable that they will bear usage for almost a life-time without needing to be repaired. In order to insure this perfect accuracy in their manufactory, each workman is provided with a hardened steel gauge for the particular work at which he is employed, the standard of which is kept in the iron safe in the superintendent's office. Then, as most of the men work by the piece, each day's work of a finisher is carried to the inspection-room, and if all passes inspection, the workman is credited, so that they earn from $3 to $5 a day.

From the inspector's room the parts are taken, as required, to the plating, gilding, japanning, and ornamenting rooms, and to the workmen who put the machines together, all of which, after being carefully adjusted, are thoroughly proved, but are never ready for sale until they have passed a final inspection by a man who sees that each one works perfectly, no matter whether a high or low-cost one, and that each has its quota of needles and bobbins and tools. When packed for shipment, the cases are lowered from the inspection room and placed directly upon the cars of the New York and New Haven railroads.

The Wood-Work for Cases, Etc.

This branch of the establishment is very extensive, occupying hundreds of workmen. In making tables, all are formed of layers of wood crossing the course of grain, five layers deep, firmly glued and pressed together, so they can neither split nor warp.

The cases—some of which are very rich rosewood or other costly material—are made in the same way. We counted some of the sides of the cases in course of construction of ten thicknesses.

Then there is a vast quantity of lumber made into packing-boxes, in which machines are shipped to almost all parts of the civilized world.

The same skill is exercised in the wood department, that we find in the iron, by substituting machinery for manual labor, so that one man, on the average, does as much as ten men could without machinery, and by this means places it out of the power of individuals to compete in the manufacture of machines, if there were no patents to interfere.

Saving of money and labor in the use of Sewing Machines—Valuable Statistics for future reference.

The following calculation only approximates the saving of time, which is money, by the use of Sewing Machines. The writer gives a fair calculation upon only four articles for which the machine is used, yet look at the sum total! Look, too, at the time saved in every family, and think of the aggregate!

If we calculate the annual average profit arising from the use of sewing machines at $25 each—which is a very reasonable sum, considering how many of them are in daily use—it would give $955,125 for those manufactured in the year 1861 under Howe's patent, to say nothing of all previously made or those under other patents.

We give the following items as a trustworthy calculation of saving:

The importance of the sewing machine to the manufacturing interests of the United States is estimated at $342,000,000 annually. The annual saving by the machine is estimated, on

Men's and Boys' Clothing in New York city alone	$7,500 000
Hats and Caps	162, 00
Shirts and Bosoms	372,750
Boots and Shoes, in Massachusetts	7,500 000

It has revolutionized thirty-seven distinct departments of manufactures, and in no branch of sewing can it be dispensed with where time and health are regarded.

In Troy, New York, where the first practical trial of the WHEELER & WILSON Sewing Machine was made in 1853, for shirt work, about 3000 are now used, and in the shirt manufactory of Messrs. Winchester & Davies, where the second trial was made, 400 are now used. The number of shirts manufactured at this establishment is about 10,000 per week. A machine with an attendant will do the work of six hands, and the estimated saving annually, by using the machine, is $240,000. The shirts are improved in quality, and very many who could not do even passable work by hand, become prime workers on the machine. Indeed, less talent is required for a machine operator than for hand sewing.

The number of shirt bosoms manufactured in the city of Philadelphia is estimated at 36,000 per day, or upwards of 10,000,000 annually, forming seams long enough to extend around the globe. An operator with a machine can stitch 100 to 150 per day, or, if the machine be run by power, twice that number; while by hand, six bosoms would be a day's work.

The manufacture of skirts and mantillas are branches of business that owe their development almost entirely to the sewing machine. Fashion and taste demand frequent changes, and by hand process of manufacture but a small portion of the required number could be made before the style would be changed. By the sewing machine the facilities of production are equal to the emergencies. The millions of garments are furnished as required, and the whole nation clothed according to the prevailing fashion.

One house in New York makes 200,000 mantillas per annum. The eight yards of seams, and twelve of binding, in making one, are done in half an hour far more tastefully than by hand.

The manufacture of white work and infant's clothing have become specialties. A flourishing dry-goods house in New York have organized an extensive sewing department, in connection with their store, employing fourteen sewing machines, and 100 sewers, cutters, and fitters. Purchasers select the material, their measure is taken, and the articles are sent home ready for wear, greatly to the accommodation of the customers and profit to the merchants. This idea is worthy of being adopted in San Francisco, and will no doubt soon be improved upon.

P. S.—Since writing the above paragraph, we learn that the Wheeler & Wilson Agency, at No. 704 Chestnut street, Philadelphia, have just refitted their elegant second-story room, where they will keep a full assortment of ladies' and childrens' ready-made clothing, of the latest style and finish.

The sewing machine is second in importance to no other mechanical agent of human power, and it is no experiment; it is an acknowledged fact. It is not only a necessity to all manufacturers where stitches are used, but it is a family necessity, one that no family can afford to do without.

What the Wheeler & Wilson Machines are Celebrated for.

1. Beauty and elegance of stitch alike upon both sides of the fabric sewed.
2. Strength, firmness, and durability of seam, that will not rip nor ravel, and made with—
3. Economy of thread.
4. Its attachments and wide range of application to purposes and materials.
5 Compactness and elegance of model and finish.
6. Simplicity and thoroughness of construction.
7. Speed, ease of operation and management, and quietness of movement.

The *American Institute, New York*, reports:

"That the Wheeler & Wilson Machine makes the 'Lock Stitch,' and ranks highest on account of the elasticity, permanence, beauty, and general desirableness of the stitching when done, and the wide range of its application."

This report was in accordance with the previous repeated awards at the Fairs of the United States, and other Agricultural Societies.

It is a splendid and well deserved compliment to the Wheeler & Wilson Machine, that wherever it has been exhibited in competition with others, it has taken the

Highest Premiums.

The highest premiums were awarded to Wheeler & Wilson at the International Exhibition, London, 1862; Industrial Exposition, Paris, in 1861, and at the Fairs of the United States Agricultural Society, and the recent American Institute, New York; Mechanics' Association, Boston; Franklin Institute, Philadelphia; Metropolitan Mechanics' Institute, Washington; Maryland Institute, Baltimore; Mechanics' Association, Cincinnati; Kentucky Institute, Louisville; Mechanical Association, St. Louis; Mechanics' Institute, San Francisco. Also, at the State Fairs of Maine, Vermont, Connecticut, New York, New Jersey, Pennsylvania, Virginia, Mississippi, Missouri, Ohio, Indiana, Iowa, Tennessee, Illinois, Kentucky, Michigan, Wisconsin, California, besides hundreds of County Fairs.

The Famous "Lock Stitch."

The "lock stitch" made by Wheeler & Wilson Machine is formed with two threads, one upon each surface of the fabric sewed and interlocked with each other in the center of it. It forms an *elastic* seam that cannot be raveled, and presents the same appearance upon each surface. Its excellence is no longer problematical. It is as firm and elastic as the fabric sewed, and is not affected by the action of the smoothing-iron or any other wearing surface. It will last as long as the article itself. The sales every year of this celebrated family Sewing Machine are larger than those of *all* the other various sewing machines combined. This fact alone is a proof of its superior merit.

One feature in the use of the Wheeler & Wilson Sewing Machine, resulting from the wide range of its application, is the varying branches of business to which it is applied. Thus, these machines may be employed in making skirts or mantillas, or diamond ruffling, or shirts, or stitching hats and caps, etc. They are not limited to one branch of manufacture, but, so long as sewing is to be done, these machines are sure of something to do, being adapted to every variety of sewing for family wear, from the lightest muslins to the heaviest cloths. They work equally well upon silk, linen, woolen and cotton goods—seaming, quilting, gathering, hemming, felling, cording, and braiding—making a beautiful and perfect stitch alike on both sides, and performing every species of sewing, except making button-holes and stitching on buttons.

Number of Stitches made per Minute.

	By Hand.	With Machine.	Ratio.
Stitching fine Linen	23	640	28
Stitching Satin	24	520	22
Stitching Silk	30	550	18
Seaming fine Cloth	38	594	16
Patent Leather, fine stitching	7	175	25
Fitting Ladies, Gaiters	28	510	18
Stitching Shoe Vamps	10	210	21
Binding Hats	33	374	11

When the machines are driven by power, the ratio is much higher—1500 and 2000 stitches per minute not being an unusual average.

Seams of a considerable length are ordinarily sewed with the best machines, at the rate of a yard a minute, and that, too, in a manner far superior to hand-sewing.

Garments are now made entirely by it, with the exception of sewing on buttons. Laces are stitched on; folds, tucks, gaiters, and plaits, are laid and stitched; cord run in, binding put on, quilting done after elaborate and beautiful designs.

The variety of work done with it is almost inconceivable. It sews leather or cloth, from the stoutest woolen down to the finest cambric, turning the most delicate hem of a lady's handkerchief without any assistance or attention from the operator. It will stitch up and sew in the sleeves of a gentleman's coat, and, one form of it was invented to work button-holes.

We also find that by a recent attachment to the WHEELER & WILSON machine seams can be corded, or ornamental embroidery by cording can be put on with great rapidity.

Who Buys and Uses these Machines.

It is estimated that there are now in use in the city of New York and vicinity not less than 25,000 Wheeler & Wilson Sewing Machines, and there, where they are best known, is where they still sell best. In Philadelphia there are upwards of 5,000 of these celebrated machines in use, and the sales are greatly on the increase.

Instead of injuring the trade of the seamstress, it has proved to her a blessing. It is used in such a variety of ways, and so cheapened clothing that it has created demand, and given more employment to sewing-women, and improved their health and comfort.

A rent collector tells us that he never fears to trust a woman who owns one of these machines.

We sincerely hope that the time will soon come when every family in this city and throughout the land will rejoice in the possession of a Wheeler & Wilson Sewing Machine, and that the annual product of their great manufactory, at Bridgeport, instead of being a hundred and fifty thousand, will be a half million machines, as they could be still further reduced in price, in order to place them within reach of those in the humblest circumstances.

The Men who make Sewing Machines.

There is a study in the men as well as the machines. If these are specimens of "Northern mudsills," the superstructure of society never can be shaken down. Here is a man, with his shirt sleeves rolled up and his arms begrimed with oil and iron, who was the representative of the town last year in the State Legislature, and who worthily filled the station.

Here is another who, we suppose, is worth $75,000. And here are scores of them who own these neat, handsome dwellings scattered around East Bridgeport, who live in comfort and independence.

Do you believe they are men of intelligence? Look at them. Watch them as they issue in a stream from the workshops on the way to dinner. There is not a stolid face among the entire number.

The "Name" of the Wheeler & Wilson Machine.

The name is accidental. A. B. Wilson was an inventor. Nathaniel Wheeler was a manufacturer, and circumstances brought them together, and their joint productions were called the "Wheeler & Wilson Machines." In 1852 they turned out from a small shop at Watertown, Conn., eight or ten machines per week, mostly hand-made, and coarse compared to those made for less than half the cost in 1862. The number of machines made in succeeding years show an unparalleled increase until now the number manufactured annually, we believe, exceeds fifty thousand machines. It is a remarkable fact that, notwithstanding the loss of the boasted Southern trade, their manufacture and sales last year were vastly larger than they had ever been before.

We feel confident that all who are interested in the Sewing Machines, after having perused the above facts, if they will but call at the Exhibition Rooms, corner of Sacramento and Montgomery streets, in this city, the agent, J. H. Hayden, Esq., will satisfy them of the superiority of their machines over all others. Ladies who desire information and instruction, will always find at these rooms ladies accomplished in the art of teaching, ready to instruct them. This agency has always been fortunate in having most capable and courteous attendents, those who made themselves popular with the people by their affability and kindness. The past agents, H. C. Hayden, Esq., and W. R. Wadsworth, Esq., will long be remembered by their many friends, and the present gentlemanly agent, J. H. Hayden, Esq., has secured for this establishment a popularity that commands success.

It is the great and mighty change that is made by their *labor-saving machines* that demands of the press their aid to herald far and wide their intrinsic value.

The Yokohama Squash.

It will be recollected that Mr. Thomas Hogg of New York visited Japan, two years ago, on a botanical tour, and since his arrival there he has sent home a variety of seeds to his brother, among them were seeds of a squash. These were planted by Mr. Hogg, and very carefully cultivated, away from all other varieties. The vines made a strong and vigorous growth, running rapidly, and rooting at the joints. They blossomed abundantly, and ripened a large crop of fine squashes, which proved to be entirely unlike anything we possessed, and so strongly marked as to leave no doubt of its being a new variety. Its appearance is represented as round, corrugated on the rim, flat and dished at the stem, like the scallop squash. Size, medium, about 8 inches in diameter, and 4 inches deep, weighing from 6 to 8 pounds; stem long, woody, and angled like that of a pumpkin; surface strongly ribbed; skin warty, and of a dark green color, which often turns more or less to a dull orange; cavity for the seeds, small, and placed near the blossom end, about the size of the Summer Crookneck squash; flesh very fine grained, sweet, sufficiently dry, and well-flavored. It keeps well.

Such is the general description of this new variety. Those who have tried it pronounce it of superior quality. Its fine growth, early maturity and productiveness, give it a claim to our attention, and it seems likely to become a favorite and profitable variety.

Mr. James Hogg states that the Yokohama keeps until February, and he has little doubt it will keep till March. It becomes quite dry by keeping, nearly as much so as the Hubbard. It is excellent for cooking when not larger than an ordinary Bush squash, thus affording a continual supply from July to March. Mr. Hogg calls it the Yokohama (Japan), the place where his brother resides, and from whence he forwarded the seeds.

TULE GRASSES.—We have received a bunch of clover and native grasses from the tule lands on Bouldin Island, mouth of the Mokelumne river. The clover is 1½ feet high, while the native grass in 1 7-12 feet high; but eventually the clover reaches a hight of three feet, entirely hiding the natural grass. The specimens received are from the ranch of Messrs. Smith & Sargent. The island contains some 7,000 acres, and is owned by different parties. The tule lands, generally, produce the same grasses with this island. Heretofore an error has been committed in the cutting of hay on these lands. It has been usual to cut it so late in the season that the clover had become ripe and had dropped down, leaving none but the native grass standing to be cut. This clover as it lies, however, affords superior pasturage for cattle.—[Bencon.

DROUGHT.

BY WILSON FLAGG.

In every climate, it will be found that the indigenous plants and animals are adapted to the circumstances to which they are liable to be periodically exposed. Between the tropics, where the year is divided into two seasons, the wet and the dry, both the plants and the animals are organized in such a manner as to meet these emergencies with impunity; and so inured do they become to these alternate extremes as to suffer more or less when they are secured from them. The leaves of the trees are tough and coriaceous, and have a glossy surface that prevents the rapid evaporation of their moisture, and reflects the fervid rays of the sun, without absorbing too great a portion of its heat. The same smooth and polished surface secures them from excessive moisture in the wet season. Nature has thus provided a single expedient to serve a double purpose.

Similar adjustments, with regard to fruits as well as foliage, protect them in tropical climes from extremes of heat, dryness and moisture. While those of northern latitudes are invested with a mere film, like the cherry, the raspberry, and the apple; the southern fruits have a rind like that of the lemon and orange, or are inclosed in a case like the banana. The fruit is thereby enabled to resist the extremes of the climate, and will not suffer decay so rapidly as the northern fruits, which are destined, by the regular course of the seasons, to be destroyed by frost, before many weeks. Another provision for the protection of tropical fruits and foliage, is the essence contained in their outer case, rind or covering. This aroma, being far more volatile than water, evaporates rapidly from the surface, and keeps the fruit and the substance of the leaf constantly cool, even when exposed to the direct rays of the sun, in a hot and dry atmosphere, without exhausting their juices. The pulp is thus preserved in a moist state, until the seed is fully ripened; and the foliage is kept moist until it has performed its destined functions, by the free evaporation of its volatile essence. Probably by the operation of some chemical principle, the water, which is used up in the elaboration of this essence, is small compared with what would be consumed with the cooling process carried on by the direct evaporation of water from the surface of the leaves and fruit.

In northern climes, the plants are organized with reference likewise to two opposite seasons, not of moisture and drought, but of heat and cold. Summer and winter they have, instead of a wet and a dry season. Hence, for the most part, the trees are furnished with a deciduous foliage, and the herbaceous plants with leaves and stalks, that die down to the surface of the soil, and continue their existence by means of their roots. Some of these roots suffer their period of rest chiefly in the latter part of summer and autumn, and vegetate in winter below the action of frost, and produce their flowers in early spring. Such are the hyacinth, the crocus, and the snow-drop, and many other bulbous-rooted plants, whose bulbs remain so deeply buried in the soil as to allow their fibrous roots to push downwards below the frozen earth, and to be in readiness to sustain the wants of the plant at the very earliest thawing of the earth. The future plant being preserved in an embryo state in the bulb, is able to endure with impunity any amount of heat or drought to which it is liable to be exposed.

But nature has not protected the plants of the temperate zone against the effects of drought, which in the usual course of things, as instituted by nature, would be of very unfrequent occurrence in these latitudes. In all temperate regions, where the hand of man has not interposed and created an artificial state of things, nature has provided a constant and equal supply of rain and moisture for the wants of the indigenous plants. This is evident from the structure of their foliage, which is not protected against the deleterious influence of long-continued frequent droughts. The land is covered to a certain extent with wood and shrubbery; and the climate, under these circumstances, is affected with that proportion of heat, dryness, cold and moisture, which is suitable to the wants and habits of vegetation. If all men who cut down forests had correctly understood meteorology, and had governed all their operations by the principles of this science, studying the effects of the different modes of clearing and planting upon the climate, and acting in conformity with this experience, many a region of country, once fertile and now a desert waste, would have retained its ancient fertility and beauty.

I have often been surprised at the zeal which our legislative bodies have always manifested in encouraging the best modes of tilling and planting the soil, while they looked with perfect unconcern upon operations extensively going on, which, if not checked, must, before a great lapse of time, render half the country a desert. Among other subjects of investigation which have been proposed by our legislatures, why has it not occurred to them to institute inquiries respecting the general causes of humidity and drought, the sources of rain, and the laws that influence not only the quantity but frequency of showers? Such investigations, made by committees of scientific men, would lead to many important discoveries, even if they did not prove the correctness of our present views. In order to promote the interests of agriculture, we must study the sources of heat, moisture and fertility, and take heed not to infringe upon any of the conditions on which these sources depend.

Most people comprehend the value of trees for timber and fuel, and their advantages for shade and ornament: but their agency in promoting the fertility of the soil the humidity of the atmosphere, the fullness of the streams and wells, and the salubrity of the climate is more imperfectly understood. But according as we investigate the subject, we shall be convinced that a certain proportion of forest in every country is necessary to preserve that regular supply of moisture which is essentially necessary to render it available for agricultural purposes,—still, if the country be deprived of its wood beyond a certain limit it will become subject to pernicious droughts, its rivers and springs will be dried up, and the land rendered waste and unprofitable.

All scientific observers acknowledge that trees in full foliage condense moisture from the vapors of the atmosphere, and conduct it to the earth; that these vapors would remain for an indefinite time suspended in the atmosphere, until they met some such condensing agents, and that in proportion to the quantity of forest will be the amount of moisture thus arrested in its progress and carried down to water the surface of the soil. Not only the foliage, but the branches of trees, after their leaves have fallen, have the same attraction for moisture of the air, as may be proved, whenever there is a fog, by the wetness of the ground under the trees, compared with that in the open plain. Trees, therefore, act the double part of applying the atmosphere with moisture, which they draw up by their roots from the depth of the earth, and discharged in an invisible form through the breathing pores of their foliage; and of wetting the surface with the moisture which they draw down by condensation from the atmosphere.

Trees are likewise, in frequent instances, the immediate occasion of showers, by conducting to earth the electricity of clouds, and thereby inducing the non-electric state which is necessary to cause them to digest rain. An *organized* cloud is an aggregation of vaporous globules which are suspended in the atmosphere, and held in this state of *union with contact*, by being in a similar electrified condition, and kept separate according to that law of electricity which causes two pith balls, similarly electrified, to repel one another to a certain distance. All those clouds which have a definite or organized arrangement of parts are charged with electricity; there are others which are organized; such are the vapors that rest on the surface of the earth, and which do not produce rain, except by acting as conductors between the earth and the organized clouds in the upper atmosphere.

To illustrate the influence of trees in producing showers, we will suppose a dense cloud in an electric condition to be passing over a desert plain: so long as it encountered no conducting object in its journey, it would remain suspended in the heavens until it met another cloud in an opposite state of electricity, or until it was absorbed into the atmosphere. But if it should pass over a forest sufficiently elevated to exert an influence upon it, the trees, which are good conductors, especially in summer when their sap is flowing, would draw down the electricity from the cloud into the earth. At that moment all the vaporous particles of the cloud, no longer repelling one another, are mingled together by the wind, and coalesce into drops of rain which descend to the earth in showers. By this principle we may explain the cause of a phenomenon which we often witness in a dry season on the coast. A dense cloud is seen to pass over our heads without affording one drop of rain until it reaches the ocean; when the vapors that rest on the surface of the waves acting as conductors, cause the cloud to part with its electric fluid, and to fall in copious showers, at the same moment.

I would not assert that the foliage of trees produces more humidity by exhalation than the same amount of foliage of herbaceous plants: but a square acre of ground covered with trees is productive of a vastly greater quantity of foliage than a square acre with any description of herbaceous plants; and as the roots of trees penetrate deeper than those of other plants into the soil, they draw up the moisture from a greater depth, and do not, therefore, in the same proportion, exhaust the humidity of the surface. To these influences of forests upon the humidity of a climate, we may reasonably attribute the fullness of the streams in all parts of this country, a century ago, compared with their present diminished bulk. This is a matter of common observation, sustained by indubitable proofs. In the same way may we account for the increasing frequency and severity of droughts, as the population has increased, and the woods are diminished.

Mr. Balfour, an English botanist remarks: "*When forests are destroyed, as they are everywhere in America by the European planters, with an imprudent precipitation*, the streams are everywhere dried up, or become less abundant. In those mountains of Greece which have been deprived of their forests, the streams have disappeared. The immoderate felling of woods, or the neglect to maintain them, has converted regions noted for their fertility into scenes of barrenness. The sultry atmosphere, the droughts of the Cape Verd Islands are attributed to the destruction of forests. It is stated that in large districts of India, climate and irrigation have rapidly deteriorated from a similar cause, and that the government is now using means to avert and remedy the mischief. On wooded countries, where the rains are excessive, as in Rio Janeiro, the climate has been improved by the destruction of trees. Gardner says that since the ax has been laid on the dense forests, surrounding the city of Rio Janeiro, the climate has become dry. In fact, so much has the quantity of rain diminished, that the Brazilian government was obliged to pass a law prohibiting the felling of trees in the Corcovado range."

"Dr. Cleghorn remarks, that the conversion of forests is unquestionably a subject of great importance. It is now occupying the attention of the government of India, and of many other governments. The physical history of every country proves incontestibly that a moderate extent of forests especially on mountain slopes and elevated rocky grounds, where tillage is impracticable, promotes to a high degree both the agricultural and manufacturing interests of individuals, as well as the physical soundness and productive resources of extensive countries. It appears that the influence of forests in a physical, economical and hygeanic point of view, is deserving of a more complete investigation than it has yet received. By felling trees which cover the tops and sides of mountains, men in every climate prepare at once two calamities for future generations—the want of fuel and scarcity of water."

These facts seem to demonstrate that trees on elevated situations have a greater influence as conductors of electricity and causes of showers, and that their benefits are proportional to their elevation. And we may well regard it as one of the instances of the beneficence of nature, who has arranged it in her economy, that trees should be the most serviceable in those situations which are of the least value for the purpose of grazing and tillage. A forest consisting of those trees which, like the oak, extend a tap-root deeply into the soil, may be compared to so many hydraulic rams conveying water from the depth of the soil, and afterwards exhaling it into the atmosphere. It seems to me, therefore, an incontrovertible point, that one of the most available means of preventing summer droughts is to preserve the forests on all our lofty hills and barren elevations, and all our sandy plains, and to cover all such places as are already bald, with trees of the most valuable species.

There can be no doubt that many a rain-cloud might be arrested, when passing over a tract of country, by means of lightning-rods, attached to the tallest trees in the most elevated places. These rods would conduct the electric fluid from the passing cloud, which would then descend in showers upon that region. It is undoubtedly attributable to the rods and spires and chimneys of a large city that showers are more frequent and abundant there than in similar open situations in the country. I allude to the effect of lightning-rods in this connection, not to recommend the use of them, but to illustrate more clearly an important principle of meteorology.

The time has come when every old State in the Union should regulate the cutting down of forests by positive and direct legislation. All barren hilltops and steep declivities should be kept constantly covered with wood, and provisions should be made for planting them, or for causing a spontaneous growth, to supply all vacancies made by clearing. Planting should keep pace with clearing except in territories already too extensively wooded. There would be no loss of pasturage occasioned by covering half the area of any moderately steep hill with wood, from the summit downwards. The remaining portion would produce more pasturage, with the protection, the greater humidity and fertilization, caused by the trees, than the whole surface would produce without them. On the other hand all deep vales and lowlands, containing a productive soil, should be deprived of their timber, that the land on which it grows might be rendered available for tillage.

As it would not suit the genius of our republican institutions were government to dictate to the citizens the manner of using his own property, the minds of the people must be influenced by bounties and awards. Let the State exact a law, exempting from taxation all woodland, situated on a hill, mountain or declivity, or on a dry sandy plain. These situations should be precisely defined in the act, and all the wood cut from them should be made subject to a double rate of taxation. The act should also provide for paying out of the public treasury a certain sum per acre, for the planting of certain soils and situations with trees of specified sorts, the sum to be paid to the owners of the land on the third year after planting, if the trees give evidence at that time of being in a healthy and thriving condition, and were planted in sufficient quantity.

Not only the farmer but every citizen is interested in this matter. Upon the proper condition and quantity of forest the community must be dependent not only for its continued supply of timber and fuel, but for regular supplies of rain in the summer, of water for the mill privileges on the smaller streams, and indirectly for the prosperity of every interest. Were the different States, in the aggregate, to expend annually a million of dollars, judiciously appropriated for the planting of forests, on lands which are at present good for no other purpose, in ten years from the time of the appropriation, the country would be made ten millions more wealthy. And unless some such measures are used for the preservation of a constant supply of growing forest, large tracts of land, now fertile and productive, will ere long be converted into barren wastes; and the country will be deprived of its natural resources, in proportion to the increase of its population.—[Hovey's Magazine.

COFFEE AND ITS SUBSTITUTES.—The use of coffee as a beverage seems to have originated among the Turks in Arabia, from whence it was carried to Europe, in 1669. The coffee bean is the seed of the *Coffea Arabica*, a shrub which grows to the hight of thirty feet, but is usually cut down to about six feet, to increase the yield of the bean. Its cultivation was confined, until within the past century, to Egypt and Arabia, but is now cultivated in the West India and East India Islands; also in Brazil, upon a most extensive scale. Roasted coffee contains about 12.50 parts of caffeine, a principle to which is ascribed a peculiar quality for preventing the waste of animal tissue. Lately, several mixtures and substitutes for coffee have become common, on account of the great rise in the price of coffee. In some of our country villages, German families roast acorns, and use them as a substitute for coffee. Roasted rye is an old and well known substitute; and so is "Gabbatt's coffee," which consists of roasted corn. White beans and peas, carrots and beets are roasted and mixed with coffee. No such substance as caffeine is contained in any of these articles; therefore they are not true substitutes for coffee in a chemical and physiological sense.

IMPROVED BUCKWHEAT PANCAKES.—"F. G." in the American Agriculturist, says: "The finest, tenderest pancakes can be made by adding a little unbolted wheat (or Graham) flour to the buckwheat. Less than a quarter will do. Mix with cold sour milk, or fresh (not sweet) buttermilk, which is best. The soda (emptyings are dispensed with), when put into cold batter, will not act satisfactorily. Bake at once. The heat will start the effervescence, and as the paste rises it will bake, thus preventing it from falling. Hence the culminating point of lightness is attained. The batter rises snowy and beautiful, and the pancake will swell to almost undue dimensions, absolutely the lightest and tenderest that can be baked, with not a touch of acid. More salt, however, must be added than is usual, to counteract the too fresh taste when soda alone is used. Thus the bother of emptyings is all dispensed with. Pancakes in this way can be baked at any time, and on the shortest notice. We keep our flour mixed, the Graham with the buckwheat, ready for use."

GATHERING PITCH.—The editor of the Oroville Union made a visit last week to Concow valley and remarks:

Mining in this locality, except in a few instances, has been suspended, and the hills resound with the strokes of the "tappers" for pitch. One company, we believe, have about 20,000 trees tapped in and around Concow, and other parties have tapped and are tapping on a smaller scale. We observed that, in this neighborhood, they have been careful to cut small notches in the trees, with a view to preserving the timber for future use. The "Digger" or nut-pine, which is generally dwarfed and useless for lumber, is equally as valuable for pitch, we learn, as the pitch pine, while the pitch of the white and "sugar pine," cannot be used, thus insuring the safety of the most valuable timber for lumber.

INDIAN CORN.—Our great cereal crop is of Southern origin, and is only made a success by the torrid heats of July and August. It luxuriates in the sunshine, when the thermometer points to a hundred, and bears drought better than any other of our crops. *Our country is the Paradise of this plant*, and one can hardly comprehend the magnitude of the corn crop. It is easy to write "a thousand millions of bushels," but difficult to take in the conception of so vast a bulk. It is nearly a bushel for every inhabitant of the globe, and thirty bushels to every one of our own population. What countless stores of food for man and beast!—[*Ex.*

A correspondent of the Yreka Journal gives the *modus operandi* for ascertaining whether rock contains silver or not. It is this:

Pound a small quantity of rock supposed to contain silver as fine as possible, then place it on an iron shovel or pan, hold it over a slow fire to burn away sulphur or arsenic, which is more or less found in silver ore; then take a cup or a glass or any earthen vessel, into which pour a small quantity of nitric acid, (aquafortis) in which put a teaspoonful of the powdered ore. Let it boil a minute or so. Then take some kitchen salt dissolved in water, in another cup, pour a small quantity of this liquid into the boiling acid; if it turns white or murky there is silver in the ore.

Two new hotel companies for the city of New York are being chartered at Albany. These hotels are to cost two and a half millions each, and one is to be erected facing Central Park.

"IT WAS," says he, "first *nitrum* that governed the world, and then *nitrum*; first *Saint* Peter, and then *Saltpetre*."

A WESTERN KITCHEN VS. A NEW ENGLAND ONE.—The St Louis Union in speaking of the Brooklyn (N. Y.) Sanitary Fair says, in alluding to the contrast between a Western kitchen and a New England kitchen:

"Our Missouri kitchens have nothing so inviting about them that they could be made an attractive feature in a great Fair. But we humbly suggest to the managers of our St. Louis Fair, that if they will raise a monster tent in the neighborhood of the Fair, and institute within it a daily barbecue, with all the arrangements and paraphernalia of such an institution, it will be one of the most attractive as well as profitable features of the exhibition. Think of dining on barbacued pig, lamb, or a roasted ox, with a small accompaniment of genuine hoecake, to be washed down with a libation of cider dipped with a tin cup from a flowing hogshead, and then of an immense breakdown in the way of a contra-dance—with the barefooted girls and boys waiting for their turn till the last. Would not such an appendage throw the Yankee kitchen quite into the shade?

THE FEAR OF ANIMALS.—Preserve girls from fear and affectation, which for the most part, find place where reason is excluded. Even at a very early age you may cover, with a many colored veil, many imaginary fears: for instance, you may tell a child that the first clap of thunder he hears is the rolling of the chariot on which the long expected spring arrives; or you may yourself unconcernedly regard animals which alarm by the rapidity of their movements, as mice; or by their size, as horses; or by their unpleasing forms, as spiders or toads. Then direct the children's eye from the whole to the individual beautiful limbs, and gradually, without compulsion, draw child and beast together; for children have scarcely any other fear than that produced by strangeness. One scream of fear from a mother may resound through the whole life of her daughter; for no rational discourse can extinguish the mother's scream. You may make any full stop, colon, or semicolon, or comma of life before your children, but not a note of exclamation!—[Jean Paul.

TO THE SOLDIERS.—The postal law passed in January last contains a provision intended for the benefit of the non. coms. and privates of the army which should be made more generally known, than we believe it is. It is this: "Articles of clothing, being manufactured of wool, cotton or linen, and comprised in a package not exceeding two pounds in weight, addressed to any non-commissioned officer or private serving in the armies of the United States, may be transmitted in the mails of the United States at the rate of eight cents, to be in all cases prepaid, for every four ounces, or any fraction thereof, subject to such regulations as the Postmaster-General may prescribe."

HUMAN LIFE.—Men seldom think of the great event of death until the shadows fall across their own path, hiding forever from their eyes the traces of loved ones whose living smiles were the sunlight of their existence. Death is the great antagonist of life; and the cold thought of a tomb is the skeleton of all our feasts. We do not want to go through the dark valley, although its passage may lead to Paradise; and, with Charles Lamb, we do not want to lie down in the muddy grave, even with kings and princes for our bedfellows. But the fiat of nature is inexorable. There is no appeal from the great law which dooms us to dust. We flourish and we fade as the leaves of the forest and the flower that blooms and withers in a day has not a frailer hold upon life than the mightiest monarch that ever shook the earth with his footsteps. Generations of men appear and vanish as the grass, and the countless multitude which fills the world to day will to-morrow disappear as the footsteps on the shore.

CALIFORNIA MARBLE WORKS.

John Grant. P. J. Devine.

Grant & Devine,

Sutter street, bet. Montgomery and Sansome,

OFFER FOR SALE

MANTLES, GRAVE-STONES,

MONUMENTS, TOMBS,

TABLE-TOPS, GRATES, TILES,

And every description of Marble Work.

Sculpture, Carving, Lettering,

And all kinds of ORNAMENTAL WORK will receive special attention.

Grant & Devine are constantly in receipt, from their quarries in Tuolumne County, of the finest and purest Marble, which they manufacture into the above. They respectfully solicit the patronage of persons requiring any articles in their line.

MARBLE sold by WHOLESALE and RETAIL, in the slab and block.

GRANT & DEVINE,

20-13 Sutter street, between Montgomery and Sansome.

NEW AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparce, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of COTTON,

HIGHLAND RICE,

TOBACCO,

SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 5-3m

SEEDS,

NO. 408 CALIFORNIA STREET

Old Number 110,

Between Sansome and Montgomery street,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED a correspondence and business in Europe as to enable him to secure from the very best sources—the most successful growers—their choicest seeds grown, of which he will always be in receipt, and in endless variety, imported directly from France and England, from well known responsible houses; some of the most prominent of which named in our catalogues.

It has been the experience of our best gardeners and growers, and all others who plant seed, that seeds grown in California are not fully reliable and cannot be for a series of year, until more capital, experience and practical knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover;	Hungarian Grass;
Kentucky Blue-grass;	Orchard Grass;
Red-top Grass;	Sainfoin Grass;
English Rye-grass,	Timothy Grass;
Red Clover;	White Dutch Clover;
Crimson Clover,	Lucerne, &c. &c. &c.

With many entire new varieties of Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONION, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties)

BULBS:

LILIES,	TULIPS,	HYACINTHS,
Amaryllis,	Anemones,	Ranunculus,
Narcissus,	Tuberoses,	Peony-rose
	Gladiolus,	Iris,

and in endless variety, imported direct from Holland and GERMANY.

From his long experience in the Seed Business (thirteen years), and his very extensive stock appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

Native California Evergreen

TREE AND SHRUB SEED

California Notes,

ABOUT

GRASSHOPPERS AND LOCUSTS.—No. 9

BY ALEX. S. TAYLOR.

SECOND SERIES.

[Continued from the California Farmer of April 1st, 1864.

Grasshoppers in 1864.—The Drouth of 13 Months.

FARMERS in the foothills say that these destructive insects will be more numerous this year than they have been for several years past. Recently Mr. Cunningham, while digging on his ranch, came across large beds of full-grown ones a short distance below the surface, with innumerable young ones.—[Mariposa Gazette, March 12th, 1864.

"There is a satisfaction in knowing, if this prognostication is correct, the varmints will all die for something to eat—[Marysville Appeal.

"Not so; the grasshopper is omnivorous, and it is their habit—like fish and stock-brokers—big ones eat the little ones. We have often watched a long, lean, lank, alligator-snouted grasshopper eat his weak but more succulent companion, yet as in the instance of Pharaoh's lean kine, "they were still ill-favored as in the beginning." In the summer of 1854 (July and August), grasshoppers were so plenty, on the Stanislaus and Tuolumne, as to eat up all green vegetation in that section. Near the running streams we noticed *ash trees of large size peeled by them, from the topmost limb to the root—peeled, smooth and white as a bone, was the wood!* This seemed strange as no other trees were touched, although abundance of oak, alder, willow and other shrubbery, usually found in moist lands, were growing thriftily. Snakes and poisonous insects, it is said, abhor the water or black ash, and why the grasshopper should feast and flourish on it is a mystery for *quid nunes* to solve. Out on the plains, at this time, they were so plenty under the shady oak trees, as to more than cover the ground, while millions were crawling through the leaves on the trees. In fact bags full of them, might have been shoveled up during the heat of the day, and the hogs fared sumptuously on them, each morning —[California Farmer, March 25th.

The foregoing extracts will indicate the probabilities of a light visitation of the locusts in 1864; a season between March, 1863, to the present in which not more than five inches of rain fell in all the country below the parallel of Cape Mendocino for the space of twelve months and the most drouthy one since 1840-1. It is not likely that these pests will be very plentiful in 1864, as the want of rain and the violent excessively dry winds from the northwest, which have occured in all March, 1864, throughout the Pacific domain, and even as far down as Cape St. Lucas, likewise all over Arizona, where the drought has been from all accounts the severest within the memory of the oldest people; at least extending south to Cedros Island, in latitude 30°. No grasshoppers *at all* have been seen in Santa Barbara county, up to 30th March, nor have we been able to hear of any in Los Angeles or San Diego, and very few were seen in these parts during 1863. They were equally absent in other districts of the State, the past year, of 1863, probably, from the floods of 1861-62 destroying their eggs and young from the excessive dampness of the ground.

NAMES PROPOSED FOR THE CALIFORNIA LOCUSTS AND SALTATORIA.

We have been able to meet no scientific designation of the California winged migratory locust, of the coast line and great valleys, nor for the great wingless locust, grasshopper or cricket, of the Shasta, Honey Lake and Klamath Lake Valleys; the wingless insect is said to be of same color as the other, but from three to four inches in length, at maturity: indeed the Honey Lake farmers and miners call them from their appearance and size, *mice crickets*, as may be seen in various places of our notes, and they very closely resemble, in many particulars, the young *saltones* of the winged species.

We may propose, therefore, if not heretofore named by Entomologists, the term of *Locusta Californicus Migratoria*, for the *winged* variety; and for the *wingless* insect, described vaguely but well-figured by Vollum, in the Smithsonian Institute's Annual Report, for the year 1860, and adverted to largely by us, and which seems to be different from those of Great Salt Lake, in Stansbury's Report, of 1849, also noted in our series We may propose that of *Orthoptera Saltatoria Californicus*, which will prevent, hereafter, great confusion in comparisons between these species, or varieties, from those of Texas, Mexico, Central America, Chile, Argentina, or of those of the Mediterranean basin. The figures and descriptions of the *Locusta*, of the Atlantic States, in the Agricultural Office Report, 1862, by Mr. S. S. Rathvon, do not conform entirely to the *California species*, and it is highly probable they are undescribed; indeed the migratory locust of this State, or of Lower California is, strange to say, not even mentioned, though from the notoriety given to them they ought to have been.—[Note of April 3d, 1864.

MORE ALABASTER CAVES.—We learn from the Virginia City Union of new and interesting discoveries of alabaster caves. That paper says:

There are probably but very few persons who are aware of the existence of caves of beautiful alabaster within three or four miles from this city. Among the hills to the west of American Flat there is an extensive limestone formation, worn and corroded into precisely similar shapes as the limestone that forms so peculiar a feature in the geology of the counties of Tuolumne, Calaveras, and Amador in California. But a short distance from this limestone there is a beautiful cave of alabaster, from the roof of which, when first discovered, hung long pendant stalactites, of snowy whiteness and rare beauty, which visitors have, from time to time, carried away. The alabaster in this cave is so soft that it may readily be cut with a jack-knife while much of it is both in appearance and softness very much like damped common loaf sugar. Unfortunately both it and the limestone are wholly unfit for building purposes, as they crumble on exposure to the air, though they are very beautiful in appearance.

PAIN.—Pain is life's sentinel. It gives warning of danger. It is nature's monitor. It says: "Take care—you have violated the laws of health—you have wounded yourself—desist or you die." But when the wound is mortal beyond hope, the sentinel gives no challenge. Pain is of no use then. The victim must die, and usually he suffers; little. Pain, therefore, if it be a penalty, is also a mercy. It is destined only to tell us of danger and to make us avoid it.

MINERALOGY.

[Continued from California Farmer of April 8th, 1864.

Sand.—Clay.—Kaolin.

[CONCLUDED.]

Potter's clay and *pipe clay* are pure plastic clays, free from iron, and consequently burning white. The clay of Milwaukie, from which the cream-colored bricks are made, is much used also for pottery.

In the *manufacture of coarse pottery*, the clay is worked with water and tempered; and then the required form of a pot or pan is given on a wheel. The ware is dried under cover for a while, and next receives the glaze in a cream-like state. The glaze for the most common ware consists of very finely pulverized galena, mixed with clay and water. The ware after drying again is next placed in the kiln, which is gradually heated; the heat causes the baking of the clay, and drives off the sulphur of the galena, thus producing an oxyd of lead, which forms a kind of glass (or glaze), with the alumina. For a better stone ware, common salt is used, and it is put on after the baking has begun.

For the finer earthenware, a mixture of red and white lead, feldspar, silica and flint-glass, is used for a glaze, the proportions differing according to the ware. The clay for this ware is mixed with flint-powder (ground flints or sand), to render it less liable to contract or break, and it is worked with great care, and through various processes to prepare it for molding. The ware is usually baked to a biscuit, before the glazing is put on, as in the manufacture of porcelain.

Kaolin. This name is applied to the clay that results from the decomposition of feldspar. It is the material used for making porcelain or China ware. The change the feldspar undergoes in producing kaolin consists principally in a removal of of the alkali, potash, with part of the silica and the addition of water. *Composition* of a specimen from Schneeberg, silica 43.6, alumina 37·7, peroxyd of iron 1·5, water 12·6 (Berthier). It occurs in extensive beds in granite regions, where it has been derived from the decomposition of this rock. A granite containing talc seems to be the most common source of it.

Kaolin or *porcelain clay*, is derived from the decomposition of feldspar. The foreign kaolin occurs in Saxony; in France at St. Yrieux-la-Porche, near Limoges; in Cornwall, England; also in China and Japan. The Kaolin used at the Philadelphia porcelain works comes mostly from the neighborhood of Wilmington, Delaware.

The name kaolin is a corruption of the Chinese *Kauling*, meaning *high-ridge*, the name of a hill near Jauchau Fu, where this material is obtained.

In the *manufacture of porcelain*, the kaolin, and also the other ingredients, are first ground up separately to an impalpable powder. The kaolin is mixed with a certain proportion of feldspar, flint and lime. The whole are worked up together in water, by mallets and spades, and well kneaded by the hands and sometimes the feet of the workmen. The plastic material is then laid aside in masses of the size of a man's head, and kept damp till required; the *dough*, as it is called, is now ready for the potter's lathe (or other means), by which it is molded into the various forms of China ware. After molding, they are slowly and thoroughly dried, and then taken to the kiln, for a preliminary baking. They come out in the state of *biscuit*, and are ready for painting and glazing. The colors are metallic oxyds, which are put on either from a wet copper-plate impression on bibulous paper, or by means of a brush. The former is used for flat surfaces; the paper is rubbed on carefully to transfer the impression to the porcelain, and is then wet and washed off. It is then carefully heated to evaporate any oil or grease employed in the printing. The glaze is made of a quartzose feldspar; it is ground to a very fine powder and worked into a paste with water, and a little vinegar. The articles are dipped for an instant into this milky fluid, and as they absorb the water they come out with a delicate layer of feldspar in a dry state. They are touched with a brush wherever not well covered. They are then ready to be finally baked in the kiln, for which purpose each vessel is placed in a separate baked clay case or receptacle, called a *sagger*. In this process the material undergoes a softening, amounting almost to a partial fusion, and thus receives the translucency which distinguishes porcelain from earthen or stone ware.

The blue color of common China ware is produced by means of oxyd of cobalt; carmine, purple and violet, by means of chlorid of gold; red of all shades by oxyd of iron; yellow by oxyd of lead, or white oxyd of antimony and sand; green by oxyd of copper or carbonate of lead; brown by oxyd of iron, manganese, or copper. A steel luster is produced from chlorid of platinum.

The best Sèvres ware is made from 63 to 70 parts of kaolin, 23 to 15 of feldspar, nearly 10 of flint, and 5 or 6 of chalk. In China the kaolin is mixed with a quartzose feldspar rock, consisting mainly of quartz, called *peh-tun-tze*.

Soapstone is sometimes used in this manufacture; and as it substitutes magnesia for a part of the potash, it makes a harder ware; but it is also more brittle.

[A white chalk-earthy substance, known as *lava*, and said to be *kaolin*, abounds in Calaveras, Amador, Tuolumne and other mining counties in California. Near San Andreas, beds of "kaolin," or *liquefied quartz*, are found in all directions, for miles around; some places the mining shafts expose beds of this "kaolin" from ten to forty feet in thickness varying in depth with the pitch of the bed-rock.—[EDITOR CALIFORNIA FARMER.

An enterprising but ignorant South American has sent to an Albany locomotive shop for one hundred "cow catchers." He expects to use them in taking wild cattle on the plains of Paraguay, in place of the lasso.

A quibbling writer of the last century quaintly observes, that when the cannons of the princes began to war, the cannons of the Church were destroyed.

THE GUNBOAT WATEREE.—This vessel is now on her way to our shores and may soon be expected. As anything which has reference to the defense and security of California is received with interest we copy the following description of this war vessel: "She is a fast steamer armed with ten guns—four of them nine-inch, two rifled guns of 200 pounds each, and two 20-pound guns, with two howitzers of 20 pounds each. A mate to the Wateree, now building, and which will be ready to sail in six weeks, is also to go to California. In addition to this, the Navy department will contract with the loyal [who wont take greenbacks] Californians to build in San Francisco three or four iron clads of the Monitor class—all the material, so far as possible, to be procured and manufactured in that State. The object of this is to establish on that distant coast the facilities for the creation of such vessels as the National exegencies may require. Mighty as is our struggle to maintain the unity and integrity of the Government on its own soil, those charged with its administration are evidently preparing for the dominion of the seas. The Comanche will be afloat about the middle of August."

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 20, 1853.

JACOB ZECH, ESQ:

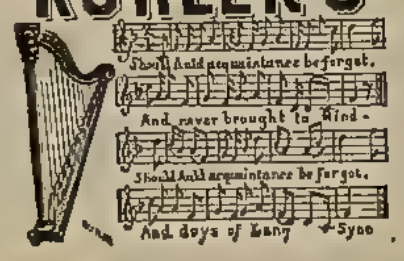
Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. BETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPFGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. ZECH.]



Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it.

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 8 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartetts, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "Angel Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 825,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; cloth bound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2, are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Cull. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival, prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

HORACE WATERS, Ag't
481 Broadway, New York,
Publisher of the above Books.

For Sale by

ALLEN & SPIER,
8 SAN FRANCISCO

The California Farmer.

SAN FRANCISCO:

FRIDAY .....APRIL 14, 1864

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, PUBLISHER CALIFORNIA FARMER, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum(s) of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the FARMER OFFICE. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Transactions of Agricultural Societies.

We would ask of those Societies in the Atlantic States and Europe, to whom we send our Journal, to send us the transactions of their several Societies, so that we may give the benefit of their perusal to visitors, from the several States, who are callers at our Reading-rooms. By this means we can lay before them the progress of Agriculture in their former homes, and thus advance the interest of both Atlantic and Pacific States.

Will our Subscribers?

Will our Subscribers, without further notice, be so kind as to remit their dues to this office. Send us U. S. Treasury Notes. WE TAKE THEM AT PAR for all dues on account of Subscriptions to the FARMER. Surely this liberal offer should induce all to remit. This is paying our Subscribers a handsome commission for remitting their dues, and saves us the trouble and cost of collecting.

New Comers—Homesteads.

Those New Comers to our State can always be sure to find valuable Homesteads, already highly improved, and for sale on favorable terms, by applying at our Office. New Comers who want important positions, as Superintendents of Farms Millers, etc, can always be informed of favorable chances.

Valuable Agricultural and Horticultural Books always for Sale at the California Farmer Reading-Rooms.

American Florist's Guide.
American Poulterer's Companion.
Allen on the Culture of the Grape.
Barry's Fruit Garden.
Bridgman's Gardener's Assistant.
Copeland's Country Life.
Cultivation of the Cranberry.
Downing's Fruit Book—new edition.
Downing's Cottage Residences.
Emerson's Florist and Flower Companion.
Fessenden's Complete Farmer.
Field on Pear Culture.
Flint on Grasses.
Flint's Milch Cows and Dairy Farming.
Flower Garden—by Breck.
Fruit, Flowers, and Farming—by Henry Ward Beecher.
Farrier and Stud-Book.
Grasses and Forage Plants—by Flint.
Holly's Country Seats.
Harris's Insects injurious to vegetation—splendidly illustrated.
Harbison's new Bee-Book.
How shall I choose a Cow?
Leibeg's Complete Chemistry.
Langstroth on Bees.
Lindsay on Morgan Horses.
Modern Horse Doctor—by Dr. Dadd.
Muon's Practical Land Drainer.
Sheep Husbandry—by Randall.
The Wheat Plant, its Culture and Diseases—by Flint.
Youatt on the Horse.
Youatt on the Dog.

And many other valuable Books at lowest prices.

What the "Greenbacks" do for the Old States.

We see by the Reports on labor, in the old States, that in New Hampshire, Connecticut and elsewhere, farm hands are getting $30 $40 and even $50 per month, according to their ability. Old prices were about $8, $10, $12 and $16. Pretty good for over there? Suppose we try it here, in California. We do try it in the FARMER office—*i. e.*, we take them for *our paper*. Let them come—the more the merrier; they have got a tinge of the Eagle and the Stars and Stripes on them.

Railroad Imposition.

We can hardly conceive of a more daring and bold attempt at fraud, upon the people, than the one now practiced by the City Railroad Companies. After every effort failed them to secure from the Legislature the *right* to raise their fares, this Company *assume the right* that our lawgivers refused; and not only assume it, but treat (by their Conductors), those who travel in the cars with insolence; this we know. How long the people will bear it, remains to be proved. Why was it necessary for them to ask the Legislature the right to do this, if they intended to do it "*nolens volens*." It is true that the several Companies advertise to furnish tickets, in large quantities, and with the Federal Tax added to the old rates, but this does not prevent them from taking 6¼ cents from strangers or those whose means will not allow them to buy in large quantities. There is only *one way* to crush the evil, that is to *refrain from patronizing the Railroad* until they come to the lawful and legitimate rate to all the people. *The people hold the power*—will the people act? We think we see by the nearly empty cars, that the people *prefer to walk*. Time will tell.

The New Clip of Wool.

We again refer to this for our wool-growers' sake. By reference to our telegraph news, it will be seen that Congress will, in all probability, make large additions to the duty on imported wool. Every additional penny of duty is so much gain to our own wool-growers. As we said in our last article on this subject, we advise *wool-growers to hold on to their clip*—do not sell now!—wait until the Congressional action is had, then you will know what is done. To them, however, who wish to realize, or those who *must* realize now, we urge them to call on us with their samples, as we can place them in a position to realize at once, and thus save all risk.

It will be seen by our Washinton news, that there was imported from abroad, last year, wools to the value of $112,000,000. Such is the dependence of our home manufacture—they must either import foreign wool or stop their works. Is it not then our duty, as a nation, to do all in our power to encourage the home growth of wool? Let our sheep-raisers, our wool-growers, look at these figures, and they will at once see that there is a home demand for wool large enough to take *hundreds of millions of pounds annually*. The great object with the grower, then, is to meet that demand with a home supply. Everything, then, should be done by Congress to aid our home product, and the grower should have the benefit of it. Let the wools of California be of such a quality and character as to meet the wants of the buyer, and to be in market at the right time, and there will always be a ready remuneration for the grower. We refer our growers to the card of Messrs. W. T. Coleman, & Co., who are always ready to aid those who desire to ship wool—by liberal advances.

The Departure.—Farewell, Kind Friend, Farewell.

Never was there a more beautiful day, than Wednesday last; the sun was shining brightly, the air was balmy and the world was full of the moving panoramas of life. Busy mortals, all, "marching on;" amid the busy throng that were moving down our streets were a group of friends escorting one who was about to leave, for a season, the scenes and associations that had been to him a part of his life for more than *ten years*:

> "Life hath as many farewells,
> As it hath sunny hours;
> And over some are scattered thorns,
> And over others, Flowers."

The occasion of this theme was the departure of our early, long-tried and former friend, J. K. PHILLIPS, Esq., the former publisher of this journal and who, ever since its first issue, has been associated with us—for eight years, in charge as the foreman of the office, and two years as a partner; and, when we say that in all these ten years, and more, there has existed as kindly an intercourse, as strong a friendship as falls to the lot of dwellers of this earth; and of him from whom we are now parted, we can say, seldom does it fall to a man to have as good a friend, as true a friend. *He was as a brother to us.* But even brothers must part. Life's changes must come, and one whose kindness we have often tried and found of "true metal," we can say now that he has gone and left us—we may seek for long years—and we may find none equal to thee, our well-tried friend. Mr. PHILLIPS, as a man and a friend, was ever true—an experience of ten years is our testimony. He is now gone to a new field of labor in a responsible position, among the rich treasures of a new and yet undeveloped land. The Island of Santa Catalina, we trust, may prove a "*type*" of that wealth which he so richly deserves. Our wish is that every *lead* may prove for him a *capital* one.

MR. PHILLIPS, as a *compositor*, had no superior in our State, and as a *proof-reader*, very few equals. Of this we can give the proof, for we believe the FARMER is sufficient, for under his supervision our journal has won a good, an enviable name for its typographical correctness and beauty. We say these things in justice to a faithful and good man, from whom all part with deep and abiding regrets; yet his prosperity we esteem a part of our own—we love to have our friends prosper. To our absent friend, we would say, could our voice reach him:

> "In after years,—when thou, perchance,
> As thoughts of *Auld Lang Syne* arise,
> 'Midst other scenes shall cast a glance,
> Along these pages, should thine eyes
> Rest on this tribute—think on me;
> Think kindly—as I do of thee."

The Typos in our office met "Phil," as he was about to leave, and presented him as a slight testimonial of their good will and appreciation, an elegant Meerschaum Pipe, silver-mounted and richly chased, with amber mouth-piece and cherry stem, all enclosed in a neat morocco case. The donor's short speech was to the point, as "typo's" speeches always are; it was good, because full of sincerity and good wishes. Other gifts and remembrances were added as proofs that one so long with them could not leave without an evidence there were *friendships* in the world. With that Meerschaum, were the following words, as the sentiment and wishes of the donors:

TO OUR OLD FRIEND AND BOSS:—"*Put this in your Pipe and smoke it.*"

> Yes, fill your Pipe and let the smoke curl,
> As the steamer leaves and her paddles whirl;
> Puff! Puff away, our good old friend,
> And keep on puffing 'till your journey's end;
> Then with *new life* leap on the shore,
> And boldly strike for the "silver ore."
> We bid "good bye," old friends must part,
> Tho' it tries the strings around the heart,
> But when you're gone, we all shall miss you,
> And now you go, we say "GOD BLESS YOU."

The types and friends met him on the steamer, and then the grasp of the hand was the assurance, made doubly sure, "our friend" had passed away on the ocean's wave—

To the silver shores of Catalina.

Napa Collegiate Institute.—We invite special attention to the card of this Institute, as this College embraces in its range of studies several features worthy of special consideration. The *location* of the college, the size and conveniences within, the great advantages derived from able teachers, whose aim is a high moral, as well as an intellectual preparation, will secure for this Institute, we are certain, a large share of confidence and patronage.

The Season—the Country.

"God made the Country."

We give the following extracts from a private letter, to show the prosperous condition of the country now, since the late rains. The letter is from a visitor from our city to the country, and shows how *life* may be enjoyed by our citizens if they could only improve it:

"The weather is truly delightful; everything around and about us speaks of the "wondrous beauties of nature; the air is filled with a variety of birds, and they are so tame that they come pecking at our windows woolt sit sowing. There has been no frost here; everything is thriving. There will be an abundance of Fruit of every description this year; we have had considerable rain for a week. It is so beautiful here, that I almost regret returning to San Francisco.

I am a great lover of "the beautiful," of trees, birds, flowers, and everything that appertains to an "elegant country residence." *This just suits me!* and I sit and dream all day, and wonder why I was not born with a "silver spoon in my mouth" or a "million" at my command. Yes! I wonder why? I ought to spend my days in just such a place as this! it is so near Heaven.

You would be delighted to see little daughter; every moment of time she enjoys to the fullest extent; she seems to think that the time she spends in *sleep* is *lost time*. Dear child! she little knows how much pleasure and comfort she is having. You can hear her laugh and the "echo" all over the grounds."

Such is the *heart* language of the country, the beautiful country, now at this season of the year. Who will not strive to enjoy it?

Hie then to the country all ye who can, and enjoy it while you may, for life is short at the longest, and it is our duty to make the most of it. Never has our country looked more charmingly than now; to the country all that can.

Books Received.

We have from Roman's Book-publishing and Book-selling Warehouse, the following new works. These are all works on human character, and intended to illustrate social life in all its phases:

Home Life, what it is and what it needs. This is a beautiful little book—a volume of teachings set in a tiara of truths like to a radii of diamonds. These beautiful teachings are divided into chapters. "Home, the Residence;" "Home, its Institution and Constitution;" "Home Intercourse;" "Home Influences;" "Evening's at Home;" "The Sunday at Home;" "The New England Home." Would the reader desire to know if the book is really full of beautiful thoughts? We will give the author's words on the dedicatory page, and in the few words we think we give evidence that *this book* is a noble one: "To the memory of her who had faith in the *boy*, who counseled and comforted the *man*, who was given me that I might know Home in all its beauty; whom alone I knew and loved as my Mother." These words alone are enough to inspire every heart that cherishes the memory of a Mother, to read this book. Such books upon the parlor table, are "policies of insurance" for the peace and happiness of our Homes. John F. A. Ware, of Cambridge, Mass., is the author of this little treasure book; Spencer, of Boston, Publishers.

The Post of Honor. This is a work of much interest, illustrating those trials incident to Religious character. It is written by a lady. The "Post of Honor" alluded to, is not that of a Military life, but the honor that comes from God, as the reward of a well spent life amid peculiar trials and persecutions, as known in the life of the Missionary.

Revelations of Mother Juliana. The nature and character of this book is revealed in a few words from the preface of the author, who says: "These revelations of Mother Juliana present to us a beautiful picture of a devoted soul, who lived nearer to God than most persons believe possible." We promise the reader in its perusal a rich treat, both intellectual and spiritual. J. F. Hecker of N. Y., is the author; Tichnor & Fields, Boston, publishers.

Elsa Woodson, or the Early Days of one of the World's Workers. A story of American life. A New York publication. This is a work exemplifying religious character—from the preface we glean the insight to the work: "The cup of hemlock was not the first trial of Socrates. Had we been with him there in Athens, you and I, we should have seen that the days and weeks went over him much as ours do; sorrows, humiliations, and triumphs, following each other, as to all lesser souls. But high blessing can only be seized, like fruit that ripens on the topmost bough, by the hand that is courageous and resolute enough to take it where it waits us."

Rubina. The author's page is blank; a New York publication. This book is one of those works of a sensation kind; it is a vivid picture of social life, wrought up in vivid colors; we give the "Dedicatory," which often gives the character of a book. The writer (author) says: "I dedicate this book to my sister, in memory of a love beyond the parental, a friendliness beyond friendship, brightening the darkness of our mutual lives, and exalting joy into the holier luster of happiness." To further show what the book is, we give the *first* paragraph that meets us upon opening it: "Slowly rises the vision of a dismembered Home; of a forsaken woman, who, bowed to the very dust, yet disdains all human sympathy, resolutely casts of humility, and cuts adrift from the sheltering harbor of Home and a husband's protection; the roaring cataracts of public gossip, scandal, and sneers to stem; unfeeling questions to evade; a mighty sorrow to be concealed, a helpless child to be supported, and the wrecks of a fortune to be gathered in—mere stranded spars of illusive hope, looking substantial enough in the distance, but melting in the avaricious clutch of the attorney's bony fingers, like an avalanche under summer skies and showers." Such is the picture of a book that will be sought for and read, for there is a fever for such works—it is the life-blood, and it must circulate.

We have other books which we must defer to notice now. Roman's Book-warehouse is full of valuable literature. Go, buy and read!

Address of C. F. Fay.

We have received the address of Caleb T. Fay, Esq., delivered before the Washington Council, or No. 1, Union League, Feb. 18, in this city. This address, we are glad to know, is to be widely circulated, 5000 copies to be sent abroad. This is well; it should be widely read; it is a very able document, and does great credit to the author of it, it will do good, great good. We take the following paragraph of statistics from the work, most valuable. They show great truths, they show that education, free labor, and a general knowledge of the world's machinery for human progress, must inevitably establish peace and freedom, and the permanent re-union of the States.

Let us consider further what these emigrants from the bogs and fens of Ireland and Scotland, and their descendants have done; and in doing so, we will take facts and figures, that we may not be deceived through extravagant words. As an illustration of what the North has done, I propose to pit the little State of Massachusetts, with her eight thousand square miles of territory and a million and a quarter of people, without inland navigation, without coal or iron, without fertility of soil, without natural productions save granite and codfish, against the whole Southern Confederacy, including Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Tennessee, Arkansas, Louisiana, and Texas, with her seven hundred and twenty-five thousand square miles of territory, and her nine millions of people, her thousands of miles of sea coast, her thousands of miles of navigable streams, her immense forests, her luxurious soil and mild climate, her immense beds of iron and coal, her great advantages for variety of production—together with all her boasted superiority of blood and descent. I do not, however, select Massachussetts for comparison because I wish to claim for her any distinction above her loyal sisters, but because she is the oldest Northern State—the mother of Republican institutions, as they exist in the North to-day. Republics are now on trial upon the charge of failure to answer the end for which government is instituted among men, namely, the common good—the protection, safety, prosperity, and happiness of the people. Take Plymouth Rock as our base of operations, and the old Commonwealth as our battle-ground, and we may safely challenge the whole Southern Confederacy to an investigation of facts and figures.

In Massachusetts, public schools number 4,500, maintained at a cost of $2,500,000 per annum, the child of the poorest citizen can enter these schools without money or price. Public schools do not flourish in the Southern Confederacy, and the same number of free schools cannot be found within her borders. A melancholy evidence of this is found in the fact, that more than one-half the common soldiers taken prisoners from the Southern armies, are unable to read or write. The other side of the picture is found in language as follows: "Never did an army before possess so much cultivated intellect, or demand such contributions for its mental food, as that now marshaled in its country's defense. Many of our divisions of the army carry the printing press and type, and the soldiers issue daily publications." Massachusetts has normal schools to train teachers for public schools, State scholarships to train teachers for high schools, evening schools for persons who are compelled to labor during the day, schools for the deaf, dumb, and blind, hospitals for the insane, schools for idiots, reform schools for boys and girls, State agencies to aid discharged convicts, almshouses for the poor of every village—and all these are public institutions, supported at public cost. Where, in all the Southern Confederacy, or in all the world, is there such ample provision made for the improvement of the human mind, or for the comfort and welfare of the poor and unfortunate? These institutions are not confined to the large towns, but are to be found in every portion of the old Bay State. The ship tunnage of Massachusetts in 1860, was 840,000 tons register. The tunnage of the Southern Confederacy, all combined, including steamboats on rivers, was 645,000 tons register, being 205,000 tons less than Massachusetts.

	Mass.	*S. Con.*
Value of Ag. Tools manufactured in 1860	$1,749,000	$1,582,000
" Engines and Machinery	5 131,000	1 060,000
" Cotton Goods	36,745,000	7,172,000
" Woolen Goods	18,930,000	2,300,000
" Leather	10,251,000	4,674,000
" Boots and Shoes	46,440,000	2,739,000
Circulation of Newspapers and Periodicals	102,000,000	53,000,000
Total product of industry, in 1860	$266,000,000	$145,350,000
	145,750,000	

Excess of Massachusetts over the whole Confederacy.....$120,650,000

Number of Patents issued to citizens of Mass., in 1860...467
" " " Southern Confederacy, in 1860...430
" " " Northern States, in 1860.....4 800
" " " South Carolina (the pink of the rebellion), in 1860.....22

These statistics are enough to show that Massachusetts, with her educated labor, guiding her thousands of machines and managing her bold enterprises, can accomplish more real benefit and work for herself and the world, than the whole Southern Confederacy, with her combatic words and ignorant muscle. The instances given, are only a tithe, and specimen of the facts as they exist, North and South. What is there in all this that looks like failure of Republican institutions, as they exist in the North, or encouragement to recognize, and set up an independent Slaveocracy in the South?

New Music.

We have received by the mail per Golden City, another collection of New Music from Horace Waters, Esq., Musical Warehouse, 481 Broadway, N. Y. Among these pieces we find the following choice music:

Katy Did and Katy Didn't—a comic song.

The Young Volunteer—dedicated to Volunteers from the Sunday School to the Federal Army.

Dost thou ever think of Me, Love?—a solo and chorus; music by Mrs. Parkhurst.

The Golden Bow—Mazurka Etude.

The King—Redowa Waltz—a part of the choice collection of the Beauties of Terpsichore; music by Johann Munck, celebrated at all Watering places in the U. S.

The Cloud with a Silver Lining—a fantasia for the Piano; composed by Mrs. Parkhurst.

Sweet Little Nell—a song and chorus, a sweet song; words by Mrs. M. A. Kidder and music by Mrs. Parkhurst.

Bury me in the Morning, Mother—one of the late Stephen C. Foster's melodies.

When Old Friends were Here and *She was all the World to Me*—these were the last two songs of Stephen C. Foster, well known as the composer of many fine and beautiful songs, arranged under the title of "Foster's Melodies;" he is no more for earth, but gone where eternal harmony reigns. Mr. Foster died Jan. 13, 1864; he was a celebrated composer.

The above pieces and many more received, can all be found at the Music Stores of our city.

Raffling at Sanitary Fairs.

The excitement on this subject, among the clergy and citizens of New York, as connected with Sanitary Fairs, has assumed an important aspect. We find a very interesting letter from Rev. Dr. Bellows, who is to take charge of the Church and Society of the late T. Starr King, which will be read with interest by the people of this city, as it establishes his status on this subject. He writes as follows to the N-Y. Evening Post:

"New York, Feb. 22, 1864.

To the Editors of the Evening Post:

In sending you the correspondence between the Standing Committee of the United-States Sanitary Commission and the lady managers of the Metropolitan Fair, on the subject of 'raffling,' I beg leave to say that when the Fair was started, and the generous services of the managers were obtained, the objections to raffling had not taken so clear a form as to give any body the impression that it could be abolished. The most that was hoped for was, that the practice could be regulated, and to this the point the Ladies' Committee courageously addressed themselves. It was well known that even church fairs profitted by the custom, and that clergymen's salaries had been eked out by its fruits. It is not surprising that a sudden and vehement expression of scruples, imputing dullness to the consciences of the managers of the Fair, should have aroused some irritation and retard their disposition to yield, under moral duress and and threats of the law, to such an unexpected outbreak of conscientiousness. The truth is, the subject is new. The moral sensitivity of any considerable portion of the public in regard to it is new. Pious and conscientious people have raffled too lately, with perfect innocence of feeling, to be able at once to appreciate the moral evil of the usage or the scruples of those who oppose it; and there are still many thoroughly and excellent Christians who regard the custom when confined to benevolent fairs, as wholly unobjectionable.

On the other hand, the same may be said of most of the evils which have yielded to the rising tide of Christian sentiment. They have enjoyed the countenance of many of the excellent and judicious down to the very hour of their fall. Things which are not evil in themselves, but only when evil by those tendencies, are not easily characterized. Those who have not had special reason for considering their tendencies do not see the evil. The Standing Committee of the Sanitary Commission, having had their most anxious attention drawn to all the consequences of the custom of raffling, have thought it their duty to discourage it on the grounds given in their communication to the ladies. They desire, however, to acknowledge their full appreciation of the difficulties which embarass the managers of the Fair in adopting their conclusion, and to express their grateful sense of the ladies' compliance with their wishes.

It is not to be concealed that the pecuniary success and immediate interest of the Fair are greatly imperilled by the abandonment of a custom which has enlivened fairs as well as filled their treasuries. Let those, then, who with ourselves have felt it to be a duty to discountenance 'raffling,' turn their minds to some practical suggestions for supplying innocent substitutes for the custom. Is our population so poverty-stricken that we cannot devise other means than this for giving interest to our Fairs? Above all, let that portion of the public who rejoice in this effort to stop a practice which was at least first cousin, if not own brother to the 'lottery,' see to it that the interests of the sick and wounded soldiers do not suffer by the high ground now taken in regard to the raising the means for their succor.

Very respectfully yours,
HENRY W. BELLOWS."

Interesting to the Suscol Ranch Settlers.

WASHINGTON, D. C., March 14th, 1864.

"I noticed with satisfaction the very excellent publicity you gave the case of Doll vs. The Town Site of Red Bluff. Since my communication to you [Morning Call], of the 11th January last, much has transpired here of interest to Californians and especially to the Pre-emption Settlers. Another thing of no little importance has transpired here since the period referred to, in reference to the Pre-emptors on the "Suscol Rancho," so called, declared, in substance, to be public land at the December term of the United States Supreme Court in 1861. What I refer to is the inability of the Land League, or the portion of them contending against the Pre-emptors on said fraudulent grant, from obtaining "patents" under the proofs offered by them before the "late" Register and Receiver. On the contrary, indeed, these "grabbers" are called upon to go over the whole proofs again, and to be confronted in each case by any party or parties claiming under the general Pre-emption Law. In fact these "grabbers" thought that all they had to do was to give the wink to District Attorney Sharp, and he would assume the responsibility of interpreting the instructions of the Commissioner of the General Land Office to suit their desires. You can scarcely credit it, Messrs. Editors, when I tell you that Mr. Sharp's understanding of them was exactly to suit the League, and make the whole matter one-sided. The Commissioner, however, has not seen fit to indorse Mr. Sharp's views, by declaring that under the special Act of March 3d, 1863, in reference to the Suscol Ranch, the purchasers under Vallejo or assigns only were authorized to offer proof in support of their claims under said bill. On the contrary, the Commissioner declares, and very justly, too, that no man on the street might as well undertake to judge of the nature of the instructions referred to as for Mr. Sharp to undertake to explain them. In fact, Mr. S. exceeded the bounds of propriety as well as his jurisdiction, when he undertook to do so. But this matter is now set at rest by the instructions of the Commissioner to the Register and Receiver, which are about to be transmitted. In reference to this matter, they declare in full and plain language that the settlers on the Rancho, under the general pre-emption Law, shall have full and ample time to present proofs of their settlement, and to cross-examine witnesses produced on the part of the purchasers under Vallejo; and that six weeks' public notice shall be given for that purpose, so that the Pre-emptors under the general law may rest assured that they will have every facility afforded them by the Government, for the purpose of enabling them to perfect their pre-emption claims. There is one class of pre-emptors, under the general Pre-emption Law, on the Suscol Rancho, whom the instructions now about to be transmitted, undertake to disqualify under the general Pre-emption Law. These are the purchasers of small tracts from Vallejo or his assigns. The instructions provide that they shall present their claims under the Act of March 3d, 1863, and estops them from presenting their claims under the general Pre-emption Law. To this point I have objected, and filed a long brief in reference to it, showing its illegality. The point is still undecided, but will soon be disposed of. I am, very respectfully yours,

B. B. NAWMAN."

The History of the Willow.

As we promised, last week, we give herewith a full history of the Willow, from standard authority. this will include all the useful varieties and their peculiarities:

Willow (*Salix*: from *sal*, near, and *lis*, water, Celtic—in allusion to the place of its growth). An extensive genus of well-known useful and ornamental trees and shrubs. They all delight to grow in swampy places, and are increased by cuttings, though some of the more rare alpine kinds excel with difficulty. There is no tribe of trees of such various magnitude as the willows, from the large white willow to the minute *Salix herbacea*, six of which may be placed between two leaves of a dodecimo, roots, stems, leaves, and flowers. Many of the species of willow, under the names of osier and sallow, are extensively grown for the manufacture of basket-rods; the best sorts for which are the great round-leaved sallow (*S. caprea*) and the common osier (*S. Viminalis*). The branches of some of the species are used as stakes, poles, hoodles to rakes, hoes and a great variety of economical purposes. Loudon (Arb. Brit.) says, "In the north of Europe the bark of *S. Alba* is used for tanning leather, and for dyeing yarn of a common cinnamon color; and the leaves and young shoots are given to cattle in a green state, or dried like the twigs of the birch, and laid up for winter fodder." The bark, however, is less valuable than that of some of the other species. The leaves of the least willow (*S. herbacea*), soaked in water, are employed in Iceland for tanning leather. (Paxton's Bot. Dict). The arrangement of the species of willows is a matter of considerable difficulty, as well as their technical discrimination. Among the numerous species of willows there are only a few which are cultivated for farm purposes: of these we shall enumerate and describe the following:—

1. The long-leaved triandrous willow (*S. triandra*). This tree is very common in wet woods, hedges, and osier grounds. It is of an upright form, rising naturally, when not injured, to the height of 30 feet; towards autumn casting the bark of its trunk and larger branches in broad, solid portions, cracking angularly asunder, like the plane tree. The young branches are erect, long, tough, and pliant, smooth, leafy, brownish, somewhat brittle at their joint or insertion. Leaves linear-oblong, serrated, smooth, rather unequally sloping at the base. The narrower-leaved willows generally come under the denomination of osiers, of which this is the most valuable. It is cultivated for the white basketwork, producing rods 8 or 9 feet long, tough and pliant, even when stripped of their bark, and very durable. They are cut down every year. There are several varieties of this species; one, called the French willow, is cultivated in Sussex and in the eastern parts of England; it is more slender in form, and only about 12 or 15 feet high.

2. Bedford willow (*S. Russelliana*). When this tree was first recommended for cultivation, by the name of the Leicestershire, or Dishley willow, it was regarded with scorn as "only the crack willow" (*S fragilis*), a sort notoriously useless. This ignorance and prejudice are now removed, and this willow is found the most profitable for cultivation of any species of the genus, for the value of its timber as well as bark, the rapidity of its growth, and the handsome aspect of the tree. This species of willow was first brought into notice by the late Duke of Bedford, who engaged an able chemist, Mr. Biggio, to make experiments upon it. It was found to contain in its bark more of the tanning principle than any other tree of England, except the oak. The bark also contains the largest quantity of *salicina*, a salt which has been found useful as a substitute for the quinia and cinchona in agues, and which is much less liable to excite irritation in the stomach than the salts of the cinchona. It is of great importance that the distinctions between this willow and the crack willow (*S. fragilis*) should be clearly pointed out, on account of the wide difference in their qualities and value. This tree is more handsome than the willow in its mode of growth, as well as altogether of a lighter or brighter hue. The branches are long, straight, and slender, not angular in their insertion, like *S fragilis;* and the trees, when stripped of their leaves, may always be distinguished by these marks. They are polished, very tough, flexible, round, and smooth. Leaves lanceolate, tapering at each end, serrated throughout, and very smooth. Those of *S. fragilis* are ovate-lanceolate; the foot-stalk, alone, is longer than the scale, whilst in *S. fragilis* it is so short that the leaf is nearly sessile. In both it is glandular or leafy.

3. Bitter purple willow (*S. purpurea*). This is a shrub growing in low meadows, about the banks of rivers and ditches, but not common. The trunk is three or four feet high, with long, slender, very smooth branches, spreading widely, and, if not supported, trailing on the ground, of a rich and shining purple, with a somewhat glaucous hue. Leaves partly opposite, obvate-lanceolate, serrated, very smooth, narrow at the base. This is a very valuable osier for fine basket-work, but more especially for platting into low, close fences, to keep out hares and rabbits; the leaves and bark being intensely bitter, those animals will not touch either. The twigs, moreover, are so long, tough, and flexible, that they may be interwoven into any shape, and kept very close to the ground, as they always retain their horizontal mode of growth. Such a fence is scarcely inferior to one made of wire, and is, perhaps, more durable, as continually producing young shoots, to supply the place of those that decay. It is important to distinguish this useful and elegant willow from that to be next described. The bark contains much salicina.

4. The rose willow (*S. helix*) grows in marshes, osier holts, and about the banks of rivulets. It is a tree of humble growth, erect, about 10 feet high, smooth in every part, altogether of a lighter hue than the last. The branches not trailing, but upright, smooth, and polished, of a pale yellowish or purplish ash color, tough, and pliable, less slender and elongated than the foregoing species, though useful for the coarser sorts of basket-work. Leaves partly opposite, oblong-lanceolate, pointed, slightly serrated, very smooth, linear towards the base. Their color a light, rather glaucous green, turning blackish in drying. The leaves and twigs are less bitter than the former, and the greater size of the trunk, as well as branches, renders this species fit for several purposes which that is not. It also makes a better figure in plantations, and the roots give more solidity to the banks of rivers or ditches.

5. Common white willow (*S. alba*). This is a tall tree, whose bark is thick, full of cracks, useful for tanning; and, as yielding much salicine, good also for the cure of agues, though inferior in quality to that of the true Bedford, or Huntingdon willow. The bark is called *cortex salignum*, and *anglicanum* by some writers. The branches are numerous, spreading widely, silky when young. Leaves all alternate, elliptic-lanceolate, pointed, serrated, silky on both sides; the lowest serratures glandular. There is a variety which is very superior in the value of the wood and bark, and the rapid growth as well as handsome aspect of the tree, to the original species.

The willow genus contains more than 130 species, chiefly distributed over the northern parts of Europe. It is less multiplied in the Northern and Southern than in the Middle and especially in the Western States. It is found on the banks of the great rivers, such as the Susquehanna and the Ohio, and is called black willow, or simply willow.

The black willow is rarely more than 30 or 35 feet high and 12 or 15 inches in diameter. It divides at a small height into several divergent but not pendent limbs, and forms a spacious summit. The leaves are long, narrow, finely denticulated, of a light green, and destitute of stipulæ. In the uniformity of its coloring the foliage of this species differs from that of the European willow, the lower surface of which is glaucous.

Upon the trunk the bark is grayish and finely chapt; upon the roots it is of a dark brown, whence may have been derived the specific name of the tree. The roots afford an immensely bitter decoction, which is considered in the country as a purifier of the blood, and as a preventive and a remedy for intermittent fevers.

The wood is white and soft, and the branches are easily broken from the tree. Neither the wood nor the twigs are applied to any useful purpose. (Michaux.)

Michaux describes two other species of American willow. One, from being found on the shores of Lake Champlain, he calls Champlain willow (*S. ligustrina*). It grows 20 to to 25 feet high, with 7 or 8 inches diameter, and very much resembles the black willow, except that the leaves are longer and narrower. The other is the shining willow (*S. lucida*), so called on account of the brilliancy of its foliage. This Michaux found only in the Middle and Northern States. It is found in moist but open grounds, and is more common on the edges of the salt meadows than in the interior of the forests; it is also seen on the islands, not covered with woods, in the rivers, and near the shores of the lakes.

This species is easily distinguished by the superior size of its leaves, which are oval-acuminate, denticulated, and sometimes 4 inches in length.

The shining willow attains the hight of 18 or 20 feet; but its ordinary elevation is 9 or ten feet. Baskets are made of its branches, when those of the European willow, which are preferable, cannot be obtained; but it possesses no property that recommends it to attention.

Many species of willow are found in the United States and in Canada, the greater part of which are susceptible of no useful employment. The three species described are distinguished only by their superior hight; but even these are greatly inferior to the European willow in size and in the properties of their wood. In the Northern and Middle States, particularly in Pennsylvania and in some townships in the lower part of New Jersey, great numbers of the European willow have been planted, of which light baskets are fabricated for the market of Philadelphia. This tree furnishes the charcoal for the manufacture of gunpowder. (Michaux.)

The common yellow willow in the *S. vitellina* of botanists. It is also frequently called golden willow, and by some egg-yoke willow. The French call it Le Saule. This, says Dr. Darlington, was early introduced here as a shade tree, and has become partially naturalized in many places. I think I have never seen any but the *pistillate* plant. A variety with paler bark (perhaps the *S. alba* of authors) is also occasionally to be met with. The handsome *S. babylonica*, or weeping willow, is more generally preferred as an ornamental shade-tree, and the pistillate plant of that species is extensively propagated about houses, but it can hardly be said to be naturalized.

Geo. Ball's Reapers.—We call attention to the six Reapers advertised by Messrs. Klopenstine & Co., in our columns this week. They will be sold low if applied for immediately.

NAPA
COLLEGIATE INSTITUTE.
For Young Ladies and Gentlemen.

NAPA CITY, CALIFORNIA.

NAPA CITY, IN POINT OF LOCATION AND Climate, is unsurpassed in the State. It is about four hours' ride by steamboat from San Francisco, and three by stage from Benicia. There will soon be a daily boat from the former place, and there are now two daily stages from the latter. There are extensive accommodations for Boarders in the College Building, with large and well-ventilated sleeping apartments. Teachers reside in the Building, and will have a constant oversight of the Students who are Boarders.

GOVERNMENT.

Young Ladies will receive no calls from any except Parents and Guardians. Ladies and Misses will not leave the College grounds, except in company with their Instructors. Young Men and Lads are not allowed to lounge about the Stores, Hotels, and Saloons of the village. All pupils are required to attend Church on the Sabbath. Parents will choose the place of worship for their children.

MILITARY DEPARTMENT.

This Department has been opened with a view to the permanent establishment of a Military Academy on this Coast. From three to four years will be requisite to complete the course in this Department. The State has furnished us the necessary equipments for such a school. The Drills will be attended to daily.

TUITION.

Spelling and Reading, per month	$2 50
Common English, with the above, per month	4 00
Higher English, with the above, per month	6 00
Latin and Greek, with the above, per month	8 00
Janitor's Fees, per month	25
EXTRAS	
Modern Languages, each, per month	$2 00
Music, with Piano, per month	8 00
Embroidery, per month	3 00
Painting in Oil and Water Colors, per month	4 00
Board with Furnished Rooms, per week	5 00
Board with Furnished Rooms, Light, Fuel, and Washing, per week	6 50
Military Branches, per month	3 00
Sword Exercises, twelve lessons	8 00

CALENDER.

The Collegiate year is divided into two Sessions of 21 weeks each. The first Session will begin July 25 and end December 15. The second Session will begin January 2 and end May 28. The Winter vacation will be two, and the Summer vacation eight weeks long.

☞ All articles of clothing should be plainly marked. Pupils will furnish their own Sheets, Pillow-cases, Towels, Napkins, and Lamps.

☞ Payments, half-yearly in advance. Pupils can enter at any time, and be charged from the time of entering. No deduction will be made for absence, except in cases of protracted illness. The month consists of four weeks each.

For further particulars address

W. S. Turner, A. M.,
Principal.

21-11

FAIR OF THE MECHANIC'S INSTITUTE.—By the circular of this Institute, now before the people, it is known that they will hold a grand Fair in our city this summer, commencing August 30. By the liberality of the friends of this Society the handsome sum of $10,000 has been raised, and from the interest already shown it is evident the Fair will be a grand one. The whole plan will soon be spread before the public, and their hearty cooperation solicited. This will be the Fourth Annual Exhibition, and it is to be hoped it will be a very successful one. It will be held on Union Square.

OUR NEW SURVEYOR.—L. Upson, Esq., formerly Editor of the Sacramento Union, has filed his bond, $60,000, and entered upon the duties of his office. Mr. Upson will make, for California, a good Surveyor General, and we trust he will bring all his *nobs* to the mark and help to make California's interests known.

NOTICE.

THE undersigned has disposed of all interest in the CALIFORNIA FARMER, and his connection with the publication of the same ceases with this date. Messrs. WARREN & CO., who will continue the publication, he hopes will retain the favors of friends and patrons. J. K. PHILLIPS.
San Francisco, March 21, 1864

☞ Holloway's Pills and Ointment.—Pleurisy. Do you wish to curtail your medical expenses and retain sound health? Use these medicines—they are adapted to every disease—for all inflammatory affections of the chest, as pleurisy, asthma, bronchitis, coughs, colds, etc. The sanative properties of the Ointment have never been questioned by all who have used it—the Pills materially expedite the operation of the Ointment.
Sold by all Druggists, at 30c, 70c, and $1 10 per box or pot. 204
HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM,
cor. Clay and Front streets, San Francisco, Cal.

☞ We should not suffer from a cough, which a few doses of AYER'S CHERRY PECTORAL will cure. Time, comfort, and health, are all saved by it.

TO FARMERS.
THRASHING MACHINES
FOR SALE.
BY
Geo. Ball's Manufacture.
6 Thrashers and Separators Complete.

THE ABOVE MACHINES ARE THE VERY BEST IN the market, and will be sold at lower rates for Cash or approved paper, than any other Machines can be bought at.
Farmers in want of a good Machine will find it to their interest to call before purchasing elsewhere.
Inquire of

Hubbard Squash.
WE HAVE RECEIVED ANOTHER SMALL INVOICE of the true "Hubbard Squash Seed," from the Atlantic States.
This is the best Squash in the world. It is a hard shell, and the only way to cook it is to saw the shell in halves and bake in the oven, then serve on the table in the shell. The flavor of the Squash is better than the best Sweet Potato, and for pies has never had an equal.
Seed for Sale at this Office.

A CAR . .

☞ IN ORDER TO PREVENT ANY MISAPPREhension arising from the fact that the prosecutions instituted against me, in the Police Court, were dismissed on the ground that the time within which indictments could lawfully be found had elapsed, I desire to state that in the month of February, William B. Garrison and others endeavored to obtain indictments against me on the charge subsequently made in the Police Court; that after a full examination of all the evidence produced on the part of the prosecution and without hearing my witnesses, the Grand Jury refused to find any bill against me—the time in which the indictment could be lawfully brought had not then expired. Garrison, foiled in his efforts in that quarter, then instituted the Police Court prosecutions. On the second of March I was called to answer before that tribunal, and the case was, by agreement of Court, continued to another day. On the adjourned day it was further continued, at the request of Garrison's counsel, to the 25th of March. In the meantime, I was advised by my counsel that it was useless to go to the expense of summoning witnesses from a distance to establish my innocence, when, in their opinion, the Court would of its own motion dismiss the case for want of jurisdiction as soon as the first witness for the prosecution should have been examined. To save expense to both parties, it was then agreed by the counsel for Garrison and myself that the matter should be argued on the 25th, and that if the Court did not then dismiss the complaints, another day should be fixed for hearing the testimony. Upon my counsel stating his first point, and before argument, the counsel for the prosecution admitted that the prosecution could not be maintained, and they were accordingly dismissed. Whenever the merits of my Wide West transactions with Garrison shall be investigated, and the civil suit pending between us shall be heard, I shall be prepared to show that the charges so industriously circulated against me are false, and that nothing whatever in my transactions with him or with others have been otherwise than perfectly fair and honorable on my part.
9-1m J. W. TUCKER.

Farmers and Immigrants.
LAND FOR SALE OR TO RENT.
THE ANTELOPE RANCH,
(FORMERLY JOB F. DYE'S) on the East side of the Sacramento River, embraces many very superior Farms of
100 to 500 Acres each; also Vineyards, Gardens and Orchards,
above all overflows, Fenced, having Dwellings, Barns, etc., and throughout the year, large running streams, and irrigating ditches.
The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane Fruits, etc.
The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of this Ranch.
Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.
Mowers, Headers, Thrashers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors.
☞ The "Job Dye Farm," of 250 acres—with Orchard, Vineyard, and Garden, with irrigating water, large Adobe House, and numerous outbuildings—will be rented to a satisfactory tenant.
Apply to GEO. CHAMPLIN, Red Bluff P. O, or on the Ranch, or to
E. F. NORTHAM and R. B. WOODWARD,
Dec. 17—19-2m San Francisco.

North Point Dock Warehouse.
STORAGE
Can be procured in this well known Warehouse on the most favorable terms.
Every facility is offered for storing Wheat, Barley, Flour, and other Domestic Produce.
Advances

☞ To correct any erroneous impression which some may have, we wish it understood that although we keep the largest Wholesale Stock in the country, small Orders and Retail Customers will receive every attention and benefit that they can at smaller establishments.
FARMERS and others will do well to call on us before purchasing, as the rate of Eastern Exchange justifies us in offering goods at REDUCED RATES.
N. B.—
We have the Exclusive sale of HILL'S CONCORD HARNESS, for the Pacific Coast.
20-21

Splendid Windmill for Sale.
ONE OF DR. FRANK JOHNSON'S SELF-REGUlating Windmills is offered at a low price, if called for immediately. This is a good 12-foot mill, 3 horse power, of the very best make and model, and finished in the most workmanlike manner. For particulars inquire of the Editor of California Farmer. 10

A Lady Teacher.
A LADY TEACHER OF EMINENT ABILITY AND qualifications, one who fully understands the great responsibility of the position, wishes a situation in some Seminary, or School, where she can have a responsible trust. The Lady has long been employed as a Teacher, and can bring the most ample testimony of ability and qualifications. A note addressed to A. B. L, care of Editor of Farmer, will be promptly attended to. 10

Home Miscellany.

"FIFTY YEARS AGO."

Stockton, April 5, 1864.

EDITOR CALIFORNIA FARMER:

The following simple little song was cut from a newspaper by a relative, before her marriage, more than fifty years ago. She is now dead and gone; the paper has come down to her grandchildren, but the hand of time has rendered the words nearly illegible, and the paper is crumbling to dust. If you will please reprint them you will greatly oblige a friend and well wisher. C. A. S.

"VARIETY."

Ask you who is singing there,
Who so blythe can thus appear?
I'm the child of Mirth and Glee,
And my name's "Variety."

Ne'er have I a clouded face,
Swift I change from place to place,
Ever wandering, ever free—
Nothing's like "Variety."

Like a bird that skims the air,
Here and there, and everywhere,
Sip my pleasures like a bee—
Such am I, "Variety."

Crowded scenes and lonely graves,
All, by turns, I can approve;
Follow, follow, follow me,
Balm of life, "Variety."

Love's sweet passion charms the breast,
Roving love I do detest,
One true heart's enough for me,
Although my name's "Variety."

"A LITTLE WHILE."

Oh for the peace which floweth as a river!
Making life's desert places bloom and smile;
Oh for a faith to grasp heaven's bright "forever,"
Amid the shadows of earth's "little while."

"A little while" for patient vigil keeping,
To face the storm, to wrestle with the strong;
"A little while" to sow the seed with weeping,
Then bind the sheaves and sing the harvest song.

"A little while" to wear the robe of sadness,
To toil with weary steps through erring ways;
Then to pour forth the fragrant oil of gladness;
And grasp the girdle of the robe of praise.

"A little while," mid shadow and illusion,
To strive by faith love's mysteries to spell;
Then read each dark enigma's clear solution;
Then hail light's verdict, "He doeth all things well."

"A little while," the earthen pitcher taking
To wayside brooks from far-off fountains fed;
Then the parched lip its thirst forever slaking
Beside the fullness of the Fountain-Head.

"A little while" to keep the oil from failing:
"A little while" faith's flickering lamp to trim,
And then the Bridegroom's coming footsteps hailing,
To haste to meet him with the bridal hymn.

And he who is at once both Gift and Giver,
The future glory, and the present smile,
With the bright promise of the glad "forever,"
Will light the shadows of the "little while."

EPITAPH.

[An Epitaph on Mr. John May, who died of cholera morbus, 1833, in England.]

READER, pass on, but let a falling tear,
A tribute pay to him who slumbers here.
In life's fair morn, when "Hope paints all things gay,"
A sudden summons called his soul away,
To enter on that "undiscovered shore,
From whence the mariner returns no more."
Let then his death this moral lesson give:
Short and uncertain is the time we live!
Death unprepared may summon us away
Before the closing of the present day:
Oh, may our lives, then, so distinguished prove,
That when commanded to appear above,
Our conduct here may Mercy's voice obtain—
So shall our earthly loss prove eternal gain.—[J. H

Lord Byrons's Mother.

Lord Byron was afflicted with a club foot, and when young he submitted to some very painful operations to have the deformity removed, but without success. His mother was a proud, passionate, wicked woman, and even the yearnings of natural affection seemed stifled. Let us see the influence his mother exerted on this brilliant and powerful mind.

The readers of Byron's Life must have shuddered to hear him speak of his mother. Moore, the biographer of Byron, speaks three times of this fact, and the passages are so remarkable that we will transcribe them literally. The first is brief, but significant:

"On the subject of his deformed foot," says Moore, in his Byron, "Byron described the feeling of horror and humiliation that came over him when his mother, in one of her fits of passion, called him a *'lame brat!'*"

The second passage is scarcely less significant:

"But in the case of Lord Byron, disappointment met him at the very threshold of life. His mother, to whom his affections first naturally and with order turned, either repelled them rudely, or capriciously trifled with them. In speaking of his early days, to a friend at Genoa, a short time before his departure to Greece, he traced his first feeling of pain and humiliation to the coldness with which his mother had received his caresses in infancy, and the frequent taunts on his personal deformity with which she wounded him."

This passage is excelled in dreadfulness by the following:

"He had spoken of his mother to Lord Sligo, and with a feeling that seemed little short of aversion. 'Some time or other,' said Byron, 'I will tell you why I thus felt towards her.' A few days after, when they were bathing together in the Gulf of Lepanto, he referred to his promise, and pointing to his naked leg, exclaimed, 'Look there! it is to her false delicacy at my birth I owe that deformity; and yet, as long as I can remember, she has never ceased to taunt and reproach me with it. Even a few days before we parted for the last time, on my leaving England, she, in one of her fits of passion, uttered an imprecation on me, praying that I might prove as ill formed in mind as I am in body!' His look and manner, in relating the frightful circumstance, can only be conceived by those who have seen him in a similar state of excitement."

What an imprecation from the lips of a woman, and that woman a mother—"Praying that I might prove as ill formed in mind as I am in body!"

How prone we are to judge from partial knowledge, and to be deceived by appearances. In this world things are oftentimes very different from what they seem to be. Men frequently wear the mask of cheerfulness when the worm of care or grief is gnawing at the heart. Evils assume the garb of angels and saints. Wasting disease often decks herself in the roscate hues of health. Sin allures with the promise of life and pleasure, and profit, concealing the sting with which it infuses the death-bearing poison into the soul.

If a few civil words will render a man happy, he must be a wretch indeed who will not give them to him. Let another man, light his candle by your own, and yours loses none of its brilliancy by what he gains.

Great Thoughts.

We commend the following great thought from the pen of Mrs. Lydia Maria Child; and from another author, a paragraph of beauty; and also thoughts from that excellent work, Trumbull's "Under Currents." These extracts are worth reading and remembering, to those who ever philosophize upon the mysterious events of human life:

"Remember: Before us stands the Future, a shadow robed in vapor, with a far-off sunlight shining through. The Present is around us—passing away—passing away. And *we?* Oh, fearful indeed is this earths's pilgrimage when the soul has learned that all its sounds are echoes, all its sights are shadows. But lo! the clouds open, and a face serene and hopeful looks forth and says: Be thou as a little child, and thou shalt thou become a seraph. The shadows which perplex thee are all realities; the echoes are all from the eternal voice which gave to light its being. All the changes around thee are but the images of the Infinite and the True, seen in the mirror of Time, as they pass by, each on a heavenly mission."

"Remember, although the loss of a friend often afflicts us less by the momentary shock, than when it is brought back to our minds sometime afterward, by the sight of some object associated with him in the memory—of something which reminds us that we have laughed together, or shed tears together; that our hearts have trembled under the same breeze of gladness, or that we have bowed our head under the same stroke of sorrow. So may one behold the sun sink quietly below the horizon, without leaving anything to betoken that he is gone; while the sky seems to stand unconscious of its loss, unless its chill blueness in the east be interpreted into an expression of dismay. But anon, rose-tinted clouds, call them rather streaks of rosy light, come forward in the west, as it were to announce the tidings of a joyous resurrection."

"Step by step we become accustomed to what happens. Gradually pushed from one stand-point to another, we learn to submit. Wonderful is the power of adaptation in man; to climate and temperature, to every kind of food and clothing, to every variety of habit and condition and circumstance. Let the hand be put forth against him, and does he fall, does he wither into insignificance? No, he adapts himself to his new state. He discovers that his former condition was not propitious to a high moral and intellectual life. He sees things in a new light, and his opinions alter accordingly. Misfortune still pursues him. Instead of crouching, crushed and humiliated, he stands up and proclaims aloud that it *is* only in adversity the true powers are developed. Press him down harder, and closer, until he is in positive extremety; he boldly defies the god of this world, points triumphantly to the next, and welcomes what shall come *there;* averring that only as a sojourner he has tarried here; never claiming a residence, he desires none, for he will soon leave for *home*—verily, strange is the power of the soul!

Indolence And Industry.

A little indolence, a brief vacuity of thought, may enervate the mind for the labor of a whole day. If you feel its poppy influences spreading over you, start up and shake yourself. Be intent about something, however trivial it may seem, and the insidious languor will soon pass away. John Leech in one of his sketches, has well illustrated the distinction between croaking idleness and self-contented activity. Two young men have gone out to spend their annual holiday in fishing. The rain begins to pour down in torrents. One of them throws aside his rod, but the other continues to fish with stern determination. "Do come home," says the croaker. "Well," says the happy fellow, "I never see such a precious disagreeable old chap; you come out for a day's pleasure, and you are always for going home." Of course the rain was far from pleasant, but he knew that a day of enforced idleness was still worse, and clung to his rod as a protection against ennui and discontent. He knew the value of the words of the wise man—"Whatsoever thy hand findeth to do, do it with all thy might;" he had come out to fish, and fish he would, though a waterspout should burst upon his head. We should all act on the same principle, and many of the clouds of life will be dissipated; the lion in the path will be found to be only a jackass; the mind once set in motion will find happiness in the play of its own faculties, and be proof against the corroding cares of life. No matter what the employment may be, so long as it is innocent; read, think, write, fish, shoot, paint, farm, go down in a diving bell or up in a balloon, do anything you choose; but above all things never be idle, or you will soon become a croaker. We were traveling the other day with a gentlemen who had made a large fortune in one of the colonies, and returned to England to enjoy it. It is the manner of our countrymen, Froissart tells us, to take their pleasure sadly; it certainly was so in this case. He was traveling for pleasure, but pleasure seemed to elude his grasp; like the old man in Rogers' poem, "he looked for something, he knew not what," and seemed grievously disappointed at not finding it. With all his wealth he was a man to be pitied; he felt so himself; the change from active employment to listless idleness had embittered his mind. "I have nothing to do," he said, "but spend my money, and I had far more pleasure in making it." Of course, he had because the making of it elicited all his powers, and gave a healthy tone to his mind, which became morbid when it had no longer anything to occupy it. The spending of money conferred no pleasure, because he felt no interest in the objects on which it was spent.—[English Paper

PICTURES.—A room with pictures in it and a room without pictures, differ about as much as a room with windows and a room without windows. Nothing is more melancholy, particularly to a person who has to pass much time in his room, than bleak walls with nothing on them, for pictures are loopholes of escape to the soul, leading to other scenes and other spheres. It is such an inexpressible relief to a person engaged in writing, or even reading, on looking up, not to have his line of vision cropped off by an odious white wall, but find his soul escaping, as it were, through the frame of an exquisite picture, to other beautiful and perhaps heavenly scenes; where the fancy for a moment may revel, refreshed and delighted. Thus pictures are consolers of loneliness; they are a relief to the imprisoned thought, they are books, they are histories and sermons, which we can read without the trouble of turning the leaves. [Downing.

SINGULAR.—It is said that the rose of Florida, the most beautiful of flowers, emits no fragrance; the bird of Paradise, the most beautiful of birds, gives no songs; the cypress of Greece, the finest of trees, yields no fruit; dandies the shiniest of men, have no sense; and ball-room belles, the loveliest creatures in the world, are very often ditto—only more so!

For sale by

TREADWELL & CO,
San Francisco,
Sacramento,
and Marysville.

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle-grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H & L AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories,

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL-OIL as a basis of their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural resin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest, until, at the present time, they have established a manufactory of Rosin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply The subscribers are now receiving native resin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

HUCKS & LAMBERT,

CHOICE GRAPES!

B. Kamp,

of SAN JOSE, offers the following Choice kinds of Grapes:

Grape-Vines, Cuttings, and Plants,

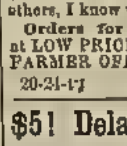
INCLUDING NINETY VARIETIES OF

NEW AND RARE KINDS!

For Wine---Rhine Grapes.

Black Gleffner, Kohlen Traube,
Johnisberger Riesling. Gray Gleffner,
Riesling Franken, Silvaner,
Traminer, Goodethel,
Rulander.

FOR THE TABLE:



Goodethel, Muscat Rose,
Black Hamburg, Muscat Alexandria,
Chasselas Musque, Golden Chasselas,
Charlesworth Tocay.

The above list embraces those that the Undersigned has proved. The WINE-GRAPES are the BEST OF THE RHINE, such as our Choice Rhine Wines are made from; and those for the Table are well known and approved. The Grapes will make Better Wine than our California Grapes, by a 100 per cent. Having cut down all my California Grapes, and instituted others, I know what I say to be true.

Orders for Rooted Vines or Cuttings at LOW PRICES, can be sent by Mail or left at the FARMER OFFICE, will be promptly attended to.

20-24-17 B. KAMP.

$5! Delaware Grape-Vines! $5!

PROPAGATED FROM VINES received in 1861, from Dr C. W. Grant, of Iona Island, near Peekskill, N. Y. One and two year-old Vines, from $1 00 to $2 00 each! The superiority of the Delaware as a Wine Grape, will doubtless induce unprincipled Dealers to flood the Market with a Spurious Article; and as mistakes sometimes UNINTENTIONALLY occur, which cause delay and trouble to the Purchaser—

☞ WILL PAY IN GOLD COIN $5.

(or the same amount in Lincoln, Lenoir, Union Village, Anna, or Diana Vines, at 50c each, or the IONA at $2 00 each) for each Vine purchased from me, for the DELAWARE, which proves untrue to name.

I have a few IONA VINES, one year old, propagated from a Vine presented to me from Dr. Grant, the Originator of the same, which, except upon the above conditions, I do not intend to offer in Market without his permission

Catawba Vines and Cuttings by the Hundred or Thousand, CHEAP!

Fine House and Garden in Sacramento City

A LARGE, SPACIOUS, AND GENTEEL House and other buildings, with fine Garden, all finely located in the upper part of the city, containing a full half block—will be sold a bargain and on liberal terms of payment if applied for soon. Real estate is rapidly improving in Sacramento, and this is a rare chance. Inquire of editor Farmer. 15

Literary Shrubbery.

[For the California Farmer.]

A Dialogue.

"It is not much the world can give,
With all its subtle art
Of gold, and gems, to sanctify,
And purify, the heart;
But O, if those who cluster round
The altar, and the hearth,
Have loving words and pleasant smiles,
How beautiful is earth!"

How true, and beautiful because true, are the lines above. But some one has said "the truth is not to be spoken at all times." Perhaps it is not, yet it has got to come sometime, for children are getting to be so inquisitive that they will bring out strange arguments, sometimes. Now I am going to give a dialogue, from a small book which I read when a child. Perhaps I shall not get it word for word, but will give it from memory's page as appropriate for the times:

Daniel. "Father, Mr. W. is going to lecture at our school-house, next Wednesday evening, on slavery, mayn't I go to hear him?"

Father. "Go to hear him! No indeed you shall not."

D. "Why, Father?"

F. "Why? Because he is a brawler, a lunatic, a cut-throat, and an incendiary."

D. "Why, Father, he once lectured here on Temperance, and you said he was a very good man, and you hoped, one day, to see me just such a man."

F. "Did I? Well, I had forgotten that I ever said so."

D. "How, then, can he be a brawler, a lunatic, a cut-throat, and an incendiary?"

F. "Go to bed, Daniel, you are too young to talk about such things."

D, "Good night, Father."

One day a farmer, driving along in his wagon, stopped and took in a little boy. The boy seemed much pleased. But soon he seemed filled with wonder. He would look for a while at the little front wheel, and then at the big hind wheel. The farmer couldn't think why he kept looking and laughing, till, at length, driving his horse quite fast, the boy forgetting himself, burst out in a fit of laughter, and spoke to the little front wheel. "Go it, little wheel, big wheel can't catch you."

Greenbacks! Greenbacks!

We receive Greenbacks for subscriptions to the California Farmer, and allow the ruling premium on Gold!

It is a well known fact to all conversant with newspaper publishers, that since the war commenced the cost of publishing a paper has very greatly increased, so much so as to stop hundreds of papers, over the United States. Yet it has been our pride not to add cost to our *subscribers*, but to relieve them although we have made sacrifices of thousands to carry out our principles, and do what we esteemed our duty to uphold the credit of our country both by precept and example. From the first we announced that we would receive Treasury Notes at par for *Subscriptions to the Farmer*. But the notes were rejected, here, as currency and many of our subscribers have, in conformity with the custom, continued to pay us in gold; yet we have never refused greenbacks at their face value when sent us by subscribers, though it has subjected us to serious loss from our being obliged (from the rejection of the currency as mentioned), to pay gold in our disbursements. At the present cost of all articles, we could not do a paying business by receiving greenbacks at par, at our present rates. But to make the thing work equally for all our subscribers, as well as conform to what we think our duty, we propose to adopt the greenback basis, and raise our subscription price to $5 a year, payable in greenbacks.

As it is evident to us now that the people of California are determined to sustain the National Government and make Treasury Notes the medium of trade, generally, we announce as follows:

The price of subscription to the CALIFORNIA FARMER, hereafter, will be $5 a year, payable in U. S. Legal Tender notes; this being a safe and easy medium of transmission, by mail; and we will allow the ruling premium when gold is tendered in payment

We also announce, to all who are indebted to us for *Subscriptions* to the CALIFORNIA FARMER, send along your *Greenbacks*. They will come to us with the glorious impress of our country's sovereignty, and every pecuniary sacrifice we may make we cheerfully lay upon the altar of that country whose faith stands pledged in these notes and whose integrity *we dare not question*.

We make this change in the terms of our subscription *not to advance the present cost* of our journal, but rather to make it cheaper to all, for at the *present nominal* value of the notes it will cost the subscriber but $3 25.

We do hope also that all to whom we have sent bills, all who are indebted to us, will now see how easy we make it for them to pay their dues. It must be remembered also that all who owe for this paper, a bill of six month's standing should, by the terms already heretofore announced, remit us $5, and g. b.'s to that amount will be very acceptable.

We shall now have the consciousness of having taken a true step to sustain the National Currency, and we shall know who will "go and do likewise."

We do hope that the friends of a good, sound National Currency will give us their aid and cooperate by sending us their names for the FARMER.

Wood's Prize Mower!

AS NOW IMPROVED AND STRENGTHENED, and adapted to the Pacific Coast, will beat all other Mowers in use, and has so been awarded at all Exhibitions in the world

CHEAPEST AND BEST Mower in Market.

TREADWELL & CO.,
Sole Agents for the Pacific Coast.

Can be had at our Stores in San Francisco, Sacramento, and Marysville. 1

The "Mabury Header."

THIS SPLENDID HEADER HAS COMPLETELY eclipsed all others in use in the Western States.

The advantages are, EASE OF WORKING, and the facility with which it TURNS ON ITS OWN GROUND, enabling the operator to keep the corners of his field square.

Other Machines are being laid aside in order to avail of the advantages of the MABURY HEADER.

For sale by

TREADWELL & CO.,
San Francisco, Sacramento, and Marysville.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] April 14.

Since our last weekly report no new features have presented themselves in our Grain Market. The remarks preceding our Prices Current then, will apply favorably to this week's Market. Wheat is offering less freely, a sufficient amount, however, to supply the demand, is on the Market. Holders, in some cases, seem dissatisfied, and regret that they did not sell at past prices. Many, who were offered from 2 to 2½c per pound (and did not sell) are now holding on in hopes of a favorable change for them, and should the Wheat Market again reach 2c we doubt not the offerings will be large. In connection with the Wheat Market, we think it but just to ourselves, and many others who are among the oldest established houses in this city, to present a copy of a report—(Puff, or rather an Advertisement)—that appeared under the head of Domestic Produce Market, Tuesday, April, 12, in the Evening Bulletin:

Domestic Produce Market.—Tuesday, April 12—1 p. m. We have been shown a letter, to-day, from a leading Sacramento house, extensively engaged in Grain dealing, addressed to a commission dealer and buyer of Wheat in this city upon the subject of short weight in various invoices and parcels of Wheat purchased in this market. The writer says:

"We wish to call your attention to the short weight on Wheat. We cannot stand this tariff; it is all wrong, sure. For instance: A lot, of 1139 sks, fell short 3534 lbs; 305 sks; short 854 lbs; 323 do, short 1000 lbs; 255 do, short 1051 lbs. These parcels were all received recently. We weigh all Wheat received by us, as it arrives. There is certainly something wrong going on which must be remedied. These lots of Wheat were all shipped by different vessels, bought in various parcels, and weighed by different weighers at separate wharfs and warehouses, and yet there is a large deficiency in weight. There is no such thing as a loss of 3 to 5lbs of Grain per sack, if honestly weighed in San Francisco and shipped to Sacramento. Scales will not vary this much, and this leak must be looked after and stopped. We do not charge you nor others of whom we buy, with intentional fraud or systematic wrong-doing; but to the laborers or employees that do the work or carrying. Please make this public, as a matter of business. The wrong must be remedied. There is a redress to be had somewhere; and it is high time that more care was exercised in the weighing and delivering of Grain in California. The loss of weight is too great, and no business can stand it, if honestly pursued.

"We are having good growing weather, but many fields of sowed ground will not produce Grain, while many others will."

In referring to the above serious charge, we would remark that if the grain sacks are good, there should be no loss of weight in its transportation. Still it is an undeniable fact that a large proportion of the bags used for the carrying of Grain are light and flimsy, made of poor material and entirely unfitted for the purpose. By the use of such sacks there must of necessity be a loss in weight. Bags will and do burst and tear in handling, on the wharf, on the drays, in the hold of vessels—in fact, they are liable to constant breakage. Any person walking on the wharfs where grain is landed will often see piles of Wheat and other grains spilled on the ground, and there left to waste. Go also into the hold of any grain-carrying vessel and there will also be found much loss. Perhaps several bags out of a thousand might be gathered up with care in the transmission of Wheat, through all the channels of its conveyance, from the farmer to its final resting place in the mill. So that after all the serious charges of our neighbor at Sacramento, they may in truth be chargeable to the inferior quality of the bags used rather than to the carrier thereof. However, the question is an important one, and ought to be well ventilated and the evil be remedied at once. At all events, give us a full supply of Campbell's extra-heavy English hand-sewed Grain Sacks, and we venture to say that there will be no more complaints of this kind sent to this office for publication in our columns.

We contend that there are some honest, fair traders and dealers engaged in the Produce business in this city and such a wholesale onslaught should be rebuked. If the Sacramento-city merchant that has taken up his abode with us, knows where the odium or stigma belongs, let him give names. A few years since an amusing affair to some (but an expressive one to the party principal in interest) occured in this city. We condense as much as possible:

A capitalist bought a mill, and at a high price bought a large amount of Wheat which went into storehouses, and in the course of time was manufactured into Flour and sold. When the business was closed up it proved a heavy loss, although large prices were obtained for the Flour. Investigation showed the profit on the wrong side of the balance sheet. The only way the loss could be accounted for—because all were honest men here in those times—was that the rats had destroyed *many, many thousand pounds*. Questions were freely asked of millers: How much Wheat rats would eat? and in course of inquiry the answer was by question, first, "how many rats?" Interested party—"all the rats, *all, all* the rats, all the *d——d* rats." This story savors much of the first, and one should be told with the other.

In Feed and Feed-Grains there has been a marked decline. Consumers now are using every thing in way of substitutes. The demand for Barley and Oats has materially fallen off. Hay, Straw, Bran, etc, are all much easier in price for the buyer. For Beans, Corn, Buckwheat, etc., there is but a limited demand. There is still a great diversity of opinion relative to the future crop. The past few warm days have again started croakers, and the many statements they advance to support their arguments, are amusing; another good shower will quiet their fears and reassure all of there being no cause of alarm. Sack-makers are a good barometer of the prospects of the crops; to know that they have already canvassed the country and are so well satisfied they have secured the bulk of the grain sacks and sacking material here and to arrive. This is unfortunate for farmers and leads us to believe that the heavy sack-tax is not yet to be ignored. In fact, so long as a few shippers are able to control and dictate the grain market of California, so long will farmers be oppressed. We should invite competition, for only on competition can fair prices be realized. The more buyers there are in the market the better it is for all parties concerned. Our China trade is one of much importance and rapidly on the increase. The past course pursued by the China merchants has given satisfaction both here in China, and their future grain demand will be large.

Our exports are as follows: Per Hamburg Bark Horburg, for Auckland, N. Z., 5000 qr-sks Flour; 1476 sks Oats. Per Bark Sarata, for Victoria, 650 sks Barley; 026 sks Beans; Flour 100 hf and 400 qr-sks; Oats 206 sks. Per Russian Bark Oscar & George, for Victoria, 126 bales Hay. Per Ship Galatea, Flour 300 bbls, 1000 hf and 1000 qr-sks. Ex steamer J. L. Stephens, for Mexico, 1310 hf sks and 203 qr sks Flour; 100 sks Barley. Ex Bark Live Yankee, for Victoria, 2124 qr-sks Flour; 20 sks Oats.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 23,026 sks, Barley 4507 sks, Oats 1147 sks, Beans 105 sks, Potatoes 1619 sks, Flour 1600 qr-sks, Bran 300 sks, Hay 1228 bales, Wool 210 bales, Corn 80 sks, Salt 400 sks, Straw 302 bales, Cornmeal 72 sks.

Also, Coastwise: Potatoes 4072 sks, Barley 612 sks, Oats 1810 sks, Wool 168 bales, Wheat 1429 sks, Beans 664 sks.

BY CONTINENTAL TELEGRAPH.

DATES TO APRIL. 14.

A boiler at Merrick & Son's foundry exploded at Philadelphia, April 6th, causing much loss of life. Seven workmen were killed and over 30 wounded 700 men are temporarily thrown out of employment. The explosion will cause much delay in the machinery for Government steamers.

The Ocean Queen, from Aspinwall March 25th, arrived at New York, April 6th. We see in the list of passengers is Samuel Ward, bearer of the Central American Transit Company's ratified contract with Nicaragua. The House of Deputies had rejected Capt. Pine's British railroad project. Medina was elected President of Honduras. The Nicaragua Congress had refused to accept President Martine's resignation. A disastrous fire took place at Valparaiso on the 23d of February, which destroyed $400,000 worth of property.

The Supreme Court has sued an injunction restraining the Trustees of the Mariposa Company from issuing more bonds, which the Company propose to do to the amount of $2,000,000.

John O. Rives, formerly of the firm of Blair & Rives, and for many years publisher of the Congressional Globe, containing the official reports of the debates in Congress, died at Washington on Sunday, the 10th.

The President has recognized Gov. Hahn as Civil Governor of Louisiana. He has also conferred on him the powers of Military Governor. These powers are doubtless intended to be temporary, and to be withdrawn so soon as the people have adopted the State Constitution.

General Sherman, after a careful general inspection of the troops and position in East Tennessee and Northern Alabama, has returned to headquarters at Nashville.

All sutlers have been ordered to leave the Army of the Potomac before the end of the week.

The Forrest excitement is over. It is supposed he is now far on his way to the South, carrying the plunder taken at Paducah, and the horses, mules, etc., stolen on his transit over the country.

The Washington War Department is, about weeding out unemployed Generals to the number of 30 or more, to make room for the promotion of others.

Troops are now raised as rapidly as the Government equip them. It is rumored that if volunteering continues at the present rate the draft may be avoided in New York, and other States.

A special to the Times says Gen. Sedgwick testified before the Committee on the Conduct of the War. He justified the conduct of Gen. Meade at the battle of Gettysburg, and was very severe on Hooker. He also laid before the Committee many other important orders in connection with that movement which never have been made public.

In the debate in the House, April 8th, Mr. Long of Ohio declared he would rather recognize the Southern Confederacy than continue the war for the subjugation of the South. Speaker Colfax offered a resolution for his expulsion. During the discussion Harris of Maryland declared he was not only in favor of the recognition of the Confederacy but of acquiescing in secession. This declaration caused considerable excitement, and at the close of the debate Washburne offered a resolution for Harris's expulsion, which was lost—ayes 81, noes 53—a two-thirds vote being required. It will be impossible to obtain the requisite vote to expel Long. The resolution is not so strong as in Harris's case, which declared the latter unworthy of a seat in Congress. All the Democrats voted against the expulsion of Harris. Subsequent to the vote in the House on the expulsion of Harris, Schenck offered a resolution declaring Harris unworthy to be a member of the House, and that he is hereby censured. Eldridge moved to lay the resolution on the table. Lost—23 to 80. The resolution to censure then passed by a vote of 93 to 18. During the debate Orth of Indiana, called Harris of Illinois, a traitor, and said that he should be sent to the capitol prison. Harris retorted by calling Orth a liar.

The National Bank Bill was laid on the table by a vote of nearly two to one. This is considered tantamount to a defeat of the measure.

The Senate Military Committee reported a large number of names for confirmation. Schofield and Gillmore were reported against. The latter officer was furiously assailed by several of the Committee, who charged him with being the originator of the Florida expedition.

Mr Collins has returned to Washington after nearly two years absence in Russia and England. The negotiations for the right of way and constructions of a telegraph across Asiatic Russia, Russian America, and British Columbia, so as to connect Europe with America via Behrings Straits, having been brought to a satisfactory conclusion under very favorable terms, he now awaits the final action of Congress, having in view the cooperation of our Government.

The Rev. Dr. Bellows and the Zoyara equestrian troupe sailed April 4th for California.

The Committee on Manufactures have made a report relative to the duties on wool. They say the duties on imported low grades of wool would not compete with domestic products and has not been realized. Seven-tenths of all the importation of last year was invoiced below the minimum of 18 cents per pound, the whole averageing less than 17 cents. This has defrauded the Treasury, and is doing great injustice to wool growers. The entire duties the last year did not produce more than $500,000. The Committee recommended a duty of 5 per cent. on wools under 12 cents to be charged, and a specific duty of 6 cents per pound and an ad valorem duty of 28 per cent, on wool costing over 24 cents per pound, and 20 per cent. ad valorem at the port where the duty is paid.

The total amount of wool imported during the last fiscal year was nearly 72,000,000 pounds, costing over $112,000,000.

Mrs. Lucretia Clay, a relation of Henry Clay, died at her residence near Lexington April 4th aged 83.

The Navy Department has received advices of the capture of the steamers Sumter and Hattie Brooks, by the Columbine of the South Atlantic Squadron. The latter is a very valuable prize.

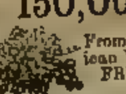
The heaviest freshet known for two years occurred on the line of the Orange and Alexandria Railroad last Saturday night. The line is said to be badly damaged. At Cameron Run, 4 miles from Alexandria, the water ran entirely over the track and bridges. At that point heavy slides occurred, and deep cuts have been made between Springfield and Beck Station. Bull Run bridge was washed away. Broad Run and Kettle Run bridges were badly damaged.

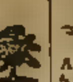
A dispatch from Cairo, April 14th, says no demonstration, beyond the bravado demand for the surrender of Columbus, has been made by the rebels. Their force left yesterday in the direction of Mayfield. A dispatch from Col. Hicks, at Paducah, says the place was attacked this morning, by a force of rebels—the number not stated. Word was sent in that an hour would be allowed noncombatants to leave, at the expiration of which time a small force attacked the place and fought for some time, while their spare men were busy stealing horses. They were finally shelled off by Col. Hicks and the gunboats. The garrison has been reinforced, and Col. Hicks is confident of his entire ability to protect himself.

The steamer Platte Valley from Memphis, is reported to have arrived from Fort Pillow. While the battle was going on, the rebel force, about 6,000, was under the command of Forest in person. The rebels appeared first with a flag of truce, and placed their troops at daylight while the demand for the surrender was being considered, and then opened with artillery and small arms. They took one fort, turned its heavy guns upon Pillow, and poured death and destruction into our ranks. Col. Bradford was wounded, and, seeing he could not hold out, though aided by the gunboats, finally capitulated at three in the afternoon. The enemy came in an hour after, and cruelly butchered every colored soldier they could lay their hands on, and the officers commanding them. The steamer Platte Valley stopped at Fort Pillow, under a flag of truce. While the wounded were being brought on board, passengers saw the rebel soldiers butchering the colored men on the field, and mutilating the bodies of those already dead—mostly those of colored soldiers. It is stated that out of 600 in the garrison, only 200 are alive, and some of these were wounded after the capitulation. The rebels commenced dismantling the works, carrying off what guns there were there. It is supposed they will not endeavor to hold the fort, but evacuate it soon.

Forrest is reported to have sent across the Coldwater, near Jackson, recently, 3,000 horses and 1,000 wagons, loaded with plunder.

The draft is postponed, probably, until June 1st.





The California column, 8,000 strong, have arrived in Texas, and joined the Union army.

Gold.—Private dispatches quote gold at 179@180, in New York, on the 14th April.

SEED, PLANTS, ETC.

THREE PREMIUMS for BEST Varieties FOREIGN GRAPES.

150,000 Grape-Roots

From imported Foreign, and American Vines of my own importation, FRUIT TREES, Etc., Etc.

Having imported myself from France, Germany, Italy, and Dr Grant of N. Y., I offer for sale this season, as choice a lot of FOREIGN GRAPE ROOTS and CUTTINGS as can be had in this State, and as cheap as any reliable nurseryman will sell. All the Vines and Trees have borne fruit with me, and I guarantee everything I sell to be TRUE TO NAME, or refund the money.

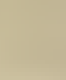
AMERICAN VARIETIES GRAPE-ROOTS, 1 and 2 years old, and Cuttings:
Delaware, Diana, Concord, Iona, Union Village, Lincoln, Anna (white), Catawba, Isabella, etc.

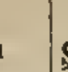
EUROPEAN VARIETIES GRAPE ROOTS, 1 and 2 years old, and countless numbers of Cuttings:
True black, red, and white Burgundy (Pineaux), Tramineer, Rulander, Madeira Winegrape, Riessling, white, red, and black Frontignan, Malaga, Parsley, Cannon-Hall and White Muscat of Alexandria, and over 100 varieties more.

ALSO:—10.000 rooted vines 2 and 3 years old, LOS ANGELES, very cheap, and any amount of Cuttings of all varieties.

Also a limited lot of
DOWNING'S EVER-BEARING MULBERRY TREES
1 year from bud, extra large;
French, German, and Swiss Prunes (Fellenberg's Zwetshe).

....ALSO....





Pear, Apple, Plum, Peach, etc; Lawton Blackberries, English Gooseberries, and all kinds of Trees, and Shrubs. Cions unlimited, and cheap, of the above.

I intend to close out the Nursery Business, and sell as low as the lowest. For prices or orders, send per Wells, Fargo & Co, or mail, to

Louis E. Miller's
Mountain Vineyard,
"SOLLAH,"
Rattlesnake Bar Postoffice, Placer Co.
January 1, 1864. 20-20

1864. - - 1864.

American Seed Store
206 J STREET,
Sacramento.

I AM CONSTANTLY RECEIVING BY Isthmus Express from the best Eastern Seed Growers—

A LARGE AND SPLENDID COLLECTION OF
GARDEN,
FLOWER,
FRUIT,
TREE,
SHRUB, and
Agricultural Seeds,

I can confidently assert, that I have as large and fine a selection of SEEDS as have ever been imported into this State, and of the growth of 1863

My assortment of GRASS and CLOVER SEEDS is large, consisting of—
White and Red Clover; Kentucky Blue Grass; Alfalfa or Chile Clover; Orchard Grass; Sainfoin Grass; Red-top Grass; Lucerne; Hungarian Grass; Rye Grass;
And other varieties for Lawns, &c, &c.

Also—Every variety of
Tobacco seed, Cotton seed, Madder seed, Opium seed.

I have also just received from Europe a splendid collection of BULBOUS ROOTS, such as
Hyacinths, Tulips, Lilies, Crocus, Narcissus, Jonquils, Gladiolus, Iris, Ixias, Bulbocodiums, &c, &c, &c

☞ Dealers furnished in Packages suitable for their trade, at the Lowest Rates.

Gardeners and Ranchmen can be assured their orders will be filled at lowest prices. Catalogues of all our Seeds, etc, on application at store or by mail, or can be had at Farmer Office, San Francisco.

W. R. STRONG,
15-tapl 206 J street, Sacramento.

PATENT RIGHTS FOR SALE.

THE FOLLOWING PATENT RIGHTS OF NEW AND valuable inventions (of which we have models to show their value) are now offered for the States of California and Oregon, and Utah and Washington Territories.

NO. 1. THE MECHANIC'S SPIRIT LEVEL.
Patented September 13, 1859.
This Implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet out. Builders will do well to examine the model.

NO. 2. IMPROVED CLOTHES REEL AND BAR.
Patented January, 3, 1860.
This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery, or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines, neat when used and ornamental when not in use.

NO. 3. A CORN CULTIVATOR.
With this implement the soil is first thoroughly plowed and deeply pulverized, and on the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

NO. 4. A MUSKETO BAR.
This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

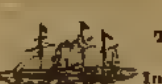
NO. 5. HYDE'S PATENT POST-DRIVER.
A most excellent labor and money-saving machine, for which we offer rights.

NO. 6. SEED-SOWER.
This is a new inventions, and one of great importance to all who sow grain, or any garden seeds. The working model can be seen at the Farmer's Reading-room.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to
COL. WARREN, Editor Farmer

A Fine Ranch in Contra Costa County.

A FINE RANCH IN THIS COUNTY IS NOW OFfered for sale at a Bargain, if applied for soon, as it will be sold at a price worthy special attention.



The Farm contains 208 acres; 70 acres of this are fenced—the balance is well and heavy timbered. This Farm will cut 2000 cords of wood, enough to pay for the Ranch.

It is an excellent Hay and Grain Ranch and the products sell well and at good prices on the spot, this being the head of navigation and near market: 8 miles from Martinez and 4 1-2 miles from Pacheco.

The Title is good and possession given immediately. The Buildings are common, but the Land is No 1. For Price and Terms inquire of the Editor of this paper who will give all particulars.

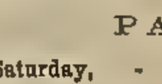
SAN FRANCISCO AND SAN JOSE RAILROAD.

Two Trains Daily, Each Way

CHANGE OF TIME

ON AND AFTER FEBRUARY 15, 1864, the San Francisco and San Jose Railroad Company will run trains each way, daily, leaving the Depot on Brannan street between Third and Fourth, for San Jose and Intermediate stations, as follows:
Leave San Francisco at 8 a. m., and 4 p. m.
Leave San Mateo at 8:55 a. m. and 4:55 p. m.
Leave Redwood City at 9:20 a. m. and 5:20 p. m.
Leave Santa Clara at 10:10 a. m. and 6:10 p. m.
Arriving at San Jose at 10:20 a. m. and 6.20 p. m.

RETURNING.
Leave San Jose at 7:30 a. m. and 3:30 p. m.
Leave Santa Clara at 7:40 a. m. and 3:40 p. m.
Leave Redwood City at 8:30 a. m. and 4:30 p. m.
Leave San Mateo at 8:55 a. m. and 4:55 p. m.
Arrive at San Francisco at 9:50 a. m. and 5:50 p. m.



FREIGHT.
Our road being completed from the City of San Francisco to the City of San Jose, we are prepared to take Freight to either end of the line, or to and from any Station on the Road, at the lowest rates.

COMMUTATION TICKETS.
Parties wishing to commute between here and San Jose, or between Stations, can procure tickets at greatly reduced rates, by applying to any Station Agent, or at the office of the Company.

☞ Passengers can reach the Depot by either the Third or Fourth street lines of city cars.
A. H. HOUSTON,
21-33m General Superintendent.

No Opposition until April 23d.

THE PEOPLE'S
OPPOSITION
STEAMSHIP LINE
FOR NEW YORK
VIA PANAMA.
GREAT REDUCTION IN RATES

THE DOUBLE-ENGINE STEAMER
MOSES TAYLOR,
J. H. BLETHEN ....Commander
Will be dispatched for
PANAMA.
Saturday, - - - April 23, 1864
From Mission street Wharf at 9 o'clock a. m.
Connecting at Aspinwall, by the PANAMA RAILROAD
With the splendid Steamship
ILLINOIS
2,500 Tons.
FOR NEW YORK.

The MOSES TAYLOR, since her last trip, has been on Dry Dock, newly coppered, thoroughly overhauled and painted, making her accommodations equal to any on the coast.
For further information, apply to
I. K. ROBERTS, Agent.
6-td No. 101 Battery street, cor of Pine, up stairs.

California Steam Navigation Company
Departure daily from Broadway wharf, at 4 o'clock, P.M.

CARRYING UNITED STATES MAIL.

THE FAST AND SPLENDID STEAMERS
CHRYSOPOLIS and YOSEMITE
Will leave on alternate days for SACRAMENTO, at 4 o'clock p. m., from Broadway wharf.

Steamer CHRYSOPOLIS, Chadwick, Master, will leave on Tuesdays, Thursdays and Saturdays. Steamer YOSEMITE, Poole, Master, will leave on Mondays, Wednesdays and Fridays.

Other steamers will also leave for STOCKTON every day at 4 o'clock, p. m. (Sundays excepted), from Broadway Wharf.

For Marysville and Intermediate Landings Every Day.
Steamer YOUNG AMERICA, Littleton, Master, and Steamer SWALLOW, Summers, Master, will leave Sacramento on alternate days, at 6 o'clock a. m.

ONE TRIP A WEEK FOR COLUSA, RED BLUFF, AND INTERMEDIATE LANDINGS.
The steamers LARK and GEM will leave for the above named places on SATURDAYS, at 7 o'clock, a. m. from the Storeship, foot of K street, Sacramento.
For freight or passage by any of the above boats, apply on board, or at the Office of the Company, corner of Jackson and Front streets.

CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES.

VOLUME XXI. SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, APRIL 22, 1864. NUMBER 12.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

PUBLISHED EVERY FRIDAY MORNING.
BY WARREN & CO.

Office—No. 220 Clay street (up stairs), below Battery.
SAN FRANCISCO

TERMS OF SUBSCRIPTION--IN GREENBACKS.

By mail, for one year, $5; for six months, 2 50. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or $6 a year in advance.

☞ Advertisements and Subscriptions must be paid for in advance.

JOB-WORK—Of every description, done with promptness, at fair rates orders will be faithfully attended to.

☞ All letters on business connected with the office should be addressed to PUBLISHER CALIFORNIA FARMER, San Francisco, Cal.

Letter from Utah.

We have good news from the farming interest of the Great Salt Lake district. We are pleased to receive the statistics, kindly sent us, and therefore recognize the order for our Journal, and shall try to repay the favor of such interchange of courtesy. It will be seen, by our readers, that grain and produce and business all advances under the auspices of the *Green Back Currency*, far beyond the difference of *Exchange*. Grain 5c ₱ lb, is good news for the farmer:

GREAT SALT LAKE CITY, April 12th, 1864.

EDITOR CALIFORNIA FARMER:

The Directors of the "Deseret Agricultural and Manufacturing Society," at their last meeting, instructed me to remit $5 in Treasury Note, for your valuable paper, the CALIFORNIA FARMER. * * *

The weather is now beautiful, after the earth has been thoroughly soaked with timely snow, hail and rain. Prospects are good, here, for our farmers, the recent falling weather having replenished the mountains with snow for our farmers' use. Provisions are unusually high: Grain having more than doubled in value within our borders, to supply our inhabitants, but the heavy influx of goldseekers, together with supplying the California Volunteers, and the merchants who freight for the Idaho and Reese River miners, have made a heavy demand for our breadstuffs. Barley and oats command almost any price, and have ranged within the last few weeks between $2 and $3 ₱ bushel; the former generally 50c in advance of the latter; but little, however, can be obtained at these prices. Butter is selling at 90c ₱ lb, the usual price at this time of the year being 25c ₱ lb. All our currency, here, is United States Treasury Notes, and Postal Currecy, except a little change issued by our City Corporation. Respectfully yours,

ROB'T L. CAMPBELL,
Secretary, D. A. & M. Society

Thoughts relative to Monuments.

EDITOR CALIFORNIA FARMER:

You are a utilitarian—so am I. You approve of the useful as well as the ornamental—so do I. We believe in improvements—something that will benefit our fellow-men. It is appropriate that we erect monuments, to commemorate the worth of the good and great men, and to keep in memory important events that transpire in the world; but may we not find other ways of handing down to future ages the names of those we love to honor and immortalize, than by spending thousands in raising towering spires of granite and marble, which must forever remain useless—merely to be gazed at and soon forgotten?

Could we consult the spirits of those for whom thousands are cheerfully given for the erection of costly monuments to their memory, I think they would say: devote the money in relieving suffering humanity, by purchasing land and erecting suitable buildings for the poor firemen, soldiers or sailors who have become disabled in their various callings, and to whom we owe a debt of gratitude for their defense of our lives, property, and country; suitable inscriptions can cover the buildings to denote the motives or objects which moved the people to erect these monuments in memory of departed friends.

I pen these thoughts, hoping that others may coincide with the suggestions, or make any other application tending to a similar end.

Let the minds of the people be opened to this subject, and I believe nine-tenths of the givers would approve of combining usefulness with the ornamental, utility with generosity, and philanthropy with patriotism; and coming generations would rise up and bless them. D. C. K.

OAKLAND, April 8th, 1864.

THE GREAT SONOMA VALLEY SAFE.—From information given us every day by visitors to our Reading Rooms, we have encouraging news from almost all sections of our State, almost without exception. We have especially flattering news from the great Sonoma Valley, we mean embracing all Napa, Sonoma, Petaluma, Santa Rosa. Every kind of product is promising, grain fine, fruit abundant, vegetation universally good, so that croakers may go and take a dose of ipecac and remove all the nausea from their stomachs, brains, and pockets.

From the Country.

SUISUN CITY, April 10th, 1864.

EDITOR CALIFORNIA FARMER:

In regard to your queries respecting crops, etc, I will say that we do not consider the crops yet out of danger. We think it best for the farmers to sell at any and all times when they can realize the highest prices at which wheat can be shipped for we depend on the shippers for a market; and anything above their prices is speculation, and the market will have to drop back to their figures sooner or later.

A steady market is better for the miller, provided there is a reasonable profit; otherwise they will have to depend on the fluctuations of the market for profit or loss, as the case may be.

We think, with the probability of getting a few showers along—the time for heavy rains having passed—that a half crop would be a fair average of what we expect to raise in Suisun.

Yours, respectfully, M. S.

Coming to California.

TECUMSEH, March 17, 1864.

EDITOR CALIFORNIA FARMER:

My dear sir: I hope you will excuse the liberty I take in writing you for information, but the position you hold at the head of the chief agricultural paper of your State, makes you, *ex-officio*, the proper one, to whom all in my circumstances should apply. I wish to inquire what part of your State is, in your opinion, best adapted to the cultivation of the grape—taking into consideration *all* circumstances of site, soil, nearness to market, and whatever else should be considered. Also, what time of the year you think best adapted for me to come to California with such an object in view? Everything in your State is so different from things here, that I have never been able to find out even the time of the year during which vines are planted. I have here a small vineyard, which yields so well as to astonish all not conversant with the properties of vines, but I do not like the climate. The winters are too cold. Also, please give me some idea how much capital would be required to begin in a small way—plant a few acres with vines and fruit trees—and the length of time necessary to wait before the returns would begin to come in. Any return to these questions you may give, will be gratefully received.

I remain yours,
WM. A. PATTERSON.

We give the above letter as it comes to us to show the desire on the part of the people in other States to come to California, and to show, also, the need that information should be conveyed to them, so they can come to us. Every lover of this State should send information home, and bring all the good folks hither they can.

In answer to our new correspondent, we say, that in every county of it the grape can be successfully grown. In a majority it is pre-eminently successful.

When our friend comes to California, we will show him *twenty valleys* as beautiful as ever greeted the eye of man, where the grape never fails of a crop, and will yield double any product ever gathered in the old States. We can show him locations near market, and every inducement and prospect of a successful result, especially to one who has knowledge and skill. *We have no cold winters here*, save in the mountains. Our markets are full of luxurious fruits, including strawberries, all the year round.

As to the capital required—bring all you can. The more the better. No place so good as this, no business better than vine-growing or fruit-raising. Fruit trees begin to bear in two years—often the first—heavy crops the third and fourth year.

We recommend all who are good cultivators to come, and to bring all the capital they can. If they will call at the Farmer's Reading-room, they can find maps of all parts of the State—registers of land for sale, farms, vineyards, orchards for sale, and every facility to aid them in finding a good and permanent home.

We send a goodly number of our FARMERS to our correspondent, desiring them to be circulated, and at the same time advising all who wish to be advised about our California—"the garden of the world"—to become subscribers, and send us those pretty "Treasury notes" so abundant there. A "V" secures a FARMER for a year, and the information we give is worth five times that sum to all who wish to come to California.

TO DISTINGUISH ARTIFICIALLY-COLORED WINES.—M. Blume gives the following simple test:—"Saturate a piece of bread crumb with the wine to be tested, and place it in a plate full of water. If the wine is artificially colored, the water very soon becomes colored reddish violet; but if the coloring matter is natural, the water, after a quarter or half an hour, is but very little colored, and a slight opalescence only is perceptible. The test depends upon the difficult solubility of the real coloring matters of wine in water free from tartaric acid."

[Let this be tried.]

The Science of Creation.

THE following highly important truths should receive the careful attention of all stock breeders, who desire truly to understand and advance in the highest degree their profession.

The theory here promulgated was made known to us in France, from the Academy of Science, while on a European tour in 1846–7. It was then for the first time advanced, as also another principle on the same theory of vital moment, and acting upon "nature's laws," the animals created are always of a better and higher character.

The advancement of truth in this connection must inevitably lead to a series of thought of the highest moment to every reflective mind.

When the world was created, as we read in sacred writings, after the work was once perfected, and Man was created, man was made Lord of the creation. Yet man has groped his way in the dark, neglectful and forgetful of his high calling. In all the orders of animals, from the lowest up to the highest, man, God's laws and Nature's laws have been violated, and thus we see all things by man created sadly degenerated. Light is now breaking. Who will receive it? The following was published in an Eastern exchange.

Every animal and plant grows up from a single, simple cell, produced by the female. This is called in plants an ovule, and in animals an egg. Independent vitality and organization is imparted to this cell, by contact with a product of the male plant or animal. This is called impregnation. In all, except some of the lower forms of animal life, the male and females are distinct individuals. They are equally distinct in many plants. Perhaps no power is more desired by breeders of farm stock than the ability to cause *the production of either sex at will*. Some time ago Prof. Thury of Geneva, made some very important investigations and arrived at conclusions, which if demonstrated, will be recognized as of immense importance. He submitted his views to the Academy of Sciences, and a commission was appointed to verify them. So far as we know this commission has not yet reported—but J. A. Barral, the well known agricultural writer and editor, has published a statement which we find translated in part in the Country Gentleman. From this we learn that Prof. Thury asserts *that the sex of the future animal (or plant) is settled by the maturity of the cell (ovule or egg) at the time of impregnation—a very mature cell producing male, and one less mature producing female offspring.* Thus when an animal comes in heat, the egg, though mature, is much less mature than toward the close of this period. In accordance with this theory he advises, that when heifer calves are desired, the very earliest period of a cow's coming in heat should be taken advantage of—and if a bull calf is wanted, the latest practicable moment. A series of experiments are cited, made by a son of the president of the Ag'l Society of Southern Switzerland, in Canton Vaud. This former had a herd of Swiss cows, and used a Durham Short-horn bull. He obtained heifer calves in 22 successive cases. Wishing to raise 3 yokes of steers, he selected cows of similar color and form, and bred with this object in view. The result was, six bull calves, well mated for working cattle. His own words are: "I have made in all 30 experiments by the new system, and *all have given the product sought, male or female, without a single instance of failure.* These experiments were all made myself, and I regard the system as perfectly correct and sure."

Liverpool Wool Market.

JOHN L. BOWES & BRO.'s Wool Circular, 5th March, 1864, says: The chief Wool markets in Europe have shown more animation the last fortnight, and in many instances prices are ½d dearer. Stocks on the whole are small, and of some kinds insufficient, and consumption is large. For the next three months we can only look for light receipts of medium and coarse kinds, particularly of long-stapled: of Australian and Mestizo an abundant supply is now afloat, but the latter will not be available before April, and the former in May.

The London auction sales of 35,000 bales Australian, and 17,000 bales Cape commenced 3d inst.; buyers are plentiful and competition strong; prices, compared with the November series, are from par to 1d per lb higher for Australian. Washed Cape shows no material change. Unwashed Cape, in the absence of American orders for such, has fallen 1d per lb. Australian sells at 26d to 32d for good average to extra scoured, 22d to 26d good washed fleece; Cape at 22d to 26d good average to extra scoured, 20d to 21d good long fleece, unwashed at 10d to 11d for superior, 9½d good fair, 8½d to 9d inferior to middling. At Antwerp and Havre the stock of desirable Mestizo is small, a little of passable No. 1 may be got at close on 9d, but first class lots of Merino and No. 1 are held at 5 to 10 per cent over that.

For the United States the demand continues small, excepting one operation of fully 300,000 lbs English South Down and Lincolnshire, etc, fleeces, at 21d to 24d per lb. At Marseilles 1500 bags Kersey Wool are reported at about 9d for Casablanca and Rabat, and 7¾d to 8d Mazagan. At Antwerp 500 bales Odessa Merino have been bought, and in England the business for the American market also includes 600 bales gray and black Donskoi fleece at 9d; 350 bales Camels' Hair at 8d, some small parcels of gray Donskoi Noils, Cordova, Crimean, and African, and 500 bales scoured Australian and Cape. 1,000 bales short flocks, chiefly German, are being shipped from Liverpool.

The Cultivation of the Rose.

NO country in the world can be more successful with the rose, than California, and we have never seen, in any part of Europe, even in conservatories, such perfect blooms as we have seen grown in the open air in California. The rose needs a rich soil, deep cultivation and careful pruning; with these three pre-requisites, here in our beautiful climate, we may in our open gardens put to the blush the greatest skill and most costly care of the Florists of Europe. Even the Duke of Devonshire, at his Palatial Gardens—the finest in Europe—supported at a cost of a million per year, cannot surpass the roses blooomed here.

We give the following valuable Essay, of Rev. Mr. Radclyffe, a celebrated Rose Grower, of England, as published in the Gardiner's Chronicle, at London. It will be found valuable to the grower of roses:

"The rose cause in England is as yet but in its infancy; still it spreads. The furor is national. The Rev. S. R. Hole, to whom we owe so much for bringing the rose more prominently before the public, has lighted a candle that I believe will never be extinguished. I propose now to answer a few questions that are sometimes put to me.

1. "Would you advise me to have roses on their own roots?"

"I can hardly answer such a question as this, without knowing other circumstances. I would advise no one to depend entirely upon roses on their own roots. To succeed well they require great care, till the roots are firm and strong. Rosewood roots, when matured, are very hardy. Tea-roses for out-of-door purposes, when nursed for a year or two, do well on their own roots. Elise Sauvage, Devoniensis, Sileno, Souvenir d'un Ami, Gloire de Dijon, are quite hardy on their own roots. As regards other autumnals—except Malmaison—the finest and best of all light-colored autumnals—I do not think that roses on their own roots bloom so abundantly, so continuously, or so late, as on alien stocks. There is, however, this advantage in having roses on their own roots, viz., that if the wood of a previous year is bad, or if it is killed by the winter, you may cut it down to the stump; and if it is injured there, it will still break from the roots. My advice is, have some roses on their own roots, and also other stocks. Here, no stock is so early, so bloom-producing, so continuous in producing blooms, or so late a producer, as the Manetti stock. As an old Harrow cricketer I call it the "tip and run" stock. The following autumnals here are (besides being on other stock) on their own roots, and do well: Malmaison, Gloire de Vitry, Jules Margottin, Geant des Batailles, General Jacqueminot, M. Laffay, Caroline de Sansal, Pauline Lansezeur, Cardinal Patrizzi, Proserpine, Paul Joseph, La Reine, Madame Campbell, Augusta Mie, and Baronne Provost. The five Teas and those are all that I have on their own roots.

2. "What roses won't die, or at any rate will die least?"

This has been partly answered. Confirmed rose roots will last longest; but, if these questions relate to families, then I answer that the summer roses are the hardiest of all roses. About seven years ago I procured some of Mr. Cranston, on two-feet briars. They are nearly all alive, and they are better trees than when they came here. Half of them are in my home garden, and were removed this time last year; the other half (the same kinds) are in my N. E. Garden, and have just been removed for the first time (Nov. 25). I was surprised at their splendid roots—so much better do briars root with summer roses on them than with autumnals; moreover their heads are splendid, and their wood is uninjured by summer demolitions, from which other kinds have suffered more or less. They do equally well on Manetti. From their freedom of growth, and sucking so freely at their heads, the stocks and roots are kept more healthy. Roses, however, as I have said before, will, on their own roots, and on all stocks, occasionally die. The most scientific gardener himself has not an immunity from decay and death. How unreasonable then is it to expect that roses should never decay and die! Even if they were budded on "Lignum vitæ," they would be subject to death and to

"Time's tyrannic sway."

The great wonder to me is, considering what the weather has been for the last four years, that roses, on own roots and on all stocks, have not been exterminated. The demolition in England and in France this summer has been very great. I watered all mine four times copiously during the torrid weather before the rain came, and I saved all but a very few. They gave an excellent bloom, and they are in excellent condition for next year. Owing to the mischief done to the foliage there is, however, amongst them more dead wood (this year's wood) than I ever saw before. Still there is plenty of matured wood, old and young.

I would here ask those who have lost many roses this summer, two questions—first: Did you, after the continuous rains of winter, fork the ground deeply in the spring with Parkes's fork to make the ground healthy? Secondly, after the torrid weather set in, did you water the roses copiously? If you did not do these two things, they are the main reasons why you have lost your roses, and why I have saved mine. I dare say you divided the blame between Providence and the nurserymen! I hope nurserymen do not listen.

3. "Is it best to move roses?"

This depends on circumstances. My rule is to let well alone. If a rose looks ill, or continues to do badly, I remove it. Roses may be removed annually, or biennially, into fresh ground, if it is done carefully. All depends on the *modus operandi*. The remover should dig all round the plant in a 10-inch radius, and cut off all the roots before he lifts with the spade under the plants. I have seen some dig the spade down under the plant and force it up. Of course some of the best roots are broken off close to the stock. By the above plan I have just moved 200 briar roses without the least damage to the roots. After the plant is up, cut out all broad suckers, and shorten the roots to a 6 or 8-inch radius, preserving the fringy roots as much as you can. If it is not desired to remove the plant, to stop blind wood, the roots may be pruned with good effect. Trees given to blind wood should be thinned out, but allowed to carry a liberal quantity of wood.

4. "My roses are covered with sedge; what would you do?"

Many of mine are much in the same state. I have ordered two bushels of quicklime, which I shall slake and mix with soot; and, having made it into a wash, I shall apply it with a brush. This compost is excellent for apple trees. Add a little salt, and it is good for American blight. This moss or sedge is owing to excessive moisture, and also to injury done to the foliage, and, as it grows into the rind of the tree it thus impedes its healthy functions. It is equivalent to scurf in the skin. Clean rind and clean foliage are essential to the health of the stock, and of the rose on it. A hardy rose often dies because the stock, or its roots die.

"What are the best tallies?"

Use none myself. They are apt to be lost, or the name becomes defaced. I plant my roses chiefly in straight lines, and always write their name in a book. The chief object of tallies is to enable the rosarian to know how to prune them, similar, some requiring merely thinning out and a more liberal quantity of wood than others.

6. "What is the best time to prune?"

[In California, December and January.] Taking the average of seven years as regards summer roses and autumnals (excepting Teas and Chinas, which should be pruned later, the 15th March would be the best time. The two exceptions require but little pruning.

On these and many other points, the excellent books of Mr. Rivers, Mr. W. Paul, and Mr. Cranston, give sound advice—indeed one or other, or all, should be in the library of all rosarians.

I believe that I have now answered, as well as I can, questions frequently proposed to me. The questions may seem trifling, but there are by no means immaterial.

FORT PILLOW MASSACRE.—Letters received detailing the capture of Fort Pillow, give even a more appalling description of the fiendishness of the rebels than the telegraph. Many of the wounded were shot in the hospital, and the remainder driven out, and the hospital burned. The morning after the battle rebels went about the field to shoot the negroes who had not died from previous wounds. Many of those who had escaped from the works and hospitals, who desired to be treated as prisoners of war as the rebels had promised, were ordered into line and inhumanly shot down. Of 350 colored troops, not more than 50 or 60 escaped, and not one of the officers in command of the colored troops survives. Gen. Chalmers told the correspondent that although it was against the policy of his Government to spare negro soldiers and their officers, yet he had done all in his power to stop the carnage; at the same time he believed it was right. Another officer said our white troops would have been protected, had they not been found on duty with negroes. Some wounded officers came up and say they begged the enemy not to shoot them after surrender, but in vain. Five negroes who were in the hospital had been buried alive, two of whom had dug their way out with their hands. Gen. Chalmers is reported to have been in command at the attack on Fort Pillow, at first; but Gen. Lee arriving before the battle he assumed the command. The rebels evacuated Fort Pillow, after destroying everything destructible; they burned every building, and finished by blowing up the walls and fortifications of the defensive works. It is not known in what direction they went. The rebels suffered heavily, and their wounded well filled three hospitals, a short distance in the country. Our loss was 53 white troops killed and 100 wounded, and 300 colored troops murdered in cold blood. The Senate has instructed the Committee on the Conduct of the War to inquire into the matter, and report at an early day. Earnest speeches were made by Conness and others, in favor of strict measures of retaliation. There is not much said, but there is a general gritting of the teeth among officers throughout the East and West, when the massacre at Fort Pillow is mentioned. Several officers have been heard to say that unless the Government takes retaliatory steps they should consider it their duty to shoot every man of Forrest's and Chalmer's commands they meet, taking no prisoners. The soldiers have threatened to shoot every one of Forrest's men now in prison, if they get a chance. President Lincoln, in an address at the inauguration exercises of the Maryland Fair, referred to the great change which had taken place in Baltimore the last three years. When he alluded to the massacre at Fort Pillow he said many supposed the Government did not intend to do its duty in regard to the protection of colored soldiers. He desired to say that all such were mistaken. When the question respecting colored men as soldiers was left to the Government, it rested very much with himself whether he should make soldiers of them or not. He pondered the matter carefully, and when he became convinced that it was his duty to employ them, he did not hesitate. He stood before the American people responsible for the act—responsible before the Christian world—and should stand responsible in the eye of the historian. He declared that the Government would protect them the same as white soldiers, whenever a clear and authenticated case was made out. Hitherto it had been difficult to ascertain with certainty what the Government's decision in a matter so serious should be. But in the Fort Pillow affair he thought we were likely to find a clear case. When Government does know the facts from official sources, and should they substantiate the reports, retribution will be surely given. The President's remarks were warmly applauded, and especially his determination to retaliate for the barbarous deeds of the rebels.

The First Public Lecture, Delivered in California, upon the Subject of Agriculture.

We republish the Lecture of Dr. Henry Gibbons, (one of a series), of this city, which was given in the Old Musical Hall, on Bush street, October 13th, 1853, during the *First Agricultural Fair* held in this city. We republish this Lecture to show how the seed planted in early days, for the cause of Agriculture, has matured and brought forth a glorious harvest—and to remind our readers of what was exhibited at that Fair, and ask them to prove by their coming Exhibitions, this year, that we are not going backward. It should be remembered that this Exhibition was planned and carried on by a private enterprise, and yet we think we shall be sustained, by those who remember it, when we assert that the Exhibition of that day presented many features that have never been surpassed since. We refer to the records. Some of the samples of grain, referred to, and other samples are *now* preserved and on exhibition at the "Farmer's Reading Room," after a lapse of eleven years:

It is a blessed age in which we live. The chief labor of man is not, as of old, to sunder and destroy; but rather to build, and unite and bind together. Nation to nation is linked by golden ties, stronger to their shame, be it said, than the ties of Christianity: but let us hope not to remain so forever. State to State, city to city are chained by bands of iron on the earth, and magic wires above. That oceans separate continents—as the school book used to teach—is no longer true. The interests of the human family are becoming one and universal—union is the watchword! Some who have learned but the first lesson, restrict their views to party or section; others can embrace half a continent in their prayers and labors; while others, treading in the footsteps of the glorious missionary of Bethlehem, and limiting *their* vision by no horizon, acknowledge the universal brotherhood, and aim to gather into their union the entire heritage of God.

Science and art have joined hands and become helpmates. Not a department of human pursuit, intellectual or mechanical, but receives rich benefits from other departments. All are linked together in a system of harmonious coöperation and mutual dependence. The hand helps the head and the head the hand. That any one branch of art or knowledge should stand or progress alone, is impossible. It must give aid to others and receive aid from them in return. It is the tendency of the age to establish a union of arts and sciences, as well as a union of nations.

It is late in the day to ask the question, "what have the population of a city to do with agriculture? What has the merchant to do with the construction of the plow? What the physician with the culture of wheat? the lawyer with potatoes? the reverend divine with oxen?" It is late in the day for the farmer to inquire what his occupation has to do with books; what relation the tillage of the earth has to chemistry, or to mineralogy, or to geology. It is late in the day to attempt to cover up ignorance of everything outside of the counting-house, the shop or the stable, by the stale cant of minding one's own business. The fact is, people who mind their own business are the most useless animals in the world, ignorant, selfish, heartless, soulless. If all men and women could be compelled to mind their own business, or in other words to keep within their own "appropriate sphere," there would be an end of progress; the world would come to a stand-still, and the glories of our progressive age would be tarnished and effaced. When, in the history of the world, was there ever a race so determined to attend to other people's business, as well as their own; so obstinately resolved to be cramped up in no particular sphere, as the race that inhabits the land of Washington and of Franklin? What barriers do they acknowledge in morals or in geography? what scheme of reform is beyond their efforts? what portion of the earth's surface beyond their ambition? To use a term as expressive as it is inelegant, they are a generation of *squatters;* some under the banner of moral reform, squatting on every moral field, and contending for what they deem right, and truth, and justice, regardless of consequences. Others, under the stars and stripes, and with "manifest destiny" for their watchword squatting on every spot of soil, the occupants of which are too feeble or too lazy to defend it.

Declaim as we please against extravagance, and ultraism, and fanaticism, the truth is, ultraists and fanatics are the very salt of the earth. They stir up the moral and political elements and purify the atmosphere. An old farmer once said to me at the close of a lecture on a moral theme, that he at first thought the lecturer went too far; but on second thought had changed his mind. "Because," he added, "in driving my team up a hill, it is necessary to drive the lead horses beyond the top, or the wagon don't reach it. So, if some of you lead horses, don't go beyond the right point, or the passengers who wait to be carried will never get there." The simile is a sound one. It is true in morals and politics. We give ourselves needless alarm at what we deem bold and extravagant doctrines. Even these have their use, and those who preach them may not break their necks.

The matron of the poultry-yard, who has hatched a brood of ducklings, supposing them to be her own legitimate offspring, is terribly frightened to see them rush into the water-pond. She is a true conservative, a genuine old fogy, in agonies at the daring of radicalism.

The attempt to circumscribe the range of human thought and action by appropriate spheres will ever prove futile. Many of those who would thus impose restrictions, themselves desire a wider range in another direction; while those again who make the most noise on the subject, neither attend properly to their own nor to any other sphere. It is common to advise women who are found abroad talking about their rights, to go home and darn their husband's stockings. I am not certain but that the stockings of such husbands are mostly better darned than those of their censorious advisers.

An eminent physician once made the remark to me, that he expected a change of weather when the moon should change. On asking his reason for the opinion, he had no argument to give, but simply took it for granted because such was the general impression—adding that he left all such questions to astronomers and others, and never bothered his head about subjects foreign to his profession. Now it happened that this gentleman did bother his head about sundry things foreign to his profession. He was a good "whip," and drove a pair of splendid horses. Half the time he had devoted to his stable would have revealed to him all the known secrets of meteorology. He also bothered his head very materially with wine and could expatiate eloquently on the flavor of Sauterne and Heidsick. Half the time spent over the wine cup would have given him an insight into the sublime mysteries of astronomy, with much less "botheration" to his head.

Such remarks, however, though intended to impress the hearer with the exclusive devotion of the individual to his calling, are in reality but ingenious apologies for ignorance on subjects really connected with his profession. The influence of the moon on disease, is truly an interesting theme, and cannot be investigated without reference to its reputed influence on the weather.

I knew a young lady who exhibited in her person the very perfection of the system of minding one's own business. She had spent all her life at school; could talk French, Spanish, and almost Latin; could pass her fingers over the keys of the piano with invisible celerity; could waltz irresistibly—in short could do everything required by a fashionable education, and nothing more. Having observed the frequent and by no means disagreeable association of lamb and peas on the dinner table, this most accomplished young lady inquired with infinite simplicity, what part of the lamb peas were taken from? Poor girl! She had wandered for once beyond her appropriate sphere.

In all departments of human pursuit, people who coop themselves up in the limited sphere of their calling, are fools out of that sphere and never fully wise in it. How is it possible that men should dwell on this noble planet of ours surrounded with all its beauties and glories and mysteries—and fill up the measure of life on such a stage with eyes turned away from surrounding objects and thoughts cramped into one narrow channel—how is it possible that they should do this without stunting their growth and falling short of the stature of manhood? Did God make man in his own image that he should shut out the effulgent light of heaven from his soul, till his eyes, like those of the moping owl, fit him only to prowl about the hen-roosts of traffic for a livelihood? "*Auri sacre fames!*"—Inordinate and accursed thirst for gold! How has it debased the human character, thwarted human destiny, dragged down man from heaven, enslaved and brutalized the immortal mind!

Exhibitions like that now on the carpet are admirably adapted to impress a people with the identity of the varied interests, and to turn the thoughts aside from narrow and selfish channels. Especially is this the bearing of the series of lectures devised by the enterprising and enthusiastic proprietor. There is great need in California of all such appliances. Whatever diverts attention from the sensuous to the intellectual—whatever exhumes the mind for an hour from the mountain heap of day-books, ledgers, and invoices, beneath which it is entombed—is a great public good and its author is most undoubtedly a public benefactor.

The modesty of the American people has never deterred them from enjoying and expressing a high opinion of themselves and their country. In leaving their former homes, the immigrants to California brought with them an ample supply of the spirit of boasting. If I should say that the most adventurous, enterprising and intelligent race of men under heaven, have commissioned the most adventurous, enterprising and intelligent of their number to colonize this western empire, and develope its unbounded resources, my audience will perceive nothing new or incredible in the declaration. There is in the recent settlers of this land, a degree of intellectual and moral power not to be found in the same amount of population elsewhere on God's footstool.

But to what uses has this young Hercules applied his strength? What have the people of California done with the ten talents committed to their care? Alas! have they not buried them in the earth! Are not the mass at this moment groveling spiritually, as they are physically, in the soil? How many lift their thoughts above the dust? How many wash their hands of toil to turn the pages of the Book of Knowledge? The theme is not likely to be popular. Men are not fond of being told their faults. Gratuitous counsel particularly is unpalatable. But the physician who would cure disease must first detect and expose it. As a member of this community, my destiny and that of those dearest to me on earth, interwoven with its interests, I offer no apology for plainness of speech on this subject. On the contrary, silence and concealment would require an apology.

Who, in California, reads a useful book? What proportion of our population rise above the desultory columns of the daily press, or the trashy works of fiction which infest the land, creeping like the lice of Egypt, even into the dough troughs; or at best the "Monthlies," which contain as much substantial nutriment for the mind as whipt syllabub for the body.

In the infant state of society, a few years ago, there was some excuse for such habits. The opportunities of improvement were wanting. The ameliorating influence of female society were wanting. The blessed atmosphere of home, the sterling enjoyments of domestic life were wanting. There was no place of rest for the weary spirit—no house of refuge for the troubled soul. No wonder then 'that men look downward rather than upward. No wonder then that the few moments spared from the greedy pursuit of gain were spent in amusement and dissipation. No wonder that men of intellect and vigor should acquire habits of mental inertia, and bury their souls in a living tomb.

But that day has gone by. Our wives and our children are here, and we have the fixtures of home around us. Is it not time for us to change our habits—time that our substantial and influential men, parents especially, should find some other employment for their hours of leisure than the theater and the billiard-room—not to mention worse places?—time that they should add to their stores of knowledge and to their vigor of intellect, instead of forgetting what they once learned, and suffering their energies to perish by neglect?—time that they should present a different example to their offspring, and surround the rising generation with better influences?

Early in the present year, a number of citizens, impressed with the necessity of making some provision for the intellectual and moral improvement of our young men, established the Mercantile Library Association. It was ushered into active existence under flattering auspices, and has been sustained thus far with much difficulty, owing to the utter indifference of the great mass of our population. Even the small pittance required to keep open a commodious reading room, with an excellent and rapidly increasing library, is paid grudgingly by many. The rooms of this institution form a comfortable and quiet home, well supplied with books and newspapers—the only establishment of the kind in California. Here you will find, in the evenings, a few individuals availing themselves of its benefits—sometimes as many as half a score, out of a population of 40,000 souls. Where are the merchants, the tradesmen, the professional and business men of San Francisco to be found? They are in the playhouse, in the billiard and bowling-saloons, in the groggeries. Alas, for the tastes of our people! "Where the carrion is, there will the eagles be gathered together."

We have another institution, recently formed, and now struggling for existence—the California Academy of Natural Sciences, of which our enterprising and industrious citizens know less than they do of the literary institutions of Japan. I regard the Societies that I have named as of higher importance to the vital interests of this community than the great Pacific Railroad, or any other scheme of a mercantile and financial character. They are schools for the young—to feed the mind and strengthen the intellect—to make of our children men and women, who will do honor to the name of California; to divert from base and sensual pursuits to the exalted and ennobling culture of the rational faculties. It is the duty of every lover of his country, every friend of man, to give not only his good wishes but a hearty and practical aid and comfort to all such associations.

The reputation of our city and the State, the moral welfare of the population, the interests of the rising generation, demand that such institutions should receive the good wishes and the practical aid of every citizen. The great object now is to divert men from sordid and sensual pursuits, and to induce them to look around with observing eyes, and to think. A habit of observation and reflection leads to perpetual enjoyment and to elevation of character. Exhibitions of the products of the farm, the garden, and the orchard, such as will be found in the adjoining Hall, tend to these results; especially the plan of public lectures associated with the Exhibition by the proprietors. But I will turn abruptly from this sermonizing which, unfortunately is not heard by those who most need it, and take up the remainder of my time with reference to some of the prominent features of the exhibition.

On entering the Hall you are struck with the tasteful decorations and paintings on the walls, and the profuse display of flowering plants, many of which are rare and beautiful. Prominent on the tables are enormous squashes, the largest weighing 121 pounds; onions that might bring tears of delight to the eye of a native of Wethersfield, weighing four pounds and measuring from 20 to 23 inches in circumference; beets, 36, 40, and even 51 pounds—several of the long variety, some of which measure two feet eight inches, to which another foot may be added for the missing extremity, which appears to have been pulled through by the antipodes; sweet potatoes from San Jose, a foot and upwards in length; carrots, 5, 8, and 10 pounds in weight, and turnips and cabbages raised to order, of any size called for. The most striking feature of the Vegetable Department is the potato, specimens of which, weighing four pounds, and measuring a foot or more in length, have been sent from all directions—San Jose, Santa Cruz, Alameda, Oakland, etc. Three years ago, when I landed here, it was a question whether California would ever produce a good crop of potatoes; now the soil is full of them, and thousands of bushels will rot in the earth, not worth the digging; even in Contra Costa, almost at the door of this great market, the farmer will give half his crop to the laborer who gathers it. The productiveness is almost incredible. Twelve bushels are exhibited, weight 700 pounds; the product of three potatoes grown at San Jose. It is a remarkable fact, that these large potatoes are always perfectly sound, and of excellent quality. I have heard of only two or three hollow potatoes in California. It is also remarkable that this vegetable requires no cultivation. Only plant the seed, without manure, and the work is done. Not a hoe or a plow enters the field till the crop is gathered. Weeds do not interfere, because the dry weather, which is really a blessing in this respect, prevents the germination of the seeds on the surface. There have been instances of the native farmers plowing up their entire crop and replanting, because of rains falling after the first planting, and starting the weeds. It was cheaper to replant than to till.

In the vicinity of Santa Cruz and elsewhere, the potato has been attacked by a coleopterous insect, which burrows in the eyes and perforates the tuber in all directions. The Academy of Natural Science of this city have anticipated the exigencies of the farmer in regard to the ominous pest, by making it the subject of investigation, with a view to a remedy. The ends of the potato which project from the ground are first effected; and it is quite probable that if the plants were hilled, in the Atlantic fashion; the roots would be protected from the evil. I am not aware that the potato rot has made its appearance on this coast.

Ten or twelve varieties of wheat are exhibited, the growth of California and Oregon, some of which have produced sixty to seventy bushels an acre; weight 62 to 65 lbs ℔ bushel. The productiveness of barley is extraordinary. A specimen is exhibited from a crop of one hundred and forty-nine bushels to the acre—the evidence being above dispute. Stalks of Indian corn fourteen feet high, ten feet to the ears, from San Jose; ears from a crop of one hundred bushels to the acre; luxuriant specimens also from Alameda, directly across the Bay. Whether this crop can be made a profitable crop in California, remains to be proved. The cool nights which characterize the climate of the entire country, are unfavorable to its maturation.

Oats are exhibited 9 feet 4 inches high, and one specimen 10 feet 7 inches. Stalks of this grain were shown by the ardent and ill-fated Shelton, at his exhibition two years ago, 13 feet in height.

The specimens of flour are very interesting, both for quality and the beauty of the packages, showing perfection in this important branch of manufacture, which sprang up but yesterday. Specimens are shown manufactured in various quarters of the State, equal in whiteness and quality to the celebrated brands of Gallego and Haxall, as I know from actual trial.

Among the fruits are an abundance of grapes in superb clusters, a common weight of which is 5 to 6 pounds; delicious pears, many of which exceed a pound, a cluster of four on a stem, weighing 7 pounds from that garden spot, San Jose; Pound or Bell pears, the largest weighing two pounds; Washington pears from Los Angeles, of uncommon size and beauty; apples from Oregon and California, one of which is 12 inches in circumference; three apples from a single graft a year old, from San Jose; Pearmains and Seek-no-farthers, from Capt. Morgan's, the trees planted last year, and growing directly on the coast, a few miles north of the Heads, in a sunny nook, backed by high hills to the leeward. This locality produces a spontaneous growth of the superb "Humboldt Raspberry," the fruit of which is 3 inches in circumference. It is highly worthy of cultivation, though in its native localities it is not a full bearer, and the berry is rather acid and destitute of the rich flavor of the Antwerp and other cultivated species. The plant grows abundantly in rich and moist situations on the coast to the northward.

There are exhibited some luxuriant specimens of a noxious weed called tobacco, raised in Sacramento Valley, by a gentleman who is about to engage in its cultivation. The only decent use of this plant is to kill vermin, though men with perverted appetites often cram it into their mouth and nose. You will observe also a quantity of mustard seed, weighing five and a half ounces, the product of two plants, each plant producing, by careful computation, an increase of one hundred and five thousand. With the exception of tobacco, the mustard causes more annoyance than any other weed in California. It grows in complete forests, so high as to overtop one's head when riding on a horse. It frequently takes possession of a field and ruins the crop, the stem growing six inches in circumference and effectually defying the scythe or sickle. The seeds remain in the soil and continue to germinate for many years.

Of embroidery and fine needle-work, there are specimens not to be surpassed in richness and elegance. The wax-fruit and shell work also possess extraordinary merit. But I cannot pretend to enumerate even the most prominent articles of the Exhibition. To appreciate them you must use your own eyes. I must not, however, conclude without calling your attention to the collections of Algæ, or sea-weeds, prepared by Mrs. Williams and Mrs. Boston, of Monterey. It is only within a few years that productions of this class have been closely studied by naturalists. The specimens are arranged with exceeding taste, and you will be surprised to observe from these collections what an elegant and diversified flora "the dark, unfathomed caves of ocean bear." They are to be found on the sea shores at low tide, and they possess a beauty and variety of color, and a delicacy of structure which might well compensate a collector, even without regard to their scientific relations. We need a sprinkling through the State of such ladies as Mrs. Boston and Mrs. Williams, to revolutionize society and to give an intellectual and scientific complexion to our population. What a blessing it would be to California if but *a few* of our young ladies would read the Book of Nature instead of the Book of Fashion—would substitute botany for bracelets and jewelry—would cultivate their brains as much as their curls!

How to Measure Coal.—Coal put into bins and leveled can be measured, from one to a thousand tons, with as much accuracy as it can be weighed on scales. For instance, Lehigh white-ash coal per ton of 2,000 pounds, of the egg or stove size, will uniformly measure 34½ feet cubical, white-ash Schuylkill coal will measure 35, and the pink gray and red-ash will reach 36 cubical feet per ton of 2,000 lbs. or 40 feet for 2,240 pounds, the difference of cubical contents between the net and gross ton being exactly 4 feet. If the length, breadth and hight of the bin be multiplied together, and the product divided by the aforesaid contents of a ton, the quotient must show the number of tons therein.—[Troy (N. Y.) Advertiser.

The Crops.—The recent rains have made glad the hearts of the farmers, as it has all classes of the community. Never were crops growing faster than at present. The farmers generally, are under the impression that the crops of this year in this county, will be fully up to, if not over the average. It can be said of San Joaquin, that it has never failed to raise a crop since the settlement of the county.—[Beacon.

CALIFORNIA MARBLE WORKS.

John Grant. P. J. Devine.

Grant & Devine,

Sutter street, bet. Montgomery and Sansome,

OFFER FOR SALE

MANTLES, GRAVE-STONES,

MONUMENTS, TOMBS,

TABLE-TOPS, GRATES, TILES,

And every description of Marble Work.

Sculpture, Carving, Lettering,

And all kinds of ORNAMENTAL WORK will receive special attention.

Grant & Devine are constantly in receipt, from their quarries in Tuolumne County, of the finest and purest Marble, which they manufacture into the above. They respectfully solicit the patronage of persons requiring any articles in their line.

MARBLE sold by WHOLESALE and RETAIL, in the slab and block.

GRANT & DEVINE,

20-13 Sutter street, between Montgomery and Sansome.

NEW

AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparce, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,
and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained.

San Francisco, Mar. 4, 1854. 5-3m

SEEDS,

NO. 408 CALIFORNIA STREET,

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED a correspondence and business in Europe as to enable him to secure from the very best source—the most careful growers—their choicest seeds grown, of which he will always be in receipt and in endless variety, imported directly from France and England, from well known, responsible houses; some of the most prominent named in our catalogues.

It has been the experience of our best gardeners and growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be for a series of year, until more capital, experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover;	Hungarian Grass;
Kentucky Blue-grass;	Orchard Grass;
Red-top Grass;	Sainfoin Grass;
English Rye-grass,	Timothy Grass;
Red Clover;	White Dutch Clover;
Crimson Clover,	Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONION, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED LEAF, AND MARYLAND TOBACCO SEED

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties)

BULBS:

LILIES,	TULIPS,	HYACINTHS,
Amaryllis,	Anemones,	Ranunculus,
Narcissus,	Tuberoses,	Honey-suckle,
	Gladiolus,	Iris,

and in endless variety, imported direct from France and Germany.

From his long experience in the Seed Business (thirteen years), and his very extensive stock of goods appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

Native California Evergreen

TREE AND SHRUB SEED

For Exportation

THE UNDERSIGNED, FROM HIS EXTENSIVE facilities and

Large Stock of Every Variety of Seeds

Can offer unusual inducements to

MERCHANTS IN THE TRADE, FARMERS AND LARGE RANCH OWNERS,

Who wish to be supplied in his line.

And would recommend that Orders for Seeds be sent DIRECT to the undersigned, through the Express or by Mail, otherwise parties run GREAT RISK of being imposed upon, in case their Orders should be sent to some Irresponsible Establishment.

☞ The Agents of Wells, Fargo & Co.'s Express are hereby authorized to act as Agents for the undersigned in taking Orders for Seeds and receipting for the same.

The undersigned is also permitted to refer to J. Warren, editor of California Farmer, who has had long experience of twenty years in the Seed and Nursery business, and is conversant with the high value of imported seeds, and their superiority to all other seeds.

☞ Send for a Catalogue.

Sheep Husbandry.

[The following thoughts upon "Sheep Husbandry," we extract from the Country Gentleman, of June 31st, by Judge French, upon Agricultural subjects. They are worth reading.]

For some years before the rebellion, it had become manifest to observing men, that all over the country, on the prairies and on the small farms of New England, sheep husbandry would in future prove a most profitable branch of agriculture. Those who were familiar with English farming, and knew that its whole system depends upon the sheep, as the enricher of the soil, and that their system was a permanent and improving system, while ours, if indeed we have any system, is temporary and exhausting, they especially, were advocates for the introduction of sheep upon our old farms.

It was argued too, that breeds of mutton sheep, such as are approved in England, instead of the fine wools common in the country, might be found most profitable, especially near large markets, where the freight, which is so much greater in proportion to value upon the meat than upon the wool, would be of small account.

All these considerations have still their weight, but the war, with the high price of cotton, has added new reasons for increased attention to the subject. We have heretofore used cotton because it was cheaper than wool. Now, taking all things into account, with about equal prices per pound of the raw material, woolen fabrics are even cheaper than cotton. The clothing of soldiers is almost exclusively of wool, and it is so, because it is the only material that sufficiently protects those exposed to great hardships, and to sudden alternations of heat and cold. To fit out a million of men, and maintain half that number constantly in the field, has consumed vast quantities of wool.

It may be assumed that cotton will not for many years be reduced to its former low price, and it may safely be assumed too, that woolen fabrics, after having been thoroughly introduced into general use, will always be preferred to cotton or linen, except for special uses.

We are rapidly finding out too, in this country, what has long been known abroad, especially in England, that mutton of really good quality is not inferior as food, to any other meat. Before the war, Boston used to get some of her best mutton from Kentucky, and the British steamers furnished the Astor House and Fifth Avenue Hotel with choice Southdown. It is easily demonstrated that a pound of good mutton can be produced generally, cheaper than the like quantity of beef. The sheep pays large interest annually, both in the fleece and in lambs, while the bullock takes a three years credit before he repays at all.

The report of the Department of Agriculture for 1862, contains a capital article, covering 43 pages, upon the "Condition and Prospects of Sheep Husbandry in the United States."

The author's name does not appear, but for a guess, we will attribute it to Mr. Grinnell, the chief clerk of that department.

It is well considered and exhaustive, giving the statistics of sheep husbandry in the States, the imports and exports of wool and woolen fabrics, the comparative prices of wool in different years, since 1824, the wool supply of Great Britain, with well considered remarks upon the different breeds of sheep and their management, and the profits of raising mutton, wool and lambs. In short, could the reader have access to the article in question, we should recommend him not to spend much time in reading our remarks on the subject, which have only the merit of brevity, which is imposed upon writers for weekly papers.

One fact is worthy of special attention, namely, that long wools in the fleece command about the same price now as short wools. Without presuming to even intimate an opinion in favor of any particular breed, which we well know would call down wrath and indignation from the breeders of every other sort, it may be said in general, that the long wools or middle wools are more hardy, more prolific, better nurses, and bear a heavier fleece than the fine wools. The improved Leicester or Dishley sheep, which in England is prized because of its early maturity under the most luxurious feeding with turnips and oil-cake, is an exception to this rule. An English friend in a letter just received, says that his flock of nine hundred improved Lincolns averaged 9½ pounds per fleece at the last shearing, which is perhaps greater than any equal number of any breed ever yielded in our country.

Again, it is said that the silky luster which belongs to some wool, and which is now much prized in ladies' dress goods, depends not on fineness of fiber, but is found in greatest perfection in certain breeds of long wools. It is a quality so valuable, that it occasions a difference of 25 per cent over other wools of equal fineness.

On the whole, we believe that the prospects of sheep husbandry were never so good as at the present time, whether upon the rough old New England farms, which demand a renewal that no other treatment can give, or upon the vast prairies where guarding and slight protection are the only requisites to abundant success.

[However great the success may have been, or may be now, we think California can show as great results in sheep-raising and wool-growing as the world ever saw. Our reports on wool-growing show this.]

The new gun-boat Ticonderoga, which rates as a sloop-of-war and is a screw propeller of very great speed and considered more than an equal of the rebel pirate Alabama, will leave in a few days for the Pacific coast. Other gun-boats also, will be dispatched to western waters as soon as men can be obtained for their crews. The Government is preparing for the possible contingency of a war with France, and will soon be in a position to dispute the supremacy of the seas with both France and England combined.

A young Englishman, with a large scar on his cheek, was accepted and sworn in as a recruit at New Haven, who was a soldier in the Crimea, and was one of the famous six hundred, immortalized by Tennyson, that made the charge at Balaklava.

A Spanish Officer's Opinion of the Union Armies.

MADRID, February 13th, 1864.—The military importance of the United States had been unknown in Spain and in Europe, except in England, until the breaking out of the war between the Northern and Southern States. Old Europe has gone on for many years believing that the United States was a nation of shopkeepers, occupying itself principally in increasing its commerce, so as to augment its wealth, without taking any care whatever of its military affairs. Because its permanent army—reduced to a few thousand men, indeed, to defend the frontiers—was not to be seen in the parks and public streets of its great cities; because the foreigner, on arriving in New Orleans, New York, Philadelphia, or even in Washington, did not anywhere observe sentinels, guards or escorts; nor could he witness those brilliant parades, made up of magnificent battalions, squadrons and splendid batteries, of which the nations of Europe make such ostentatious display—it was believed, I say, that in that country there was not any military element; and this idea was carried to such an extent that any nation of Europe considered itself capable of measuring arms with the great people of Washington. This judgment, as disdainful as erroneous, was supported by the insignificance of the naval force which that people maintained in times of peace, which, according to careless and thoughtless persons, it was not possible for them to increase if any serious danger should threaten the country, because the State was not in possession of immense and therefore costly arsenals like those we see in Woolwich, Toulon and La Caracca. But it was not taken into account that in that country, as a consequence of its political and administrative organization, every citizen employs his time, his intelligence, and his wealth in the way that suits him best, so that with perfect liberty church ornaments are manufactured, and guns, cannon, and every engine of war constructed without impediment or prevention whatever; the result being that, without the State having the necessity, as we have, to sustain such costly arsenals, foundries and workshops, the day on which the Government may require arms, ships, or material of war, it appeals to private industry, and this supplies it with everything that it may need in the greatest abundance and with surprising rapidity, because the elements of construction contained in the industry of that intelligent country borders upon the fabulous; and, as is commonly said, it is necessary to see it to believe it (*"se necesita verle para creerlo"*).

For my own part, I never participated in the disdain with which the most of my fellow-countrymen, the most of the people of Europe—and I refer to thinking men—have regarded the great republic as respects its elements of war. I knew the burning energy, the irresistible activity of the people who constitute the American Union; I knew their geographical position—the most beautiful, the richest, the most extensive, for its unlimited boundaries, for its immense rivers and great harbors, which facilitate the movements of their ships-of-war and transports. In short, I knew the mighty—nay, gigantic—efforts which the people of the land of Washington had to put forth to emancipate themselves from their mother country; and this was sufficient for me to comprehend that in that land there were all the principles of wisdom, wealth, and bravery which nations require in order to be great.

Of all the armies which I have seen in campaign, those that are best provided with the indispensable element of transportation are those of the United States. The Army of the Potomac, for instance, carried with it five thousand large wagons, each drawn by four vigorous horses or six mules, conducted by a driver mounted *a la Dumont*. It had besides a thousand pack mules to transport things over places inaccessible to the wagons, and, in addition, two thousand were let loose to graze as a reserve to supply the places of those that might be used up. This is the way in which an army may be well provided.

From the moment I arrived at White House (Va.), and while traversing those immense woods, rivers and lagoons, I began to comprehend the difficulties with which the invading army had to struggle, as I thought within myself—a matter which few persons in Europe can account for on reading in the official accounts of the great losses suffered by the beligerents, and on reading, as it has occurred more than once, that the conquered forces surrendering the field had carried off more prisoners than those which had been victorious. This is easily explained, and will be easily comprehended. The armies operate and fight their battles on a ground covered by dense woods. The combatants scarcely see each other; neither do the soldiers of the same army, see the lines of a single *corps d'armee* or division, and therefore they cannot lend mutual aid to each other. The wings advance while the center finds itself compelled to retreat, without the General-in-Chief being able to send forward the troops of the body in reserve to reinforce it, because he cannot see its movements, and for the same reason he cannot know what is going on unless he has the good fortune to divine it. When least expected the opposing forces find themselves close to each other in some of the glades of the forest in greater numbers than the extent of the ground permits them to operate, they then fire at arm's length, and to destroy one another is the work of a moment, whole companies of the forces that have borne the brunt of the fight becoming prisoners.

From all that I have said, it seems, in my opinion, that if the importance of nations is to be measured by the number of soldiers that they can put into the field—when these are well fed, armed and equipped—the United States is the first nation of the world; because I do not know of another nation which can maintain for the long period of four years a million and a half of men under arms, expending in all that appertains to war about four millions of dollars a day, without up to this hour calling for a foreign loan.

Men, arms, ships, materials, money—all spring out of its bosom—all gems of its vigorous life. It must be borne in mind that my judgment embraces the States both North and South; for, although at present they cordially hate each other, when the war is ended—which, in my opinion, it soon will be—although the States of the South may be finally separated from the Federation—whenever the Monroe doctrine is to be defended—America for the Americans—they will form a single power, and woe unto those who shall dare to contend with them in America. If this article should, perchance, come to the knowledge of the statesmen of France, it is to be hoped that they will take note of this prophecy.

WOULDN'T THAT SUPPORT A RAILROAD?—The cost of wagon freights across the Sierra Nevada mountains to Washoe, last season, is estimated at $14,000,000. This is exclusive of the freights to Esmeralda, and almost all of that taken to Humboldt—which does not touch Virginia nor Carson. Take this into account with the constant stream of passengers by stage, and the freight charges on bullion and mails, and it would make a handsome sum for a railroad to take in a year. The stages loaded with passengers will figure up, taking all the lines, about twelve each way daily. This matter of stage fare must be about $2,000 daily, between California and the Territory.

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 29, 1863.

JACOB ZECH, Esq:

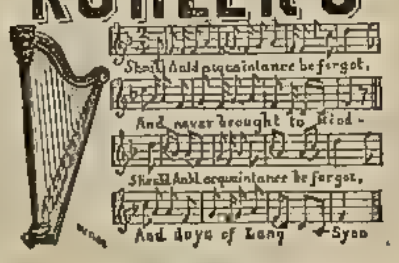
Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPPGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. ZECH.]



Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression as desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it.

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 8 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartets, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 825,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2 are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc. Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Cull. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price.

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100, cloth bound, embossed gilt, 75 cents, $65 per 100. Mailed at the retail price.

HORACE WATERS, Ag't
481 Broadway, New York,
Publisher of the above Books.

NEW INSTRUMENTAL MUSIC.

"Idlewild," "Polka Caprice," by M. Keller: "Morning Prayer," by W. F. Muller; "Summer House of Roses," gallop, by Mrs. Parkhurst "Le Petit Polka," "West Point March," 25c each. "Ometepec Waltz;" "L'Artiste Waltz," "Frederica Waltz," J. G. Bernard, 40c each. "We are coming Father Abraham," "Always look on the Sunny Side," "Brilliant Variations," by Charles Grobe, 50c each. "Shall we know Each Other There," for Guitar, by Bloomer, 25c. "Sunny Side," set of 20 easy arrangements for the piano, 10 by James Bellak, and 10 by Mrs. Parkhurst, 15c each. Mailed free.

HORACE WATERS,
Publisher, No. 481 Broadway.

NEW VOCAL MUSIC.

"Land of the Brave and Free," Rev. G. S. Plumley: "Your Fortune is too Small for Me," Comic Song, Maurice; "I will Wait at the Gate for Thee," S. Holden; "We parted with a Cheerful Smile," M. Keller; "One by one the Stars of Evening," "The Flowers Bloom in Linden Vale," S. Lawrence, "The Morning is Dawning," H. S. Leland; "There is a Beautiful world," "Shall we Meet Beyond the River?" "The Angel's are Hovering Near," "The Year of Love," "How Softly on the Bruised Heart," Mrs. Parkhurst; "Kindly Words and Smiling Faces," J. R. Thomas; "For the Dear Old Flag I Die," "Oh, Why am I so Happy?" S. C. Masters; "Sabbath Bells, Chime On," Lowry, 25 cents each, mailed free.

For Sale by
8 ALLEN & SPIER,
SAN FRANCISCO

The California Farmer.

SAN FRANCISCO:

FRIDAY .....APRIL 22, 1864

☞ Those who receive a number of the Farmer with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, Publishers California Farmer, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the Farmer Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the Farmer Office. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Will our Subscribers?

Will our Subscribers, without further notice, be so kind as to remit their dues to this office. Send us U. S. Treasury Notes. We TAKE THEM AT PAR for all dues on account of Subscriptions to the Farmer. Surely this liberal offer should induce all to remit. This is paying our Subscribers a handsome commission for remitting their dues, and saves us the trouble and cost of collecting.

Valuable Agricultural and Horticultural Books always for Sale at the California Farmer Reading-Rooms.

And many other valuable Books at lowest prices.

TO READERS AND CORRESPONDENTS.

We are in receipt of letters from our valued correspondent M. A. S, New York—will appear in our next.

Letter from "Glencoe," upon Chicken Lice—next week.

Letter from G. H. B., Pennsylvania, upon New Grapes, will appear next week, also, several other correspondents' favors will be responded to.

We ask a careful reading of the valuable Address of Dr. Henry Gibbon, of this city. It will be found very interesting; it improves, like wine, by experience and age.

The poem of "Agnes" is full of beautiful, but sad thoughts, and delicacy of feeling.

A Spanish Officer's opinion of our Armies, should be read—there is powerful truth in it.

The "Pacific Railroad." We shall commence a very able dissertation upon the Pacific Railroad, in our next, from the pen of an able correspondent.

The 19th of April 1776—The 19th of April 1861. The present week contains one day that will ever be remembered in the annals of American history, the 19th day of April. This day was baptized by martyrs' blood on the plains of Lexington, in 1776, the first blood of our revolution. The day was again consecrated at Baltimore by the first blood in our great rebellion, after the fall of Sumter; and in this instance, a most remarkable one, by the soldiers of Massachusetts also. Thus twice have this State commenced the battle for freedom. These two great events should never be forgotten in our country's remembrance.

Loss of Horses by War.—The present war is sweeping off the horse-flesh at a terrible rate, and if we are not very much mistaken, we shall see that *horse-flesh* will rise in the market in coming years, so that our horse-breeders can drive horses back over the plains to a good profit.

We want Specimens.—If our friends in the *mining regions* will send us specimens of gold, silver, lead, or copper ore, for our museum, we will gladly send them our journal to the value of the ores they send, and also do what we can to make their mines known.

New Advertisements.—Our readers will please look to our new advertisements—Pianos of Woodworth & Co., Dry Goods of Kirby, Byrne & Co., and others.

"A Sower Went out to Sow."

The present season thus far has been one that has elicited more thought and practical study than any previous year. We esteem the late dry season a means for a good end. Farmers begin to see the error of doing things "slip shode"—the mere scratching of the earth. They begin to see, know, and feel (in their pockets) the folly of poor farming.

We wish those farmers that have no crops would come and spend a week in the Farmer's Reading-room, and hear the reports of farming that come to us daily. Some of them are so severe upon "slip-shod" farming, as it is termed, that we could not publish them. Scarcely a practical farmer, one who is a reading, thinking, and working farmer, have we seen this season, but what agree with us, that seven-eighths of what is termed "lost crops," have been lost, not by reason of the dry weather, but by reason of late or shallow plowing, or late planting, thin sowing, or upon land that has never been rotated or summer-fallowed. Good cultivation, wise, careful, and considerate calculations of the soil, season, culture, and adaptation of the crop to the soil, will rarely ever fail, even in this country, dry as it is. We have hundreds of callers at our rooms who all testify to the excellent condition of those crops planted on summer-fallowed land, or where crops have been rotated, and upon well cultivated land.

The whole matter of this failure of crops, we feel confident, can be illustrated, and most beautifully too, by that most admirable, and in this case, appropriate parable or sermon of Christ—"The Sower." Let farmers just read it here, and apply it at the present time, and it verifies all we desire to urge:

"Behold! there went out a sower to sow;

"And it came to pass as he sowed, some fell by the wayside and the fowls of the air came and devoured it up.

"And some fell on stony ground, where it had *not much earth*, and immediately it sprang up *because it had no depth of earth*;

"But when the sun was up it was scorched, and because it had no root it withered away.

"And some fell among thorns (weeds) and the thorns grew up and choked it, and it yielded no fruit.

"And other fell on good ground, and did yield fruit, that sprang up and increased, and brought forth, some thirty, some sixty, and some an hundred fold."

Now, we simply ask our easy, careless, and plod-along farmers, to read this parable, and apply it to their farms, and the condition of their own soil, and its cultivation, and the whole secret of lost crop is explained: They have not prepared the soil good, consequently have not got, nor will they get, the hundred fold, nor the sixty, nor the thirty, for their land has been so poorly tilled, that when the grain was planted it had not much depth of earth, and when the sun was up it was scorched, and because it had no root it withered away. Here is the whole gist of our reasoning.

We don't know of any way to get this advice to this class of farmers—they don't take any paper.—they rarely ever read about their own farming business—but to request all intelligent farmers (they do take our paper) to loan this number to them to read, or send to us, and we will send extras for their especial benefit, for we are conscious of the truths of what we write.

Highland Rice not Injured by Frost.

We have information from one of our subscribers who has Highland Rice planted, at Santa Rosa, that it has passed *two* severe frosts, severe enough to cut down potatoes, and no injury was done to the Rice; this establishes its hardy character, and this is valuable information. This Highland Rice is from Japan; it will produce a large crop twice or thrice the weight per acre of wheat, and worth more than double in price per Ton. We have the Rice Mills of Messrs. Battles & Co., in full operation, for cleaning the rough rice, and we are surprised our farmers do not try this Rice when it can be grown as easily as wheat. We furnish samples of the grain, freely, to all by which they can secure the seed.

ARTICLES RECEIVED AT THE CALIFORNIA FARMER EXHIBITION ROOMS, No. 320 Clay Street.

We have received from Dr. E. Pugh, President of the Faculty of the Agricultural College of Pennsylvania, a Report upon the "Plan of Organizing Colleges for Agriculture and the Mechanic Arts." The Plan, of Dr. Pugh, is a noble one. We shall in future numbers give a synopsis, if not the whole, of his plan; it is a valuable one. Thanks for the Report.

Tobacco Grown in Santa Rosa.—John Barry, Esq., Santa Rosa, called at our office and gave an account of his tobacco crop. He raised 11 acres, the product of which was 12,000lbs, well-cured Tobacco—samples of his crop can be seen at our office. Mr. Barry's lot of Tobacco we think is the best we have seen of the last year's growth, it has been well cared for, being cured well and all in good condition. Many of the crops of last year was ruined by ignorance and bad management. We invite all who have Tobacco for sale to bring us samples for exhibition.

We are indebted to our old friend Hutchings, of the Magazine, for a copy of his book, with illustrations of the great Yosemity Valley and the Mariposa and Calaveras Big Tree forests, and other mountain scenes. A most interesting book. For sale at Rosenfield's.

To Mr. Hutchings we are also indebted for a fine sample of argentiferous galena, from the Fiela Lode, Inyo District, Cuso.

Shakespearean Anniversary.—We are glad to know that the memory of this great Dramatist is to be duly honored in all parts of the world, and while plans are in progress for the observance of the day and his memory, let all ignoble and inglorious thoughts and feelings be discarded, and let every actor on that occasion act as if the immortal Shakespeare himself were present to witness the performance, and see who were worthy to tread the stage, and he himself to mark and reward those worthy to do so.

Shall we have Immigration?

The State of California, with her unparalleled climate, the unprecedented richness of her mineral resources, and the vast extent of her fertile valleys, capable of sustaining a population equal to all New England, is yet without a population of even *one million of people*, although it is *fifteen years* since the discovery of gold in our State. Why is this? What has hindered our State from becoming populous, *very* populous, and why should not the vast and almost boundless wealth of her mines, the riches of her soil, and the geniality of her climate be developed to the utmost, by the intelligent and skillful of every nation under heaven?

Throughout the length and breadth of our Union, this State is the only one that is free from the turmoils of the terrible war now going on in the United States. We are at peace within our borders; a quiet and glorious tranquility reigns everywhere over our State, whose every section, even hundreds of miles of it yet untouched, is full of riches unexplored. We have hundreds of thousands and *millions* of acres of the richest of lands, highland, valley, and lowland, capable of the highest culture, that has never yet been moved by the plow, and only awaits the coming of the husbandman.

We have rivers whose water power would carry ten thousand factories, woolen, cotton, linen, and every other kind of machinery that would tend to develop this vast territory, or manufacture its products. We have, as is well known, hills and mountains full of gold and silver, we have coal mines, iron mines, lead mines, copper mines. We have mountains of sulphur and of the richest ores of every conceivable variety that tend to the advancement of the arts and sciences.

We have rivers of oil beneath our feet—petroleum gushes up as "a light to our path." Our forests abound with timber for our ships, with millions of trees from which flow turpentine in its crude state, resin, tar, and turpentine enough to supply a world. The wool of California—the wine of California—the gold and silver of California—and the golden grains of California, are now heralded in all the mercantile marts of the world.

Our gold is the balance-weight that swings like a pendulum on the world's exchange clock, and gold rises or falls, as our steamers, laden with it, bear it from the Pacific slope to meet the wants of the Atlantic, and to make up her deficiency for Europe by her excessive importation of goods that should be manufactured at home. Our grain, golden, too, loads our clipper ships for the East, for Europe, and for China and Japan, to feed hungry millions. Our wine is now being sent abroad, and is checking the import of a poorer wine, and by this means will soon stop the drain of millions of dollars annually of our gold, that would otherwise be drawn from the Treasury of our State, to pay for foreign wines. Our wool, too, tells in millions of pounds annually, and is quoted in all the Eastern world, and rolls back wealth to our coffers, by its increasing amount in this State. But although we are now working wonders, and loading an hundred and fifty ships annually with our products for all parts of the world, yet this vast wealth, these great results are but as "drops to an ocean," of the business that will be consummated when California shall have those *facilities of intercourse* with the older States and Europe, that her vast territories and endless riches, and great undeveloped capacities demand and require.

The People's Line of Steamers are beginning to work a change, and the people see it—and they are coming by the hundreds and will come by thousands, but we want such steamers as these *every week*. It is of vital moment that the people see this—feel this—and *act* upon it. The people must take hold of the work; they must talk about it, write about it, and send what they say and do abroad; and by these means bring hither the people by the thousand—tens of thousands, and hundreds of thousands. California can support ten millions of people as easy as one million, and yet she has not even that *one million*.

The people have been hindered from coming, for years, by a powerful monopoly. Long voyages "Round the Horn" was an objection; the excessive charge by steamers, made it an impossibility with the masses, and the masses were without information of our climate and vast resources. Now we have a coming hope: a *People's Line* of Steamers has been established—splendid steamers, with ample accommodations—safe and speedy passages—good fare—faithful, intelligent, and obliging officers: these are our present hope. It now remains for the people to say whether we will have an immigration or not. We know this, that if the people will but take the matter in hand, if they—the masses—will give their united aid to the People's Line, if they will go in their steamers and come in them in preference, other steamers will be added by this company until a weekly line shall be established, so that the people shall come and go at a "low price"—even lower than at the present rates.

Give but the proper encouragement to this Line, give it to this in *preference*, and they will show the people that they will work for their interests, and the best interests of the State. The people in the old States are in the dark, even now, about the soil and fertility of this State, in spite of all that has been done to inform them; they know but little about the climate—they cannot conceive of a country where the climate makes it a *perpetual summer of fruit and flowers*—they cannot realize a land of perpetual fruits—yet such is the truth; and for this reason we desire to herald this news far and wide; we wish to send ten thousand copies of important statistics every month into the great States of Ohio, Missouri, Illinois, Indiana, and throughout Michigan, Iowa, and elsewhere, and let the hundreds of thousands of people know the pleasant land that is waiting for their coming.

Farmers! mechanics! manufacturers and laborers! this is the land for you! The Opposition Line of Steamers, by their great enterprise and untiring exertions against a powerful monopoly and almost insurmountable difficulties, have triumphantly succeeded in establishing upon a firm basis, a line of steamers equal to any ever established, in order to *facilitate immigration*, and it is the first duty of the people to aid the cause of immigration and give to this Line their cordial support and aid. Merchants should give it their patronage by shipping their goods by them both ways—especially their wool, wine, copper, and other goods to the Eastern States—and by all means travel on the People's Line, for had it not been for their steamers, the price would have been more than double the present rates, and so with freight. This State would double its population in *two years*, if all who are interested in building up the State would but give the cause of immigration their heart's aid and support, for there is not a merchant in this city whose business would not be largely increased in amount and profit, if there was proper attention given to this subject.

We need an increase of population to develop our resources, and we never can have it to a large extent until all take hold and scatter abroad statistics of the resources of our State. This will bring population, and this is the work to be done. Then give the information we can furnish, and scatter it in every State, and show the opportunity of a safe and quick passage to this country, and take measures that the people come by the People's Line, and in a little time we shall see such a rush for California as was seen in 1849 and 1850. Scatter information abroad—this is the essential thing to secure a great immigration to California.

Good steamers, quick and safe passages, and *low prices*, and the people will come. We repeat, the People's Line is now firmly established; we rejoice to know the people are beginning to see and realize that this Line was the first that reduced the price, and they are determined to patronize it. Before the establishment of the Opposition Line, the price by the Old Line was $325, $200, and $125 or near that.

Now the price by the Opposition Line for the 23d inst. is for the best State Rooms, upper deck, only $102; Dining Saloon, $125; Second Cabin, $75, and the Steerage $50—a saving of more than one-half—and this is not only so much gain to each family and individual, but so much more capital brought here in real material, to build up "homes," improve the land, and scatter it in improvements generally.

Down the Coast.

[We present our readers with a flying letter from our old friend and companion in our office giving us his 'dotting down' of his "new expedition and his new field of labor." We anticipate a series of very interesting letters from him among the wilds and wastes of the new land and of the "precious metals" which shall be developed under his eye, these we hope will abundantly reward his labors:]

Editor California Farmer:

It is a pleasant trip down the coast at this season, that is, if favored with such pleasant weather as experienced on the Senator, which left your port on the 13th inst. Old Ocean was smooth (except his natural "swell"); the days, and nights too, with the young moon, were remarkably fine. About the only excitement of the 46-hours' run to San Pedro, was a "school" of porpoises we "struck" during the forenoon of Friday. They formed a crescent of half a mile or more in length, leaping from the water in front of us, and kept it up right lively during the half hour or more that they took the lead of us, when they gradually passed to the eastward and fell astern. They were near enough to try the skill of "pistol sharps," but several shots failed to injure any one materially.

Coming out of San Francisco, the hills look green and fresh, but on the next day as we pass along the coast, the hills look more dry and parched, the dryness appearing to increase as we proceed South. The "port" of San Luis Obispo is the first stopping place, about 24 hours from San Francisco. No "town" is to be seen (that being some distance inland), scarcely any signs of life or improvement, and freight and passengers must be landed in boats. The country, that can be seen, looks dry and parched, with scarcely any vegetation. Santa Barbara, which is reached in 30 hours, is a little more inviting, as the "town" is situated in the level valley near the beach, and there are some green spots and trees to be seen. The old Mission looks up finely on a little elevation beyond the town. The abrupt mountain ridge back of the town, looks like a huge backbone, extending northwest some forty miles till it breaks off at Point Concepcion. The landing here is worse than at San Luis, as it has to be done through the surf, which breaks on the beach, and the method is as primitive as when Dana was "hide dragging" on the coast thirty years ago, his description of "beaching" the boats by jumping into the water, and loading them by wading in with the hides on top of the heads, answering very faithfully for the present mode. The march of improvement hasn't reached "muchly."

At San Pedro (New and Old) there are some improvements. Though there is no wharf for the steamer, freight and passengers are conveniently landed in lighters ("plungers") and also by a small steamer, and the main business of the steamer centers here, which is considerable, and likely to increase, as the mines and other interests of this region, are developed. But it is dry enough all round the "port." There was rain enough lately to make a little show of green, but it will soon fade, and then the stock will fare slim, that is, if any is yet left. Likely hay will be brought down from San Francisco. By the way, one item of the Senator's freight to San Luis was a couple of bundles of hay!

However, if mountains have a supply of feed, there appears to be enough of them to furnish the requisite quantity. Yours, P.

A fire on Folly Island, on the eighth, destroyed Quartermaster's stores to the value of $40,000.

The Doctors, Ministers and Newspapers the Last and Poorest Paid.

These are *facts*, and the history of the past has made these facts "*Proverbial*." There seems to be some very strange idiosyncrasies upon the brains, by which they feel and think that the Doctor, Minister and Printer, those laborers that feed the mind and soul, and when these are out of repair restore it again, that these laborers may be paid *after all others* are paid. We do not say this because we see more of this in our profession than falls to our share, but because we see it and then such cases come under our observation that establishes the fact that it is a *general* disease, an error that prevails to a large extent over the world, and we think that if the ledgers of the *three* professions, could be exhibited they would show many curious facts. The error is not chargeable to men of ordinary means or standing, but to men, oftimes, of wealth and influence, who by those, too, who in times of embarrassment strain every nerve to pay their debts—every thing—save the Doctor, Parson and Printer. We give below, a sample, of a letter highly complimentary to our Journal, and to its good and timely influences, yet we cannot agree to that reasoning that would *pay all other laborers* and not a *debt due* for a newspaper as much as a claim for labor as any thing else, and our debt, in this case was for *three years subscription* of our Journal, continued by request. We let the letter speak to show the error of reasoning, and we here call notice the fact, and one of *vast importance*, that this case a farmer of comfortable means—a good farm, pleasant home—farm well stocked, and a man in good standing pecuniarily, all this sacrificed upon the altar of *speculation* in mines, and this will be the case, and has been, in nine cases out of twenty, when the farmer or any business man forsakes his legitimate calling for outside speculations. We hold it up as a warning to others, and while we are losers we most deeply regret it. We would merely add that we were sadly affected to think that any one who felt that our Journal was really a source of comfort, should not also feel that one who supplied so much, was at least worthy of pay, as much so as any other laborer. It is time a more *just* and liberal view should be taken in these matters. Now, while we thus speak, we can commend to any one who wants a Superintendent, the writer of the letter:

Editor Farmer—*Dear Sir*:—I received your favor of last Saturday evening, on my return home, after an absence of several days. I am sorry I cannot contribute my mite just now, to swell the stream which shall flow copiously to your coffers. It is certainly out of my power to do so, or to make any other return at this time for the gratification "the Farmer" has always afforded me, than to *wish it well*. I regret this much, and indulge the hope that you have but few subscribers who cannot give you more substantial aid. Since, and sometime before the failure of my mining operations, I appropriated every dollar I received (beyond the very limited sum absolutely necessary for the support of my family), to paying arrearages due hands, for labor, which *I could not hold money back when it was demanded by those who were justly entitled to it and I knew* it, this left me entirely without funds. I have some mining stocks yet, which may one day bring me something, but at present I cannot *sell* them at any price. Were not my faith so strong that the time will soon come when I shall be above want and able to spare, I should feel constrained to ask you to discontinue my paper," and thus refrain from incurring at least so much more liability without knowing exactly how to meet it—but for *Ten Years* amid sunshine and storm, in sickness, sorrow and health "The Farmer" has been a welcome weekly visitor, it has become with myself and children a familiar household word and it would seem like parting with an *old friend* to call it now. I have not yet engaged in any permanent business. Could I fill the bill of "Farm Superintendent Wanted," in your issue of —— 8th? If you think I —what and where is the place? Whose is it? What is the salary? Colonel I am ready and willing to work as far as I have ability, and be useful in whatever station may be assigned me by the Creator of all things, my ability and practical knowledge of farming I will rather let others speak. An actual experience of twenty years in the Atlantic States and California ought to make me familiar with all its branches. If you have not already found some person for the place it might suit me, and if so I think I could give satisfaction. If you will be good enough to write me at ——, I can have the letter brought me from the sooner than it would reach me by mail directed to ——. If I had been able I would have called on you in person as soon as possible after seeing the notice, but I cannot spare even the few dollars, necessary for the trip, on an uncertainty, and unless you advise me differently, will have to make this note answer in place of personal application for the situation. H. M. L.

Rich Dress Goods for Ladies and the Household.—We are happy in calling the attention of our readers to the new card of Messrs Kerby, Byrne & Co., and to their new and rich spring and summer goods, the richest and most superb stock of goods, in the dress goods line, ever yet imported into California. Messrs. Kerby, Byrne & Co. are so well conversant with the wants of families that the quality and styles of their goods are always suited to them, being manufactured in most cases, expressly for this city. The styles of dress and shawls surpass in elegance all former styles, both in richness of texture and elegance of design. A fine collection of furs, of splendid quality, at low prices. Hosiery, gloves, laces, etc, with heavy family goods such as blankets, table linen, lace curtains, and white goods. This is the "One-Price Store," and visitors will always be attended to with politeness, courtesy, and promptness.

NOTICE.

The undersigned has disposed of all interest in the California Farmer, and his connection with the publication of the same ceases with this date. Messrs. Ware & Co., who will continue the publication, he hopes will retain the favors of friends and patrons. J. K. Phillips.

San Francisco, March 24, 1864

A Miller Wants a Place.

A MILLER, WHO IS ALSO AN ENGINEER, wants a place where he can be permanently situated: he wants a good place in the country in preference; can bring the best references as to capacity and integrity. The advertiser is qualified, as a purchaser of Grain, and wishes a head position, if attainable, as he was his usual post. Apply at this office.

California Grass Seeds.

EVERY VARIETY OF NATIVE GRASSES, seed of which can be saved, will find a ready purchaser for the seed, on application at the Farmer Office.

California Flaxseed Wanted.

TWO HUNDRED BUSHELS CALIFORNIA Flaxseed, wanted. Apply at the California Farmer Office.

New Music.

Again and again we are indebted to Kohler, of the Musical Emporium, Washington street, for a very fine collection of New Music, received by the last steamer. In this collection are many very splendid pieces. We name the following as part:

If I Sleep; Will Mother Come—A beautiful song.

One by One—This is known as a choice song.

Thoughts of Home—

"I would not win a heart to share,"

And Field Flowers. Three very pretty pieces.

Natalie; Or the Miller's Daughter—An admired Bohemian Melody—English words by Wm. Ball.

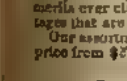
Three of the choice gems from *Gounod's Opera, Faust's March, Marguerite Waltz* and *Mephistopheles Galop.* They are new and rare pieces.

Metropolitan Schottisch and *Starlight Schottisch*—New and fine.

"*I know not how Heaven will Strike the Blow,*"—from Beauties of Donizetta's Opera.

"*Oh what a World this might be*"—Here we have a beautiful song, indeed; the sentiment inculcated should be treasured up by all—and how appropriate for a song:

"Oh what a world this might be,
If hearts were always kind,
If *Friendship*—none would slight *thee,*
And Fortune prove less blind.
With Love's own voice to guide us,
Unchangingly and fond,
With all our wish beside us,
And not a care beyond.



"Oh what a world this might be," &c.

Let this song be echoed, far and wide, until the hearts now wretched shall all be harmonized by the spirit of this beautiful song. Go to Kohler's —Charley has lots of Music.

Rev. I. S. Diehl.—The friends of this gentleman learn with pleasure that he is "at work," as a literary and scientific scholar. After a series of travels in the Asiatic region, Mr. Diehl has returned to the States, and is now delivering a series of "Oriental lectures" in the Western States He is capable for this work, and is a most interesting lecturer. He is now in Missouri, and his lectures are popular.

Please Settle up.—It will be seen by the notice of "a change," that the Farmer is now published by Warren & Co. It is to be hoped that all who are indebted to the Farmer will send in their dues, so that old accounts may be all squared up. It will be easy now to remit, and we hope all will do so without further request.

In all matters except a little matter of tongue, a woman can generally hold her own.

PIANAOFORTES

.. AND ....

Harmoniums,

MANUFACTURED BY

—AND THE—

STODART PIANOFORTES.

Importers of

Piano Covers, Music Stools, Music Racks,

ETC.

PICOLLO PIANOFORTES.

WE WOULD CALL PARTICULAR ATTENTION TO these beautiful instruments from our own manufactory in Paris, and which we can confidently recommend as equal in quality to those of any other European manufacturer.

PICOLLO PIANOFORTES are now in universal use on the continent of Europe, having completely taken the place of the old style of Square Pianos. They possess all the merits ever claimed for the Square Piano, with many advantages that are peculiar to themselves.

Our assortment comprises six different styles varying in price from $375 to $100 each.

Iron-framed Picollo Pianofortes.

These instruments are a "specialité" of our manufacture, are constructed with a special view to withstand the peculiar climate of the interior of California, and are warranted to stand any change of temperature.

Price $400 to $450 each.

STODART PIANOFORTES.

We have had the exclusive agency for the sale of these celebrated Pianos for the past twelve years, and refer with confidence, as to their quality, to the many hundreds of instruments themselves now in use throughout the whole extent of the Pacific Coast. A general assortment of these instruments will at all times be found in our warerooms, comprising Grand Action, Square, Upright, and Overstrung Pianos, in plain or richly carved cases. We offer them at the same prices at which they are sold at the manufacturers' warerooms in New York, thus saving to the purchasers here the cost of freight, insurance, interest, and attendant charges. Prices range from $240 to $500 each.

FRENCH HARMONIUMS.

In connection with our manufactory of Pianofortes at Paris, we have established a manufactory of FRENCH HARMONIUMS, suitable for parlors, music-halls, and churches. These instruments, like our Pianofortes, are all in rosewood cases, and are made with the improved "transposition attachment," which enables the performer, in voice accompaniments, to assist the instrument to any particular "key," thus entirely obviating the necessity of any transposition of the music. Prices vary from $100 to $1,000 each.

We beg to call attention to the fact that the Harmoniums of our manufacture possess many valuable improvements not to be found in any other instruments of this description, among which is the peculiar disposition of the reeds. This improvement is based upon purely scientific principles, rendering the reeds doubly sensitive and much less liable to become deranged or get out of order

For full description of Picollo Pianofortes and Harmoniums send for descriptive catalogues.

PRINCE & CO'S

Melodeons, Doubl. reed School Organs, and Organ Melodeons.

Being the exclusive agents for the sale of these celebrated instruments in California, we are prepared to furnish them at the catalogue prices, sold at the warerooms of the manufacturer in the East. The assortment comprises twelve different styles of instruments, ranging from $60 to $425 each. Illustrated catalogues, with full description and price of each instrument annexed, will be furnished on application.

For Young Ladies and Gentlemen.

NAPA CITY, CALIFORNIA.

NAPA CITY, IN POINT OF LOCATION AND Climate, is unsurpassed in the State. It is about four hours' ride by steamboat from San Francisco, and three by stage from Benicia. There will soon be a daily boat from the former place, and there are now two daily stages from the latter. There are extensive accommodations for Boarders in the College Building, with large and well-ventilated sleeping apartments. Teachers reside in the Building, and will have a constant oversight of the Students who are Boarders.

GOVERNMENT.

Young Ladies will receive no calls from any except Parents and Guardians. Ladies and Misses will not leave the College grounds, except in company with their Instructors. Young Men and Lads are not allowed to lounge about the Stores, Hotels, and Saloons of the village. All pupils are required to attend Church on the Sabbath. Parents will choose the place of worship for their children.

MILITARY DEPARTMENT.

This Department has been opened with a view to the permanent establishment of a Military Academy on this Coast. From three to four years will be requisite to complete the course in this Department. The State has furnished us the necessary equipments for such a school. The Drills will be attended to daily.

TUITION.

Spelling and Reading, per month	$2 50
Common English, with the above, per month	4 00
Higher English, with the above, per month	6 00
Latin and Greek, with the above, per month	8 00
Janitor's Fees, per month	25

EXTRAS.

Modern Languages, each, per month	$2 00
Music, with Piano, per month	8 00
Embroidery, per month	3 00
Painting in Oil and Water Colors, per month	4 00
Board with Furnished Rooms, per week	5 00
Board with Furnished Rooms, Light, Fuel, and Washing, per week	3 50
Military Branches, per month	3 00
Sword Exercises, twelve lessons	8 00

CALENDER.

The Collegiate year is divided into two Sessions of 21 weeks each. The first Session will begin July 25 and end December 16. The second Session will begin January 2 and end May 23. The Winter vacation will be two, and the Summer vacation eight weeks long.

☞ All articles of clothing should be plainly marked. Pupils will furnish their own Sheets, Pillow-cases, Towels, Napkins, and Lamps.

☞ Payments half-yearly in advance. Pupils can enter at any time, and be charged from the time of entering. No deduction will be made for absence, except in cases of protracted illness. The month consists of four weeks each.

A CARD.

☞ IN ORDER TO PREVENT ANY MISAPPREHension arising from the fact that the prosecutions instituted against me, in the Police Court, were dismissed on the ground that the time within which indictments could lawfully be found had elapsed, I desire to state that in the month of February, William R. Garrison and others endeavored to obtain indictments against me on the charge subsequently made in the Police Court; that after a full examination of all the evidence produced on the part of the prosecution and without hearing my witnesses, the Grand Jury refused to find any bill against me—the time in which the indictment could be lawfully brought had not then expired. Garrison, foiled in his efforts in that quarter, then instituted the Police Court prosecutions. On the second of March I was called to answer before that tribunal, and the case was, by agreement of Court, continued to another day. On the adjourned day it was further continued, at the request of Garrison's counsel, to the 25th of March. In the meantime, I was advised by my counsel that it was useless to go to the expense of summoning witnesses from a distance to establish my innocence, when, in their opinion, the Court would of its own motion dismiss the case for want of jurisdiction as soon as the first witness for the prosecution should have been examined. To save expense to both parties, it was then agreed by the counsel for Garrison and myself that the matter should be argued on the 25th, and that if the Court did not then dismiss the complaints, another day should be fixed for hearing the testimony. Upon my counsel stating his first point, and before argument, the counsel for the prosecution admitted that the prosecution could not be maintained, and they were accordingly dismissed. Whenever the merits of my Wide West transactions with Garrison shall be investigated, and the civil suit pending between us shall be heard, I shall be prepared to show that the charges so industriously circulated against me are false, and that nothing whatever in my transactions with him or with others have been otherwise than perfectly fair and honorable on my part.

9 1m J. W. TUCKER.

Farmers and Immigrants.

LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOB F. DYE'S) on the East side of the Sacramento River, embraces many very superior Farms of

100 to 500 Acres each; also Vineyards, Gardens and Orchards,

above all overflows, Fenced, having Dwellings, Barns, etc., and throughout the year, large running streams, and irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of this Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Thrashers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors.

☞ The "Job Dye Farm," of 250 acres—with Orchard, Vineyard, and Garden, with Irrigating water, large Adobe House, and numerous out-buildings—will be rented to a satisfactory tenant.

Apply to GEO. CHAMPLIN, Red Bluff P. O, or on the Ranch, or to

20-2t

Splendid Windmill for Sale.

ONE OF DR. FRANK JOHNSON'S SELF-REGUlating Windmills is offered at a low price. If called for immediately. This is a good 12-foot mill, 3 horse power, of the very best make and model, and finished in the most workmanlike manner. For particulars inquire of the Editor of California Farmer. 10

A Lady Teacher.

A LADY TEACHER OF EMINENT ABILITY AND qualifications, one who fully understands the great responsibility of the position, wishes a situation in some Seminary, or School, where she can have a responsible trust. The Lady has long been employed as a Teacher, and can bring the most ample testimony of ability and qualifications. A note addressed to A. B. L, care of Editor of Farmer, will be promptly attended to. 10

Home Miscellany.

[For the California Farmer.]

THERE IS A UNION IN HEAVEN.

Ponder thy sorrows for an hour,
Oh weary care-worn heart of mine,
And let Spring's soft and genial power
Soothe with its influence benign.

Sweet odors load each passing breeze,
Sweet music glads the listening ear,
While green and crimson, on the trees
Contending, tell us Spring is here.

Soft skies are shining darkly blue,
The fields are robed in richest green,
In gentle showers and falling dew,
Nature's glad promises are seen.

Vain! Vain! to me, no joy they bring,
Beauty hath lost the charm to please;
The flowers that bloom, the birds that sing,
Wake only mournful memories.

The sunbeams filtered through the leaves,
Cast mourning shadows on the grass,
Morn's fragrant winds and Evening's breeze,
Seem echoing grief-sighs as they pass.

The hand that trained the flowers with me,
The eye that loved to mark their bloom,
The heart that beat with sympathy,
Are cold and silent in the tomb.

The trees he planted thrive and grow,
The rose he loved blooms just as fair,
The vines abroad their tendrils throw,
And severely seem to miss his care.

But I so wretched, sad and lone,
View them with more of pain than joy,
The thought of him forever gone,
All pleasant scenes and thoughts alloy.

One only hope its radiance throws,
O'er the dark winter of my life,
In God's blessed promises it glows,
With soothing consolation rife.

It bids us look beyond time's sway,
To that bright realm of endless joy,
Where joined by those we mourn to-day,
Death can no more our peace destroy.

Father, I thank Thee, that thy love,
The hope of glad reunion gave,
To raise our thoughts to realms above,
And strip all terror from the grave.

AGNES.

HOME-VALLEY RANCH, April 10th, 1864.

ON PICKET DUTY.

Within a green and shady wood,
Circled with spring, alone I stood;
The nook was peaceful, fair, and good.

The wild-plum blossoms lured the bees,
The birds sang madly in the trees,
Magnolia-scents were on the breeze.

All else was silent; but the ear
Caught sounds of distant bugle clear,
And heard the bullets whistle near,—

When from the winding river's shore
The Rebel guns began to roar,
And ours to answer, thundering o'er;

And echoed from the wooded hill,
Repeated and repeated still,
Through all my soul they seemed to thrill.

For, as their rattling storm awoke,
And loud and fast the discord broke,
In rude and trenchant words they spoke.

"*We hate!*" boomed fiercely o'er the tide;
"*We fear not:*" from the other side;
"*We strike!*" the Rebel guns replied.

Quick roared our answer, "We defend!"
"*Our rights!*" the battle sounds contend;
"The rights of *all!*" we answer send.

"*We conquer!*" rolled across the wave;
"We preserve!" our answer gave;
"*Our chivalry!*" they wildly rave.

"*Ours are the brave!*" "Be ours the free!"
"*Be ours the slave, the masters we!*"
"On us their blood no more shall be!"

As when some magic word is spoken,
By which a wizard spell is broken,
There was a silence at that token.

The wild birds dared once more to sing,
I heard the pine-bough's whispering,
And trickling of a silver spring.

Then, crashing forth with smoke and din,
Once more the rattling sounds begin,
Our iron lips roll forth, "We win!"

And dull and wavering in the gale
That rushed in gusts across the vale
Came back the faint reply, "*We fail!*"

And then a word both stern and sad,
From throat of huge Columbiad,—
"Blind fools and traitors! ye are mad!"

Again the Rebel answer came,
Muffled and slow, as if in shame,—
"*All, all is lost!*" in smoke and flame.

Now bold and strong and stern as Fate
The Union guns sound forth "We wait!"
Faint comes the distant cry, "*Too late!*"

"Return! Return!" our cannon said;
And, as the smoke rolled overhead,
"*We dare not!*" was the answer dread.

Then came a sound, both loud and clear,
A godlike word of hope and cheer,—
"Forgiveness!" echoed far and near;

As when beside some death-bed still
We watch, and wait God's solemn will,
A blue-bird warbles his soft trill.

I clenched my teeth at that blest word,
And, angry, muttered "Not so, Lord!
The only answer is the sword!"

I thought of Shiloh's tainted air,
Of Richmond's prisons, foul and bare,
And murdered heroes, young and fair,—

Of black and lash and overseer,
And dark, mild faces pale with fear,
Of baying hell-hounds panting near.

But then the gentle story told
My childhood, in the days of old,
Rung out its lessons manifold.

O prodigal, and lost! arise
And read the welcome blest that lies
In a kind Father's patient eyes.

Thy elder brother grudges not
The lost and found should share his lot,
And wrong in concord be forgot.

Thus mused I, as the hours went by,
Till the relieving guard drew nigh,
And then was challenge and reply.

And as I hastened back to line,
It seemed an omen half divine
That "Concord" was the countersign.

[Atlantic Monthly.

A Western editor, in an obituary on a young lady who had recently died, closed by saying: "She had an amiable temper, and was uncommonly fond of ice cream and other delicacies.

Partner Wanted.

Almost every day, as the eye glances over the columns of advertisements, it rests upon "Partner Wanted;" sometimes in great capitals, with a file of astonishers; then in Lilliputs of letters, with a single exclamation point to challenge admiration, and again with a plain, sober period, and nothing more.

"Partner wanted!" Of course everybody wants a partner, from the ragman, with his bag and hook, to him whose ships flock into port, "Like doves to the windows."

Partner wanted in everything "lovely and of good report;" in everything worthy and unworthy; in crime and christianity; in lumber and literature. What could be done without the little &? Strike it out of existence and enterprise would be a wreck, the world over; coalyards would boast no anthracite, lakes no commerce, school-rooms would be childless, and pupils without a teacher.

Every day sees three-line notices of partners found, when December marries May, or January is wedded to June, and the device is an altar and a cradle.

Every day, beneath a willow and an urn, the eye rests upon notices of partners lost, when stars are quenched in the morning, or long summer days are hidden beneath the cold grey cloud of night and death.

Partners wanted! Why, down through the scale of being to the very brink of dreary nothing, everything advertises for a partner. The voice of a turtle calls for its mate in the shadows; clouds in pairs are wedded at the closing gates of day; the arms of forest trees extend and interlock, and build up the strong old Gothic arches of the woods, and defy the tempest and time; love-tokens and pledges of partnership float invisible as thought through the orchard white with Spring's sweet drift of life.

Partnership is a synonym for life. There is but one thing made to be alone, and yet that one thing dissolves all partnership; for youth and age, night and morning, sooner or later, to-day or to-morrow, will be married to it—"married unto death."

Married Men Shouldn't Frequent Billiard Rooms.—A warning to married men who are in the habit of passing their time in billiard saloons when they should be quietly at home with the mother of their children, is found in the following case given in a late number of the Detroit Tribune:

"Last night a laughable incident occurred, which is suggestive of the strong mind of women. A gentlemen had often indulged in playing billiards, but his better-half determined to stop him. Last night the women followed her liege lord into a saloon on Gratiot street, where he was engaged in his favorite pastime. She suggested that he had better desist and go home—husband couldn't see it in that light—wife was inexorable and demanded acquiescence to her bidding. Pater-familias refused peremptorily to comply with her wishes until the game was ended. Wife wouldn't wait, and "pocketing" one of the balls, started home with it. Husband thought that rather cool, and went home too. That's what we call a strong minded woman."

DOMESTIC RECIPES.

Orange Fritters.—Take four oranges, peel them and remove the white skin and pips. Cut them into slices, and dip them in a thick batter made with eggs, milk, flour and sugar. Put some butter into a frying-pan, and when it boils fry the slices of orange after they have been thoroughly dipped in the batter. Serve with powdered sugar sprinkled over them.

Bread Sauce.—Boil the crumb of bread with a minced onion and some whole white pepper; when the onion is cooked, take it out, as also the peppercorns, and put the bread carefully crushed through a sieve into a saucepan with cream, a little butter and salt, stirring it carefully till it boils.

Violet Perfume.—Drop twelve drops of oil of rhodium on a lump of loaf sugar; grind this well in a glass mortar, and mix thoroughly with three pounds of orris root. A fine violet perfume will thus be obtained. By increasing the quantity of rhodium you will obtain a rose perfume.

What is Poetry?—A smile, a tear, a glory, a longing after the things of eternity! It lives in all created existence, in man, and every object that surrounds him. There is poetry in the gentle influences of love and affection, in the quiet broodings of the soul over the memories of early years, and in the thoughts of that glory that chains our spirits to the gates of Paradise. There is poetry, too, in the harmonies of nature. It glitters in the wave, the rainbow, the lightning and the star; its cadence is heard in the thunder and the cataract; its softer tones go sweetly up from the thousand voice-harps of the wind, and rivulet and forest; and the cloud and sky go floating over us to the music of its melodies. There is not a moonlight ray that comes down upon the stream or hill; not a breeze coiling from its blue air, thrown to the birds of the summer valleys, or sounding through midnight rains, its low and mournful dirge over the perishing flowers of spring; not a cloud bathing itself like an angel-vision in the rosy blushes of autumn twilight, nor a rock glowing in the yellow starlight, as if dreaming of the Eden land, but is full of the beautiful influence of poetry. It is the soul of being. The earth and heaven are quickened by its spirit; and the heaving of the great deep, in tempest and in calm, are but its accent and mysterious workings.—[George D. Prentice.

Ayer's Pills.

ARE YOU SICK, FEEBLE, AND COMPLAINING? Are you out of order with your system deranged and your feelings uncomfortable? These symptoms are often the prelude to serious illness. Some fit of sickness is creeping upon you, and should be averted by the timely use of the right remedy. Take Ayer's Pills, and cleanse out the disordered humors—purify the blood, and let the fluids move on unobstructed to health again. They stimulate the functions of the body into vigorous activity, purify the system from the obstructions which make disease. A cold settles somewhere in the body, and obstructs its natural functions. These, if not relieved, react upon themselves and the surrounding organs, producing general aggravation, suffering and disease. While in this condition, oppressed by the derangements, take Ayer's Pills, and see how directly they restore the natural action of the system, and with it the buoyant feeling of health again. What is true and so apparent in this trivial and common complaint is also true in many of the deep-seated and dangerous distempers. The same purgative effect expels them. Caused by similar obstructions and derangements of the natural functions of the body, they are rapidly and many of them surely cured by the same means. None who know the virtue of these Pills will neglect to employ them when suffering from the disorders they cure, such as Headache, Foul Stomach, Dysentery, Bilious Complaints, Indigestion, Derangement of the Liver, Costiveness or Constipation. As a Dinner Pill they are both agreeable and effectual.

Price 25 cents per box; or 5 boxes for $1.

Prepared by Dr. J. C. AYER & CO., Lowell, Mass.

Price 25 cents per box. Five boxes for $1. Sold by Crane & Brigham, San Francisco; R. H. McDonald & Co., Sacramento, and all dealers in medicine.

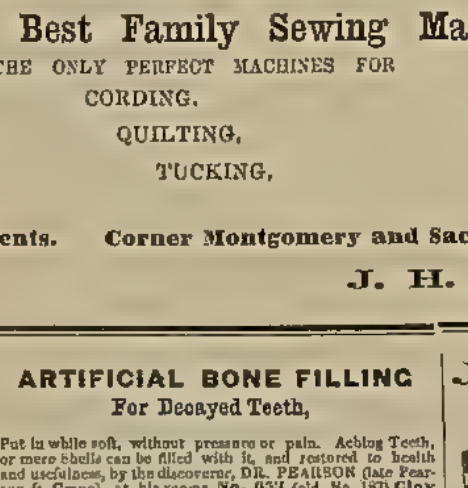
ARTIFICIAL BONE FILLING
For Decayed Teeth,

Put in while soft, without pressure or pain. Aching Teeth, or mere Shells can be filled with it, and restored to health and usefulness, by the discoverer, DR. PEARSON (late Pearson & Crane), at his rooms No. 653 (old No. 187) Clay Street, San Francisco.



Dr. Pearson having spent the last six years in New York, Philadelphia, Baltimore, London, and Paris, is prepared to supply at short notice, and at reasonable prices, Artificial Teeth on the most approved methods, including Vulcanite Rubber Work, rendering the Extraction of roots wholly unnecessary.

DR. PEARSON'S NERVINE

Cures the severest Tooth-ache, and serves as a temporary filling—any one can apply it by observing the directions Price $1, sent by express.

ALL DENTAL OPERATIONS will receive the personal attention of Dr. Pearson, as he has no partner, and INTENDS having none in future. His office has been established thirteen years—being one of the oldest, if not the oldest Dental Offices in the State of California.

and Marysville.

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H & L AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories,

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL-OIL as a basis of their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural rosin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest until, at the present time, they have established a manufactory of Rosin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests will yet give us that supply The subscribers are now receiving native rosin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

HUCKS & LAMBERT,
Manufacturing Chemists,
21-8 Natoma and Minna streets, San Francisco.

GOLDEN EAGLE HOTEL

Real estate is rapidly improving in Sacramento, and this is a rare chance. Inquire of editor Farmer. 15

Literary Shrubbery.

THE OLD FRANKLIN PRESS.—We are truly glad this relic of former years has been saved from Time's ravages, as far as was possible, and placed in good keeping as a sacred memorial of one of our best of men. The Newport (R. I.) Mercury, of a recent date, says: "In 1859 we sold the old Franklin Press to John B. Murray, Esq., of New York, he agreeing to place it at the Patent Office, in Washington, or some equally public and suitable place, our desire being, not so much to secure the liberal sum offered us as to secure its preservation for future generations, as it was the first press upon which Benjamin Franklin worked. From the time of the sale until a few days since, we had lost all track of the press, but now learn that Mr. Murray has decided to present it to the Massachusetts Charitable Mechanic Association, and the presentation was made on the recent occasion of the 158th anniversary of the birthday of Franklin. This act of Mr. Murray's is gratifying to those who have desired its preservation, although Newport should have retained it, Boston is next entitled to it, for there it was first used, having been sent from England in 1716.

As a father and his son were jogging comfortably along towards a neighboring town, the father volunteered the following advice: "Now, sonny," says he, "when we get there, you keep your mouth shut, and no one will find out that you are a fool." When they arrived at the public inn, there happened to be several gentlemen present who had a pleasant word and smile for the youth, but all their inquiries failed to elicit any replies from him, when a gentleman spoke to a friend in an undertone, "I guess that boy must be a fool." Whereupon the boy hearing this called out to his father: "Father, they've found it out!"

A lady promised her servant five dollars as a marriage portion. The girl married a man of low stature, which somewhat surprised her mistress.

"Why, Mary, what a little husband you have got!"

"La, Missus," replied Mary, "what can you expect for *five dollars?*"

A negro once gave this toast: "De late Gubernor ob de State—him come in wid berry little opposition, him go out will none at all."

Greenbacks! Greenbacks!

We receive Greenbacks for subscriptions to the California Farmer, and allow the ruling premium for Gold!

It is a well known fact to all conversant with newspaper publishers, that since the war commenced the cost of publishing a paper has very greatly increased, so much so as to stop hundreds of papers, over the United States. Yet it has been our pride not to add cost to our *subscribers*, but to relieve them although we have made sacrifices of thousands to carry out our principles, and do what we esteemed our duty to uphold the credit of our country both by precept and example. From the first we announced that we would receive Treasury Notes at par for *Subscriptions to the Farmer*. But the notes were rejected, here, as currency and many of our subscribers have, in conformity with the custom, continued to pay us in gold; yet we have never refused greenbacks at their face value when sent us by subscribers, though it has subjected us to serious loss from our being obliged (from the rejection of the currency as mentioned), to pay gold in our disbursements. At the present cost of all articles, we could not do a paying business by receiving greenbacks at par, at our present rates. But to make the thing work equally for all our subscribers, as well as conform to what we think our duty, we propose to adopt the greenback basis, and raise our subscription price to $5 a year, payable in greenbacks.

As it is evident to us now that the people of California are determined to sustain the National Government and make Treasury Notes the medium of trade, generally, we announce as follows:

The price of subscription to the CALIFORNIA FARMER, hereafter, will be $5 a year, payable in U. S. Legal Tender notes; this being a safe and easy medium of transmission, by mail; and we will allow the ruling premium when gold is tendered in payment.

We also announce, to all who are indebted to us for *Subscriptions* to the CALIFORNIA FARMER, send along your *Greenbacks*. They will come to us with the glorious impress of our country's sovereignty, and every pecuniary sacrifice we may make we cheerfully lay upon the altar of that country whose faith stands pledged in these notes and whose integrity *we dare not question*.

We make this change in the terms of our subscription *not to advance the present cost* of our journal, but rather to make it cheaper to all, for at the *present nominal* value of the notes it will cost the subscriber but $3 25.

We do hope also that all to whom we have sent bills, all who are indebted to us, will now see how easy we make it for them to pay their dues. It must be remembered also that all who owe for this paper, a bill of six month's standing should, by the terms already heretofore announced, remit us $5, and g. b.'s to that amount will be very acceptable.

We shall now have the consciousness of having taken a true step to sustain the National Currency, and we shall know who will "go and do likewise."

We do hope that the friends of a good, sound National Currency will give us their aid and cooperate by sending us their names for the FARMER.

Wood's Prize Mower!

AS NOW IMPROVED AND STRENGTHENED, and adapted to the Pacific Coast, will beat all other Mowers in use, and has so been awarded at all Exhibitions in the world

CHEAPEST AND BEST Mower in Market.

TREADWELL & CO.,

An Invoice of Agricultural Books, of select character, just received.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] April 21.

The dry and warm weather of the past ten or twelve days, and sparing receipts, have caused a degree of firmness in our market, and a feeling of uneasiness again pervades the minds of many that the Crops will be short. We argue, that with half a crop, the prices, to the farmer, will be more than if a full crop is produced. The expense of harvesting, sacks, etc., etc., will be materially lessened. Our export trade will, doubtless be less than in past years; and on that score there are reasons to regret a short crop. Our market for Wheat, Barley, and Oats, are fully 10 cents ₱ 100 lbs, better than last week's quotations. Beans have not changed in price; of this article there is a large supply. Hay is firm and active.

Our exports are as follows: Ex Bark Smyrniote, for Honolulu, 450 qr and 200 hf-sks Flour; 200 sks potatoes, &c., &c. Per ship Arracan, for Hongkong, 1908 qr and 1260 bbls Flour, &c., &c.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 11,794 sks, Barley 4455 sks, Oats 925 sks, Beans 24 sks, Potatoes 2118 sks, Flour 3465 qr-sks, Bran 400 sks, Hay 1878 bales, Wool 362 bales, Corn 625 sks, Salt 1000 sks. Straw 228 bales, Cornmeal 312 sks, Mustard Seed 38 sacks.

Also, Coastwise: Potatoes 2422 sks, Barley 1717 sks, Oats 30 sks, Wheat 830 sks, Beans 1239 sks, Hay 10 bales.

Geo. Ball's Reapers.—We call attention to the six Reapers advertised by Messrs. Klopenstine & Co., in our columns this week. They will be sold low if applied for immediately.

BY CONTINENTAL TELEGRAPH.

DATES TO APRIL. 19.

The money market was much disturbed in New York, April 18th by a stock panic, and there is no regular rate of interest. One per cent per day, and even more, has been paid. The banks are not paying out greenbacks, and legal tenders are worth 2 per cent more than certified Treasury checks. Some banks refuse to take certified checks of others, and a large number of Bull operators have failed. Morse & Co. announce to be able to pay up in sixty days. At the Public Board the panic was intense, and stocks were thrown overboard at almost any price. At the second Board, the market was very unsettled; some stocks showing a sharp advance, while a majority were lower.

Sales of gold certificates, so far, amount to about $7,000,000. It is said they are reaching the limit of consumption duties, which must soon take place, at least until July.

A Paymaster arrived at Port Royal on the eighth with $1,000,000, for the payment of all the troops in the Department.

The reason given on the street for the rapid decline in gold, on the 16th (from 180), is that Secretary Chase had sold from £400,000 to £600,000, sterling exchange.

The gold bill as reported provides further that none but *bona fide* owners, in actual possession, shall make contract for the sale of gold or foreign exchange, and forbids transactions except at the place of business of the buyer and seller. All contracts in violation of the act, are void, under penalty of fine or imprisonment. The bill was drawn at the Treasury Department. On Wednesday Secretary Chase telegraphed to Chairman Sherman and Hooper, from New York, urging immediate action thereon. The bill passed the Senate on the 15th and now waits the action of the House.

Advices from Red river say the fight reported to have taken place on Cove river, was at Henderson Hill, 20 miles distant. Five Federal regiments and one battalion were engaged. Nineteen officers, 208 privates, two brass six-pound howitzers, four caissons, 260 horses and about the same number of small arms were captured.

A small skirmish occurred on the 6th instant, at Pleasant Hill, within five miles of Shreveport, and a few wounded on both sides. On the 7th, another skirmish took place, five miles above Natichoches, where the Federals were driven in, but rallied, when the enemy retreated with considerable loss. The Federals had 30 killed and wounded.

Alexandria advices to the 8th are to the effect that the army is in fine spirits, moving steadily on Shreveport. It is thought that the enemy would retreat from Texas.

The Richmond Examiner has a rumor that Burnside's forces were landing at Newport. The same paper places the strength of Grant's army at 44,000 infantry, and says 20,000 reinforcements will be the extent of his present resources.

Jacksonville, Florida, dates to the eleventh, gives a list of 354 wounded in the hands of the rebels.

On the 7th a party of cavalry with one gun, near Port Hudson, were surrounded by three hundred of Wort Adams' cavalry, and in the skirmish we lost the gun, fifteen prisoners and had five wounded. The rebels lost fifteen killed.

A Portsmouth, Virginia, correspondent reports the result of the recent expedition for the purpose of capturing the rebel torpedo boat which attempted to destroy the Minnesota. It was not found, but several sharp skirmishes were had with the rebels. Fifty contrabands, and a large number of horses, were brought in.

In the skirmish at Fort Jessup on the 2d we took 40 prisoners. Our loss was slight. A pitched battle was not probable unless Kirby Smith can fall upon a detached portion of Bank's forces. The rebel army is reported at 20,000 strong, with 72 pieces of artillery. Gen. Price is reported as approaching with 7,000 more troops.

The excitement at Metropolis, Ill., and along the river, for the last week, in regard to guerrillas, who swarm upon the opposite (Kentucky) shore, has been intense. It is known that the 3d, 7th and 8th Kentucky rebel regiments are infesting and overrunning the entire country across the river. Gunboats are constantly patroling the river, and have taken every possible precaution to prevent the guerrillas crossing. They have smashed up all the skiffs and canoes along both banks of the river, and sunk all other floating craft that they might seize upon. The citizens of Metropolis for two days have been ready to defend themselves or decamp at a moment's notice.

On the 11th, 400 Texas cavalry attempted to surprise Roseville, up the Arkansas. After a fight of four hours the enemy was driven off with a loss of 12 killed and a large number wounded. The Federal force numbered 250. Loss, 5 killed.

The Herald's special from Alexandria, Va., the 15th, says this morning Mosby, at the head of 500 rebel cavalry made his appearance on the line of the Orange and Alexandria railroad, near Bristol Station, and suddenly took by surprise the patrol for the protection of that road between that place and Manassas, and 20 to 25 soldiers were captured. The rebels went away in the direction of Fredricksburg.

Hedges' rebel brigade attacked Col. Gillespie's force at Painesville on Tuesday last, but was repulsed. Gillespie pursued the retreating rebels with 800 men of the 14th and 39th regiments, and surprised them on the 14th, in camp at Half Mountain, capturing 70 prisoners, 200 horses, 400 saddles, 300 stand of arms, and all their camp equipage. Eighty-five rebels were killed or wounded. A large amount of stolen property was recovered and returned to citizens. A rebel wagon train was also captured and burned. Our loss was one killed and four wounded. The rebels were commanded by Colonels Clay, Prentice, May and Johnson. Col. Clay is among the prisoners.

Letters dated Grand Ecore La., of the 10th and 11th say our cavalry of the third and fourth divisions of the 13th army corps after a hard fought action was overpowered and put to flight by a largely superior rebel force. The 19th Corps came up and finally checked the enemy. Our loss is reported at 2,000. The Chicago Mercantile battery lost all their guns, 4 officers and 32 men. Our cavalry had been driving the enemy for two days, but in the forenoon of the 8th they sent back word for infantry support. Gen. Ransom, in command of the third and fourth divisions of the 13th Corps, was ordered to send a brigade, and did so. At noon he was ordered to send up all of the fourth division and went up with them. After advancing about five miles from where the third division and 19th Corps were encamped, the rebels made a stand and our line, consisting of only 2,400 men, formed in a belt of woods with an open field in front, and the enemy in the woods on the opposite side. Gen. Charles P. Stone, of Ball's Bluff fame, Chief of Gen. Bank's staff, took the direction of movements. Gen. Ransom was in favor of advancing only in force, but his wish was disregarded, and after keeping up a skirmish firing across this open field for about an hour the enemy advanced in overwhelming numbers, estimated at 10,000 strong. All our available troops were sent to the front, and opened on the enemy. They lost heavily, but advanced steadily, and made our cavalry give way and the infantry fall back. In a few moments the enemy pressed us so closely, and the panic of the cavalry was so demoralizing that the retreat became a rout. While endeavoring to save the artillery, Gen. Ransom was wounded severely in the leg and his Adjutant, Capt Dicky, was killed. The Chicago Mercantile battery lost all their guns, and the Captain was taken prisoner. Two Lieutenants were killed. While the Fourth Division was falling back in disorder, three divisions, numbering only 1,800 men, came up and were immediately routed, and finally the 13th Corps, with 7,000 men, came up and formed in line and checked the enemy and held them until we got all our trains off except that of the cavalry. The whole army is now falling back here. They must wait and reorganize before proceeding further towards Shreveport. Our loss is said to be 2,000, but may be exaggerated. The next morning at 9 o'clock, Gen. A. J. Smith came up with his command and relieved Gen. Franklin. He whipped the rebels badly, recaptured twelve guns and took 800 prisoners. Another letter places the number of prisoners at 2,000, and eighteen pieces of artillery captured in the fight. We lost 24 guns—all that were in the action. The same letter says: "Our corps the 13th is all cut to pieces; out of 4,000 men, not more than 1,000 are left to tell the tale of the fearful odds against which we contended."

Prices at Pacific Fruit Market—Apr. 21.

Messrs. Addison Martin & Co. report to us the following prices as the ruling rates for fruit:

Apples 10@15c, ₱ lb. Dried Plums 15@20c ₱ lb. Dried Peaches 10@15c ₱ lb Dried Nectarines 20@30c ₱ lb. California Dried Figs 30@50c ₱ lb. Strawberries—Queens 30@40, Longworth's Prolific 35@50c. Raspberries 75@1 00 ₱ lb Lemons $8@$10 ₱ box, retail 50@75c ₱ doz. Oranges $2 50@$3 50 ₱ 100, retail 25@ ₱ 75 doz. Gooseberries 15@35 ₱ lb, Chestnuts 30@40c ₱ lb Black Walnuts 15@20c ₱ lb.

Apples, per "Panama," were sold at auction, and brought from $3 50 to $5 37½ ₱ box. Nearly the whole shipment were in fine order, which is remarkable considering the season of the year. Strawberries have come in freely this week, and prices are very much lower. Raspberries and Gooseberries are making their appearance.

Holloway's Pills and Ointment.—Facts for the Million. By a recent enactment of the French government, these medicines are admitted free of all duty into all ports of France. They are extensively employed in all the public and military hospitals throughout the Empire. The Emperor has signified his appreciation of their virtues in an autograph letter, to Dr. Holloway. During the late campaign in Italy, large quantities were used for the wounded at Brescia and Montechiaro.

Sold by all Druggists, at 30c, 70c, and $1 10 per box or pot. 205

HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM, cor. Clay and Front streets, San Francisco, Cal

We should not suffer from a cough, which a few doses of AYER'S CHERRY PECTORAL will cure. Time, comfort, and health, are all saved by it.

FOR SALE, TO LEASE, ETC.

A Fine Ranch

IN MENDOCINO COUNTY.

A FINE GRAIN AND STOCK RANCH of 800 acres under fence, in Mendocino County, will be offered at a bargain if applied for soon. Together with this is a Stock Ranch of some thousand acres of mountain land which goes with this Ranch, being Uncle Sam's land.

The Ranch is about 60 miles from Petaluma and on the great mill road to the Navarre, Albion, and Mendico & Noyo's mills

The location is pleasant, having the Redwood Hills for a back ground, with a fine valley tract—one hundred and sixty acres valley land, mostly under cultivation—yielding fine Barley, Oats, Wheat, Hay, Corn, etc. The crop of Hay is fine.

This Farm will sustain a herd of 300 Cattle, and is a grand Ranch for raising Stock, Horses Mules, or Hogs, and a good place to raise Poultry. There is an orchard of two acres of bearing Trees. Vegetables grow well.

There is on the place a fine two-story frame Building, in which was put 30,000 feet of lumber, also Granary, Smokehouse, and Barn. The vicinity to the Redwoods gives an opportunity to improve, as Lumber is cheap and Timber handy

There are, at present, good Tools, Implements, Harvesters, Plows, etc, on the place; also some furniture. The House has been used as a Hotel and Store, and is also the Stage House. Hay, Grain, and Produce can always be sold at good prices.

There is also a herd of 100 head of Stock which will be sold at a bargain.

This is a rare chance, and worthy the attention of those who wish a good Home, a good Farm, and a profitable business. Prices reasonable. For particulars inquire of Editor Farmer. 21-1

Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOma County, lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P Swift, Esq., containing fourteen thousand acres of land, is offered for sale in Lots or Farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality. It is accessible to market, being adjacent both to the Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State.

No better opportunity, it is believed, will ever be offered for the purchase of desirable farms at a low price and upon easy terms.

There is a very large amount of fencing on the tract, the entire body of land being enclosed.

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

The Sonoma Embarcadero is at one side, thus furnishing a convenient access to the San Francisco market at all seasons.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the office of Haight & Pierson, 622 Clay street, San Francisco, or at the store of Mr. Paule, Sonoma WILLIAM BIHLER
8

For Sale!

A Fine Orchard and Garden.

A BEAUTIFUL ORCHARD AND GARDEN, FULL of Fruit Trees of rare kinds, a new Gothic Cottage House, with pleasant surroundings.

The place contains 150 acres of rich land, all in a high state of cultivation.

The estate is near Oakland, Contra Costa County, and is increasing in value every day. For particulars, inquire of the Editor of this journal. n8

English Steward, or Gardener.

A PERSON JUST ARRIVED FROM CANADA IS DEsirous of securing a place as Steward or Superintendent of a Farm. The very best references can be given of his character and capability for the situation. Apply at the office of Editor of Farmer, or by letter. 21-8

Situation Wanted as Superintendent of Farm.

A GENTLEMAN, every way qualified for the superintendence of a large Farm, who is now in the Eastern States, wishes a permanent situation. He is a man of family, and every way qualified for such a place. Any one wishing a No. 1 Superintendent, within a little time, can secure a valuable man for such a place by addressing the Editor of the Farmer.

SEED, PLANTS, ETC.

THREE PREMIUMS for BEST Varieties FOREIGN GRAPES.

150,000 Grape-Roots

From imported Foreign, and American Vines of my own importation, FRUIT TREES, Etc., Etc.

Having imported myself from France, Germany, Italy, and Dr. Grant of N. Y., I offer for sale this season, as choice a lot of FOREIGN GRAPE ROOTS and CUTTINGS as can be had in this State, and as cheap as any reliable nurseryman will sell. All the Vines and Trees have borne fruit with me, and I guarantee everything I sell to be TRUE TO NAME, or refund the money.

AMERICAN VARIETIES GRAPE-ROOTS, 1 and 2 years old, and Cuttings

Delaware, Diana, Concord, Iona, Union Village, Lincoln, Anna (white), Catawba, Isabella, etc.

EUROPEAN VARIETIES GRAPE ROOTS, 1 and 2 years old, and countless numbers of Cuttings:

True black, red, and white Burgundy (Pineaux), Traminer, Rulander, Madeira Winegrape, Riesling, white, red, and black Frontignan, Malaga, Parsley, Cannon-Hall and White Muscat of Alexandria, and over 100 varieties more.

ALSO:—10,000 rooted vines 2 and 3 years old, LOS ANGELES, very cheap, and any amount of Cuttings of all varieties.

Also a limited lot of
DOWNING'S EVER-BEARING MULBERRY TREES
1 year from bud, extra large;
French, German, and Swiss Prunes (Fellenberg's Zwetshe).

....ALSO....

Pear, Apple, Plum, Peach, etc; Lawton Blackberries, English Gooseberries, and all kinds of Trees, and Shrubs. Cions unlimited, and cheap, of the above.

I intend to close out the Nursery Business, and sell as low as the lowest. For prices or orders, send per Wells, Fargo & Co, or mail, to

Louis E. Miller's

Mountain Vineyard,

Also—Every variety of
Tobacco seed, Cotton seed, Madder seed, Opium seed.

I have also just received from Europe a splendid collection of BULBOUS ROOTS, such as

HYACINTHS, TULIPS, LILIES, CROCUS, NARCISUS, JONQUILS GLADIOLUS, IRIS, IXIAS, BULBOCODIUMS, &c, &c, &c

Dealers furnished in Packages suitable for their trade, at the LOWEST RATES.

Gardeners and Ranchmen can be assured their orders will be filled at lowest prices. Catalogues of all our Seeds, etc, on application at store or by mail, or can be had at Farmer Office, San Francisco.

W. R. STRONG,
15-tapl 206 J street, Sacramento.

PATENT RIGHTS FOR SALE.

THE FOLLOWING PATENT RIGHTS OF NEW AND valuable inventions (of which we have models to show their value) are now offered for the States of California and Oregon, and Utah and Washington Territories.

NO. 1. THE MECHANIC'S SPIRIT LEVEL.

Patented September 13, 1859.

This Implement will be of great value to Contractors and Builders, being one of the most valuable Inventions yet out. Builders will do well to examine the model.

NO. 2. IMPROVED CLOTHES REEL AND BAR.

Patented January, 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery, or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines, neat when used and ornamental when not in use.

NO. 3. A CORN CULTIVATOR.

With this implement the soil is first thoroughly plowed and deeply pulverized, and on the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

NO. 4. A MUSKETO BAR.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be afforded very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

NO. 5. HYDE'S PATENT POST-DRIVER.

A most excellent labor and money-saving machine, for which we offer rights.

NO. 6. SEED-SOWER.

This is a new invention, and one of great importance to all who sow grass, or any garden seeds. The working model can be seen at the Farmer's Reading room.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

COL. WARREN, Editor Farmer.

A Fine Ranch in Contra Costa County.

A FINE RANCH IN THIS COUNTY IS NOW OFfered for sale at a Bargain, if applied for soon, as it will be sold at a price worthy special attention.

The Farm contains 209 acres; 70 acres of this are fenced—the balance is well and heavy timbered. This Farm will cut 2000 cords of wood, enough to pay for the Ranch.

It is an excellent Hay and Grain Ranch and the products sell well and at good prices on the spot, this being the head of navigation and near market: 8 miles from Martinez and 4 1-2 miles from Pacheco.

The Title is good and possession given immediately. The Buildings are common, but the Land is No 1. For Price and Terms inquire of the Editor of this paper who will give all particulars.

TRAVELING.

THE PACIFIC RAILROAD.

"Forever float that Standard Sheet!
Where breathes the foe but falls before us?
With Freedom's soil beneath our feet,
And Freedom's Banner streaming o'er us."

[We give to our readers, this week, a valuable Essay upon the Pacific Railroad from our highly esteemed friend and correspondent, Rev. Joshua Butts, whose writings in the Farmer have always been read with interest by his many warm friends, on this side. It will be well-remembered by the readers of the Farmer, that Mr. Butts was in California, for several years, and became warmly attached to this State; was enthusiastic in his views of her future greatness, and served this State and labored for its highest interest, all in his power. Like thousands of other persons, fire, flood, sickness and calamity caused him to leave our shores. He is now stationed near Port Royal, Chaplain to the brave 47th New York Regiment, and there amid the clash of arms and the din of war, he sends us his Peace Offering, and his heart-wish, for the land he loved. We can see, in his earnest language, prophetic words, and we trust the readers of his Essay will truly appreciate the Heart Offering of a warm and true friend of this State. This letter came to us last season, but by reason of the opposition and delay of this great enterprise, we heretofore omitted publishing it. Now that the *cars are actually running*, we may publish it, and exclaim: "Thank God, the work is a Triumph:]

Camp of 47th Reg. N. Y. S. Volunteers, Ostawba Island, Geo., May 8th, 1863.

Editor California Farmer:

Thank God the Pacific Railroad bill has passed and is the law of the land! That for which so many have for years been laboring and praying is now a reality. Already the noble work is in progress. Every well wisher of California must rejoice, and the citizens of the Golden State must feel that a new era has dawned upon them. The bow of promise now spans the brilliant skies, and though the crimson tide of civil war rolls, frets and foams at the base of our National capital, and thence permeates every section of the land; yet from that very capital gleams of light, and words of cheer, comfort and hope, leap along their fiery trail, and fall like goodly pearls in the midst of the homes and hearts of those, who hold the golden keys to the commerce of the world.

Other nations may glean somewhat from the rich vintage to be gathered, but Californians alone will be able to see the empurpled clusters swinging from the bending vine, around their own bright and happy homes. They, too, alone will be able to look upon the unspeakably rich harvest that will be gathered there, increasing in richness and extent through all time, and feel that those heavy sheaves, bending with rich and precious fruit, stretching far over valley and hill-side, studding even the mountain-tops like a zone of gold, clasping the whole State, uniting all her vast and growing interests, and binding all together as one brotherhood, have been produced by their own industry. Complacently can she sit and see those, called by business or pleasure to pass through her borders, catching here and there a sheaf from her waving harvests, or a flower, that nature hath planted and reared in deeply-fringed border along her mountain slopes, twined in coronal wreaths upon her hills, and woven in chaste and variegated beauty over her plains, more gorgeous by far, than the Imperial purple, robing the princely forms of earth.

Those slight mementoes, of your wealth and splendor, may thus reach every Continent, and grace the cabinets of every ruler of the world, and adorn the lordly mansions of every clime, but still the masses of our race will hear and know but little, it may be nothing, of the the extent of your territory, the rich productions of your prolific soil, or of the substantial and permanent wealth of your mineral treasures. Here, then, at the very outset of your new and brilliant career, opens the vastest field of energy and enterprise ever spread before the mind of man. You may, if you so decide, neglect to cultivate and improve it, that you may in due time reap the well merited reward of your labor. If so, rest assured that others will appreciate its importance, will put forth strength adequate to the development of resources, the most varied and rich of any territory of equal extent known to man. The time has passed away when the richest fields of productive industry known in the world's history, can long remain unoccupied, when their wealth is literally cropping out so that he that runs may behold it and he that is wise may know when and where to get it.

From my stand point on this side of the continent, far removed from the local and sectional influences that form the characteristics of every land, I think I can perceive some grave errors into which Californians have most unwittingly fallen: First—They have labored more for the *present* than for the future, and seem to suppose that rapid growth indicates position and permanent wealth. Now, all know that the *foundations* of a great and powerful State should be laid with a view to strength, capable of sustaining the vast superstructure to be reared upon it. Many appear to have pushed forward their own individual interests and thought too little of the growing importance of the State, the future development of her worth and the colossal grandeur of her vast and symmetrical proportions. Instead of acting for the future, the masses seem, each to have struggled for a *corner lot* in a good location, or even a street lot, somewhere within the purlieus of upper-ten-dom. They appear not to have been conscious that they were laying the foundations of a State, destined to be one of the wealthiest and most powerful in the Union. It is true, they have, as a State and a people, done much, and acted nobly. But as the interests of that State are peculiar, towering far above those of every other, of course a more liberal policy should, at the first, have been inaugurated; a policy embracing the entire circle of your present and prospective growth, calculated to cherish, strengthen and develope the energies of the people, to guide those powers thus called forth, into the proper channels of commercial, agricultural, and mechanical enterprise. All know full well, that these are the foundation of wealth, happiness and permanent prosperity. Without them no State is worthy of the name, with them it may occupy a proud position among the nations.

You may ask what you are to do in the premises? I will answer by asking you a few plain questions: How many ships do Californians own, man and sail to the various parts of the world? What proportion of the vast carrying trade between San Francisco and the Orient, will she engage to perform? Will any of the productions of your soil find a ready and remunerative market in China, India, Japan, or the Amoor river, if so, what are they, and to what extent are they cultivated? Many articles manufactured in the United States will be required in all the opening markets of the East; from your shores they can be shipped, and large profits made on them, at a much less cost than from this side of the continent. Are your manufacturers and mechanics prepared to meet the demands from all these fresh markets that will be expected to supply *four hundred millions of people?*

In answer to these questions you may reply, that if you have not the manufactured goods, you can readily purchase them and make a fair profit by supplying these markets. All very true. But then others would reap the harvests, and you would be only the *gleaners*. You can charter all the ships you need, but all the profit made by those ships, goes into the pockets of their owners, while you, in San Francisco, must be content with the *small* gains realized by storing those goods brought and carried by Foreign bottoms. Do you wish that?

Already I learn by the papers that an English Company is about commencing a line of steamers to run to China from your city; I am rejoiced to learn that you are to have a regular line in operation soon. But Oh! it sent a pang through my heart when I read *English Company*—why not California Company? You have the wealth, and the energy to carry out such an enterprise; have you been wise in permitting Foreign capitalists thus to forestall you? It will be far easier for them to put on half a dozen additional steamers when business, demands it, than for you to put on two and run in opposition to them, if you wait till that time.

This leads me to mention another mistake that I think Californians have made, that is, in not carrying out, fully, Capt. Randall's project. Had that been done, you would have had the work in your own hands. Whether he is yet among the living, I know not; I have neither seen nor heard from him for the past two years. If he is alive, the very best thing San Francisco could do in my humble opinion, would be, to build two steamers upon his plan, which will cost a million of dollars, and put them at once into the China and India trade. I believe they would pay expenses from the start, and in less than ten years pay for themselves twice over, and thus you would be more likely to secure what seems now taken from your hands, by beginning at once, and dashing vigorously but safely forward, than you would to wait until business requires greater facilities, for they, having been the pioneers in the work, and having secured the confidence of the public, will be very likely to rule you out.

Again, it has undoubtedly occurred to you, that when the trade with China and India is once fairly opened, many articles grown upon your soil will find a ready and remunerative market. Do you know yet what they are, and are you preparing to step forward and send the first invoice, followed rapidly by others, so that before other lands know that such a product is in demand you will have *staked out your claim*, and be the entire masters of the situation?

Still farther: The vast population, with whom you will be brought into immediate and constant contact, will need and procure very many articles manufactured by their neighbors on the other side of the globe, and they will have them at any price, for the very novelty of possessing articles, to them, so new and wonderful. Have you mechanics enough, skilled in their various departments, to fill all orders for home consumption, and to supply those of the India and Chinese markets? I do not for a moment suppose that any one State can readily supply that vast population when the full current of trade sets in with all its force and vigor. But you, and all, can see that those who are ready to embark, upon this vast and new sea of commerce at the first rippling of its waters, will be able thoroughly to explore all the channels of trade, to learn where are the rocks and shoals now, and where the channels wind, what their width and depth, the capacity of all the inlets, bays and harbors, can make out the chart of the whole, and photograph every feature of the country and people, their wants immediate and prospective. Or to drop the figure, they can find out what the people want, and when and how to get it there, keep their own counsels, control the course of trade, hold in their own hands the balance of commercial power, reap the first fruits of the vast and rich harvest, select those particular branches of trade, which California can most easily supply, and bear off the palm of victory, while others will be obliged to, as you have done, examine the country, *prospect* the various localities, and stake out the ground, not covered with your claims, not supplied by your enterprise. It may here again be said that it is and ever will be utterly impossible for any one country—much less a single State—to supply the demands of trade for half the human race. These suggestions are not made supposing it can be done by any one section of our nation, but for the purpose of calling your attention to the subject and of eliciting thought, and prompt action in the matter.

But to be rather more explicit: Suppose the Pacific Railroad now completed, and steamers owned by your own State, or by others were regularly plying between China, India and San Francisco and the Amoor river, and one of your merchants should receive an order from the Emperor of Russia for ten thousand army wagons and ten thousand sets of harness, to be all delivered in six months to his shippers in your city, how many wagons and how many sets of harness could you actually manufacture in the State in that time, furnishing the wood, leather and iron?—you have the wood, I believe, and you also have tanneries and plenty of iron ore. Or should the Emperor of Japan send an order for five thousand plows, to be sent in ninety days, how many could you send of your own manufacture? Should the Emperor of China, catching something of the spirit of Yankee enterprise, inaugurate a vast system of railroads in the Flowery Kingdom, and send to your merchants, as his nearest neighbors, for a few hundred thousand tons of railroad iron, could you send it? You have the material in your mountains to make the iron, and the skill to make the rails also, but would you do it, if not, *why* not?

It is not probable that these orders will ever come from the parties named, or any others as large, yet they may, or others equally new and unexpected to you all. Great and astonishing changes will follow the completion of that road, in such rapid and startling succession, as to actually bewilder those, who have no adequate preparation to meet them. Orders as great or greater will be given to your merchants, and perhaps, too, for articles not now dreamed of, as entering into the commerce of the world, and happy will be that people, who first are able, to respond to the call. I fear you might be obliged to import largely to fill a very large proportion of the calls made upon you.

This leads me to another point, to which I have often adverted, and which several years ago, I laid before your readers in a letter from New York, and which I will not here repeat, merely calling attention to a few points in that communication: I have nearly forgotten the heading of the letter, but it was on the subject of immigration. I then suggested that there should be an organ in the city of New York through which, the capabilities and resources of the country, the splendor of its climate, and the great inducements offered to one and all to make their home in that second Paradise upon the earth. When I asked you the question as to what proportion of the supposed orders you could fill I could guess your answer would be, that you had not the mechanics, or the capital to start upon such a scale at first but might in time *grow* to it, by beginning in a *small* way.

Now this is what I wish to talk about, if you are not already out of all patience with me. In addition to what I said in the letter referred to (years have passed since I have seen it), I would say, if your State would take hold of this matter in earnest, and at the next meeting of the Legislature appropriate ($50,000), Fifty Thousand Dollars for that purpose annually for a term of years not less than five, or more than ten, your population at the end of ten years would probably be two millions or more. Now, you have too many there, who, after making all the money they can, leave the country to spend it; such persons take very little interest in the moral, social, or financial condition of the country. The population you would secure by this method would be composed of mechanics in every department of labor, manufacturers, citizens, farmers and merchants. Large numbers would be attracted there, in view of the state as represented above, believing that their labor would be far more productive than in any other part of the world, and all would bring more or less wealth with them to their new homes.

Agriculture, with the largely increased capital, and men employed, would bring her annual gifts to lay them upon your altars; gifts, that would astonish the nations, and rejoice the hearts of all beholders. The mechanic arts, in the tens of thousands of practiced, strong and skillful hands, would rise to the highest point of perfection attainable in any land. The iron ore in your mountains would be mined, smelted, and prepared for the market, either as new material, or manufactured in such form as the markets might demand.

You have quicksilver enough to supply the world, should all other sources fail. Your marble quarries would make you a rich State had you no other sources of wealth. Of that you can produce as great a variety, and as fine in quality as any from Egypt or Italy. Do you properly appreciate these vast sources of wealth, as sure and permanent as your gold hills?

Your wine will yet flow, and sparkle in the golden goblets on the tables, in the mansions of the great and noble, and in every Royal palace of Europe, and will be considered second to none, not even excepting the most renowned vintage of the East. Why should you not supply the whole American Continent with wine, fresh grapes and raisins? Offer in our markets the *best* and cheapest as you surely can, and you will soon command customers, for all you can produce, at fair profits.

It is stated that your waters, from Humboldt Bay to San Diego abound in sardines larger in size, and of as fine flavor as any known. Can you make this branch of trade profitable? If not, why?

Finer fruit than you can produce has never been seen outside of Eden's leafy bowers. Skirting along your entire coast from San Diego to the Northern boundary of Washington Territory, small isolated patches of vines and orchards, extending into the interior in the same form a hundred miles or so, may be seen smiling like the fresh-blown rose, amid the dew-spangled lilies, and drooping violets, adding a new charm and loveliness to the already gorgeous landscape. A hundred fold more should line your shores and fill up your backgrounds, stretching from the mountains to the plains, outspreading hill and valley, crowning your mountain slopes with the purple and golden fruits, fairer by far than the fairest of other lands.

Should the war unhappily continue for a long period, the harvest that waves over your vast plains the herds and flocks that swarm all over the land, would feed and clothe the nation, while warring to preserve its own dignity, unity, life and power.

True, you *may*, you do need more hands to cultivate, and more wealth to develope your resources and power. This is the very reason why this immigration plan has been, and is still recommended. The title to your lands should be put upon a sure and permanent basis. Inducements and facilities for good and true men of all climes should be held out, and prominently set forth among all peoples. Send them forth from your capitol, and let the good news spread from State to State; proclaim it from your mountain tops, and let the glad words echo in cheering, thrilling tones through all lands, and there will be a shaking among the down-trodden nations of Europe. The tide of immigration will set in slowly at first, but steadily and surely. From every part of our land, there will be a movement among the masses. It will take the tide some time to turn in full power in that direction but turn it will, then, if not till then, when the people come by tens of thousands, you will find that you have not been a moment too soon in your preparations to receive them. Were your citizens sure, that for any season ten thousand persons, men, women and children would be likely to arrive in the course of a few weeks time more or less, would not your whole population do all in their power to make suitable preparations for so large an influx of strangers? So should your State be ready to welcome strangers seeking a home among you, to afford every facility needed for giving all necessary information respecting various locations, the adaptation of the soil of certain sections to the production of special grains and fruits.

You can, from your knowledge of the wants, the means, the resources, and facilities for mining, agricultural and mechanical pursuits, in every part of your State, be able to say to the farmer, here is the place for you; to the mechanic, there you will find an ample field of enterprise; to the tradesman, here your wares will ever be in demand; to the professional man, there you will find ample scope for all your professional skill, for the full employent of your best energies.

At San Francisco, Sacramento, Placerville and other points, favorably located on the main route, offices should be opened where all this information could at once be given to those arriving from the distant shores of the Atlantic, and from Foreign lands, and also as to the best and cheapest route to the point selected by the stranger, who, alas! has been too often imposed upon by various parties, connected with hotels, stages, steamships or steamboat companies. Less than thirty days since, I heard of a farmer from the State of New York, who caught the California fever, sold his estate for $20,000, and started with his wife and three children to find a home in your State. Arriving in San Francisco, during the last Summer, a perfect stranger, he made inquiries of parties whom he supposed ought to be sufficiently informed, to give him the information he sought, as a stranger, at their hands. He remained in San Francisco one day, went to Sacramento and spent another day, thence to Stockton, and started for Marysville when, finding that all the information, or nearly all, he had received in relation to his earnest inquiries, as a *new comer*, to settle in the State, where he could bring his wealth and set up a new and permanent home, with secure titles to them, were utterly unreliable, he stopped short in his journey, returned to your city, and thence to New York by the first steamer, having spent about two weeks in the State at an expense of $500, for himself, wife, and three children between the ages of twelve and four years. He was a strictly temperate man indulging in neither liquor nor tobacco in any form. His form of expression was that "every man he had anything to do with, seemed to take it for granted he could 'skin him,' to his heart's content." Now, I am inclined to believe he exaggerated somewhat as to the amount spent, and feel assured that he was not as well informed, as he might, and should have been, still there must have been something wrong somewhere, to have induced him, after all his sacrifice, in leaving his early home, and braving the perils of the ocean with his family, thus suddenly to turn away from a land, selected as his future home. This may be, probably is, an isolated case, still such a thing ought never to have occurred. He may have been unwise, he surely was, in thus hurrying away. Still it illustrates the point, under consideration, and shows the importance of guarding against a recurrence of any thing approaching to it.

Had there been one or many who, really interested in having him remain in your midst, could have taken him kindly by the hand, and have given him the information he sought, and so much to his cost, and yours also, you would have added another worthy, industrious and thriving family to your population, and every such family adds to the wealth of the State, in more ways than one. Your offices, located as indicated, could, in a moment, give all this necessary information to the immigrant. That these might be still more effectual, the office of your paper in New York should encourage all in the Atlantic States, and those from Europe passing through that city, proposing to go to the Pacific coast to communicate with its agents there, and from there carry such letters of introduction as would secure to them all the attention, and information they might desire. This could be done in a very simple form. Proper blanks could be prepared, and when a party wished to get a letter to the offices in California, he could state whether he was a farmer, grazier, mechanic, artisan, merchant, tradesman, or a professional man, in that blank form his name and calling, could be inserted and he would thus go recommended to those who would be ready and willing to give him the information necessary to guide him in making a judicious choice.

It being taken for granted, that your offices there would be able at once to inform the stranger where farmers were needed, the condition, extent, quality, and terms for lands for sale for farming or grazing purposes; the locality where fruit is most easily grown, and the various kinds of fruit

where the vine flourishes, where the gardener, and the florist should locate; where the merchant and tradesman would be likely to successfuly pursue their several callings. In short they should be able to tell every man where he could go and and settle with advantage to himself and the community generally, leaving the matter, of course, to be decided by the parties themselves, as to where their tastes, inclinations and pecuniary resources should determine their location.

By commencing such a course at once you would very soon begin to reap the benefits of it. Were you to spend $100,000 per year in this way, under wise and proper management, after the first year you would reap ten-fold reward for so doing. Even our traders in the city of New York, and elsewhere, have their agents, stationed at every steamer and ferry-boat landing, and every Railroad depot, who thrust into the hands of passengers a hand-bill setting forth the wares they have for sale, and realize large profits on the outlay. So would your State should she carry this great work vigorously and systematically forward. Let agents, at your landings, at San Francisco, Sacramento, and Placerville, have a circular setting forth the information to be obtained, by all who seek, at a specified place in the town, free of charge, to put into the hands of every passenger the moment he steps from the conveyance bringing him there, and you will have no more cases of the kind mentioned above.

It was recently stated in the papers that the Argentine Republic, of South America, had a system nearly exactly like the one here advocated, originated and sustained by the Government, and that they had agencies in the principal capitals of Europe, where all the particulars necessary for one to know, before breaking up his home and emigrating to a distant land, could be obtained.

It is also stated that other South American States, besides some of the West India Islands, have local associations of this kind, whose agents are swarming in every capital and principal city of Europe, and in our own country, and it is added that the tide of immigration is setting, with a power and vigor never known before, in the history of nations.

The fact is, you must make your country known to the world. If it has advantages over others, how is the world at large to know it, unless you tell it abroad? Do your merchants, manufacturers, or mechanics fill their stores with the most costly wares, that all need and would have, if they knew of them, and then sit down to wait for customers, simply because their goods are of the best quality, with the idea that they will find out their location and the superior excellence of their merchandise, if they wait patiently? No, Sir: Even before they open their cases, if they are wise, the morning papers will all proclaim that "this day will be opened the largest and best assortment of goods ever offered for sale in this city or State." Every hotel will contain scores of these hand-bills, they will follow along every great thoroughfare like the scattered leaves of the forest. From the seaboard to the mountains it will be known to the masses, by the morrow, what they have for sale and where they are to be found, and all invited to call, examine, and see for themselves, if any thing in all creation, was ever seen or *heard of, like unto those things*, before. What is the result? The rush comes, the goods are sold at fair profits, and still the great crowd presses on in unbroken procession, and they, to their great comfort find the next day that they still have a *few more of the same sort left*. Shall individuals be wiser than the State? If so, they will probably be richer too.

Does not your State pride; the numerous personal, State, and National considerations, urge you to promptly adopt some method, by which you may meet the advancing tide, in such a manner that you will not be swamped by the breakers, or swept away by the swelling surge as it breaks upon the golden sands sparkling upon your winding shore? Day by day the Railroad is progressing. Hour by hour the vast lines of California's policy and interest are converging to a focus. The seasons come and depart; the excitement, the pleasure, the hopes, the fears, the exuberant bursting forth of new and vigorous life on every hand, the wild and fervid gush of joy, the throbbing pulsations of glad hearts, the thrilling bounds of souls fired with the love of the beautiful, grand and glorious, will sway the masses of the people there, as in other lands. The hurrying footsteps of time will sweep around the cycle of years, and your plans, your policy, and all the appliances you intend to bring to bear upon this subject, to work out the wished for result, *may become crystallized*, as it now exists, and when the work is completed, when the glad news leaps along the electric wires, outstripping the sun in his tardy journey, when the cannon's thunder booms over the wide continent from the Atlantic to the Pacific shores, then when you apply your hand to the lever to lift the gate, to let the sparkling, living waters flow within your borders mingling with, and assimilating all to their purity, life and vigor, you may find *all past progress* crystallized, locked up just as it is *now*, with no chance for an immediate and needed change, and you be found like the foolish fox in the fable, napping by the wayside, not having kept pace with the grandest events of the age.

In proportion to the exertions you put forth now, to the enlightened and liberal policy, you now inaugurate, systematically and vigorously push forward, will you find your reward. No earthly power can stay your progress if the pulsations of the great public heart send the pure and vigorous blood through the whole vital organism. If you have begun right, and continue right, in planning, executing, and moving forward with a high and holy purpose; when the harvest time comes, your reapers with the flush of health upon their cheeks, their hearts all aglow with long pent up enthusiasm, will stand upon the mountain crests ready to thrust in the sickle, when the first wave dashes its ripling waters at their feet, and the wild hurrah will float over the land, full, wide and deep, hearty and cheerful, echoing through every valley, rising, like the shout of a cohost of angels, above everything else of earth. Over the mountains, across the plains, upon the hills and through the valleys, by the rivers and far upon sea, the glad sound will speed on its joyous path and with it, you will enter upon the greatness of your way rejoicing in the bright prospects, full of promise and hope, opening before the people.

Before the year 1870 commences, without doubt, the iron horse will leave St. Louis, and in one week slack his thirst with the waters of the Sacmento. Then, if you are prepared, no nation on the wide earth will be as eligibly situated to reap large and lasting profits as the State of California.

I intended to have adverted to other topics connected with this work and indissolubly linked with the interest of the State, but I fear my letter is already too long. Indeed, after I had written thus far I about made up my mind to destroy it, fearing that you, or others, might say, "better stick to your war stories, and let your advice be given when sought." I know I have written much, and often urged your citizens to certain courses of action, and I also know that you have many in your midst far more capable than myself, whose whole interest are centered there, and bound up with those of the State, who, I hope, will take the whole matter in hand, and devise and carry out some plan to build up the vast interest of the State. These few hints have been thrown out, in the hope of calling the attention of the people at large to the subject, knowing full well if they once take the matter in hand in real earnest, it will be pushed forward to a successful and triumphant issue.

In conclusion let me urge you to secure as large a population as you can induce to come of all classes. Build as many manufacturing establishments as you can. If possible, find out what you can sell on the other side of the water, and be ready to furnish it. Remember, also, that the increase of trade between California, and the Atlantic States will probably be at first far greater than your whole trade with the Indies. That the first iron horse will sweep away every barrier to the full and free trade with the Atlantic coast. To this end make *known your country*. Let the world know that there is a California, and that in many things she excels all the other States of the Union, that from her very location the commerce of half the globe must come into her ports and pass through her domain, that the iron bands that bind her to the East are being laid, that her agricultural resources and her mineral wealth are unsurpassed, that all the elements of permanent prosperity abound through all her borders, that the climate is second to none on the globe, that it is the healthiest country known to man, that the population now there is the most intelligent and enterprising that could be found in all the other States, transferred there to begin a new, bright, and glorious career, that they are raising a great citadel of liberty, whose light shall flame out over the dark waves of the Pacific to lighten, warm and cheer the down trodden in all lands, and burn off the iron fetters that have bound them, that have long eaten into their hearts.

Soon steamers from San Francisco will swarm along the coasts of China, Japan, Russia, and the entire Indian Archipelago, bearing to and fro the richest productions and manufactures of both continents. On those steamers many of the most intelligent, enterprising, and thoughtful, will come, skilled in all the varied and complex manufactories of the East. But when your own story of the wonders of the land is wafted to the Eastern central portions of the earth, there will soon be an uprising of the people, such as has not been witnessed since the crusades. Thousands upon tens of thousands will flock to the shores of the Western land of promise, there rear their homes, beautify and adorn the little Eden, of which that home is the life and center. They will then set up their household gods with their family jewels, and gradually rear around them those ties, interests, and influences that will bind them to their adopted home in bands more precious than gold, more durable than adamant.

These skillful hands and brawny arms will, under your direction, grasp the boon, apply, hurry forward, or retard, the whole machinery of the social organism, as interest may require. That this may be done intelligently, you should be prepared in every department of human enterprise applicable to the interest of the State, by having your mechanics well trained, posted in every particular, your men and means properly arranged, so that, when the train approaches, they may step upon the platform, blow the whistle, clear the track, and move onward with an impressive grandeur and speed that shall attract the attention, elicit the applause, and secure the admiration of all mankind.

JOSHUA BUTTS.

THE DROUTH.—A correspondent of the Call thus writes of the ravages of the drouth in the Southern counties: A gentleman just arrived from San Luis Obispo, informs us that the ravages caused by the drouth in that region are truly deplorable. The cattle have died by thousands, and should there be no considerable rain during the present month, the immense herds of sheep that subsist upon the hills within the county must also perish. Vegetation, except in the immediate vicinity of springs and marshes, is as sear and lifeless as that of New England in December; while, heretofore, grass at this season of the year was half way to the cattle's sides, and San Luis Obispo was proverbial for her fat cattle and fine grazing lands. But the people of San Luis Obispo are far from desponding, for during the past six months there have been rich discoveries of cinnabar and copper within their borders, and already more money is in circulation in the county than there has been for years before.

CHICKEN HATCHER.—There was exhibited at Marysville some two or three years since, a machine to hatch chickens by heat. If the owner or inventor of that machine will call or send his address to this office, he will hear of something to his advantage.

Letters from an Old Californian at the East.

NUMBER FIFTEEN.

NEW YORK, March 19th, 1864.

A Visit to Henry Ward Beecher's Church.

EDITOR CALIFORNIA FARMER:

"Now be sure when you go to New York and visit the Church of Henry Ward Beecher," said one of my San Francisco friends; I said yes, and ever since the return of the distinguished divine from England I have tried to get up early enough, on Sunday mornings, to fulfill my promise. I was warned that in order to get a seat it was necessary to be at the church at least half an hour before service. I am living in the upper part of New York and Mr. Beecher's church is at least half a mile from the ferry in Brooklyn, so that it takes fully an hour and a half to make the trip. Last Sunday morning I made the effort, but to my disappointment when I reached the church I found not only every pew occupied, but every bench and chair, and stool. Patience and perseverance, however, accomplished almost everything, and at last I squeezed myself into a corner and it was only when seated that, upon looking around the dense crowd, I appreciated my success. I was fully repaid for my trouble; the sermon was a new experience, and I was completely fascinated. Mr. Beecher not only delighted me by his elocution, and the grace of his gestures, but his discourse, full of thought and sparkling with illustrations of the greatest beauty, gave me something to enjoy all the week. I confess I have been prejudiced against him, but his wonderful gift of eloquence has obliterated every ill-natured reflection. I think he is even superior to the late Rev. T. Starr King. When the congregation sing one of the grand old chorals the effect is wonderfully impressive. Every one joins in the chorus and when organ and choir and congregation are singing in unison, after the sermon,

"With one consent let all the earth,"

it appropriately closes a most interesting service.

Dr. Osgood's Eulogy on T. Starr King.

In the evening I attended the Church of the Messiah, to hear Dr. Osgood's eulogy on T. Starr King. The crowd was equally great and among the faces I could occasionally see a well-known San Francisco countenance. All the Unitarian Clergymen, in the vicinity of New York, were present, and a number of them assisted in the service, among them Dr. Bellows. Dr. Osgood is a polished scholar and his eulogy was therefore profoundly interesting. The music was performed by one of the greatest quartette choirs in the metropolis. Before the pulpit, was a funeral Urn draped with the Stars and Stripes, and entwined with Ivy, brought from Sunny Side. Among the audience I saw Bryant, Bancroft, Fremont, Gen. Dix, Peter Cooper, and a host of distinguished people. It is rumored that Dr. Bellows has been given leave of absence by the congregation to fill the pulpit of Starr King, in San Francisco, until some one can be found who will be considered worthy to take the place of the lamented dead. I hope this is true, but I cannot understand who can be found to take the place of Dr. Bellows, here. His congregation is said not only to be one of the largest but the most intellectual in the city.

Other Noted Clergymen.

Talking about churches reminds me that among the notable clergymen of New York with whom I have been particularly pleased is Dr. Armitage. He is an original thinker, and at times is as eloquent as Beecher, or Bellows, or Chapin. At the Church of the Rev. Dr. Sarles, of Brooklyn, I heard a young minister, the Rev. Mr. Brown, pastor of one of the Baptist Mission Churches, who is quite remarkable. He is only twenty-one of years age, but his command of language is so great and his manner so prepossessing that he already attracts attention, and will, as soon as he becomes better acquainted with men, and experienced in the way of talking to them, take a first position among the pulpit orators of the land. Nothing is more noticable in New York than the crowds which throng all the principal churches. A stranger would give New York the credit of being a very religious city. The Lecture Season, this year, has been unfortunate, and even the very "popular" Jeems Pipes has gone to parts unknown.

The "Money-Drift."—Another Dry-Goods Palace.

A. T. Stewart has at last demolished the palace, put up by Dr. Townsend, at a cost of $125,000, and exhibited at 25 cents admission for charitable purposes, and is ready to build the foundation of *his* palace, which is to cost a million of dollars. So the money goes!

Besides an Unusal Number of Foreigners,

It is estimated that there are 150,000 Southerners in New York; certain it is, that go where you will, you see crowds of people; and in consequence of the great demand for stores and dwellings landlords have advanced their rents in some cases, in popular localities, 100 per cent. This has created a great disturbance in the vast hive, and May-Day this year, will be long remembered for its extra confusion. What a glorious thing it is that we have no such day in San Francisco.

St. Patrick's Day,

Was appropriately celebrated here. It was remarked of the procession that every body seemed to be wearing new clothes. It was certainly a very handsome display.

The Ladies are all Busy,

In working for the approaching Fair, which promises to be long remembered in the annals of New York. Everybody is working or giving. Among the most industrious are the Public-School children, who are stationed on every corner to coax the good-natured and liberal public into buying tickets for their really excellent exhibitions. Occasionally some copperhead hisses at them but this does not discourage them. God speed the cause!

Many of My Solano Friends will Remember,

That during the Senatorial excitement, prior to the election of McDougal, I was an earnest advocate, in my humble way, of the claim of Col. Hoge, and abandoned him like many others at the earnest solicitation of McDougal's friends. I have bitterly repented the act, since I have seen the shameful sight of a California Senator as drunk as a beast; a beast did I say, what beast ever presented so disgusting a sight as a drunken man. Mr. Conness, however, is becoming so popular here that I am much mistaken if in another year he does not take a first rank in the Senate. Already he more than makes up for McDougal's idleness. The papers, here, have been continually finding fault with Halleck, but how few have the generosity to point to the graceful way in which he has given up his rank as the Commander-in-Chief and taken the place of Chief-of-Staff, remarking to his friends that his only ambition is to see the country safely through all its troubles. "I am willing to take any position where I can be useful." These fault-finders prophesied that Gen. Halleck would resign, in indignation, but they are all silent now. It is some consolation, however, to know that the people appreciate and admire patriotism, for Gen. Halleck's conduct has been the theme of general conversation in private circles. This independent yet popular sentiment manifests itself in no more remarkable way, than in the enthusiasm which invariably exhibits itself whenever Gen. McClellan's name is mentioned. The politicians are trying hard to ruin him, however, for at the McClellan meeting, the other night, they had no rebuke for Jeff. Davis, but when Lincoln was spoken of it was vehemently hissed.

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED SUCH a correspondence and business in Europe as to enable him to secure from the very best source—the most careful growers—their choicest seeds grown, of which he will always be in receipt, and in endless variety, imported directly from France and England, from well known and responsible houses; some of the most prominent of which named in our catalogues

It has been the experience of our best gardeners as growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be for a series of year, until more capital, experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover;	Hungarian Grass;
Kentucky Blue-grass;	Orchard Grass;
Red-top Grass;	Sainfoin Grass;
English Rye-grass,	Timothy Grass;
Red Clover;	White Dutch Clover;
Crimson Clover,	Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

—AND THE—

STODART PIANOFORTES.

Importers of

Piano Covers, Music Stools, Music Racks,

ETC.

PICOLLO PIANOFORTES.

WE WOULD CALL PARTICULAR ATTENTION TO these beautiful instruments from our own manufactory in Paris, and which we can confidently recommend as equal in quality to those of any other European manufacturer.

PICOLLO PIANOFORTES are now in universal use on the continent of Europe, having completely taken the place of the old style of Square Pianos. They possess all the merits ever claimed for the Square Piano, with many advantages that are peculiar to themselves.

Our assortment comprises six different styles varying in price from $275 to $400 each.

Iron-framed Picollo Pianofortes.

These instruments are a "specialité" of our manufacture, are constructed with a special view to withstand the peculiar climate of the interior of California, and are warranted to stand any change of temperature.

Price $400 to $450 each.

STODART PIANOFORTES.

We have had the exclusive agency for the sale of these celebrated Pianos for the past twelve years, and refer with confidence, as to their quality, to the many hundreds of instruments themselves now in use throughout the whole extent of the Pacific Coast. A general assortment of these instruments will at all times be found in our warerooms, comprising Grand Action, Square, Upright, and Overstrung Pianos, in plain or richly carved cases. We offer them at the same prices at which they are sold at the manufacturers' warerooms in New York, thus saving to the purchasers here the cost of freight, insurance, interest, and attendant charges. Prices range from $240 to $500 each.

FRENCH HARMONIUMS.

In connection with our manufactory of Pianofortes at Paris, we have established a manufactory of FRENCH HARMONIUMS, suitable for parlors, music-halls and churches. These instruments, like our Pianofortes, are all in rosewood cases, and are made with the improved "transposition attachment," which enables the performer, in voice accompaniments, to adapt the instrument to any particular "key," thus entirely obviating the necessity of any transposition of the music. Nine varieties $100 to $1,000 each.

We beg to call attention to the fact that the Harmoniums of our manufacture possess many valuable improvements not to be found in any other instruments of this description, among which is the peculiar disposition of the reeds. This improvement is based upon purely scientific principles, rendering the reeds doubly sensitive and much less liable to become deranged or get out of order

For full description of Picollo Pianofortes and Harmoniums, send for descriptive catalogues.

PRINCE & CO'S

Melodeons, Double reed School Organs,

and Organ Melodeons.

Being the exclusive agents for the sale of these celebrated instruments in California we are prepared to furnish them at the catalogue prices, as sold at the warerooms of the manufacturer in the East. The assortment comprises twelve different styles of instruments, ranging from $60 to $425 each. Illustrated catalogues, with full description and price of each instrument annexed will be furnished on application.

Flax Cotton—Flax and Wool Goods.

At the last session of Congress twenty thousand dollars were appropriated to pay for investigations in order to test the practicability of cultivating and preparing hemp and flax as a substitute for cotton. Hon. J. K. Moorehead of Pittsburgh, Dr. John A. Warner of Cincinnati, and Wm. M. Baily, of Providence, were appointed Commissioners to examine and report. Notice to those interested in the growth and manufacture of flax was given all over the country, to send samples, etc., to Washington by the 24th ult. A correspondent to the Columbus Journal writes:

"In answer to this invitation quite a number of specimens, both of hemp and flax, in all conditions, from the rough straw as it is in the field to the finest and whitest fiber, has been sent forward. And, what is better, from Oswego, New York are sent manufactured specimens of clothing, composed of flax and wool. Among these are some worsted underskirts, for soldier's wear, of most beautiful texture and color, equal to anything in the market. Some of the finer lots of the cotton fiber equal in fineness the best upland cotton, and excel it in, brilliancy of color. The exhibition establishes two points: the presence of the specimens prove that flax can be prepared so as to be used as a substitute for cotton; the reports of prices prove that it can be manufactured into goods fit for consumption at the low price of four hundred per cent, below the cost of cotton goods at this time. The mere statement of these facts will show the magnitude of the interest upon the development of which we are just entering.

STATISTICS OF THE "REAPER" TRADE.—But few persons not actually engaged in the enterprise, have any very definite idea of the immense porportions the business of manufacturing reapers and mowers is assuming in this country. We have reliable information, says the Prairie Farmer, that there were made for the trade of 1862, 33,000 of these machines; for that of 1863, something over 40,000; and for the business of the present year, upwards of 70,000 will be made. Mark the great increase since the war began. Out of the 70,000 between 14,000 and 15,000 will be manufactured in the State of Illinois. Seventy thousand machines, at an average of $130 each (combined machines selling the ensuing season, at $150 to $160, or even higher, and mowers from $105 to $140), and we have the enormous amount of $9,100,000 paid by the agriculturists of the North, in a single season, for a single class of instruments. Probably the repairs on machines, old and new, will swell the amount to nearly $11,000,000. Can any country in the world equal or even approach these figures?

CAREFULLY PRUNE YOUR GARDEN ROSES.—The past copious rains will promote a vigorous growth of the wood of all roses and garden shrubs, and now is the time to carefully prune and keep down short, and the bloom will be greater for it. Gardens can be made, laid out and finished now and all this month and next, which work will do well and prosper.

BUSINESS NOTICES.

Photograph of Starr King.—Among the many that have been taken of this eminent man, none are more perfect likenesses, nor do we think any as perfect as those taken by Geo. H. Johnson, the Daguerrean artist on Clay street. Mr. Johnson's pictures have that artistic finish which makes good pictures, and infuses into them a life-like look that gives them the real value.

Napa Collegiate Institute.—We invite special attention to the card of this Institute, as this College embraces in its range of studies several features worthy of special consideration. The *location* of the college, the size and conveniences within, the great advantages derived from able teachers, whose aim is a high moral, as well as an intellectual preparation, will secure for this Institute, we are certain, a large share of confidence and patronage.

Jebb's Patent Churn.—We invite those who want a churn to call at the FARMER office and see the best churn ever made. One that gives them butter from cream in five minutes, or butter from new milk in ten to fifteen minutes. Seeing is believing, and the trials furnish facts that are not to be gainsayed. Patent rights for counties for sale from which a fortune can be made. Single churns can be purchased also.

FARMS, AND FARM LANDS TO LEASE.—We call the attention of all who wish Farming Land to the liberal offer made by the proprietors of the Great Antelope Ranch, near Red Bluff. This is an extraordinary opening, and every opportunity is offered to advance the interest of those who lease land of the proprietors. Persons in want of such land should look to the advertisement.

GRAIN HARVESTERS.—Grain-growers, now look to your Harvesters; there will be a good crop; see that you have your Mowers, Reapers, and Harvesters. Look to our columns for Machinery for grain-growers. The best in the world can be had of our importers, Treadwell & Co., Hawley & Co., and Arthur & Low. Look to it in season. Long rains, good rains, will enhance the value of Reapers and Mowers. You can buy cheap now; strike quick, and buy cheap.

RICH TEA-SETS, VASES, ETC.—Some of the most superb Tea and Coffee sets we have ever seen, are now being opened at Haynes & Lawton's Crockery Warehouse. The beautiful blending of the colors of blue and gold, crimson and gold, green and gold, in their chaste designs, gives harmony and beautify, that is most gratifying to the eye, and adds materially to the flavor of the beverage.

HOME MADE PAPER.—Messrs S. P. Taylor & Co, our near neighbors, are the Pioneer Paper Manufacturers. We rejoice to know that they are now successful in the manufacture of all styles and kinds of printing paper, wrapping paper, etc. It is a good sign when we know such manufactures are sustained.

THOSE NEW LAMPS.—Reader have you seen those new and beautiful lamps received by Stanford Brothers? To the student, the professional man, all who read, sew, or use a lamp, we say, by all means, go and provide a lamp, and the fluid that will not only be clear and brilliant, protect and preserve the eyes.

GARDEN CUTLERY.—New and fine garden tools, just received from Europe, for sale at Moore's Seed Store California street.

FOR SALE, TO LEASE, ETC.

Farmers and Immigrants.

LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOB F. DYE'S) on the East side of the Sacramento River, embraces many very superior Farms of

100 to 500 Acres each; also Vineyards, Gardens and Orchards,

above all overflows, Fenced, having Dwellings, Barns, etc. and throughout the year, large running streams, and irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of this Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Threshers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors

☞ The "Job Dye Farm," of 250 acres—with Orchard, Vineyard, and Garden, with irrigating water, large Adobe House, and numerous out-buildings—will be rented to a satisfactory tenant

Apply to GEO. CHAMPLIN, Red Bluff P. O, or on the Ranch, or to

E. F. NORTHAM and R. B. WOODWARD, San Francisco.

Dec. 17—12-2m

Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOMA County, lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P Swift, Esq., containing fourteen thousand acres of land, is offered for sale in Lots or Farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality. It is accessible to market, being adjacent both to the Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State.

No better opportunity, it is believed, will ever be offered for the purchase of desirable farms at a low price and upon easy terms.

There is a very large amount of fencing on the tract, the entire body of land being enclosed.

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

The Sonoma Embarcadero is at one side, thus furnishing a convenient access to the San Francisco market at all seasons.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the office of Haight & Pierson, 522 Clay street, San Francisco, or at the store of Mr. Paule, Sonoma. WILLIAM BIHLER.

8

A Fine Ranch
IN MENDOCINO COUNTY.

A FINE GRAIN AND STOCK RANCH of 800 acres under fence, in Mendocino County, will be offered at a bargain if applied for soon. Together with this is a Stock Ranch of some thousand acres of mountain land which goes with this Ranch, being Uncle Sam's land.

The Ranch is about 80 miles from Petaluma and on the great mill road to the Navarro, Albion, and Mendico & Noye's mills.

The location is pleasant, having the Redwood Hills for a back ground, with a fine valley tract—one hundred and sixty acres valley land, mostly under cultivation—yielding fine Barley, Oats, Wheat, Hay, Corn, etc. The crop of Hay is fine.

This Farm will sustain a herd of 300 Cattle, and is a grand Ranch for raising Stock, Horses Mules, or Hogs, and a good place to raise Poultry. There is an orchard of two acres of bearing Trees. Vegetables grow well.

There is on the place a fine two-story frame Building, in which was put 30,000 feet of lumber, also Granary, Smokehouse, and Barn. The vicinity to the Redwoods gives an opportunity to improve, as Lumber is cheap and Timber handy.

There are, at present, good Tools, Implements, Harvesters, Plows, etc, on the place; also some furniture. The House has been used as a Hotel and Store, and is also the Stage House. Hay, Grain, and Produce can always be sold at good prices.

There is also a herd of 100 head of Stock which will be sold at a bargain.

This is a rare chance, and worthy the attention of those who wish a good Home, a good Farm, and a profitable business. Prices reasonable. For particulars inquire of Editor Farmer. 21-1

A Fine Ranch in Contra Costa County.

A FINE RANCH IN THIS COUNTY IS NOW OFfered for sale at a Bargain, if applied for soon, as it will be sold at a price worthy special attention.

The Farm contains 208 acres; 70 acres of this are fenced—the balance is well and heavy timbered. This Farm will cut 2000 cords of wood, enough to pay for the Ranch.

It is an excellent Hay and Grain Ranch and the products sell well and at good prices on the spot, this being the head of navigation and near market: 8 miles from Martinez and 4 1-2 miles from Pacheco.

The Title is good and possession given immediately. The Buildings are common, but the Land is No 1. For Price and Terms inquire of the Editor of this paper who will give all particulars.

Fine Farms for Sale.

YOU WHO WANT GOOD FARMS CAN SECURE them by applying to the Editor of the Farmer. The following can now be had:

FOUR VERY FINE FARMS in the splendid San Joaquin District, within a few miles of Stockton, all very productive.

ONE FARM about 20 miles from Stockton—valuable.

ONE FARM capable of great improvement and valuable, in Contra Costa County, near Pacheco.

A GOOD RANCH in Santa Cruz County—a good bargain.

A FINE FARM AND VINEYARD in the region of Mt. Diablo—can be made valuable.

Several STOCK RANCHES in various parts of the State, from $1,500 to $25,000; in all these, good and permanent settlers can find bargains. Address by letter, or in person, for particulars to Col. Warren, Editor of the Farmer. 23

$2,500 Wanted on Real Estate.

THE SUM OF $2,500 is wanted on Real Estate in San Francisco County, upon land of undoubted title, worth double the amount. Address A. E. C., Farmers Office. 7

Corner of Davis and Washington streets.

2-3m San Francisco.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it.

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 8 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

We are
SOLE AGENTS
IN SAN FRANCISCO AND MARYSVILLE
FOR THE

HAINES "ILLINOIS" HEADER.

THE DAY SCHOOL BELL.

49,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartetts, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 825,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100: clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

Is an entire new work of 193 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2. are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, paper covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells." Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freemen's Gathering," "Columbia's King forever," "Marching Along," etc. Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Cull. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 72 pages of tunes and hymns, designed for revival prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 25 cents, $25 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

HORACE WATERS, Ag't
481 Broadway, New York,
Publisher of the above Books.

NEW INSTRUMENTAL MUSIC,

"Idlewild," "Polka Caprice," by M. Keller: "Morning Prayer," by W. F. Muller; "Summer House of Roses," gallop, by Mrs. Parkhurst, "Le Petit Polka;" "West Point March;" 25c each. "Ometepe Waltz," "L'Armstee Waltz, "Fredonica Waltz," J. G. Bernard, 40c each. "We are coming Father Abraham," "Always look on the Sunny Side," "Brilliant Variations," by Charles Grobe, 50c each. "Shall we know Each Other There," for Guitar, by Bloomer, 25c. "Sunny Side," set of 20 easy arrangements for the piano, 10 by James Bellak, and 10 by Mrs. Parkhurst, 15c each. Mailed free.

HORACE WATERS,
Publisher, No. 481 Broadway.

NEW VOCAL MUSIC.

"Land of the Brave and Free," Rev. G. S. Plumley; "Your Fortune is too Small for Me," Comic Song, Maurice; "I will Wait at the Gate for Thee," E. Holden, "We parted with a Cheerful Smile," M. Keller; "One by one the Stars of Evening," "The Flowers Bloom in Linden Vale," S. Lawrence; "The Morning is Dawning," H. S. Leland; "There is a Beautiful world," "Shall we Meet Beyond the River?" "The Angel's are Hovering Near," "The Year of Love," "How Softly on the Bruised Heart," Mrs. Parkhurst; "Kindly Words and Smiling Faces," J. R. Thomas, "For the Dear Old Flag I Die," "Oh, Why am I so Happy?" S. C. Foster; "Sabbath Bells, Chime On," Lowry, 25 cents each, mailed free.

For Sale by
ALLEN & SPIER,
8 *SAN FRANCISCO*

The California Farmer.

SAN FRANCISCO:

FRIDAY .....APRIL 29, 1864

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them or their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address,
PUBLISHER CALIFORNIA FARMER, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the FARMER OFFICE. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Send along your Greenbacks,

Don't be afraid to send along your Greenbacks. These we TAKE AT PAR in payment for all back dues to the FARMER for subscription. So send them along, now is the time. This is a better speculation than mining stocks, for it is so pleasant to read a newspaper when one knows he has paid for it, the digestion is better and a man feels happy, and, if happy, then he feels rich. So pay prompt and you will "strike a lucky lead."

Cashmere Goats, and the Alpacca and various Goats of Asia.

We have received letters from parties familiar with this subject, who have traveled largely in that part of the world, and who have a complete history of those valuable animals and the source from whence they can be obtained, who are desirous to form a company for the purpose of importing them in numbers to this country. The gentlemen wish parties who have capital to join in the enterprise for the purchase and shipment of these animals. This enterprise can be made very certain and largely profitable. The party who writes is one of high standing, has much experience as a traveler, and is of undoubted responsibility, with a thorough knowledge of such an undertaking.

TO READERS AND CORRESPONDENTS.

Letters, innumerable, upon our table, by reason of absence a few days, will be attended to quickly now. E. M. B., on Water Raising; A. T., on Insects, and other matters of interest, shall all have attention. We regret to be obliged to leave out some valuable matter, even advertisements, but the importance of the *Railroad Essay* supersedes all.

We call attention to the very happy letter of our able New-York correspondent, Professor M. A. Sarles, formerly of Benicia.

Our Present Number.

We shall send this issue to a large number of our prominent merchants and business men over the State, because we consider the "Railroad Essay" in this issue a most valuable one, and worthy a careful perusal by all who take an interest in our State's prosperity.

We print a large edition at much cost, with the hope of awakening a deep interest in the subject-matter of the essay.

We hope that many to whom we send this number will review the FARMER. We know it is worthy their attention, and being one of the oldest journals on the Pacific Coast, and having advocated the best interests of the State for over *ten years*, we hope to be favored with the names of many who will receive this number as our permanent patrons. Our columns will ever advocate the cause of internal improvements, and the rapid development of the resources of California.

ARTICLES RECEIVED AT THE CALIFORNIA FARMER EXHIBITION ROOMS, No. 320 Clay Street.

Tobacco from Society Islands.—We have received a very handsome roll of tobacco that was manufactured at the Islands. The style of curing is very singular, being in rolls of some 3 to 5 lbs., then incased in flag leaves, then bound up by cords so compact as to be as solid as a limb of a tree. This tobacco, when cured, cuts like a cheese, and is of a peculiar aromatic flavor, and of a most superior quality. This sample was kindly presented to us by a friend, and can be seen at our office.

WELL DONE.—The Commissioner of Internal Revenue has announced a decision of importance to dairy farmers. Persons who carry on farms, and keep cows—selling milk, butter and cheese as an incident to their farming operations—are considered as farmers, and exempt from license for the sale of their products.

THANKS, THANKS.—We express our most grateful thanks to those friends who have sent us new subscribers, and those advertising patrons who have so liberally given us their favors. We will deserve their kindness.

BUST OF T. STARR KING.—We call attention to the advertisement of Mr. Devine in another column, in which it will be seen that our opinion of his excellent bust of the late Rev. T. Starr King is indorsed by the Press of this city.

Zech's New Piano.—Although the great excitement, during the State Fair, about the "Zech's Pianos," has passed away, in part, Jacob Zech has orders for his Instruments, in advance, all the time. His fame, as a Piano Maker, brings him a world of business.

The Pacific Railroad.

The Directors of this great work can now speak in the language of an able poet and say:

"It is not victory to win the field,
Unless we make our enemies yield
More to our justice than our force; and so
As well instruct, as overcome our foe."

What a triumph is before the vision of those who have so long and so nobly labored in this great work! What a victory has been won! And how true, in this case, are the words of the immortal Shakspeare, whose memory has been newly laurel-crowned by thousands of true hearts in all parts of the world. The immortal bard says:

"The harder matched, the greater victory."

And truly in all the history of railroads in the United States—not even the opposition to the Boston & Worcester, and the Great Western—has a case ever occured, where there has been so bitter an opposition, or one where the issue has been so misrepresented, as in the case of the Pacific Railroad, that part known as the Central Pacific, from Sacramento to the mountains. And where, let us ask has this opposition come from, and what is the cause of it?

This opposition did not come from the People? No, for they voted promptly, and by large majorities for it. Nor did this opposition come from the farmers and mechanics of the country through which the road was to pass, cutting up their farms, and carrying wealth and business by them down to San Francisco, the metropolitan city of this great and growing State? No, the opposition did not come from the country, for every county gave it prompt aid. It came from that very receiver of the wealth and business the road should make; it came from San Francisco; from that city, even after the people had, by their votes, spoken so loudly in favor of it, but it did *not* come from the real working people, but from an *interested few*, supported and backed up by a hireling press that, not content to battle by crafty misrepresentations of main facts, yet sought to deter those who were willing to aid from doing so by striving to prevent the fulfillment of sacred obligations in the issuance of Bonds voted by the people, and thus retard the work.

What must be the reflections of those journals, that have, for long months, labored to check this mighty work, as they see all their efforts were in vain! How must they feel as they hear the late news coming over the wire, of the approbation which the National Legislature bestows upon this work! Those two journals in our city, whose morning and evening prayers, and curses intermingled, were so constantly directed to "Dutch Flat," must wish themselves in Holland, bye and bye, as the evidence begins to thicken around them of the complete triumph of that Road in spite of their merciless opposition.

When we see the very bitter and malignant opposition that has been manifested, by two leading journals of this city, against this Road, and not only against the Road itself, but against the President, the Directors, the Contractors, the terminus, and against any and all aid to it, when this is recalled, and then in contrast see what has been done, well may we exclaim again with Shakespeare

"The harder matched, the greater victory."

In this mighty enterprise, we can give the following proud results as evidences of splendid management and most fortunate successes: No ship on which the stock for this road was freighted has ever been wrecked or retarded in her course; no ship has been touched by pirates on the sea (pirates were all here); no error has been committed in the estimate or plans for securing the stock for the road; but one complete, continuance of good fortune—every effort a success; and now there is here, already, iron rails enough for 45 miles of the road, together with engines, cars, and machinery of the very best, so that by the middle of May *thirty-one miles* of this road will be furnished and opened to the public.

Congress has acted nobly; everything asked has been granted, and more than was asked for, in the fullness of liberality. Let it be remembered, too, that while we announce the opening of thirty-one miles of this road nearly completed (a few weeks only wanting) *not one rod* has been laid on the Atlantic side of the mountains.

Is not such a fact a triumph for our State? Is it not a reward to the President and Directors of this noble enterprise? And how stands the Central Pacific Railroad, in its credit, in the East, today? In New York, at Washington, everywhere abroad, the credit of this Company is undoubted, and we venture the assertion that in less than 12 months this stock will be at a very large premium, and eagerly sought for in Europe.

With the opening of this Road to New Castle, a bright day will dawn upon our State; it will be a day memorable in the history of California, and it will place upon the brows of those who have so long and earnestly labored in this work, honor and fame enough to satisfy the most ambitious mind. We remember well the opening of the Perth & Amboy Railroad—the first in the United States. It was our pleasure to enjoy a ride on that opening day. We remember the firing of the cannons; it was the roar of 6-pounder, and great as was the enterprise in those days, those 6-pounders were a just proportion for that event as compared to this, for when this Road shall be opened to New Castle, we trust that the Directors will bring forth the *Columbiads*, and let the roar of our 300-pounders send their echoing voices over the Sierras to notify them on the Atlantic side that the train is coming.

Such will be the glorious results of the opening of this road, that we verily believe the Directors will be enabled to complete the road to Salt Lake with the *income* of this road, combined with the County, State and National aid alone. This gives to the Stockholders a gain unparalleled in the history of Railroad building.

Well may the friends of this road now rejoice, for by the card of the Company it will be seen that the cars are already running from Sacramento to Folsom, via. the Lincoln cut-off. By this route passengers reach Lincoln more than one hour earlier than by the Valley Railroad.

The running of the Central Railroad train must very seriously diminish the business of the Valley route, for the Central route being the best, and making the quickest time, it will take the passengers and freight, and especially the Marysville route.

We have extended this article much beyond our intention, but so prolific is the theme we could not avoid it. We ask the public to read the very able Essay on this Road on the first page of this paper.

We have seen the T. D. Judah's (the engineer) working profile of this gigantic undertaking, from the city of Sacramento to the end of the first fifty miles: the work is from the beautiful Sacramento plains to the lofty mountains, where the grade is 105 feet to the mile, through solid granite or flint rock, and over gorges and ravines of hundreds of feet in depth. This shows how much has been, and is to be accomplished, and much credit and honor belongs to those who have and will triumphantly complete it.

The very great length of the articles upon the Railroad this week, precludes the possibility of giving all the statistics we desire. We shall continue this important subject. We will give, however, the actual account of trade on the Placerville road to Washoe, for eight weeks, ending in October 1863, and it is greater now:

Number of Stages bound up	169
Number of Stages bound down	171
Number of Buggies bound up	61
Number of Buggies bound down	46
Number of Stage Passengers up	1,287
Number of Stage Passengers down	785
Number of Travelers, other than Stage passengers, up—riders, footmen, and in buggies (including emigrants)	1,288
Number of Travelers, etc, down	2,503
Loose stock, of all kinds, up	573
Loose stock, of all kinds, down	434
Number of teams bound up	4,142
Number of teams bound down	4,464
Number of Animals in teams, up	22,738
Number of Animals in teams, down	22,600
Number of pounds of Freight, up	19,336,200
Number of pounds of Freight, down	

We give, also, the Washoe business on the first fifty miles, under estimates of 1863, but have since very largely increased:

30,000 tons freight, @ $5	$150,000
15,000 passengers, @ $3	45,000
Mails and express	15,000
Total	$210,000
Add total California receipts, less $80,000, estimated for points beyond Lincoln	$656,490
Gives as total receipts, fifty miles	$866,490
Deduct all expenses, operating, etc	150,000
Gives as net profits	$716,490

Or an annual net profit of 2¼ per cent, or monthly return of two per cent a month.

With such reliable statistics, who can doubt the near triumphant results to the road and our State. We say with heart and soul, God speed the work.

Replies to the Railroad Essay of our Correspondent.

The earnest desire of our friend, "J. B.," for the establishment of the Randall Line of Steamers (the four-wheel steamers), either on the Isthmus route or China and Japan, has been superseded on the Isthmus route by the Roberts Line of Steamers, and a similar enterprise will undoubtedly soon be added on the China seas. We regret we cannot inform our friend of the whereabouts of Capt. Randall, but believe he is still prosecuting his enterprise.

We can inform our friend that California is now shipping largely of grain, flour, and many articles of produce, to China, that we have *two* regular lines—one by Messrs. Macondray & Co., and one by Messrs. Koopmanschap & Co., and the trade is rapidly increasing, and California is reaping the benefit of this trade.

We are happy too to say, we have established Headquarters for the immigrant to our shores. The CALIFORNIA FARMER office has established Reading-rooms, with library, cabinet, and a fine hall, where all new comers can obtain information so much desired and needed, and hither they now come every steamer. The case alluded to, we think, must be a canard of those who were opposed to California. Such a case could not possibly occur. Since our friend has left our shores California has made great and rapid advances in all such enterprises, and we rejoice to herald it. The prophecy of our friend is now being verified. We should rejoice to welcome him again with us.

The American Flag.

"Flag of the free heart's only home,
By angel hands to valor given."

"Flag of the brave! thy folds shall fly,
The sign of hope and triumph high!"

This is the title of a new daily journal, and also with an issue weekly, that has recently appeared in our city under this most imposing name.

There is no name more significant, none more noble, none that ever has, or ever can, gather around it such glorious and hallowed associations.

We hail the American Flag! We acknowledge it! We bow before it! We love it! The beautiful Flag is the synonym of all that an American citizen would ask or claim. When we see the Stars and Stripes unfurled, it is as the herald of victory, and a victory of honor.

The American Flag, to which we allude in this sketch, comes to us as a political journal, a defender of the Constitution and Government of our country; as such we would have it everything that is noble, brave, and of good report. Every page, column, communication, paragraph, line, and word, should be a *type* of the *American Flag*. No act of a political journal that is established to defend it, should do that which would dim its luster.

The American Flag appears under the auspices of D. O. McCarthy. Its typographical appearance reflects much credit upon this new journal. There is in the editorial matter a fire, a spirit, and a vim, that denotes victory. Let the arguments used be only noble ones, the warfare fearless, but magnanimous, dignified and courteous, and the Flag will long and triumphantly wave. For the sake of the cause we wish it success.

The Flag appears to be well sustained by the patronage of the community, which is an indication of early success.

Sacramento.

The City of Trials—The City of Levees—and the City of Roses.

The fires, floods, and taxation, which have been the lot of Sacramentans, establish the first proposition in our trio, and the *levy* that has been made upon the purses of its citizens for the fifteen years past, to their hearts content, establishes the second proposition, and any one who will visit the "levee city" now, while the very air is redolant with the fragrance of roses, will say it most completes our trinne proposition. Sacramento, after all, is a wonder even to her best friends. The city is truly named, she has indeed been, as it were, the Sacramental food, and continually making an atonement. We hope her "day of redemption draws nigh." Although we have scores of Sacramentans in San Francisco, yet as we pass along the levee, or go up J to K street, and along the old and well known cross streets, there are seen the old familiar names of by-gone years. There they stand like the granite pillars, or iron columns of some mighty temple, upon which storm after storm has spent its fury, and the temple still stands. So with this devoted city two years since, a desolate ruin, now rising up in power and strength and newness of life, not content to be what she was, but resolved to overcome all her trials and put on beautiful garments like a bride in her wedding robes.

Sacramento can only be likened to an arched bridge, or the quartz rock of our mountains, the more weight that is put upon the first makes it the stronger by the pressure, and the hotter the fire, and heavier the blows upon the latter, brings out the most and the finest gold, and we verily believe there can never come to the brave spirits of this devoted city a trial they cannot overcome. The present undertaking in that city, now witnessed at the city front, of raising a city nine or ten feet, could only have *originated at* Sacramento. The people of that city are so accustomed to such things they must have some great work to do, and they will do it. Sacramentans are now awake, the golden sky shines over them, their future is a bright one. Ten years from the present, and Sacramento will be a proud and prosperous city; equaled by no other on this coast, save the metropolitan city, and then her fame, the fame of the levee city, will be worth possessing. We do not believe there is in all the histories of the world a parallel case to the noble undeniable fortitude which the citizens of this city have shown for fifteen years. Millions upon millions have been poured out with a freedom of spirit heroically grand, and as we stood upon the present new levee, we felt a thrill of pride and satisfaction as we inwardly exclaimed, *Triumphant!*

The beginning of this great work, in the handsome and substantial manner in which the stores of J. & P. Corolan have commenced, like a land mark, is a good omen of the future. Sacramento is safe, she has never stood so strong as to-day, never looked so well or so hopefully. There is a solidity about her business men, an indomitable spirit that never quails and is never conquered. It was a pleasure to go up and down her streets, now in order, and shielded safely by her great *sea-wall*. As we quietly made our way dreamily on, almost thinking of the "happy times coming," we could see names, here and there, as we see fixed stars in the firmament above, their names were the indorsers for this city's redemption. We walked on, dreamed on, read on. We have no desire to be individuous at all, for we could not have space to name all that deserves remembrance, but these we saw and met, therefore we speak of them. They are known as honorable workers and read of of all men—D. O. Mills & Co., R. T. Brown, Arnold & Co., Booth & Co., Lindly, Hall & Lubman, J. L. Polhemus, Bragg & Co., D. S. Lord & Co., Gillig & Co., Gibbs & Holmes, Treadwell & Co., W. R. Strong, Field & Co., E. P. Figg, Big Tree Store, Dr. Bowman, Wormser & Co., McDonald & Co., Waters & Co., Carolan & Co., B. F. Hastings & Co., Strobridge & Co., O'Connell, Ryan & Co., Coffin, Hamburger, Hardy & Hall, Dale & Co. These were mostly on J street, on K street the pioneers Huntington & Hopkins, Hammond & Co., Gates & Co., Nelson—and on the city front, Mowe & Carrol, Earl, Gen. Reddington, Robinson, Chesley, Earl & Co., and many others we cannot recollect. It is such a host that has sustained, built up, and saved our levee city from the doom that faint hearts and despair would have inflicted and left her a ruin, whereas, she is now, and will be, A PROUD MONUMENT TO HER FRIENDS AND THE WORLD.

LAND FOR IMIGRANTS.—In our present issue will be found a letter of inquiry from Michigan. We have also letters of similar import from Illinois, Iowa, New York, and from Pennsylvania; and hardly a mail arrives that we do not receive letters of inquiry for land and "homes." This is a good sign for our State. We send the FARMER to all applicants to show them the condition of our State. To such imigrants we call their attention to the large track of land known as the "Antelope Ranch," advertised in our paper. Here is a good opportunity for new comers. Let them look to it. Call at our "Reading-room," and we will aid them in getting homes. The Antelope Ranch is a splendid tract of land, the last year the crops were fair; barley, 75 bush. per acre, wheat, 30 bush, tobacco was grown successfully, 10 acres in one lot—and there is no product that will not grow luxuriantly. Living streams of water are abundant on the place. It is a deep rich soil, a prairie land of noble appearance, capable of making five hundred happy homes. New roads are being laid out around and across this great tract of country which is now easy of access—the soil is from 3 to 10 feet deep.

The Fashions at Sacramento.—The headquarters of fashion of our cities is generally where ladies most do congregate, and from our notes of observation while there, we observed crowds of handsomely dressed ladies at O'Connell, Ryan & Co., on J street, at Sacramento, and we presume the cause of this gathering, and the elegant style of dresses they appeared in, is more fully explained in the card of this long established firm and popular store, which is seen in another column.

A Trip to Folsom on Pacific Railroad.

A flying visit to Sacramento, the present week gave us a favorable chance to enjoy a trip to Folsom in double-quick time, and without hindrance to business, as will be seen in the brief sketch we give of it. We left Sacramento at 9 A. M., at the foot of J street. Passengers by steamer, up-river over night, were taking seats for Marysville, by this route via Lincoln. The cars of this Company are large and handsome, seats easy and commodious, so solid is the track that the run of the cars will permit writing with ease and facility as at a desk. The number of passengers this morning, was an evidence that *the People* intend to give their patronage to *this route* and to this road, in earnest. A few moments, only, after starting, and we cross the bridge of the American river, leaping forward into the open country, at lightning speed; here lies outstretched a vast tract of land, seemingly a waste plain, but this ere long, will become a fruitful soil. Over the plain we sped at the rate of *forty miles per hour*; this is called the *Sacramento Plains*, and here the eye enjoys a broad Panoramic View bounded only by the distant Sierra Nevadas and the Coast Range; it is a grand picture, the foreground being the beautiful ever-green oaks, among which flocks and herds are seen scampering away, affrighted at the shrill voice of the "Iron Horse," that now comes to them for the first time; after passing twenty-five miles the land becomes a little mountainous, while here and there is seen the deserted tenements of those who in former days occupied these places, as "Squatters," but who now have found elsewhere better titles and "Happy Homes" in more cultivated districts. Along this road we noticed long piles of "wood" brought thither from the waste wood, as the grove, by the industrious laborer who has thus begun his pile, by seeking a near market for his wood to the Railroad Company, too, a product that would have remained waste a long time had it not been for the early opening of this road, as it was too far from market to make it pay.

We were quickly at the station, at Rosedale—distance *thirty miles*, time only *eighteen minutes*. Here we found one train ready for Lincoln, and one for Folsom. Taking the latter, we had room but a few paragraphs in the morning Union, and we found ourselves at Folsom, from whence trains start, on the arrival of trains, to Placerville, Washoe, Virginia City, etc.; time, from Rosedale, 11 miles in 16½ minutes, the quickest time made, and this over the *old road*, here we noticed the fine teams ready to take passengers to Placerville, Washoe, etc.; five splendid four-horse coaches and three six-horse coaches, of the Pioneer Stage Co., whose fine teams now run over 1,300 miles of our widely extending State. Spending some twenty minutes in Folsom, we returned time to Rosedale 17 minutes, and to Sacramento from the latter place 30 minutes; arriving at the Golden Eagle, for breakfast, at precisely 8½ A. M., having paid a visit to Folsom and back, a pleasant trip, as an appetizer, on a beautiful morning. We return thanks to the Directors and Conductors of the road for kind courtesies which gave us important information and made the trip doubly pleasant.

THE PACIFIC RAILROAD COMPANY ROOMS, LIBRARY, CABINET, ETC.

This Company have large and spacious Rooms, on K street, in the original "Stanford Building," that safely passed the terrific flames of '52. This fact is a favorable omen for the Company's Rooms, as it has proved *fire-proof* in a *mercantile* sense, as it has proved *fate-proof* in a *Railroad sense*. The Rooms are all spacious, each and every department having separate rooms, President, Directors, Secretary, and Treasurer, Draftsmen, Contractors, &c., all admirably arranged. The President's room has a large and valuable *law library*, as well as a miscellaneous one, and is handsomely furnished with maps and profiles of the route of the railroad, and also a valuable cabinet of minerals, petrefactions, &c., gathered from the different sections of the line of the road. We noticed in the cabinet gold and silver rock from "Stewart's Flat," "iron ore" from section 51, splendid specimens of granite from the famous quarry on Section 24, copper ore, fine, from Section 31, Plumbago, very pure Section 31, flint from Section 48, petrefactions, fine, from Sections 22, also from different places along the line, "porphyritic rock," "agates," "pipe clay," and numerous ores. All showing that rich and valuable developments may be expected by the opening of this road over and through these mighty wastes. The evidence of these ores and minerals along this road should be enough to convince any one of the value of the stock on this road. If the people of this State don't take it, foreigners will, and we shall regret it when too late. We have written vastly more than we intended, but the splendid essay in this number by our old and esteemed friend induced us to send out with it such facts as we deem important. The following are some of *the estimates of the business on this road.*

Central Pacific Railroad,

.....AND.....

CALIFORNIA CENTRAL R. R.

ON AND AFTER MONDAY, APRIL 25th, UNTIL further notice, trains will leave the foot of K street, SACRAMENTO, as follows:

For Lincoln and Folsom, at ..... 6:15 A. M.
For Folsom, at ..... 10:30 A. M.

RETURNING

Leave Folsom at ..... 7:30 A. M.
Leave Lincoln at ..... 10:45 A. M.

13tf LELAND STANFORD,
President C. P. R. R. CO.

Iron Pipe for Farmer's Use.

THE UNDERSIGNED IMPORTS ALL SIZES OF Iron Pipe for irrigating purposes generally, together with all fixtures to complete the same.

THOMAS DAY,
239 Montgomery street,
13-tf San Francisco.

California Whips.—Purchase in preference, always, those articles manufactured here; this is our first duty, even if we pay more for them. The Whip Factory, of Messrs. Main & Winchester, exhibits as fine specimens of Whips as any country has produced. Remember this and give preference to our "Home Work."

Salt for Dairy Use.—Dairymen, remember the salt for your Butter should be of the *best quality*, as is also the salt for our Pork and Beef Packers and Pickle Makers. OAKLEY & JACKSON have the *very best*, and of their own manufacture, too.

"Do you want your audience attentive?" said Dr. Emmons; "then give them something to attend to."

LIFE-SIZE BUST

....OF....

Thos. Starr King.

COPIES OF THE BUST OF THE LATE REV THOS STARR KING, by P. J DEVINE, are soon to be issued to subscribers. The Bust and subscription list may be seen at Mead & Van Tassel's store, Montgomery street, or at Grant & Devine's Marble Yard, Sutter street, between Montgomery and Sansome streets The public are invited to see the Autograph Subscription list which comprises many of Mr King's personal friends.

Opinions of the Press.

The following criticisms are from the leading newspapers of the city:

After the many attempts at Busts of the late Thos Starr King which have been made, it is gratifying at last to have one we can praise It is a work of art, for expression is there as well as outline —Bulletin

Nothing heretofore executed, either as a portrait or bust, will equal it as a work of art or valuable memento of the dead —Alta

It is an admirable work, and is pronounced a perfect likeness of the deceased by those most capable of judging —Democratic Press.

The friends of Mr King, who have critically watched Mr Devine's progress, express themselves highly satisfied with the result. It exhibits a fidelity of likeness and artistic grace that has not yet been equaled —Golden Era.

As a work of art it is wonderful, seeming to be exact and complete in every detail to which the eye may be directed or recollection recalled —Sunday Mercury.

We have for many years looked with interest upon the labors of the artist In the present effort he has been completely successful —Cal Farmer 13 tf

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 29, 1863.

JACOB ZECH, ESQ:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation to pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T EVANS, Pianist and Organist,
GEO. F PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPFORE, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J ZECH.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,

CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

SACRAMENTO October 6th, 1863. 13-3m

ELECTRICITY

THE

GREAT REMEDIAL AGENT.

Electricity as a Remedial Agent has, until recently, been but little known. An Electric Battery has been a terror from childhood up because a little Battery gave a "start," and the thunder storm ruled by lightning. Now it is better understood, and is and will be the sovereign remedy for many diseases heretofore considered incurable. The following series of articles and statistics, with facts and proof of the virtue of Electricity are worthy of attention. When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulations of the poisons which constitute disease. A great cry went up from the interested in the continued supremacy of the old system of one poison to cure another, that Electricity, as a Curative Agent, had been tried and had proved to be of but little if any value—thinking, poor souls, the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients there were those who were diving into the science of Electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the *Improved Instruments* of Dr. J. H. Josselyn, Resident Physician at the Electropathic Institute, 645 Washington street, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic System. From early morn till late at night, his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services.

The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed is Rheumatism; none has given the honorable practitioner more trouble to relieve, and no one has pretended to cure (if we except known empirics) permanently. But this subtle disease give way before the Electropathic System in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of a relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases of full as troublesome, and some far more fatal in their results.

We allude to that kind of disease paraded by quacks in the journals of the day, a trouble which was never cured by medicine, only a little strength imparted by the use of tonics. The poor victim is kept taking medicines and paying for them until his last dollar is gone and then, as soon as he undertakes to work to obtain more funds, the trouble comes back in all its loathsomeness To this disease Electropathy is peculiarly applicable, its action being upon the spermatic nerve, strengthens the secretory organs, and at the same time, creating an equilibrium to the system, thereby preventing an elapse.

We dwell upon this disease because it is the bane of the youth of California; and one about which there has been more deception used than all others put together. It is not necessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present very few Instruments in the world that can be depended upon A good instrument costs very heavy, and cannot be purchased unless ordered, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only Instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous imposters in the bathing line. The pure Magnetic Bath is one of the most effective aids in the removal of disease from the system, but if given at the wrong time is likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this Bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unreasonably administered, and if not necessary, advise the requisite remedy.

To Females,

the Directors would say, Electropathy is particularly applicable to your delicate and fragile systems, and to the numerous troublesome and painful diseases to which you are liable. Should you be irregular, a few treatments will restore the functions to the proper state without pain or inconvenience. Should you be weak and enfeebled either general or local, this system imparts strength and vitality, making the recipient feel buoyant and youthful, where before they were languid and unable to enjoy the pleasures of life. One great blessing connected with Electropathy is, it purifies the system so thoroughly that it beautifies the complexion, making the coarse and freckled skin as pure and fair as possible, giving the patient a fresh and healthful look.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil foreboding and your system strengthened so that nothing can disturb the current of your life Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in issuing this pamphlet, do it in the hope that it may be the means of awakening the public, who have not studied into such things, to a sense of their duties, and if possible prevent those who have the care of a rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse the origin. Also, that those in need of remedial agents may know where they can find them without resorting to taking the thousand and one poisonous nostrums that are continually palmed off as sovereign panaceas for all the ills of humanity. Avoid them all, they are snares set to rob you, and to your bodily injury at the same time. The following is a list of the cases which have been successfully treated by the *Electropathic System*, at the Institute, during the first four years of its establishment. The record is good, and challenges admiration of the world:

Name of Disease.	No.
Rheumatism	1589
Neuralgia	1492
Dyspepsia	1467
General Debility	1410
Fever and Ague	1252
Dumb Ague	1210
Bronchial Affections	1106
Asthma	1049
Female Irregularities	1022
Mercurial	933
Scrofula—long standing	922
Paralysis	890
Disease of the Eye	592
Catarrh in the head	705
Catarrh in the lungs	608
Liver complaint	600
Incipient Consumption	582
Panama Fever	563
Deafness—total and partial	480
Mental Derangement	471
All other—and among which is almost every nameable disease	2,186
Total	21,273

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them to prevent its success. It has risen to a position that is beyond their fiendish malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions A thinking public are fast consigning them to that oblivion their works merit. Let them go, they will not be missed.

Persons seeking remedial assistance, may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature to the body from the center to the surface, by its energy, while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the flesh should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon mercurial diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity forces itself out of the body. This result has been arrived at by testing the water after an Electro Magnetic Bath. After such tests have been found in the water the patient is not troubled any more with those pains peculiar to the diseases. In all other cases it forces to the surface and is washed off by the bath. The whole system in its application is a luxury there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure all the time. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES.

SAN FRANCISCO, April 18, 1860.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied with chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco—ss.
Subscribed and sworn to before me, this eighteenth day of April, A. D., 1860. P. BARRY, Notary Public.

The undersigned takes this method of acknowledging publicly the benefits he received from the treatment applied to him at the Electropathic Institute, while suffering under a terrible infliction:

This is to certify that I have been under Electropathic treatment at the Electropathic Institute, 645 Washington street. When I applied to Dr. Josselyn I was cramped up with rheumatism, and also had the coast ague. So bad was I that, without relief, I don't think I could have lived more than one week. The Doctor, with his instrument, relieved me the first treatment from all pain, and perfectly cured me of all disease in twenty treatments, without the use of medicines. I cordially recommend all afflicted to patronize this Institute, for it is truly a blessing to the afflicted, and the operation is very pleasant. I wish to thus publicly thank Dr. Josselyn for his care and sympathy.

JOSEPH SEGER, of Bolinas Bay.

September 19, 1860.
State of California, City and County of San Francisco—ss.
Subscribed and sworn to before me, this 19th day of Sept., A. D. 1860. P. BARRY, Notary Public.

SACRAMENTO, Oct 10, 1860.

DR. JOSSELYN—Dear and Honored Sir: You requested me to let you know how I feel after being at home three weeks. Well, sir, I have been here a little over two weeks and there is no return of that very unpleasant trouble. My sleep is sound, and there is no disturbance of the regular laws of nature. I feel as strong as I ever did before bad habits had weakened my system. Not only is the general debility entirely disappeared, but the local trouble has gone. I feel so strong that there is no fear of its return. Considering that you only took one month to cure a disorder of seven years standing, I think your system almost miraculous. Accept my sincere thanks, and publish this if you please. I have sworn to it, as you will see. C. BOWMAN.

State of California, County of Sacramento—ss.
Subscribed and sworn to before me, this tenth day of Oct, A. D., 1860. CHAS. HART, Notary Public.

HORSETAIL, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it; and Mercurial pains as you state them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you would cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can, by spreading your fame up in these parts.

Respectfully yours, GEO PERKINSON JR.

To J. H. Josselyn, M. D., Resident Physician, at the Electropathic Institute.

NEVADA, Nov. 8, 1860.

DEAR DOCTOR: Pursuant to agreement, upon my arrival, I sit down to pen you a few lines in acknowledgement of the great service you have rendered me, in relieving me of that painful case of neuralgia and rheumatism. When I look back and see the gallons of medicines I have swallowed to no purpose, and then to think how soon you cured me, I am astonished. You were only twelve days performing a cure of the trouble, for which I had taken medicine over six months. Dear Doctor, if you could see the wonder exhibited by my friends, who can hardly believe that a cure was performed without medicines, but here I have been cured, and I have not taken a drop of medicine from you, nor from any one else, while being treated by your splendid Instrument I shall try to show my gratitude by sending every sick man I come across to you. Yours, till death,

FRANCIS GARLAND.

To J H Josselyn, M. D, Resident Physician, Electropathic Institute.
State of California, County of Nevada—ss.
Subscribed and sworn to before me, this eighth day of Nov., A. D., 1860.
F. SPAULDING, Notary Public.

YREKA, Nov. 10th, 1860.

DR. JOSSELYN—Dear Sir: Your letter, dated October 15th, is before me. You wish to know how my bronchial troubles are. Now, Doctor, that looks a great deal like a joke. I once had such an affection of several years' standing, but thanks to your natural mode of treating disease, it has gone to be numbered with the things of the past. Since my return I have not felt the slightest trouble from it. When you pronounced me well I did not expect to ever hear from it again. Any one who sits under treatment of that *Improved Instrument* of yours will have the same feelings. It imparts vitality to the system so rapidly that confidence is at once established. I have to thank you that you did not refuse to treat me because I could not pay you the whole of your reasonable charge; inclosed is the balance due you, and God bless you for the kind treatment I received at your hands.

Yours, ever grateful, WM. GARDNER.

State of California, County of Siskiyou—ss.
Subscribed and sworn to before me, this tenth day of Nov., A. D, 1860. B. F. WELLITS, Notary Public.

This is to certify that I, the undersigned, was troubled with dumb ague accompanied with rheumatism, very badly. My disease was taken in Washoe. After having exhausted medicines without benefit, I applied to Dr. Josselyn, at the Electropathic Institute, on the first day of November. After taking twenty treatments with his Improved Electropathic Instrument I am perfectly cured, having been entirely relieved of all pain or inconvenience. I feel as strong as I ever did when in the best of health. I cheerfully recommend all afflicted to his care, as being the best physician I ever became acquainted with. One great advantage, he uses no medicines, but cures by a process which is perfectly natural. The time occupied in my case was thirteen days.

D. O. HARRA.

November 14 h, 1860.
State of California, City and County of San Francisco—ss.
Personally appeared before me, D.O. Harra, and subscribed and sworn to the above certificate, on this fourteenth day of November, A. D., 1860.
P. BARRY, Notary Public.

SAN FRANCISCO, Aug. 3d, 1861.

To the Directors and Resident Physician of the Electropathic Institute.

SIRS: You requested of me a certificate of the cure you performed in my case. Below I append it:

This is to certify that I was troubled with a swelling which commenced in my ankles, and gradually extended upward until it effected my whole body. I sought the best medical aid in New York and Boston, and they all pronounced it dropsy. Hoping to retrieve my health, I visited California in February last. I consulted the Resident Physician at the Electropathic Institute; and now, after five months of treatment, and waiting to see its effects, I am pronounced well by competent judges. It did not take but three months of treatment to cure me, but I waited to see that it did not return. I feel perfectly assured from what I saw while under treatment that Electricity as applied at the Institute will cure any disease to which the human family is liable.

Now, gentlemen, you can make what use you please of this certificate. With my thanks to the Resident Physician for his kind attention, I subscribe myself,

Your thankful patient,
MRS. C. A. CARLTON.

Opinions of the Press.

The advantages of electricity as a remedial agent, are universally admitted by the medical and scientific world. It requires, however, experienced skill to apply this remedy efficiently, and this skill of application is possessed in an eminent degree by Dr J H Josselyn, of the San Francisco Electropathic Institute. Particulars of his method of practice can be obtained by reference to his advertisement in another column. The Doctor is well known to us as a scientific gentleman, and an ardent devotee to his profession He is no pretender, but has conferred incalculable benefit on those who were so fortunate as to seek relief at his hands. For those who desire speedy and permanent relief from the rheumatic pains, so prevalent in this region, we can recommend no surer remedy, than a visit to Dr. Josselyn at his rooms in San Francisco, No. 645 Washington street.—[Placerville Republican.

ARE YOU SICK?—We wish to say a word to those that are sick. We have in the city an institution known as the Electropathic Institute, situated at 645 Washington street. The establishment is under the charge of Dr. J H. Josselyn, a physician who has no superior in the city. He has been in charge of the Electropathic Institute for several years, and has been uniformly successful in his treatment of the numerous patients that have placed themselves under his charge. The Electric treatment will cure many diseases that cannot be reached by any other mode. Dr. Josselyn gives his personal attention to all of his patients, and is always ready to give advice to those that may call upon him. His charges are very moderate, and we cannot do the sick a greater favor than to recommend them to call on him before placing themselves in charge of another —[San Francisco Daily Journal.

We call the attention of our readers to the advertisement of Dr. Josselyn's Electropathic Institute. Voluntary and unsolicited we make the following statement, proving its beneficent effects, particularly in rheumatic cases. Some months since we were on an editorial trip, visiting the mountains. The stage-coach upset, and landed all the passengers, including the writer, below in the valley, where the Deer Creek overflowed by receiving the additional material, extensions to its usual contents. For some hours exposed in our wet clothes, to night wind and weather, we soon felt the effects of the accident in the mountains—pains in the back, hip, and legs; so much so, that for weeks we hardly could walk. Treatments of all kinds were applied but without avail, until our attention was called to the Electro-galvanic Baths and appliances of the above institute. Thank God, after two weeks we have been fully restored, and enjoy now the free use of our limbs and body, as fully as previous to the involuntary bath in Deer Creek.—[Dr. H. Sims, Ed.—True Pacific Messenger.

ELECTROPATHY.—Electricity has long been classed among the most effective medical agents. It possesses great advantages over the systems of therapeutics heretofore relied upon, as it reaches more certainly the seat of disease, especially in nervous or rheumatic complaints. The Electropathic Institute, No. 645 Washington street, under the charge of its able Resident Physician, Dr. J. H. Josselyn, has attained a well-merited celebrity for the many cases which have resulted favorably from the skillful application of this invaluable remedy.—[Daily Morning Star

A GOOD INSTITUTION FOR THE SICK.—One of the very best places in the city for the care of the sick is at the Electropathic Institute, 645 Washington street. The establishment is under the charge of Dr J. H. Josselyn, a physician of great experience, and no one can do the sick no greater favor than to recommend them to give the Electropathic Institute a trial.—[Weekly Journal. 13

Patent Hat Rack.

THE PROPRIETOR AND PATENTEE WOULD invite public attention to a new

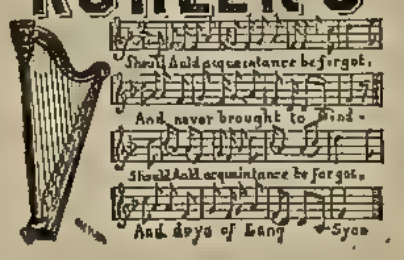
PATENT HAT RACK

which is now on exhibition at the California Farmer Reading-room. This is an entire new thing in style, and of peculiar form. It is a valuable invention and worthy the attention of Furniture Dealers, and Inventors This Invention is patented and the undersigned will sell Rights for the County or State, or other parts of the Pacific Coast. This Patent was sold for a high price in New York. Call at Farmer Reading-rooms and see the model For particulars call on Editor of Farmer. 13-3m

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle-grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H & L AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories,

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.



The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL-OIL as a basis of their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural resin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest until, at the present time, they have established a manufactory of Resin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply The subscribers are now receiving native resin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

Home Miscellany.

THE ROMANCE OF THE OLD.

Though bends the hoary head with years
In reverential grace,
As bowing meekly unto God
When nearest to his face;
Yet lives there something of the child,
One spark amid the cold,
To hallow with the warmth of youth
The Romance of the Old.

Not all the throng of worldly cares
That saddon life's decline,
Can leave the human heart without
Some one Ideal's shrine;
For if Realities have proved
What childhood no'er foretold,
Still clings the fiction's charm about
The Romance of the Old.

Oh, lover, in thy blushing pride,
Oh, sweetheart, in thy walks,
Turn not in angry haste away
Because the old man talks,
But think the twinkle of his eye,
O'er jokes so often told,
Reflects thine own romance within
The Romance of the Old.

The hand that hangs the Christmas Tree
With quaint, ingenious toys,
May lack the whiteness of the girl's
The quickness of the boy's;
Yet in the loving heart that bids
Such fruit the branches hold,
Are children's dreams renowned to guide
The Romance of the Old.

I saw returning from a church
A fond and happy pair;
And he with look and step elate,
And she with modest air.
Behind them came two stooping forms
As happy;—but behold!
They wept; for weeping marketh oft
The Romance of the Old!

To manhood in its hardy prime,
And womanhood the young,
'Tis given perfect joy to show
By music from the tongue;
But tears refine the withered cheek
Where many a tear hath rolled,
When tenderness thro' pleasure thrills
The Romance of the Old.

All blessings on the sacred head
That wears the silver crown,
And blessings on the shaking hand
That smooths its brightness down;
And blessings on the shrunken lips
To kindness only bold,
Whose very benedictions breathe
The Romance of the Old!

And whether at the hearth of Home,
Or in the world around,
Let's thank the Father of us all
For wisdom so profound,
That, as in Youth the blood is warm,
And as in Age 'tis cold,
The two are sweetly blended in
The Romance of the Old.

[For the California Farmer.]

Home.

The joys of home are linked with many a picture of sadness, which gives a greater brightness for the momentary obscurity of its light. Lights and shadows follow us like day dreams; we are ever watching for lights without shadows, but the intensity would be insupportable to our mortal eyes were it not for the beautiful veil with which nature hides herself, like a blushing maid screening her beauties from the gaze of the world. We should tire of her, and she become an unwelcome intruder to our happiness, but the beautiful changes render her a fit subject for study and delight. So with home, our joys and sorrows render the thing delightful. The varied scenery of a beautiful landscape, reflecting its changing shades of rocky scenery where, in childhood, many a tiny footstep clambered o'er the rugged steeps in search of blue-bell or violet, whose heads peeped forth in loveliness to gladden the world and praise their Creator; then again the grassy banks and lawns covered with flowers of every hue, the running streams whose banks are bordered with foliage and trees of massive growth, all, all of these present a picture of home with its varied scenery, where memory's page dwells on the early days of childhood, up through the long train of years and changes that have come, one by one, and broken in upon that home of hearts. And as, year after year, some one of that beloved home has been called away to return no more to mingle in earthly pleasures, but passing on in a halo of light and reflection to fill up and enliven the darkened, saddened hours of desolation, thus spiritual for natural decay. Home, Friends, ye are around us still; we feel the silent touch and the presence of those loved ones often by our side, harmonizing ourselves to be fitted for the beautiful change which calls us to our bright, celestial home in Heaven, where sorrow no more comes and parting is unknown.

McDonald Clarke.

The following account of a very singular man appeared in the Portland Transcript in 1850:

"Some of our readers, perhaps, have heard of McDonald Clarke, sometimes called the *mad poet*. Our thoughts are at this moment directed to him by observing, in an exchange, one of his poems, credited to that most prolific genius, Mr. Anonymous. Poor fellow! he died in a mad house, and now the orphaned offspring of his brain and heart wander, unowned, through the high-ways and by-ways of literature.

McDonald Clarke was a singular, unfortunate, but gifted being. Amid a thousand absurd vagaries shone out gleams of the gifted genius. Two or three years ago, we came into possession of a small, miserably-printed collection of his rhymings, published during his lifetime. It probably fell dead from the press. It was full of bad grammar and worse orthography, yet it contained snatches of poetry that would not disgrace the proudest of the children of song. The following straggely worded, but touchingly beautiful paragraphs are from his introduction to the literary volume referred to:

"'I won't pester folks with apologies. Here's a a rough handful of flowers—a little dirt about the roots—a tear'll wash off.

"'If the life of my poetry is wholesome, 'twill breathe after the wild spirit that inspired it has been sobered at the terrible tribunal of eternity, and the weak hand that traced it long wasted to ashes.'

"He is the author of those oft-quoted lines,—

"'Now twilight lets her curtain down,
And pins it with a star.'

"In his wilder moments, he set all rules at defiance, and mingled the startlingly sublime and the laughably ridiculous in the oddest confusion. He talks thus madly of Washington:

"'Eternity—give him elbow room;
A spirit like his is large;
Earth fence with artillery his tomb,
And fire a double charge
To the memory of America's greatest man:
Match, him, posterity, if you can.'

"In the following lines, he sketches, with a few bold touches, a well-known place, sometimes called a *sum hole*:—

"'Ha! see where the wild-blazing grog-shop appears,
As the red waves of wretchedness roll,
How it burns on the edge of tempestuous years,
The horrible light-house of hell!'

"A reviewer having made a sneering allusion to Clarke, and used the word *zigzag* in reference to brains, Clark called at the office of the paper which published it, and wished permission to reply. It was granted, on conditon that he would occupy only four lines. This was his reply:

"'I will tell Johnny ——, in the way of a laugh,
Since he's dragged my name into his pen-and-ink scrawl,
That most people think it is better by half
To have brains that are 'zigzag' than no brains at all.'

"Here is a tribute to the Sabbath, which, in sweetness and simplicity, is not often equaled:

"'I feel the happier all the week,
If my foot has pressed the sacred aisle;
The pillow seems softer to my cheek;
I seek to slumber with a smile;
With sinful passions cease to fight,
And sweetly dream on Sunday night.'

"Mrs. Child speaks of McDonald Clarke as one of the purest-hearted and most affectionate of beings. 'He was,' says she, 'simple and temperate in all his habits; and in his deepest poverty he always kept up the neat appearance of a gentleman.'

"He died, a few years ago, in a lunatic asylum, on Blackwell's Island, New York, at the age of forty-four, and was buried in Greenwood Cemetery, agreeably to a wish often expressed by him during his brief and sad career. He is said to have expressed a child-like delight when told what arrangements should be made at his funeral. 'I hope the children will come,' said he; 'I want to be buried by the side of children. Four things I am sure there will be in heaven—music, flowers, pure air, and plenty of little children.'"

NAPA
COLLEGIATE INSTITUTE.

For Young Ladies and Gentlemen.

NAPA CITY, CALIFORNIA.

NAPA CITY, IN POINT OF LOCATION AND Climate, is unsurpassed in the State. It is about four hours' ride by steamboat from San Francisco, and three by stage from Benicia. There will soon be a daily boat from the former place, and there are now two daily stages from the latter. There are ext nsive accommodations for Boarders in the College Building, with large and well-ventilated sleeping apartments Teachers reside in the Building, and will have a constant oversight of the Students who are Boarders.

GOVERNMENT.

Young Ladies will receive no calls from any except Parents and Guardians. Ladies and Misses will not leave the College grounds, except in company with their Instructors Young Men and Lads are not allowed to lounge about the Stores, Hotels, and Saloons of the village. All pupils are required to attend Church on the Sabbath. Parents will choose the place of worship for their children.

MILITARY DEPARTMENT.

This Department has been opened with a view to the permanent establishment of a Military Academy on this Coast. From three to four years will be requisite to complete the course in this Department. The State has furnished us the necessary equipments for such a school. The Drills will be attended to daily.

NEW
AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparce, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of

COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 5-3m

San Francisco, Mar. 4, 1864

Wood's Prize Mower!

AS NOW IMPROVED AND STRENGTHENED, and adapted to the Pacific Coast, will beat all other Mowers in use, and has so been awarded at all Exhibitions in the world

CHEAPEST AND BEST MOWER in Market.

TREADWELL & CO.,
Sole Agents for the Pacific Coast.

Can be had at our Stores in San Francisco, Sacramento, and Marysville. 1

The "Mabury Header."

THIS SPLENDID HEADER HAS COMPLETELY eclipsed all others in use in the Western States.

The advantages are, EASE OF WORKING, and the facility with which it TURNS ON ITS OWN GROUND, enabling the operator to keep the corners of his field square.

Other Machines are being laid aside in order to avail of the advantages of the MABURY HEADER.

For sale by

Literary Shrubbery.

A very pretty anecdote is told by the writer of a clever article in an English periodical upon "The Sleep of Plants." Among many interesting instances, he mentions that the compound leaves of the American Senna and the Locust-tree droop at sunset, and continue in that state during the night, but with the approach of morning they again elevate themselves to their usual position. The leaves of these plants present, with their drooping foliage, a very different aspect in the evening to what they do in the morning. A little girl, who had observed the phenomenon of sleep in a locust-tree that grew before her nursery window, upon being required to go to bed a little earlier than usual, replied, with much acuteness: "O mother, it is not yet time to go to bed; the locust tree has not yet begun to says its prayers."

A young lady who talks eloquently about love, is probably, incapable of feeling much of it. Deep feeling does not overflow in words. Many a young woman sincerely believes that she is capable of a never-ending attachment, when she likes only the the excitement of having a lover and hearing her virtue extolled by others.

Doctor. "There's not much the matter with him, but I think we must cut off his animal allment."

Master Tom (with intense alarm). "Oh! Ma! Will it hurt me?"—Punch.

A thrifty wife wonders why men can't manage to do something useful. Might they not as well amuse themselves in smoking hams as smoking cigars?

When two friends part, they should lock up each others secrets, and exchange the keys. The truly noble mind has no resentments.

A philosopher was once consulted as to the best method of destroying one's enemy, and he gave for an answer, "Make him your friend."

The man who courted an investigation, says it isn't half as good as courting an affectionate girl.

Greenbacks! Greenbacks!

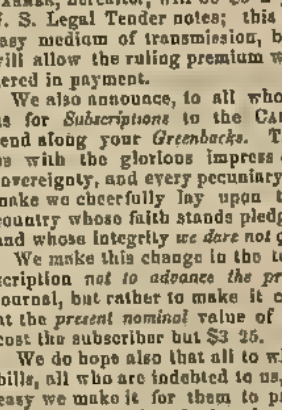
We receive Greenbacks for subscriptions to the California Farmer, and allow the ruling premium for Gold!

It is a well known fact to all conversant with newspaper publishers, that since the war commenced the cost of publishing a paper has very greatly increased, so much so as to stop hundreds of papers, over the United States. Yet it has been our pride not to add cost to our *subscribers*, but to relieve them although we have made sacrifices of thousands to carry out our principles, and do what we esteemed our duty to uphold the credit of our country both by precept and example. From the first we announced that we would receive Treasury Notes at par for *Subscriptions to the Farmer*. But the notes were rejected, here, as currency and many of our subscribers have, in conformity with the custom, continued to pay us in gold; yet we have never refused greenbacks at their face value when sent us by subscribers, though it has subjected us to serious loss from our being obliged (from the rejection of the currency as mentioned), to pay gold in our disbursements. At the present cost of all articles, we could not do a paying business by receiving greenbacks at par, at our present rates. But to make the thing work equally for all our subscribers, as well as conform to what we think our duty, we propose to adopt the greenback basis, and raise our subscription price to $5 a year, payable in greenbacks.

As it is evident to us now that the people of California are determined to sustain the National Government and make Treasury Notes the medium of trade, generally, we announce as follows:

The price of subscription to the CALIFORNIA FARMER, hereafter, will be $5 a year, payable in U. S. Legal Tender notes; this being a safe and easy medium of transmission, by mail; and we will allow the ruling premium when gold is tendered in payment.

We also announce, to all who are indebted to us for *Subscriptions* to the CALIFORNIA FARMER, send along your *Greenbacks*. They will come to us with the glorious impress of our country's sovereignty, and every pecuniary sacrifice we may make we cheerfully lay upon the altar of that country whose faith stands pledged in these notes and whose integrity *we dare not question*.



We make this change in the terms of our subscription *not to advance the present cost* of our journal, but rather to make it cheaper to all, for at the *present nominal* value of the notes it will cost the subscriber but $3 25.

We do hope also that all to whom we have sent bills, all who are indebted to us, will now see how easy we make it for them to pay their dues. It must be remembered also that all who owe for this paper, a bill of six month's standing should, by the terms already heretofore announced, remit us $5, and g. b.'s to that amount will be very acceptable.

We shall now have the consciousness of having taken a true step to sustain the National Currency, and we shall know who will "go and do likewise."

We do hope that the friends of a good, sound National Currency will give us their aid and cooperate by sending us their names for the FARMER.

The Great Want supplied.

FAMILY
Cider & Wine
MILL,
WITH
Press Combined.

Costs but $18.

Grinds 6 to 8 bushels of Apples; 10 to 12 bushels of Grapes, Currants, or Berries, per hour.

Tears the Pulp Without Crushing the Seed.

Adapted to Wine Plants. Occupies less than 2 feet square, and is easily worked by one man.

Simple, Durable, and Cleanly.

The MILL and PRESS, with a Pamphlet containing full directions to make Wine and Cider in the best manner, will be sent on receipt of Price, $18. Weight 160 pounds. J. H. BROWN & CO.,

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.) April 23.

Tne continued dry weather has caused everything in the way of Produce to advance. Those who are fortunate enough to have Grain and Hay on hand are realising big prices. Exporters who have received orders (and we see there is an occasional sale for export) are compelled to advance their prices. There is considerable competition between millers for Wheat, and all that offers finds a ready market. Flour has advanced as will be seen by the Prices Current annexed. Barley, Oats, and Bran are all in active demand at a material advance in price. Our advices from the Country are very conflicting, and in some localities we are led to believe there will be a total failure of the crops. Considerable uneasiness is manifest. Large orders have gone East for Cornmeal. This article, it will be remembered, a few years since was one of our main articles of feed and bids fair soon to be again.

Our Exports are as follows: Per Hamburg brig New Ed, for Shanghae, 565 bbls Flour, 1200 sks Wheat, etc. Per bark Comet, for Honolulu, 100 bf and 144 qr-sks Flour, etc. Per British ship Locket, for Sidney, 4000 bf 2428 qr-sks Flour, 11321 sks Wheat. Per British bark Amateur 4350 sks Wheat, 4000 qr-sks Flour, and 350 sks Bran.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 11,224 sks, Barley 4316 sks, Oats 1054 sks, Potatoes 3408 sks, Corn 237 sks, Wool 330 bales, Hay 1105 bales, Straw 193 bales, Salt 1640 sks. Cornmeal 441 sks, Flour 1803 qr-sks, Beans 20 sks, Bran 64 sks.

Also, Coastwise: Potatoes 3825 sks, Barley 2310 sks, Wheat 2201 sks, Beans 111 sks, Wool 31 bales, Oats 208 sks.

BY CONTINENTAL TELEGRAPH.

DATES TO APRIL. 26.

Gen. Bank's having fallen back to Grand Ecore, 35 miles from Pleasant Hill, 55 miles from Mansfield, and 95 miles from Shreveport, will advance again as soon as reinforcements and adequate supplies are received; Admiral Porter's fleet will operate to as far as possible an extent in its operations, which depends on the depth of the water. According to reports of prisoners, Kirby Smith, Dick Taylor, Green, Magruder, and Price, are all in the field against Banks. The rebel loss in the battles at Sabine, Cross Roads and Pleasant Hill, was three to our one.

Alexandria dispatches say all the speculators are excluded from that post, and the military authorities will conduct all trade, sending the cotton and sugar to New Orleans and selling it on Government account. The gunboats Neosho, Louisville, and Chillicothe were aground above Grand Ecore. The Eastport, Osage and Mound City were ordered out of the river in consequence of the falling water. The Ozark is ordered to Mobile. About 25 miles below Grand Ecore, on the left bank of the Red river, the rebels opened on the transports Clara Bell and Rob Roy. They fired twelve shots into them. A force of 1,000 mounted infantry, said to be part of the rebel force under Gen. Green, s command, came down in front of the battery and poured volleys of musketry into the steamers, which were getting the worst of it when a small gunboat came up, shelled and silenced the battery, compelling the rebels to fall back. Our troops are in excellent spirits, and anxious for another advance. Should Red River fail to be navigable, and an advance be rendered impracticable, the certainty of holding and occupying Alexandria and Nachitoches remains, and so far the forward movement is a success. At the latest advices from Gen. Steele he was within 60 miles—a few days march—of Shreveport, with 10,000 men. Gen. Smith's command began crossing the river opposite Grand Creek, on the 13th, for an overland trip to Vicksburg, it being understood that Grant had sent orders to Gen. Smith, to return to that place. Rebel prisoners say they had 25,000 men in the recent battles, and that they lost 3,000 in the fight. They left their killed and wounded on the field. Our loss on Saturday was about 1,500. Our wounded were taken to Grand Ecore, and the killed left on the field; but it is reported that they were afterwards buried by the cavalry. Great dissatisfaction is expressed of Bank's generalship, as Friday's battle was fought contrary to Gen. Franklin's plan. Both Franklin and Ransom protested against having the cavalry so far in advance, and Gen. Smith protested against a retreat from Pleasant Hills after the victory of Saturday, he wishing to pursue the flying rebels, but Banks ordered the return of the whole army to Grand Ecore. It is difficult to determine what the result of the expedition will be yet. It will require some time to organize the army; and if the river continues to fall, Alexandria will necessarily become the base of operations, instead of some point above.

The House Committee of the Whole adopted an amendment taxing all sales of gold and silver bullion, sterling, uncurrent money, stocks, bonds, etc., one-fifth of one per cent, on the amount of such sales, and contracts for such sales.

The Bank statement shows a decrease in loans of $2,416,000, an increase in specie of $3,180,000, and a decrease in deposits of $6,372,000.

The Register of the rebel Treasury reports the whole amount of the issue of non-interest bearing notes, since the formation of the Government, at $978,277,868. The whole amount now outstanding is $196,254,403.

The House, on Saturday, went into Committee of the Whole on the Internal Tax bill. The tax on railroad iron re-rolled was made $20 per ton. "*Provided*, that the term of rerolled iron shall apply only to rails which the manufacturer receives and pays for remanufacturing, not for new iron or the various manufactures of iron on which a duty of 50 cents was reported." The amendment was agreed to, taxing them $1 per ton. The tax on native wine three instead of five cents per gallon. The tax on furs was raised to 10 per cent. On custom made articles, and on wearing apparel the tax was increased 5 per cent. On diamonds emeralds, precious stones, imitations, thereof and all other jewelry a tax of 10 per cent, instead of 50 was agreed to. The duty on Cavendish, plug and twist manufactured tobacco not otherwise provided for is 30 cents per pound. On cigars valued at over $10 and under $20 per thousand the tax is increased to $8 per thousand; on those valued at over $20 and under $40 per thousand the tax was increased to $15.

Steward Benton, for two years past a resident at Fort Pillow, and was in the Fort during the recent attack, was examined at General Rosecran's headquarters and fully corroborates all the previous reports of rebel barbarities, making an additional statement that bloodhounds were used to discover the hiding places of those who escaped the massacre.

Little Rock dates to the 13th say that the Legislature met on the 11th, and the Senate was organized. Thirteen representives had arrived. The number of votes cast for a Free State Constitution were six thousand seven hundred and seventy-seven greater than required by the President's Proclamation.

A great part of Hickman, Ky., has been burned by the guerrillas. The officers of the steamer Anderson saw about 400 guerrillas in Henderson Ky., and passed without loading.

The House Committee on Elections has decided all the contested election cases from Missouri. Where there has been any military interference they will go back to the people of the district. The Committee have not yet made public their decision in the contested case of Blair vs. Nixon.

Intelligence has been received from Little Rock, Ark., to the 15th, which says the expedition under Colonel Clayton, consisting of a thousand infantry and five regiments of cavalry, with six pieces of artillery, reached Pine Bluff after a raid to Saline River, where they encountered a force of rebels three thousand strong. The first encounter took place near Branchville, where the rebels were defeated, after three hours fighting. They retreated our forces following them up to near Mount Elba, on the Saline. The next day we occupied the place without resistence. Our forces here divided, one attachment crossing the river and the other reconnoitering this side. The enemy were found some distance from Mount Elba, having been reinforced and advancing on our forces Hasty preparations for their reception were made by extemporizing fortifications of logs, rails, and cotton bales. The enemy charged three times, and each time were repulsed. They finally retired, after six hours vain effort to dislodge us. Our forces then charged on them, scattering them in all directions. In this and the engagement at Branchville, we killed eighty-four, wounded three hundred and fifty, and captured fifty. In the meantime the force which had been sent across the river was busy and returned in the evening, having marched fifty miles. During the trip they captured a train of fifty wagons, filled with supplies. The train was under an escort of three hundred rebels. The entire train was captured and destroyed, and the entire three hundred men taken prisoners. Over one thousand horses and mules fell into our hands. These events took place about the 30th of March.

In the House on the Tax bill, Mr. Frank of New York offered an amendment providing that on incomes exceeding $600 and not exceeding $10,000 a tax of 5 per cent, be imposed; on incomes from $10,000, to $25,000, a tax of 7½ per cent; over $25,000, a tax of 10 per cent. After debate the amendment was adopted by 73 to 35. Mr. Stevens moved an amendment to tax soldiers and members of Congress 10 per cent, which was voted down by a large majority.

A Little Rock letter says that the Legislature will immediately provide for the organization of the State militia, and for raising revenue, and adopt such measures as will render it impossible for the rebels to again grasp the reins of Government.

The proposition by the Governors of the Northwestern States to furnish 85,000, one hundred day troops, is in substance as follows: The troops are to be mustered into service and equipped the same as other infantry volunteers, the whole number to be furnished within 20 days from the date of the notice of the acceptance of the proposition. The troops are to serve in the fortifications, or wherever service may be required, within or without their respective States. No bounty is to be paid to the troops for their services, nor are they to be credited on any draft—the draft for three years to go on if any district short of its quota. Any soldiers in this special service who may be drafted shall be credited for services rendered. The President accepted the proposition on the 22d.

RECEIPTS AT THE CUSTOM HOUSE.—The total collections received at the Custom House for the week ending April 23d was $332,000. The sum collected on Saturday was the largest ever received by the establishment, amounting to $120 662.

The battle which had been going on at Plymouth from the 16th to the 20th, resulted in the capture of the city by the enemy (rebels) on Wednesday noon, including Gen. Wessells and forces, 1,500 strong. The enemy obtained possession of the town at eight in the morning. Gen. Wessells and troops retired into Fort William, and held out until noon, repulsing the enemy in nine different assaults, whose loss is said to be 170, while our loss is slight. Gen. Wessells, who gained such distinction in the seven days fight before Richmond, made a most brave resistance with his little band of veterans. Several weeks since he called for 5,000 men, stating it would be impossible to hold the city with a less number. Two companies belonging to the 2d N. C. Union Volunteers were among the captured. The Richmond Enquirer, says:

"A telegram has been received by President Davis, from Col. Wood, the 21st, giving further particulars of the capture of Plymouth by the forces under Gen. Hoke, with naval coöperation. He says: About 2,500 prisoners were taken, 300 to 400 of them were negroes, 30 pieces of artillery, 10,000 pounds of meat, 1,000 barrels of flour, and a full garrison outfit. Our loss is about 300 in all. Cols. Rice and Along were killed. Two gunboats were sunk, another disabled, and another small steamer captured."

Prices at Pacific Fruit Market—Apr. 23.

Messrs. Addison Martin & Co. report to us the following prices as the ruling rates for fruit:

Apples 10@15c, ₱lb. Dried Plums 15@20c ₱lb. Dried Peaches 10@15c ₱lb. Dried Nectarines 20@30c ₱lb. California Dried Figs 30@50c ₱lb. Strawberries—Queens 30@40, Longworth's Prolific 20@35c. Raspberries 50@75 ₱lb. Lemons $5 00 ₱ 100. Cherries, $1 00@1 75 ₱ doz. Oranges $2 50@4 00 ₱100. Black Walnuts 15@20c ₱ lb. Gooseberries 12@20.

Addison, Martin & Co.'s Strawberries are coming in freely. Cherries well grown and ripe are in the Market this week.

☞Holloway's Pills and Ointment.—Facts for the Million. By a recent enactment of the French government, these medicines are admitted free of all duty into all ports of France. They are extensively employed in all the public and military hospitals throughout the Empire. The Emperor has signified his appreciation of their virtues in an autograph letter, to Dr. Holloway. During the late campaign in Italy, large quantities were used for the wounded at Brescia and Montechiaro.
Sold by all Druggists, at 30c, 70c, and $1 10 per box or pot. 205
HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. URANE & BRIGHAM,
cor. Clay and Front streets, San Francisco, Cal

SEED, PLANTS, ETC.

THREE PREMIUMS for BEST Varieties FOREIGN GRAPES.

150,000 Grape-Roots

From Imported Foreign and American Vines of my own importation, FRUIT TREES, Etc., Etc.

Having imported myself from France, Germany, Italy, and Dr. Grant of N. Y., I offer for sale this season, as choice a lot of FOREIGN GRAPE ROOTS and CUTTINGS as can be had in this State, and as cheap as any reliable nurseryman will sell. All the Vines and Trees have borne fruit with me, and I guarantee everything I sell to be TRUE TO NAME, or refund the money.

AMERICAN VARIETIES GRAPE-ROOTS, 1 and 2 years old, and Cuttings:
Delaware, Diana, Concord, Iona, Union Village, Lincoln, Anna (white), Catawba, Isabella, etc.

EUROPEAN VARIETIES GRAPE ROOTS, 1 and 2 years old, and countless numbers of Cuttings:
True black red, and white Burgundy (Pineaux), Traminer, Rulandur, Madeira Wineygrape, Riesling, white, red, and black Frontignan, Malaga, Parsley, Cannon-Hall and White Muscat of Alexandria, and over 100 varieties more.

ALSO:—10 000 rooted vines 2 and 3 years old, LOS ANGELES, very cheap, and any amount of Cuttings of all varieties.

Also a limited lot of
DOWNING'S EVER-BEARING MULBERRY TREES 1 year from bud, extra large;
French, German, and Swiss Prunes (Fellenberg's Zwetsche).

....ALSO....

Pear, Apple, Plum, Peach, etc; Lawton Blackberries, English Gooseberries, and all kinds of Trees, and Shrubs. Cions unlimited, and cheap, of the above.

I intend to close out the Nursery Business, and sell as low as the lowest. For prices or orders, send per Wells, Fargo & Co, or mail, to

American Seed Store
206 J STREET,
Sacramento.

I AM CONSTANTLY RECEIVING BY Isthmus Express from the best Eastern Seed Growers—
A LARGE AND SPLENDID COLLECTION OF
GARDEN,
FLOWER,
FRUIT,
TREE,
SHRUB, and
Agricultural Seeds.

I can confidently assert, that I have as large and fine a selection of SEEDS as have ever been imported into this State, and of the growth of 1863
My assortment of GRASS and CLOVER SEEDS is large, consisting of—
White and Red Clover; Kentucky Blue Grass;
Alfalfa or Chile Clover; Orchard Grass;
Sainfoin Grass; Red-top Grass;
Lucerne; Hungarian Grass;
Rye Grass;
And other varieties for Lawns, &c, &c.
ALSO—Every variety of
Tobacco seed, Cotton seed, Madder seed, Opium seed.
I have also just received from Europe a splendid collection of BULBOUS ROOTS, such as
HYACINTHS, TULIPS, LILIES, CROCUS, NARCISUS, JONQUILS, GLADIOLUS, IRIS, IXIAS, BOLDOCODIUMS, &c, &c, &c
☞ Dealers furnished in Packages suitable for their trade, at the LOWEST RATES.
Gardeners and Ranchmen can be assured their orders will be filled at lowest prices. Catalogues of all our Seeds, etc, on application at store or by mail, or can be had at Farmer Office, San Francisco.
W. R. STRONG,
15-tapl 206 J street, Sacramento.

PATENT RIGHTS FOR SALE.

THE FOLLOWING PATENT RIGHTS OF NEW AND valuable inventions (of which we have models to show their value) are now offered for the States of California and Oregon, and Utah and Washington Territories.

NO. 1. THE MECHANIC'S SPIRIT LEVEL.
Patented September 13, 1859.
This Implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet out. Builders will do well to examine the model.

NO 2. IMPROVED CLOTHES REEL AND BAR.
Patented January, 3, 1860.
This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery, or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines, neat when used and ornamental when not in use.

NO. 3. A CORN CULTIVATOR.
With this implement the soil is first thoroughly plowed and deeply pulverized, and on the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

NO. 4. A MUSKETO BAR.
This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

NO. 5. HYDE'S PATENT POST-DRIVER.
A most excellent labor and money-saving machine, for which we offer rights.

NO. 6. SEED-SOWER.
This is a new invention, and one of great importance to all who sow grain, or any garden seeds. The working model can be seen at the Farmer's Reading-room.
Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to
COL. WARREN, Editor Farmer.

Wanted.—Improved Property.

A GENTLEMAN WANTS A HOUSE AND LOT IN the
CITY, OR OAKLAND,
Or a small improved Farm, containing from 20 to 100 acres of land, within the influence of the sea-coast, and of easy access to the city; for which he offers to exchange
First-class Improved Lots in New York,
Within three miles of Wall-street Ferry, accessible by steam and horse cars; or will exchange
First-class Beese River Mining Stock.
For further particulars inquire of the Editor of the California Farmer 10-tf

TRAVELING.

SAN FRANCISCO AND SAN JOSE RAILROAD.

Two Trains Daily, Each Way
CHANGE OF TIME.

ON AND AFTER FEBRUARY 15, 1864, the San Francisco and San Jose Railroad Company will run trains each way, daily, leaving the Depot on Brannan street, between Third and Fourth, for San Jose and intermediate stations, as follows:
Leave San Francisco at 8 a. m., and 4 p. m.
Leave San Mateo at 8:55 a. m. and 4:55 p. m.
Leave Redwood City at 9:20 a. m. and 5:20 p. m.
Leave Santa Clara at 10:10 a. m. and 6:10 p. m.
Arriving at San Jose at 10:20 a. m. and 6:20 p. m.

RETURNING.
Leave San Jose at 7:20 a. m. and 3:30 p. m.
Leave Santa Clara at 7:40 a. m. and 3:40 p. m.
Leave Redwood City at 8:30 a. m. and 4:30 p. m.
Leave San Mateo at 8:55 a. m. and 4:55 p. m.
Arrive at San Francisco at 9:50 a. m. and 5:50 p. m.

FREIGHT.
Our road being completed from the City of San Francisco to the City of San Jose, we are prepared to take Freight to either end of the line, or to and from any Station on the Road, at the lowest rates.

COMMUTATION TICKETS.
Parties wishing to commute between here and San Jose or between Stations, can procure tickets at greatly reduced rates, by applying to any Station Agent, or at the office of the Company
☞Passengers can reach the Depot by either the Third or Fourth street lines of city cars.

JOB-WORK—Of every description, done with promptness, at fair rates. Orders will be faithfully attended to.

☞ All letters on business connected with the office should be addressed to PUBLISHER CALIFORNIA FARMER, San Francisco, Cal.

Grape Insects.

VALLECITO, May 2d, 1864.

EDITOR CALIFORNIA FARMER:

Inclosed I send you specimens of a bug that I found in the grape vines of a neighbor; they threaten to ruin grape vines if they continue as they have commenced with his; they enter the vine at the base of the *new wood*, and work downward, 1½ or 2 inches, cutting all of the inside of last year's wood away; occasionally they enter the end of the vine, where it was cut off in pruning; they are found two and sometimes three in one hole; they are very tenacious of life; I caught them by sticking a pin through the body, and they appeared as active as ever, a half hour afterwards. My neighbor has spent three days in cutting them out of his vines, frequently finding half a dozen holes in one vine. The visible effects of this mischief is the withering of the new shoot when the sun comes to it, and soon dying. They have been found, as yet, only in two vineyards, so far as I have learned, in this vicinity. The soil of these vineyards is a black vegetable mold and sticky clay, with waters near the surface, *and neither of them have plowed or dug among their vines this spring*. My object in writing this is to learn if the bug is common, or often found in vines. No one in this vicinity has ever seen it before. If there is danger ahead, by reason of the insect, please sound the alarm; if not, a line in your paper will allay our fears. This hot weather has brought out millions of the grape-fly (as we call it), a small yellowish insect about as large as a flea, and as quick; is there any sure remedy for them?

Fruit of all kinds, in this vicinity, is very plenty. Crops are very poor, not more than a quarter of the usual amount of hay will be cut this year. Old hay is worth $50 per ton, and scarce at that.

Can you, and will you, through your paper, tell how, and of what grapes to make the raisins of commerce, and have we any grapes, suitable, in this State? I tried a number of varieties, last year, but did not succeed to my entire satisfaction. I wish to try it again, next fall, if I get any information on the subject. Yours, &c.

ALLEN TAYLOR.

In reply to our correspondent, we would say, that the insects, sent us in the letter, were so much broken we could not examine them as we desired. When insects are sent us they should be, preserved in bottles; we can always describe them if so sent. We think those sent are a species of *black weevil*, which we have frequently seen attack the grape; these are always found on trees and plants that are old and decayed on poorly cultivated land, and near stagnant water, or where the water remains in the soil to make it sour and sickly. The other insect is the "Aphis," a greenish fly; it generally attacks the grape, on arbors, or where the foliage is thick and the ground hard, or the grape shaded, want of circulation of air, poor cultivation and a very dry atmosphere produces them. Remedy: *Purification by pruning out*, by cultivation and showering, sulphur thrown on the leaves is also good to remove them; they will destroy the crop of grapes by killing the *leaves*—the *lungs* of the plant. As the season is too far advanced to think of *planting Vineyards*, the experiments made with several varieties of grapes, for raisins, this year, will then answer the latter inquiry better than it can be done now.

Raising Water.

NAPA, April 27.

EDITOR CALIFORNIA FARMER:

I wish to raise water from a well 80 feet deep. Please inform me through your valuable paper, the most economical and efficient manner to do it. Is there any deep well-pump or ram that is better than the Douglass Suction and Force Pump?

Yours, very respectfully,

E. M. BENJAMIN.

In answer, we say, that the Harrison Pump, used in pumping out the Aquila, is *the* pump wanted. They can be had all sizes. Dr. Selfridge exhibited a pump at the State Fair, that won the premium over all others. That was an excellent pump. This will do the work. Both these are better than the Douglass.

Disease among the Poultry.

GLENCOE HOUSE, April 17th, 1864.

COL. WARREN—Dear Sir: It is your province to confer a benefit upon the public. I have been at considerable expense, and have not spared labor to house and feed my poultry. Until recently, they have done remarkably well. I have kept an abundance of lime in their house, which was large and well constructed. Yet they have met their enemy—vermin—which seems likely to capture them. More than a hundred eggs have been sacrificed, and all seem on the retreat from their former flourishing condition. Can you tell me how to destroy the pest and send the FARMER containing the intelligence.

Very truly yours, "GLENCOE."

We give the letter of "Glencoe"—well, he has lost his hens, and of course, his eggs, too, and all because he was not a constant reader of the FARMER, as in the issues of last year, in articles on this subject he would have found a remedy. Sulphur and ashes, mixed, powdered in the feathers of poultry, will destroy lice, effectually.

"Glencoe" is like a great many others, after they have lost their stock, they go and seek a remedy. Like a man that lost his horse, "then he locked the stable door." So with many farmers, after their loss, they think about seeking the "information" that would have saved them. Hundreds and thousands of the farmers and stock raisers suffer large losses, because *they do not study their profession*. They are not ready thinkers, practical workers, and without vanity or egotism, we can say, that the information conveyed in our Journal upon practical subjects is worth many times the cost of the paper. "Glencoe" says, *he has lost hundreds of eggs*. A *single hundred eggs* he has lost would have paid the paper for a whole year, and yet "Glencoe" says it is *our* province to confer benifit upon the public, and *save his eggs*, and thereby his "*Bacon too*," by publishing the remedy and send it to him for his gain. We ask should there not be some little return benefit? we looked for it—the *greenback*, "but don't see it."

Crops, Etc.

CENTREVILLE, May 2d, 1864.

EDITOR CALIFORNIA FARMER:

If I were to state to you that we are entirely burnt up for want of rain, you will brand me *croaker*, but I shall not get any grain, or hay even, for my grain, as things look at present; yet I shall fare as well as most of my neighbors. Some have tried to cut hay, but it is so short and light that a horse-rake will not gather it.

Yours, R. B.

The Cause and Preventive of "Interfering" of Horses' Feet.

S. FORMAN of New York City, writing to the Scientific American says: "The cause of "interfering" is not owing to the slipping of horses, as many suppose, for all horses slip more or less; but it is due to traveling with their feet too close together. To prevent it, make the inner half or halves of the shoe or shoes one-eighth of an inch thicker than the outer half or halves, and set them even with the face of the hoof. They will travel then far enough apart to not cut themselves when they slip." This subject is one of great interest to all keepers and owners of horses, and in regard to which there is a wide difference of opinion. Some horses "interfere" in spite of all the skill of the shoer; thus showing that it must result from some infirmity in the animal.

MOWING OFF STRAWBERRY VINES.—At a late meeting of the Waltham (Mass.) "Farmer's Club," Dr. O. B. Farnsworth said he had been trying a new experiment with his strawberry beds. After his bed had ceased bearing, he mowed it closely and raked off all the vines, put on a little guano, and the result was that the ground was literally covered with the finest fruit. The bed which he experimented with is now five years old, and he intends to continue this course with it. He thought it would not be well to pursue this course if there were many weeds, as in that case it would be easier to set out a new bed. In setting a bed, he would trench 1½ feet deep and manure highly. The rows should be 3½ feet apart, and the plants 8 inches apart in the rows. Paths should be dug from 18 inches to 2 feet apart, and filled with meadow hay.

TEA BRANDS.—The following will interest housekeepers: "Hyson" means "before the rains," or "flourishing spring," that is early in spring; hence it is often called, "Young Hyson." "Hyson skin" is composed of the refuse of other kinds, the native term for which is "tea skins." Refuse of still coarser descriptions, containing many stems, is called "tea bones." "Bohea" is the name of the hills in the region where it is collected. "Pekoe" or "Pecco" means "white hairs," the down of the tender leaves. "Powchong," "folded plant;" "Souchong," "small plant." "Twankey" is the name of a small river in the region where it is bought. "Congo" is from a term signifying labor, from the care required in its preparation.

New York Wool Market.

WALTER BROWN'S Monthly Wool Circular, issued April 1 says:

The Domestic Wool Trade continued to be very inactive during the early part of the month just closed, with a downward tendency in prices. Since the middle of the month, however, there has been more demand from manufacturers, and Wools, to a fair amount, have been taken for consumption at prices ranging from 7 to 10 cents per pound below the highest quotations of the season. The month closed with a firmer feeling, and with the prospect that manufacturers, who in many cases are in light stock, may be induced by the present comparatively moderate rates to come into market for more liberal supplies. A further motive to this course with some buyers may be the apprehension that Congress will pass an Act amendatory to the present tariff law, imposing an increased duty on Foreign Wool. Should this measure be adopted, no doubt but that purchases made on the basis of present rates, would be advantageous to the buyer.

The market is now well supplied with desireable parcels from all the Wool-growing sections, and holders are generally willing to meet the market—a condition of things which of late has existed to a limited extent only. As a consequence of this condition, buyer and seller being alike inclined to operate, more frequent and larger transactions are occurring.

The fluctuations in Gold, while they have to some extent effected the price of Foreign Wools, do not appear to have influenced in any degree the market in Domestic Fleeces. The most efficient cause in checking the downward course of prices would seem to have been the anticipated action of Congress toward an increase of import duties.

The demand for Pulled Wools has been moderate, and they have changed but little in price. We think present rates will be maintained, and should our expectations of an increased activity be realized, possibly an advance in these Wools may occur.

California Wools have sold freely, and most of the desirable lots have been taken up by the kersey and blanket manufacturers. Some other choice parcels were taken for the Cassimeres and similar trade fabrics. The stock is light, and must continue so for some months to come. Early parcels of the Spring clipping will probably arrive by steamer of May next, and if in good condition and free from burrs, they will be favorably received.

There has been a good trade in Foreign Wools of all grades, and prices have not varied much from the last quotations. Our late advices from Europe speak of an active trade, and of improvement in prices of the most saleable descriptions.

We have reported the following sales during the past month; Fleeces, 685,000 lbs, 65@80c; Pulled, 283,000 lbs, 60@78c; 341,000 lbs California, 30@50c; 2,020 bales Cape, 36@47c; 1,180 bales Mestizo, 22@41c; 224 bales East India; 235 bales Algerian; 9 bales Turkey; 31 bales Smyrna, 52½c; 1,200 bales African; 95 bales Mogadore; 400 bales Odessa, 42c; 200 bales Russian, 43c; 714 bales Donskoi, 50c; 80,000 lbs Mediterranean; 30,000 lbs La Plate; 425 bales Entre Rios; 18 bales Santa Rios.

At Auction.—1,542 bales California, 15@64½c; 862 bales Cape, 26½@41c; 23 bales Mestizo, 34½@35c.

In Boston, Fleeces and Pulled, 1,725,000 lbs., 62½@85c; 10,000 lbs Canada; 6,000 lbs California, 46½c; 491 bales Cape, 37@42c; 37 bales Mestizo, 28c; 523 bales Mediterranean; 1,300 bales Foreign.

In Philadelphia, Fleeces, 293,000 lbs 73@82c; Pulled, 79,000 lbs, 68@75c; 400 bales California, 35c; 40 bales Colorado, 38c; 500 bales Donskoi, 2,000 lbs Mediterranean, 63½c; 100 bales Algerian; 62,000 lbs Foreign.

In Providence, Fleeces, 10,400 lbs, 75@83c; 11,800 lbs Foreign.

The imports for the past month, as published, are: from Liverpool, 747 bales; London, 1,090; Marseilles, 167; Havre, 748; Malaga, 296; Curacao, 11; Odessa, 598; Montevideo, 39; Taganrog, 694; Aspinwall, 242; Buenos Ayres, 30; Rio Grande, 107; Matamoras, 232; Algoa Bay, 2,013; Rio Janeiro, 12. Total, 8,409 bales.

California Washed Fall Clip, in grades, 35@48.

HOW COFFEE CAME TO BE USED.—At the time Columbus discovered America, coffee had never been known or used. It only grew in Arabia and upper Ethiopia. The discovery of its use as a beverage is ascribed to the superior of a monastery in Arabia, who, desirous of preventing the monks from sleeping at their nocturnal services, made them drink the infusion of coffee, upon the report of some shepherds, who observed that their flocks were more lively after browsing on the fruit of that plant. Its reputation rapidly spread through the adjacent countries, and in about 200 years it reached Paris. A single plant, brought there in 1614, became the parent stock, of all the coffee plantations in the West Indies. The extent of consumption can now hardly be realized. The United States alone annually consume, at the cost of its landing, from fifteen to sixteen millions of dollars. You may know the Arabia, or Mocha, the best coffee, by its small bean of a dark color. The Java, or East India, the next in quality, a larger and paler yellow. The West India Rio has a bluish, greenish, gray tint.

Letters from an Old Californian at the East.

NUMBER SIXTEEN.

NEW YORK, March 30th, 1864.

Comparative Superiority of California Schools.

EDITOR CALIFORNIA FARMER:

Everybody is working in some way for the Sanitary Commission and trying to make the proceeds of the great Metropolitan Fair as large as possible, and I have been occupied in assisting one of the large private Academies to get up an exhibition. I do not mention the establishment because I wish to say that my position enabled me to look thoroughly into one of the boasted Schools for which this city is famous, and I have come to the conclusion that people who send their children to the East to be educated are either ignorant of what they are doing, or are stupid. In every way the Collegiate Institute at Benicia, for instance, is superior to the one in which I have been teaching for the past fortnight, and yet I found boys from California among my temporary pupils. That the schools, outside of New York, are equally inferior, I am not quite sure of, from talking with a distinguished Californian who has been looking around for a proper place at which to educate a boy placed under his care. Advise your friends by all means to educate their children in California.

Musical Services on Good Friday.

I attended service, on Good Friday, at Trinity Church. The effect of the chaunting, by a choir of boys, is wonderfully impressive. They are perfectly trained. On Easter Sunday I succeeded, after a persevering effort, in squeezing myself into a standing-place in St. Stephens Church. The mass, of course, was celebrated with great magnificence. The singing was delightful. I have never heard anything to surpass it. The solo parts were all taken by celebrated artistes and every chorus singer would claim to be a star out of New York. A great number of distinguished strangers were present, and a host of Californians. I believe I have often reminded your readers that at this church can be heard the best singing in New York, and rumor says the best out of Rome. The loyal Catholics are rejoicing over the fact that Rosecrans has forbidden the circulation of the Metropolitan Record, in his Department. It is one of the lowest papers in this city. Where it is unknown it is a "wolf in sheep's clothing."

Depreciation in Real Estate.

I have been giving some attention to real estate and am surprised to find that it is almost a drag in the market. Of course Broadway corner, and Fifth Avenue and its environs' property is in demand, and bring very high prices, but if a man wishes to buy a house and lot in any other locality he can get what he wants not only without trouble but less than it would cost him to build at present prices. In localities like East Broadway and Henry streets, the depreciation is very great. This result is astonishing every body, for rents are high and houses are in demand. I cannot believe that this will continue. Experience proves that real estate always rises in times of inflation, but I find many who predict a still greater decline for real estate. The speculators in fancy property, however, make up for lost time. Mr. Shoddy has to pay a pile of greenbacks for a lot on or near Murray Hill, or in the vicinity of Central Park. I had occasion to go into the Bowery Savings Bank the other day, and was amazed at the crowd of workmen waiting to deposit money. I asked one, whom I knew, why he did not buy a house and lot—"and pay the taxes? Not I!"

Cost and Condition of Private Residences.

It may interest your readers to know that a first class house is generally built of brick with an ornamental brown-stone front, is five stories high and is splendidly finished from the sub-cellar to roof. The hall is generally tiled with marble, and the stairway is of black walnut often finely carved. The mantles are very expensive. A second-class house is three stories, with a plain brick front, is well finished, has marble mantles throughout, and all the modern improvements the same as a first-class house. The cost of one of the first-class houses is from $20,000 to $100,000. The average may be about $30,000. A second-class house can be bought for from $10,000 to $15,000. A third class or old fashioned dwelling can be had at from $3,000 to $5,000. In Brooklyn, property is so depreciated that a second class house can be bought as low as $5,000. Unimproved, in proportion, is higher than improved property. The business localities, down town, are so constantly changing, that in many streets large warehouses can be purchased at a great sacrifice.

I have been offered a five-story building, with sub-cellar, for $15,000; it could not be built for the money. Property is very desirable on the Third, Sixth, and Eighth Avenues, and yet on the Eighth Avenue I have been offered a four-story house, renting for $1,000 per year, for $10,000, and in the Sixth Avenue, in the best locality, a similar house was sold the other day for $13,000, the rent of which is over $1,300 a year. The fact is, when owners of real estate are *obliged* to sell they have to take a price far less than the supposed value of their property. I should attribute the evident depreciation of the market to the miserable government of the city, but then I find that in Philadelphia and Boston the same indisposition to invest in land is observed.

Cause of the Advance of Gold.—Immigration.

The newspapers are quarreling about the cause of the rise of gold, attributing it to every cause under the sun but the right one, which in their anxiety to write sage articles they overlook. Let our armies be *successfully* in motion and gold will fall as did it after the splendid victories of Grant, last year. Do you notice what a wonderful immigration there is from Ireland. I have made it my business to talk with some of these new comers. I asked of them "were you not afraid to come to America in war time?" "Sure and we could not be worse off than in Ireland," was the answer. They are almost instantly approached, on their arrival, by "democrats" who, if they are not paid agents of the Confederates, ought to be. I overheard one of these copperheads say to an immigrant: "I hope you are going to help us put a stop to this war? This infernal administration wants to draft every workingman, and all they care for is the negroes; they would not employ a white man if they could get a black one." This is only a part of the contemptible conversation, but it had its effect. Let any honest democrat come to New York and if he does not feel ashamed of the name of his once honored party it is because he will not *see* and refuses to *hear*.

Taxes to be Increased.

Among the anomalies of the present time is the fact that the press and people are clamorous for an increase of taxation, while the legislators are holding back. I suppose the administration is afraid that increased taxation will give a most powerful weapon into the hands of the copperheads; but their opposition ought to be as much disregarded as the curses of the gold-gamblers, who are in great tribulation to-day.

Spring has opened delightfully. I am charmed with the softness of the atmosphere, and it is very pleasant after one has been shivering, all winter, with the cold. The March winds have not been unpleasant, for a San Franciscan learns to become accustomed to high winds, and even to like them.

M. A. S.

COOLING OFF.—Every observing farmer knows that men and horses are the only animals that have double means of refrigeration, and all others have but one. No other beings sweat like men and horses, and therefore cannot cool themselves by perspiring, through the skin. This will be found true throughout the whole range of comparative anatomy, and applies to the largest as well as the smallest beings. All the thick-skinned animals, except the horse, have powers in the skin to exhale heat by perspiration, it being only a secretive surface. All the cleft-feet species, including those with feet and toes rounded and unprovided with claws, the rhinoceros, elephant, bison, mastadon, buffalo, swine, ox, deer, lion, tiger, bear, wolf, fox, squirrel, dormouse, opposaum, racoon, all, like the dog, have no means of cooling themselves, when heated, except through the medium of respiration. Thus the ox, when very hot, thrusts out his tongue and pants, to exhale the heat generated by exercise; and if driven without time allowed for this, will die with the heat that accumulates within him. Hogs often die when driven too fast because they cannot part generated heat.

A NEW GRAFTING WAX.—One pound of rosin, five ounces of 95 per cent alcohol, one ounce of beef-tallow, one tablespoon of spirits of turpentine. Melt the rosin over a slow fire, add the beef-tallow, and stir with a perfectly dry stick or piece of wire. When somewhat cooled add the turpentine, and last, the alcohol in small quantities, stirring the mass constantly. Should the alcohol cause it to lump, warm again until it melts. Keep in a bottle. Lay it on in a very thin coat with a brush. In a room of moderate temperature, the wax should be of the consistence of molasses. Should it prove thicker, thin it down with alcohol. It is always ready for use, is never effected by heat or cold, and heals up wounds hermetically.

THE Michigan petroleum, lately discovered, has been analyzed, and found to be of a very superior quality. It has less odor than the crude Pennsylvania oils, and will yield 20 per cent more of the refined article than the former. Its specific gravity is forty degrees. That of the Pennsylvania oil ranges from forty-five degrees to forty-seven degrees. Albion petroleum is easily deodorized, and, when refined, makes a clear white oil that burns freely, and is entirely non-explosive. It yields but little naphtha, and stands a fire test of 140 degrees.

FROM present indications there is little doubt that the maple sugar crop of 1864 will vastly exceed that made in previous years. In all probability the crop of maple sugar at the North for the present year will reach 25,000,000 pounds, worth at the low estimate of fifteen cents per pound, $3,750,000. Why not raise the sugar maple in California, in the mountain districts, where the climate is known to be sufficiently cold.

Foreign Grapes—New Varieties.

NAZARETH (Pa.), March 16th, 1864.

EDITOR CALIFORNIA FARMER:

I received, to-day, two copies of your valuable paper, for which I am much obliged to you. In my letter, of February 19th, at the end of the first paragraph, it should have read: "In my native country," instead of county.

I am fully aware of the great advance in California Grape and Fruit culture, but I was convinced, at the same time, that you had not all the valuable varieties of grapes which I possessed and which I have *not* found in any American collection, being perfectly distinct. Among these I wish to mention most particularly the Arramont, a very large bunch, the berries of which are nearly double the size of the Black Hamburg or Trollinger; the grape is of exquisite flavor, but requires a warm situation, as also the Furminet and the Harslavelli (Hungarian); the Carmenet is the grape which makes the the well known Bordeaux wine. The White Lombardy is my particular favorite, its flavor is so delicate a mixture of sweet and vinous acid, and the texture so tender and almost seedless that it vanishes in the month before we are aware of it. The Basilicum is a German Seedling, raised by my old friend, Brunner; it is enormously prolific, with the flavor of that plant for which it is named. The Vander Laan, is a Belgian grape; the White Augster, is Hungarian; the Blue Portugal grape has no acid, is very vigorous and prolific; the Orange grape (Brunner's seedling), with flavor of Orange blossoms. Excuse my English, as that is by me only *picked* up. Yours, &c.

G. H. B.

P. S.—See also in the 10th volume of the Horticulturist, page 110. Also at page 280 of the same volume, and in the 17th volume, page 263 and 275, you will find some of my endeavors for the protection of the insectivorous birds. Is California well stocked with these agricutural aids? At the present time thousands of sparrows are sent from Germany to Australia, as formerly to New Zealand, where the (tame) birds all had been destroyed by the imported cats, and agriculture languished from the havoc produced by myriads of insects.

G. H. B.

The Health of Farmer's Families.

DR. HALL, of New York city, has furnished a paper on this subject to the last published report of the Agricultural Department, which is well worth study and reflection not only by farmers, but, in a measure by the heads of all families. It seems that, in this State Dr. Kirkbride, of the Pennsylvania Insane Hospital, found that nearly one-seventh of the whole number of the insane were from the families of farmers. In the States of Ohio and in Massachusetts the greatest number of those brought to the Asylum were farmers' wives and daughters. Nor do farmers live the longest as is commonly supposed, and as is the case with one or two exceptions, in England. Even the clergy, whose brains are constantly tasked, and who take as a class quite insufficient exercise, live longer. The most prominent causes for this seems to be the confinement of the mind to one idea or class of ideas. Incessant thinking on one subject always tends to craze the mind, and it would seem that the isolated lives of many farmers, their narrow and restricted range of thought and occupation, is one chief cause of this tendency to insanity and early death. Now there is absolutely no pursuit that tends so much to afford variety of occupation and culture, if rightly pursued, as agriculture. There is work for the hands, and work for the heart and domestic affections, and work for the brain in the soverest study, if the agriculturist be only sufficiently educated and properly inclined. The study of manures, the analysis of the soils afford scope for the pursuit of chemistry, most directly profitable. There are few farmers that might not make many new applications of all the mechanical skill they can acquire in applying and improving the implements in use to save labor. The care of stock involves a study of the laws of natural history that might well employ the mind in another direction. One of the most successful English farmers used to spend the first half of each day in out of door exercise on his farm; then he would wash and dress and sit down to the mental calculations of his farm, and the education of his children, in the course of which he contrived to write some of the most fresh, vigorous and profound articles for the London Quarterly Review.

But the hardships of farmers' wives in this State, would seem to be peculiarly great and they are much more liable to mental disease and early death than farmers. Instead of the ruddy-cheeked dairy maids of England, we have too often farmers daughters and wives sinking yearly into hopeless insanity. This is mostly for want of care and free arrangement on the part of the men. Often the wood is neglected in cutting, and then has to be used green and cut up by the females. Panes of glass are broken, and drafts give cold to those heated by the hard work, and washing, and baking, and churning. Washing ought never to be performed by young mothers; yet most of them have to do it.

Then too-the want of respect and proper attention to the women of the household by the farmer, often greatly increases their cares and sorrows. Many a farmer, and it may be added, many a husband, in every walk of life, speaks habitually to his wife, before others, in terms more imperious and degrading than he would think of using to the hired hands, male or female, of his farm.

Many a farmer allows his wife's rest to be broken into at night, either in the care of sick children, or in performing duties crowded out of the day by his own neglect. It is only the other day that a poor woman fell head foremost into a well and was drowned by slipping on the ice in drawing a bucket of water, all for the want of the most common protection to the well, or arrangements for raising the water. The proper education of the laboring classes throughout this State has become a great necessity. Fully half the labor, both of men and and, women, is wasted for want of knowledge, forethought and contrivance. What is far worse, a much larger proportion of the life, health and happiness of all are thus wasted even by persons with large capital, through greediness of gain.—[Journal of Health.

Small Leaks in the Household Ship

We commend most earnestly the following sketch on household things. Many a fortune, here in California, has been lost and squandered by want of care and attention to these "little things." A thousand worm-holes that will each admit scarcely a gallon of water during ten hours, will much sooner water-log a ship than a large hole through which is poured a gallon a minute. In the financial affairs of a family, though the large outgoes may be canvassed and avoided, the whole income may be dribbled away, and no advance be made toward competency, wealth, or position. As a rule, the financial success of any family depends more upon the economy of the wife than upon the earnings or business income of the husband. Mrs. Haskell, in her recently issued "Household Encyclopedia," throws together some of the leaks in a household ship, which we copy for a, double purpose: 1st, to show the men that their wives have a multitude of cares, of little details to look after—generally far more items than occur in man's business pursuits; and 2d, to perhaps in some cases indicate to house-wives details, that they may not have thought of before:

"Much waste is often experienced in the boiling &c., of meats. Unless watched, the cook will throw out the water without letting it cool to take off the fat, or scrape the dripping pan into the swill-pail. This grease is useful in many ways. It can be burned in lamps mixed with lard; or when no pork has been boiled with it, made into candles. When pork is boiled alone, it will do to fry cakes, if cleansed. Again, bits of meat are thrown out which would make hashed meat or hash. The flour is sifted in a wasteful manner, or the bread-pan left with dough sticking to it. Pie-crust is left and laid by to sour, instead of making a few tarts for tea, &c. Cake batter is thrown out because but little is left. Cold puddings are considered good for nothing, when often they can be steamed for the next day, or, as in case of rice, made over in other forms. Vegetables are thrown away that would warm for breakfast nicely. Dish towels are thrown down where mice can destroy them. Soap is left in water to dissolve, or more used than is necessary. If Bath brick, whiting, rottenstone, &c., are used, much is wasted uselessly. The scrub brush is left in water, pails scorched by the stove, tubs and barrels left in the sun to dry and fall apart, chamber pails allowed to rust, tins not dried, and iron-ware rusted; nice knives used for cooking in the kitchen, silver spoons are used to scrape kettles, or forks to toast bread. Rinsing of sweetmeats and skimmings of syrup, which make good vinegar, are thrown out; cream is allowed to mold and spoil; mustard to dry in the pot., and vinegar to corrode the castor; tea, roasted coffee, pepper and spices, to stand open and lose their strength. The molasses jug loses the cork, and the flies take possession. Sweetments are opened and forgotten. Vinegar is drawn in a basin, and allowed to stand, until both basin and vinegar are spoiled. Sugar is spilled from the barrel, coffee from the sack, and tea from the chest. Different sauces are made too sweet, and both sauce and sugar wasted. Dried fruit has not been taken care of in season, and becomes wormy. The vinegar on pickles loses strength or leaks out and the pickles become soft. Potatoes in the cellar grow, and the sprouts are not removed until they become worthless. Apples decay for want of looking over. Pork spoils for want of salt, and beef because the brine wants scalding. Hams become tainted or filled with vermin, for want of the right protection. Dried beef becomes so hard it can't be cut. Cheese molds, and is eaten by mice or vermin. Lard is not well tried in the Fall, and becomes tainted. Butter spoils for want of being well made at first. Bones are burned that will make soup. Ashes are thrown out carelessly, endangering the premises, and being wasted. Servants leave a light and fire burning in the kitchen, when they are out all the evening. Clothes are whipped to pieces in the wind; fine cambrics rubbed on the board, and laces torn in starching. Brooms are never hung up, and soon are spoiled. Carpets are swept with stubs, hardly fit to scrub the kitchen, and good new brooms used for scrubbing. Towels are used in place of holders, and good sheets to iron, taking a fresh one every week, thus scorching nearly all in the house. Fluid, if used, is left uncorked, endangering the house and wasting the alcohol. Caps are left from lamps, rendering the fluid worthless by evaporation. Table linen is thrown carelessly down and is eaten by mice, or put away damp and is mildewed; or the fruit stains forgotten, and the stains washed in. Table-cloths and napkins used as dish-wipers; mats forgotten to be put under hot dishes; teapots melted by the stove; water forgotten in pitchers and allowed to freeze in winter; slop for cow and pig never saved; chips used to feed cats and dogs on; and in many other ways a careless and inexperienced housekeeper will waste, without heeding, the hard-earned wages of her husband; when she really thinks, because she buys no fine clothes, makes the old ones last, and cooks plainly, she is a most superior housekeeper."

Cleansing the Teeth.

If you would preserve your teeth you must keep them clean. Dr. Dio Lewis has gone so far as to say that teeth, if kept perfectly clean, will never decay. Be that as it may, they are liable to decay, if the cleansing processes are neglected. The teeth should be thoroughly cleansed before retiring at night as well as in the morning. No particle of food or foreign matter should be allowed to remain between the teeth. The tooth-brush, with the bristles sufficiently stiff to accomplish the purpose, should be used in a rotary manner, so that the brush may have an upward and downward movement. In this way the bristles are inserted between the teeth, where decay first makes its appearance, and all particles of food are effectually removed. Much injury is often done to the teeth by the vigorous use of a hard brush, moving it from side to side across the teeth, which cuts away the investing membrane and causes the gums to recede, leaving the bony parts of the teeth exposed to the air and acid of the mouth, when decay is an inevitable consequence. If proper attention should be given to these simple directions, ladies and gentlemen would not be obliged to call upon their dentist so frequently for the purpose of having their teeth filled.

Tooth powders are not necessary, and frequently do injury. Camphor, and various drugs, have been much abused in this way. A gritty tooth powder will cut away the enamel of the teeth and expose them to decay. A suitable brush and cold water are all that need be used for cleansing the teeth.

Toothpicks are not only useful but indispensable in keeping the teeth clean. Goose-quills make the best picks, orange-wood and ivory answer a good purpose. Metallic toothpicks, should always be avoided.—*Herald of Health.*

Inauguration of Governor Hahn, of Louisiana, at New Orleans, March 4, 1864.

THE place selected for the inauguration ceremonie was Lafayette square, opposite the City Hall The surrounding buildings, and the large button-wood trees which line the square, were all ingeniously worked in as decorations.

In the middle of the square was erected a circular platform, 50 feet in diameter, which served as a base to a tall flagstaff, bearing aloft, above all rivals, the national standard. From this point as a center, in a sweep of half a mile, toward an amphitheater of seats which in hight, accommodations and magnitude was never before erected on this continent. On these ranges of seats were comfortably accommodated 10,000 children, together with ample room for 5,000 specially invited guests. At the base of this immense amphitheatre was a platform for Gilmore's 500 musicians, and 40 anvils and their "beaters." In the rear of the amphitheatre 34 upright columns, each surmounted by a glass colored globe underneath a shield; in this way every State of the Union was represented. Behind all this was stationed, by Gen. Arnold, 50 pieces of brass artillery. Over the center square were the festoons of evergreens and gay signal flags of all nations, and all around were various patriotic mottoes.

The day of the inauguration ceremonies, 4th March, 1864, was ushered in by a salute of 100 guns from batteries under command of Gen. Arnold. Mingling with this pealed forth merry chimes from all the bells in the city. At an early hour ladies, gentlemen and children commenced wending their way towards the center of attraction: and before ten o'clock the sides of the square outside were densely packed with spectators. The time consumed in waiting was happily relieved as one delegation of school children after another threaded their way through the multitude, waving their Union flags and, in interminable rows, ascending one above another, took possession of the amphitheatre.

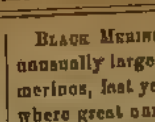
At eleven o'clock, when the school children had all arrived, when the ladies had taken possession of their allotted seats, when the veteran soldiers, two regiments, 1st Regulars and 30th Massachusetts veterans, passed into the square, the excitement grew intense. A procession crossed St. Charles street and entered the square as follows:

The Governor Elect, supported by Brig.-Gen. Shepley, Military Governor; Charles Claiborne, Esq., Clerk U. S. Court; Alfred Shaw Esq., Clerk U. S. District Court; Hon. E. H. Durell, Judge U. S. District Court; A. C. Graham, Esq., Marshal U. S. Court; Judges B. K. Howell, J. H. Hiestand, C. A. Peabody, J. S. Whitaker, C. Handlin and A. A. Atocha; Recorders H. T. Vennard and Judge Lesaumont; Aide-de-Camp; Mayor Hoyt; Aide-de Camp; Maj-Gens. Banks, McClernand, Sherman, and Reynolds; Brig.-Gens. T. W. Sherman, C. P. Stone, Bowen, Arnold, Lee, Ransom and Cameron, with their several staffs; followed by the officials of the Federal and City Governments, a large number of distinguished citizens and the different committees of arrangements.

Order being at length obtained, Hon. R. K. Howell, Judge of the Sixth District Court, called the vast assemblage to order, and invited the Rev. F. E. Chubbuck to open the ceremonies with prayer

When the prayer had been offered, "Hail Columbia" was performed in the following manner: First verse, full band, 500 performers; second verse, full band and grand chorus of the 10,000 public school children present; third verse, full band, grand chorus by the children, and a chime of all the bells in the city; fourth verse, full band, grand chorus, the chiming of the bells and a great gun accompaniment of 50 pieces of artillery! It was some time before the delighted and astonished audience could control their feelings, and when silence was apparently restored, there would break out in some parts o he vast assemblage involuntary shouts of applause, which would be echoed back again.

Order being restored, the Governor-elect, amid deafening cheers stepped up to the table and, amid a profound silence, listened to the words of the oath as they were repeated by Judge Durell. The Governor-elect then kissed the Bible, and was sworn into office under circumstances of extraordinary interest, not only the first loyal Governor of a State once identified with the so-called Confederacy, but also the first Free, State Governor of the South-Western States.



The "Star Spangled Banner," which followed, was never before given with such splendid effect: First time, full band; second time, full band and grand chorus; third time, full band, grand chorus, and a chime of all the bells of the city; fourth time, full band, grand chorus, chiming of bells, and a great gun accompaniment of 50 pieces of artillery.

Judge Howell now introduced the newly-installed Governor of the State, who, in a clear voice, read his inaugural, and closed by again returning thanks to those who had elected him Governor, and promised to do his duties in that office.

Music, "Anvil Chorus," performed by the full band, accompanied by 40 time-beaters upon anvils and 50 pieces of artillery. The novelty of this new musical treat, after what had taken place, was indeed a surprise, and it seemed as if the audience would never tire in their plaudits. Meantime, a beautiful young lady, a teacher in the Barrack, street school, accompanied by several beautiful children, miniature representatives of the Goddess of Liberty, came on the stand and presented Gov. Hahn with a beautiful wreath, the flowers wrought so as to read, "M. H., our Governor." The wreath was justly admired for its delicacy and good taste.

At this stage of the proceeding, Gen. Banks rose and addressed the audience. At the close the band gave "Our Flag is Still There," first time with full band; second time, full band in grand chorus; third and last time, full band, chorus, chiming of bells, with artillery accompaniment. The Rev. Mr. Horton then offered up an eloquent prayer, followed by a musical medley of our most popular airs, ending with the benediction. Then followed the musical finale, which was one of the grandest affairs of the kind that was ever attempted in this country.

BLACK MERINOS.—It is said that there was an unusually large number of *black lambs* among the merinos, last year. They appeared even in flocks where great care had been taken in breeding for twenty years or more. This shows how long it takes, and how hard it is to get it rid of an undesirable trait, or quality, when once in the blood; and it suggests the need of the greatest care on the part of the breeders, in the selection of animals for breeding purposes. "Blood will tell."—[Massachusetts Plowman.

PICOLLO PIANOFORTES.

WE WOULD CALL PARTICULAR ATTENTION TO these beautiful instruments from our own manufactory in Paris, and which we can confidently recommend as equal in quality to those of any other European manufacturer.

PICOLLO PIANOFORTES are now in universal use on the continent of Europe, having completely taken the place of the old style of Square Piano. They possess all the merits ever claimed for the Square Piano, with many advantages that are peculiar to themselves.

Our assortment comprises six different styles varying in price from $275 to $400 each.

Iron-framed Picollo Pianofortes.

These instruments are a "specialité" of our manufacture, are constructed with a special view to withstand the peculiar climate of the interior of California, and are warranted to stand any change of temperature.

Price $400 to $450 each.

STODART PIANOFORTES.

We have had the exclusive agency for the sale of these celebrated Pianos for the past twelve years, and refer with confidence, as to their quality, to the many hundreds of instruments themselves now in use throughout the whole extent of the Pacific Coast. A general assortment of these instruments will at all times be found in our warerooms, comprising Grand Action, Square, Upright, and Overstrung Pianos, in plain or richly carved cases. We offer them at the same prices at which they are sold at the manufacturers' warerooms in New York, thus saving to the purchasers here the cost of freight, insurance, interest, and attendant charges. Prices range from $240 to $500 each.

FRENCH HARMONIUMS.

In connection with our manufactory of Pianofortes at Paris, we have established a manufactory of FRENCH HARMONIUMS, suitable for parlors, music-halls and churches. These instruments, like our Pianofortes, are all in rosewood cases, and are made with the improved "transposition attachment," which enables the performer, in voice accompaniments, to adapt the instrument to any particular "key," thus entirely obviating the necessity of any transposition of the music. Nine varieties $100 to $1,000 each.

We beg to call attention to the fact that the Harmoniums of our manufacture possess many valuable improvements not to be found in any other instruments of this description, among which is the peculiar disposition of the reeds. This improvement is based upon purely scientific principles, rendering the reeds doubly sensitive and much less liable to become deranged or get out of order.

For full description of Picollo Pianofortes and Harmoniums send for descriptive catalogues.

PRINCE & CO'S

Melodeons, Double reed School Organs,

and Organ Melodeons.

Being the exclusive agents for the sale of these celebrated instruments in California we are prepared to furnish them at the catalogue prices, and sold at the warerooms of the manufacturers in the East. The assortment comprises twelve different styles of instruments, ranging from $60 to $425 each. Illustrated catalogues, with full description and price of each instrument annexed will be furnished on application.

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED HIMSELF in correspondence and business in Europe as to enable him to secure from the very best source—the most careful growers—their choicest seeds grown, of which he will always be in receipt and in endless variety, imported directly from France and England, from well known and responsible houses; some of the most prominent of which named in our catalogues.

It has been the experience of our best gardeners as growers, and all others who plant seed, that seedsmen in California are not fully reliable and cannot be for a series of year, until more capital, experience and scientific knowledge shall be given to the business

HAS FOR SALE

Alfalfa or Chile Clover; Hungarian Grass;
Kentucky Blue-grass; Orchard Grass;
Red-top Grass; Soinfoin Grass;
English Rye-grass, Timothy Grass;
Red Clover; White Dutch Clover;
Crimson Clover, Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

13 SAN FRANCISCO.

FOR JAMIE'S SAKE.

Two by the stroke of the clock. They are all at rest in the old house at home, for they keep early hours there. Gentle, pale-faced, uncomplaining mother has folded up her work and laid it away in the great opened-mouthed basket, whose contents, like the oil in the widow's cruse, are never lessened by subtraction; and in a stern, hard voice father has read in the book how God's wrath is kindled against His offenders (touching never upon those passages that tell of His love, His tenderness, His pity for the erring), and, kneeling, in the same dry, uncompassionating voice has offered up the petition that all such offenders may be judged without mercy—that only they who, with unwavering purposes and never-wandering will, have walked in strict obedience to God's Word may be counted worthy of His salvation, and receive the blessing of Heaven now and forevermore. (O, my Father, who shall stand?) The prayer ended, Benny, with a bitter, scornful smile breaking up the grave, tender lines of his fine mouth, has lit his candle and strode away in silence to his room; and dear sister Belle, with something of mother's patient, saintly look in her face, has bidden a sweet "good-night" and fluttered out into the hall and up the stairway to the dainty, white-walled, snowy-curtained chamber that we used to share together.

There is no sound but the quick beating of the little gothic clock upon the wide, old-fashioned mantle in the deserted family room, but the fire burns clear and bright there (for fires never go out at Hill Side Cottage in winter) and the light and the darkness gambol together like merry children, leaping high and crouching low, giving living motion, and strange, unearthly beauty to the quaint old pictures on the wall. Oh, if I might drag my numbed limbs and stretch my aching fingers to the warmth! The atmosphere is like summer there, and Belle's tea-roses and pet geraniums put forth their tender leaves fearlessly as in their native air; and her blithe little singer, in his coat of sunshine, catching the fragrance of their breath, dreams straightway of the odorous groves, the gorgeous bloom, and the spicy airs of his native isles—a dim tradition of which forever haunts his bird brain, and pricks his golden breast with a wild unrest that breaks anon in wondrous trills and breathless flights of song. True poet, he.

Dear bird, we mortals, too, have dreams and visions, and recognitions of another life than this—a less tumultuous life, and truer—but cramped and fettered in our house of clay, restlessly beating at our prison doors, homesick and yearning, we cannot pour out our souls in praise like thee.

—

How fiercely the wind rattles the shrunken, rotten sash, and shakes the rusty fastenings of my door, as if half tempted to come in slay me with his breath! With what a merciless hand the cruel, cruel cold clutches at my heart! I am shivering like one in mortal terror. I am faint unto death with long fasting—worn and utterly weary I am in body and soul. It is not much; for myself it doesn't matter; I could say joyfully to hunger and cold, do your worst, and well so, for I should sooner reach rest, and Richard, and Heaven—but for Jamie's sake. Oh, my precious! that strange, strange look he gave me before he fell asleep—it haunts me yet.

"Lie with me a little while, mamma," he plead, "only a little while—I am so cold."

"I cannot, darling," I said, with cruel hardheartedness. "Lie still and sleep. Mamma must work while the light burns, or Jamie will have no bread to-morrow."

He nestled down under the scanty covering of his bed, silenced by this unanswerable argument. But presently the little blue hands were again outstretched to me.

"Mamma, is it warm up in Heaven?"

"Yes, dear."

"And light, mamma? It is always light there, isn't it?"

"Always," I answered, a vision of the Holy City of the Apocalypse sending an instant thrill of joy to my soul.

"And the angels are never hungry, think?"

"Never, my boy."

"Oh, mamma, why can't we go to Heaven—you and I?"

"God has not opened the way for us yet."

Another silence.

"Mamma?"

"Well."

"You think that God—Him that blessed little children I mean—you think He hears me when I pray, don't you?"

"Surely, Jamie."

"And if I should pray *very hard* for Him to take us to Heaven, where papa is, don't you believe He would?"

"Ah, my dear child, indeed I cannot tell."

"Well I'll ask Him, anyhow, mamma," he said, clasping his hands fervently together, and looking earnestly above: "Dear, good Mr. Jesus, we are so hungry and cold—mamma and I are—and we haven't got any fire, nor anything to eat. I didn't have half supper enough to-night, and mamma didn't have a bit. Please do let us come to Heaven right away. I know you are a good, blessed Jesus, for mamma says so. She reads about you in her book when she don't have to say. We want to get to Heaven so bad. Please send papa right after us to-night, and I'll be a good boy and never do naughty things any more. We want to go just now, we are so cold. Do, please, send for us quick. Amen."

"There, ma," he said, with a sigh of profound satisfaction, "I know Jesus heard me, for I feel so good here" (laying his hand upon his breast) "so don't cry any more, you darling mamma. Now if I happen to go to sleep, you be sure to wake me when papa comes. I can get ready real quick. I wish I had a better jacket to wear, though, don't you, ma? But I guess God will see about that" (with another sigh of relief) "so don't you worry. Kiss me good-night now. I'll kiss you good-morning in Heaven, blessed mamma."

Oh the simple faith of childhood! If we could carry it always with us we might be happier.

—

How slowly my work progresses. I cannot fix my thoughts upon it. My hands refuse almost to execute my will. This will never do. These garments must be finished before I sleep, or the dreadful alternative of death by starvation awaits my Jamie. How clumsy and awkward my fingers are! These last stitches are so unskillfully taken—will they pass unnoticed, I wonder? Oh no, the quick sharp eyes of Asa Stone will find them out. He will look at me frowningly, and say again, in that cruel, cutting tone of his, "Woman, you grow worse and worse. I shall only give you half pay for this work, and perhaps you will do better next time." How aggrieved and indignant he appeared to-night when I begged—is *that* the word?—aye, *begged* him to pay me a part of my wages in advance—a mere trifle, just sufficient to procure a handful of fuel and a morsel of food, for I could work so much swifter if my bodily wants were even in a small measure supplied. Oh what a face he turned upon me!

"How can you ask such a thing of me?" he said; "I have engaged to deliver the goods to-morrow, and those articles must be finished to-night. If I pay you in advance, what surety have I that you will not take your ease and cheat me of a good customer? No, madam, I don't want your word,"—with a sneer—"I want your work. When you have earned your money you shall have it, but I never conduct my business on the credit system."

The man is possessed of a devil. It speaks in the sharp, keen glitter of his eye; in the eager, greedy, clutching movements of his fingers; in the restless, darting, swooping motions of his body; in the cruel cunning of his speech. God have mercy upon your soul, Asa Stone! Wretched, suffering, steeped to the lips in penury as I am—rich, powerful, rioting in this world's goods as you are—I would not change conditions with you to-night. * * * *

What visions of warmth, and light, and blessedness flit before my eyes! Unsatisfying all! I stand outside the windows of my father's house—the fire shines brightly through the frosty panes—it mocks but does not warm me. I reach my hands out yearningly, but no one bids me enter. Should I call, one, in a voice of thunder, would cry, "Begone! I know you not." The old housecat may bask luxuriously in the generous warmth. Even Bruno in his kennel, and Lapwing and Lightfoot in their stables, know nothing of the pangs of hunger or cold. Of the master's house, only the master's daughter is unthought of and uncared for. It is just, it is just—so always shall it fare with the wayward and the disobedient. * * *

I cannot work, I cannot! My hands fall away as if they were another's, and I have no power over them. I say, oh hands, for Jamie's sake do not fail me! and they flutter an instant with feeble, uncertain motion, then drop heavily again at my side. Not even for Jamie's sake! How hard and unfeeling I have grown. Curse and sneer, Asa Stone—defraud me of my dues and refuse to give me work, I do not mind. I know if I fail to finish my task Jamie will have nothing to eat to-morrow, and yet it does not trouble me, so heartless I am. God will provide. I long only to lie down and sleep, and sleep. God will take care.

—

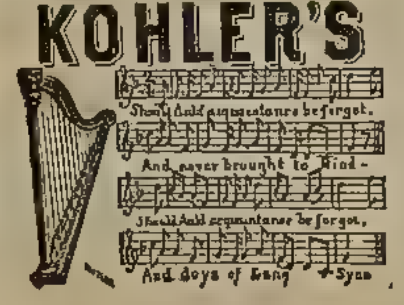
Towards noon of a day succeeding the most intensely cold night that had been known for years, a man, heavily coated and furred, strode up the creaking stairs leading to the third story of an old, dilapidated tenant-house in —— street, and groping cautiously along the dim passage, paused before a door at the extreme left, and rapped sharply upon it with the hard head of his walking-stick. There was no response.

"I don't know but I may have mistaken the room," he muttered impatiently. "Curse the woman! She'll have to pay for this trouble."

The knock was repeated. Still no sound within. With an ugly oath the man threw his foot against the door, and, the imperfect fastenings yielding quickly to the impetuous blow, it swung open, revealing a scene which might have touched a heart less strong than his who looked upon it. The air of the room was more chilly even than that outside, the ashes were dead on the hearth, the oil had burned quite out of the small lamp standing on a rough table in the center of the wretched apartment, a heap of unfinished work lay where it had carelessly fallen on the carpetless floor, and upon the poor bed a woman and child—the former with no covering except her thin, daily apparel—lay in sweet, unconscious sleep.

The intruder's eye dwelt on these last items—the unfinished garments and the sleeping woman and his hard face darkened with an angry frown.

"What, madam! asleep, and your work undone?" he cried in an injured tone. "How can I trust you? You were to bring the articles to me by nine o'clock to-day, and it is now—"



He paused as if smitten by a sudden fear. His voice woke no emotion in the sleepers. He moved quickly across the room and touched the cheek of the woman, who lay in a weary, careless attitude, her hands thrown lightly over her head, a happy, restful expression on the still, white face.

The man drew back with a scared look. Then, as if not wholly satisfied, he approached again, essayed to unclasp the thin wasted fingers, bent his ear to her breast, leaned over and touched his hand to the forehead of the sleeping child. The look of horror grew more intense. "Dead!—Frozen!" The terrified exclamation was scarcely above his breath. "Good God! I might have prevented this. But I will atone. The woman shall have something better than a pauper's burial. The world shall see that Asa Stone has a heart that can feel for the poor. Well, well, no doubt this is the most fortunate event that could have happened to the poor lady and the child."

Truly, "the most fortunate event!" Beyond sorrowing and beyond suffering!

Lightly, on the soul of Asa Stone, rests the burden of his murderous sin, and simple in his eyes is the atonement. Yet a day cometh!—[Arthur's Home Magazine.

KOHLER'S

FOR SALE, TO LEASE, ETC.

Farmers and Immigrants.

LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOB F. DYE'S) on the East side of the Sacramento River, embraces many very superior Farms of

100 to 500 Acres each; also Vineyards, Gardens and Orchards,

above all overflows, Fenced, having Dwellings, Barns, etc. and throughout the year, large running streams, and Irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of this Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Threshers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors

☞ The "Job Dye Farm," of 250 acres—with Orchard, Vineyard, and Garden, with Irrigating water, large Adobe House, and numerous out-buildings—will be rented to a satisfactory tenant

Apply to GEO. CHAMPLIN, Red Bluff P. O, or on the Ranch, or to

E. F. NORTHAM and R. B. WOODWARD,
Dec. 17—19-3m San Francisco.

Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOma County, lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P Swift, Esq., containing fourteen thousand acres of land, is offered for sale in Lots or Farms to suit purchasers.

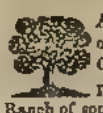
Most of this tract of land is suitable for cultivation, and has soil of the best quality. It is accessible to market, being adjacent both to the Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State.

No better opportunity, it is believed, will ever be offered for the purchase of desirable farms at a low price and upon easy terms.

There is a very large amount of fencing on the tract, the entire body of land being enclosed.

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.



The Sonoma Embarcadero is at one side, thus furnishing a convenient access to the San Francisco market at all seasons.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the office of Haight & Pierson, 622 Clay street, San Francisco, or at the store of Mr. Pauls, Sonoma. WILLIAM BIHLER.

8

A Fine Ranch

IN MENDOCINO COUNTY.

A FINE GRAIN AND STOCK RANCH of 900 acres under fence, in Mendocino County, will be offered at a bargain if applied for soon. Together with this is a Stock Ranch of some thousand acres of mountain land which goes with this Ranch, being Uncle Sam's land.

The Ranch is about 80 miles from Petaluma and on the great mill road to the Navarro, Albion, and Mendico & Noyo's mills.

The location is pleasant, having the Redwood Hills for a back ground, with a fine valley tract—one hundred and sixty acres valley land, mostly under cultivation—yielding fine Barley, Oats, Wheat, Hay, Corn, etc. The crop of Hay is fine.

This Farm will sustain a herd of 300 Cattle, and is a grand Ranch for raising Stock, Horses Mules, or Hogs, and a good place to raise Poultry. There is an orchard of two acres of bearing Trees. Vegetables grow well.

There is on the place a fine two-story frame Building, in which was put 30,000 feet of lumber, also Granary, Smokehouse, and Barn. The vicinity to the Redwoods gives an opportunity to improve, as Lumber is cheap and Timber handy.

There are, at present, good Tools, Implements, Harvesters, Plows, etc, on the place; also some furniture. The House has been used as a Hotel and Store, and is also the Stage House Hay, Grain, and Produce can always be sold at good prices

There is also a herd of 100 head of Stock which will be sold at a bargain.

This is a rare chance, and worthy the attention of those who wish a good Home, a good Farm, and a profitable business. Prices reasonable. For particulars inquire of Editor Farmer. 21-1

A Fine Ranch in Contra Costa County.

A FINE RANCH IN THIS COUNTY IS NOW OFfered for sale at a Bargain, if applied for soon, as it will be sold at a price worthy special attention.

The Farm contains 208 acres; 70 acres of this are fenced—the balance is well and heavy timbered. This Farm will cut 2000 cords of wood, enough to pay for the Ranch

It is an excellent Hay and Grain Ranch and the products sell well and at good prices on the spot, this being the head of navigation and near market: 8 miles from Martinez and 4 1-2 miles from Pacheco.

The Title is good and possession given immediately. The Buildings are common, but the Land is No 1. For Price and Terms inquire of the Editor of this paper who will give all particulars.

Fine Farms for Sale.

YOU WHO WANT GOOD FARMS CAN SECURE them by applying to the Editor of the Farmer. The following can now be had.

FOUR VERY FINE FARMS in the splendid San Joaquin District, within a few miles of Stockton, all very productive.

ONE FARM about 90 miles from Stockton—valuable.

ONE FARM capable of great improvement and valuable, in Contra Costa County, near Pacheco.

A GOOD RANCH in Santa Cruz County—a good bargain.

A FINE FARM AND VINEYARD in the region of Mt. Diablo—can be made valuable.

Several STOCK RANCHES in various parts of the State, from $1,500 to $25,000; in all these, good and permanent settlers can find bargains. Address by letter, or in person, for particulars to Col. Warren, Editor of the Farmer. 23

$2,500 Wanted on Real Estate.

THE SUM OF $2,500 is wanted on Real Estate in San Francisco County, upon land of undoubted title, worth double the amount. Address A. B. C., Farmers Office. 7

1864.

9-3m San Francisco.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 8 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

We are

HORACE WATERS, Ag't,
No. 481 Broadway, N. Y

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartets, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 625,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2, are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Gale. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

HORACE WATERS, Ag't
481 Broadway, New York,
Publisher of the above Books.

NEW INSTRUMENTAL MUSIC.

"Idlewild," "Polka Capriice," by M. Keller. "Morning Prayer," by W. F Muller; "Summer House of Roses," galop, by Mrs. Parkhurst, "Le Piri Polka," "West Point March;" 25c each. "Omotepe Waltz;" "L'Arnette Waltz, "Frederica Waltz," J G Bernard, 40c each. "We are coming Father Abraham," "Always look on the Sunny Side," "Brilliant Variations," by Charles Grobe, 30c each. "Shall we know Each Other There," for Guitar, by Bloomer, 25c. "Sunny Side," set of 20 easy arrangements for the piano, 10 by James Bellak, and 10 by Mrs. Parkhurst, 15c each. Mailed free. HORACE WATERS,
Publisher, No. 481 Broadway.

NEW VOCAL MUSIC.

"Land of the Brave and Free," Rev. G. S. Plumley; "Your Fortune is too Small for Me," Comic Song, Maurice; "I will Wait at the Gate for Thee," E. Holden; "We parted with a Cheerful Smile," M. Keller; "One by one the Stars of Evening," "The Flowers Bloom in Linden Vale," S. Lawrence; "The Morning is Dawning," H. S. Leland; "There is a Beautiful world," "Shall we Meet Beyond the River?" "The Angel's are Hovering Near," "The Year of Love," "How Softly on the Bruised Heart," Mrs. Parkhurst; "Kindly Words and Smiling Faces," J. R. Thomas; "For the Dear Old Flag I Die," "Oh, Why am I so Happy?" S. C. [illegible] star; "Sabbath Bells, Chime On," Lowry, 25 cents each, mailed free.

For Sale by

ALLEN & SPIER,

8 SAN FRANCISCO

The California Farmer.

SAN FRANCISCO:

FRIDAY .....MAY 6, 1864

☞ Those who receive a number of the Farmer with this paragraph marked, may understand that it is sent to them or their examination, hoping it will meet their approval and advice them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it n the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address,

Publisher California Farmer, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the Farmer Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the Farmer Office. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use: a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Send along your Greenbacks,

Don't be afraid to send along your Greenbacks. These we take at par in payment for all back dues to the Farmer for subscription. So send them along, now is the time. This is a better speculation than mining stocks, for it is so pleasant to read a newspaper when one knows he has paid for it, the digestion is better and a man feels happy, and, if happy, then he feels rich. So pay prompt and you will "strike a lucky lead."

Cashmere Goats, and the Alpacca and various Goats of Asia.

We have received letters from parties familiar with this subject, who have traveled largely in that part of the world, and who have a complete history of those valuable animals and the source from whence they can be obtained, who are desirous to form a company for the purpose of importing them in numbers to this country. The gentlemen wish parties who have capital to join in the enterprise for the purchase and shipment of these animals. This enterprise can be made very certain and largely profitable. The party who writes is one of high standing, has much experience as a traveler, and is of undoubted responsibility, with a thorough knowledge of such an undertaking.

TO READERS AND CORRESPONDENTS.

We remind our readers that they will find on our 2d and 6th page much that will interest them. "Small Leaks in the Household Ship" should be read by every housewife. "Health of Farmer's Families" is also important. The musical celebration at the inaugural of the Governor of Louisiana will be found deeply interesting from its association with "ten thousand little children." The poem on 'Labor," by Frank Soule, is, as would be expected, a gem in the poetical tiara already wreathed upon his brow. Our happy writer and correspondent, Professor Sarles, gives us another letter this week. "For Jamie's Sake" is one of those stories worth reading.

We have received "Across the Continent," by C. French Richards, a happy effort on the opening of the Pacific Railroad—we shall give it next week. Several other communications will appear, now laid on our table—came too late.

"Old Pioneer's Going Home," and "Oakland," also a letter on Postoffice matters will appear next week.

ARTICLES RECEIVED AT THE CALIFORNIA FARMER EXHIBITION ROOMS, No. 320 Clay Street.

We have received from the "Rhode Island Society for the Encouragement of Domestic Industry," the transactions of 1863—a neat volume of 113 pages, containing the doings of this interesting Society, with a valuable correspondence upon many subjects of great scientific interest, showing the value of a society of working material. This Society is prosperous having a capital at interest that, with their increase by membership, will enable it to accomplish great good. We shall copy from the work evidences of their prosperity and efficiency.

We have received, at Rooms, the May number of the California Teacher. This fine periodical is now doing very good work for the cause of Education.

We have received the new and valuable catalogues of *Messrs. Vilmorin-Andreux & Co., of Paris.* Their catalogues embrace their full business, of seeds of the Garden, Field and Orchard, including new and rare kinds, with catalogues of their new and rare bulbous roots. We are surprised that those who deal in seeds should not always forward their catalogues, in advance of the season, and thereby secure trade. Our season, for *preparation*, is October to January. Seedsmen should have catalogues here by July previous, then they would secure large orders for their new and rare seeds, etc., besides the standard qualities.

We have received the fall catalogues of Messrs. Dewey's, of their colored plates of Fruits, Flowers, &c., embracing all kinds of fruits, &c. Their establishment is at Rochester, N. Y.

Our Exchanges.—We have noticed for several months past a reckless disregard of giving credit to this journal for articles taken from it. In many of our country exchanges and in several Eastern exchanges, we have seen articles, entire, from three or four paragraphs to half a column, taken from this journal without credit, and in many cases marked "Exchange," without the name of this paper. This kind of *injustice* should be remedied. We endeavor, always, to give credit, in every instance, to others, and if by any reason an omission is made, on our part, we are always happy to correct it.

The Pacific Railroad.

In our last number we gave our readers the admirable Essay of our valued correspondent, J. B., on the Pacific Railroad. Its length precluded our giving other data which we desired. We would, however give a brief synopsis of the route that we gathered from the profile of the road.

The opening of this Railroad will give to our State many sources of wealth not yet revealed. Riches, greater, far, than the warmest enthusiast of our State could dream of. In the office of the Company, the profile of the Road, for the first *fifty miles*, points out the various localities, the materials of the soil, hill, valley and mountain, and the samples in the cabinet of the Company, show what may be anticipated in the future. The discoveries of minerals have not as yet progressed much, as the labor was only directed to the work of the road. Enough, however, has been seen to indicate the vast wealth that will be added to the capital of the Company. The mighty "Granite Quarry" on section 22, is enough, in quantity, to supply our State, to build our Capitol, and many, or all our Public Buildings. When the road shall be opened, this Granite Quarry will be to our State a "Gould and Curry" in value. This is the place for the location of a State Prison, where the labor of the "law-breakers" can break the quarry into blocks to upbuild our State. No better or finer shaded granite can be found, and the quantity is beyond calculation.

At this point, for some 4½ miles, the grade is enormous, being 104 feet rise to the mile, and from Newcastle, the 31st Section, the grade is very heavy, being about the same rate; this point, at Newcastle, is only three miles from Auburn; this is one of the hardest portions of the road to finish, yet it will be open about September. Stages will, however, carry passengers from Newcastle, in half an hour, and this road will be opened in about three weeks to Newcastle.

The Pacific route is now open, in connexion with the old Central road, to Lincoln and to Folsom, taking the up-river passengers to Lincoln, thence by the California Stage Company to Marysville in two hours less time than formerly, land passengers at Marysville at about 11 a. m., and at Folsom at half past seven a. m., ready for stage to Placerville and over the mountains.

When the road shall be opened to Auburn 31 miles, the balance of the grade up to section 38 will be about 90 feet to the mile. Section 39 and 40 is nearly level. Section 41 and 42 is only 26 to 52 feet grade. 43 to 50 is very heavy, about 105 feet to the mile; and yet with all this immense labor and heavy rise, there is no loss by a descent; what is gained is retained; and the whole elevation is less than that of the Allegheny Mountain Road; and the summit on this route when attained is higher, but no loss by descending again, and labor to recover. There is no descending till the summit is attained and the road passes down on the other side.

Some of the hardest and heaviest work is on section 48, here is a mountain of hard flint rock, that will cost $100,000 to penetrate, beyond this 48 and 49, 50 comes, the terminus of the first grand section of this road—this is above Illinoistown and Gooseberry Creek. Here is the New England Saw Mill, all ready for the upbuilding of the new towns and cities, that must eventually spring up, as the result of new enterprises.

When this road shall continue on to Donner's Lake, which is one of the garden spots of our State, splendid villas, and summer residences for our merchants, will be erected there; and this road will receive large acquisitions to its freight list, from the ice that will be brought from the lake to San Francisco.

The Central Pacific Road is now surveyed five miles beyond the big bend of the Truckee river. The Central Pacific Railroad must be a perfect success. Its location does honor to its designers, and to the engineer, T. D. Judah, whom fate took from us too early. The entire route is based, as it were, on the rib of a great backbone of the mountain where there are no breaks, or risk of breaks, by reason of river, or streams, or ravines, save only the one at Long Ravine, where there is a depression in the route. Here the road will cross over a bridge or embankment of 100 feet in hight. This is just beyond Illinoistown on the 55th section.

From the present 50-mile Division, from King's, on the Truckee river, a branch road will turn off over the mountains to the great Washoe Valley, to Virginia City, shortening the present distance to that place 30 miles.

The present wagon road keeps open the way for travel now; and when the railroad opens to Newcastle, in a few days, the stages will go over this wagon road to Garden Valley, and intersect the Henness Pass road, thence by that road to Virginia City. From Dutch Flat, the road is excellent for loaded teams It is wide, easy grade, and less than one foot rise to the rod. These are the beginnings of great events now opening up for the future.

From Donner Lake to Lake Bigler is only 18 or 20 miles, a good road up river; here too, is one of the fairy spots of our State; here too will cottage spots be selected, and it will become famous for European tourists who desire to visit our mountains of gold and silver, our beautiful lakes, our mighty forests, and Yosemite Valley.

Speedy as may be, another opening is coming on; 220 miles more and this road will open up the great Humboldt Valley, and the rich mines, timber lands, and garden spots, that will send down its treasures to our city.

We refer again to the ores found all along the present line of this road, of which samples are at the rooms of this Company, and these samples are as a drop of the riches to be revealed.

The profile of this road, and the map of all this region, and the entire route of the road, now in the office of the Company, is one of the best pieces of chirography we have ever seen, being done by one of the officers in employ of the company, a most honorable evidence of his skill.

We are glad to add that the saving of time between this city and Marysville, of some two hours, has induced the transfer of the mails from the Sacramento Valley Road to the Pacific Road; and as the work progresses other changes will be made, benefitting alike the Government and the people.

Reef the Mainsail.

The prudent and well skilled shipmaster, when his eye has carefully scanned the heavens, and as carefully consulted his barometer, steps upon the quarter-deck, and sends forth those commands that has direct and immediate influence upon the safety of his ship and cargo, and the lives of those entrusted to his keeping.

Our country, like a richly freighted ship, is tempest-tost—breakers on the starboard, breakers on the larboard, and breakers ahead. The sky is dark, but here and there the lurid lightnings flash to reveal only for a moment the dangers around. Terrible peals of thunder quake the earth, and while fear blanches the cheek of the timid, the brave and resolute are all at work; but there is mutiny! and treason is added to all the other calamities to make the peril the greater. This is the condition of our country now.

"Reef the mainsail!" cries the brave commander. "Call all hands on deck! To your posts! Steady there! Reef the mainsail! Reef the foresail! Take in the topsail! Steady there! How does she head now?"

Now is the time to prepare to meet the impending gale. The fearful extravagances of the times among the "shoddy" class, has been working a greater evil than the war itself; and if there is any patriotism or love of country left in the hearts of men, they must see the storm that threatens to strike and overwhelm us, and bring us to a more certain ruin than all the war could have done; had our people but have lived according to the rule that should have guided them in such times as the war has produced. But a love of money, pride, and self-aggrandizement, has laid the foundation for an evil fearful to contemplate, and unless there is an immediate effort put forth, and a gigantic one too, our goodly ship, however richly freighted she may be, will be like a ship under full sail—when taken aback she will *go down stern foremost.*

Read the news East, and then imagine a people involved in a war—civil war—at an expense of *two million dollars a day*, then adding to that fearful burden *twenty-five million dollars a month* of *foreign manufactures*; such reckless extravagance can never be indulged without utter ruin. The blow must come, and when it begins it will be like the *sirocco blast*; all must fall before it. Our word of warning is not only "Reef the mainsail," but take in all sail, and meet the coming storm, by scudding under bare poles.

We clip the following from the Boston Daily Advertiser. Let the reader peruse carefully these facts, and wisdom must show that there is a storm approaching, a *monetary storm*, that demands of every well-wisher to our country to prepare for:

Since the port of New York now absorbs so large a proportion of the foreign trade of the country, the course of business at that port represents fairly enough the state of the business of the whole country. The great fact meets us then, that in the month of February, 1864, the imports at New York were $21,643,937, against $12,027,846 for the same month last year, and $19,350,379 in 1860, the last year of full trade for the whole country. Only once have the imports in February ever reached the enormous figure of this year—the exception being in 1857, when in the flush which preceded a revulsion, the imports exceeded $25,000,000. And it will be remembered that these amounts, being the foreign valuation, are still *in the gold currency*, and are subject to no reduction by reason of the present monetary inflation.

The increase of imports has been heaviest for the past few weeks, as the most unobservant may have had occasion to notice. Since the 1st of July the increase over last year has been twenty millions, but of this only seven millions came in the first six months of the fiscal year, and little more than three in January, *nearly one-half of the whole increase occurring in the four weeks of February.* The feverish appearance of this movement is greatly heightened by the working of the warehousing system. The withdrawals from warehouse are not only more than double the withdrawals of last year, but exceed the entries for warehousing this year, so that in effect something more than the amount of the fresh imports is thrown upon the market, while the existence of a strong speculative excitement is proved by the heavy increase of warehousing operations. If we make the allowance for these operations, we find that *the merchandise which has actually gone into the consumption of the country at New York in the last two months, exceeds by fifteen and a quarter millions the amount for the corresponding months of 1863—and this at a gold valuation.*

We must glance at the other side of the account—the statement of the exports with which we are undertaking to pay for these immense purchases. Exports of specie are not now excessive, an enormous premium serving to check the outflow. But, on the other hand, our exports of domestic produce have fallen off. For the first six months of the year they fell behind the last year six millions; January adds three millions to the deficiency, and February four, so that from the 1st of July to the 1st of March, the exports were $115,396,413, against $128,566,178 in the corresponding months of last year—$101,981,762 in the year before. And in these figures, it must be remembered, allowance must be made to the disadvantage of the present year, for the rise of nominal price occasioned by the condition of our currency.

We need not dwell at more length upon these facts. They tell their own story with sufficient plainness. The warning is one to which, we believe, in spite of the present fever, the public in general are disposed to give heed. The Secretary of the Treasury, as it appears, is not unmindful of the dangers of the present course of affairs. It is for Congress to show whether it has the moral courage to meet the country with the stringent and perhaps harsh remedies which the case requires.

Whenever our people shall read aright the signs of the times, they will see there is *but one way* to save our country from "the abyss of ruin" now threatening her, and that is to adopt the "American system" at once, import no more silks and satins, rich shawls, and costly laces—close out our present stock—and give to our *own manufacturers* our full and complete support. Let our men wear our own homespuns, our women our own calicoes and delaines, and thus with every article of dress, and the amount saved will in a little time, not only carry on the war and complete it, but it would pay the *national debt*, and make our country free, independent, united, prosperous, and happy again.

Let the word go forth among business men now. Take in all sail and prepare to meet the coming storm.

Food for Starving Stock.

In the early spring we repeatedly urged upon our farmers, stockraisers, and dairymen, the very great importance, nay, the necessity of their raising the articles of sugar-beet, carrot, sorghum, or sugar-cane for their stock. We urged this on account of the threatened drought. *One single acre* of sugar-beet yielding forty or fifty tons, would be equal to a large field of hay or grain; and if the hay or grain failed they could fall back on the root crops.

How many availed themselves of these hints we know not, this *we do know*, that whoever planted such root crops as they should have done, can now look with complacency on the dry weather, and know their stock is provided for. This crop, well put in, would not have suffered by the general drought.

It is very surprising, that after the many years' experience of drought, flood, and losses, our cultivators will not learn wisdom. Thousands of our fine dairy stock must suffer and die, and the owners be subjected to heavy losses, that a few dollars expended in planting root crops might have saved.

A Good Flock of Sheep and a Good Clip

We had the pleasure of meeting Wm. Whitney, Esq., of Lincoln, formerly a furniture merchant in our city, on California street, now a happy farmer, sheep-raiser, and wool-grower. Mr. W. was at the Levee city, sending down his wool to market.

Mr. Whitney has a fine flock of improved sheep from the best bucks on Australian ewes—Spanish and French Merino bucks. The flock contains 2600 sheep, and of this spring's lambs, 1600—4400 in all.

From the 2600 the product was 11,000 pounds of fine wool. Mr. W. informs us that his Australian wethers gave him an eight-pound clip, his ewes also eight and nine pounds each. From a splendid French Merino buck he had of Samuel Brannan, Esq., he clipped twenty-two pounds. He is now breeding from this kind. Mr. Whitney's clip is a full one. Samples of his wool was kindly given us, and can be seen at our office.

Medical Press.

This Medical Work—a valuable one—is now under the charge of Dr. Henry Gibbons and Dr. Beverly Cole, as editors. The change is a good one, giving experienced Physicians, with high social and moral characters to sustain their opinions. We give three items from No. 1, written by Dr. Gibbons, each spiced with the "vim" of the Doctor, who is almost as famous for a joke as "Uncle Abe" himself. We shall *anatomize the Valedictory* next week:

Female Doctors.—The British census of 1861 gives 13 female "Doctors," 2 female bone-setters, 17 female dentists, and 1 female astronomer. We have nearly as many females in San Francisco who style themselves "Doctors," some of whom are regular graduates of the Eastern schools. But in bone-setters, dentists and astronomers in crinoline we are entirely deficient—unless, in regard to the last, *fortune-tellers* be referred to.

State Prison for Lunatics.—The Stockton "corral" for insane patients is in a flourishing condition. It appears by the annual report of the medical superintendent that it has nearly 600 inmates, besides officers and attendants. No other institution of the kind in the world accommodates so large a population in so small a space. In a building so crowded, it is a marvel that the prevailing disorder does not become infectious, and attack the Physicians and employés. It is a disgrace to California.

Digitalis in Delirium Tremens.—Digitalis is now enjoying a fashionable run as a remedy in Delirium Tremens. It is given in very large doses, and its action is said to be prompt and successful. From a source worthy of entire credit, we learn of a case in this city, in which a large dose was administered, and the patient very speedily relieved—by death. There is nothing surprising in such a result.

Arguing from the Bible.

Colonel Warren, of the Farmer, is endeavoring to have farmers read, and be convinced from the Bible, that they have been pursuing a wrong plan in the cultivation of their farms in the past. We admit the soundness of his views, and think the tillers of the soil would be benefitted by adopting his suggestion; but at the same time we must be allowed to say, that arguments from the Bible on secular matters are rather too heavy metal for California. If the Bible was made the foundation, we think it would be an easy matter to prove from it that our State is, if not in Tophet itself, at least a very close outpost of it. No, no, Colonel, don't knock us down with the Bible; give us a chance. Wield only agricultural reports, or the like, in making thrusts at prevailing evils.

We find the above in the California Ledger. This paper in its comments alludes to an editorial in our last number, upon the "parable of the sower."

It admits the soundness of our views, and agrees to the fact that the tiller of the soil would be benefitted by adopting the principle. That was just what the parable was given for. Though intended for the spiritual man, yet will admirably apply to practical use in the natural earth.

We can only reply to the Ledger by saying that, as these parables were intended to *save* those who were in danger of ruin spiritually, so, in this case, we intended them to save the harvester from ruin.

It has always been the custom in our courts of law, in order to establish *Truth* from the highest sources, to quote such authorities as Blackstone, Story, Webster, etc. Now we adopt the same rule. We quote from the Bible, the word of God; we have always found it the highest and most reliable authority in everything relating to the cultivation of the soil, and when the Ledger *can* point out a *better* authority, or one more applicable, we will adopt it; till then, we shall give that authority, even if our neighbor, the Ledger, should get "*knocked down.*"

Lassen County.—This new county is now organized. The election takes place Monday May 9th, and there are two tickets in the field. Susanville and Jaynesville are contending for the county seat, and it will be a close and earnest contest.

Not Stolen.—The *plates* of the Government greenbacks, were not stolen, as some papers state. This is a *new dodge* of the enemy.

New Music.

Wambold's Five Songs.—Kohler sends us the following:—

Brother's Fainting at the Door;
Mother Kissed me in My Dreams;
Speak to Thy Lonely One, now;

These three are among the favorite songs of Wambold, whose superb voice so admirably articulated makes the hearer *feel* the sentiment of the songs. Lovers of fine singing should go to hear Wambold.

We also received another collection, viz:

Now Thou art Mine;
The Bridal Bells; The Leaflets;
Jesus, Savior of My Soul;
Gondolier Song; Field Flowers;
I'se G'wine to be a General, etc.

The collection of music, now at Kohler's, has never been equaled. Every "Home" can be full of music.

Grand Encampment.—The Right Worthy Grand Encampment of Patriarchs of the State of California, I. O. O. F., assembled at Odd Fellows' Hall, Sacramento, on Tuesday May 3d,—M. W. Grand Patriarch J. A. J. Bohen presiding. The report of the Grand Patriarch presents a very gratifying condition of this branch of the order. The following officers were elected and installed for the ensuing year: Most Worthy Grand Patriarch—Charles L. Thomas, of Marysville Encampment No. 6; Most Worthy Grand High Priest—Jesse Sober, of Mokelumne Hill Encampment; R. W. Grand Senior Warden—A. B. Asher, of Blue Lake Encampment, No. 8; R. W. Grand Scribe—P. Rodgers Johnson, of Golden Gate Encampment No. 1; R. W. Grand Treasurer—Philo White, of do.; R. W. Grand Junior Warden—William H. Gilman, of Marysville Encampment No. 6; R. W. Grand Representative to the Grand Lodge of the United States—M. W. Shuster, of Marysville Encampment No. 6.

Grand Speed on the Central Pacific Railroad.—In an article in our last week's issue, on the trip to Folsom, an error occurred, which materially hastened the speed of the cars on the track. By types were made to say *thirty miles in eighty minutes*, instead of *eighteen miles in thirty minutes*. Some few other errors occurred, which, by reason of haste, and our absence part of the time, could not be avoided.

Map of Humboldt District.—Messrs. Bancroft & Co., have sent us their New Map of Humboldt Mining District. A friend, to whom it would be interesting, called, and we gave it out as *seed for sowing*. might do good, and sent it out as *seed for sowing*.

Patent Rights.—Several new and valuable Patent Rights, by which pretty fortunes can be made can be seen at our office. Models always on exhibition.

Mathematics Taught in Fifteen Minutes.

Quite a scientific breeze has been created lately by the visit to our shores of Professor J. D. Andrews, of New York, who comes to give instruction in the science of mathematics in a new and speedy way, and in a perfectly comprehensive manner, and so perfectly as to enable the student to understand and comprehend his plans in the space of fifteen minutes. We are not in the position of a young student, yet having become a pupil to the professor, we can testify that he can perform all he says he will do.

Professor Andrews will make a quick trip over the State visiting the most prominent places and giving instruction. From this city, he will visit Sacramento, and thence other prominent points. We can certainly say upon the teachers of our schools and colleges, merchants and business men generally, and all classes, to make the acquaintance of Prof. Andrews, for he will open up a new world of study for them which will abolish old plans and drudgery and give them a bright light for the future. In multiplication, in computation of interest, and per centage in trade, his science is perfect, and every one who becomes a pupil will see, almost by intuition, it is admirably adapted to California. We say to all, go and see and you will soon become a pupil. He is now engaged every moment of his time, and is doing a rushing business. There are among his students many of the best calculators and business men of the city.

Agricultural Warehouse, Sacramento.—We paid a visit to the new and fine Agricultural Warehouse, recently opened on J street, Sacramento, of Treadwell & Co. This house has done business there a long time, but recently their business increased to such a degree as to demand more space and convenience for display of their goods. The main store is 75 feet deep by 40 feet wide, with a back warehouse, same width and 80 feet deep, for putting up machinery and tools, and storage, also a large cellar under all the building, and a lot adjoining of 80x100 feet, for displaying Harvesting Implements of large size. The appearance of all the business indicates a perfect, systematized plan of work. We were politely shown over the place by Mr. Williams, the agent, and was glad to see a large amount of business going on; we saw several Wood's Mowers loading on farmers' teams, and Hay-presses, Hay-rakes, etc. These are evidences of a large and prosperous business. The following Implements were selling rapidly: Large Hay-press, Wood's Mower, Kirby's Reaper, and the steel Hay-rake. Mr. Williams informed us that the sales of Harvesting Implements were three times that of last year. Treadwell & Co, appear to be doing the chief business of the place, and we can recommend Harvesters of all that region to call and see the stock ready for them.

Music for the Family.—Messrs. Woodworth, Ackerson & Co, as will be seen by their advertisement of new and improved Pianos, and their "specialte" made particularly for California, together with the new Instruments—French Harmoniums—from their own manufactory at Paris, are doing all they can for "Harmony and peace, and there is nothing like music. It is destined to quell all discord, and change the murderous spirit to love and good will to man We take pleasure in calling attention to this well known Piano Warehouse, as we should say the "Pioneer Piano Ware-rooms" of California, Mr Woodworth having been, for long, many years, the sole agent of the "Stodart Piano," as well as others of high merit.

Views of San Francisco.—The fine Panoramic Views of San Francisco which were published, and are now for sale, by Rosenfield, should be in every library. It is the only comprehensive work of the kind ever got out, and is invaluable. We are surprised that so few people know of this work. Twenty years hence it will be worth $100—go see it, and you will purchase it. It is a condensed picture of our yet to be "London of America."

Patent Hat Rack.—We invite attention to the advertisement of the new Patent Hat Rack on exhibition at our office. A good mechanic can make a rare business, some sum of money with this patent.

FIVE PERSONS KILLED BY CAVING OF A BANK.—A telegraphic dispatch to the San Francisco Call, dated Gold Hill, N. T., May 4th, says: A dreadful accident occurred in this town this evening. The town authorities had twenty-five men at work constructing a reservoir for the new Water Works at the rear of town, near the Bullion Mine. This evening, about six o'clock, an overhanging embankment caved down, there being perhaps fifty tons in weight, and twelve feet in height, and buried nine of the workmen. They were extricated as soon as possible. Five were horribly bruised and mangled; two were dead, and three more have since died. The names of the dead are Nicholas Heatbon, John Robertson, Nicholas Murphy, P. Ford and Thomas Ryan. The other four were not seriously hurt, and are doing well.

SLIGHTLY NERVOUS.—The Stockton Independent seems to be merry-making over some affair at Point Lobos, or on the way, at target-shooting, in which he rings in the FARMER. We simply beg the Independent to be sure his *Armor* is of the right kind, and safe, else they may turn to "Clays" again, if they shoot this way. We are not on the shoot ourselves; but the typo to whom they allude in our office, if he is as good at hitting the mark as he is at the types, the Independent had better be on their guard. We were not aware before that we had any shooting man a writer in our office, as the person alluded to as a writer in the FARMER, is a typo only, but can write—if challenged.

THE MECHANICS' FAIR.—The Circular of the Mechanics' Institute, with their programe, and rules and regulations for the Fair is before us. We gladly herald to our whole State, that the Fair of the year will be held in San Francisco this year, commencing Aug. 30th, and lasting as long as it is acceptable. We were in hopes that the Mechanics' Institute would see and feel the importance of giving premiums only to California industry If this is done, the Hall will be filled with the industry of *our own people*, if not, many will *not* exhibit. We shall further speak on this subject.

THE DROUGHT.—We call especial attention to the grain reports in this week's issue, in relation to the present condition of crops; and, although we do not think there is any cause of alarm, or the fear of famine prices, it is well to understand the true condition of the State. There is food enough, and to spare. Oregon can give us of her abundance; and one word of alarm to Chile, and cargoes come to us. Many portions of our State now feel the drought severely, but this state of things will lead to a better cultivation hereafter, and the drought will do good.

STIR THE EARTH.—Keep the earth moving in all the orchards, vineyards, and garden-spots. This will produce moisture. Stir the earth, and keep it stirring! *Rain is coming!*

A Correspondent Wanted.

A YOUNG GENTLEMAN WHO RESIDES at the Eastern extremity of the United States would like, for the novelty of it, to open a correspondence with an intelligent young lady in the Golden State. Any person so inclined will please address

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 22, 1863.

JACOB ZECH, ESQ:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPFGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument—J. ZECH.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

SACRAMENTO October 6th, 1863. 13-3m

Situation Wanted as Superintendent of Farm.

A GENTLEMAN, every way qualified for the superintendence of a large Farm, who is now in the Eastern States, wishes a permanent situation. He is a man of family, and every way qualified for such a place. Any one wishing a No. 1 Superintendent, within a little time, can secure a valuable man for such a place by addressing the Editor of the Farmer.

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle-grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H & L AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories,

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL-OIL as a basis o their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusio n, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural resin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest until, at the present time, they have established a manufactory of Resin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply The subscribers are now receiving native resin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

HUCKS & LAMBERT,
Manufacturing Chemists,
21-3 Natoma and Minna streets, San Francisco.

A Fine, House, Orchard and Vineyard

NEAR SACRAMENTO—FOR SALE.

A FINE HOUSE AND OUTBUILDings, and 30 acres of Land in the highest state of cultivation, with good Orchard and Vineyard, in full bearing. MAY-DAY OFFERING.

[We gladly accept the "Beautiful," offering of Koradi,—a May-Day Offering, too,—and happily associated with "the Beautiful of Earth."]

[For the California Farmer.]

THE BEAUTIFUL.

Out in search of "The Beautiful,"
One morning I took my way,
My weary heart was very sad,
My soul in mourning garments clad;
So I took my lonely way,
Out in search of "The Beautiful,"
One early morning in May.

Out in search of "The Beautiful,"
I wandered over the hills,
Glad to escape the weary strife,
That clings to the busy haunts of life;
So I wandered over the hills,
That overlook a quiet vale,
Watered by murmuring rills.

Out in search of "The Beautiful,"
I wandered all the day long;
I found it in the wild-flower's bloom,
Filling the air with their sweet perfume,
And heard it in the wild-bird's song,
The sky was bright, the earth was fair,
A balmy fragrance filled the air.

I sought and found "The Beautiful,"
Painted upon the sky,
In scarlet and purple and red and gold,
Rare beauty to me did those clouds unfold,
In colors of richest dye,
Then a spirit spoke from the mountain crest,
"Fly away to the clouds and be at rest."

Sweet voices whispered to me in the breeze,
Waking low music in the trees,
And in the fountains play;
And what did those spirit voices say,
In the evening breeze and fountain's play?
Thus they said or seemed to say,
"O there is a beauty, higher far,
Than shining sun or beaming star,
Or aught that meets the ear or eye,
In earth, or air, or sea, or sky,
This beauty we can only find,
In a peaceful and contented mind."

KORAH SYLVESTER.

MAY 1st, 1864.

LABOR.

BY FRANK SOULE.

Despise not labor! God did not despise
The handicraft which wrought this gorgeous globe;
That crowned its glories with yon jeweled skies,
And clad the earth in nature's queenly robe.

He dug the first canal, the river's bed,
Built the first fountain in the gushing spring,
Wove the first carpet for man's haughty tread,
The warp and woof of his first covering.

He made the pictures painters imitate;
The statuary's first grand model made;
Taught human intellect to re-create,
And human ingenuity its trade.

Ere great Daguerre had harnessed up the sun,
Apprenticeship at his new art to serve,
A greater Artist greater things had done,
The wondrous pictures of the Optic nerve.

There is no deed of honest labor born,
That is not God-like in the toiling limb;
How'er the lazy scoff, the brainless scorn,
God labored first, toil likens us to Him.

Ashamed of work! mechanic, with thy tools?
The tree thy ax cut from thy native sod
And turns to useful things—go tell the fools—
Was fashioned in the factory of God.

Go build your ships; go, raise your lofty dome;
Your granite temple that through time endures;
Your humble cot, or that proud pile of Rome—
His arm has toiled there in advance of yours.

He made the flowers your learned florists scan,
And crystalized the atoms of each gem;
Ennobled labor in great nature's plan,
And made it virtue's brightest diadem.

Whatever thing is worthy to be had,
Is worthy of the toil by which 'tis won;
Just as the grain with which the fields are clad,
Pays back the warming labors of the sun.

'Tis not profession that ennobles men,
'Tis not the calling that can e'er degrade;
The trowel is as worthy as the pen,
The pen is mightier than the hero's blade.

The merchant with his ledger and his wares,
The lawyer with his cases and his books,
The toiling Farmer mid his wheat or tares,
The poet by his shady streams and nooks:

The man, whate'er his work, wherever done,
If intellect and honor guide his hand,
Is peer to him who greatest state hath won,
And rich as any Rothschild of the land.

All mere distinctions based upon pretence,
Are merely laughing themes for manly hearts;
The Miner's cradle claims from men of sense,
More honor than the youngling Bonaparte's.

Let fops and fools the sons of toil deride,
On false pretensions brainless dunces live;
Let carpet heroes strut with parlor pride,
Supreme to all which indolence can give.

But be thou like them, and envy not
These fancy tomtit burlesques of mankind—
The witless snobs in idleness who rot,
Hermaphrodites 'twixt vanity and mind.

Oh, sons of toil, be proud, look up, arise
And disregard opinion's hollow test,
A false society's decrees despise—
He is most worthy who hath labored best.

The scepter is less royal than the hoe;
The sword, beneath whose rule whole nations writhe,
And curse the wearer while they fear the blow—
Is far less noble than the plow and scythe.

There's more true honor on one tan-browned hand
Rough with the honest work of busy men,
Than all the soft-skinned paths of the land,
The nice white kiddery of "upper ten."

Blow bright the forge, the sturdy anvil ring;
It sings the anthem of king Labor's courts;
And sweeter sounds the clattering hammers bring,
Than half a thousand thrummed pianofortes.

Fair are the ribbons from the rabbet plane,
As those which grace my lady's cap and cape,
Nor does the joiner's honor blush or wane
Beside the lawyer with his brief and tape.

Pride thee, Mechanic, on thy honest trade:
'Tis nobler than the Snob's much vaunted golf,
Man's soulless pride his test of worth has made,
But thine is based on that of God himself.

It is not known where he who invented the plow was born, or where he died; yet he has effected more for the happiness of the world than the whole race of heroes and conquerors, who have drenched it with tears and manured it with blood.

[For the California Farmer.]

The Future.

When we look forward into the future, how little do we see, that assures us of length of life or brighter prospects. But all uncertain do we take the step, as it were, in the dark. We make our plans as we will, we may promise ourselves that the morrow may bring some pleasing associations, but we only awaken to find our joys turned into sorrows and disappointment. But hope, bright hope, buoys us up to renew our journey, and thus we are led on step by step through changes and trials, until the final change comes, which unveils the great mystery of death to our eyes. Could we foresee the path which we must tread, who could for a moment have the courage to go? No heart would be brave enough to encounter the trials which beset them. But with ignorance of the future and hope leading her siren voice to win us onward, we trust her in child-like simplicity, and go on rejoicing, oftimes, at the very gates of destruction. How wisely has it been ordained by the Father that we should be ignorant of our future life, as it would destroy all interest or animation in our earthly existence; we should remain in apathetic indifference to existence and usefulness, but uncertainty brings hope, and hopes give life which animates us to press onward, surmounting obstacles, overcoming pain and anguish, with the consolation that the future will be brighter and our life will yet be clothed with flowers. Thus we journey on, hoping for the best, trusting in God, who has wisely hidden these things from us.

M. J. U.

[The article on "Home," in last issue, was by the same writer, the signature was accidentally omitted.]

A Mother's Love.—The work to which we refer is that which every mother, whether rich or poor, whatever the advantages or disadvantages of the circumstances may be, is required by the most sacred and rigid obligations to achieve—the assiduous cultivation in her children of the inner nature, of that which makes the good man or woman that which shall live for ever. For this she must be always at her post, with never so much as a recess from her maternal care and solicitude, toiling on, breaking up the ground, sowing the seed, training the tender plant, enriching the soil, watering, nourishing, stimulating every good and pleasant growth, until the flowers begin to bloom and the fruit to ripen. Then comes a heyday of enjoyment, of rest and comfort to the mother, in the golden autumn of her life, when, surrounded by a group of affectionate, dutiful, virtuous, and noble sons and daughters, she sits among them in beautiful repose, her face radiant in the glow of her own heart's ever burning love, and the smile of heaven as a halo of light about her head a spectacle to be admired an envied of all. But this season of comfort, this "Indian summer" of maternal life, never, never comes to those who evade their responsibilities, forsake their trust, and leave their work for others to do, for the sake of personal ease, sensuous indulgence or selfish gratification.

NAPA

COLLEGIATE INSTITUTE.

For Young Ladies and Gentlemen.

NAPA CITY, CALIFORNIA.

NAPA CITY, IN POINT OF LOCATION AND Climate, is unsurpassed in the State. It is about four hours' ride by steamboat from San Francisco, and three by stage from Benicia. There will soon be a daily boat from the former place, and there are now two daily stages from the latter. There are ext nsive accommodations for Boarders in the College Building, with large and well-ventilated sleeping apartments Teachers reside in the Building, and will have a constant oversight of the Students who are Boarders.

GOVERNMENT.

Young Ladies will receive no calls from any except Parents and Guardians. Ladies and Misses will not leave the College grounds, except in company with their Instructors. Young Men and Lads are not allowed to lounge about the Stores, Hotels, and Saloons of the village. All pupils are required to attend Church on the Sabbath Parents will choose the place of worship for their children.

MILITARY DEPARTMENT.

This Department has been opened with a view to the permanent establishment of a Military Academy on this Coast. From three to four years will be requisite to complete the course in this Department. The State has furnished us the necessary equipments for such a school. The Drills will be attended to daily.

ELECTRICITY

THE

GREAT REMEDIAL AGENT.

Electricity as a Remedial Agent has, until recently, been but little known. An Electric Battery has been a terror from childhood on because a little Battery gave a "start," and the mere letter storm filled the lightning. Now it is better understood, and is and will be the sovereign remedy for many diseases here-before considered incurable. The following series of cases and statistics, with facts and proof of the virtue of Electricity are worthy of attention. When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulations of the poisons which constitute disease. A great cry went up from the interested in the conservatory supremacy of the old system of one poison to cure another, that Electricity, as a Curative Agent, had been tried and had proved to be of but little if any value—thinking, poor ones, the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old Sages were content if they cured one in every five patients there were three who were dying into the science of Electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the Improved Instruments of Dr. J. H. Josselyn, Resident Physician at the Electropathic Institute, 645 Washington street, San Francisco. It is astonishing to see the number of patients and severity of diseases that have been relieved by the Electropathic System. From early morn till late at night, his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services.

The charges, too, are not so heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed is Rheumatism; none has given the honorable practitioner more trouble to relieve, and no one has pretended to cure it (we except known empirics) permanently. But this subtle disease gives way before the Electropathic System in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of a relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

We allude to that kind of disease paraded by quacks in the journals of the day, a trouble which was never cured by medicine, only a little strength imparted by the use of tonics. The poor victim is kept taking medicines and paying for them until his last dollar is gone and then, as soon as he undertakes to work to obtain more funds, the trouble comes back in all its loathsomeness. To this disease Electropathy is peculiarly applicable, its action being upon the spermatic nerve, strengthening the secretory organs, and at the same time, creating an equilibrium in the system, thereby preventing an elapse.

We dwell upon this disease because it is the bane of the youth of California, and one about which there has been more deception used than all others put together. It is not necessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present very few instruments in the world that can be depended upon. A good instrument costs very dearly, and cannot be purchased unless ordered, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only Instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous imposters in the bathing line. The pure Magnetic Bath is one of the most effective aids in the removal of disease from the system, but if given at the wrong time is likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this Bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unreasonably administered, and if not necessary, advise the requisite remedy.

To Females,

the Directors would say, Electropathy is particularly applicable to your delicate and fragile systems, and to the numerous troublesome and painful diseases to which you are liable. Should you be irregular, a few treatments will restore the functions to the proper state without pain or inconvenience. Should you be weak and enfeebled, either general or local, this system imparts strength and vitality, making the recipient feel buoyant and youthful, where before they were languid and unable to enjoy the pleasures of life. One great blessing connected with Electropathy is, it purifies the system so thoroughly that it beautifies the complexion, making the coarse and freckled skin as pure and fair as possible, giving the pale a fresh and healthful look.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a derangement of the nervous system, have been permanently cured by this system. The Directors, in issuing this pamphlet do it in the hope that it may be the means of awakening the public, who have not studied into such things, to a sense of their danger, and if possible prevent those who have the care of a rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse the origin. Also, that there is need of remedial agents may know where they can find them without resorting to taking the thousand and one poisonous nostrums that are continually palmed off as sovereign panacea for all the ills of humanity. Avoid them all, they are snares set to rob you, and to your bodily injury at the same time. The following is a list of the cases which have been successfully treated by the *Electropathic System*, at the Institute, during the first four years of its establishment. The record is good, and challenges admiration of the world:

Name of Disease.	No.
Rheumatism	1560
Neuralgia	1492
Dyspepsia	1407
General Debility	1410
Fever and Ague	1262
Dumb Ague	1210
Bronchial Affections	1198
Asthma	1049
Female Irregularities	1023
Mercurial	938
Scrofula—long standing	922
Paralysis	890
Disease of the Eye	872
Catarrh in the head	705
Catarrh in the lungs	698
Liver complaints	600
Incipient Consumption	582
Panama Fever	563
Deafness—total and partial	180
Mental Derangement	474
All other—and among which is almost every nameable disease	2 166
Total	21,373

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudice of the public gave them to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the splendid world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit. Let them go, they will not be missed.

Persons seeking remedial assistance, may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface, by its energy, while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon mercurial diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity forces itself out of the body. This result has been arrived at by testing the water after an Electro Magnetic Bath. After such tests have been found in the water the patients not troubled any more with those pains peculiar to the diseases. In all other cases it forces to the surface and is washed off by the bath. The whole system in its application is a mystery, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure all the time. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES.

San Francisco, April 18, 1860.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute and that he has cured me. My disease was rheumatism, accompanied with chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco—ss.
Subscribed and sworn to before me, this eighteenth day of April, A. D., 1860. P. BARRY, Notary Public.

The undersigned takes this method of acknowledging publicly the benefits he received from the treatment applied to him at the Electropathic Institute, while suffering under a terrible infliction:

This is to certify that I have been under Electropathic treatment at the Electropathic Institute, 645 Washington street. When I applied to Dr. Josselyn I was cramped up with rheumatism, and also had the coast ague. So bad was I that, without relief, I don't think I could have lived more than one week. The Doctor, with his instrument, relieved me the first treatment from all pain, and perfectly cured me of all disease in twenty treatments, without the use of medicines. I cordially recommend all afflicted to patronize this Institute, for it is truly a blessing to the afflicted, and the operation is very pleasant. I wish to thus publicly thank Dr. Josselyn for his care and sympathy.

JOSEPH SEGER, of Bolinas Bay.

September 19, 1860.
State of California, City and County of San Francisco—ss.
Subscribed and sworn to before me, this 19th day of Sept., A. D. 1860. P. BARRY, Notary Public.

SACRAMENTO, Oct. 10, 1860.

DR. JOSSELYN—Dear and Honored Sir: You requested me to let you know how I feel after being at home three weeks. Well, sir, I have been here a little over two weeks and there is no return of that very unpleasant trouble. My sleep is sound, and there is no disturbance of the regular laws of nature. I feel as strong as I ever did before bad habits had weakened my system. Not only is the general debility entirely disappeared, but the local trouble has gone. I feel so strong that there is no fear of its return. Considering that you only took one month to cure a disorder of seven years standing, I think your system almost miraculous. Accept my sincere thanks, and publish this if you please. I have sworn to it, as you will see. C. BOWMAN.

State of California, County of Sacramento—ss.
Subscribed and sworn to before me, this tenth day of Oct., A. D., 1860. CHAS. HART, Notary Public.

HORNITAS, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it; and Mercurial pains as you state them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you would cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can, by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON Jr.

To J. H. Josselyn, M. D., Resident Physician, at the Electropathic Institute

NEVADA, Nov. 8, 1860.

DEAR DOCTOR: Pursuant to agreement, upon my arrival, I sit down to pen you a few lines in acknowledgement of the great service you have rendered me, in relieving me of that painful case of neuralgia and rheumatism. When I look back and see the gallons of medicines I have swallowed to no purpose, and then to think how soon you cured me, I am astonished. You were only twelve days performing a cure of the trouble, for which I had taken medicine over six months. Dear Doctor, if you could see the wonder exhibited by my friends, who can hardly believe that a cure was performed without medicines, but here I have been cured, and I have not taken a drop of medicine from you, nor from any one else, while being treated by your splendid Instrument I shall try to show my gratitude by sending every sick man I come across to you. Yours, till death,

FRANC'S GARLAND.

To J. H. Josselyn, M. D., Resident Physician, Electropathic Institute.
State of California, County of Nevada—ss.
Subscribed and sworn to before me, this eighth day of Nov., A. D., 1860.

F. SPAULDING, Notary Public.

YREKA, Nov. 10th, 1860.

DR. JOSSELYN—Dear Sir: Your letter, dated October 16th, is before me. You wish to know how my bronchial troubles are. Now, Doctor, that looks a great deal like a joke. I once had such an affection of several years' standing, but thanks to your natural mode of treating disease, it has gone to be numbered with the things of the past. Since my return I have not felt the slightest trouble from it. When you pronounced me well I did not expect to ever hear from it again. Any one who sits under treatment of that *Improved Instrument* of yours will have the same feelings. It imparts vitality to the system so rapidly that confidence is at once established. I have to thank you that you did not refuse to treat me because I could not pay you the whole of your reasonable charge; inclosed is the balance due you, and God bless you for the kind treatment I received at your hands.

Yours, ever grateful, WM. GARDNER.

State of California, County of Siskiyou—ss.
Subscribed and sworn to before me, this tenth day of Nov., A. D., 1860.

B. F. WELLITS, Notary Public.

This is to certify that I, the undersigned, was troubled with dumb ague accompanied with rheumatism, very badly. My disease was taken in Washoe. After having exhausted medicines without benefit, I applied to Dr. Josselyn, at the Electropathic Institute, on the first day of November. After taking twenty treatments with his Improved Electropathic Instrument I am perfectly cured, having been entirely relieved of all pain or inconvenience. I feel as strong as I ever did when in the best of health. I cheerfully recommend all afflicted to his care, as being the best physician I ever became acquainted with. One great advantage, he uses no medicines, but cures by a process which is perfectly natural. The time occupied in my case was thirteen days.

D. O. HARRA.

November 14th, 1860.
State of California, City and County of San Francisco—ss.
Personally appeared before me, D. O. Harra, and subscribed and sworn to the above certificate, on this fourteenth day of November, A. D., 1860. P. BARRY, Notary Public.

SAN FRANCISCO, Aug. 3d, 1861.

To the Directors and Resident Physician of the Electropathic Institute.

SIRS: You requested of me a certificate of the cure you performed in my case. Below I append it:

This is to certify that I was troubled with a swelling which commenced in my ankles, and gradually extended upward until it effected my whole body. I sought the best medical aid in New York and Boston, and they all pronounced it dropsy. Hoping to retrieve my health, I visited California in February last. I consulted the Resident Physician at the Electropathic Institute; and now, after five months of treatment, and waiting to see its effects, I am pronounced well by competent judges. It did not take but three months of treatment to cure me, but I waited to see that it did not return. I feel perfectly assured from what I saw while under treatment that Electricity as applied at the Institute will cure any disease to which the human family is liable.

Now, gentlemen, you can make what use you please of this certificate. With my thanks to the Resident Physician for his kind attention, I subscribe myself,

Your thankful patient,
MRS. C. A. CARLTON.

Opinions of the Press.

The advantages of electricity as a remedial agent, are universally admitted by the medical and scientific world. It requires, however, experienced skill to apply this remedy efficiently, and this skill of application is possessed in an eminent degree by Dr. J. H. Josselyn, of the San Francisco Electropathic Institute. Particulars of his method of practice can be obtained by reference to his advertisement in another column. The Doctor is well known to us as a scientific gentleman, and an ardent devotee to his profession. He is no pretender, but has conferred incalculable benefit on those who were so fortunate as to seek relief at his hands. For those who desire speedy and permanent relief from the rheumatic pains, so prevalent in this region, we can recommend no surer remedy, than a visit to Dr. Josselyn at his rooms in San Francisco, No. 645 Washington street.—[Placerville Republican.

ARE YOU SICK?—We wish to say a word to those that are sick. We have in this city an institution known as the Electropathic Institute, situated at 645 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician who has no superior in the city. He has been in charge of the Electropathic Institute for several years, and has been uniformly successful in his treatment of the numerous patients that have placed themselves under his charge. The Electric treatment will cure many diseases that cannot be reached by any other mode. Dr. Josselyn gives his personal attention to all of his patients, and is always ready to give advice to those that may call upon him. His charges are very moderate, and we cannot do the sick a greater favor than to recommend them to call on him before placing themselves in charge of another.—[San Francisco Daily Journal.

We call the attention of our readers to the advertisement of Dr. Josselyn's Electropathic Institute. Voluntary and unsolicited we make the following statement, proving its beneficent effects, particularly in rheumatic cases. Some months since we were on an editorial trip, visiting the mountains. The stage-coach upset, and landed all the passengers, including the writer, below in the valley, where the Deer Creek overflowed by receiving the additional material, extraneous to its usual contents. For some hours exposed in our wet clothes, to night wind and weather, we soon felt the effects of the accident in the mountains—pains in the back, hip, and legs; so much so, that for weeks we hardly could walk. Treatments of all kinds were applied but without avail, until our attention was called to the Electro-galvanic Baths and appliances of the above institute. Thank God, after two weeks we have been fully restored, and enjoy now the free use of our limbs and body, as fully as previous to the involuntary bath in Deer Creek.—[Dr. H. Dirx, Ed.—True Pacific Messenger.

ELECTROPATHY.—Electricity has long been classed among the most effective medical agents. It possesses great advantages over the systems of therapeutics heretofore relied upon, as it reaches more certainly the seat of disease, especially in nervous or rheumatic complaints. The Electropathic Institute, No. 645 Washington street, under the charge of its able Resident Physician, Dr. J. H. Josselyn, has attained a well-merited celebrity for the many cases which have resulted favorably from the skillful application of this invaluable remedy.—[Daily Morning Star.

A GOOD INSTITUTION FOR THE SICK.—One of the very best places in the city for the care of the sick is at the Electropathic Institute, 645 Washington street. The establishment is under the charge of Dr J H Josselyn, a physician of great experience, and no one can do the sick no greater favor than to recommend them to give the Electropathic Institute a trial.—[Weekly Journal. 13

Encourage HOME MANUFACTURE!

IT MUST BE GRATIFYING TO ALL CALIFORNIANS to observe the steady increase of Home Manufacture. Then let the motto of all be "ENCOURAGE BY YOUR PATRONAGE," and the time will soon come when we will be able to supply all our own wants, and the wants of the Pacific Coast.

NEW AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparce, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 5-3m

San Francisco, Mar. 4, 1864.

Wood's Prize Mower!

AS NOW IMPROVED AND STRENGTHENED, and adapted to the Pacific Coast, will beat all other Mowers in use, and has so been awarded at all Exhibitions in the world.

CHEAPEST AND BEST Mower in Market.

Literary Shrubbery.

A HOME IN THE HEART.

"Oh! ask not a home in the mansions of pride,
Where marble shines out in the pillars and walls;
Though the roof be of gold it is brilliantly cold,
And joy may not be found in its torch-lighted halls;
But seek for a bosom all honest and true,
Where love once awakened will never depart;
Turn, turn to that breast like the dove to its nest,
And you'll find there's no home like a home in the heart.

"Oh! link but one spirit that is warmly sincere,
That will brighten your pleasure and solace your care;
Find a soul you may trust as the kind and the just,
And be sure the wide world holds no treasure so rare.
Then the frowns of misfortune may shadow our lot,
The check-scaring tear-drops of sorrow may start,
But a star never dim sheds a halo for him,
Who can turn for repose to a home in the heart."

A gentlemen at a dinner party stated that he had been on board one of our new men-of-war, and had seen the largest "bird" that ever was heard of. After fully exciting their curiosity, and eagle, condor, albatross, etc, having been guessed at, he informed them it was a "300-pound *Parrott*."

Rather unexpected was the reply of the urchin, who, on being arraigned for playing marbles on Sunday, and sternly asked, "do you know where those little boys go who play marbles on Sunday?" replied innocently, "Yes, some of them goes down by the side of the river."

"What is the difference between a legal document and a cat." "One has pauses at the end of its clauses, and the other has claws-es at the end of its paws-es.

"Do you see anything ridiculous in this wig?" said a brother judge to Curran. "Nothing but the head," he replied.

Greenbacks! Greenbacks!

We receive Greenbacks for subscriptions to the California Farmer, and allow the ruling premium for Gold!

It is a well known fact to all conversant with newspaper publishers, that since the war commenced the cost of publishing a paper has very greatly increased, so much so as to stop hundreds of papers, over the United States. Yet it has been our pride not to add cost to our *subscribers*, but to relieve them although we have made sacrifices of thousands to carry out our principles, and do what we esteemed our duty to uphold the credit of our country both by precept and example. From the first we announced that we would receive Treasury Notes at par for *Subscriptions to the Farmer*. But the notes were rejected, here, as currency and many of our subscribers have, in conformity with the custom, continued to pay us in gold; yet we have never refused greenbacks at their face value when sent us by subscribers, though it has subjected us to serious loss from our being obliged (from the rejection of the currency as mentioned), to pay gold in our disbursements. At the present cost of all articles, we could not do a paying business by receiving greenbacks at par, at our present rates. But to make the thing work equally for all our subscribers, as well as conform to what we think our duty, we propose to adopt the greenback basis, and raise our subscription price to $5 a year, payable in greenbacks.

As it is evident to us now that the people of California are determined to sustain the National Government and make Treasury Notes the medium of trade, generally, we announce as follows:

The price of subscription to the CALIFORNIA FARMER, hereafter, will be $5 a year, payable in U. S. Legal Tender notes; this being a safe and easy medium of transmission, by mail; and we will allow the ruling premium when gold is tendered in payment.

We also announce, to all who are indebted to us for *Subscriptions* to the CALIFORNIA FARMER, send along your *Greenbacks*. They will come to us with the glorious impress of our country's sovereignty, and every pecuniary sacrifice we may make we cheerfully lay upon the altar of that country whose faith stands pledged in these notes and whose integrity *we dare not question*.

We make this change in the terms of our subscription *not to advance the present cost* of our journal, but rather to make it cheaper to all, for at the *present nominal* value of the notes it will cost the subscriber but $3 25.

We do hope also that all to whom we have sent bills, all who are indebted to us, will now see how easy we make it for them to pay their dues. It must be remembered also that all who owe for this paper, a bill of six month's standing should, by the terms already heretofore announced, remit us $5, and g. b.'s to that amount will be very acceptable.

We shall now have the consciousness of having taken a true step to sustain the National Currency, and we shall know who will "go and do likewise."

We do hope that the friends of a good, sound National Currency will give us their aid and cooperate by sending us their names for the FARMER.

ARTIFICIAL BONE FILLING
For Decayed Teeth,

Put in while soft, without pressure or pain. Aching Teeth, or mere Shells can be filled with it, and restored to health and usefulness, by the discoverer, DR. PEARSON (late Pearson & Crane), at his rooms No. 65½ (old No. 167) Clay Street, San Francisco.

Dr. Pearson having spent the last six years in New York, Philadelphia, Baltimore, London, and Paris, is prepared to supply at short notice, and at reasonable prices, Artificial Teeth on the most approved methods, including Vulcanite Rubber Work, rendering the Extraction of roots wholly unnecessary.

DR. PEARSON'S NERVINE

Cures the severest Tooth-ache, and serves as a temporary filling—any one can apply it by observing the directions. Price $1, sent by express.

ALL DENTAL OPERATIONS will receive the personal attention of Dr. Pearson, as he has no partner, and INTENDS having none in future. His office has been established thirteen years—being one of the oldest, if not the oldest Dental Office in the State of California.

10 JAMES PEARSON, M. D.

A Lady Teacher.

A LADY TEACHER OF EMINENT ABILITY AND qualifications, one who fully understands the great responsibility of the position, wishes a situation in some Seminary, or School, where she can have a responsible trust. The Lady has long been employed as a Teacher, and can bring the most ample testimony of ability and qualifications. A note addressed to A B L, care of Editor of Farmer, will be promptly attended to. 10

13-tf San Francisco.

California Grass Seeds.

EVERY VARIETY OF NATIVE GRASSES, the of seed which can be saved, will find a ready purchaser for the same, on application at the Farmer Office. nl2

The Markets.

Wholesale Prodnce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Tubb & Co., corner of Clay and Drumm Streets.] May 5.

Our Grain and Produce Market presents an appearance never before witnessed here. We say, never before witnessed; this we wish to apply to the period we have been engaged in it, say the last nine or ten years. There is a perfect recklessness manifest on the part of buyers. Sellers often fear they will not ask a sufficient price. The natural result is, that there often occurs a great disparity between opinions of buyers and sellers. The impression exists, and is pretty generally concurred in, that not enough for our own consumption will be produced. Exportation of the Crops of 1864 must be abandoned and we may consider ourselves fortunate if we do not have to import for our own consumption. Of Feed and Feed-Grains, there is no doubt existing we must import—the quantity on hand, and the slim prospects of a crop, warrant us in making the statement. The Prices Current annexed shows a very material advance in all kinds of Produce. *Wheat, Barley, Oats, Bran, Middlings, Corn,* and *Flour,* all have materially advanced, although present prices of Flour are not in proportion to the market rates of Wheat, consequently a further advance in Flour may be expected at no distant day. The present prices are inviting importation from Chile, which will have an injurious effect on speculation. Beans, that have long dragged and been an article of dull sale, are partaking of the general advance and now may be quoted as active and advancing.

Our Exports are as follows: Per bark Julia Ann, for Hong Kong, 738 bbls 4748 hf-sks Flour, 50 bales Hay, etc. Per bark Rival 100 hf 880 qr-sks Flour etc.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 17,820 sks, Barley 5416 sks, Corn 105 sks, Beans 130 sks Potatoes 3206 sks, Flour 6041 qr-sks, Bran 376 sks, Hay 2827 bales, Oats 318 sks, Cornmeal 516 sks, Wool 655 bales, Straw 170 bales.

Also, Coastwise: Beans 2392 sks, Oats 2905 sks, Potatoes 5934 sks, Barley 2345 sks, Wheat 537 sks, Bran 159 sks, Peas 25 sks, Wool 40 bales, Flour 200 qr-sks, Corn 261 sks.

Fruit of all kinds very scarce.

BY CONTINENTAL TELEGRAPH.

DATES TO MAY 2.

The House considered the Army Appropriation bill and after a lengthy debate agreed to the Senate amendment placing its negro soldiers on an equality with the white ones, from and after January 1st, 1864; also, in regard to uniforms, arms, equipments, camp equipage, rations, pay, etc., and providing that bounties to negroes shall not exceed $100. Mr. Schenck, from the Committee on Military Affairs, reported a bill providing, after the first of May next, that the pay of privates in arms shall be increased to $16 a month; corporals to 18; sergeants to 20; orderly sergeants to 24; and sergeant-majors to 26. Mr. Schenck moved the previous question. Mr Cox asked his colleague to withdraw the demand, so as to allow him to move an amendment that the pay of privates be $18. This was refused by Mr. Schenck, who explained that the bill restored the ration of 1861, making a saving to the Government of one dollar and 39 cents per man a month, taking away nothing essential to the soldier's comfort and subsistence and giving him supplies equal to any soldier's in the world, and twice as much as those of Jeff Davis. The bill passed unanimously.

Mr. Frank, of New York, presented a resolution of the Legislature of New York, affirming the President Lincoln's proclamation declaring the extinction of slavery, was necessary, statesmanlike, constitutional, and should be the law of the land and requesting their representatives to support the amendment to the Constitution prohibiting slavery in any State. The resolution was referred to the Judiciary Committee.

The affidavits taken by the Sub-Committee on the Conduct of the War at Fort Pillow, show conclusively that some of the negroes were buried alive. The deposition of one was taken who dug out of his own grave. There is no doubt of the fact that one or more persons were nailed through the flesh to pieces of wood, and then burned alive. Not only on the day of the surrender were such fiendish acts perpetrated, but next day in cold blood. The victims seen by the Committee were some of them pierced and cut in the face and eyes with bayonets and swords, while the other parts of their bodies were disfigured either by steel or lead.

The expedition sent from Vienna on Thursday, returned, having visited Leesburg and Upperville. At the latter place they encountered a portion of Mosby's gang, and after a sharp fight the rebels were routed, with a loss of six killed and wounded and 23 captured. Our loss was three killed and four wounded. The expedition also captured a number of horses, a large quantity of wool, tobacco, and other contraband goods.

Little Washington, N. C., was evacuated by our forces on Thursday last, the troops there being wanted elsewhere.

Five steamers were seized by order of the Government, for service, and were ordered to report at Louisville, without delay. They leave immediately in obedience to order.

All the railroads are taxed to their utmost capacity in transporting troops to the East and Chattanooga.

Annapolis letters say a flag of truce boat arrived from Richmond, with 400 prisoners held by the rebels, all of whom had to be admitted to the hospital. Their looks and words abundantly show their miserable condition, produced by starvation. Many of them are believed to be past the reach of medicine.

General Butler has stopped all exchanges for the present, and prohibits flag of truce boats from going up and down the James River.

The Home Guard was mustered in at Cincinnati in response to the Governors call for 100 days. Out of 486 companies, all but 43 reported, making about 35,000 men ready for active duty. The whole number will reach 40,000. Four Cincinnati regiments turned out nearly 3,000 strong, armed and equipped.

The Pacific Railroad bill as reported by Mr. Stevens, from the house select committee, provides that the grant of lands shall not impair any preemption, homestead, swamp land or other lawful claim or government reservation. It proposes to repeal the provision for a reservation by the government of a portion of the construction bonds. The Central Pacific Railroad Company, of California, is authorized to issue the first mortgage bonds not exceeding the amount of the government bonds, to which the lien of the United States bonds shall be subordinate. Any other road may issue one-half United States bonds and have the same precedence. It fixes the number of directors to be elected by the stockholders at 20, and the number appointed by the President at ten.

The famous trotting stallion George M. Patchen, died from rupture.

No dispatches since May 2d, when Gold was quoted at 177@178.

☞ **Holloway's Pills and Ointment.**—Erysipelas. These deservedly popular medicines have met with astonishing success in the cure of erysipelas, king's evil, ring worm, scrofulous eruptions, and all inflammatory diseases of the skin. Other preparations may afford a temporary relief, but the combined action of these remedies will by their detergent and properties effect a radical cure in the blood and system.

Sold by all Druggists, at 30c, 70c, and $1 10 per box or pot. 20-6

HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM, cor. Clay and Front streets, San Francisco, Cal

Fine House and Garden in Sacramento City

A LARGE, SPACIOUS, AND GENTEEL House and other buildings, with fine Garden, all finely located in the upper part of the city, containing a full half block—will be sold a bargain and on liberal terms of payment if applied for soon. Real estate is rapidly improving in Sacramento, and this is a rare chance. Inquire of editor Farmer. 16

Hubbard Squash.

WE HAVE RECEIVED ANOTHER SMALL INVOICE of the true "Hubbard Squash seed," from the Atlantic States.

This is the BEST Squash in the world. It is a hard shell, and the only way to cook it is to saw the shell in halves and bake in the oven, then serve on the table in the shell. The flavor of the Squash is better than the best Sweet Potato, and for pies has never had an equal.

Seed for sale at this Office.

LIFE-SIZE BUST

....OF....

Thos. Starr King.

COPIES OF THE BUST OF THE LATE REV. THOS STARR KING, by P J DEVINE, are soon to be issued to subscribers. The Bust and subscription list may be seen at Mead & Van Tassel's store, Montgomery street, or at Grant & Derine's Marble Yard, Sutter street, between Montgomery and Sansome streets. The public are invited to see the Autograph Subscription list which comprises many of Mr. King's personal friends.

Opinions of the Press.

The following criticisms are from the leading newspapers of the city:

After the many attempts at Busts of the late Thos. Starr King which have been made, it is gratifying at last to have one we can praise. It is a work of art, for expression is there as well as outline.—Bulletin

Nothing heretofore executed, either as a portrait or bust, will equal it as a work of art or valuable memento of the dead.—Alta.

It is an admirable work, and is pronounced a perfect likeness of the deceased by those most capable of judging.—Democratic Press

The friends of Mr. King, who have critically watched Mr. Devine's progress, express themselves highly satisfied with the result. It exhibits a fidelity of likeness and artistic grace that has not yet been equaled.—Golden Era.

As a work of art it is wonderful, seeming to be exact and complete in every detail to which the eye may be directed or recollection recalled.—Sunday Mercury.

We have for many years looked with interest upon the labors of the artist. In the present effort he has been completely successful.—Cal. Farmer. 13-tf

SEED, PLANTS, ETC.

THREE PREMIUMS for BEST Varieties FOREIGN GRAPES.

150,000 Grape-Roots

From imported Foreign and American Vines of my own importation, FRUIT TREES, Etc., Etc.

Having imported myself from France, Germany, Italy, and Dr. Grant of N Y., I offer for sale this season, as choice a lot of FOREIGN GRAPE ROOTS and CUTTINGS as can be had in this State, and as cheap as any reliable nurseryman will sell. All the Vines and Trees have borne fruit with me, and I guarantee everything I sell to be TRUE TO NAME, or refund the money.

AMERICAN VARIETIES GRAPE-ROOTS, 1 and 2 years old, and Cuttings:
Delaware, Diana, Concord, Iona, Union Village, Lincoln, Anna (white), Catawba, Isabella, etc.

EUROPEAN VARIETIES GRAPE ROOTS, 1 and 2 years old, and countless numbers of Cuttings:
True black, red, and white Burgundy (Pineaux), Traminer, Rolander, Madeira Winegrape, Riessling, white, red, and black Frontignan, Malaga, Parsley, Cannon-Hall and White Muscat of Alexandria, and over 100 varieties more.

ALSO:—10,000 rooted vines 2 and 3 years old, LOS ANGELES, very cheap, and any amount of Cuttings of all varieties.

Also a limited lot of
DOWNING'S EVER-BEARING MULBERRY TREES
1 year from bud, extra large;
French, German, and Swiss Prunes (Follenberg's Zwetshe).

....ALSO....

Pear, Apple, Plum, Peach, etc; Lawton Blackberries, English Gooseberries, and all kinds of Trees, and Shrubs. Cions unlimited, and cheap, of the above.

I intend to close out the Nursery Business, and sell as low as the lowest. For prices or orders, send per Wells, Fargo & Co, or mail, to

PATENT RIGHTS FOR SALE.

THE FOLLOWING PATENT RIGHTS OF NEW AND valuable inventions (of which we have models to show their value) are now offered for the States of California and Oregon, and Utah and Washington Territories.

NO. 1. THE MECHANIC'S SPIRIT LEVEL.

Patented September 13, 1859.

This implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet out. Builders will do well to examine the model.

NO. 2. IMPROVED CLOTHES REEL AND BAR.

Patented January, 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery, or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines, neat when used and ornamental when not in use.

NO. 3. A CORN CULTIVATOR.

With this implement the soil is first thoroughly plowed and deeply pulverized, and on the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

NO. 4. A MUSKETO BAR.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

NO. 5. HYDE'S PATENT POST-DRIVER.

A most excellent labor and money-saving machine, for which we offer rights.

NO. 6. SEED-SOWER.

This is a new invention, and one of great importance to all who sow grain, or any garden seeds. The working model can be seen at the Farmer's Reading-room.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

COL. WARREN, Editor Farmer.

The Drought.

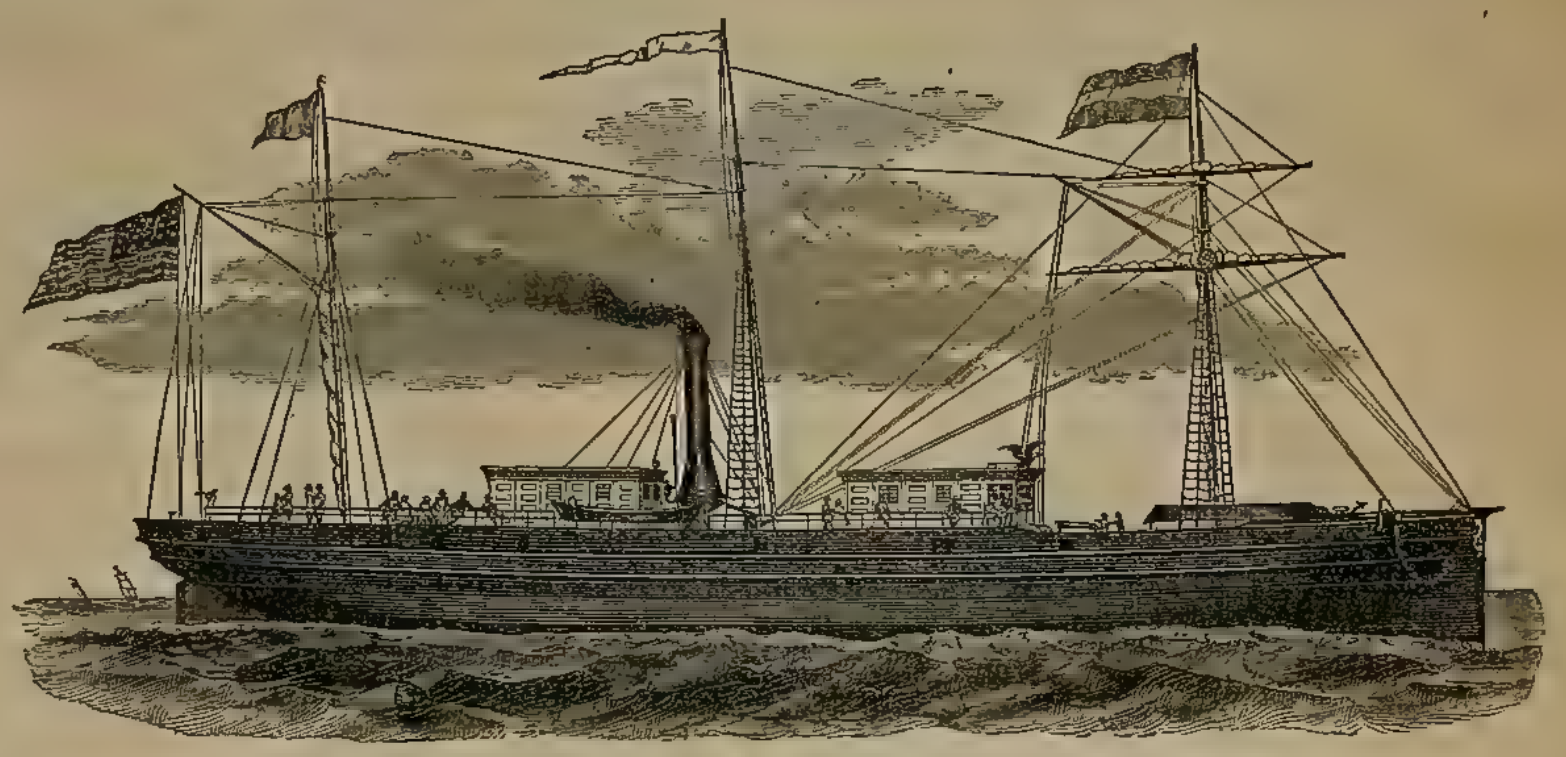
We call attention to the following facts on Vegetable Culture. Now that the drought is testing our crops, let those who are suffering look to the cause of the failure. In many products we pronounce it a want of good and careful cultivation The following, as the teachings of experience, we find in the Farmer and Gardener, and it is certain that if in the old States, where rain falls every month in the year, such practices are pursued; they are needed in this dry climate more peremptorily.

"One of the greatest faults in the cultivation of vegetables, arises from the mistaken opinion entertained by many persons, that the quantity of a crop is increased by closely sowing or planting. Nothing can be more erroneous than such a supposition. On the contrary, both in weight and quality, the crop of all vegetables to be as large as the quantity and nature of the ground sown permits, will be found to increase in proportion as sufficient space is afforded for the proper tillage of the ground during its growth, and for the admission of the requisite influence and circulation of light and air.

"The greatest impediment to success in the production of fine vegetables perhaps, is want of due attention to the proper tillage of the ground; nothing can supersede the advantages accruing from deep culture; when the plow is used the subsoil plow should follow it, and in all land, whether heavy or light, (except a subsoil of pure gravel,) will be benefited by it. When the the spade is used, the ground should be dug at least sixteen inches deep.

"It is best to sow and cultivate all crops in drills and rows, in preference to broad cast. The crop is tilled at less expense, both of time and trouble. The hoe, during the growing season, should be continually at work, and in direct proportion to the complete eradication of the weeds and to the keeping of the ground open and loose, will be the weight and quality of the crop."

When this manner of cultivation is pursued no drought can injure the crops, however hot the rays of the sun may be or however long and continuous, for, when the earth is loose and porous, the rays of the sun seem to draw up the moisture from the depths below to moisten and nourish the plant. The heat of the sun on the plant acts like a hydraulic apparatus to bring up, by the roots of the plant, the waters from below. Good drainage is of equal importance.



"The rotation of crops should be attended to. Manure should be given to crops above ground, as the cabbage, peas, the potato, (for that is not a root,) and similar vegetables. These should be followed by root crops, as carrots, parsnips, &c. with less manure.

"Those who are experienced cultivators, have no need of these suggestions but few, who are not so, will not be easily convinced of their importance, until by direct experiment they are satisfied of their value and truth."

Fruit Trees in Hedges.—Pears and various varieties of fruit are grafted into the hedges, in many provinces in France—not that the proprietor anticipates enjoying the fruit. They call them God's part (*la part de Dieu*). In the quince hedges of the Prince of Deadogne, branches to bear fruit are allowed to grow and form little trees, bearing quite an amount of fruit "which bouquets of trees," M. Laguaim assures the editor of the Revue Horticole, "hanging gracefully in the midst of the hedges, produce a beautiful effect and render the scene less arid, being at the same time elegant and productive."

Weight of a Sheep for Mutton.—The usual estimate of the gross and nett weight of sheep, is that the dead carcass will weigh one half the gross weight, and therefore, when sheep are sold at five cents a pound alive, the price is equivalent to ten cents a pound for the meat, sinking the pelt and all the offal, so that the butcher, if he should sell the carcass at cost, would have the pelt, rough fat, head, &c., for a profit.

A Gold Watch Earned.—The money saved by patronizing the People's Line will buy one of Tucker's splendid watches.

PEOPLE'S LINE OF STEAMERS.

SHALL WE HAVE IMMIGRATION?
NO. II.

This is one of the most important of all questions to the people of California. With a vast area of rich and fertile land, capable of sustaining millions of people and making those millions wealthy, with a climate which has no superior in the world, with all the natural advantages for manufacturing in every branch that human ingenuity could devise, with gold and silver bursting out of the earth at our feet—those Archimedian levers that move great enterprises—with all the other rich and valuable ores or minerals to aid man in his onward progress, with as fair valleys and hillsides as ever the poet pictured, whose fruits are touched with the tropical luxuriance for abundance and beauty, with all these blessings, we are yet without a population commensurate with our ability as a State to maintain, and for this reason manufactures and the mechanic arts are not in that condition of prosperity that we are entitled to with so many natural advantages and blessings.

In the developments of our vast mineral wealth, vast numbers of working men are wanted, and with them, *capital* to work our mines is wanted also, and there is no place in the world where there are greater openings for well directed scientific labor, or where that labor would be better rewarded than in our rich but hitherto undeveloped mines.

We want for the mines of California one million real *working men*—not the mere speculator, the man that *makes a mine on paper* and seeks his "chance to sell it"—but *real live working miners*, such as were seen at work in '49-'50, along the rivers and ravines, in those early days.

We want, too, for the development of our *water power*, another million, that we may establish manufactories of woolen, linen, iron, lead, copper, etc, and speedily as may be, cotton and silk goods, carpets, bagging for our grain, wool, etc.

We do not only want the mere day laborer and his family, but we want the men of genius and enterprise, men who can seek out, discover, plan and erect such manufactories as shall not only be a source of wealth to those who establish them, but an honor to our State.

Now, one of the great hindrances to a more rapid development of our vast mines is the *want of machinery*. There are not Foundries enough in our State to do *half the work required*, though they work night and day, and the cost of such work, oftentimes, by reason of its urgency, is twice what it might be. We want Foundries all over our State.

We want Woolen Factories to use up our own wool, so we may be clothed in our own "Home manufactures." This can be done here as well and as cheaply as at Lowell and Dover, or at Manchester, Eng. Why should we import millions of dollars' worth of carpeting, when it can be made at our doors? All we need is working men and capital, and the old States have been waiting for years to have a way opened by which this class of population could come to our shores, and not be compelled to expend their entire fortune in coming to us.

The day begins to dawn upon us. The opening of the Pacific Railroad is the "day gun" for California, for it opens the way speedily to our rich mines, in our own mountains and to those adjacent to us, so that immigrant miners may speedily reach their destined fields of labors.

The permanent establishment of the People's Line of Steamers is "daylight" that is to make glad the hearts of millions, for they can now come and bring their loved ones, and their household gods, and not be subject to the tribute money of that voracious sea-monster, Vanderbilt, whose *twenty-six millions of dollars* has been taken, a goodly portion of it, from the sun-burnt miner, and hardy worker on these shores to satisfy his "thirst for more" for bringing them hither, or permitting them to visit their early homes.

Now that a People's Line has been established and Vanderbilt held in check with his heretofore iron-grasped monopoly, where is the press of our State that formerly held him up to the public as the cause of our poverty in population? Why do they not speak out and give information to the people, and counsel them to sustain and patronize, exclusively, the People's Line? Before it was established, they boasted what should be done—our great papers talked loud then, why don't they speak now? If there is one duty paramount to all others in this matter, it is the duty of every well wisher of our State to give their influence to the People's Line.

It has generally been the case that all opposition lines have been inferior in convenience comfort, and safety, but we rejoice to say that the present Opposition Line of Steamers is equal, and in many respects superior to the old Line, and very soon will be superior in every respect.

We have said a *new day* dawns on California. The people in the *Old States* are beginning to realize that a way is opened to the "Eldorado" of the West, and the people are beginning to shout Eureka! Eureka! It is a well known fact that in all the past years of California, the Pacific Mail Steamers, under the reign of Vanderbilt have been the "reign of terror" to all who desire to come to our shores, or those who wished to visit the "Old Folks at Home;" the more anxious the people to "pass to and fro," the higher the price of passage, notwithstanding the steamer had the carrying the mails at a *high figure*, and who does not remember the refusal of Vanderbilt to take the mails at all! What did he care for the merchants and the importers of the Pacific—the "pound of flesh," the "pound of flesh," was his cry, and poor California, bled by his lancet, was fleeced by his scalpel, and although no Company could have more faithful, competent or prompt agent, this side, than Messrs. Forbes & Babcock, yet they must *carry out instructions*, whatever may by the fate of the traveler. There was no competition and *the price*, "*the price*," was fixed according to the will of the giant Vanderbilt, the great Sea Shark, as he was called by some. But now a way is opened; California can have justice done to her; the people of other States will come and bring their wealth with them. All that is now wanted *to secure a complete triumph and a permanency* to a line of the very best steamers is the combined action of the people and a resolute determination to sustain the People's Line in preference to all others.

With the next month comes the *new* and splendid steamer, *Golden Rule*, then we shall have *two steamers a month, regularly*, and first class steamers too; these two noble steamers, by their very names, are significant of success. The "Golden Rule" and "America," the first bringing hither the laborers for the Garden of the World, the Granary of the World, the Vineyard of the World and the Workshop of the World, and the latter to bear hence the gold and silver, the hides, wool, wine, and rich ores, of which our lands abound. The steamer America has already won the favor of the public and golden opinions, too, of those who have crossed and re-crossed in this cradle of the deep.

The "Golden Rule" will surely be here in the Month of Roses, fair June, we shall hail her and welcome her to us as she comes cutting the foaming waters that wreath her brow when she enters the Golden Gate, and kisses the waters of the fairest bay in the world. That our people may know what a splendid steamer is soon to be with us, we give the dimensions of the Golden Rule, as furnished to a New York correspondent of the Ledger:

The length is 310 feet; breadth 44 feet; depth 23 feet; her frame work is solid and of best materials, her capacity 3,500 tuns. For beauty of form, for grace in appearance, as she sets on the ocean "a very thing of life," she has no superior. The Golden Rule has been built with direct reference to strength as a safe Ocean Steamer, for spaciousness and elegance, so as to give real comfort and plenty of fresh air—a material element in an ocean trip. She has been finished in her cabins, state rooms and saloons more with reference to solid elegance and durability than fanciful taste. That the public may know that she is a noble ship it is only necessary to say she was built by Henry Steers, the celebrated ship-builder; the iron-work, engines, boiler, etc., from the Morgan Iron Works; engines, style-beam, 81 inch cylinder, 12 foot stroke; *two* boilers, double furnace, patent surface condenser. This noble steamer, when complete, will cost over *half a million of dollars*. The work is under the entire supervision of E. N. Dickerson, Esq., and when this steamer shall grace the waters of the Pacific, she will not only be the Pride of the Bay of San Francisco, but esteemed the finest steamer that ever entered the harbor.

We ask now of the People of California, will you sustain a Line of Steamers like these; will you now do all you can to scatter news abroad that we have a People's Line, and that immigrants can come, bringing their families with them—a family of half a dozen almost as cheap as *one* person could come a few years since? Will you, the people, use your influence with those who *go East* to give this line your favors? Will you, *wool-growers*, wine-growers, ore-shippers, hide and tallow shippers, send your produce by this Line and thus sustain and build up a line that has done so much for the good of California.

Who does not know that now every effort is made and making to crush the Opposition Line, and thus defeat the People's interest. Can any one for a moment hesitate as to duty in this respect?

For many years past the Vanderbilt Line, as a monopoly, have drawn from our people, from $250 to $275 for a cabin passage to New York, and other parts of the ship in proportion; this was almost like an embargo. None but the wealthy could go without sacrifice. Now by the aid of the New Line, our people can go and come at less than half the former prices, while the State is reaping the advantage of an increased population, and of the good and true men, women and children. When we conceive the business that must be transacted by our ocean steamers, when a fair competition is had, and freight made reasonable, as it will be if the people sustain the People's Line by their business, then California will take the proper rank among the States of the Union. Let us refer to the condition of the trade in wool and grain, in 1857, as compared with 1863-'4, only 6 years since. Then the Eastern shipment of Wool from California was 55 bales of poor wool. The clip of this year will approximate to *ten thousand bales*. In 1857, fifty thousand barrels of flour was imported into California; in 1863 the crop of grain would load more than one hundred clipper ships, of the largest class. Thus we progress. Do we not want good steamers?

What would be the result, should this line be withdrawn? Passage fees would not only double but treble; all the past loss from *high fares* would be recovered by exhorbitant rates. It is evident that Vanderbilt, the mighty Vanderbilt will leave no effort untried to break up, destroy and overpower the People's Line! We ask, will the people stand by their own interests and gloriously triumph, or will they see their worst enemy prevail?

It is presumed that every body reads the Bulletin. The letter of Frank Pixley, on his recent trip, was a light to them of which line is the best for the traveler; take the records of the last trip of the Illinois, as she arrived at Panama, in the evening; instead of turning the passengers off, on shore, to provide for themselves, the Captain ordered a fine dinner prepared for *all the passengers*, including steerage, etc., and then furnished them a Band of Music and an Evening's Entertainment and lodgings, and did all he could to have them happy till the morning's train was ready, and then sent them on their way rejoicing. This was the plan of the People's Line, under the ownership of Marshal O. Roberts, Esq., the father of our efficient director this side.

How was it with the passengers of the Old Line. They were compelled to go on shore bag and baggage, and find quarters where best they may. Many women and children—strangers in a strange land. Now which of these two Lines was the "People's Friend."

This line, on the New-York side, is called the M.-O.-Roberts Line, and by this late act on the part of the Company we shall call it the Golden-Rule Line. We have from our correspondent in New York this admirable fact: This new steamer was named, when launched, the Retribution, the name has been happily changed to the Golden Rule, and it was by the wish and plan, personally, of the noble owner this was done, as he and his company resolved that all who travel on this Line shall find that the "golden rule" will be the motto of the owners, and all who travel on it will be better and stronger friends of the Line when they come to their journey's end than when they began. The owners, captains, officers, stewards, etc, aboard, and the agents everywhere, will make it an axiom in their plans. With these views and plans, and with this noble Line of Steamers to help the People WE SHALL HAVE IMMIGRATION.

The people will come to us by tens of thousands, and those that leave us for a season go but to bring more back again. Let us, then, look more hopefully to the future. Vanderbilt, in years past, laughed at the people and mocked at their sufferings. Then, the people were few and powerless, now, we can say to him, the day of "Retribution" has come. But the new Line, instead of pursuing a suicidal, revengeful policy, as others have done, hoists the People's flag, and on its pure folds have inscribed in golden words the "Golden Rule." Guided by its principles and precepts, the people will become the retributive power and the rewarding power. To them and their influence the appeal is made, and it will not be made in vain, for they now say to the tyrant of the sea in the language of Pierpont:

> "The thousands that last year you scorned,
> Are millions now, be warned, be warned!"

They feel, too, that

> "The keen spirit
> Seizes the prompt occasion,—make the thoughts
> Start into instant action, and at once
> Plans and performs, resolves and executes!"

Thus will come the triumph through this Line to the immigrant and our State.

The Blessed Rains.—In our last we said the rains were coming. Such was our faith. The rains have come, and blessed the earth in many places, and we shall have more still.

Edward Everett.

[The annexed noble tribute to a noble man, one of the most eloquent men living, we find in the "Wabash Magazine," by T. H. Risdine, which we take pleasure in publishing. It will be read with interest by thousands.]

In this number we present the readers of the Magazine with a portrait of our distinguished countryman, Edward Everett, the scholar, the statesman, and the prince of orators. Being still before the people, and acting a devoted part in the trying scenes of the present, we deem it a fitting time to speak a word of his eminent virtues and exalted worth. Few men have occupied the proud eminence which he has enjoyed from youth to ripe old age. Over half a century has borne witness to those noble qualities which have displayed so forcibly their strength and structure in every sphere of their employ. In the political arena he has been a prominent actor. When the country sought his able counsel in solving the enigmas which so often embarrass statesmanship, he ever met the call and did all well, leaving the records of a nation emblazoned with noble acts, nobly done.

A graceful bearing, with his scholarly attainments, make him the bright star of every circle, whether at home or abroad, in the Senate Chamber or at the Court of St. James. His countrymen are not slow to honor a public benefactor, and Everett in his native land has ever received the plaudits of a grateful people; while in foreign lands he has been the ornament of that country which has ever delighted to call him her favorite son. But neither literature, politics nor diplomacy, was the master idea of his life. It is in the brilliant gift of oratory, where thought takes its loftiest flight, bearing the mystic influence of its power over a multitude, that the genius of the man is most plainly visible. It is in this that he has ever sought the crown and consummation of a glorious and immortal career.

Edward Everett was born in Dorchester, Massachusetts, April 11th, 1794. He came of an humble, though honorable line. His ancestors were of known integrity and solid worth. Their virtues were his pride, as his words evinced when he said in one of his grandest displays, "I am proud of my descent. My forefathers left nothing to their descendants, of either fame or fortune, but a good name." A good name. This was his inheritance, and it is, according to the inspired and uninspired writers, the worthiest ever bequeathed. Frequently in after years, in those noblest moments of his being, when that voice seemed a voice inspired, he would recur to childhood's home, and ever spoke of his native place, of his "honored father," with a tender, touching pathos. From an early age he enjoyed the instructions of the common schools, even then widespread in the Bay State, and says of his first attendance, "I was of the valliant age of three years." The source of that youthful training was never forgotten. The common schools have ever been the subject of his ablest eulogy, and always found in him a kind advocate, a willing patron, and a generous friend. When a boy, politeness was his prominent trait, indicating a career of noble manliness, whether in a lowly sphere, or on the topmost current of popular regard. With him it was a part of the molding, which formed the graceful figure and almost faultless man. Then, also, at that youthful period, the love of oratory imprinted itself deeply upon this germ of genius, to unfold with years. And that lisping voice was gaining strength in discipline, unconscious that it would in time command the listening ear of multitudes. Thus in infancy was nurtured that gift which was to shine in resplendent beauty through maturer life. At an early age he entered Harvard College, youngest of his class. Here he pursued his studies with commendable zeal, and graduated at seventeen. Harvard had thus nurtured and brought up one destined to be a star of the first magnitude, a bright and shining light in that institution—first as its tutor, then its Professor, and lastly its President. The law was the profession of his choice, but yielding to the wishes of friends, he studied for the ministry. Though but nineteen when entering upon the duties of this vocation, he met with signal success, and early ranked with the eloquent divines, winning a reputation and the marked favor of all as a minister of Christ. Once in the National Capital, this eloquent man of God spoke in his might the truths of the Bible, and made the nation's greatest statesman bow and weep. His popularity as a pulpit orator was universal.

Everett was a thorough student and a lover of classical study. The wish to move among those scenes of ancient splendor, pictured on his classic mind, constantly increased, and to satisfy this desire and perfect his scholarly attainments, he left America in his twenty-first year to travel in foreign lands. He visited the most noted universities of the Old World, and followed the pursuit of literary acquisition through all the ample field which Europe offers the ardent scholar, ever seeking some new treasure for his store-house of knowledge. For five years he searched and studied the tomes of learning which centuries have amassed, and then returned to give his native land the worth of a peerless mind, and add a brilliant character to her literary name. The North American Review became under his guidance a national periodical, and for years found its main support in his able pen. Foreign travel made him familiar with affairs abroad, and conversant with measures best adapted to the early growth of the young Republic. Through this medium he wielded immense influence in the leading departments of the nation, giving tone and sentiment to public opinion, and thereby directing "literature, history, public policy and foreign relations," into spheres commensurate with his elevated ideas.

It was, however, the eloquence of Edward Everett that placed him on that eminence, and made him an idol of the American people. The Phi Beta Kappa oration, that mighty effort of a mighty mind, gave him at the age of thirty an established reputation. It was a time for such grand marshaling of words. Then, if ever, then was eloquence in "the subject and the occasion." It was the return of Lafayette. All were rejoicing to see this venerable man, and New England was ablaze with feeling to welcome the aged patriot. Then, in the presence of Lafayette, in the midst of that jubilant multitude, was a fitting place for the eloquent Everett to awaken his soul-stirring strains and leave the question of his power beyond dispute.

Soon after this address he was elected member to Congress. Resigning his professorship in Harvard, he immediately sought the field of his new duties—a field for which he was eminently fitted. This new employ furnished no questions too deep, no intricacies too difficult for him to solve. Very seldom has the Congress of the United States opened its doors to one who brought such depths of learning, such immense faculties, such grand powers to struggle in the support of true national interests. For ten years he continued in the arduous duties of his station, and left as a memorial of his earnest labors the public record.

Everett displayed in his congressional career the politician as that character should ever be—a noble, high-minded man. He constantly bore himself with quiet dignity, allowing nothing to draw him one iota from the line of duty and of right.

This course of office has made him the pride of his State, and gave him universally a name which friends loved and enimies respected. And it is an acknowledged fact that no politician has ever escaped the abuse of "passionate partisans," as has Edward Everett.

No sooner had his seat in the House been vacated, than the voice of his State called him to fill the chair of that Commonwealth. For three successive terms the popular suffrages reinstated him Governor of Massachusetts. In this capacity his giant energy found constant employ. His every aim was the good of humanity. As a man of letters, he well knew that the safety, welfare and chief interests of society were best secured by human culture, and his philanthropic labors placed education at the threshold of every family in the Commonwealth. He gave an impulse to industry, which has made that State famous for its massive resources, and an impetus to the commercial, agricultural, and educational interests of the Bay State, which leaves her with scarcely a rival in the Union. At the termination of his official career, he is called to another position of weighty responsibility. It was to be his country's representative at the most important court of Europe. Few ever occupied this sphere, and moved among the cultivated gentry of the English Court with the manly graces of Everett. It was a time when a group of brilliant statesmen thronged the English Parliament, yet the American Minister was not eclipsed. His refinement and gifted qualities were never dimmed in the audience of the world's greatest counsellors, but rather increased.

Questions of diplomacy, the most intricate, were met and mastered with a promptness which proved him equal to any emergency. In this character Edward Everett moved for several years before the British people, reflecting honor upon himself and the republican institutions of his loved land. Time, however, changed the order of government at home, which resulted in similar changes abroad. Thus he was permitted to return, but no sooner had he reached the shore of his native America, than the friends of Harvard gathered around and urged him to accept the Presidency, just vacated. He assented, and was soon at the head of that flourishing institution, the scene of his early struggles, honors and signal successes.

Few characters combine many virtues. Seldom can be found that beautiful combination of eminent greatness, goodness and usefulness. The subject of our discourse is such an one. A kind Providence has ever smiled upon this child of genius, because his ways are right. He has been the successful student, the model politician, the able and energetic governor, the brilliant embassador, senator and statesman. He has won a name in letters, as the first literary mind of our country, and his cultured powers have always been employed in the best service.

His ablest efforts in his favorite field, that of eloquence, all have a practical stamp. Those perfect, elaborate orations, concentrating in themselves the intrinsic worth of human knowledge, were wrought for the noblest purposes—that of exciting an aspiration and a love of letters, eulogizing illustrious men, or inspiring a veneration for republican institutions. These and kindred motives called forth the mightiest exertions of his life, and combine to make his name blessed as the generous friend of his race. Here the commonest mind improved, for the multitude were eager to hear his voice, as well as the most refined audience. To each it was a source of profit and of pleasure, because it is in oratory that he transcends every other gift. In it every avenue of his massive mind seems opened, and the rich tide of knowledge issues forth to fertilize and enrich wherever it finds entrance. His orations are lasting monuments of his fame. They each recall revolutionary renown. Bunker Hill, that glorious name, was a thrilling theme with him. Its history is fraught with joyful remembrances, and its mention kindles all the ardor of his soul into a flame whose might is irresistible. As much of the best literature of the ancients is to be found in the orations of their great men, so also the written orations of our great men hold a high place in American literature. This is not denied those of Everett's. They have had the commendation of every literary circle in this or other lands. Then as an orator he has another noticeable claim. Besides the elevated tone and merit of them all, he has pronounced *more* orations than *any* other man.

When Webster died, his friend, the bereaved Everett, in words that were scarcely ever equaled in Faneuil Hall, told Boston that her gifted son was dead. The city was bowed with grief, and the orator but gave utterance to the sorrow which was crushing the great heart of the community. It was a noble tribute to a noble man.

Upon the decease of Webster, Edward Everett was chosen to fill the vacancy in the Cabinet, as Secretary of State, and afterwards occupied a seat in the National Senate.

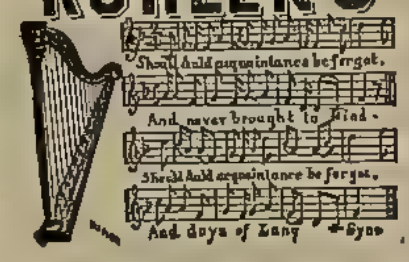
This eminent man has grown aged in his country's service, but still is lithe and active in speech or counsel, although seventy years bear upon his labor-laden frame.

When rebellion lifted its haughty front, the voice of Everett from New England rang out clearly through that ominous, awful calm which preceded civil war. It told reasonable beings everywhere the atrocity and crime of treason, and gave to the world, its present and future, an unqualified assurance of the right, the justice and necessity of sustaining, by blood and treasure, the Union of these States. Again, and we see his venerable form, and hear that gifted tongue speak the depths of a country's love over the fresh graves at Gettysburg. The battle scenes are passed, the fallen lay buried on the field of honor, and a nation gather round to do reverence to the gallant dead. Here in his old age, Edward Everett is the leading spirit of the hour, grandly, triumphantly moving that multitude with words that thrilled the great heart of the American people.

Such is a very brief outline of the character and public services of him whom every one is proud to call an American. It is a name linked with our nation's choicest memories. The literary world may claim him, yet to his country has been dedicated the golden hours of a long and vigorous life.

A noble bearing, unbiased judgment, and a devoted patriotism have characterized his labors through long years in the station of honor, which has been wholly his.

Would any or all seek a similar sphere? Then study his virtues, follow his footsteps, emulate his actions, and imitate his noble deeds; and you may move among your countrymen loved and respected in the close of a useful, illustrious and honored career.



PRESERVATION OF GUM AND STARCH PASTE.—The paste made by gum tragacanth and gum arabic, which is so extensively used by the apothecaries in this country, acquires, particularly during the warm season, a very unpleasant and even offensive odor in consequence of fermentation, which soon commences on exposure to the air. Oil of cloves, alum, and other essential oils and salts are frequently added to counteract this tendency, with but partial success, the volatile oil merely hiding to a certain degree the offensive odor developed, and retarding the fermentation incompletely. For some time past I have availed myself of the antiseptic property of creosote, which may be added to these pastes recently made, until its ordor is faintly apparent. The result is their perfect preservation, no offensive odor being disengaged, and their adhesiveness is not impaired by keeping them for months.—[John M. Maish, in American Journal of Pharmacy.

Fast Life and Swift Decay.

THE ONLY COUNTERCHECK.—The times in which we live teems with wonders. Nothing seems impossible; for the impossibilities of one year become the commonplace events of the next. Lightning presses, instantaneous communication between the most distant points, and innumerable inventions for compressing vast amounts of business into small spaces of time, and for curtailing the processes of production and manufacture, are among the marvels of this marvelous era. Under such circumstances we may truly be said to lead a "fast life." But whether the whirl and rush by which we are borne along is really conducive to our happiness is another question.

Certain it is, that the average duration of human life is decreasing in the midst of this excitement. The modern phases of disease seem to puzzle and baffle the faculty, and with two remarkable exceptions, viz, HOLLOWAY'S PILLS and HOLLOWAY'S OINTMENT, no medicines appear to make the desired impression upon internal or external disorders. These two celebrated remedies are said, however, to be accomplishing the most wonderful cures throughout the length and breadth of our land. Liver complaint and diseases of the stomach and bowels, which in a majority of cases are produced by over-exertion and over-excitement in business, yield to the Pills when all the resources of the druggist and apothecary have failed, and eruptive and scrofulous complaints seem to be equally under the control of the Ointment. We congratulate Dr. HOLLOWAY on the signal success of his great medicines in this country. From what we know of the man, we have no doubt that the profits derived from that success will afford him far less satisfaction than the knowledge of the good his remedies have effected.—[N. Y. American.

KOHLER'S

A. KOHLER,

Music Dealer, San Francisco.

LIFE-SIZE BUST

....OF....

Thos. Starr King.

COPIES OF THE BUST OF THE LATE REV. THOS STARR KING, by P. J. DEVINE, are soon to be issued to subscribers. The Bust and subscription list may be seen at Mead & Van Tassel's store, Montgomery street, or at Grant & Devine's Marble Yard, Sutter street, between Montgomery and Sansome streets. The public are invited to see the Autograph Subscription list which comprises many of Mr. King's personal friends.

Opinions of the Press.

The following criticisms are from the leading newspapers of the city:

After the many attempts at Busts of the late Thos. Starr King which have been made, it is gratifying at last to have one we can praise. It is a work of art, for expression is there as well as outline.—Bulletin.

Nothing heretofore executed, either as a portrait or bust, will equal it as a work of art or valuable memento of the dead.—Alta.

It is an admirable work, and is pronounced a perfect likeness of the deceased by those most capable of judging.—Democratic Press.

The friends of Mr King, who have critically watched Mr Devine's progress, express themselves highly satisfied with the result. It exhibits a fidelity of likeness and artistic grace that has not yet been equaled.—Golden Era.

As a work of art it is wonderful, seeming to be exact and complete in every detail to which the eye may be directed or recollection recalled.—Sunday Mercury.

We have for many years looked with interest upon the labors of the artist. In the present effort he has been completely successful.—Cal. Farmer. 13-tf

California Grass Seeds.

EVERY VARIETY OF NATIVE GRASSES, the of seed which can be saved, will find a ready purchaser for the seed, on application at the Farmer Office. n12

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 29, 1863.

JACOB ZECH, Esq.:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPFGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. ZECH.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,

CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

SACRAMENTO October 6th, 1863. 13-3m

NAPA

COLLEGIATE INSTITUTE,

For Young Ladies and Gentlemen.

NAPA CITY, CALIFORNIA.

NAPA CITY, IN POINT OF LOCATION AND Climate, is unsurpassed in the State. It is about four hours' ride by steamboat from San Francisco, and three by stage from Benicia. There will soon be a daily boat from the former place, and there are now two daily stages from the latter. There are extensive accommodations for Boarders in the College Building, with large and well-ventilated sleeping apartments. Teachers reside in the Building, and will have a constant oversight of the Students who are Boarders.

GOVERNMENT.

Young Ladies will receive no calls from any except Parents and Guardians. Ladies and Misses will not leave the College grounds, except in company with their Instructors. Young Men and Lads are not allowed to lounge about the Stores, Hotels, and Saloons of the village. All pupils are required to attend Church on the Sabbath. Parents will choose the place of worship for their children.

MILITARY DEPARTMENT.

This Department has been opened with a view to the permanent establishment of a Military Academy on this Coast. From three to four years will be requisite to complete the course in this Department. The State has furnished us the necessary equipments for such a school. The Drills will be attended to daily.

TUITION.

Spelling and Reading, per month	$2 50
Common English, with the above, per month	4 00
Higher English, with the above, per month	6 00
Latin and Greek, with the above, per month	8 00
Janitor's Fees, per month	25

EXTRAS.

Modern Languages, each, per month	$2 00
Music, with Piano, per month	6 00

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED SUCH a correspondence and business in Europe as to enable him to secure from the very best source—the most skillful growers—their choicest seeds grown, of which he will always be in receipt, and in endless variety, imported directly from France and England, from well known and responsible houses; some of the most prominent of which named in our catalogues.

It has been the experience of our best gardeners and growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be for a series of year, until more capital, experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover;	Hungarian Grass;
Kentucky Blue-grass;	Orchard Grass;
Red-top Grass;	Sainfoin Grass;
English Rye-grass,	Timothy Grass;
Red Clover;	White Dutch Clover,
Crimson Clover,	Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties)

BULBS:

LILIES,	TULIPS,	HYACINTHS,
Amaryllis,	Anemones,	Ranunculus,
Narcissus,	Tuberoses,	Peony-roots,
	Gladiolus,	Iris,

and in endless variety, imported direct from France and GERMANY.

From his long experience in the Seed Business (over thirteen years), and his very extensive stock of goods appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

Diseases of Over-Worked Men.

Time was when the very phrase, diseases of over-worked men, would have been considered foolish, and out of the question; now, it conveys a truth of natural importance, which the nation must consider From being a comparatively idle word, we have of late become an insane world on the subject of labor. So long as the muscles merely were employed, so long little harm was done; we remained men; now we aspire to be gods, and we pay the forfeit of our ambition. From overwork we now get a class of brains and all the muscles thereto appended. An electric battery works a single wire from the City to Brighton, and does its work well, and goes on for some months before it is dead or worn out. Can it do the work of a hundred wires? Oh yes, it can, but it must have more acid, must wear faster, and will ultimately die sooner. We may protect the plates, make the battery to an extent self-regenerated as the body is; but, in the main, the waste is in excess of the supply, and the wear is as certain as the day. Men of letters, men of business who do their business through other hands and do great business, and men immersed in politics, suffer much the same kind of effects from overwork. They induce in themselves, usually, when they suffer from this cause, one or other of the following maladies:—Cardiac melancholy, or broken hearted; dyspepsia, accompanied with great loss of phosphorus from the body; diabetes, consumption, paralysis local and general; apoplexy, insanity, premature old age. They also suffer more than other men from the effects of ordinary disorders. They bear pain indifferently, can tolerate no lowering measures, are left long prostrated by simple depressing maladies, and acquire in some instances a morbid sensibility which is reflected in every direction; so that briskness of action becomes irritability; and quiet, seclusion and moroseness. They dislike themselves, and feel that they must be disliked, and if they attempt to be joyous, they lapse into shame at having dissembled, and fall again into gloom.—[Social Science Review.

ANTIDOTES FOR STRYCHNIA.—The British Medical Journal says "Professor R. Bellini, after conducting a long series of experiments on poisoning by strychnia and its salts, arrives at the opinion, that the best antidotes are tannic acid and tannin, chlorine, and the tinctures of iodine and bromine. Chlorine, he maintains, attacks the strychnia even when it is diffused through the system, for he found that in rabbits poisoned with the sulphate of the alkaloid, on being made to inhale chlorine gas in quantity, such as was not sufficient in itself to kill, the convulsions were retarded, and were milder when they occurred; death, also, was less rapid. The author further observed, that when strychnia was exhibited with pyrogallic acid, the convulsion was retarded for the space of half an hour, by comparison with other experiments in which the alkaloid was given by itself. Professor Bellini believes that this arrest in symptoms is not dependant on the acid acting chemically on the strychnia, but only through the astringent effects produced by the acid on the mucous membrane of the stomach, whereby the absorbtion of the poison is rendered difficult. The same author, dwelling on the frog-test for strychnia, asserts that this test is not to be trusted, inasmuch as other poisons produce the tetanic symtoms, although in a lesser degree."

REMEDY FOR EARACHE.—M. Duval says he has found relief in severe earache, other means failing, from a mixture of equal parts of chloroform and laudanum, a little being introduced on a piece of cotton. The first effect is a sensation of cold, then numbness, followed by a scarcely perceptible pain and refreshing sleep.—[Brit. Med. Journal.

One day a Parisian banker waited upon Talleyrand to ascertain the truth of a rumor of the death of George the Third, which was expected to affect the price of the stocks. The banker of course, apologized to the minister for the extraordinary nature of his request. "Oh!" exclaimed Talleyrand, with the imperturable gravity peculiar to him, "there is no harm, no indiscretion whatever. I shall be delighted if the information I have to give is of any use to you." The banker was profuse in his acknowledgements. "Well, now, I must tell you," continued Talleyrand, with an air of mysterious confidence, "some say the king is dead; others, that he is not dead; for my own part I believe neither the one nor the other. Mind, now, I tell you this in confidence, and for Heaven's sake don't commit me." On another occasion the Spanish ambassador complained to Talleyrand that one of his dispatches had been unsealed. "Sir," returned the minister, who had listened with an air of profound gravity, "I will wager I can guess how the thing happened. I am convinced that your dispatch has been opened by some one who desired to know what was inside." Very satisfactory, no doubt.

FARMS, AND FARM LANDS TO LEASE.—We call the attention of all who wish Farming Land to the liberal offer made by the proprietors of the Great Antelope Ranch, near Red Bluff. This is an extraordinary opening, and every opportunity is offered to advance the interest of those who lease land of the proprietors. Persons in want of such land should look to the advertisement.

GRAIN HARVESTERS.—Grain-growers, now look to your Harvesters; there will be a good crop; see that you have your Mowers, Reapers, and Harvesters. Look to our columns for Machinery for grain-growers. The best in the world can be had of our importers, Treadwell & Co., Hawley & Co., and Arthur & Low. Look to it in season. Long rains, good rains, will enhance the value of Reapers and Mowers. You can buy cheap now; strike quick, and buy cheap.

RICH TEA-SETS, VASES, ETC.—Some of the most superb Tea and Coffee sets we have ever seen, are now being opened at Haynes & Lawton's Crockery Warehouse The beautiful blending of the colors of blue and gold, crimson and gold, green and gold, in their chaste designs, gives harmony and beautify, that is most gratifying to the eye, and adds materially to the flavor of the beverage.

GARDEN CUTLERY.—New and fine garden tools, just received from Europe, for sale at Moore's Seed Store California street.

ETC.

PICOLLO PIANOFORTES.

WE WOULD CALL PARTICULAR ATTENTION TO these beautiful instruments from our own manufactory in Paris, and which we can confidently recommend as equal in quality to those of any other European manufacturer.

PICOLLO PIANOFORTES are now in universal use on the continent of Europe, having completely taken the place of the old style of Square Pianos. They possess all the merits ever claimed for the Square Piano, with many advantages that are peculiar to themselves.

Our assortment comprises six different styles varying in price from $275 to $400 each.

Iron-framed Picollo Pianofortes.

These instruments are a "specialité" of our manufactory, are constructed with a special view to withstand the peculiar climate of the interior of California, and are warranted to stand any change of temperature.

Price $400 to $450 each.

STODART PIANOFORTES.

We have had the exclusive agency for the sale of these celebrated Pianos for the past twelve years, and refer with confidence, as to their quality, to the many hundreds of instruments themselves now in use throughout the whole extent of the Pacific Coast. A general assortment of these instruments will at all times be found in our warerooms, comprising Grand Action, Square, Upright, and Overstrung Pianos, in plain or richly carved cases. We offer them at the same prices at which they are sold at the manufacturers' warerooms in New York, thus saving to the purchasers here the cost of freight, insurance, interest, and attendant charges. Prices range from $240 to $500 each.

FRENCH HARMONIUMS.

In connection with our manufactory of Pianofortes at Paris, we have established a manufactory of FRENCH HARMONIUMS, suitable for parlors, music-halls and churches. These instruments, like our Pianofortes, are all in rosewood cases, and are made with the improved "transposition attachment," which enables the performer, in voice accompaniments, to adapt the instrument to any particular "key," thus entirely obviating the necessity of any transposition of the music. Nine varieties $100 to $1,000 each.

We beg to call attention to the fact that the Harmoniums of our manufactory possess many valuable improvements not to be found in any other instruments of this description, among which is the peculiar disposition of the reeds. This improvement is based upon purely scientific principles, rendering the reeds doubly sensitive an much less liable to become deranged or get out of order

For full description of Picolio Pianofortes and Harmoniums send for descriptive catalogues.

PRINCE & CO'S

Melodeons, Doub reed School Organs, and Organ Melodeons.

Being the exclusive agents for the sale of these celebrated instruments in California we are prepared to furnish them at the catalogue prices, a sold at the warerooms of the manufacturer in the East The assortment comprises twelve different styles of instruments, ranging from $60 to $425 each. Illustrated catalogues, with full description and price of each instrument annexed, will be furnished on application.

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets trios, quartetts, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little Lute," and "Little Led," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair true," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 825,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1.

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100: clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "There, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2. are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS,

No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Call. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

8 **ALLEN & SPIER,** SAN FRANCISCO

ELECTRICITY

THE

GREAT REMEDIAL AGENT.

Electricity as a Remedial Agent has, until recently, been but little known. An Electric Battery has been a terror from childhood up because a little Battery gave a "start," and the thunder storm killed by lightning. Now it is better understood, and is and will be the sovereign remedy for many diseases heretofore considered incurable. The following series of articles and statistics, with facts and proof of the virtue of Electricity are worthy of attention. When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulations of the poisons which constitute disease. A great cry went up from the interested in the continued supremacy of the old system of one poison to cure another, that Electricity, as a Curative Agent, had been tried and had proved to be of but little if any value—thinking, poor souls, the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients there were those who were diving into the science of Electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks: and all by the *Improved Instruments* of Dr. J. H. Josselyn, Resident Physician at the Electropathic Institute, 645 Washington street, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic System. From early morn till late at night, this instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services.

The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most irradicable diseases to which Californians have been exposed is Rheumatism; none has given the honorable practitioner more trouble to relieve, and no one has pretended to cure (if we except known empirics) permanently. But this subtle disease give way before the Electropathic System in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of a relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

We allude to that kind of disease paraded by quacks in the journals of the day, a trouble which was never cured by medicine, only a little strength imparted by the use of tonics. The poor victim is kept taking medicines and paying for them until his last dollar is gone and then, as soon as he undertakes to work to obtain more funds, the trouble comes back in all its loathsomeness. To this disease Electropathy is peculiarly applicable, its action being upon the spermatic nerve, strengthens the secretory organs, and at the same time, creating an equilibrium in the system, thereby preventing an elapse.

We dwell upon this disease because it is the bane of the youth of California, and one about which there has been more deception used than all others put together It is not necessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in the State or at the East.

There are at present very few Instruments in the world that can be depended upon. A good Instrument costs very heavy, and cannot be purchased unless ordered, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only Instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous imposters in the bathing line. The pure Magnetic Bath is one of the most effective aids in the removal of disease from the system,; but if given at the wrong time is likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this Bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unnecessarily administered, and if not necessary, advise the requisite remedy.

To Females,

the Directors would say, Electropathy is particularly applicable to your delicate and fragile systems, and to the numerous troublesome and painful diseases to which you are liable. Should you be irregular, a few treatments will restore the functions to the proper state without pain or inconvenience. Should you be weak and enfeebled, either general or local, this system imparts strength and vitality, making the recipient feel buoyant and youthful, where before they were languid and unable to enjoy the pleasures of life. One great blessing connected with Electropathy is, it purifies the system so thoroughly that it beautifies the complexion, making the coarse and freckled skin as pure and fair as possible, giving the patient a fresh and healthful look.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil forebodings and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in issuing this pamphlet, do it in the hope that it may be the means of awakening the public, who have not studied into such things, to a sense of their duties, and if possible prevent those who have the care of a rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse the origin. Also, that those in need of remedial agents may know where they can find them without resorting to taking the thousand and one poisonous nostrums that are continually palmed off as sovereign panaceas for all the ills of humanity. Avoid them all, they are snares set to rob you, and to your bodily injury at the same time. The following is a list of the cases which have been successfully treated by the *Electropathic System*, at the Institute, during the first four years of its establishment. The record is good, and challenges admiration of the world:

Name of Disease.	No.
Rheumatism	1590
Neuralgia	1402
Dyspepsia	1407
General Debility	1410
Fever and Ague	1282
Dumb Ague	1210
Bronchial Affections	1106
Asthma	1049
Female Irregularities	1022
Mercurial	938
Scrofula—long standing	922
Paralysis	890
Disease of the Eye	832
Catarrh in the head	705
Catarrh in the lungs	698
Liver complaint	600
Incipient Consumption	582
Panama Fever	563
Deafness—total and partial	480
Mental Derangement	471
All other—and among which is almost every nameable disease	2,186
Total	21,373

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit. Let them go, they will not be missed.

Persons seeking remedial assistance, may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface, by its energy, while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon mercurial diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity forces itself out of the body. This result has been arrived at by testing the water after an Electro Magnetic Bath. After such tests have been found in the water the patient is not troubled any more with those pains peculiar to the diseases. In all other cases it forces to the surface and is washed off by the bath. The whole system in its application is a luxury, there being no pain or inconvenience attending upon it, but the reverse in the case, being one continued pleasure all the time. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES.

SAN FRANCISCO, April 18, 1860.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied with chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this eighteenth day of April, A.D., 1860. P. BARRY, Notary Public.

The undersigned takes this method of acknowledging publicly the benefits he received from the treatment applied to him at the Electropathic Institute, while suffering under a terrible infliction:

This is to certify that I have been under Electropathic treatment at the Electropathic Institute, 645 Washington street. When I applied to Dr. Josselyn I was cramped up with rheumatism, and also had the coast ague. So bad was I that, without relief, I don't think I could have lived more than one week. The Doctor, with his instrument, relieved me the first treatment from all pain, and perfectly cured me of all disease in twenty treatments, without the use of medicines. I cordially recommend all afflicted to patronize this Institute, for it is truly a blessing to the afflicted, and the operation is very pleasant. I wish to thus publicly thank Dr. Josselyn for his care and sympathy.

JOSEPH SEGER, of Bolinas Bay.

September 19, 1860.

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this 19th day of Sept., A. D. 1860. P. BARRY, Notary Public.

SACRAMENTO, Oct. 10, 1860.

DR. JOSSELYN—Dear and Honored Sir: You requested me to let you know how I feel after being at home three weeks. Well, sir, I have been here a little over two weeks and there is no return of that very unpleasant trouble. My sleep is sound, and there is no disturbance of the regular laws of nature. I feel as strong as I ever did before bad habits had weakened my system. Not only is the general debility entirely disappeared, but the local trouble has gone. I feel so strong that there is no fear of its return. Considering that you only took one month to cure a disorder of seven years standing, I think your system almost miraculous. Accept my sincere thanks, and publish this if you please. I have sworn to it, as you will see. C. BOWMAN.

State of California, County of Sacramento—ss.

Subscribed and sworn to before me, this tenth day of Oct., A. D., 1860. CHAS. HART, Notary Public.

HORNITAS, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and Mercurial pains as you state them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you would cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can, by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON Jr.

To J. H. Josselyn, M. D., Resident Physician, at the Electropathic Institute

NEVADA, Nov. 8, 1860.

DEAR DOCTOR: Pursuant to agreement, upon my arrival, I sit down to pen you a few lines in acknowledgement of the great service you have rendered me, in relieving me of that painful case of neuralgia and rheumatism. When I look back and see the gallons of medicines I have swallowed to no purpose, and then to think how soon you cured me, I am astonished. You were only twelve days performing a cure of the trouble, for which I had taken medicine over six months. Dear Doctor, if you could see the wonder exhibited by my friends, who can hardly believe that a cure was performed without medicine, but here I have been cured, and I have not taken a drop of medicine from you, nor from any one else, while being treated by your splendid Instrument I shall try to show my gratitude by sending every sick man I come across to you. Yours, till death.

To J. H. Josselyn, M. D., Resident Physician, Electropathic Institute.

State of California, County of Nevada—ss.

Subscribed and sworn to before me, this eighth day of Nov., A. D., 1860.

F. SPAULDING, Notary Public.

YREKA, Nov. 10th, 1860.

DR JOSSELYN—Dear Sir: Your letter, dated October 16th, is before me. You wish to know how my bronchial troubles are. Now, Doctor, that looks a great deal like a joke. I once had such an affection of several years' standing, but thanks to your natural mode of treating disease, it has gone to be numbered with the things of the past. Since my return I have not felt the slightest trouble from it. When you pronounced me well I did not expect to ever hear from it again. Any one who sits under treatment of that *Improved Instrument* of yours will have the same feelings. It imparts vitality to the system so rapidly that confidence is at once established. I have to thank you that you did not refuse to treat me because I could not pay you the whole of your reasonable charge; inclosed is the balance due you, and God bless you for the kind treatment I received at your hands.

Yours, ever grateful, WM. GARDNER.

State of California, County of Siskiyou—ss.

Subscribed and sworn to before me, this tenth day of Nov., A. D., 1860.

S. F. WELLITS, Notary Public.

This is to certify that I, the undersigned, was troubled with dumb ague accompanied with rheumatism, very badly. My disease was taken in Washoe. After having exhausted medicines without benefit, I applied to Dr. Josselyn, at the Electropathic Institute, on the first day of November. After taking twenty treatments with his Improved Electropathic Instrument I am perfectly cured, having been entirely relieved of all pain or inconvenience. I feel as strong as I ever did when in the best of health. I cheerfully recommend all afflicted to his care, as being the best physician I ever became acquainted with. One great advantage, he uses no medicines, but cures by a process which is perfectly natural. The time occupied in my case was thirteen days.

D. O. HARRA.

November 14th, 1860.

State of California, City and County of San Francisco—ss.

Personally appeared before me, D.O. Harra, and subscribed and sworn to the above certificate, on this fourteenth day of November, A. D., 1860.

P. BARRY, Notary Public.

SAN FRANCISCO, Aug. 3d, 1861.

To the Directors and Resident Physician of the Electropathic Institute.

SIRS: You requested of me a certificate of the cure you performed in my case. Below I append it:

This is to certify that I was troubled with a swelling which commenced in my ankles, and gradually extended upward until it effected my whole body. I sought the best medical aid in New York and Boston, and they all pronounced it dropsy. Hoping to retrieve my health, I visited California in February last. I consulted the Resident Physician at the Electropathic Institute; and now, after five months of treatment, and waiting to see its effects, I am pronounced well by competent judges. It did not take but three months of treatment to cure me, but I waited to see that it did not return. I feel perfectly assured from what I saw while under treatment that Electricity as applied at the Institute will cure any disease to which the human family is liable.

Now, gentlemen, you can make what use you please of this certificate. With my thanks to the Resident Physician for his kind attention, I subscribe myself,

Your thankful patient,

MRS. C. A. CARLTON

Opinions of the Press.

The advantages of electricity as a remedial agent, are universally admitted by the medical and scientific world. It requires, however, experienced skill to apply this remedy efficiently, and this skill of application is possessed in an eminent degree by Dr. J. H. Josselyn, of the San Francisco Electropathic Institute. Particulars of his method of practice can be obtained by reference to his advertisement in another column. The Doctor is well known to us as a scientific gentleman, and an ardent devotee to his profession. He is no pretender, but has conferred incalculable benefits on those who were so fortunate as to seek relief at his hands. For those who desire speedy and permanent relief from the rheumatic pains, so prevalent in this region, we can recommend no surer remedy, than a visit to Dr. Josselyn at his rooms in San Francisco, No. 645 Washington street.—[Placerville Republican.

ARE YOU SICK?—We wish to say a word to those that are sick. We have in this city an institution known as the Electropathic Institute, situated at 645 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician who has no superior in the city. He has been in charge of the Electropathic Institute for several years, and has been uniformly successful in his treatment of the numerous patients that have placed themselves under his charge. The Electric treatment will cure many diseases that cannot be reached by any other mode. Dr. Josselyn gives his personal attention to all of his patients, and is always ready to give advice to those that may call upon him. His charges are very moderate, and we cannot do the sick a greater favor than to recommend them to call on him before placing themselves in charge of another.—[San Francisco Daily Journal.

We call the attention of our readers to the advertisement of Dr. Josselyn's Electropathic Institute. Voluntary and unsolicited we make the following statement, proving its beneficent effects, particularly in rheumatic cases. Some months since we were on an editorial trip, visiting the mountains. The stage-coach upset, and landed all the passengers, including the writer, below in the valley, where the Deer Creek overflowed by receiving the additional material, obnoxious to its usual contents. For some hours exposed in our wet clothes, to night wind and weather, we soon felt the effects of the accident in the mountains—pains in the back, hip, and legs; so much so, that for weeks we hardly could walk. Treatments of all kinds were applied but without avail, until our attention was called to the Electro-galvanic Baths and appliances of the above Institute. Thank God, after two weeks we have been fully restored, and enjoy now the free use of our limbs and body, as fully as previous to the involuntary bath in Deer Creek.—[Dr. H. SIEN, Ed.—True Pacific Messenger.

ELECTROPATHY.—Electricity has long been classed among the most effective medical agents. It possesses great advantages over the systems of therapeutics heretofore relied upon, as it reaches more certainly the seat of disease, especially in nervous or rheumatic complaints. The Electropathic Institute, No. 645 Washington street, under the charge of its able Resident Physician, Dr. J. H. Josselyn, has attained a well-merited celebrity for the many cases which have resulted favorably from the skillful application of this invaluable remedy.—[Daily Morning Star.

A GOOD INSTITUTION FOR THE SICK.—One of the very best places in the city for the care of the sick is at the Electropathic Institute, 645 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician of great experience, and no one can do the sick no greater favor than to recommend them to give the Electropathic Institute a trial.—[Weekly Journal. 13

The California Farmer.

SAN FRANCISCO:

FRIDAY .....MAY 13, 1864

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address,

PUBLISHER CALIFORNIA FARMER, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the FARMER OFFICE. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc., at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Send along your Greenbacks,

Don't be afraid to send along your Greenbacks. Those we TAKE AT PAR in payment for all back dues to the FARMER for subscription. So send them along, now is the time. This is a better speculation than mining stocks, for it is so pleasant to read a newspaper when one knows he has paid for it, the digestion is better and a man feels happy, and, if happy, then he feels rich. So pay prompt and you will "strike a lucky lead."

Cashmere Goats, and the Alpacca and various Goats of Asia.

We have received letters from parties familiar with this subject, who have traveled largely in that part of the world, and who have a complete history of those valuable animals and the source from whence they can be obtained, who are desirous to form a company for the purpose of importing them in numbers to this country. The gentlemen wish parties who have capital to join in the enterprise for the purchase and shipment of these animals. This enterprise can be made very certain and largely profitable. The party who writes is one of high standing, has much experience as a traveler, and is of undoubted responsibility, with a thorough knowledge of such an undertaking.

The Medical Press.

We promised, in our last issue, to further notice the *Medical Press*, a copy of which was handed us by the Senior Editor, Dr. Henry Gibbons. We stated that we should *anatomize the Valedictory*, i. e., we intended to select some paragraphs from the address of Dr. L. C. Lane, upon the Essay on *Anatomy*:

"The human memory is like our native soil, which produces nothing of value unless it is subjected to rigorous and continued culture;—like our soil, wild plants, as the *lupine*, the *ceanothus*, the *chrysea* will flourish there in extravagant and wanton luxuriance, but ere the precious grain, the golden wheat, will grow and mature in it, the carefully selected germs must have been planted,—so the *memory* is more disposed to retain the trivial and useless;—the *idle jest*, the *trashy song maintain firm footing* in the youthful mind, and have all the brightness of yesterday's story, long after the raven wing of oblivion shrouds in darkness the facts of wisdom which were coevally treasured up in the mind.

* * * * * * * * *

"Gentlemen, when you take into account that, in your present initiation into the profession of medicine, you become, so to speak, the rightful guardians of the treasures of experience which have been accumulating during many ages, then you have a deep and keen incentive to preserve as sacred this precious heritage of the past,—yes, when you remember that it has, like some of the architectural wonders of the past, required age after age, and century after century, to bring this *temple of truth* to its present proportions of excellence and beauty, then I believe that nothing can tempt *you* to sully its altars with the polluting offerings of charlatanism. There is certainly nothing more deserving of *censure* and *contempt* than the *example* of those, who, after having received all the fostering influences of a medical education, finding themselves *unsuccessful* in their *professional* career, are *seduced* to embark their fortunes upon the *dubious ocean* of the *ephemeral phantoms* of the time, for whose waters no *chart* or *guide* has ever been found which will save the *unfortunate* mariner thereon from ultimate *shipwreck* and *ruin*."

* * * * * * * * *

When you reflect, gentlemen, that the profession of Medicine *has for its object* the *alleviation* of *human* woe and *human misery*, you need no further proof of the nobleness and dignity of your calling, and the heart of every physician must swell with honest pride when he recalls how much has been done by his art for the accomplishment of these most worthy objects.

We have made *three extracts*, and give them to our readers; they are very appropriate *words* to stimulate the mind of the medical student, appropriate for *that* occasion and for those to whom they were addressed. But to *our own mind*, when we remember the source whence they emanated, we could only ask can such teachings be *consistent with the Records of the Fourth District Court*, on a recent occasion? In all our studies of "Natural History," we are told, the *same* fountain cannot give forth *sweet* and *bitter* waters. We therefore ask the question, as an *anatomist*. The *italics* in the above extracts are ours.

PLEASE SETTLE UP.—It will be seen by the notice of "a change," that the FARMER is now published by Warren & Co. It is to be hoped that all who are indebted to the FARMER will send in their dues, so that old accounts may be all squared up. It will be easy now to remit, and we hope all will do so without further request.

CROWDED OUT.—A large amount of matter. We are compelled to omit this week Our New York Letters, etc., and many articles have been received too late.

San Francisco Postoffice.

"Twenty years behind the times." How true! and yet for uttering this *truth*, Postmaster Parker lost his head.

Perhaps Postoffice matters in San Francisco is one of those cases where the "truth is not to be spoken at all times." One thing is very certain, there is no individual gain in trying to remedy evils in postal matters, but only loss. There is a *power behind the scenes* that enables those who are complained of to retaliate and revenge severely their supposed wrongs, by various means, known only to themselves, and this is apt to deter the press from correcting the evils that now exist—evils of great magnitude.

The Postoffice facilities for the public of this State are more than "twenty years behind the age," and San Francisco Postoffice, now the third in importance in the United States, an office that should, by its promptness and efficiency and in all its management, equal Boston, Philadelphia, or our other great cities, is—is—well, one of those branches of our government that appears to be managed more for the benefit of party, than for the best interests of the public, as it is evident that good and well-trained clerks have to give place to favorites, whether qualified or not.

The irregularities, delays, and blindnesses in getting letters, are the subject of common complaint everywhere; the crowds of waiters in long lines at the windows, look like the days of '49, this is not because the mails are so large or so difficult to deliver, but a want of efficiency, attained only by able, intelligent, and well-trained clerks, and heads of departments; this can never be had in the San Francisco Postoffice so long as politics and party, or favorites, is of more account than public accommodation.

There is a universal complaint of the lack of promptness in delivering, and it is no great the public see the hopelessness of a remedy, and therefore the carriage of letters is transferred to the expresses; and let any person go to Wells, Fargo & Co.'s when the River steamers arrive, and they will be convinced that our *Postoffice* is repudiated almost as a means of conveyance of business letters here. By the well-devised plans of this house, with their three or four able clerks, merchants and business men get their letters in five to fifteen minutes from the time the steamers touch the wharf; while the *United States Mails* at the Postoffice, are not delivered, assorted, and obtained for *one*, *two*, and *three* hours, and very often not until next morning, and sometimes till "next week." We can give many instances of serious injury and disastrous loss by reason of delayed letters.

This evil is growing worse and worse. Our merchants and all can remember what efficiency was shown under Postmaster Weller's rule. So admirable was the system then, that "down river mails" were distributed with dispatch—rarely over half an hour ere letters were all in the boxes. That able and most admirable clerk, Armstrong, had a perfect system, and understood his business. Mr. Weller, too, was most active and on his post of duty, and it was most unfortunate for the Post-office Department to remove that able clerk and some others. Our citizens will well remember Armstrong, Wadhams, Cassos and others—some had been in the Post-office for years, even back to Postmaster Moore's term. These changes of good clerks are disastrous to the public weal.

Under the rule of Postmaster Parker, a system was begun that promised great good. His clerks were well trained—had began to overcome the difficulties resulting from the last change—they were gentlemanly, courteous, intelligent men, yet overtaxed and poorly paid—by reason of the depreciation of our currency—yet improvement was the order of the day, and however many small evils had crept into the Postoffice, they were being removed, and the public were rapidly feeling the benefit, for Mr. Parker was earnestly trying to do all in his power, when—"presto, change!"—another political "topsy turvy"—yes, a change—and *such* a change!

At the present time there is no remedy but patience. "When the wicked rule, the people mourn"—so says the Scripture—and it says, also, "the sins of the *ignorant* shall be winked at." This is too much for our people to bear, however, so they are transferring their business from the Postoffice to Expresses, and rather than be annoyed and vexed by delays, rudeness, and vulgarity, to do their business elsewhere, and yet, why should an office like the United States Postoffice, one that belongs to the whole people, be the plaything of political hucksters, and men wholly unfit for office be placed there? We ask, why?

If there is any place in our city, any public office where the clerks and officials should be remarkable for their intelligence and activity, it is the Postoffice; "at least," said a gentleman who was waiting for letters, "they should *know how to read!*"

When the clerks of the San Francisco Postoffice shall be as well skilled in their business (and they should be) and as intelligent as those of Wells, Fargo & Co., then we may hope, and not till then. There is a fine picture in one of the Daguerrean galleries, of a group of the Clerks of Wells, Fargo & Co; we suggest that there be one made of those in the Postoffice, and hang them side by side, and then select a judge and let him say to the public, "Look on this picture, then on this, and then say where they may expect the best results, or where they can get their letters quickest?" That would settle the question, judging from appearances.

We copy from the Sacramento Union the following—it has never been yet answered that we have seen:

"*San Francisco Postoffice.*—A correspondent at Sacramento writes to the Union under date of April 26th, as follows:

"Can you inform the undersigned what is the matter with the San Francisco Postoffice. On the 18th, I placed in the office here three letters addressed to mercantile houses at the Bay, none of which have been received. On the 21st, three more were sent with drafts, and were seen by the writer placed in the mail bag, yet but one reached its destination. All were addressed to well-known business firms. Other houses here are sufferers, I find, like myself. Is there no remedy, or are we to be compelled to forward everything by express?

"We invite the attention of the Postmaster at San Francisco to the above statement, and add that other complaints of the same character are within our knowledge. There are also complaints about the non-delivery of printed matter. Newspapers that are regularly mailed here to subscribers are not delivered when called for. In one case four days elapsed before the subscriber received his paper although it was called for daily. We know also that the fault is not in the Sacramento Postoffice, and that it must be in the office in San Francisco."

A gentleman waiting for his box letters late one evening this week, stood opposite the "O P" window—it was open—and he was upon the point of asking if there was an Overland Mail in—he had not spoken—when he was rudely told by the clerk, "The *office was closed!* didn't want lookers on!" His manner was rude and coarse. This is only one case, and this, too, at a *public office*, where the *people pay them* for their—insolence.

It is said Wells, Fargo & Co. distribute as many and oftentimes more letters than the Postoffice; it is true all such letters pay "Uncle Sam," but the people *pay* the extra for promptness—by necessity. Should it be so? More anon.

The Sanitary Fair of Philadelphia.

The enthusiasm with which woman has taken hold of this *great work*, which is now absorbing so much of the public mind, is in keeping with the known elements of her character. Suffering humanity is woman's labor field, and the sick and wounded soldier is now especially the object of her charities throughout our whole country. Noble has her efforts been, and noble has been the results from the first Sanitary Fair at Chicago, where $60,600 was gathered for the cause, to the New York Fair, where the result will be a *million of dollars*; the work has been steadily onward and triumphant.

The circular we give this week, only received but the last few days, announces the Fair at Philadelphia. We regret there is no time to do as Californians otherwise would, had it been received a month since. Our heart-felt wishes and the little that may go, will be sent with a "God bless the laborers" in such a vineyard. May they all, for their God-like deeds, at last be received into that blessed rest of the pure and good, the "Haven" of immortality and peace:

PHILADELPHIA, April 10th, 1864.

EDITOR CALIFORNIA FARMER:

Although my few lines will not ring with the *Cora-l* notes of poetry and song, from the pen of "Auld Lang Syne," yet "Cora," knowing your patriotism, again addresses you in behalf of the soldier; that you may feel interested with us for our "Great Central Fair," for the U. S. Sanitary Commission; using your influence in collecting something that San Francisco, though so far away, will still remember the Keystone State. The time is short, to the opening of the Fair, yet in that little while even the gathering of some slight token from California might reach me in time, and give me pleasure to hand to the "Commission," as a memento from your noble State. We must ever have in remembrance our Union soldiers, they have fought, and bled, and died, in the noblest cause. Liberty and Union, one and indivisible, now and forever. If you should succeed in obtaining anything for us, you will be kind enough to send to my address, it will be gratefully acknowledged. Very respectfully. MISS HAVEN,
Sub-Chairman.

1,429 Lombard Street, Philadelphia.

The Great Battle of Tuesday last.

Dispatches of yesterday bring down the news from the battle-field to Wednesday morning. Early on Tuesday our army began to straighten out in line of battle, skirmishing being kept up between the advanced lines of the two armies. The enemy was bestirring himself as though he intended offensive operations on our line, which was formed by the Second Corps on the right, the Fifth Corps in the center, the Sixth Corps on the left, with Burnside's Corps in the rear of the left, to protect the immense trains and to act as a reserve in any emergency. The enemy during the night strengthened his formidable position with rifle pits, breastworks and barricades. Thus matters stood until late in the afternoon, firing being quite sharp at intervals at different points. Five o'clock was fixed for the grand assault. General orders announcing the successes of Sherman in the West, and Butler on the James river, were read to the troops, producing the wildest excitement. As the hour for the attack approached, the enthusiasm of the troops became almost ungovernable. Gen. Grant, accompanied by his staff, and Generals Meade, Hancock and Warren, were all stationed on eminences within sight of each other, while the vast columns of our army were slowly gathered together for a great struggle. At the appointed hour, simultaneously with the firing of 13 guns, the whole line advanced with cheers. The movement is said to have been indescribably grand. A portion of the forces moved in solid column, while others advanced in the usual order of battle. The whole army moved together. The fight opened all along the lines. Longstreet's corps, under Hill, held the rebel right, resting about 2 miles northeast of Spottsylvania. Grant pitted Burnside's Ninth Corps against it. At a given moment later in the afternoon, Burnside precipitated his entire command, except the colored troops, upon the rebel front, driving them, completely crushing it, and capturing three rebel brigades, and four pieces of cannon. The fight continued with a ferocity never before witnessed until 9 o'clock, when night closed upon the bloodiest field of the war. The losses on both sides are very large. Of the rebel brigades captured, some escaped during the awful carnage which followed, but 1,200 of those captured were sent to the rear this morning. Our informant talked with some of them before leaving to-day. They said that they had been in every principal battle of the war, but that they had never experienced such hard fighting. The battle ceased at 9 o'clock, P. M., our line having advanced—Burnside occupying at the end of the conflict the entrenchments held by Longstreet's forces at the beginning of the fight. At 10 o'clock Burnside held the same position. Lee's army was then contracted into a sort of horse-shoe form, in and about the town of Spottsylvania Court-house.

Great Commercial Expedition.

Diplomatic, Commercial, Scientific, and Agricultural Expedition into Eastern Asia.

We ask the attention of the readers of the FARMER to the letter addressed to us by Dr. Macgowan, of Washington, who writes upon the subject of a voyage of discovery into Eastern Asia. The position which Dr. Macgowan has occupied under our Government, and his extended travels in Europe, will enable him to accomplish great good. His familiarity with the Eastern world, as shown by complimentary and recommendatory letters, should prompt our Government and each State and Society to a prompt coöperation in such an enterprise, and we sincerely hope it may be carried out.

We shall be most happy to do all in our power to forward such an enterprise, and hope to have the pleasure to welcome the Doctor to our shores. We would earnestly hope if such an enterprise should be matured, that that earnest laborer and our excellent correspondent, Rev. J. S. Dehl, who is also deeply interested in such an enterprise, may become associated with the Dr. Rev J. S. Dehl is at present delivering lectures on a similar subject, near St. Louis, and we hope these two Oriental laborers may join heart and hand in this goodly work; we shall hail this arrival her with gladness.

HEADQUARTERS 9th Reg Veteran Reserve, Martindale Barracks, Washington, April 9th, '64

EDITOR CALIFORNIA FARMER:

I beg to call the attention of my countrymen on the Pacific coast to the project of a diplomatic, commercial, scientific, and agricultural expedition, that I have submitted to the consideration of the General Government. I had first explained in lectures throughout the country, the character of the proposed enterprise, and in this way obtained the support of numerous industrial and learned associations, and also legislative indorsement where I have been able to address State Legislatures. The commendations of those bodies, an abstract of which I subjoin, present a succinct statement of my object; might I ask to have them laid before your readers?

The importance of our interests in Eastern Asia, particularly to the Pacific States, has never been duly appreciated. While Great Britain, Russia, France, Spain, Portugal, and Holland, hold possession on the Western coasts of the Pacific, the inhabitants of the Eastern side of the ocean possess no such advantage for the protection of their commerce. The period may be remote, perhaps, when it may be politic for Americans to occupy and fortify harbors in distant regions, but there exists a present necessity for the multiplication of consular posts in Eastern Asia. Our Government made repeated and futile attempts to negotiate a commercial treaty with Cochin China (Annam), but as portions of that empire had been seized by France, and three ports—Turon, Ballat, and Kwangnan—have been opened for trade, the time has arrived when the effort should be renewed. There are other small states in whose harbors our vessels should be allowed to resort, and where negotiation will promote our commerce.

In the transmission from Eastern Asia to Western America of useful animals and plants, there is the best reason to believe that California, Oregon, Washington, and conterminous states, will be greatly enriched, and therefore solicit the coöperation of public spirited men in my projected undertaking. Should the Government adopt my plan, I hope to prevail upon them to send me to the East through California, as the information that I might acquire there would enable me to serve that portion of my country more efficiently than if I journey Eastward. If on the other hand, Congress should not see fit to accede to this comprehensive and most promising enterprise, I shall, as I am to return to the East, still aim first to visit California. This brings me to another subject to which I beg to solicit your attention. Herewith I send a programme of lectures on Eastern Asia that I have delivered in Europe, and from the Atlantic to the Mississippi, which I should like to deliver in San Francisco and Sacramento, for unless there is a fair prospect that I should be patronized as a lecturer, I could not venture on the expense of such a journey. Perhaps the publicity that I am now seeking, and my desire to render my Oriental experience subservient to American interests in the Pacific, may secure me friends enough to calculate on success.

Respectfully, D. J. MACGOWAN.

(From the National Intelligencer.

Economic Mission to Eastern Asia.

The projected mission to the countries of Eastern Asia, submitted to various public bodies by Surgeon Macgowan, soon after his return to the East (notices of which we have repeatedly published), continues to gain adherents. On Friday Mr. Anthony submitted resolutions of the State of Rhode Island which were passed by the General Assembly, after Dr. Macgowan had, in an address, explained his object to that body. Dr. Macgowan lately delivered an address in the hall of the Massachusetts House of Representatives, which led to the adoption, by the House, on the recommendation of the Committee on Agriculture, of the following resolution, drawn up by its Chairman, Col. Clark, of Amherst:

WHEREAS, An effort is being made by Surgeon D. J. Macgowan, U. S. Army, aided by various scientific societies, to secure the organization of an expedition, under the auspices of the General Government, to explore the populous and productive regions of Eastern Asia, with special reference to the discovery of such plants and animals as may be profitably introduced into the United States, and for the purpose of opening more intimate, diplomatic, and commercial relations with those countries; Therefore,

Resolved, That this enterprise, so full of promise, be earnestly recommended to the favorable consideration of Congress.

In the resolutions of the memorial of the Agricultural Society of the State of New York, submitted by Judge Harris, the object of the enterprise is succinctly expressed:

Resolved, That the Society regard as a subject of great importance to the industrial and agricultural interests of the United States, the project of Dr. D. J. Macgowan for the appointment by the National Government of a commission, composed of scientific men and practical Agriculturists, to visit and explore Eastern Asia, with a view to acquire information bearing upon arts and manufactures there pursued, and to obtain and transmit seeds, plants, and animals, the cultivation or propagation of which would be likely to add to the valuable products of our farms.

Resolved, That the New York State Agricultural Society heartily commend the subject to the favorable consideration of the Government, as likely to result in substantial benefit to every section of the country.

The undersigned, in behalf of the State Agricultural Society, beg leave to memorialize your Honorable bodies for the enactment of such law or resolution as will best accomplish the objects of the resolutions.

The petition of the American Geographical and Statistical Society, presented by Gov. Morgan, says: We have much confidence in the ability and experience of Dr. Macgowan, and being made aware of his proposed scientific and industrial exploration of Eastern Asia, for the project of a commercial treaty with Cochin China, and believing that the enterprise will conduce to the interests of American Commerce and Agriculture heartily commend his plan to the favorable consideration of the Government.

The indorsement in the memorial of the American Oriental Society, presented by Mr. Cross, was equally strong.

Mr. Conness has been intrusted with a memorial on the same subject from the American Ethnographical Society. A similar document is being drawn up by a committee of the American Institute.

Committees of the New York Chamber of Commerce, and the Boston Board of Trade, have the proposed undertaking under consideration. In Boston, we observe that to the diplomatic part of the programme the Island of Madagascar is added, mercantile men regarding the multiplication of Consular ports in Eastern seas as a desideratum. We are not surprised to discover that Members of Congress from California and Oregon, as well as representatives of the press and others interested in Commerce and Agriculture of the Pacific, accord to the enterprise their cordial support. Our columns have contained letters from the Hon. Edward Everett, and other public men, in commendation of the plan. It is admitted by all who have paid much attention to the industrial interests of the country, that Dr. Macgowan is right in assuming that if the Sorghum had been transmitted to us by persons who had investigated the mode of culture and the method of crystalizing its product, that an amount of money would have been saved by the farmers of the Northwest (wasted in futile experiments) which would in itself have defrayed the expense of an expedition like that proposed.

The commercial value to a nation of a new material among its products is seldom overrated, and when we consider the extent of region to be explored and the vastness of our domain, it may be admitted that plants numerous and valuable may be introduced by this exploration. Dr. Macgowan, during his long residence in China, transmitted many seeds to his native land, some of which have taken root. The Camphor tree and the Grass-Cloth plant are notable instances. Essays on the culture of the last named, and on the mode of utilizing the Tallow tree, already introduced into the South, may with other technological communications be consulted in Silliman's Journal.

Of the animals proposed to be acclimated, Surgeon Macgowan attaches much importance to the hardy and cold-enduring Camel of Northern China, the Yak of Tibet, and the Cashmere Goat, all which can be advantageously domesticated in corresponding regions of this Continent.

Concerning the projector of this comprehensive enterprise, we find that when after some twenty years' absence he was introduced to the Geographical and other officers, Judge Daly stated the lecturer came before his countrymen with a well-earned European reputation; that his investigations had attracted much attention abroad, and in the matter of Physical Geography, his researches were referred to by Humboldt in his Cosmos, as discovery of the eyre or bore of the Dilen-tang river in China occupies a large space in Maury's Physical Geography of the Sea. Dr. Macgowan is an American patriot who has already rendered great and spontaneous service to the Union by his able efforts in Europe to vindicate our National cause against their foreign enemies and domestic traitors. As, since his return, he has lectured in the chief cities between the Atlantic and the Mississippi, his scheme has met with a wide-spread indorsement.

WE WANT SPECIMENS.—If our friends in the *mining regions* will send us specimens of gold, silver, lead, or copper ore, for our museum, we will gladly send them our journal to the value of the ores they send, and also do what we can to make their mines known.

Beautiful Pictures, Sculptures, Paintings, Photographs, Engravings, Drawings and Music.—These are all the adornments of home. Reader, do you love beautiful pictures of any kind? Just drop in at Robinson & Snow's, on Sansome street, and examine the collection there; see the portfolios of drawings and engravings. There is a collection of gems worth looking at there, and some of the finest styles of frames of pictures that have ever been made; and money spent at such a place will make any one feel happier.

"234 *Sewing Machines.*"—We noticed this fact among the goods and merchandise of the last steamer. This shows what California is doing, and of this amount Wheeler and Wilson received two thirds. This speaks volumes. The fact is now well established that the Wheeler & Wilson Machines, the world over, are better known, better esteemed, than any other. Scarce a month passes but some new machines are announced. It lasts a few days, weeks, or perhaps months, and passes away as a thing that was, while the Wheeler & Wilson grows more and more into public favor.

Liverpool Wool Market.

John L. Bowes & Bro's Wool Circular, 26th March 1864, says: The principal Wool markets in Europe have been strong this month, consumption being large everywhere, and stocks moderate. Full-bodied filling kinds are rather dearer, but fine short dirty parcels Worsted Wools, particularly bright-haired English and such foreign descriptions as can be substituted, are 1d higher, and Cotswolds during the next two months will be at their maximum, there is some excitement amongst consumers to cover themselves, but dealers show no disposition to speculate at the present high value of these qualities.

Purchasers for the United States have again been very limited.

The London Sales ended 23d inst, the fine Wools; comprised 35,034 bales Australian and 16,958 Cape there was a firm tone throughout, and prices closed in favor of sellers, excepting for greasy Cape, which, owing to the absence of orders for America declined ½d to 1d per lb. Stapley kinds of Australia advanced 1d on November, but will be severely tested at the auctions to commence 5th May, when there will be offered over 100,000 bales. There were also 468 bags inferior Brookwashed Odessa, partly sold at 11½d, to 13½d; 2,867 scoured Odessa Merino which sold at 29d to 30½d for fine AAA medium to fine AAA 25d to 29d, AA 24d to 16½d, locks and low marks 18d to 22d; 1,097 Hungarian not wanted, a few sold at 14d.

By private contract sales have been made of the new clip of Mestizo at 8d Mo and 7½d 1st for short dirty parcels. Cordova is very scarce and has realized 11½d middling short up to 13½d superior long. White Donskoi fleece has sold for arrival in August at 11½d, and 12d is now asked for cargoes.

Shipments from Liverpool to United States, from 1st January, to 24th March, 1864, in bales Wool 2,943, Shoddy 581, Flocks 2,014, Camels Hair 16, Cotton 93.

How Mr. Mechi Plows.—Mr. Mechi, the great English farmer, is as earnest as to the effect of deep cultivation as in most of the other subjects he advocates. He says that his "neighbor, Dr. Ribbon, of Rivenhall, once pulled up a parsnip with a vertical root 13 feet 6 inches long, besides the farther piece left by its breaking off. This was in a bank of earth 20 feet deep, that fell over loosely when excavated." As a general rule, the Alderman does not, therefore, advocate plowing a rod or so in depth; but he wants farmers to imitate more closely than they do the practice of successful market gardeners, who always cultivate much deeper than is done with field crops. As to his own practice, he says:

"From sixteen to twenty years ago I broke up much of my land, by six horses following in the track of the first plow, drawn by three horses, and in this very year I could see the great contrast in part of a field where I had omitted to do this. To-day I am following the two-horse plow, with four horses attached to an iron plow, without the breast. The subsoil breaks up, boils over, and intermixes with the top soil and manure, and as it flows over you see the strong roots of old weeds torn from their hitherto safe residence, but condemned now to destruction or removal."

Paints, Oils, and Painting.—We call the attention of those who want the above articles, to the Card of Messrs. J. R. Deane & Co., our near neighbors, who have a good stock in trade, and who, by their fair and liberal dealing, have a well established trade and permanent customers. This enables them by valuable facilities to sell their goods at very advantageous terms. This firm have men they can send out to do word appertaining to their line, at short notice. We cheerfully commend this house to our readers and friends.

Furniture for the Household.—In a little State like ours, one would suppose that the furniture that has been imported here for the last few years, (ship-loads of it) would have supplied this coast, so that the trade would have ceased; but the more that comes seems only to make a demand for more. We have for years past had the pleasure to herald the Furniture Warerooms of Messrs. J. G. Clark & Co., whose business was very extensive, and in that trade gave to him a handsome competency. Mr. C. retired from business, and has left our shores for a season on a tour of travel. We now herald in the columns of our journal the Furniture Warehouse of J. W. Stringer, Esq., 520 Washington street. Our readers from the country should remember that this place is worthy their particular attention. The furniture from this house will always give satisfaction, being made to order to please customers. The parlor and chamber sets are of their own home-make. We are pleased to say, also, that Mr. Taylor, for many years the popular salesman at J. G. Clark & Co. is at this house. His friends, and purchasers of furniture for many years, will be glad to call and see him, and trade with him at Mr. Stringer's, and where they will always be satisfied with their purchases.

FURNITURE!
....AND....
CARPETS.

We respectfully invite an inspection of the above. Our System is ONE PRICE.
O'CONNELL, RYAN & Co.
SACRAMENTO.
13-3m.

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle-grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H & L AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories,

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL-OIL as a basis to their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native product of California, believing that large quantities of natural resin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest until, at the present time, they have established a manufactory of Rosin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply. The subscribers are now receiving native resin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

HUCKS & LAMBERT,
Manufacturing Chemists,
21-9 Natoma and Mission streets, San Francisco.

A Fine, House, Orchard and Vineyard
NEAR SACRAMENTO—FOR SALE.
A FINE HOUSE AND OUTBUILDings, and 30 acres of Land in the highest state of cultivation, with good Orchard and Vineyard, in full bearing. Home Miscellany.

[For the California Farmer.]

ACROSS THE CONTINENT.

Spread, O work of God and man—
Strike thine anvil, sinewy Peace—
Until thy forge's iron span,
A country free in war's release,
Across the Continent.

Swing ajar, O Golden Gate,
Let thy tides go in and out,
White-winged birds of commerce wait,
Brawny sailors sing and shout,
"Across the Continent."

And the heathen lashed and dumb,
Sitting in beleaguered night,
Lift their hearts so cold and numb,
Thanking God for breaking light,
Across the Continent.

China's Flowery Kingdom greets,
Knocking at thy portalled west,
Hark along thy golden streets,
Comes that cry of strange unrest,
"Across the Continent."

Laughing Islands of the sea,
Nations flocking into port,
Bring their argosies to thee,
And send up that glad retort,
"Across the Continent."

Harvests rolling in the wind,
Fruit that ripen and decay,
Reapers bend, and sing and bind,
While the gleaming children say,
"Across the Continent."

Lungs of iron, hoops of steel,
Day eternal in its track,
Haste, O Sun—let bells that peal
There at morn, at night peal back,
Across the Continent.

Gold and silver links of love,
Like a zone of fire shall clasp,
Palm to palm and glove to glove,
East and West in one firm grasp,
Across the Continent.

And the hearts that sigh for home,
Bruised hearts that will not break
Those that write "Yes, I will come,
When I've *gold* enough to take,"
Across the Continent.

Cheery in thy West-land home,
Weeping mother, watch and pray,
For the last one soon will come,
For the poor Acre found a way,
Across the Continent.

Strike the hammered rivet home,
Bridge the gorge and blast the rock,
Here shall rise no lordly dome,
Labor leaves her mighty track,
Across the Continent.

Where the trail and wigwam stood,
Now the village church-spire stands,
And along the margined wood,
Smile sweet homes and harvest lands,
Across the Continent.

C. FRENCH RICHARDS.

San Francisco, May 1st, 1864.

LIFE'S INCONGRUITY.

BY LIEUTENANT ROBERT PHELPS.

Of the following poem, Willis, of the Home Journal, says: "The degree to which the melodies are perfected, and the beauty of metaphor and rythm, are more like the finished work of a classic poet than the inspiration of an impulsive soldier. It is an exquisite gem, and, though we have never before heard of the author, we are very sure that he is not only a soldier, but the truest of poets:"

Green grows the laurel on the bank,
Dark was the pine upon the hill,
Green hangs the lichen, cold and dank,
Dark springs the hearts-ease by the rill!
Age-mosses clamber ever bright,
Pale is the water-lilly's bloom;
Thus life still courts the shades of night,
And beauty hovers o'er the tomb.

So, all through life, incongruous has
Each object worn from childhood down,
The evanescent—heaven's blue,
The all enduring—sober brown:
Our brightest dreams too quickly die,
And griefs are green that should be old,
And joys that sparkle to the eye.

And yet 'tis but the golden mean
That checks our lives' unsteady flow.
God's counterbalance thrown between,
To poise the scale 'twixt joy and woe;
And better so, for were the bowl
Too freely to the parched lip given,
Too much of grief would crush the soul,
Too much of joy would wean from Heaven.

NEVER TRIFLE WITH AFFECTION.—How often in this life are we inclined to trifle with those whose love is the dearest object of our existence. How often does foolish pride or a wicked desire to show our independence, tempt us to scorn the kind offices of our best friends. How often does the heart, turned against its idol by some real or fancied grievance, repel all the advances, refuse to accept the explanations, or even the humiliating acknowledgements of an error committed by that idol, thinking perhaps that as it has humbled itself thus far it may be induced to creep in the dust before the virtuous (?) indignation of that self-willed stony heart. And how often does some little look or word of reproof, although we know well enough that it is intended only for our good, cause a coldness to arise between us and those who are everything to us, shutting out the bright sunlight from our minds, leaving us in darkness bordering on despair. Oh, who can live without love! Boast, if you will, of your independence; proud, haughty mortal; the time comes when you must see your folly; when you must acknowledge that help from others is not to be disdained.

INDUSTRY and frugality are by no means necessarily connected with an avaricious disposition. Economy is not inconsistent with generosity. It steers the middle course between extravagance and covetousness. It is observable that the most industrious are the most liberal. Be liberal, not prodigal; diligent, not avaricious; so also frugal, but not sordid."

Gleaners.

They are scattered all over our broad and beautiful land. They are sturdy, vigorous men, and by their sides tender, frail women, gleaning for riches, fame and honor. And living merely for these, forgetting to glean treasures of love and wisdom, their hearts grow hard and cold; their cheeks become pale and wrinkled, eyes dim, hair silvery, and steps feeble, and still they find no joy and gladness in it all, for written on each golden tablet, and entwined with every laurel wreath, they see "Passing Away." There are many gleaning for Truth, and searching among rubbish and stones, and far-away places, find it, and rejoice with great and holy joy.

"Gleaners in the world's great bosom!
Toilers! in the mine or mind,
Dig away! The hidden jewel
Ye shall yet most surely find."

We are *all* Gleaners. And like the gentle Ruth, we ought to go among the reapers early, and diligently labor, gathering a rich harvest from the golden fields around us. Glean lessons of love and duty from the dewy leaves, fragrant flowers, and birds of song. As scholars we should glean useful lessons from our school-books, which will strengthen and improve the mind. As workers, we should learn lessons from busy, active machinery, and glowing forge, which helps to harden and strengthen metal, just like fiery trials and great troubles, purify and strengthen hearts.

Ah! the time has come when we all have to pass through great trials. The dim, dark war-cloud o'ershadows us, and yet we are gleaning lessons of faith and endurance. And as link after link of slavery's chain is broken, lesson after lesson is gleaned from it, that "God doeth all things well."

How shall we glean? With hope that the harvest will richly repay us for all toil. With faith that the Master will bid us welcome by the side of his servants. With patience gleaning untiringly. And may we all, at the close of life, be ready to answer the question, "Where hast thou gleaned to-day?" by pointing out to our master the fields where we have labored, and showing our sheaves.

One, perchance, has gleaned among desolate rocks and barren soil, but will he not, if an untiring laborer, be as amply repaid as he whose way led among thick sheaves and golden grain, and pleasant, sunny fields? Be faithful and true, weary laborer, the reward, life eternal, will soon be yours. Oh! all ye, who, passing through life, are gleaning all that's good and true, how my heart warms to you!

Dear fellow-gleaners, there's the same road before us, even though we're widely separated now. There's flowers and brambles, there's rocks and emerald grass, there's scorching sands and cooling pastures to go through, and then, too, a deep, dark river to cross, but beyond a sunlit clime, joy, great and unending, crowns of glory and angel-songs.

"Thus when hope, and faith, and patience,
Glean the pastures God has sown,
Softly angel-songs will welcome
Us, the reapers, as his own."

[Arthur's Home Magazine.

EATING WHEN SICK.—It is the custom among a certain class of people, when a member of the family is sick, to begin at once to ask: "Now what do you want to eat?" Every one has heard the old story of the man who ate eighteen dumplings when he was sick. On one occasion when engaged upon the eighteenth, his little son said: "Pa, give me a piece?" "No, no, my son," replied the father, "go away, pa's sick." When a young man has been surfeited, in season and out of season, until exhausted nature gives away, and a fever is coming on, the good mother is in trouble She anxiously inquires, "Now John, what can you eat? You must eat something. People can't live without food." Then comes toast, and tea, etc. The stomach is exhausted, and no more needs stimulating or food than the jaded horse needs the whip. What is needed is rest, complete rest. Nine-tenths of the acute diseases might be prevented by a few day's starvation, when the first indications appear. I don't mean complete abstinence in every case, but perhaps a piece of cold bread, with cold water for drink. If such a policy was generally adopted, what ruin would overtake the medical profession.—[Dr. Dio Lewis.

UNHEALTHY POSITIONS OF THE BODY.—Those persons engaged in occupations requiring the hands alone to move, while the lower limbs remain motionless, should bear in mind that without constantly raising the frame to an erect position, and giving a slight exercise to all parts of the body, such a practice tends to destroy their health. They should, moreover, sit in as erect a position as possible. With seamstresses there is always more or less stooping of the head and shoulders, tending to retard circulations and respirations, and digestion, and produce curvature of the spine. The head should be thrown back to give the lungs full play. The frequent long-drawn breath of the seamstress evinces the crimping and confinement of the lungs. Health cannot be expected without free respiration. The life-giving element is in the atmosphere, and without it in proportionate abundance must disease intervene. Strength and robustness must come from exercise. Confined attitudes are in direct violation of correct theories of physical development and the instincts of nature.

DEATH IN THE SWEET-MEAT JARS.—A child was recently poisoned in Pennsylvania, so that death ensued, from eating apple-butter which had been kept in a glazed jar. This glazing contains an active poison—the oxide of lead—which is dissolved by fruit acids, and is extremely dangerous to life. All such substances as apple-butter and the like should be kept in wood or glass vessels, so as to avoid the possibility of mischief. The above is not a solitary instance, as many similar ones have occurred.

SOME men are kind because they are dull, as common horses are easily broken to harness. Some are orderly because they are timid, like cattle driven by a boy with a wand. And some are social, because they are greedy, like barn-yard fowls that mind each other's clucking.

Influence of Food upon the Intellect.

Very few well-informed persons dispute the fact that the nature of the food taken by man has an influence upon his brain, or mental power. It is unquestionable that certain kinds of food are injurious to beasts and produce or tend to induce disease; and this peculiarity has a proportionate evil effect upon the animal part of man. Other matter taken into the system for refreshment or luxury, such as drink or narcotics, has also some influence upon the character of those who partake of it. National traits and characteristics are thus developed, and we see Germans and Hollanders heavy slow thinkers, solid rather than brilliant, and given to sluggishness rather than bodily activity. Cannot the cause of this be found in the quantity of beer, tobacco and highly seasoned cookery which is consumed by the people; and may we not trace some of the prominent traits of the French character to the quality of diet and drink they subsist on? Whatever conclusions we may arrive at we may not venture to dispute the result of actual experiments on this subject, made by learned physicians, some account of which we annex.

In the excellent work of Prof. Moleschott of Zurich, the influence of diet on the intellect is dwelt upon at great length. "It is a well-known fact," says this philosopher, "that change of food has transformed the wild cat into the domestic fireside companion; from a carniverous animal, with short intestines, it has by gradually becoming accustomed to other food, become transformed into another being, enabled by a long intestinal canal to digest vegetable food which in its natural state it never touches. Food, therefore, makes the most rapacious and perfidious animal in the world an inmate with man, agreeing with children, and rarely, except to a close observer, revealing its former guileful character. Are we, then to wonder, that tribes of men become ardent, phlegmatic, strong or feeble, courageous or cowardly, thoughtful or unintelligent, according to the different kinds of aliments they take? If food is transformed into blood, blood into nerve and muscle, bone and brain, must not the ardor of the heart, the strength of the muscles, the firmness of the brain, be dependant upon the constituents of food?" In treating of the diet of the artist and literary man, the author states that well-baked bread and lean meat, combined with young vegetables and such roots as are easy of digestion and contain a considerable portion of sugar, form a wholesome diet for thinkers and poets; a large quantity of leguminous seeds, heavy bread, rich gravy, and greasy meats, create those irritable, morose and almost slender statesmen, who have permitted gloomy thoughts and gloomy imaginations to eclipse all happier views of life in them, or that they have come to consider rods and fetters as the most important promoters and protectors of civilization."

To the Rev. Professor Haughton of Trinity College, Dublin—a philosopher who has enlarged the boundaries of many departments of science—we are indebted for an admirable physiological investigation, the results of which have established the curious fact that the greatest, or perhaps we should say, the hardest thinker is the greatest eater.

Professor Haughton states that men employed in mere manual labor, require only a vegetable diet, while those who are engaged in pursuits requiring the constant use of the intellectual faculties must be supplied with food of a better kind—that is, mixed animal and vegetable aliments.

These very interesting experiments of Professor Haughton open a wide field of curious and interesting inquiry. Is vital activity a mere modification of chemical force, and is the explanation of all the phenomena of living beings to be found in the domains of chemistry and the various physical sciences? No doubt many of the changes which take place during the different stages in the life of an animal can be clearly traced to the unmodified action of the various physical agencies, but there are others which are not so easily explained, and which some physiologists refer to the operation of a force which they regard as distinct from all others, namely, the vital. It should, however, be remembered that this force as it is called, never evidences its independent nature by any unaided manifestations of a material character. It has never been proved that any portion of matter, however small, has been caused to change its position in space by the sole agency of the vital power.

DOMESTIC RECIPES.

ROCK CREAM.—This will be found a very ornamental as well as a delicious dish for the supper table. Boil a teacupful of the best rice till quite soft in new milk, sweeten it with powdered loaf sugar, and pile it up on a dish. Lay on it in different places square lumps of either currant jelly or preserved fruit of any kind; beat up the whites of five eggs, with a little powdered sugar, and flavor with orange-flower water or vanille. Add to this, when beaten very stiff, about a tablespoonful of rich cream, and drop it over the rice, giving it the form of a rock of snow.—[Godey's.

TO MAKE LARD CANDLES.—To every eight pounds of lard add one ounce of nitric acid, and the manner of making it as follows: Having carefully weighed your lard, place it over a slow fire, or at least merely melt it; then add the acid, and mold the same as tallow, and you have a clear beautiful candle. A small proportion of beeswax makes them harder.

CORN GRIDDLE CAKE.—Scald at night half the quantity of meal you are going to use, mix the other with cold water, having it the consistency of thick batter; add a little salt and set it to rise; it will need no yeast. In the morning the cakes will be light and crisp.

RHUBARB PIES.—As this is the season for them we give the following receipt concerning the sweetening required in Rhubarb pies, a Pittsfield lady gives the following: "Throw in sugar as long as your conscience will let you; then shut your eyes and throw in one handful more."

JOHNNY CAKE.—"Shorten" corn meal dough with good lard, and season with salt. No soda or saleratus should be used. Bake on a board two feet long, and six inches wide, by setting up on one edge before the fire.

BOWEN BROTHER,

WHOLESALE AND RETAIL DEALERS IN

STAPLE AND SELECT FANCY

GROCERIES,

Ship stores, Ranch and Farm Stores

OF EVERY KIND, AT LOW PRICES.

Particular attention is always given to the selection of our stock of Goods. Many articles are prepared

AGRICULTURAL IMPLEMENTS.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it.

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 8 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

We are

NEW

AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparse, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of

COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 5-3m

THE ABSENT ONE.

My own, my bright, my beautiful,
Would I could see thee now,
And twine a garland of fair flowers
To deck thy maiden brow;
But fate has willed that I should roam
Afar, dear one, from thee,
And sadness casts her shadows now,
Dear one, on me, on me.

I know that while I roam afar,
Dear one, afar from thee,
That I am in thy thoughts the while,
And thou art true to me,
That when my roamings have an end,
And I return to thee,
Thou'lt give a hearty welcome, love,
A welcome, love, to me.—[N. Y. Dispatch.

AT a banquet when solving enigmas was one of the diversions, Alexander said to his courtiers. "What is that which did not come last year, has not come this year, and will not come next year?" A distressed officer starting up, said, "It certainly must be our arrears of pay." The king was so diverted, that he commanded him to be p aid up, and his pay increased.

Cheerfulness arises half from personal goodness, half from a belief in the personal goodness of others.

To love and to labor is the sum of living; and yet how many think they live who neither labor nor love.

FARMER'S sons had better learn to hold the plow and feed the pigs, than to measure tape and count buttons.

Greenbacks! Greenbacks!

We receive Greenbacks for subscriptions to the California Farmer, and allow the ruling premium for Gold!

IT is a well known fact to all conversant with newspaper publishers, that since the war commenced the cost of publishing a paper has very greatly increased, so much so as to stop hundreds of papers, over the United States. Yet it has been our pride not to add cost to our *subscribers*, but to relieve them although we have made sacrifices of thousands to carry out our principles, and do what we esteemed our duty to uphold the credit of our country both by precept and example. From the first we announced that we would receive Treasury Notes at par for *Subscriptions to the Farmer*. But the notes were rejected, here, as currency and many of our subscribers have, in conformity with the custom, continued to pay us in gold; yet we have never refused greenbacks at their face value when sent us by subscribers, though it has subjected us to serious loss from our being obliged (from the rejection of the currency as mentioned), to pay gold in our disbursements. At the present cost of all articles, we could not do a paying business by receiving greenbacks at par, at our present rates. But to make the thing work equally for all our subscribers, as well as conform to what we think our duty, we propose to adopt the greenback basis, and raise our subscription price to $5 a year, payable in greenbacks.

As it is evident to us now that the people of California are determined to sustain the National Government and make Treasury Notes the medium of trade, generally, we announce as follows:

The price of subscription to the CALIFORNIA FARMER, hereafter, will be $5 a year, payable in U. S. Legal Tender notes; this being a safe and easy medium of transmission, by mail; and we will allow the ruling premium when gold is tendered in payment.

We also announce, to all who are indebted to us for *Subscriptions* to the CALIFORNIA FARMER, send along your *Greenbacks*. They will come to us with the glorious impress of our country's sovereignty, and every pecuniary sacrifice we may make we cheerfully lay upon the altar of that country whose faith stands pledged in these notes and whose integrity *we dare not question*.

We make this change in the terms of our subscription *not to advance the present cost* of our journal, but rather to make it cheaper to all, for at the *present nominal* value of the notes it will cost the subscriber but $3 25.

We do hope also that all to whom we have sent bills, all who are indebted to us, will now see how easy we make it for them to pay their dues. It must be remembered also that all who owe for this paper, a bill of six month's standing should, by the terms already heretofore announced, remit us $5, and g. b.'s to that amount will be very acceptable.

We shall now have the consciousness of having taken a true step to sustain the National Currency, and we shall know who will "go and do likewise."

We do hope that the friends of a good, sound National Currency will give us their aid and cooperate by sending us their names for the FARMER.

ARTIFICIAL BONE FILLING

For Decayed Teeth,

Put in while soft, without pressure or pain. Aching Teeth, or more Shells can be filled with it, and restored to health and usefulness, by the discoverer, DR. PEARSON (late Pearson & Crane), at his rooms No. 633 (old No. 187) Clay Street, San Francisco.

Dr. Pearson having spent the last six years in New York, Philadelphia, Baltimore, London, and Paris, is prepared to supply at short notice, and at reasonable prices, Artificial Teeth on the most approved methods, including Vulcanite Rubber Work, rendering the Extraction of roots wholly unnecessary

DR. PEARSON'S NERVINE

Cures the severest Tooth-ache, and serves as a temporary filling—any one can apply it by observing the directions. Price $1, sent by express.

ALL DENTAL OPERATIONS will receive the personal attention of Dr. Pearson, as he has no partner, and INTENDS having none in future. His office has been established thirteen years—being one of the oldest, if not the oldest Dental Office in the State of California.

10 JAMES PEARSON, M. D.

A Lady Teacher.

A LADY TEACHER OF EMINENT ABILITY AND qualifications, one who fully understands the great responsibility of the position, wishes a situation in some Seminary, or School, where she can have a responsible trust. The Lady has long been employed as a Teacher, and can bring the most ample testimony of ability and qualifications. A note addressed to A. B. L, care of Editor of Farmer, will be promptly attended to. 10

Splendid Windmill for Sale.

ONE OF DR. FRANK JOHNSON'S SELF-REGULating Windmills is offered at a low price, if called for immediately. This is a good 12-foot mill, 3-horse power, of the very best make and model, and finished in the most workmanlike manner. For particulars inquire of the Editor of California Farmer. 10

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] May 12.

The Grain and Produce Market is apparently more easy than last week. The few showers of rain in some parts of the farming country has doubtless done much good. There is a manifold disposition to economise as much as possible among those using Feed Grains—the consumption is materially less than it was before the rise. The advance in Flour the past few days has been considerable. Flour was ruling lower than Wheat and it was natural for an advance to take place. The bulk of low grades or cheap Flour that has been on the Market has gone into consumption, or is in the hands of speculators and no longer interferes with our miller's sales. Barley, Wheat, Oats, and Corn are firmer but less active, doubtless the closeness of the money market and near approach to steamer day are having a temporary effect to depress prices. Hay of the new crop has made its appearance on our market; the receipts of both old and new, however, are light. Jobbing prices are much the same as last quoted, but cargo sales are a shade less. Potatoes have been in liberal supply, large arrivals have had a depressing effect on the market. The bean market is quiet, buyers are unwilling to meet seller's views.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 9720 sks, Barley 9250 sks, Oats 1075 sks, Potatoes 1443 sks, Beans 200 sks, Cornmeal 596 sks, Flour 2493 qr-sks, Bran 608 sks, Wool 911 bales, Straw 280 bales, Hay 1023 bales, Corn 352 sks, Salt 2087 sks.

Also, Constwise: Beans 1304 sks, Wool 336 bales, Potatoes 4503 sks, Oats 223 sks, Barley 973 sks, Wheat 100 sks, Flour 100 qr-sks.

Prices at Pacific Fruit Market—May 12.

Messrs. Addison Martin & Co. report to us the following prices as the ruling rates for fruit:

Apples 8@15c, ₱ lb. Dried Plums 18@30c ₱ lb. Dried Peaches 10@15c ₱ lb. Dried Nectarines 20@30c ₱ lb. California Dried Figs 30@50c ₱ lb. Strawberries 25@40. Raspberries 40@50c ₱ lb. Lemons $8 00 ₱ 100. Gooseberries, 15 @25 cents ₱ lb. Oranges $2 50@$3 00 ₱ 100, do. sweet, $1 00@5 00 ₱ 100. Black Walnuts 15@20c ₱ lb. Cherries 25@50c; do. No. 1, 60@$1 00.

Fruit has come in a little more plenty the past week. Cherries are having the tendency to bring down the price of strawberries.

BY CONTINENTAL TELEGRAPH.

DATES TO MAY 9.

The Lieutenant General opened the campaign in Virginia on the night of Tuesday May 3d. The Second, Fifth, Sixth and Seventh Corps crossed the Rappahannock and the Rapidan by the fords leading to the roads which penetrate the Wilderness or pass to the eastward of that tract. The crossing was effected without opposition. This movement threatened Lee's right flank. Burnside's corps was held in reserve at Warrenton.

Rebel journals announce that a great fire occurred at Wilmington (N C.)—date not given—destroying property valued at from $3,000,000 to $5,000,000 in gold, and checking the contraband business of the blockade runners, whose property was consumed. The rebel ram in the Neuse had run aground. Another one, at Plymouth, which assisted in capturing Wessels' command, is reported to be leaking and helpless.

The National House of Representatives has passed a bill providing for the reconstruction of State Governments in the rebellious portion of the South. This Act requires a majority of the legal voters to participate in the work of reorganization, extends an amnesty to persons who have held civil office and military office below the rank of Colonel, and insists upon the recognition of the death of slavery. It differs from the President's plan mainly in requiring more than one-tenth of the legal voters to sanction the new State Government.

The advance of the Army of the Potomac across the Rapidan on the 3d of May was followed by a terrific battle, which raged until the evening of Friday, May 6th, when Lee withdrew. The army seems to have been concentrated in its old position near Mine Run, intrenched and protected to a certain extent by thick woods which rendered the operations of the Union army extremely difficult. On May 4th Lee left his intrenchments and attacked the Union forces. Next day the Army of the Potomac attacked the rebels, and on the 6th—the third day of the battle—Lee made a series of desperate efforts to break his tenacious adversary's lines, all of which efforts were repelled with heavy loss. On Saturday the 7th, there was no serious fighting, and the rebel army was believed to be quietly retreating. Hancock was pushed forward to Spottsylvania Court House. An official order from General Lee informs us that Longstreet was wounded and General Jenkins killed. On the National side, General James S. Wadsworth, of New York, was killed, and a number of general officers wounded. The losses were heavy on both sides. The rebel wounded were left on the field.

Meantime General Butler's army advanced up the James river and effected a landing on the small neck of land opposite City Point, where, under the protection of the gunboats, a good base was secured and fortified. That position is within 18 miles of Richmond, and not more than five miles from the railroad between the rebel Capital and Petersburg, Generals Smith and Gilmore were in active command of the troops, and devoted themselves to the destruction of the southern communications of the rebel Capital. General Kautz, with a cavalry command, had left Suffolk to destroy the railroad at Hicksford, south of Petersburg. Beauregard is said to be in command of the rebel forces at Richmond.

From Sherman's department the intelligence is also stirring, that General's whole army having commenced its advance southward on the 2d of May. As a measure of precaution Gen. Schofield, who commands in East Tennessee, had ordered the destruction of fifteen miles of the East Tennessee and Virginia Railroad beyond Bull's Gap. Gen. Thomas advanced directly on Dalton, while Gen. McPherson moved from Huntsville to make a flank march toward Rome by way of Will's valley. This army is marching into the bowels of the Confederacy.

On the 7th the opposing Generals skirmished and manœuvered for position. Grant gradually extended his left wing, under Hancock, southward, so as to threaten Lee's communications with Richmond. Spottsylvania Court House, six miles south of Chancellorsville, at the junction of several roads and directly upon the rebel line of retreat, was the point of importance to both Generals. Here a fight occurred on Sunday, the 8th, in which it is stated that Gen. John Sedgwick was killed. An official dispatch from Gen. Butler announces that his forces have cut the railroad between Richmond and Petersburg, and between Petersburg and Weldon. It would seem that it is not Butler's intention to advance on Richmond, but for the present to prevent the reinforcement of Lee. He claims to have accomplished this purpose. The Richmond papers concede that this movement has created a lively panic in that city.

The Democrat publishes the following: The expedition under Gen. Steele, towards Shreveport, has ended. A gentleman conversant with the facts, who has arrived here, communicates the following in regard to the expedition: Steele found no stores to subsist his troops, and had to reduce the allowance to quarter rations. As the movement was to have been a cooperation with the main one of General Bank's, which had failed, there remained no course but to return to Little Rock. Price undertook to retain Steele in Camden, while Marmaduke, with a strong force set off for Little Rock. Steele, for the safety of Arkansas and its Capital, with its Union population and millions of dollars worth of Federal stores, and for the rescue of his army, broke through Price, and set out to get to Little Rock in time to save it from Marmaduke, who was making every exertion to rout and bag the proposed game. At Sabine Fork it became necessary to give Price battle, which was handsomely done. The fight was protracted and bloody, lasting three or four hours, and resulted in the complete repulse of the enemy, leaving Steele to pursue the exciting race with Marmaduke. The latter approached Little Rock, throwing shells into our army on the afternoon of the 1st. Shortly afterwards our cavalry came up, and joining the troops at the post, compelled Marmaduke to relinquish the undertaking. He made little resistance, as the body of Steele's army was rapidly arriving. During the entire march from Camden the troops were constantly skirmishing with the enemy, who hung upon their rear and flanks, strenuously endeavoring to impede their progress. There were no ambulances for the wounded, and they had to be left at the houses of the residents on the road.

Discoveries have been made which confirm the statement published some time since of negotiations between certain parties North and the rebel Gen. Kirby Smith, whereby the latter was to secure to the former the Confederate cotton west of the Mississippi river, and to receive in return goods and ammunition. Several prominent business men were repeatedly solicited by parties of wealth and influence in the East to join in the enterprise—one to act as agent. They, declined, but the project seems to have been successfully carried out to some extent. S. L. Casey of Caseyville, Kentucky in connection with William Butler of Springfield, Illinois, late State Treasurer, are named as prominent agents in accomplishing it. The Treasury Department furnished permits to pass it. A portion however, was stopped at New Orleans by Gen. Banks, notwithstanding the permit and order of the Treasury Department.

The law recently passed by Congress makes provision for the permanent settlement of the Indians of Utah in Uinta Valley of that Territory. The bill appropriates thirty thousand dollars for agricultural implements, to enable them to become self-sustaining.

☞Holloway's Pills and Ointment.—Erysipelas. These deservedly popular medicines have met with astonishing success in the cure of erysipelas, king's evil, ring worm, scrofulous eruptions, and all inflammatory diseases of the skin. Other preparations may afford a temporary relief, but the combined action of these remedies will by their detergent and properties effect a radical cure in the blood and system.
Sold by all Druggists, at 30c, 70c, and $1 10 per box or pot 206
HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM,
cor. Clay and Front streets, San Francisco, Cal

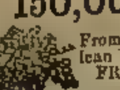
GOD MADE MAN, AND MAN MADE MONEY
God made Bees, and Bees made Honey;
Men and Money, and Honey and Bees,
There are spurious kinds of all these.
But if you want pure California Honey,
Come to Washington Market with your Money,
In all shapes you'll get it if you call,
At Howard & Knoller's Honey Stall.
'Tis said, some folks their Honey mix.
But it is always pure at 70.
Now when your friends to market you bring,
Be sure and come to the Eastern Wing.
v19-20

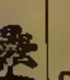
Fine House and Garden in Sacramento City

A LARGE, SPACIOUS, AND GENTEEL House and other buildings, with fine Garden, all finely located in the upper part of the city, containing a full half block—will be sold a bargain and on liberal terms of payment if applied for soon. Real estate is rapidly improving in Sacramento, and this is a rare chance. Inquire of editor Farmer. 15

Hubbard Squash.

WE HAVE RECEIVED ANOTHER SMALL INVOICE of the true "Hubbard Squash Seed," from the Atlantic States.
This is the BEST Squash in the world. It is a hard shell, and the only way to cook it is to saw the shell in halves and bake in the oven, then serve on the table in the shell. The flavor of the Squash is better than the best Sweet Potato, and for pies has never had an equal.
Seed for Sale at this Office.





Old Newspapers.

FIFTY THOUSAND Large-sized old Newspapers for sale at this office in lots to suit purchasers.

SEED, PLANTS, ETC.

THREE PREMIUMS for BEST Varieties FOREIGN GRAPES.

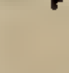
150,000 Grape-Roots

From Imported Foreign, and American Vines, of my own Importation, FRUIT TREES, Etc., Etc.

Having imported myself from France, Germany, Italy, and Dr. Grant of N. Y., I offer for sale this season, as choice a lot of FOREIGN GRAPE ROOTS and CUTTINGS as can be had in this State, and as cheap as any reliable nurseryman will sell. All the Vines and Trees have borne fruit with me, and I guarantee everything I sell to be TRUE TO NAME, or refund the money.

AMERICAN VARIETIES GRAPE-ROOTS, 1 and 2 years old, and Cuttings:
Delaware, Diana, Concord, Iona, Union Village, Lincoln, Anna (white), Catawba, Isabella, etc.

EUROPEAN VARIETIES GRAPE ROOTS, 1 and 2 years old, and countless numbers of Cuttings:
True black, red, and white Burgundy (Pineaux), Traminer, Rulander, Madeira Winegrape, Riessling, white, red, and black Frontignac, Malaga, Parsley, Cannon-Hall and White Muscat of Alexandria, and over 100 varieties more.



ALSO—10 000 rooted vines 2 and 3 years old, LOS ANGELES, very cheap, and any amount of Cuttings of all varieties.

Also a limited lot of
DOWNING'S EVER-BEARING MULBERRY TREES
1 year from bud, extra large;
French, German, and Swiss Prunes (Fellenberg's Zwetshe).
....ALSO....
Pear, Apple, Plum, Peach, etc; Lawton Blackberries, English Gooseberries, and all kinds of Trees, and Shrubs. Cions unlimited, and cheap, of the above.

I intend to close out the Nursery Business, and sell as low as the lowest. For prices or orders, send per Wells, Fargo & Co, or mail, to

Louis E. Miller's
Mountain Vineyard,
"SOLLAH,"
Rattlesnake Bar Postoffice, Placer Co.
January 1, 1864 20-20

1864. - - 1864.
American Seed Store
206 J STREET,
Sacramento.

I AM CONSTANTLY RECEIVING BY Isthmus Express from the best Eastern Seed Growers—

W. R. STRONG,
15-tapl 206 J street, Sacramento.

PATENT RIGHTS FOR SALE.

THE FOLLOWING PATENT RIGHTS OF NEW AND valuable Inventions (of which we have models to show their value) are now offered for the States of California and Oregon, and Utah and Washington Territories.

NO. 1. THE MECHANIC'S SPIRIT LEVEL.
Patented September 13, 1859.
This Implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet out. Builders will do well to examine the model.

NO. 2. IMPROVED CLOTHES REEL AND BAR.
Patented January, 3, 1860.
This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery, or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines, neat when used and ornamental when not in use.

NO. 3. A CORN CULTIVATOR.
With this implement the soil is first thoroughly plowed and deeply pulverized, and on the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

NO. 4. A MUSKETO BAR.
This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

NO. 5. HYDE'S PATENT POST-DRIVER.
A most excellent labor and money-saving machine, for which we offer rights.

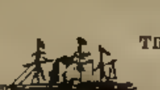
NO. 6. SEED-SOWER.
This is a new invention, and one of great importance to all who sow grain, or any garden seeds. The working model can be seen at the Farmer's Reading room.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to
COL. WARREN, Editor Farmer.

Wanted.—Improved Property.

A GENTLEMAN WANTS A HOUSE AND LOT IN the
CITY, OR OAKLAND,
Or a small improved Farm, containing from 20 to 100 acres of land, within the influence of the sea-coast, and of easy access to the city; for which he offers to exchange

First-class Improved Lots in New York,
Within three miles of Wall-street Ferry, accessible by steam and horse cars; or will exchange



First-class Reese-River Mining Stock.

For further particulars inquire of the Editor of the California Farmer 10-tf

SAN FRANCISCO AND SAN JOSE RAILROAD.

Two Trains Daily, Each Way
CHANGE OF TIME

ON AND AFTER FEBRUARY 16, 1864, the San Francisco and San Jose Railroad Company will run trains each way, daily, leaving the Depot on Brannan street, between Third and Fourth, for San Jose and intermediate stations, as follows:
Leave San Francisco at 8 a. m., and 4 p. m.
Leave San Mateo at 8 ; 55 a. m. and 4 : 55 p. m.
Leave Redwood City at 9 : 20 a. m. and 5 : 20 p. m.
Leave Santa Clara at 10 : 10 a. m. and 6 : 10 p. m.
Arriving at San Jose at 10 : 20 a. m. and 6 : 20 p. m.
RETURNING.
Leave San Jose at 7 : 30 a. m. and 3 : 30 p. m.
Leave Santa Clara at 7 : 40 a. m. and 3 : 40 p. m.
Leave Redwood City at 8 : 30 a. m. and 4 : 30 p. m.
Leave San Mateo at 8 : 55 a. m. and 4 ; 55 p. m.
Arrive at San Francisco at 9 : 50 a. m. and 5 : 50 p. m.
FREIGHT.
Our road being completed from the City of San Francisco to the City of San Jose, we are prepared to take Freight to either end of the line, or to and from any Station on the Road, at the lowest rates.
COMMUTATION TICKETS.
Parties wishing to commute between here and San Jose, or between Stations, can procure tickets at greatly reduced rates, by applying to any Station Agent, or at the office of the Company.
☞Passengers can reach the Depot by either the Third or Fourth street lines of city cars.
A. H. HOUSTON,
21-3-3m General Superintendent.

California Steam Navigation Company
Departure daily from Broadway wharf, at 4 o'clock, P. M.
CARRYING UNITED STATES MAIL.

THE FAST AND SPLENDID STEAMERS
CHRYSOPOLIS and YOSEMITE
Will leave on alternate days for SACRAMENTO, at 4 o'clock p. m., from Broadway wharf.
Steamer CHRYSOPOLIS, Chadwick, Master, will leave on Tuesdays, Thursdays and Saturdays. Steamer YOSEMITE, Poole, Master, will leave on Mondays, Wednesdays and Fridays.
Other steamers will also leave for STOCKTON every day at 4 o'clock, p. m. (Sundays excepted), from Broadway Wharf.

For Marysville and Intermediate Landings Every Day.
Steamer YOUNG AMERICA, Littleton, Master, and Steamer SWALLOW, Summers, Master, will leave Sacramento on alternate days, at 6 o'clock a. m.

ONE TRIP A WEEK FOR COLUSA, RED BLUFF, AND INTERMEDIATE LANDINGS.
The steamers LARK and GEM will leave for the above named places on SATURDAYS, at 7 o'clock, a. m. from the Storeship, foot of K street, Sacramento.
For freight or passage by any of the above boats, apply on board, or at the Office of the Company, corner of Jackson and Front streets.

Cultivation of Tobacco.

EDITOR CALIFORNIA FARMER:

The time of transplanting being at hand, reminds me of my promise to the FARMER. The soil properly prepared, the best mode is to roll level, hills are liable to dry out, and mark at proper distance apart 3 feet each way for Havana, and 3½ for Virginia, or the heavier varieties; for marking, I use a piece of scantling made like a rake, long enough for three rows with a pin inserted for the required distance of the rows; with this implement a person can mark a few acres in as many hours. It is immaterial how you mark, but by all means make them straight. I always form an opinion of a farmer, favorable or otherwise, by the straightness of his rows; the land should be harrowed and rolled a few days before planting, that the moisture may rise near the surface. The evening before drawing the plants, saturate the beds thoroughly with water; in pulling, take a pointed stick in one hand to loosen the roots, lifting as much soil with them as possible; a good plan is to plant a few of the earliest in a convenient place for re-planting those that may fail, this will give the crops a uniform appearance, they should be about large enough to cover a silver dollar before transplanting; drop the plants a short distance ahead, take up, in the left hand make a hole and cover with the right; should the fingers get sore at this operation it is evidence that the soil is not properly prepared; set the plants about the same depth as they sit in the beds, or a little deeper; if the ground be dry plant in the evenings, and cover with a handful of grass or weeds next morning; avoid watering, if possible. In about two weeks the plants will require hoeing, and soon after you can use the corn-plow and cultivator; the first plowing, keep the land side of the plow next the plants, follow with the cultivator; the last plowing, turn the mold-board to the plants, both ways, hilling them up; the oftener it is plowed and cultivated, as long as a horse can get through it without injury to the plants, the better; every time the soil is stirred it gives a new impulse to the growth of the plant. When the crop is about one month old it should be pruned; that is the lower leaves, about four, taken off; you must also keep a lookout for worms, which can easily be discovered by the ravages they commit; completely ruining a plant before leaving it. The tobacco worm is produced from a large gray-colored fly commonly called *the miller*, and is nearly as large as the humming-bird, with a very long bill; it generally flies at night, and deposits its eggs, which hatch in about 36 hours. The next operation is topping; the number of leaves left will depend upon the season, soil and climate, and varies all the way from eight to sixteen leaves. Some cultivators suppose that by leaving a greater number of leaves they get a finer article. This is all wrong, there is as much difference between fine and light tobacco, as there is between fine and light goods of any kind. It is to variety of seed, soil and climate we must look for the fine article, not to high topping; in topping, I reach down with the thumb and fore-finger and nip off the seed-bud as soon as I can find it; in about one week from topping, the suckers will begin to show themselves, and you must watch them closely; each leaf will throw out two and the closer they are kept picked off the better it will be for the crop; the object is to throw the whole strength of the plant into the leaf, and every sucker that is suffered to remain detracts just so much from the leaf; after the second ones are taken off, no more will come from the leaves, but they will come from the root, till harvested; these must also be taken off. Its dark green leaves, now completely covering the ground, present an appearance that any farmer may be proud of; it can easily be known when ripe by changing to a spotted or what might be termed a pie-bald appearance; or by folding the leaf, if it breaks readily it is ripe, if it can be doubled over without breaking it is not. If properly attended to it will be a little over three months from planting to harvest, before which time I will endeavor to describe the harvesting and curing process.

Yours truly, J. D.

FRENCH-MERINO SHEEP, A BUCK AND TWO EWES.

Foundation of the French Merinos.

[Translated from the French for the Cultivator.]

WINDVILLE, Commune de Crespieres Seine et Oire, April 7th, 1859.

My father was born a farmer, and busied himself in his youth in-breeding sheep.

In 1786 the Queen of Spain made a present to the King of France, of a flock of Merino ewes and rams, selected from the best blood in that country. This flock was equally divided, and one half were placed at Rambouillet, where they have always remained; the other half was presented by the King to a proprietor, M. de Chaurier, who placed them on his farm at Croissy, four leagues from Paris. My father was 27 years of age at this date; he visited the flock soon after his arrival, and each succeeding year, to satisfy himself in regard to the acclimation of the flock, and to compare the produce of wool and flesh with the native breeds. After satisfying himself that our climate agreed with this fine-wooled race, and that they offered a greater inducement and advantage from the extra product of wool, as well as their flesh, compared with the existing flocks of France, he purchased a buck and eight ewes at Croissy, in 1800, at the first sale. The ram was four years old, weighed 124 pounds (138 pounds English), and carried 12 pounds of wool; the ewes averaged 9 pounds in its pure, unwashed state. He bought yearly from two to four sheep, until 1810. In 1811, 50 ewes and 5 ram lambs. In 1818 the whole flock at Croissy were sold, 55 of the ewes to my father, who paid on an average from 120 to 300 francs. At Croissy the pasturage and hay was of a better quality, and more suitable for sheep than at Rambouillet. The sheep were superior, and for this reason, my father made all his purchases at Crossy.

In 1821 he bought one ram at Rambouillet. Notwithstanding these two flocks were of the same family, he obtained a great advantage in alliance of blood, as there had been a complete separation for 35 years; up to 1827 he bought five rams from this branch; at this date, ceded to me his flock, which numbered 200 ewes of three years and upwards, and 176 ewes one and two years old, and 90 yearling rams. In 1832 I bought 55 ewes at the public sale at Rambouillet, and since then have bought a few ewes and two rams to mix the blood with my flock, always choosing my reproductors among those which carried the greatest quantity of wool of the best quality. By this means I have increased the fleece upon my whole flock. The ewes, many of them, yielding 18 pounds (20 and 27 pounds English), and the rams 24 pounds. Our common practice has been to use no ram till well matured, say two years old, and not allow the ewes to drop any lambs till three years old. We have thus improved the form and size of our flock, which inherit a stronger constitution.

No American gentleman visited us previous to the 11th May, 1846. We then had the pleasure of seeing Mr. J. A. Taintor of Conn., to whom I sold two rams and seven ewes. Since then I have yearly made shipments of a few bucks and ewes to Mr. Taintor, who has made my sheep prosper in the States as they do in France. I have also had the satisfaction of receiving a visit from Mr. Isaac de Forrest of New York, Mr. Sanford of Orwell, and Mr. S. W. Jewett of Middlebury, Vermont. The latter purchased of me, in 1851, 82 ewes and 18 bucks. In 1852, I sold him 94 ewes, and to deliver in 1853, I have sold him 90 ewes. I have also had a visit from Mr. Howard and Mr. Parker of Ohio, to whom I was not able to sell any sheep this year or next, to their great regret.

From the various essays made by my father to ameliorate the Merino race, and those which I have continued to effect on the same principles, we arrived at this conclusion, that in order to improve the breed it was necessary to let them graze on good land, preferring dry to wet, and renew blood of his flock every five or six years. If a longer time expires before you renew the blood, you can maintain the flock in the same quality, but you cannot improve it.

Before the ewes are fleeced, I assort and separate into as many lots as I have rams, and avoid using rams with any defect, to ewes of the same defect. It is with these means, put in good practice for many generations, that we have obtained the amelioration of our flock.

It was only in 1844 that I decided upon letting my flock compete with others for the prize. Upon this occasion, the Agricultural Assembly of Paris, appointed a commission to visit the best flocks of the country. After the commissioners made their report, the Minister of Agriculture awarded me the great medal of gold.

The agricultural exhibition for 1845 took place at Grignon. I sent there 350 ewes and four bucks. The first prize was given me and my father, then 86 years old, who received it at the hands of the Duke de Nemours, conducted there by his two sons.

The Great General Exhibition which took place at Versailles in 1851, I and my colleague, Mons. Cugnot, sent there, each of us, three rams; the first prize was granted to us. VICTOR GILBERT.

Letters from an Old Californian at the East

NUMBER SEVENTEEN.

NEW YORK, April 7th, 1864.

The Great Sanitary Fair.

EDITOR CALIFORNIA FARMER:

The great excitement of the week has been the Sanitary Fair. I went through the buildings last week, with Capt. Freeman (an old Californian), who has charge of the Receiving Department. Everything looked hopelessly incomplete and although the ladies were sanguine of being ready in time I could not anticipate such a result. I joined the crowd who pushed and squeezed its way into the Fair, the first day, and was amazed at the change. The scene was indeed fairy like and I could easily have persuaded myself of the existence of a second Aladdin's lamp. The brilliancy and grace of the decorations, the exquisite taste of the coloring of the wood-work, the richness of the articles on exhibition, the prodigal use of bouquets and garlands of choice flowers, the brilliant costumes of the visitors who seemed to have attired themselves to give effect to the scene, the beauty of the ladies in charge of the stalls, and the inspiring music all, contribute to make the occasion one of unprecedented attraction. Passing from the great hall, the Indian Department, the Hall of Arms and Trophies, the Curiosity Shop, and the Exhibition of Machinery, each attracts the delighted attention of visitors, but the Art Department is the great attraction of the Fair. Standing in the centre of the room you can look upon six of the greatest pictures of the present day—Leutze's "Washington Crossing the Delaware," and his "Venice Victorious;" Church's "Heart of the Andes;" Huntingdon's "Mercy's Dream;" also Ginoux's "Indian Summer," and Bierstadt's "Rocky Mountains." You could spend a morning in examining each of these splendid pictures; but I stood longest before the "Rocky Mountains." The sublimity of this picture I hesitate to describe. I can point out the opening in the fore-ground, with the tents and animals of a hunting party—the grand old trees that shade the encampment, the lake and water-fall beyond the picturesque hills above, while rising into the blue sky are the snow-capped mountains whose kingly presence awes you into silent admiration; I can direct your attention to the marvellous effect of sunshine and shade, show you little nooks in the forest where you could choose as a point for an excursion; but I cannot give you the deep and solemn meaning of the picture, the moral so to speak, of one of the grandest poems that has ever been painted. Among the other great pictures are "The Last Roll Call of the Victims of the Reign of Terror," which freezes one's blood to look at; "The Brittany Peasants at Prayer," which causes you to voluntarily bow your head in respect; "The Breaking Up of the Cardinal's Ball," describing the first interview between Henry the Eighth and Anna Boleyn; "Mary, Queen of Scots, dividing her Jewels among her Attendants;" "The Game of Life;" "The Andes of Ecuador;" "Florence Nightingale at Scutari;" Vandyk's "Ecce Homo," etc. But to describe the list would take a sheet of the FARMER. If money can value them—the insurance, on the loaned pictures, alone is $500,000. The collection of engravings and photographs is equally remarkable.

On Wednesday evening I went to the opening of the Union Square Department. The crowd was so great that it took an hour to force my way from the door to the Concert Room. The same taste is here manifested, in every way, that struck me so forcibly at the Department on Fourteenth street. I tried to look at the "Knickerbocker Kitchen," but the crowd was too great. The same squeezing had to be gone through with in the Concert Room, but fortunately the music could be *heard*.

Not the least remarkable thing, about the Fair, is, that one can see all the noted ladies of the Metropolis. The distinguished Literary, Musical and Social families are all represented. You cannot ask the name of any of the ladies whom your curiosity may notice that the answer does not make you acquainted with the appearance of some celebrated lady.

The military display, on Monday, was the finest I have ever witnessed. The crowd was something to recollect, with wonder, when the papers failed to report any cases of serious accident. I was carried along, for blocks, without the powers of extricating myself from the crowd. The utmost good humor prevailed and all classes seemed disposed to make it a day of unalloyed pleasure.

Let me copy Mr. Choates remarks on the opening of the Fair.

"It is the women of the country," said he, "in whose hands its destiny reposes; and no cause that is not great enough to command their devotion, and pure enough to deserve their sympathy can ever wholly triumph. But the wholeness of their devotion and the ardor of their sympathy is the test that the cause which has called us together to-night is one of the grandest and purest that ever appealed to the heart of man. [Applause.] It is the cause of our country bleeding from the living veins of her brave sons. Thousands and tens of thousands of our brave and wounded heroes now languish in the hospitals of the Sanitary Commission from the Potomac to the Mississippi, and thousands and tens of thousands more will be added to their number in the months of battle that are already impending over us.

It was to save and succor these martyrs to our liberties that that noble institution was founded, and to hold up the drooping hands of the institution itself, the women of all the cities at the North, with a spontaneous and contagious impulse, have devoted the entire winter to these fairs. You all know what great things have been done elsewhere—how the cities of the East and the West have vied with each other in their efforts and achievements; and how at last, even Brooklyn, jealous of her independence and fearing to be swallowed up in spite of the broad waters of the East River, has taken time by the forelock, and rousing herself to unknown vitality, has poured a flood of wealth into the treasury of the Commission. [Cheers.] And now, with these bright examples before her, it remains to be seen what New York shall do. The hopes of the managers may seem to some extravagant, but the highest figures that have yet been named must surely fall short of the true result. [Renewed cheers.]

And why should not this great metropolis, rolling in wealth, plunged to the lips in luxury, not only surpass each one of her sister cities in this strife of love, but even do more than all the rest together? Why should she not wipe from her escutcheon the unhappy stains of the last Summer, by the bright consummation of this glorious Winter? [Applause.] Surely, if there ever was a time and a city which ought to respond to the sufferings of our gallant soldiers, it is New York to-day. Why, what have the men of New York been doing while these our brethren have been bleeding and dying? Let Wall street answer; let the bloated fortunes of her merchants and tradesmen answer; let the purple and fine linen, in which her citizens go clothed, tell; let the diamonds and jewels on the necks of her daughters speak, aye, let this bright and shining company itself reveal the story. [Applause.] Behind that living rampart of flesh which the breasts of a million of fellow-citizens in arms have formed, we have followed the giddy pursuit of wealth, and have bought and sold and gathered in our gains as quietly and serenely as if the peace of the nation had never been sullied. Why, then, should we not give, and give largely, to this great cause. Yes, for us, the effeminate men of New York, who have shared with the women all the benefits and profits of the soldier's toils and woes, there is no escape from the stern calls of the house. One thing or the other, "your money or your life," is what America and the ladies demand of every man of us to-night. [A voice, "they shall have it," and great laughter and applause.] And now, if you will look around you at all the wonders of the Fair, you will see that the ladies have spared no pains to satisfy every taste, however fastidious, and to draw the money from every pocket, however reluctant. [Laughter.] Is your soul glowing with the love of art? Go feast it in yonder gallery of pictures, the most magnificent which the American sun has ever lighted. Or, if dead to the beauties of art, you would study Nature, and, as Bryant hath it, "hold communion with her visible forms," go forth to the wigwam of Bierstadt, and visit the red men and women of the wilderness—sweet children of Nature—[laughter]—arrayed in primitive simplicity, sounding the war-hoop on the peaceful pavement of Fourteenth street, and amusing themselves and their visitors with the innocent sports of the tomahawk and the scalping knife. Or perhaps a love of the marvelous has seized possession of your soul—there is food even for you; for lo! the old curiosity shop opens its ports, wherein you can see the seven hundred wonders of the world and the glory of them, and all without extra charge. [Laughter.] Here, too, is food for the hungry in most ample stores. To-morrow the Knickerbocker Kitchen, on Union Square, will open its doors and if rumor is to be trusted, the good things there to be served up by ladies of the purest Dutch descent will have such magic virtues that a fortnight's board in that mushroon edifice will transform the most cadaverous and ill-conditioned exile from New England into the sleek and unctious image of the primeval Dutchman to whose memory that establishment is dedicated. [Great laughter.] But you must go and look for yourselves for these and all the other glories of the Fair.

You can hardly go amiss in any direction, in the honest endeavor to empty your burdensome purses—and be sure that no less than this is expected of you. I do not know that positive orders have been given to the police to arrest and detain every man who is found leaving the premises with money in his pockets; but of course those officials know their duty, and will discharge it fearlessly. [Renewed merriment.] And now, what remains but that we should all, with all our might, second the glorious exertions of the managers, and when the Fair is ended and the grand result is known, as our gallant armies march out to strike that gigantic blow which shall, as we hope, send this foul rebellion reeling to its last retreat, let it bear to them the glad tidings that they carry with them the hearts and the hopes and the prayers of twenty millions of loyal Americans, and that for as many as fall or faint by the way, all the strong arms of the nation will be ready to save them, and all its fair hands to heal their wounds or sooth their dying hour. [Applause]

Besides the Fair, a number of private enterprises are on foot in favor of the same holy cause. Messrs. Belmont & Aspinwall have thrown open their magnificent galleries. The children of all the Public Schools are giving exhibitions. The little ones of "upper-tendom" are preparing to produce "Cinderrella" in a gorgeous manner, and the parents are going wild over the costumes, each one trying to excel the other; and private concerts, theatricals, and tableaux, without number are occupying the attention of those who are not elsewhere engaged.

New York, in this way, will attempt to obliterate the fearful remembrance of the "Riot week." It is to be hoped that Mercy and Charity will hereafter be something more than an excitement of the hour. M. A. S.

Agricultural Schools in Europe.

We have received from the Secretary of the Massachusetts Board of Agriculture, C. L. Flint, Esq., (whose efficient labors and efforts, in the cause of Agriculture, have been beyond all price), the able report of the Secretary upon the subject of Agricultural Schools in Europe. The work is comprised in 120 pages, and full of valuable statistical, scientific and practical matter, from the workings of this kind of Colleges in Europe, from which we in America can glean important truths to aid us in our Colleges and in their progress to prosperity. We shall give, from this volume, extracts to show that the good of the people and not of party is paramount in all the details of labor.

ESSAY

On the Objects of Agricultural Societies and the Deterioration of the Wheat Crop.

R. P. JOHNSTONE, SECRETARY.

[As the season of Agricultural and Mechanical Fairs is approaching, we think those who are interested in making such institutions popular and profitable will gather important truths by perusing the following extracts, from the Secretary of the Michigan State Ag. Society's Report. This Society appears prosperous. The Ex. Committee, it seems, take time to do their business well; they gave *four days* in their business session to the work, and their finances show a prosperous years' work, and with true patriotism they invest $6,000 in 5-20 bonds. How much will our State Ag. Society take?]

"How can the State Agricultural Society best accomplish the objects for which it was established, by its exhibitions?"

This is the title of the subject which has been adopted as a part of the series that is to come up for discussion at this meeting of the State Agricultural Society of Michigan. The question is one that has intimate relation with the progress and usefulness of the Society, and deserves much thought and attention. The exhibitions are so much a part of the societies, and the societies have themselves through State, county and town organizations, become so much a part of agricultural life and development everywhere throughout the United States, and in all countries which have made the greatest progress in agriculture, that it is evident whatever promotes the success and usefulness of the exhibitions must increase at the same time, the influence of the Society, and have a tendency to foster and encourage the objects it was designed to build up.

It may be well, before discussing how our exhibitions can be rendered more useful, to determine what are the objects of the Society, and how they are to affect the interests of the citizens engaged in agricultural pursuits, and hence, as a matter of course, the general welfare of all the people of the State of Michigan; for it is evident that whatever develops or extends our agriculture, enriches and extends every other industrial interest, increases the comfort and happiness of all our citizens, and adds to the progressive greatness and wealth of our whole country.

I have long heard it argued that both State and county Societies, and particularly our own had become simply associations for holding exhibitions and had not actual or really useful objects beyond the collection and distribution of the means to defray their expenses, and that in fact the society was completely merged in the fair, the cattle show or the horse race, or such other term as the fancy of the complainant might chance to apply to the annual exhibitions. It must be admitted that there has been some truth in these remarks, but like any other broad assertion, it was entitled to certain qualification. This society was founded and went into operation in 1849, at a time when the population of the State did not reach 400,000, when the numbers of bushels of wheat grown was but four millions, when the number of pounds of wool clipped only reached two millions, and when the whole number of cattle hardly amounted to 250,000. If its officers, in their anxiety to keep pace with the rapid advance which agriculture has made in the last twenty-five years, occasionally overstrained the financial strength of the society, sure I am, from a somewhat severe experience, that it was allowable, and that whilst the public received all the benefits, no private interest has been built up at its expense, and not one of those most intimately connected with its business has been paid for the time and labor the management of its affairs has required. From 1850 to 1862, a period of twelve years, we find the society, therefore, most of the time struggling for financial strength and all its energies economized for the purpose of clearing it from the evil and depressing influence of debt; and hence it has sometimes been charged with neglecting the "objects" for which it was established.

When we turn to those who have been most apt to find fault, and make inquiry as to what are the "objects" beyond the opportunities for observation, comparison and competition afforded by the annual exhibition, it is very seldom that I find any one willing to determine or define what they should be, as nearly all definitions include expenditures, totally beyond the means of our societies.

The constitution of the society simply defines its "objects" to be "to promote the improvement of agriculture, and its kindred arts" throughout the State. This, it will be seen, is very general in its terms, and leaves the whole field open without a boundary of any kind.

The constitution of the New York State Agricultural Society defines the "objects to be to improve the condition of agriculture, horticulture, and the household arts." This definition is somewhat more pointed than that of our own State, but still it leaves the whole subject open.

The charter of the Royal Agricultural Society of England enumerates ten particular objects for which it is established, and as these really embody in a succinct and clear form the actual propositions on which has been established one of the most useful organizations of the kind in existence, and one which has given in a greater or less degree its character to like associations all over Europe, I will here recite them as they are embodied in the charter itself:

1. To embody such information contained in agricultural publications, and in other scientific works as has been proved by practical experience to be useful to the cultivators of the soil.

2. To correspond with agricultural, horticultural and other scientific societies, both at home and abroad, and to select from such correspondence all information, which, according to the society, may be likely to lead to practical benefit in the cultivation of the soil.

3. To pay to any occupier of land, or other person, who shall undertake, at the request of the society, to ascertain, by any experiment, how far such information leads to useful results in practice, a remuneration for any loss that he may incur in so doing.

4. To encourage men of science in their attention to the improvement of agricultural implements, the construction of farm buildings, the application of chemistry to the general purposes of agriculture, the destruction of insects injurious to vegetable life and the eradication of weeds.

5. To promote the discovery of new varieties of grain and other vegetables useful to man, or for the food of domestic animals.

6. To collect information with regard to the management of woods, plantations and fences, and other subjects connected with rural improvement.

7. To take measures for the improvement of the education of those who depend upon the cultivation of the soil for their support.

8. To take measures for improving the veterinary art as applied to cattle, sheep and hogs.

9. At the meetings of the Society, by the distribution of prizes, and by other means, to encourage the best mode of farm culture, and breeds of live stock.

10. To promote the comfort and welfare of laborers, and to encourage the improved management of their cottages and gardens.

The enumeration of the subjects treated by the Imperial Central Agricultural Society of France, in its annual *compte rendu* will indicate the complete supervision which it exercises over every division of agriculture, and the objects it has in view. It holds great exhibitions once in five years, but it takes special interest in the subordinate regional exhibitions, which are held annually in the several great agricultural divisions of that country. It reports on the state of the crops, on the various new grains and plants which are brought before it, on insects and their habits and ravages, on the vine culture, on the application of chemical knowledge, on the most extended scale and by the most minute and reliable methods; on solid and liquid manures, their intrinsic values and their commercial value, on the fabrication of cakes from the various seeds employed for that purpose; on the manufacture of alcohol and of sugar, and the refuse of these establishments as valuable either for animal food, or for manure, on bread making, on preserved meats, on the diseases of animals, on the veterinary practice and experiments, on the silk worm and the silk culture, and on agricultural statistics, and in fact on every subject in any way connected with agricultural industry. The list of members includes the names of men illustrious in the annals of science, and these men are employed in solving problems or in elucidating propositions which are not only of the greatest importance to the agriculture of France, but to that of both hemispheres.

In truth, when I refer to France, and glance at the progress made in its agriculture since the elevation of the present ruler to the imperial throne, I am filled equally with admiration and amazement—admiration for the systematic order and arrangement with which France has been divided and subdivided, and with which each division and section has been organized and supplied with Boards of Agriculture that have had conferred upon them the duty of originating and administering the measures best adapted to promote a more extensive knowledge, a more enlarged education, and better practice amongst the rural population—amazement at the immense flood of science and learning which, streaming from all the highest sources of knowledge, seems like the great river of Egypt, to have swept over the land of France, enriching and fertilizing its soil, penetrating with its healthy influence into every industrial pursuit, and bringing at once from the most distant regions, and the nearest deposits, elements hitherto unknown, with which to enrich, to elevate and to ennoble a labor hitherto neglected This singular progress can hardly be more thoroughly exemplified than by the fact that in 1850 there was not a regional or district agricultural exhibition in France, while in 1863 I am informed that the number of agricultural societies which were entitled to and received aid from the national funds, was 708, and the amount collected and disbursed by them, from all sources, in prizes, was $380,000.

I refer to France here, as indicating to you how rapidly the intelligent men of that great country have seized upon the development of her agriculture as the true basis from which her industrial resources had to be increased, if her preponderance as a great military nation was to be sustained. To England, the land in which agricultural science has been the first to flourish and develop itself almost to the extreme boundary of speculative theory, combined with economical practice—where capital, science and practical experience have been united to an extent that has not been approached in any other country, and where it may be almost said, that agriculture, like certain German schools of philosophy, has reached the famous jumping-off place, and now has to await for the social, scientific and mechanical world to advance, before further progress can be made, we need not refer here further than to indicate that in the charter of her renowned national society we find the correct definition of the "objects" of societies and associations to promote the improvement of agriculture.

Having endeavored to define what should be considered the "objects" of agricultural societies, and having shown that whilst the annual exhibitions form a part, and a very large part, of the working machinery by which the objects of the society may be promoted, yet they cannot justly be considered the sole aim and end of any association of this description. I will now endeavor to consider the exhibitions themselves, and how they may be made to perform their appropriate function.

The annual exhibitions are beneficial, to the State and to the people, in two ways. The first of which is, as a social institution, that exerts a healthy and invigorating influence on the people; and the second is, their educational influence, by bringing the means of observation and comparison within the reach of the agriculturist and other industrial classes at the least possible expense to them and] the community, and thus promoting in an eminent degree the development of the resources of the State.

Socially considered, it is a remarkable fact, which I leave for the present to the consideration of the philosophy of civilization, that it was in the most democratic and free States of antiquity, that like institutions in the form of great games and festivals, were first established, where the people of different States, but of like origin and language, might congregate at stated periods, and, leaving aside all differences of opinion, all agitating discussions, all political and sectional strife, meet in a common arena where might be displayed and made manifest their individual wealth, their attainments in learning, in arts and in science; and that in the present times it is in the two great States most distinguished for their free forms of government, that the great social gatherings of the people, denominated agricultural exhibitions, have been most fully developed, and have become almost necessities incident to the wants and instincts of both nations.

It is under the second, the educational principle, however, that we must consider the annual exhibitions of our society at this meeting. To do this we must first consider the formula under which it is conducted.

The design of the conduct of the exhibitions is to bring within the observation of the whole people, in a single field, the advances made in the several grand divisions of productive industrial life, namely, agriculture, mechanics, manufacturers and the arts of design.

The first includes all those classes or divisions, which provide for the encouragement of competition in live stock, production of crops, the improvement and conduct of farms, the produce of the orchard and dairy.

The second has a direct bearing on the first because it includes all those inventions and constructions to which either as implements or machinery, agriculture has to resort for the performance of its labor.

The third includes all those classes which are assigned for the exhibition and comparison of the productions brought forth by the combination of raw material with mechanical skill and incidentally with the arts of design.

I shall confine my remarks and suggestions principally to the agricultural division of the subject before us, because if the Society can do anything to improve and render more productive agriculture of the State, that alone will bring improvement and progression in the others.

During the fifteen years of the existence of this Society, there has been expended in premiums to encourage and stimulate improvement nearly fifty thousand dollars, and a very large proportion of this sum has been devoted to the classes that include cattle and horses. Is it not suggestive to stop and ask what has really been done to introduce any systematic improvement in either of these important divisions of live stock?

Again, Michigan is peculiarly a crop-producing State, largely dependent on that power for her wealth, and particularly on her wheat-crop. If we ask to-day, are the varieties of wheat which we cultivate of a higher quality, more productive, or better able to contend either with its insect enemies, or with the changes of the climate, or better adapted to the peculiarities of our soils, than were the varieties grown fifteen years ago, what would be our answer? I fear very much that we should have to answer that in no one of these points, were our wheats of 1864 actually equal to the wheats of 1849! It is true that we produce a greater quantity, in the aggregate, for we have a greater area of improved land, and a population of double the number. It is estimated that the wheat crop of Michigan for the past year, with her population of 800,000, was equal to that of New York, with her population of over three millions. At least the returns to the Department of Agriculture, indicate the crop of each of these States at only a little over fourteen millions of bushels. Now the returns of your State census in 1864, just ten years ago, indicate that wheat was produced here at the rate of only fourteen bushels as the average of all the lands sown with wheat in 1853. It is estimated that we now sow with wheat about a million of acres, and it will be seen that though we now grow a larger proportion of the coarser wheats than we did in 1853, yet the average production is but fourteen bushels per acre, indicating that during the existence of our Society this important product has not been improved, the system of tillage connected with its cultivation has remained stationary, and in fact, that no material progress has been made. On the contrary, we find that during the twenty-five years' existence of the Agricultural Society of England, the wheat crop which in 1839 was estimated to average in that country but seventeen bushels per acre, has now doubled, and that the crop of last year which was one of extraordinary general productiveness, is estimated to average over thirty-six bushels per acre, and is deemed to have approximated to nearly forty bushels per acre, many of the fields having yielded as high as 6, 7, and in some extreme cases, 8 quarters per acre, or at the rate of 48, 56 and 64 bushels.

Compare the action of the two Societies: on the one hand our society beyond the offer of small premiums for the best ascertained crop, the best bushel of seed, and the best barrel of flour, has done comparatively nothing to direct the attention of its members to the improvement of this crop in any way whatever, and the results are that the wheat crop is not worth any more per acre than it was when the society was inaugurated

On the other hand, the society on the farther side of the Atlantic has applied to the cultivation of wheat, the results of experiments, which have been conducted with the utmost skill, learning and ability—some of which have taken several years to complete, It has taken pains to spread throughout the land knowledge, both by precept and practical example, of the results of the researches and experiments of science on the cultivation of land, the application and economy of measures, the effect of implements and machinery, the qualities of new varieties; at a considerable expense to be sure for all these labors could not be performed without the use of time, means and knowledge, and were not to be had for nothing. But certainly the whole aggregate expended, would not reach a small fractional part of the results. And the results, what are they? To compute them by the mere value of the duplication of the wheat crop alone, is only placing a small part of their true value upon them. While the wheat crop has been doubled, the productive value of nearly every other acre of land in the kingdom has increased in a like degree, for the ability of each acre to sustain more live stock, and to produce nearly double the amount of beef, mutton and pork, which it had twenty-five years ago is likewise demonstrated by facts and figures that are unquestionably correct.

It will easily be seen, that in this State, had our society been able to devise, ten years ago, and to carry out, even at any moderate expense per year, a series of trials and carefully conducted experiments, that would have had the effect at the end of five years to raise the average production of wheat from fourteen bushels to sixteen bushels per acre, our crop for the past year would have been increased two millions, or in other words, the efforts of the society in this one direction properly applied, would have added to the actual wealth of the State at least two and a half millions of dollars, in a single season. But suppose that only half this result was accomplished, would not such a return amply repay the society and the State for any reasonable expenditure.

I believe that a method might be devised by which in connection with the county organizations, a very great impetus might be given to improvements in the cultivation of that one important crop, and just as sure as the wedge is once entered, improvement in other directions are sure to follow.

I have referred to the exhibitions of live stock as being susceptible of improvement. The exhibitions of cattle are in three sections. The first is of animals shown as the best for breeding purposes. The second, which consists of fat and working cattle, simply the produce of the first, and so is the third, which includes cattle for dairy purposes. The second and third are very properly the recipients of premiums for their individual excellencies; but I think that a series of premiums should be introduced into the first which would tend to bring forward year after year for comparison and observation, the produce of the aged breeding animals, so that we might be able to arrive at the comparative qualities of each herd, and be able to indicate to its owner wherein his families excelled, and in what points they were inferior. As it is by the power to produce stock will grow rapidly, mature at an early age, and make the greatest amount of beef out of the food it may require that breeding animals should be valued, I consider it of importance that their progeny should be exhibited at the several ages till three years old. Should such premiums be offered, I believe they would have a tendency to stimulate breeders and to render them more particular in their selection of the animals they themselves would introduce from abroad.

Horses are bred so much according to the fancy of individuals, and so little upon any general system, with a design to improve, or even to obtain a stock of high-class animals, that I do not know that at present any material change in our programme can be recommended to your notice. There is still in the State a very great lack of a general understanding amongst breeders as to the quality of the animals needed. It might be that by a general co-operation with the county societies, a more general determination could be created throughout the State to use only breeding of a higher quality, and of certain well-defined points, and that in the course of a few years the weeds would be rooted out.

There is a fine field at present open for the breeding of mules, which as it is likely to continue long after some other excitements have died away, and which as it is likely to be productive of a large income to the State, the Society should notice. A mule at two or three years old is more easily raised than either colt or steer, and will bring more money. A member of this executive board, during the past week, sold ten mules of his own raising, ranging from two to three years of age, and the lot brought him $1,500. There is not any kind of stock that is likely to pay so well for a long time as this.

From the experience which the society has already had, I esteem it of importance that more attention should be given to the trials of implements and machinery. It is very evident that the western farmer will have to depend largely, for some years at least, upon the use of labor-saving implements. There are four sections into which the implement division may be divided, but three of them are of primary importance. The first contains the classes of implements and machines used in tillage. The second is the class used for harvest purposes, and the third the class used for threshing out and cleaning crops, and the fourth contains all that range of miscellaneous machinery, used for various purposes, but which are as necessary in their place as any other. Might it not be well to consider the propriety of holding a general critical trial and examination of one of the three last named sections once in three years. I believe that were we to devote the time afforded by the exhibition to a thorough examination of one section once in three years, making the premiums of high value in that particular class to be examined, we would be doing more good to both manufacturers and operators, than we now do. The last year's experience inclined me to the opinion that we attempted too much when we undertook to give a trial to all kinds of machinery. I was present at Battle Creek, during the late meeting of the agricultural association at that place, and the thorough trial of the horse-powers and thrashing machines, which took place seemed not only to give interest to the exhibition in that department, but was really useful and meritorious.

Arrangements might be made for a trial of reaping and mowing machines, and other harvesting machines, during the season. The awards made by the society have heretofore been made simply on the exhibition of the machine, and not on its merit as tested by work. Whilst these awards are creditable to the workmen who get up the successful machines, they certainly are rather injurious than beneficial to the agricultural interest.

Nor should we neglect or overlook the department intended to develop the arts. It is upon that department we must rely if we desire that our exhibitions should diffuse a taste for elegance and novelty of design, and send home its members and their families imbued with that admiration and love for the beautiful that seems necessary if we would render the domestic circle the abode of happiness.

Besides, the arts promote in a wonderful degree, industry, mental energy, and an increase of comfort and of wealth amongst the people, by the development of the resources of the State. The oldest historian mentions in terms of admiration the immense wealth and wonderful development of industry in the little island of Samos. Agriculture and manufactures, developed by art, raised the inhabitants of that little State, whose extent was not as large a this county of Washtenaw, in which we are now, to such a degree of wealth and power that to be a Samian was to be a synonym for industry, energy and riches. The soil, was a clay, and the plastic arts were employed in its potteries. These potteries carried the commerce of the island to every shore of the known world, and even to the then unknown regions beyond the pillars of Hercules. Art, developed by the skill and genius of the people, made the soft clay more precious and of far more value than fine gold, while agriculture terraced its mountains, till every foot of the land on hill and in valley teemed with corn and oil and wines, and its ships were sought for by all other nations engaged in war or in commerce. Thus agriculture, mechanics, manufactures, beautified by art, developed the resources of this little island of the Ægean, till it became the rival of great empires.

The same sun still shines on its fertile vallies and its rough declivities; the clay that was of old the richest of treasures still exists in its ancient abundance; still over it glows the most genial of climates; still around it flows the deep blue waters of the Ægean and the Mediterranean; but alas agriculture lies buried beneath the ruins of the terrace that was at one time her pride and her glory. Commerce sits on the shore and weeps over the memories of the past; and art has fled to lands where freedom exists, and where labor is honored. The glory of Samos has departed!

These are the suggestions to which I would call attention at the present meeting; whilst there are many others that demand our attention, I think it will be found that it is not best to attempt too much in a single year. If we would should succeed in the directions which I have indicated that very success would lead to results of the greatest benefit to the State and fulfill to our utmost hopes the objects for which the society was established.

The financial condition of the society as reported by the Secretary is as follows:

Total receipts for 1863	$15,345 90
" expenditures	$14,315 36
Leaving balance on hand January 1, 1863	929 59
To this there should be added, due for lead pipe sold	131 60
Amount subscribed for 5-20's	6,000 00
Amount loaned Kalamazoo County Society	150 00
Amount due from sales of lumber	39 43
Making total available means	$7,250 62

SEED WAREHOUSE

(ESTABLISHED IN 1850.)

S. W. MOORE,

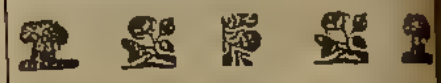
Ornamental Tree and Shrub

SEEDS,

NO. 408 CALIFORNIA STREET,



Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED BY a correspondence and business in Europe as to enable him to secure from the very best source—the most careful growers—their choicest seeds grown, of which he will always be in receipt, and in endless variety, imported directly from France and England, from well known responsible houses; some of the most prominent of named in our catalogues

It has been the experience of our best gardeners as growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be for series of year, until more capital, experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover;	Hungarian Grass;
Kentucky Blue-grass;	Orchard Grass;
Red-top Grass;	Sainfoin Grass;
English Rye-grass,	Timothy Grass;
Red Clover;	White Dutch Clover;
Crimson Clover,	Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties)

BULBS:

LILIES, Amaryllis, Narcissus,	TULIPS, Anemones, Tuberoses, Gladiolus,	HYACINTHS, Ranunculus, Peony-roots, Iris,

and in endless variety, imported direct from France and Germany.

From his long experience in the Seed Business (over thirteen years), and his very extensive stock of seeds appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

How True!—We read of a philosopher who, passing through a mart filled with articles of taste and luxury, made himself quite happy with this simple, yet sage reflection: "How many things there are here that I do not want!" Now, this is just the reflection with which the earnest believer passes happily through the world. It is richly furnished with what are called *good things*. It has posts of honor and power to tempt the restless aspirings of ambition of every grade. It has innumerable bowers of taste and luxury, where self-indulgence may revel. But the Christian whose piety is deep-toned, and whose spiritual perceptions are clear, looks over the world and exclaims, "How much there is here that I do not want! I have what is far better. My treasure is in heaven."—[Rev. Dr. Tyng.

Sewing Machines.—Notwithstanding the great degree of perfection to which the sewing machine has been carried, all efforts have failed, until quite recently, to produce one which would work button-holes. Mechanical ingenuity has at last, however triumphed—this new and novel feature has been fairly introduced. At the recent Fair of the American Institute in this city, a machine was on exhibition that worked one thousand button-holes per day in a manner that for elegance and strength far exceeded the old method of working them.

[This will be introduced here as soon as it is perfected.]

A Church Blower.—The first bell in Haverhill, Mass., was purchased in 1761; before that time there was a singular substitute, as appears by a vote passed in 1730: "That Abraham Tyler blow his horn half an hour before meeting time on Lord's day and on lecture days, and receive one pound of pork annually, for his services, from each family."

In a private letter to the editor of the Washington Republican from the army the writer tells a story of one of the farmers in the vicinity of Culpepper, whose possessions lay in a district where both armies had foraged. The old chap one day, while surveying ruefully the streaks in the soil where his fences once stood, remarked with much feeling: "I hain't took no sides in this yer rebellion, but I'll be dog goned if both sides hain't took me."

When Socrates was ask why he had built for himself so small a house, he replied, "Small as it is I wish I could fill it with friends." These, indeed, are all that a wise man would desire to assemble; for a crowd is not company, and faces are but a gallery of pictures, and talk but a tinkling cymbal, where there is no love.

Opinions of Professors of Music on Jacob Zech's Pianos.

San Francisco, December 29, 1863.

Jacob Zech, Esq:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior square piano, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

B. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPPGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
E. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. Zech.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best an exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

Sacramento October 6th, 1863. 13-3m

PIANAOFORTES
....
Harmoniums,
MANUFACTURED BY
WOODWORTH, ALLOVON & CO.,
Paris.

Warerooms in San Francisco,
MASONIC TEMPLE,
Corner of Montgomery and Post streets.

Wholesale Agents for
PRINCE & CO'S MELODEONS
—AND THE—
STODART PIANOFORTES.
Importers of
Piano Covers, Music Stools, Music Racks,
ETC.

PICOLLO PIANOFORTES.

WE WOULD CALL PARTICULAR ATTENTION TO these beautiful instruments from our own manufactory in Paris, and which we can confidently recommend as equal in quality to those of any other European manufacturer.

PICOLLO PIANOFORTES are now in universal use on the continent of Europe, having completely taken the place of the old style of Square Pianos. They possess all the merits ever claimed for the Square Piano, with many advantages that are peculiar to themselves.

Our assortment comprises six different styles varying in price from $275 to $400 each.

Iron-framed Picollo Pianofortes.

These instruments are a "specialité" of our manufacture, are constructed with a special view to withstand the peculiar climate of the interior of California, and are warranted to stand any change of temperature.

Price $400 to $450 each.

STODART PIANOFORTES.

We have had the exclusive agency for the sale of these celebrated Pianos for the past twelve years, and refer with confidence, as to their quality, to the many hundreds of instruments themselves now in use throughout the whole extent of the Pacific Coast. A general assortment of these instruments will at all times be found in our warerooms, comprising Grand Action, Square, Upright, and Overstrung Pianos, in plain or richly carved cases. We offer them at the same prices at which they are sold at the manufacturers' warerooms in New York, thus saving to the purchasers here the cost of freight, insurance, interest, and attendant charges. Prices range from $240 to $500 each.

FRENCH HARMONIUMS.

In connection with our manufactory of Pianofortes at Paris, we have established a manufactory of FRENCH HARMONIUMS, suitable for parlors, music-halls and churches. These instruments, like our Pianofortes, are all in rosewood cases, and are made with the improved "transposition attachment," which enables the performer, in voice accompaniments, to adapt the instrument to any particular "key," thus entirely obviating the necessity of any transposition of the music. Nine varieties $100 to $1,000 each.

We beg to call attention to the fact that the Harmoniums of our manufacture possess many valuable improvements not to be found in any other instruments of this description, among which is the peculiar disposition of the reeds. This improvement is based upon purely scientific principles, rendering the reeds doubly sensitive an much less liable to become deranged or get out of order

For full description of Picollo Pianofortes and Harmoniums send for descriptive catalogues.

PRINCE & CO'S
Melodeons, Double reed School Organs,
and Organ Melodeons.

Being the exclusive agents for the sale of these celebrated instruments in California we are prepared to furnish them at the catalogue prices, as sold at the warerooms of the manufacturer in the East. The assortment comprises twelve different styles of instruments, ranging from $50 to $425 each. Illustrated catalogues, with full description and price of each instrument annexed, will be furnished on application.

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartetts, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little boss," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 825,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother." "The Angels told me so," "In the Light," "Rest for the Weary, etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2, are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "I leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by
HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc. Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Coll. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

ELECTRICITY
THE
GREAT REMEDIAL AGENT.

Electricity as a Remedial Agent has, until recently, been but little known. An Electric Battery has been a terror from childhood up because a little Battery gave a "start," and the thunder storm killed by lightning. Now it is better understood, and is and will be the sovereign remedy for many diseases heretofore considered incurable. The following series of articles and statistics, with facts and proof of the virtue of Electricity are worthy of attention. When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulations of the poisons which constitute disease. A great cry went up from the interested in the continued supremacy of the old system of one poison to cure another, that Electricity, as a Curative Agent, had been tried and had proved to be of but little if any value—thinking, poor souls, the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients there were those who were diving into the science of Electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks: and all by the *Improved Instruments* of Dr. J. H. Josselyn, Resident Physician at the Electropathic Institute, 645 Washington street, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic System. From early morn till late at night, his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services.

The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed is Rheumatism; none has given the honorable practitioner more trouble to relieve, and no one has pretended to cure (if we except known empirics) permanently. But this subtle disease give way before the Electropathic System in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of a relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

We allude to that kind of disease paraded by quacks in the journals of the day, a trouble which was never cured by medicine, only a little strength imparted by the use of tonics. The poor victim is kept taking medicines and paying for them until his last dollar is gone and then, as soon as he undertakes to work to obtain more funds, the trouble comes back in all its loathsomeness. To this disease Electropathy is peculiarly applicable, its action being upon the spermatic nerve, strengthens the secretory organs, and at the same time, creating an equilibrium in the system, thereby preventing an elapse.

We dwell upon this disease because it is the bane of the youth of California; and one about which there has been more deception used than all others put together. It is not necessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present very few Instruments in the world that can be depended upon. A good instrument costs very heavy, and cannot be purchased unless ordered, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only Instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous imposters in the bathing line. The pure Magnetic Bath is one of the most effective aids in the removal of disease from the system, but if given at the wrong time is likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this Bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unreasonably administered, and if not necessary, advise the requisite remedy.

To Females,

the Directors would say, Electropathy is particularly applicable to your delicate and fragile systems, and to the numerous troublesome and painful diseases to which you are liable. Should you be irregular, a few treatments will restore the functions to the proper state without pain or inconvenience. Should you be weak and enfeebled, either general or local, this system imparts strength and vitality, making the recipient feel buoyant and youthful, where before they were languid and unable to enjoy the pleasures of life. One great blessing connected with Electropathy is, it purifies the system so thoroughly that it beautifies the complexion, making the coarse and freckled skin as pure and fair as possible, giving the patient a fresh and healthful look.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil foreboding and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in issuing this pamphlet, do it in the hope that it may be the means of awakening the public, who have not studied into such things, to a sense of their duties, and if possible prevent those who have the care of a rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse the origin. Also, that those in need of remedial agents may know where they can find them without resorting to taking the thousand and one poisonous nostrums that are continually palmed off as sovereign panaceas for all the ills of humanity. Avoid them all, they are snares set to rob you, and to your bodily injury at the same time. The following is a list of the cases which have been successfully treated by the *Electropathic System*, at the Institute, during the first four years of its establishment. The record is good, and challenges admiration of the world:

Name of Disease.	No.
Rheumatism	1580
Neuralgia	1492
Dyspepsia	1457
General Debility	1410
Fever and Ague	1263
Dumb Ague	1210
Bronchial Affections	1106
Asthma	1049
Female Irregularities	1022
Mercurial	938
Scrofula—long standing	942
Paralysis	899
Disease of the Eye	832
Catarrh in the head	705
Catarrh in the lungs	698
Liver complaint	600
Incipient Consumption	582
Panama Fever	563
Deafness—total and partial	480
Mental Derangement	471
All other—and among which is almost every nameable disease	2,180
Total	21,373

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit. Let them go, they will not be missed.

Persons seeking remedial assistance, may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface, by its agency, while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon mercurial diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity forces itself out of the body. This result has been arrived at by testing the water after an Electro Magnetic Bath. After such tests have been found in the water the patient is not troubled any more with those pains peculiar to the disease. In all other cases it forces to the surface and is washed off by the bath. The whole system in its application is a luxury, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure all the time. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES.

San Francisco, April 16, 1860.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied with chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco—ss.
Subscribed and sworn to before me, this eighteenth day of April, A. D., 1860. P. BARRY, Notary Public.

The undersigned takes this method of acknowledging publicly the benefits he received from the treatment applied to him at the Electropathic Institute, while suffering under a terrible infliction:

This is to certify that I have been under Electropathic treatment at the Electropathic Institute, 645 Washington street. When I applied to Dr. Josselyn I was cramped up with rheumatism, and also had the coast agun. So bad was I that, without relief, I don't think I could have lived more than one week. The Doctor, with his instrument, relieved me the first treatment from all pain, and perfectly cured me of all disease in twenty treatments, without the use of medicines. I cordially recommend all afflicted to patronize this Institute, for it is truly a blessing to the afflicted, and the operation is very pleasant. I wish to thus publicly thank Dr. Josselyn for his care and sympathy.

JOSEPH SEGER, of Bolinas Bay.

September 19, 1860.
State of California, City and County of San Francisco—ss.
Subscribed and sworn to before me, this 19th day of Sept., A. D. 1860. P. BARRY, Notary Public.

Sacramento, Oct. 10, 1860.

Dr. Josselyn—Dear and Honored Sir: You requested me to let you know how I feel after being at home three weeks. Well, sir, I have been here a little over two weeks and there is no return of that very unpleasant trouble. My sleep is sound, and there is no disturbance of the regular laws of nature. I feel as strong as I ever did before bad habits had weakened my system. Not only is the general debility entirely disappeared, but the local trouble has gone. I feel so strong that there is no fear of its return. Considering that you only took one month to cure a disorder of seven years standing, I think your system almost miraculous. Accept my sincere thanks, and publish this if you please. I have sworn to it, as you will see. C. BOWMAN.

State of California, County of Sacramento—ss.
Subscribed and sworn to before me, this tenth day of Oct., A. D., 1860. CHAS. HART, Notary Public.

Hornitas, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it; and Mercurial pains as you state them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you would cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can, by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON Jr.

To J. H. Josselyn, M. D., Resident Physician, at the Electropathic Institute

Nevada, Nov. 8, 1860.

Dear Doctor: Pursuant to agreement, upon my arrival, I sit down to pen you a few lines in acknowledgement of the great service you have rendered me, in relieving me of that painful case of neuralgia and rheumatism. When I look back and see the gallons of medicines I have swallowed to no purpose, and then to think how soon you cured me, I am astonished. You were only twelve days performing a cure of the trouble, for which I had taken medicine over six months. Dear Doctor, if you could see the wonder exhibited by my friends, who can hardly believe that a cure was performed without medicines, but here I have been cured, and I have not taken a drop of medicine from you, nor from any one else, while being treated by your splendid Instrument I shall try to show my gratitude by sending every sick man I come across to you. Yours, till death,

FRANCIS GARLAND.

To J. H. Josselyn, M. D., Resident Physician, Electropathic Institute.
State of California, County of Nevada—ss.
Subscribed and sworn to before me, this eighth day of Nov., A. D., 1860.
F. SPAULDING, Notary Public.

Trieka, Nov. 10th, 1860.

Dr. Josselyn—Dear Sir: Your letter, dated October 15th, is before me. You wish to know how my bronchial troubles are. Now, Doctor, that looks a great deal like a joke. I once had such an affection of several years' standing, but thanks to your natural mode of treating disease, it has gone to be numbered with the things of the past. Since my return I have not felt the slightest trouble from it. When you pronounced me well I did not expect to ever hear from it again. Any one who sits under treatment of that *Improved Instrument* of yours will have the same feelings. It imparts vitality to the system so rapidly that confidence is at once established. I have to thank you that you did not refuse to treat me because I could not pay you the whole of your reasonable charge; inclosed is the balance due you, and God bless you for the kind treatment I received at your hands.

Yours, ever grateful, WM. GARDNER.

State of California, County of Siskiyou—ss.
Subscribed and sworn to before me, this tenth day of Nov., A. D., 1860.
B. F. WELLITS, Notary Public.

This is to certify that I, the undersigned, was troubled with dumb ague accompanied with rheumatism, very badly. My disease was taken in Washoe. After having exhausted medicines without benefit, I applied to Dr. Josselyn, at the Electropathic Institute, on the first day of November. After taking twenty treatments with his Improved Electropathic Instrument I am perfectly cured, having been entirely relieved of all pain or inconvenience. I feel as strong as I ever did when in the best of health. I cheerfully recommend all afflicted to his care, as being the best physician I ever became acquainted with. One great advantage, he uses no medicines, but cures by a process which is perfectly natural. The time occupied in my case was thirteen days.

D. C. HARRA.

November 14th, 1860.
State of California, City and County of San Francisco—ss.
Personally appeared before me, D. C. Harra, and subscribed and sworn to the above certificate, on this fourteenth day of November, A. D., 1860.
P. BARRY, Notary Public.

San Francisco, Aug. 3d, 1861.

To the Directors and Resident Physician of the Electropathic Institute.

Sirs: You requested of me a certificate of the cure you performed in my case. Below I append it;

This is to certify that I was troubled with a swelling which commenced in my ankles, and gradually extended upward until it effected my whole body. I sought the best medical aid in New York and Boston, and they all pronounced it dropsy. Hoping to retrieve my health, I visited California in February last. I consulted the Resident Physician at the Electropathic Institute; and now, after five months of treatment, and waiting to see its effects, I am pronounced well by competent judges. It did not take but three months of treatment to cure me, but I waited to see that it did not return. I feel perfectly assured from what I saw while under treatment that Electricity as applied at the Institute will cure any disease to which the human family is liable.

Now, gentlemen, you can make what use you please of this certificate. With my thanks to the Resident Physician for his kind attention, I subscribe myself,

Your thankful patient,
MRS. C. A. CARLTON.

Opinions of the Press.

The advantages of electricity as a remedial agent, are universally admitted by the medical and scientific world. It requires, however, experienced skill to apply this remedy efficiently, and this skill of application is possessed in an eminent degree by Dr. J. H. Josselyn, of the San Francisco Electropathic Institute. Particulars of his method of practice can be obtained by reference to his advertisement in another column. The Doctor is well known to us as a scientific gentleman, and an ardent devotee to his profession. He is no pretender, but has conferred incalculable benefit on those who were so fortunate as to seek relief at his hands. For those who desire speedy and permanent relief from the rheumatic pains, so prevalent in this region, we can recommend no surer remedy, than a visit to Dr. Josselyn at his rooms in San Francisco, No. 645 Washington street.—[Placerville Republican.

Are You Sick?—We wish to say a word to those that are sick. We have in the city an institution known as the Electropathic Institute, situated at 645 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician who has no superior in the city. He has been in charge of the Electropathic Institute for several years, and has been uniformly successful in the treatment of the numerous patients that have placed themselves under his charge. The Electric treatment will cure many diseases that cannot be reached by any other mode. Dr. Josselyn gives his personal attention to all of his patients, and is always ready to give advice to those that may call upon him. His charges are very moderate, and we cannot do the sick a greater favor than to recommend them to call on him before placing themselves in charge of another.—[San Francisco Daily Journal.

We call the attention of our readers to the advertisement of Dr. Josselyn's Electropathic Institute. Voluntary and unsolicited we make the following statement, proving its beneficent effects, particularly in rheumatic cases. Some months since we were on an editorial trip, visiting the mountains. The stage-coach upset, and landed all the passengers, including the writer, below in the valley, where the Deer Creek overflowed by receiving the additional material, extraneous to its usual contents. For some hours exposed in our wet clothes, to night wind and weather, we soon felt the effects of the accident in the mountains—pains in the back, hip, and legs; so much so, that for weeks we hardly could walk. Treatments of all kinds were applied but without avail, until our attention was called to the Electro-galvanic Baths and appliances of the above Institute. Thank God, after two weeks we have been fully restored, and enjoy now the free use of our limbs and body, as fully as previous to the involuntary bath in Deer Creek.—[Dr. H. Bates, Ed.—True Pacific Messenger.

Electropathy.—Electricity has long been classed among the most effective medical agents. It possesses great advantages over the systems of therapeutics heretofore relied upon, as it reaches more certainly the seat of disease, especially in nervous or rheumatic complaints. The Electropathic Institute, No. 645 Washington street, under the charge of its able Resident Physician, Dr. J. H. Josselyn, has attained a well-merited celebrity for the many cases which have resulted favorably from the skillful application of this invaluable remedy.—[Daily Morning Star.

A Good Institution for the Sick.—One of the very best places in the city for the care of the sick is at the Electropathic Institute, 645 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician of great experience, and no one can do the sick no greater favor than to recommend them to give the Electropathic Institute a trial.—[Weekly Journal. 13

The California Farmer.

SAN FRANCISCO:

FRIDAY .....MAY 20, 1864

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them on their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address,

PUBLISHER CALIFORNIA FARMER, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the FARMER OFFICE. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mail, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc., at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Send along your Greenbacks.

Don't be afraid to send along your Greenbacks. These we TAKE AT PAR in payment for all back dues to the FARMER for subscription. So send them along, now is the time. This is a better speculation than mining stocks, for it is so pleasant to read a newspaper when one knows he has paid for it, the digestion is better and a man feels happy, and, if happy, then he feels rich, so pay prompt and you will "strike a lucky lead."

Clerk and Assistant Wanted.

We want an active intelligent business clerk in our office. We want a person who has a knowledge, to some extent, of agriculture, horticulture, the science of botany, and the seed business. A man of correct habits, and willing to give his time to business, closely; a young man free from incumbrances on his time so that he can apply himself to business wholly. A knowledge of the languages would be desirable, and of mineralogy, also. Application only to be made between the hours of 4 and 5 p. m., and by none who cannot give the best of references.

The People's Line.

The splendid steamship America, of the People's Line, leaves our wharves on Saturday (to-morrow), May 21st, for Panama and New York. The price of fare is as follows:

Ladies' Saloon, (through tickets),	$165
Dining "	135
Second Cabin,	90
Steerage,	60

Thus it will be seen that this Peoples' Line has been the means of *Reducing the Fare* more than *one-half*. Who will not say that the *Peoples' Line* should receive the People's hearty support. The *America* is a noble steamer, with every comfort and convenience and from all the information we can gather from those who have traveled on her, the trip will be a *speedy, safe and superior one*, landing passengers in New York in about *twenty-four days*.

Fruit in Our Market.

The late repeated and copious showers have had a tendency to greatly invigorate the strawberry plant, and the warm sun which has followed, has given us a better fruit, and promises a good second crop. Other fruits feel the reviving influences of the rains, and all fruits look finer.

Cherries come in now, freely, and are superior.

Apricots have made their appearance in our market, *raised in Putah*.

New Corn has appeared in the Vegetable Department, grown over the Bay side, in Contra Costa county. All the vegetable gardens have felt the benefits of these late rains, and vegetables in this department never looked better.

Good Time to Plant.

Many kinds of vegetables can be planted, now, the rains have so vivified the earth that seeds will vegetate quickly. Plow or spade deep, make the earth fine and mellow, and plant, and a good crop is the result. Beans, peas, radishes, turnips, and many articles of real luxury, for the *family table*, can be grown now, if the time is only improved.

The Farmer and Our Friends.

We ask the friends of this Journal to coöperate with us, now that we are publishing important matters tending to the development of new resources, and aiding the cause of immigration; to help us with facts, both at home and abroad. We also ask our friends to help us in *sending the* FARMER *abroad* and extending its circulation here; as to the condition of our markets, the fluctuations in the prices of *Grain, Wool, Tobacco*, and other products of California, should always be made known to the grower. Our Journal costs but little and will save thousands to every reader who is a producer or shipper of the articles. Will our kind friends aid us in extending the circulation of the FARMER and thus aid the cause of immigration and extending useful information, to the people.

SALE OF HARVESTERS.—Who says the crops are short? Were there no grain-fields or hay-fields to harvest, there would be but few sales of Harvesting Implements. But how *is* it? There never has been such large sales as the present year. One House has sold almost every Mower—quite 300 of the celebrated Mowers; another has sold as many Reapers, and a third can number nearly 500 Reapers and Mowers. Think of this—over 1,000 Reapers and Mowers sold from this city alone. The sales at Sacramento has been very large, also at Marysville and Stockton. These are facts! So we may all rest assured our State wont suffer for food, *for men or beast*.

Departures of Pioneers.

Our Pioneers and the Material they are made of.

History can never do justice to the mighty energy displayed by the Pioneers of California, or any new country. Pioneers are *workers*, they have not *time* to sit down and write out their histories and adventures, however bold or serviceable they may be to posterity. Their works follow them—their works praise them.

"How slow the time
To the warm soul, that, in the very instant
It forms, would execute a GREAT DESIGN!"

■ with our Pioneers—God bless them! They are the salt of the earth. Among the many who are constantly, leaving us, we always regret to part with Pioneers. One of the early builders of our great city has recently left us, DR. J. W. MONSE, of Philadelphia, and in early years well and honorably known among us, has been a visitor here for a year or more. Dr. M. was largely engaged in real estate and owned large property here, and was associated with many of our best and wealthiest citizens—was one of those men whose active minds destined him to be a Pioneer.

It is not our purpose to become a biographer of men; but to our mind there always has been a singular and peculiar history surrounding our "Noble Pioneers;" they seem to have been made of *different material* from other men, to have been more subject to strange vicissitudes, trials and afflictions, and in a great measure to have arisen superior to them and overcome them, and to have been sent to this strange and wonderful land for a peculiar mission. Could a biography be written, of our early Pioneers; could their lives and the strange incidents connected with them be collected and written down, there could be no book made that would present such a history of startling incidents and great enterprises; of wonderful human physical fortitude and endurance; of so many trials, losses and afflictions; of such bravery, humanity and benevolence, and noble traits of human character, as would be revealed, in the "Lives and Times" of those who are and were the Pioneers of California. But, as we said, we are no biographers of men. We note down passing events; the true history of the noble band who laid the foundation of this glorious to-be-Empire of Freedom, never can be fully written, for *Washington Irving is dead!*

DR. J. W. MONSE, of whom we now would briefly speak, was an early comer to our shores; he was a Pioneer, to California, in the first trip of the steamer Oregon, Capt. Pearson (whose resignation in the Pacific Mail service is heralded this week—a noble ship-master, whose kindness and attentions will be remembered by thousands, and whose name and fame will ever be dear to Californians). DR. MONSE landed the morning of April 2, 1849, at the *foot of Clay street;* at that time the foot of Clay street was nearly up to the easterly side of now Montgomery street. Then, like all Pioneers, he waited opportunities to find a carrier for his baggage, which did not occur till near night, when he was conveyed to Clark's Point, where he remained till he found quarters with Mr. Merrill, on Stockton street. He then, in a brief time, took a trip up the river, to Benicia, Sacramento and Sutter's Fort. At that time Sacramento had but a few houses. He then returned to San Francisco, engaged in building, and remained there till the great fire of 1851, when with others he was burned out, experiencing heavy losses. As Pioneers were wont, DR. MONSE has passed to and fro several times since, on our ocean steamers.

DR. J. W. MONSE belongs to our Revolutionary as well as our Pioneer history. His father was in the Revolution, with many of his kindred. Eight of his immediate relatives patriotically engaged in the present war of the rebellion; four have been killed; one of his nephews, a graduate of West Point, has been in fifteen pitched battles, was at Antietam, has been three years in service, yet never wounded, sick or in the hospital although exposed to great peril and hardships, often in daring adventures, and once, with seventeen others, led into ambush where seventeen were killed, he only escaped. Such men bear the stamp of the *Pioneer*.

DR. MONSE went to sea at the early age of twelve years; visited Europe, just previous to the war of 1812-13, and on one voyage was taken prisoner, at Moran Bay, by the British Frigate Sapphire, pressed on board the Little Belt, carried into Jamaica, and there remained four months, a prisoner. We mention this to show a very singular fact, that in his last voyage here, in 1862, the steamer was taken by the *Pirate*, Alabama, at the same place, and he *was again a prisoner at Jamaica*, after a period of fifty years.

DR. MONSE was connected with the Santa Fe Expedition, as a tourist, in 1841, when learning the nature of the expedition he, with four others, escaped, and after many perilous adventures over the wild and dangerous mountain country, exposed to innumerable dangers and hardships—a travel through a vast wilderness—his companions dying and killed by the Indians, he alone escaped. Dr. M. has been a traveler, like many of our brave Pioneers; for it is traveling that gives the knowledge necessary to make a Pioneer. He has resided eleven years in France; four years in Mexico; visited Africa, Italy, Spain, the Antillas; visited Cuba and the principal Tropical Islands; and made himself familiar, by travel, with our own country by visiting all parts of the United States. These are some of the incidents of the life of *one Pioneer*, and could the minutia, be written out of all or many, a library of brave adventurers, heroic endurance, would make the histories of many brave spirits, whose ashes repose on California soil, or who yet are at work in our midst—Pioneers still.

We are glad to say that DR. MONSE has, amid peculiar trials, losses and dangers, ever maintained the great enduring spirit that marks the manhood of the Pioneer and Patriot: a warm heart and ready hand, and a soul alive to the interest of his country. He has ever been a large and liberal contributor to the *Sanitary Cause* and all good works; ever linked with the truest and best men of the times—always a friend of Science—he was a true California Pioneer, enrolled among our band, here; we revere the memory of such. He has now gone, for a season, from us; we wish him a pleasant, happy trip. He has sent and bears with him a very valuable collection of the curious and rare things of our State and this coast, to enrich the different Societies of which he is a member. And while we wish success to valued friends that leave us, we shall ever be glad to welcome such back again. Such men will find warm friends everywhere.

Dr. Henry Bellows and the Sanitary Commission.

"There is a tide in the affairs of man (nations) which taken at its flood rolls on to fortune (victory)."

Mysterious are the workings of Providence—finite creatures see them not. Only here and there, when the human mind is drawn away from grosser things of time and sense and fixed on the imperishable, can the mind recognize this mysterious Providence.

Platt's Hall, on Friday evening, the 13th, was a manifestation of one of those events that, to the reflective mind, must have given proof of an overruling Providence in all the affairs of men, of States, and of Nations.

The arrival of Dr. Henry Bellows, the President of the Sanitary Commission, to our shores, his connection with us in that great and humanitarian enterprise, his early and most intimate connection with the ever lamented Starr King, by whose mighty spirit this very cause, as well as the cause of patriotism, freedom, and loyality was aroused into new life on our shores, and his recent call to occupy the field of labor of one so dear to us but gone to his reward, all these events are conclusive that there is a Providence that shapes our destiny, the destiny of individuals, as well as States and Nations.

Fortunate, indeed, is it for our State, that when a calamity so great as the death of Starr King had befallen us, that it was so ordered that one, so peculiarly qualified in every position and relation of life, in all our circumstances and associations, and linked intimately in thought, feeling, and action, in mind, spirit, and labor, should be found who was, as it were, a twin spirit, to come, and in the great field of human action, continue on the work that was to be accomplished in this portion of God's vineyard. We bid him a heart-welcome and God speed.

There seems a beautiful appropriateness so singular in this event that one cannot but see the Divine hand in it. Who, let us ask, but Dr. Bellows could occupy the place left vacant by that "eloquent one?" Who but Dr. Henry Bellows could seize hold of those electrical thoughts, such as emanated from the mighty soul of Starr King, as connected with all those grand enterprises for our country's welfare? Who, we ask, but Dr. Bellows, the only man in our country that could, in any degree, fitly take up and continue the chain of great deeds? He is now with us, completing the work so well and nobly begun by him who now "hot sleepeth."

The meeting at Platt's Hall was a grand one. Most gratifying it must surely have been to Dr. Bellows, at whose instance it was proposed, so that he might come before his fellow countrymen and tell them of the prosperity of an association that has no equal, as a charitable, benevolent, and christian institution, in the world, or one that has accomplished so much good for our suffering, bleeding and dying fellow men.

Platt's Hall was filled to overflowing, and as Dr. Bellows stood upon the platform and presented the cause of the Sanitary Commission, and explained it in all its mighty and glorious workings, every honest heart was convinced that as the head of so noble an enterprise, Dr. Henry Bellows was the right man in the right place. In simple justice to him, it was readily seen that his whole heart and soul was in the work. The clear, concise, and thorough manner in which he presented the conception, organization and working of this stupendous life-saving institution, satisfied all that the Sanitary Commission is a God-like charity, and all who aid it are the "Good Samaritans" of our land. The true and deep feeling with which the audience listened to Dr. Bellows was proof of the heart-interest our people feel in this great charity.

Dr. Bellows was most happy in all his remarks; all his explanations were to the point, just what the people needed so that they could understand it in all its workings. He held up this cause before the people, and stripped it of all party and sectarian interest, of all sectional partiality, and held it up clear and transparent as a great and noble charity, whose blessings fell on all alike without distinction of State, creed, party, or race but bound up the wounds and poured wine and oil into every bleeding and suffering heart within its power.

The high and just tribute of grateful acknowledgment to California as a patriotic State, and her noble gifts, in the hour of need, to this work was very happy, and was duly appreciated by all. The fervent, heartfelt tribute paid to the lamented Starr King was as beautiful as it was appropriate and just, and every word and sentiment expressed was drank in by the audience, in their deep sympathy, as the plants drink in the dew of Heaven.

This very happy address of Dr. Bellows has been published in full in the American Flag of the 16th, and we earnestly commend to every one who can appreciate true eloquence to read carefully this noble address.

The Sanitary cause is the cause of Heaven, and it is in good hands. The hearts, too, of our people are for it, it is prospering all over the land, springing up everywhere watered by the very dews of Heaven.

"In faith and hope the world will disagree,
But all mankind's concerned in charity;
All must be false, that thwart this one great end;
And, all of God, that bless mankind, or mend."

THE RAINS!—THE GLORIOUS RAINS!—Regular New England showers have been a refreshing beverage to the earth, within the past few days, and on Monday evening, in our city, a good old-fashioned April shower fell, washing our streets. When the morning sun shone, the earth never looked more lovely, the rain-drops hung upon the roses' lips kissing them with their jewelled brightness. Nature never sent earth a sweeter breath than our city has enjoyed after these showers.

Superior Cider and Vinegar.—We have received samples of a very superior kind, really pure, from Messrs. Lebaron & Thresher, who have established a cider mill at 708 Market street opposite Third street.

Sanitary Festival at Sacramento.

The citizens of Sacramento and its surroundings, set apart *Wednesday* last, for a Festival trip on the "Pacific Railroad,"—the route being finished 27 miles. This was an admirable idea, to consecrate the opening trip to the cause of Humanity, thus—how Heaven smiled that day! Nature put on her loveliest robes, the pure fresh air of Heaven wafted its fragrant kisses upon the train, the new bright flowers, born by the late rains, peeped up out of their little bed among the grasses and sent their sweet breath to the passers by. Birds sang their gay carols, for Nature and Humanity were in harmony.

Sacramento, with her usual great prompt heart, voted to suspend all business. *Banks*, stores, workshops, mills, foundries, etc., were all silent, for the pulsations of human hearts and the work of human hands were to be dedicated that day to the *Great Sanitary Cause*, and every ear was to be opened to hear the sigh, the groan, and the wail of the sick, wounded and dying soldier, and all thought and effort was to be given, earnestly, joyously, and with power, to still that sigh, to hush that moan, to help the wounded and to comfort the dying, those who were thus suffering, away upon the battle-fields and in the hospitals of our sister States. This was the work for Sacramentans, and the hearts of all were to work and testify with *Railroad speed*, "what a day may bring forth." Look now to Sacramento, with all her own untold trials and sufferings, of years. List and you shall hear her heart-throbs, and see that "she *can feel for others' woes!*" We shall put down her donation at $50,000. What generous soul will not bless the Pacific Railroad if her first trip sends $50,000 into the Sanitary Fund? We deeply regret we could not accept the kindly urged courtesy extended to us be with that glorious throng of generous hearts. We *were there* in spirit, and hope with faith that their efforts were Heaven-blessed. This festival was held at "Bellows Grove," most appropriately named in honor of the arrival of the noble President of the Sanitary Commission. God bless this cause! We regret we have not room for a full sketch of this happy affair, we will give it in our next.

A Question for the Well-being of Society!

It is being admitted that there are times and seasons when the human mind seems to be under particular influences and carried away with them, almost beyond human control—a certain mental and electrical power that seizes hold of the brain and controls it. We might cite numerous cases—our love of country and the Union cause, and our hatred of treason; the fearful *mining mania*, that has gone across the Pacific to the Atlantic and threatens to overwhelm thousands there. These are only instances, and in politics, religion and social life the cases are numerous where, for a season, a mania prevails. Suicide is the *mania* now and our newspapers are daily filled with sad cases of those who, weary of life or bereft of reason, take the fearful "leap in the dark," and go unbidden into the presence of God. We ask, and this is the question we propound: Is it wise, is it right to herald these cases in our daily journals, and as some thoughtless papers do, color the sad pictures with unfeeling comments, or wild and reckless descriptions. Does not such publicity tend to create a madness for suicide? Does not the public and frequent discussions of suicides, and all attending circumstances relative to them, produce the malady in others? We ask these questions of those conversant with Phrenology and Physiology. Are we not so constituted that such themes constantly held up before the mind that those who are not well fortified by a strong will-power will give way and fall. Will those who can answer give us a reply?

The Sanitary Fair of Philadelphia.

We publish a portion of the Circular, received by us, by which it will be seen the Fair opens the *first week in June*. Parcels leaving here the 21st, or the 23d, will reach Philadelphia in twenty-four or five days, and be in time. Send your gifts to our office and they shall go at once. We hope the generous will move quickly, and their gifts shall go. The Fair will probably last two or three weeks:

PHILADELPHIA, March 23d, 1864

It is purposed to hold a "Great Fair" in this City, in the first week of June next, on behalf of the United States Sanitary Commission. With this view, we beg leave to address you.

We solicit the sympathy of every true-hearted patriot in Pennsylvania, Delaware and New Jersey, an elsewhere, so far as our appeal may reach, to respond nobly and generously to our call. We ask their earnest and untiring efforts an coöperation; and we confidently hope that every county, city, town and village will feel an honest pride in being worthily represented at "The Great Central Fair."

We would say, in conclusion, that there is a great work before us, and but a limited space of time in which to accomplish it. We would therefore earnestly represent to the ladies the importance of forming themselves, *at once*, into Sewing Societies, in every vicinity of country or city; the more effectively and agreeably to work for the approaching humane and patriotic undertaking.

We feel every confidence that our loyal country women, always ready to work in a good cause, even at the cost of great personal exertions and sacrifices, will not be slow in ministering, though *indirectly* none the less *certainly*, to the wants and sufferings of the noble defenders of their country's flag.

MRS. EPHRAIM CLARK,
Chairman.

247 S. Eighteenth Street, Philadelphia.

MOORE'S NEW SEED STORE.—S. W. Moore, Esq. so long and favorably known as the prominent Seedsman of our State, has recently fitted up a new store on California street, a few doors nearer Montgomery, where he will be glad to see his numerous friends and patrons. We would say to our readers in this connection (as preachers say) that the late rains should induce all to keep on planting many of those luxuries for the household, and the home-garden—Mr. Moore can advise what.

PIPE FOR IRRIGATION.—We call attention to the iron pipe imported by Mr. Day, and advertised in our columns. Orchardists and culturists can use this pipe, both for irrigation upon correct principles, or for drainage, and to great advantage.

The Weather, Crops, Etc.

The following memorandum, of weather, we [illegible] from a business letter from Grass Valley, Nevada county: "The weather has been a medley since I wrote you (April 5), with warm from that date until about the first of this month, when for several days we had very cold winds. My journal says—'10th April, a heavy rain afternoon and night; 25th—rainy in the morning, cleared up in the day time; afternoon heavy thunder, lightning and rain. May 5th—cloudy in morning, a little rain, snow and sleet; very heavy rain from six to sun-set; 6th—some rain and cloudy; 7th—cloudy and a little rain.' Yours, etc." We have news from the lower counties, of heavy rains. So from the interior, of refreshing showers and more that is favorable for many crops and for vegetables, generally and for feed. The following news from Yuba county and Butte:

Heavy Storm of Rain and Hail.—The heaviest storm of rain and hail, accompanied with constant thunder and lightning, passed over this city yesterday, between four and six o'clock, ever witnessed by the oldest white inhabitant. The water poured incessingly for nearly two hours—the only variation being an occasional increase of volume at every clap of thunder, which fell upon us clap after clap, well sandwiched with vivid flashes of lightning. There was no way of measuring the rain or hail, but it is safe to say that more of both fell during the time mentioned than was ever precipitated in the same space of time during the wet or dry season in this country. Our street gutters were flowing like a river—the rain poured through the eve conductors so as to resemble young waterspouts—sky-lights on flat roofs were overflowed and the water precipitated into the rooms below—vaults were filled in several instances and overflowed the premises—and cellars were flooded where unguarded. The hail, we should estimate, had it not melted would have completely covered the ground. The storm was a regular south-wester—such a one as often overtakes the weary traveler on the plains. Lightning flashed vividly, and the thunder rolled majestically. The shower of the 17th day of May, 1864, will be long remembered.—[Marysville Appeal.

The Crops in Butte.—A gentleman from the neighborhood of Chico, informs us that the crop prospect in that section is very flattering. On Major Bidwell's large ranch a fine crop of grain is ripening, and will soon be ready to garner. Other ranches in that vicinity will produce equally as well.—[Ib.

From all the regions round San Francisco, from San Jose, and Santa Clara, heavy rains, and prospect for more, until the hay makers are commencing complaints that they cannot cure their hay. From all sections we have cheering news of reviving crops, and although there is no denying a crop below the anticipated harvest by a very large amount, yet we shall have no fear of a famine, or any continued high rates for Breadstuffs. The amount of land planted was large, the average crop will be light, the *total* will be a large crop, an evidence of harvest, see, harvesters.

The Crops at Santa Rosa.

SANTA ROSA, May 17th, 1864

EDITOR CALIFORNIA FARMER:

In answer to yours: We are now cutting our hay, and will have an average crop in this neighborhood. The grain crop will be equally good; that which was put in early, and the ground plowed deep, looks very fine; indeed many fields of grain, in this vicinity, will yield 50 bushels to the acre; all the grain that was planted on corn-land is very heavy, and will yield immensely, unless it falls down. Corn-ground will yield 50 bushels to the acre, while the same ground, after a wheat crop, would not yield 20 bushels; I have tested it myself. I have no use for gang-plows, for I believe they are a curse to the farmers and "headers" as I have on my farm, averaged, for the last 7 years, from 30 to 50 bushels of heavy wheat, per acre. I change from wheat to corn, every second year, at least. The ground is easily cultivated, but I always put three horses to the plow and one and a-half is as much as I can plow, per day. For wheat brings the highest price, in the market, Mr. J. N. McCune, Clay-street Wharf, San Francisco, will testify. Some of my neighbors have as good land as I have, but as they plant wheat all the time, and scratch the same old top of the ground, before planting, always fail. This year some of them profited by my example and have a fine crop. Last year I planted 11 acres of tobacco, but did not plant any this season, in view of the good price of grain and the bad price of tobacco. This year I have planted corn; I expect to get 50 bushels to the acre; I planted it the 1st day of May, and it is all up and looks fine.

Yours truly. J. B.

[Comment is unnecessary. Here are facts—good cultivation produces good crops. We regret that by a combination, of those who deal in Tobacco, the grower cannot get a fair price.]

BUST OF STARR KING.—We feel a peculiar gratification in being able, as a friend to Art and Genius, to say we have received, as a subscriber, a copy of Starr King. We have placed it in the Reading-room, that others may see, and enjoy too, this perfect likeness of this great, and good and gifted man. It is certainly due to the Artist, P. J. Devine, Esq., to say that the judgment of a just jury, the Public, have decided in his favor. The subscription list of this Bust, now just left at Roman's Book Store, shows the names of some of the best judges in our State, and some thirty or forty names are already enrolled besides a large number ordered at the Artist's, and other places. As a work, of high merit, it deserves well of the community. Mr. Devine has just finished the bust of a little child, which for perfection of form and for beauty of face, and expression, cannot be surpassed. We are glad to know Mr. Devine's labors is being appreciated.

THE GOLDEN CITY.—The Pacific Mail Company's steamer, Golden City, with over 900 passengers, arrived at her wharf at sunset last Tuesday evening. Among the passengers came Gen. J. B. Frisbie of Vallejo, and many of our old Pioneers and citizens, returning again by the Golden Gate—to our Golden City. There comes also a glorious number of women and children—names familiar to Californian history—names and hearts dear to many California homes. Many strangers, new-comers too, to this fair land, the "Home of the Free and the Land of the Brave."

Books.

"Books should to one of these four ends conduce,
For wisdom, piety, delight or use."

"Books in the running brooks,
Sermons in stones, and good in everything."

"Time heaven to lounge upon a couch, said Gray,
And read new novels, through a rainy day."

"Books are a part of man's perogative;
In formal ink they thought and voices hold,
That we to them our solitude may give,
And make time present travel that of old."

So we find men of different minds and tastes
Have differing views of life and its duties, and so
Books are made to suit all tastes and desires:
Prose, poetry, and blank-verse,
And rhymes for children to rehearse;
Books of all kinds for man or woman,
By thousands are daily sold by *Roman*.

When lawyers seek for legal lore,
They find their books at *Roman's* store.
The Clergy, too, and men of science,
That seeking books of great reliance—
The very rarest that can be found—
Roman has got them richly bound.
Have our Doctors, of every kind,
Find books at *Roman's* to suit each mind.
Teachers and students, the old and the young,
Will find the right book that to each will belong.
Patriot and Christian, both Gentile and Jew,
Will find many books that are good and are true.
Politicians, and miners, for them too are made
Many books—for surely every one to their trade—
Though their business is risky and their stocks may soon fall,
Yet *Roman* is wise, he makes books for them all.
And though *Roman* is Union, and a strong Treason hater,
Yet there's one book, the life of Arnold the Traitor;
He sells it, in order a warning to give
To the men of all time, how much nobler to live
In the faith of our Flag, and our country so true,
That *Traitors* may learn their *Treason* to rue.
And *Roman* has books for men that must toil,
And by the sweat of their brow earn bread from the soil.
Our Farmers, and Stockmen, and Raisers of wool,
Our Wine-makers and Grain-growers with their garners all-full,
Manufacturers, too, and the men at the Mills,
And our Brewers, and others that work at the Stills,
For each and for all, the Child, Man, and Woman,
They all can be suited at the Bookstore of *Roman*.

GREAT CENTRAL SANITARY FAIR, PHILADELPHIA.—By the notice in another column it will be seen that we can even now forward parcels to this Fair and be in season. Those who desire to do so we will pledge to have them go punctually forward, free of charge. We send a parcel this steamer, by the kind courtesy of the People's Line. We shall be very glad to aid this cause in any way in our power. Who will send? We rejoice to know that in addition to all that has been done and is doing, here, New York has been remembered, and Philadelphia too.

MERRY TIME FOR CHILDREN AND "OLD FOLKS" TOO.—Manager Wilson, celebrated in Circus and Equestrian Management, has reared the Mammoth and Champion Tent, on Jackson street and will soon show the famed *Zoyora Equestrian Troupe*. The famed Ella Zoyora, who has performed before Kings, will be the Prima Donna. Manager Wilson caters well, to please the public, and everybody will enjoy it.

Winchester's HYPOPHOSPHITES

Act Promptly and Certainly in all Stages

....OF....

CONSUMPTION.

THEY IMMEDIATELY INCREASE the Strength, and deepen the color of the Pale Blood. They check the Night Sweats, always, in from seven to fourteen days; the appetite is at once invigorated, and the patient rapidly gains flesh; the cough and difficult breathing are speedily relieved; the sleep becomes calm and refreshing; the evacuations regular and uniform.

"In no instance," says Dr. Churchill, "have I found the Remedy fail to produce every thing that could be reasonably expected from it."

"I have no doubt whatever," says Dr. Townsend, of Chatham, Pa., "of the superior efficacy of the Hypophosphites over all other medicines or methods hitherto discovered."

The Hypophosphites

Have a TWO-FOLD and SPECIFIC ACTION: On the one hand as a prompt and powerful

NERVOUS TONIC,

increasing the vital energy; and on the other as a Generator of

New and Healthy Blood,

Invigorating the whole system. They should, therefore, be used in all cases of

Nervous and General Debility,

Wasting of Flesh, Loss of Strength or Appetite, Paleness or Deficiency of Blood, Languor or Listlessness, Cough, Night Sweats, Chronic Diarhea, Scrofulous Sores;

Also, in Chronic Bronchitis, Asthma, the Debility or Weakness of Young Children, and as an INVIGORATOR to women of feeble vitality during gestation and the period of nursing.

WINCHESTER'S

Genuine Preparation of the Hypophosphites

Is the only reliable form of Dr. Churchill's Remedy, and is approved by the Medical Profession generally. USE NO OTHER, or any Remedy containing Iron.

CONCENTRATED SOLUTION in 7 oz Bottles, prepaid expressly for California, $2 per Bottle—Three Bottles for $5 in coin. Circulars, free. Sold by all respectable Druggists, and by

J. WINCHESTER,

At the AGENCY DEPOT, 208 BUSH STREET, opposite the (new) Adelphi Hotel, San Francisco.

☞ The Trade supplied by REDINGTON & CO., Wholesale Agents for the Pacific Coast, Front-street South, San Francisco. 16-3m

Books Received.

The National Almanac.—Roman & Co., have sent us a copy of the "National Almanac and Record," for 1864. This is one of the most valuable statistical works published, comprising material matter of each State in the Union and of the United States. Everything that relates to the well being of our country, in a statistical point of view, "Exhibiting the Political, Financial, Economical, Educational and Military condition and progress of the United States, for the years 1862-3, and the *personel* of our Government for 1864." This is a work that should be in every Library. Price only $1 50, and over 600 pages. Roman & Co., will send copies by mail, for $1 75.

New York State Agricultural Society.—We are under obligations to this Institution for their large bound volume of the Transactions of this efficient Society, with an abstract of all the County Societies. The work is illustrated with fine cuts, map of Orange county, Minisink Monument, a ground plan of the Building for the International Exhibition, fine view of Washington's Head Quarters at Newburgh, New York, the American Trophy at the International Exhibition, with many others. The work is complete, in all its details of the history of this excellent Society, with list of members, etc., etc. The work is highly creditable to the officers of the Society, under whose management the Society has reached its present prosperous state.

SEEDS FROM THE AGRICULTURAL DEPARTMENT.—We have been favored with an invoice of seeds from the Agricultural Bureau, by Hon. Isaac Newton, some five hundred parcels, which we will be glad to scatter to our subscribers and friends. We are aware they came late, but we have written, again and again, to inform the other side that our time for planting is not in March, April, and May, but that we want such things in November, December, and January. We hope in future years to have them in time.

THE INDUSTRIAL FAIR.—We have received another circular of the Industrial Fair. We hope to be enabled to speak definitely of the plans, etc, in our next. It is all important for its success that the List of Prizes and Rules, etc, should be sent over the State as soon as possible in order to secure success.

FINE STATUARY.—We call attention to the card of Messrs Domiano Mancarini & Co., whose work-rooms are on Clay street, and where collections of beautiful designs in plaster can always be found for the parlor, the study, or the garden—designs as beautiful can be desired or conceived of. These artists show by their work that they are master workmen. It was at this place that the bust of Starr King, modeled by Mr. Devine, was cast—the only bust that is a likeness. They will be happy to receive orders for any work in their line, and those who can appreciate the beautiful can procure rare models of beauty and taste for a very little money. A few pieces in a garden or dwelling add much to its adornment. "Beautify home" should be the motto of all.

Melrose, Zorn & Co.,

610 FRONT STREET,

OFFER THE FOLLOWING AGRICULTURAL IMPLEMENTS, consigned to them from R. H. Allen & Co, N. Y.:

One Eagle Plow, Plain, 18½	$5 50

California Cider and Vinegar.

THE UNDERSIGNED INVITE THEIR Friends and the Public to call at their Manufactory, 708 MARKET STREET, Exactly opposite Third street, to see somewhat of a curiosity in California: A CIDER MILL. And, if you wish, we shall be pleased to furnish you with new sweet Apple Cider, dripping right from the Press, and in its season the juice of Grapes, or any other Fruit. Drinking new sweet Cider is known to be healthy, giving a ruddy glow to the complexion

Nearly all the Vinegar sold in San Francisco is a manufactured imitation, made from corrosive acids, and people have provided their families with what was sold as Cider Vinegar, but which was in fact a poison. We mean to keep nothing but CIDER and VINEGAR, and that genuine

If we are to succeed in our experiment of substituting pure Vinegar for the villainous fluid which has injured the health of thousands in California, it can only be done by a general patronage, and we trust to receive a call from you.

Lebaron & Thresher,

Cider Mill, 708 Market street,
Exactly opposite Third street.

☞ We have an Order Box at C. E. Collins, 602 Montgomery street, and will deliver Cider and Vinegar at any part of the City Free of charge. Orders sent through Wells, Fargo & Co., will be promptly attended

16-3m

SAN FRANCISCO.

Constantly on hand

A Large Assortment of Figures in Composition, Gelatine, Etc.

☞ Figures for Churches, Gardens, etc, made to order.

16-3m

SUMMER PRUNING.—Now that the rains have come, so copiously, and more to follow, our *Vine-growers, Orchardists* and *Gardeners* will notice how quickly and luxuriantly the *trees and vines* will start into growth; these should be carefully watched and checked in a too rapid growth, by a system of *thumb-pruning* the excessive growth will be retarded, and the tree, vine and plant become stronger in the body, branch and root, and thus made more enduring in its life and habits and in its producing power.

Hypophosphites.—Stop that coughing! We know how unpleasant it is to the ear to hear a poor fellow cough, cough, cough, and feel that he or they are "passing away" without a thought they can be saved! Read, we beg of all, the announcement of Dr. Winchester, who offers the celebrated "Cure for Consumption," which all the *Doctors* say cannot be cured; but which the best and most eminent Physicians declare can be cured. We shall give, in subsequent numbers, very important facts, upon the subject. We say Read, Read, Read.

Home Miscellany.

[For the California Farmer.]

SLEEPY HOLLOW.

C. FENNON RICHARDS.

The mill down at Sleepy Hollow
Stands like a gnome mid its willows,
The great wheel asleep in the water,
Still dripe with the sweat of its labor,
And the song of the miller's daughter,
Like the sound of Miriam's tabor,
Inefably sad and sweet and low,
Then, like waters mad when storm-winds blow,
Comes up from Sleepy Hollow.

Ah, the miller's crazy daughter,
Mad—but madness hath not taught her
To forget that her heart is broken,
Tho' she laughs when the tale she's telling,
Her hard eye melts when they've spoken
The name of the dead Captain Dilling—
She talks to the moon, and she whispers
Weird words like a coon, till our lispers
Are afraid of Sleepy Hollow.

But Madge is fond of the prattlers,
She tells them tales, and the tattlers,
Unlearned in the skill of secrets,
Have told me the story she told them,
The story of Madge and the Captain,
And how close she did enfold them
When she said "He's dead, or I had pressed,
Some such little head to mother's breast—
Poor Madge of Sleepy Hollow."

"WHAT ARE WE FIGHTING FOR?"

H. A. BEACH.

Now thou the battle's din, and all the fierce array
Of war, the battle-smoke, the bloody fray,
Heart-touching moans, and piercing shrieks,
The dying groans, and paling cheeks
Where death has stole the loved soul away;
Where mangled forms that erst with life
And vigor strong, moved onward to strife,
Where beating hearts in brave men's breasts,
Beat stronger still through all the fiery tests
That mark on every side the awful day.
Dost ask what means this sad display,
Where death holds his court and feasts upon his prey,
And riots fiercely in the wanton play?

Dost ask, "What fight we for?" Ask why
The thunder-cloud oftime obscures the sky;
Ask why the lightning flashes rend the air;
Ask why the tempests rage that seem to bear
The fury of the demons as they fly;
And Nature answers that the tempest's power
Was given it in Nature's quiet hour;
The elements were brought together then,
Which in their rage and fury shake the abodes of men,
And in the dark'ning cloud that meets thine eye
The purifying spirit dwells, whose angry glare
Is but the burning glance that purges from the air
The tick'ning, deathly vapors lurking there.

Thus in our country's quiet, when the smile of peace
Seemed wreathing all the land, and rich increase
Of wealth, and vast resources, led to power,
We nursed to life and vigor in that peaceful hour
The elements which now in war seek their release;
And the tempest's angry tumult is the sword,
Unsheathed by the Almighty, drawn to fulfill his word;
We fight because God wills it—that our land may be
Indeed the *land of freedom*, when the oppressed are free.
We profess to love our banner,—may its glory never cease,
But we fight not for conquest, we fight not for fame,
But that the *Flag of Freedom*, be worthy of its name;
War is God's lightning glance, the purifying flame.

And when the storm shall pass, and sunlight fill the air,
'Twill disclose our starry banner still more beauteous and fair,
The same, the good old flag, each stripe and every star,
The symbols of our nation's glory, and afar
Its fame shall spread, and everywhere
Our banner, loved and honored over every land and sea,
Shall be esteemed with pride—*the Banner of the Free*;
And those who rally round it now, brave hearts, true as steel,
Firm and unflinching while the cannon's peal
And musket's roar the work of death declare,
Shall share in its new glory, when the foe
Which seeks the life of freedom, shall have felt the blow
Which breaks *forever* Slavery's chain, and lays the oppressor low.

Hints to Mothers.

While a mother needs to guard her children carefully, from the many temptations to vanity which will beset them from the very cradle, she cannot be too choice and scrupulous in having their surroundings those which will refine and cultivate the taste and feelings. Everything which will do violence to good taste and refinement, and promote coarseness and carelessness of manners, should be most carefully avoided, even in their most secluded hours. Yet there are homes whose parlors are highly adorned, where the private apartments are all in confusion, and where convenience and tasteful arrangement are the last things thought of. Children take in, with the atmosphere of such a home, the principle which governs it, and it will run through all after life. "No matter what we are, so that we show off well." Hypocrisy is its foundation, and it pervades all departments of the character.

It costs little to make a home tasteful and cheerful, if only the heart is in it. Abundant pictures on the nursery walls, be they ever so simple, if they only tell some sweet story; a pot of flowers in the window, a hanging basket or two, even if made of a cocoanut shell, a few pretty shrubs in the yard, a rosebush or two by the doorway, and, if possible, trees about your dwelling; all these are refining agencies which exert a powerful influence on the hearts of your children. Teach them to make a little frame of shell-work, or acorn-cups, and the like, and see how they will enjoy a little picture set in it. All these simple arts make home beautiful, and are well worth cultivation.

Good Doctrine.—No man should be delicate about asking for what is properly due him. If he neglects doing so, he is deficient in the spirit of independence. Rights, if not granted, should be demanded. The selfish world is little inclined to give one his own, unless he has the manliness to claim it.

Lord John Russel's wife had been a widow—a lady of dignified and ample proportions and presence. His lordship is of slender stature; hence he was called by the wits the widow's mite. "Oh!" exclaimed an American lady to whom this witticism was related at a dinner party of English gentry, "I now see how it came to pass that his lordship was cast into the treasury!"

[For the California Farmer.]

LINES.

BY CELIA B. BENHAM.

[Lines in memory of Anson T. Cadwell, a volunteer in the United States Army, suggested by hearing of his death in March 1863.]

Last year was sent to my cottage door
(A gift for a cherished friend)
A Live-Oak leaf, from the golden shore;
The hand that pressed it shall nevermore
For friendly grasp extend,
That true hand never—no nevermore
Shall a kindly greeting send.

A tender, noble, and manly heart,
Forever has ceased to beat,
And thus are severed by death's fell dart,
Two brothers who scarce knew joy apart.
Now, alas! no more to meet,
In the quiet home or crowded mart—
No, nevermore to meet.

There are friends to weep for the young and brave
Who sleep in a soldier's bed,
But never a drop shall reach his grave,
In "the land of the free" and the doom of the slave,
Of all the tears they shed.
He had but a life, and that he gave—
Oh, tell us he is not dead!

With fadeless verdure his soul is crowned—
I see him, a Live Oak stand
On a higher, holier, battle ground,
In a noble army—not lost but found—
And I long to clasp his hand
Where the ceaseless warfare makes no sound,
Save loveliest music floating round
On the breath of the morning land.

Our Remotest Ancestors.

Modern geologists, although at issue on many points, agree on this: that our remotest ancestors existed at a period scores of thousands of years anterior to that popularly assigned to the creation of the world. They have examined the materials of which the planet is composed, so far as they could get at them, and the result is an almost unanimous opinion, on their part, that, instead of its being only some six thousand years old, as our great grand-fathers were taught to suppose, it was spinning through space three or four thousand centuries ago, and has been the abode of animal life for at least half that period.

Lyell, in his last great work, leaves us to infer, from the data he gives, that he believes man to have inhabited the earth and to have made hatchets, spear-heads and knives out of flint over one hundred thousand years ago. Underneath the bones of mammoths, woolly rhinoceroses, cave-lions and cave-bears, these weapons have been found in various parts of Europe; and human bones have been discovered associated with those of the mastodon in the valley of the Mississippi. The animals, of which the remains have been thus found in connection with evidences of the coetemporaneous existence of humanity, are assigned by nearly all modern geologists, we believe, to a period a thousand centuries prior to the present era.

If these somewhat startling theories are correct, and the human species have been always progressive, our very early ancestors must have been fearfully brutal and barbarous. Judging by the improvements which have taken place in the manners, customs, morals, and intellectual stains of a portion of mankind within the historic period, the pre-historic man of a hundred thousand years ago, if there ever was such a being, could not have been a sort of person that a Christian, with all the modern improvements, would desire to embrace as a man and a brother. He knew enough, however, according to our scientific strata-searchers, to fight and whittle. It is quite possible to make bloody war with spears and hatchets, and to shape wood with the latter and other tools that he has left behind him.

Upon the whole, we do not see that the researches of the geologists amount to much as a foundation for theories as to the antiquity of our genus. God, in remote ages, may have worked in a mysterious way, unknown and unguessed at by "your philosophers." Analogies—and these are the basis for their hypothesis—go for nothing where miracles are concerned, and for aught the savans know to the contrary, the changes which they suppose to have been the work of thousands of years, may have been accomplished by an Omnipotentent Hand in the twinkling of an eye!

Tattling.—"It is a great thing to mind one's own business," said a certain philosopher, and he was right. It is a great thing to let other people's business alone, and this much is implied by the maxim above quoted. In our view there is hardly a class of pests in modern society—and they are numerous—so superlatively contemptible as that class known as tattlers, or meddlers in other people's business. We don't admire a thief; we have no affinity for gamblers; abominate drunkards, and have no respect for misers, but any one of these is a first-class gentleman in comparison with the jealous-minded tattler, who goes mousing about in a garb of social respectability, poking his or her nose into the affairs of their neighbors, and seizing upon every trifling circumstance which comes within the wide swoop of their remorseless curiosity, for the purpose of making capital against those whose character they cannot understand, because it is pure and above impeachment. The mischief-making busybodies are simply all unmitigated nuisances, and should be frowned on by all sincere lovers of social peace and happiness. The man or woman who can find no better employment than tattling, had better jump in the nearest pool of water, and become food for respectable fishes. In that way the eels would gain a little in their commissary department, and society above water would be immensely purified.

Who is Old.—It is a foolish idea to suppose that we must lie down and die, because we are old. Who is old? Not the man of energy; nor the day laborer in science, art or benevolence; but he only who suffers his energies to waste away and the springs of life to become motionless.

The Women of a Nation.—We do not hesitate to say that the women give to every nation a moral temperament, which shows itself in its politics. A hundred times we have seen weak men show real public virtue, because they had by their sides women who supported them, not by advice as to particulars, but by fortifying their feelings of duty, and by directing their ambition. More, frequently, we must confess, we have observed the domestic influence gradually transforming a man, naturally generous, noble and unselfish, into a cowardly, common place, place-hunting self-seeker, thinking of public business only as a means of making himself comfortable—and this simply by contact with a well-conducted woman, with a faithful wife, an excellent mother, but from whose mind the grand notion of public duty was entirely absorbed.

English Girls.—The English girl spends more than half her waking hours in physical amusements, which tend to develop, invigorate and ripen the bodily powers. She rides, walks, drives and rows upon the water, runs, dances, plays, sings, jumps the rope, throws the ball, hurls the quoit, draws the bow, keeps up the shuttlecock, and all this without having it pressed forever upon her mind that she is thereby wasting her time. She does this every day, until it becomes a habit which she will follow up through life. Her frame as a natural consequence, is large, her muscular system is in better subordination, her strength more enduring, and the whole tone of her voice healthier. Girls, think of this.

Occupation for Children.—The active habits of children prove that occupation is a necessity with most of them. They love to be busy, even about nothing, still more to be usefully employed. With some children it is a strongly developed necessity, and if not turned to good account, will be productive of positive evil, thus verifying the old adage, that "Idleness, is the mother of mischief." Children should be encouraged, or if indolently disinclined to it, should be disciplined into performing for themselves every little office relative to the toilet which they are capable of performing. They also keep their own clothes and other possessions in neat order, and fetch for themselves whatever they want; in short, they should learn to be as independent of others as possible, fitting them alike to make a good use of prosperity, and to meet with fortitude any reverse of the fortune that may befall them. I know of no rank, however exalted, in which such a system would not prove beneficial.

A North Carolina paper has an advertisement from Miss Pauline M., Wilmington, N. C., stating that she is a candidate for matrimony; that she has $100,000, a fair complexion and flowing ringlets, once golden in their hue, is 17 years of age, and five feet four inches in hight. How about the money, Pauline, is it in Greenbacks? asks the Springfield (Mass.) Republican.

More beautiful than Apollo is the soldier, lying face forward upon the battle-field grimed with powder, and smeared with blood, if for a sacred cause he dared to die.

Zeno the philosopher, was once asked if wise men ever fell in love. He answered: "If wise men do not fall in love, beautiful women must be very unfortunate."

NAPA
COLLEGIATE INSTITUTE.

For Young Ladies and Gentlemen.

NAPA CITY, CALIFORNIA.

NAPA CITY, IN POINT OF LOCATION AND Climate, is unsurpassed in the State. It is about four hours' ride by steamboat from San Francisco, and three by stage from Benicia. There will soon be a daily boat from the former place, and there are now two daily stages from the latter. There are ext nsive accommodations for Boarders in the College Building, with large and well-ventilated sleeping apartments. Teachers reside in the Building, and will have a constant oversight of the Students who are Boarders.

GOVERNMENT.

Young Ladies will receive no calls from any except Parents and Guardians. Ladies and Misses will not leave the College grounds, except in company with their Instructors. Young Men and Lads are not allowed to lounge about the Stores, Hotels, and Saloons of the village. All pupils are required to attend Church on the Sabbath. Parents will choose the place of worship for their children.

MILITARY DEPARTMENT.

This Department has been opened with a view to the permanent establishment of a Military Academy on this Coast. From three to four years will be requisite to complete the course in this Department. The State has furnished us the necessary equipments for such a school. The Drills will be attended to daily.

TUITION.

Spelling and Reading, per month	$2 50
Common English, with the above, per month	4 00
Higher English, with the above, per month	6 00
Latin and Greek, with the above, per month	8 00
Janitor's Fees, per month	25

EXTRAS.

AGRICULTURAL IMPLEMENTS.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 6 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

We are

SOLE AGENTS

IN SAN FRANCISCO AND MARYSVILLE

FOR THE

HAINES "ILLINOIS" HEADER.

This is the ONLY HEADER, which, during the past SIX YEARS, has stood the test and given satisfaction; all others, which have been tried, have proved failures, and have been withdrawn from the Market as unsaleable.

NEW

AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparce, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of

COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 5-3m

San Francisco, Mar. 4, 1864.

Literary Shrubbery.

THE BRIDE.

Her feet beneath her petticoat,
Like little mice, stole in and out,
As if they feared the light;
But oh, she dances such a way!
No sun upon an Easter day
Is half so fine a sight.
Her lips were red, and one was thin,
Compared to that was next her chin;
Some bee had stung it newly;
But yet her eyes so guard her face,
I durst no more upon them gaze
Than on the sun in July.
[Sir John Suckling.

"THE Child's Epitaph," reminds one vividly of the sublime Christian instruction, "Of such is the Kingdom of Heaven." It expresses a most beautiful idea:

"He took the cup of life to sip,
But bitter 'twas to drain;
He meekly put it from his lip,
And went to sleep again."

"PERHAPS you did not know that I had corns," said a good-natured man, as a stranger set his carpet-bag down on the end of his toes, in a crowded car. "Much obliged to you for the information, stranger," said the carpet-bag man, "but I think you *cultivate too much ground!*"

"GRANDMA," said an intelligent but crafty child, "do you want some candy?" "Yes, dear, I should like some." "Then go to the shop and buy me some, and I will give you part."

"I once," said a friend, saw a regiment of Tennessee negroes on a parade, and when they came to the "right dress," with the whites of their eyes all turned, "it looked just like a *chalk mark.*"

Greenbacks! Greenbacks!

We receive Greenbacks for subscriptions to the California Farmer, and allow the ruling premium for Gold!

IT is a well known fact to all conversant with newspaper publishers, that since the war commenced the cost of publishing a paper has very greatly increased, so much so as to stop hundreds of papers, over the United States. Yet it has been our pride not to add cost to our *subscribers*, but to relieve them although we have made sacrifices of thousands to carry out our principles, and do what we esteemed our duty to uphold the credit of our country both by precept and example. From the first we announced that we would receive Treasury Notes at par for *Subscriptions to the Farmer.* But the notes were rejected, here, as currency and many of our subscribers have, in conformity with the custom, continued to pay us in gold; yet we have never refused greenbacks at their face value when sent us by subscribers, though it has subjected us to serious loss from our being obliged (from the rejection of the currency as mentioned), to pay gold in our disbursements. At the present cost of all articles, we could not do a paying business by receiving greenbacks at par, at our present rates. But to make the thing work equally for all our subscribers, as well as conform to what we think our duty, we propose to adopt the greenback basis, and raise our subscription price to $6 a year, payable in greenbacks.

As it is evident to us now that the people of California are determined to sustain the National Government and make Treasury Notes the medium of trade, generally, we announce as follows.

The price of subscription to the CALIFORNIA FARMER, hereafter, will be $5 a year, payable in U. S. Legal Tender notes; this being a safe and easy medium of transmission, by mail; and we will allow the ruling premium when gold is tendered in payment.

We also announce, to all who are indebted to us for *Subscriptions* to the CALIFORNIA FARMER, send along your *Greenbacks.* They will come to us with the glorious impress of our country's sovereignty, and every pecuniary sacrifice we may make we cheerfully lay upon the altar of that country whose faith stands pledged in these notes and whose integrity *we dare not question.*

We make this change in the terms of our subscription *not to advance the present cost* of our journal, but rather to make it cheaper to all, for at the *present nominal* value of the notes it will cost the subscriber but $3 25.

We do hope also that all to whom we have sent bills, all who are indebted to us, will now see how easy we make it for them to pay their dues. It must be remembered also that all who owe for this paper, a bill of six month's standing should, by the terms already heretofore announced, remit us $5, and g. b.'s to that amount will be very acceptable.

We shall now have the consciousness of having taken a true step to sustain the National Currency, and we shall know who will "go and do likewise."

We do hope that the friends of a good, sound National Currency will give us their aid and cooperate by sending us their names for the FARMER.

ARTIFICIAL BONE FILLING

For Decayed Teeth,

Put in while soft, without pressure or pain. Aching Teeth, or mere Shells can be filled with it, and restored to health and usefulness, by the discoverer, DR. PEARSON (late Pearson & Crane), at his rooms No. 653 (old No. 187) Clay Street, San Francisco.

Dr. Pearson having spent the last six years in New York, Philadelphia, Baltimore, London, and Paris, is prepared to supply at short notice, and at reasonable prices, Artificial Teeth on the most approved methods, including Vulcanite Rubber Work, rendering the Extraction of roots wholly unnecessary.

DR. PEARSON'S NERVINE

Cures the severest Tooth-ache, and serves as a temporary filling—any one can apply it by observing the directions. Price $1, sent by express.

ALL DENTAL OPERATIONS will receive the personal attention of Dr. Pearson, as he has no partner, and INTENDS having none in future. His office has been established thirteen years—being one of the oldest, if not the oldest Dental Office in the State of California.

10 JAMES PEARSON, M. D.

A Lady Teacher.

A LADY TEACHER OF EMINENT ABILITY AND qualifications, one who fully understands the great responsibility of the position, wishes a situation in some Seminary, or School, where she can have a responsible trust. The Lady has long been employed as a Teacher, and can bring the most ample testimony of ability and qualifications. A note addressed to A. B. L, care of Editor of Farmer, will be promptly attended to. 10

Iron Pipe for Farmer's Use.

THOMAS DAY,
733 Montgomery street,
13-tf San Francisco.

Splendid Windmill for Sale.

ONE OF DR. FRANK JOHNSON'S SELF-REGULating Windmills is offered at a low price, if called for immediately. This is a good 12-foot mill, 3-horse power, of the very best make and model, and finished in the most workmanlike manner. For particulars inquire of the Editor of California Farmer. 10

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.) May 20.

Our Grain Market is firmer but less active than at last week's quotations. Millers seem unwilling to pay present prices, contending that Wheat is higher than Flour, and also that the latter is very dull sale. The result has been that all offerings have not found a ready market. It is at best but a point of time to determine the mark. In our opinion, prices cannot recede. The natural laws governing trade, want and supply, must soon be calculated, and with the slim prospects of our crops, if prices do not remain firm or advance we err in our judgment. Hay, both of the old and new crop, has arrived very sparingly, and prices have gone up to the highest figure of the season. The quantity of Wheat and Barley that is being cut for Hay will help, but in our opinion there must be less than ordinarily, there being but few, if any of the hills that generally produce our Wild-Oat Hay, that will yield any this season. The Potatoe and Bean Market is quiet. Wool arrives very freely, and much complaint arises on account of the burs by the purchasers.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 10340 sks, Barley 5076 sks, Oats 617 sks, Beans 328 sks, Corn 1443 sks, Flour 6309 qr-sks, Wool 1124 bales, Straw 710 bales, Hay 1111 bales, Potatoes 1882 sks, Cornmeal 729 sks, Salt 475 sks, Bran 692 sks.

BY CONTINENTAL TELEGRAPH.

DATES TO MAY 18.

The battle of Spottsylvania, called in some of the dispatches the eighth battle of the struggle between Grant and Lee, and fought throughout the 12th of May, ended in an undoubted victory for the Army of the Potomac—Lee retiring during the night across the Po, leaving the greater portion of their dead and wounded, seven thousand prisoners and thirty-nine guns in the hands of Grant. The losses in both armies were very heavy, but Grant was receiving reinforcements and Lee could obtain none, owing to the success of the various detached columns of Union troops in destroying his communications with the South and West. Heavy rains had swollen the streams and rendered the roads difficult for wagons and artillery. Grant's army was terribly fatigued by its protracted struggle, but no sooner was the retreat of Lee discovered than two divisions were sent forward in pursuit and preparations made for a general advance. The enemy kept up a formidable show of force in retiring. The condition of the streams rendered this necessary. Previous to the battle of the 12th he expressed his determination to continue the fight on that line if it took him all Summer, and his tenacity has been rewarded by the first decided victory yet gained over Lee's army in Virginia. In Lee's rear, Grant's plans have been admirably executed. The rebel commander's supplies were mostly drawn from Lynchburg, by way of Gordonsville. On the 12th Sigel sent a dispatch to Grant announcing that he had destroyed the railroad between Charlottesville and Lynchburg, and the Gordonsville road between Charlottesville and Keswick. Sheridan, Grant's Chief of Cavalry, reached the Virginia Central Railroad, at Beaver Dam, destroyed the track for twelve miles, captured a supply train and restored to liberty 300 prisoners taken by Lee in the Wilderness. He destroyed a large portion of the railroad running between Richmond and Fredericksburg, and a large quantity of supplies; penetrated inside of the first line of defenses of the rebel capital, but finding the inner works too strong for him, crossed the Chickahominy at Meadows Bridge, whipped the rebel cavalry sent to oppose him, and then pressed forward to the James River, where, at Turkey Bend, he formed a junction with Butler. South of the James, General Butler has cut the two railroads leading from Richmond southward, and with the aid of iron-clads threatens Fort Darling. The position of Bermuda Hundred, near Turkey Bend, has been fortified. General Smith holds the railroad immediately north of Petersburg. The position of Lee's army is critical. Worn out and weakened by desperate fighting, cut off from reinforcements and with supplies running short, even retreat, while an active and vigilant adversary clings to his rear, must be costly. We have estimated Grant's main army, including Burnside's corps, at 150,000 men, at the opening of the campaign. The three grand divisions, under Hancock, Warren and Sedgwick, were believed to average 40,000 men each; and the reserve, under Burnside, was stated in dispatches to be 30,000 strong. The losses are variously stated at from 52,000 to 46,000. Probably 35,000 killed, wounded and missing would approximate the total loss. Twelve thousand men left Washington on the 12th to reinforce Grant, and Sigel's corps may soon be added. On the 16th of April as we learn by mail, Lee's army was believed at headquarters to be as large as it was when it marched to Gettysburg—that is, it included three corps, under Hill, Ewell and Longstreet, averaging 30,000 men each, with a large force of artillery and cavalry. At a moderate estimate, Lee's loss in killed and wounded in all the battles must have been 20,000 and 9,000 prisoners are mentioned in the trustworthy dispatches of Grant. We question, therefore, whether Lee, retired from the field of Spottsylvania with more than 60,000 men. Without reinforcements, Grant was relatively stronger than when he opened the campaign. We surmise that the success of the campaign is now assured, though the day of complete victory may be postponed.

Butler carried the first and second line of defenses at Fort Darling. It was thought that much trouble would not be experienced in reducing the inner works, and that then there would be no impediment between Butler and Richmond. Other reports set forth that the James river is strongly fortified almost to Richmond from Fort Darling. The rumor received that Lee is being reinforced by Beauregard by way of Danville is confirmed.

In another part of the great theater of the war a movement has been made by the rebels which looks very much like an attempt to create a diversion by the old route—the Valley of the Shenandoah. Sigel who had advanced as far as Woodstock, found himself confronted by a large force of the rebels, and was forced to fall back to Strasburg, with loss. Breckinridge and Imboden are said to have been the rebel Generals by whom he was attacked. Breckinridge was with Lee till recently.

Affairs in Louisiana do not wear a very promising aspect. The rebels are reported to have blockaded Red River below Bank's position at Alexandria, Polk, for some time past, has been on the Lower Mississippi, and of course it was to be expected that he would fall on Banks' communications. It is now said that Smith, or more properly speaking, Banks, will now have to fight his way out to the Mississippi and strike for Vicksburg. If such a movement should become necessary the gunboats, at last dates above the falls of Red River, will have to be blown up.

General Crook, who it was reported a few days ago was marching from Western Virginia, with 22,000 men to reinforce Grant, has had a fight with the rebels under Jenkins on his way, and whipped them severely Jenkins himself was mortally wounded. This success cuts off Lee from an important source of supplies.

At Resaca the fighting has been desperate. Hooker, Palmer, Schofield and other Generals of note were engaged on our side. On Sunday the the rebels were forced to take advantage of the night and evacuate the place.

☞ **Holloway's Ointment—The loss of beauty** is regarded by females as a heavier affliction than death, and consequently Dr. Holloway receives a large share of the patronage of the gentler sex; for all blotches and pimples, which disfigure the face, arms, and neck, the Ointment is a certain specific, and restores the brilliancy of the complexion. Sold by all Druggists, at 30c, 70c, and $1 10 per box or pot. 20d
HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM,

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H & L AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories.

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL-OIL as a basis to their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural resin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest until, at the present time, they have established a manufactory of Resin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply. The subscribers are now receiving native resin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

LIFE-SIZE BUST
....OF....
Thos. Starr King.

COPIES OF THE BUST OF THE LATE REV. THOS STARR KING, by P. J. DEVINE, are soon to be issued to subscribers. The Bust and subscription list may be seen at Mead & Van Tassel's store, Montgomery street, or at Grant & Devine's Marble Yard, Sutter street, between Montgomery and Sansome streets. The public are invited to see the Autograph Subscription list which comprises many of Mr. King's personal friends.

Opinions of the Press.

The following criticisms are from the leading newspapers of the city:

After the many attempts at Busts of the late Thos. Starr King which have been made, it is gratifying at last to have one we can praise. It is a work of art, for expression is there as well as outline.—Bulletin

Nothing heretofore executed, either as a portrait or bust, will equal it as a work of art or valuable memento of the dead.—Alta.

It is an admirable work, and is pronounced a perfect likeness of the deceased by those most capable of judging.—Democratic Press.

The friends of Mr. King, who have critically watched Mr. Devine's progress, express themselves highly satisfied with the result. It exhibits a fidelity of likeness and artistic grace that has not yet been equaled.—Golden Era.

As a work of art it is wonderful, seeming to be exact and complete in every detail to which the eye may be directed or recollection recalled.—Sunday Mercury.

We have for many years looked with interest upon the labors of the artist. In the present effort he has been completely successful.—Cal. Farmer. 13-tf

Farmers and Immigrants.

LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOB F. DYER'S) on the East side of the Sacramento River, embraces many very superior Farms of

100 to 500 Acres each; also Vineyards, Gardens and Orchards,

above all overflows, Fenced, having Dwellings, Barns, etc and throughout the year, large running streams, and irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of this Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Threshers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors.

☞ The "Job Dye Farm," of 250 acres—with Orchard, Vineyard, and Garden, with irrigating water, large Adobe House, and numerous out-buildings—will be rented to a satisfactory tenant.

Apply to GEO. CHAMPLIN, Red Bluff P. O, or on the Ranch, or to
E. F. NORTHAM and R. B. WOODWARD,
Dec. 17—19-2m San Francisco.

Pleuro-Pneumonia of Cattle.

We call the attention of all stock-raisers to the following letter of the Secretary of the Mass. Board of Agriculture to Gov. Andrew. The great increase of this disease in New England, its sad, unmistakable and fatal effect upon human health, should awaken public attention. Who can tell what becomes of the vast numbers of cattle that die of this disease, or *that are slaughtered* because they must die! How much of *our imported meats* are of this kind? Is there no remedy? No way of analyzing these diseased meats before we get "Death in the pot." Read what Mr. Flint says:

AGRICULTURAL DEPARTMENT, STATE HOUSE, BOSTON, December 24th, 1863.

To His Excellency John A. Andrew—Dear Sir:—The disease commonly called pleuro-pneumonia still exists among the herds of some twelve or fifteen towns of this Commonwealth. The most moderate estimates fix the loss by pleuro-pneumonia alone, in the British Isles, at ten million of dollars a year. The value of cattle lost by that disease amounts to two or three times the value of all the cattle imported. More than a million head of horned cattle died of pleuro-pneumonia in the six years ending with 1860, of a value of at least sixty millions of dollars.

Prof. Gamgee, a man of high scientific attainments as a veterinarian, and having the confidence of the British Government as such, says:

"The traffic in diseased animals is impoverishing stockholders and the country at large. My calculations, made under the most favorable circumstances, show that the United Kingdom never loses less than forty millions of dollars annually by disease among cattle, sheep and pigs. Half that loss is annually due to foreign contagious diseases."

"The contamination of the animal food supplies has effected the health of the people to an extent becoming more and more appreciated the more the subject is investigated."

"The tens of thousands of carcasses of diseased animals, sold in large towns, are stealing life from human beings when and where we least expect it."

"Last year," says Gamgee, "employed in extensive investigations under the authority and direction of the Government, "my opinion became confirmed that the flesh of cattle affected with pleuro-pneumonia, when eaten by man, induces boils and carbuncles to an incredible extent."

There would seem to be no longer any reasonable doubt that the disease is contagious and dangerous to a very high degree. Every step of its history in this State has shown this to be the case, even if it had not already been well known before, from history abroad.

We know it is contagious. We knew it on its first introduction, four or five years ago. The evidence, then, as now, was so conclusive and overwhelming that it would seem that any one, who could doubt with only a limited knowledge of the facts, would doubt all human testimony, even that of his own senses. We could fill many pages with the opinions of the most competent and learned veterinarians as well as practical men, all going to show its purely contagious origin.

I have before me now the written opinions on this point of nearly all the veterinary surgeons in Great Britain, several hundred in number, and, so far as I am aware, not one of them expresses a doubt upon the point.

On the 1st of February, 1863, Prof. Gamgee sent a circular to all the veterinary surgeons in the United Kingdom, making inquiries on this very point of contagion, among others. He got answers from about three hundred, and he says: "I find that all the best veterinary surgeons in this country, whose opportunities are most favorable to arrive at a sound conclusion, attributed these diseases (foot-and-mouth and pneumonia) to contagion and infection." "Ninety-nine per cent of the dead cows carted from the town dairy die of contagious pleuro-pneumonia."

And again. "Whatever county I select as an illustration, it will furnish you with the most unmistakable evidence that *our cattle, our soil, our food and climate have nothing to do with the generation of pleuro-pneumonia;* but traveling, buying and selling, transporting by steamers and railways, are the causes which lead to approximation of diseased and healthy, and thus tend to the decimation of our stock."

The *Italics* are mine, and I wish to call especial attention to this point, because some have attempted to lull the public mind into a false and dangerous security, by trying to have it believed that local causes, as want of ventilation, &c., have generated the diseases here among us. It is a most dangerous fallacy. There is not the slightest ground for belief that a single case ever arose in this country from any such causes. It is clearly and unquestionably an imported disease, and if the whole truth were known, every link in the chain would appear, as most of them, in fact, do now. I might go farther and say that it is not generated spontaneously, according to the opinions of those best capable of knowing, in any part of Western Europe. It is probably brought from hotter climates.

In what I have said I have no personal interest, either direct or indirect, to subserve, and in urging the facts in regard to this disease upon the public attention during the last four or five years, I have only attempted to do what I conceived to be a public duty. So far from having anything to regret, to retract, or alter, from what I stated at first, subsequent events and a more extended observation have corroborated those statements in the strongest manner. If the community still sleep over the danger, I shall have the melancholy satisfaction of finding, at last, a unanimous public sentiment on this subject. But it will be too late. The result is inevitable. Neglect will and can only lead to unmitigated evil.

If the people are willing to drink the milk of cows, rotten with disease, and give it to their children, as they have done in Boston, if they are ready to accept the alternative of having the beef of diseased animals brought upon their tables, as has been the case, I have no more to say. But if they desire to avoid this alternative, they will have to act promptly and strenuously for the eradication and stop of pleuro-pneumonia.

If necessary, let a competent inspector be stationed at the principal markets for live stock, with full power to exclude any diseased animals, or to prevent its being entered and sold there. The last able Board of Commissioners had full power to do this, as well as to put men under oath to elicit facts which will otherwise remain concealed, and this contributed more than anything to keep the disease in check.

The honest dealer could not object to this course. It would be his own protection as well as that of the community. The unprincipled dealer alone would be discommoded, and from him the community has a right to protect itself.

Very respectfully,
Your Excellency's obedient servant,
CHARLES L. FLINT,
Secretary of the Board of Agriculture.

CURE FOR A FELON.—Those who have ever suffered the agony of a felon on the thumb or finger, will be glad to know a sovereign remedy has been found. We are pleased to state that, by repeated experiments, it has been discovered that the leaves of the Jonquil made into a poultice, and bound upon the felon effects a rapid cure, pain is almost immediately removed, and relief is had with joy. We can attest to this fact, having aided in three cures by the leaves from our own garden. We believe the Narcissus and Hyacinth will also accomplish a speedy cure. Any one affected should try it.

To smile at the jest which plants a thorn in another's breast, is to become a principal in the mischief.

CASHMERE GOATS—MALE AND FEMALE.

THE CASHMERE GOAT.

We present once more the illustration of the pair of splendid full blood Cashmere goats, of which we spoke some three years since, when we had the three pairs of these splendid animals, on their way from Georgia to California.

We had at that time (July 1861) ten as fine animals as the world ever saw, ready for their new home in California, but this "cruel war" intercepted them, and they became the "food of war," and we couldn't help ourselves. We made the best of it, and charged the loss to war account. Such is the fate of war. These animals should be introduced into California, and acclimated here.

Already a Mr. Landrum introduced two bucks across the plains in '62. One died since, and a few half-bloods only have been reared. The stock can be purchased at a fair price now, but we want full blood ewes, and a stock of them, and a fortune could be made. We ask the attention of any one that feels an interest in these animals to read the card below, and with this the letters we published two weeks ago, from Dr. Macgowan, on the same subject. We do really hope a company can be found that will, at the earliest day, complete a plan that will furnish to our State a thousand of these beautiful animals.

We have received letters from parties familiar with this subject, who have traveled largely in that part of the world, and who have a complete history of those valuable animals and the source from whence they can be obtained, who are desirous to form a company for the purpose of importing them in numbers to this country. The gentlemen wish parties who have capital to join in the enterprise for the purchase and shipment of these animals. This enterprise can be made very certain and largely profitable. The party who writes is one of high standing, has much experience as a traveler, and is of undoubted responsibility, with a thorough knowledge of such an undertaking.

[For the California Farmer.]

Nursery and Orchard.

An experience of fourteen years in the nursery and orchard, prove how little I once knew, and how much is yet to be learned. Man is naturally ignorant, but, thank Heaven, he has the adaptability to learn. Pomology is a science—a noble one. Fruit, rich, ripe and delicious! How healthful, how ennobling! Means must be used to accomplish ends. Causes produce effects. Change is the order of this world. Alkalies, acids, oxyds, gases, electricity, light, heat, oxygen, hydrogen, nitrogen, etc., are means used by the great laboratory, Nature; her house is stored with useful materials and, by her, are well-used.

To succeed, as a nurseryman or orchardist, some vegetable physiology, agricultural chemistry, and meteorology are necessary. With these, industry and common sense, success will crown his efforts. Without them, he will be a bungler, and fail. Discrimination and taste should characterize the votaries of Pomona.

The Nursery:—Too much cannot be said, under this head, if rightly spoken, on the subject. The *soil* should be dry, rich, and full of vegetable mold. A dry soil makes healthy, vigorous roots and bodies; and if rich, large growth, vegetable mold is highly important; it keeps the soil loose, warm and moist, three things, essentially necessary to the healthy growth of trees. Deep culture early in the season, and surface culture after—especially after a heating rain. Deep culture has more advantages than the simple one of mechanically mellowing the soil; there is sound philosophy in deep and frequent plowing. Diseased organs may be restored by pruning, repeated stirrings of the earth, and an application of liquid manure; this I have tried repeatedly. Example: Take a nursery, the clons of which are covered with mildew and fungus, prune off the fungus, add liquid manure, and *plow deep*. In a week or so, a new vigorous growth of wood, and rich, dark green leaves are the result. Back of this end, effect or result, are causes, and here is the result—the fundamental principle: The earth is a *pile*, containing most, and frequently when brought into proper action, all materials necessary, with air, heat, light, water and electricity to produce healthy plants or vigorous trees. Electricity, in its various and modified forms, induce all motion even *vital motion*. In a mellowed mass are minerals forming a battery; these in their action, as alkalies, acids, oxyds become changed—*plus*. The spongioles of the roots are *ne-plus*, and absorb this vitalized food; in a hard soil no such action takes place, hence the philosophy of *deep plowing*. All know how to graft or bud; if not, they can learn elsewhere; root-grafting is bad, nearly always sending up water-sprouts, just below the union. Graft on healthy seedling stocks, just above the ground; bud the same. With common sense and energy added, we have said enough.

The orchard, if properly attended to, is worthy a place in every well-regulated farm. It is valuable and pays. Johnson said apple-dumplings were good, as whole families could be raised on them. Apples are fine for China-boys, chickens, sheep, hogs, horses and cattle, raw or cooked. In setting an orchard the following rules should be observed:

First—Plow the land twenty inches deep, or more. Take a common plow, with a strong team, turning up the earth ten inches; and follow with a sub-soil plow, cutting twenty inches deep.

Second—Harrow till level and well-mellowed.

Third—Set the trees deep enough so as not to be injured by the plow, near the tree, when the main roots are large.

Fourth—Set yearlings, as they do better than two, four, or six-years-old trees.

Fifth—Young trees should never be manured, as it is apt to make them tender, unless the soil is poor, or a stiff clay.

An orchard, *in bearing, must be well-cultivated, liberally manured and pruned, to insure good fruit.* The distance and method in setting the orchard is a matter of taste, except the trees should be far enough apart not to stride each other when large. Hogs and fowls should be permitted to run in the orchard, freely. They are of immense benefit destroying grubs, worms, insects and fallen fruit.

FIDUS.

SALEM, (Oregon), April 21th, 1864.

New Mining Law.

[As we have many readers in our mining districts, who are interested in mining, we give the following *new law* in relation to mining claims.]

Law in Relation to Suits for Recovery of Mining Ground.

The People of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. No action for the recovery of property in mining claims, or for the recovery of the possession thereof, shall be maintained unless it appears that the plaintiff, his ancestor, predecessor, or grantor, was seized or possessed of the premises in question within two years before the commencement of this action.

SEC. 2. No cause of action or defense to an action founded upon the title to property in mining claims, or to the rents or profits out of the same, shall be effectual unless it appear that the person prosecuting the action or making the defense, or under whose title the action is prosecuted or the defense is made, or the ancestor, predecessor, or grantor of such person, was seized or possessed of the premises in question within two years before the commencement of the Act in respect to which such action is prosecuted, or defense made.

SEC. 3. This Act shall take effect from and after its passage.

Approved February 18, 1864.

THE WONDERS OF A WATCH.—There are very few of the many who carry watches who ever think of the complexity of its delicate mechanism, or of the extraordinary and unceasing labor it performs, and how astonishingly well it bears up and does its duty under what would be considered very shabby treatment in almost any other machinery. There are many who think a watch ought to run and keep good time for years without even a drop of oil, who would not think of running a common piece of machinery a day without oiling, the wheels of which do but a fraction of the service. We were forcibly struck with this thought the other day, upon hearing a person remark that, by way of gratifying his curiosity, he had made a calculation of the revolutions which the wheels in an American watch make in a day and a year. The result of this calculation is as suggestive as it is interesting. For example: the main wheel makes 4 revolutions in 24 hours, or 1,460 in a year; the second or centre wheel, 24 revolutions in 24 hours, or 8,760 in a year; the third wheel, 192 in 24 hours, or 69,080 in a year; the fourth wheel, (which carries the second-hand), 1,340 in 24 hours, or 525,600 in a year; the fifth, or 'scape wheel, 12,960 in 24 hours, or 4,738, 400 revolutions in a year; while the beat, or vibrations made in 24 hours are 388,800, or 141,813,000 in a year.—Lancaster Express.

[Curious as is the above we add one other curious fact; J. W. Tucker's splendid watches are such perfect time keepers that they move faster than this bodily, i. e. he is selling them at a very fast rate.]

"FLAT BROKE."—We have seen a letter written a few days ago by a gentleman at Virginia City, to a friend here, wherein the writer says, that there are more men idle and "flat broke" at the former place, than he ever saw together in any place before in his life. It is but a short time since the Virginia papers were boasting that the attractions east of the mountains would soon depopulate California; but a great number that are eagerly rushing off to the silver mining country, will probably before next winter sets in, find it to their comfort and advantage to return.—[Stockton Independent.

Served 'em right. When folks are so foolish as to suppose they can *depopulate* California by any rush in mining, they will find it like Don Quixote's experiment with the windmills.

IMPORTANT DISCOVERY.—A curious discovery has just been made regarding the influence of iron on vegetables. Preparations of iron are used as medicine where the blood is poor in red particles. The pale cheeks of the invalid often regain their bloom under the influence of such tonics. It is the same, it appears, with plants. On the chalky soils of France and England, where there is an absence of iron, vegetation has a sere and blanched appearance. This is entirely removed, it appears, by the application of a solution of sulphate of iron. Haricot beans watered with this substance acquired an additional weight of sixty per cent. Mulberries, peaches, pears, vines, and wheat, derive advantages from the same treatment. In the cultivation of clover, wonderful advantages have been gained by the application of the sulphate of iron on soils in which that ingredient is wanting, and in cases where it is desired to produce an early crop. The material is of course cheap, and the quantity applied small. All the scales falling around the blacksmith's anvils should be saved for the land—they are worth five cents a quart to gardeners. No fruit is so much benefitted by iron rust in the soil as the pear.—[Ex.

POVERTY is the only load which is the heavier the more loved ones there are to assist in supporting it.

Letters from an Old Californian at the East.

NUMBER EIGHTEEN.

New York, April 16th, 1864.

The Great Sanitary Fair.

EDITOR CALIFORNIA FARMER:

The excitement about the Metropolitan Fair is on the increase, if anything. It is extremely difficult, in the evening, to see anything in detail. One's whole attention must be devoted to moving about. In some places even to move is a difficulty. In the morning the crowd is not so dense and the visitor can look at the articles for sale and purchase with a tolerable notion of what he has got for his money. I have spoken of the Art Gallery, but the other departments deserve more than a passing notice: The hall of Arms and Trophies is not only fitted up with excellent taste, but well repays one for a close examination. In this department are to be seen the swords, which have become the great excitement of the Fair. The crowds about the table, upon which the book for enrolling the names and votes of the subscribers, is so great that only a six-footer can see what is going on. At one time I should have voted for McClellan, but now Vicksburg points to Grant, Chickamauga to Thomas, Lookout Mountain to Hooker, and Gettysburg to Meade; Generals whose names ought to take precedence of Little Mac. You could devote a morning to looking over the curiosities in the "shop." The most interesting to me was the Widow's Mite, the one-dollar-greenback stained with the blood of an only child which some poor mother, with a woman's tenderness, had sent for the benefit of the sick and wounded. It is the only green-back that has ever brought the tears to my eyes. My attention, in one place, was called to the miniature model of a Soldiers' Home. Upon beds in the house, on benches outside and lingering under the trees were the sick and maimed. One little fellow, with a wooden leg, stood in the foreground and pointed to a little box with which the visitor was invited to drop pennies. As the little nickel coin went down it touched a spring which forced up a little card with two words written upon it, "Thank You," that were eloquent. The Indian Room, under the management of Bierstadt, the Artist, is most interesting and one can enjoy the performances of the Chiefs with an additional zest by reading Cooper's Novels. As much of a curiosity, as anything in the Fair, is the crowd of people who are eating in the restaurants—sight-seeing must create an immense hunger. An unnecessarily painful spectacle is the parade of a gang of pickpockets through the crowd, the men elegantly dressed and the women most respectable-looking and crying bitterly. It may have been a necessary discord, but after that the beautiful colors of the Fair seemed to be darkened by the shadow of an unseen tint. The music is the very best; it is worth the price of admission to hear Graffula's band play selections from Operas of Faust, the Merry Wives of Windsor and Ione. One could promenade in the evening, with a relish, if the crowd did not render walking impossible. As it is, a thin man like me, floats along wherever the tide carries him, and is thankful for once, for not having a preponderance of flesh.

Among the Antiquities of Rome.

The interesting feature of the Fair, on Monday, was the opening of the Roman department, which had been looked forward to with so much eagerness by the Italian community, and also by many Americans who have enjoyed the pleasure of visiting the Eternal City and witnessed its classic wonders. About two o'clock in the afternoon the articles had been arranged and were ready for exhibition. The arrangement of the collection was most tasteful. The Papal and Roman flags were spread upon the wall at either side of a magnificent portrait of Pius the Ninth; above these appeared the keys of St. Peter, while at the north side was a bust of Washington, and at the left side a bust of Secretary Seward, both in marble. A number of rare oil paintings, embracing copies of some of the most celebrated works of Italian artists, were suspended from the walls, and commanded the admiration of the more refined and intellectual visitors. But the most interesting portion of the collection was the display of Roman antiquities, which must prove a rare feast to all who possess a love for ancient history. A list of some of these will be interesting. Thus there is a bit of marble picked up in the ruins of the Temple of Jupiter, on the Via Appia, and worked into the form of the tomb of Caius Sextus. There is also a paper-weight from the golden house of Nero. An inkstand of Pavonazetta marble, from the Palace of the Cæsars, in the form of Scipio's tomb, lies among a pile of other less notable curiosities. We may mention also the bath of Caracalla, marble from Adrian's Villa, pieces of the Tarpeian rock, nine bullets from the battle-field of Thrasymene, Marmo, Sorbito, with a cross, from the tombs of Via Appia. A great number of Roman relics, pearls, diadems, etc., are to be seen among the collection, out of which we may enumerate the following: Thirty-six rosaries blessed by the Pope, representations of ruins in the Forum, in Rosso Antico; four obelisks of black marble; Sorrento wood glove-box and a bronze model of the bell of St. Peter's, Basilica. Models of the Temples of Neptune and Vesta, manufactured of cork in the most artistic fashion, form an attractive feature of the curiosities, in fact, the articles in the Roman Department are so numerous and fraught with so much interest that it would occupy a column in describing them. It is under the direction of Mrs. Blatchford, who is assisted by a number of ladies and gentlemen.

The Academy of Music.

I was forced, the other evening, to abandon the Fair, for the Academy of Music. As I had left my white kids at home, I went up into the gallery—but what a jam! It was the first night of Robert le Diable, and the crowd was even greater than at the Fair. The only vacant seats were in the subscribers' boxes in the dress circle. The gallery was packed with foreigners who delighted me by applauding in the right place and rebuking the unfortunate individuals who whispered in the interesting parts. Down stairs it is sometimes impossible to hear, for the untimely conversation of brainless men and women, who seem to think the proper *place* for flirting is at the Opera, or in a Concert room, and the *time* during the singing of the most interesting arias. I noticed, in the audience, up-stairs, a number of colored people, and the French and Italians chatted with them in the liveliest way, while the Americans kept at a respectful distance. My companion, who was a young New Yorker, had all the senseless prejudices which you will find no where else so ridiculously displayed as in this city, and he showed that he would even keep the poor black lover of music out of the gallery of the Opera House. This prejudice has almost entirely banished from the highly educated classes, but a large portion of the middle and lower ranks of the New Yorkers, change so slowly in this respect, that one almost doubts if they ever think or read at all. To return to the Opera: Meyerbeer, in Robert, portrays the antagonism of the spirit of Good and Evil, and if the artistes are equal to their parts, his wonderful music is almost transparent to even a musically-uneducated listener. The struggle of Bertrand and Alice, for the mastery of Robert, the fascinating character of Isabella were beautifully portrayed, and in the grand Trio, where the spirit of Good, personified by Alice, triumphs, the entire audience seemed transported with delight. Brignoli's pure soft voice thrilled through me, charmingly relieved by the deep tones of Herman's bass, while the singing and acting of Medori was sublime. Miss Harris, who took the part of Isabella, has an exquisitely sweet voice, her vocalization is perfect, but she is like a child compared to Medori, and it is often, with difficulty, that she is heard. Brignoli is the great star, here, and his voice is soft, and every tone so delicious that I cannot wonder at the enthusiasm of the musical world. Mazzoline is the greater actor, but his singing lacks sweetness.

Amateur Theatrical Performances.

The performance of the Glass Slipper, by the children of the aristocracy of New York, for the benefit of the children of the soldiers, realized a handsome sum. The house was crowded by the fashionables, and the gay costumes of the ladies, the animated features of the children and the brilliant display of diamonds made up a scene of great beauty. The play was cast as follows:

DRAMATIS PERSONÆ.

Cinderella	Miss Minnie Cropsey
The Fairy Serene	Miss Katy Sinclair
Queen	Miss Clara Field
First Haughty Sister	Miss Minnie Cropsey
Second Haughty Sister	Miss Nelly Haskill

Ladies of Quality.

Prince	Master Charley Fremont
King	Master Sinclair
Dromio	Master Calhoun
[illegible]	Master Morse
Coachman	Master Frank Fremont

In every respect it was a remarkable success. The costumes were superb, the scenery was most splendid, and the Juvenile Amateurs performed histrionic wonders. The spectators, composed to a large extent of papas, mammas and all the connections, lineal and collateral, of the performers, were charmed beyond measure, and expressed their gratification in unbounded applause and sweet-smelling bouquets, which rained down upon the stage in delightful showers. Miss Minnie Cropsey made an arch Cinderella, and carried off the largest share of the honors. Master Charley Fremont did the Prince right royally. Miss Katy Sinclair was a duck of a Fairy Queen, and the haughty sisters were capitally rendered by Miss Nelly Haskill and a sister of Miss Minnie Cropsey. In fact, it all went off beautifully, even to the chariot and Shetland ponies. The probability is that it will have to be repeated to enable those disappointed yesterday, to see it. The sum realized by the exhibition was $2,842.

Stock-Jobbing and Gold-Gambling.

Business has been materially affected by the gambling in gold. The excitement in the neighborhood of the street exchange would forcibly remind you of an outbreak in a lunatic asylum. Such crowding, such swearing, such screaming, is only to be described by a Dante. It is the most horribly repulsive spectacle which a stranger can witness in New York. Read what the Herald says:

"GOLD, GOLD, GOLD.—Gold is publicly announced to have gone up yesterday to 189; but the people ought to understand very clearly that this statement is not true. The price of gold is 165, as government is selling it at that. Any quotation of gold above that point is fictitious and not in any sense real. But how does it happen that these statements of the high price of gold are made? An answer to this question shows that the newspapers must necessarily connive at the deception. They must give the operations in gold on the street, at whatever prices, though the operations are mere fictions. Every operation in gold in which the ostensible price is twenty-four cents higher than gold can be bought for obviously has not the purchase of gold for its object; and such operations are of exactly the same nature as the bets made between the thimble-rigger and his accomplice to inveigle the green ones who stand by. Such are the operations between gamblers in gold to catch third parties; and such operations are made to an extent without a dollar changing hands or being ever seen by either party. All this would do comparatively small harm if it stayed in Wall street. But the news goes abroad that gold has gone up to these high figures, and the retail dealer in the necessaries of life, even if he knows such a rise to be unreal, makes it the pretext for adding five or ten per cent to the price of the articles he deals in, and thus the people are cheated. Their only remedy is to know the truth, and not be imposed upon with such a reason for a rise in prices."

M. A. S.

GOOD WOOL.—The first requisite for good wool is fineness, which is governed by and produced under the laws of stock-raising, as the breed or variety, climate, the summer and winter food of the sheep, and their management. The second requisite is softness; this depends on the character of the yolk or oily secretion which fills the tube of the hair or fiber. This yolk crystalizes in the fiber after shearing, and renders it brittle and harsh, or soft and silky, according as its character is formed by those matters which govern its growth. The last requisite is the length of the wool or of the fibers composing it, and this is governed by climatic changes and the condition of the animal.

A Bad Spell for the Crops.

1864

Sanfrancisco Cal May 7th

Mr Editor of California Farmer would you like to know the 2 best avrage crops in Alemeda county I think they are on the road from San antone to Alemeda city one is one the left & I was told it belonged to Mr. Kenedy which crop looks fine it is Barley the next is a crop of wheat on the right a haife mild from Mr k s & is a crop of more than ordinary size for the season by the side of this field is a neat coatage which with its out buildings & the Neat Fence that inclose them show that the ones has an Eye for comfort & convenience together with a taste for economy the Name of which I did not learn traveling along & turneing to the right on the way that leeades to what is called the Encinel we do not find any thing of match Note until we get a way past a field where the road makes a shurt tail Bend please pardon me for saying shurt tail, we next arrive at a little settlement which is blended more or less wit redeeming Qualitys here we Notice some Ladies working in the flower garden & they looked more helthey then our city Ladies who are a fraid to take a hold of a hoe lest it mite Bite them traveling alon a little wais furthe we are arested by a most a swete oder which comes from some New made hay which is put up into small sugar loaf piles it is barley which has bin cutt for hay the man who ones this property is called Mr Fitch at this point we strike an Avenue where the Railroad is to run there is a fine field of corn on the right which belongs to mr F mr F told me that the corn would pre mature for want of Moisture it is all ready taseling out while it has not arived at a prope bight mr F has a well cultivated field between the Avenue & the march I am told it is superintende by a mr Nicerson at this time we look at our time piece & find we must returne to meete the boat not having time to proceed any furthe on our inchanted Journey So good By

Youres most sincer Fling Gingle

[We find the above letter in our Box; we publish it as a *Literary Curiosity*. We give it *verbatim, et literatim, et punctuatim*. It will be seen we have a "Josh Billings" among us; Artemus Ward's "Babes in the Wood," is left in the rear, now—no account. The only punctuation mark in the letter is a coma, when the writer comes to a stop at the *bend* in the road. There is a *gingle* in it anyhow, and this *gingle* makes us *laugh*, and *laughter* is good for the dyspepsia. There is also some good suggestions to the *fair sex*—and the writer evidently has a *taste* for the beautiful in motion—but most fortunately he has never lost much time in *study*, probably was afraid of the schoolmaster; or we *guess* (Yankee privilege), that he comes *from Pike*, where schoolmasters are scarce. Were there not so much to amuse we should not publish such a Literary Epistle, without knowing the author. We would suggest, however, that he should sell his *Timepiece* and spend the value in learning to spell.]

Between Sansome and Montgomery sts.,

SAN FRANCISCO, CAL

THE UNDERSIGNED HAS ESTABLISHED a correspondence and business in Europe as to enable him to secure from the very best sources—the most careful growers—their choicest seeds grown, of which he will always be in receipt, and in endless variety, imported directly from France and England, from well known and responsible houses; some of the most prominent of which named in our catalogues.

It has been the experience of our best gardeners and growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be for a series of year, until more capital, experience and practical knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover;	Hungarian Grass;
Kentucky Blue-grass;	Orchard Grass;
Red-top Grass;	Sainfoin Grass;
English Rye-grass,	Timothy Grass;
Red Clover;	White Dutch Clover;
Crimson Clover,	Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONION, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties)

BULBS:

LILIES,	TULIPS,	HYACINTH,
Amaryllis,	Anemones,	Ranunculus,
Narcissus,	Tuberoses,	Peonywort,
	Gladiolus,	Iris,

and in endless variety, imported direct from FRANCE and GERMANY.

From his long experience in the Seed Business (over thirteen years), and his very extensive stock of goods appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

Native California Evergreen

TREE AND SHRUB SEEDS

FOR EXPORTATION.

THE UNDERSIGNED, FROM HIS EXTENSIVE facilities and

Large Stock of Every Variety of Seeds

Can offer unusual inducements to

MERCHANTS IN THE TRADE, PARKS AND LARGE RANCH OWNERS,

Who wish to be supplied in this line.

And would recommend that ORDERS FOR SEEDS be sent DIRECT to the undersigned, through the Express or by Mail, otherwise parties run GREAT RISK of being imposed upon, in case their Orders should be filled by some IRRESPONSIBLE ESTABLISHMENT.

☞ The Agents of Wells, Fargo & Co's Express are hereby authorized to act as Agents for the undersigned in taking Orders for Seeds and receipting for the same.

The undersigned is also permitted to refer to Dr. Warren, editor of California Farmer, who has had experience of twenty years in the Seed and Nursery business, and is conversant with the high value of imported seeds, and their superiority to all others.

☞ Send for a Catalogue.

Pacific Tin-Works, 324 Clay street, below Kearny,

13 SAN FRANCISCO.

First Things in New England.

The first vessel was built in Plymouth in 1621. The colonists in that year received an accession of a carpenter and nail maker. Of the former Governor Bradford says:—"He quickly builds two very good and strong shallops, with a great and stronger lighter, and having hewn down timber for ketches (a much larger description of vessel), but this spoilt; for in the heat of the sea, he falls into a fever and dies, to our great loss and sorrow."

The first vessel built in Boston was the Trial, of 30 tons burthen. She sailed for Bilboa June 4, 1643, Thomas Graves, master, laden with fish, which she sold there at a good rate, and from thence she freighted to Malaga.

The first saw-mill was set up in Salem in 1639. In the second letter of instructions to Gov. Endicott, he is directed to "give approbation and furtherance to Francis Webb in setting up his saw-mill."

The first mill in New England was a wind-mill, erected near Watertown, which was taken down in 1632, and rebuilt in Boston.

The first corn-mill in Boston was removed from its original site (the locality not given) in 1631 "Because it would not grind but with a westerly wind." It was set up on Copps' Hill, afterwards called Wind-Mill Hill, by which name it is mentioned in the records of 1635. This mill was a conspicuous object throughout the settlement, as being the first attempt to supercede the morters and hand-mills previously used by the people.

The first printing press was set up at Cambridge in 1638, and the work issued from it was "The Freeman's Oath." The second issue was an almanac for 1639, "by Pierce, Mariner." Stephen Day was the first printer.

In 1663, two hundred and one years ago, the entire Old and New Testament, with the New England Psalms, all in Indian verse, translated by the Rev. John Elliott, minister of Roxbury, into the dialect of the Nipmuck or Natick Indians, was printed in quarto, with marginal notes, and issued with the joint imprint of Samuel Green and Marmaduke Johnson.

The first American edition of the English Bible was published in 1782. Sower's German Bible came out eighty years after Elliott's and forty years before the English imprint.

The first paper-mill was set up in Milton, seven miles south of Boston, on the Neponset river, below the head of the tide. The proprietors were Daniel Henchman, Gilman Phillips, Benjamin Faneuil, Thomas Hancock and Henery Doring. They furnished the Legislature with a sample of their manufacture in 1731, and the mill was probably built early in the previous year.

The first glass works are said to have been erected in Braintree, but the first to which we are enabled to assign a date were commenced in Salem, in 1638, in which there were granted to "ye glass men several acres of land adjoining to their houses."

Captain Sedgewick set up the first Brew House soon after the settlement of Boston, in November, 1637, the General Court, for the protection of common brewers, ordered that "no person shall brewe any beare, or malt or other drinke, or sell in gross or by retail, but only such as shall be licensed by this Courte, on pain of £100; and whereas Capt Sedgewick hath before this time set up a brewe house at his great charge, he is freely licensed to brewe beare during the pleasure of this Courte."

The first regular attempt at an improved manufacture of cloth—particularly woolen was made by a company of Yorkshiremen who in, 1638, settled at Rowley, in Essex county.

As early as 1651, shoes were exported to England from Lynn, where that business had already begun to take root.

—AND THE—

STODART PIANOFORTES.

Importers of

Piano Covers, Music Stools, Music Racks,

ETC.

PICOLLO PIANOFORTES.

WE WOULD CALL PARTICULAR ATTENTION TO these beautiful instruments from our own manufactory in Paris, and which we can confidently recommend as equal in quality to those of any other European manufacturer.

PICOLLO PIANOFORTES are now in universal use on the continent of Europe, having completely taken the place of the old style of Square Pianos. They possess all the merits ever claimed for the Square Piano, with many advantages that are peculiar to themselves.

Our assortment comprises six different styles varying in price from $275 to $400 each.

Iron-framed Picollo Pianofortes.

These instruments are a "specialité" of our manufacture, are constructed with a special view to withstand the peculiar climate of the interior of California, and are warranted to stand any change of temperature.

Price $400 to $450 each.

STODART PIANOFORTES.

We have had the exclusive agency for the sale of these celebrated Pianos for the past twelve years, and refer with confidence, as to their quality, to the many hundreds of instruments themselves now in use throughout the whole extent of the Pacific Coast. A general assortment of these instruments will at all times be found in our warerooms, comprising Grand Action, Square, Upright, and Overstrung Pianos, in plain or richly carved cases. We offer them at the same prices at which they are sold at the manufacturers' warerooms in New York, thus saving to the purchasers here the cost of freight, insurance, interest, and attendant charges. Prices range from $210 to $500 each.

FRENCH HARMONIUMS.

In connection with our manufactory of Pianofortes at Paris, we have established a manufactory of FRENCH HARMONIUMS, suitable for parlors, music-halls and churches. These instruments, like our Pianofortes, are all in rosewood cases, and are made with the improved "transposition attachment," which enables the performer, in voice accompaniments, to adapt the instrument to any particular "key," thus entirely obviating the necessity of any transposition of the music. Nine varieties $100 to $1,000 each.

We beg to call attention to the fact that the Harmoniums of our manufacture possess many valuable improvements not to be found in any other instruments of this description, among which is the peculiar disposition of the reeds. This improvement is based upon purely scientific principles, rendering the reeds doubly sensitive and much less liable to become deranged or get out of order

For full description of Picollo Pianofortes and Harmoniums send for descriptive catalogues.

PRINCE & CO'S

Melodeons, Doub reed School Organs, and Organ Melodeons.

Being the exclusive agents for the sale of these celebrated instruments in California, we are prepared to furnish them at the catalogue prices, as sold at the warerooms of the manufacturer in the East. The assortment comprises twelve different styles of instruments, ranging from $60 to $425 each. Illustrated catalogues, with full description and price of each instrument annexed, will be furnished on application. 12-3m

JACOB ZECH,
FIRST PREMIUM
Pianoforte Manufactory,
416 MARKET STREET,
Between Sansome and Battery streets,

I HEREBY GIVE NOTICE TO THE PUBLIC that I have now on hand a fine assortment of seven-octave over-strung, three-string Pianos, of my own manufacture which cannot be excelled by any manufacturer in this or the United States.

Purchasers of Pianos will find it to their advantage to come and inspect my Pianos before they buy elsewhere, I guarantee every one of my Pianos for three years.

☞ Pianos tuned and repaired.

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartets, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair oxen," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 325,000 copies. Prices—paper covers, 25 cents, $20 per 100, bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2, are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100, cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glori ous," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 300,000 copies.

Just published by HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc. Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Cull. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100, cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

ELECTRICITY
THE
GREAT REMEDIAL AGENT.

Electricity as a Remedial Agent has, until recently, been but little known. An Electric Battery has been a terror from childhood up because a little Battery gave a "start," and the thunder storm killed by lightning. Now it is better understood, and is and will be the sovereign remedy for many diseases heretofore considered incurable. The following series of articles and statistics, with facts and proof of the virtue of Electricity are worthy of attention. When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulations of the poisons which constitute disease. A great cry went up from the interested in the continued supremacy of the old system of one poison to cure another, that Electricity, as a Curative Agent, had been tried and had proved to be of but little if any value—thinking, poor fools, the world of science stood at the same point it occupied one hundred years ago. They were wrong; while those old fogies were content if they cured one in every five patients there were those who were diving into the science of Electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the *Improved Instrument* of Dr. J. H. Josselyn, Resident Physician at the Electropathic Institute, 645 Washington street, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic System. From early morn till late at night, his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services.

The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed is Rheumatism; none has given the honorable practitioner more trouble to relieve, and no one has pretended to cure (if we except known empirics) permanently. But this noble disease gives way before the Electropathic System in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of a relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

We allude to that kind of disease paraded by quacks in the journals of the day, a trouble which was never cured by medicine, only a little strength imparted by the use of tonics. The poor victim is kept taking medicines and paying for them until his last dollar is gone and then, as soon as he undertakes to work to obtain more funds, the trouble comes back in all its loathsomeness. To this disease Electropathy is peculiarly applicable, its action being upon the spermatic nerve, strengthens the secretory organs, and at the same time, creating an equilibrium in the system, thereby preventing an elapse.

We dwell upon the disease because it is the bane of the youth of California, and one about which there has been more deception used than all others put together. It is not necessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in the State or at the East.

There are at present very few Instruments in the world that can be depended upon. A good Instrument costs very heavy, and cannot be purchased unless ordered, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only Instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous imposters in the bathing line. The pure Magnetic Bath is one of the most effecure aids in the removal of disease from the system, but if given at the wrong time is likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this Bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact the only place where they can be obtained to all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unreasonably administered, and if not necessary, advise the requisite remedy.

To Females,

the Directors would say, Electropathy is particularly applicable to your delicate and fragile systems, and to the numerous troublesome and painful diseases to which you are liable. Should you be irregular, a few treatments will restore the functions to the proper state without pain or inconvenience. Should you be weak and enfeebled, either general or local, this system imparts strength and vitality, making the recipient feel buoyant and youthful, where before they were languid and unable to enjoy the pleasures of life. One great blessing connected with Electropathy is, it purifies the system so thoroughly that it beautifies the complexion, making the coarse and freckled skin as pure and fair as possible, giving the patient a fresh and healthful look.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil foreboding and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in issuing this pamphlet, do it in the hope that it may be the means of awakening the public, who have not studied into such things, to a sense of their duties, and if possible prevent those who have the care of a rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse the origin. Also, that those in need of remedial agents may know where they can find them without resorting to taking the thousand and one poisonous nostrums that are continually palmed off as sovereign panaceas for all the ills of humanity. Avoid them all, they are snares set to rob you, and to your bodily injury at the same time. The following is a list of the cases which have been successfully treated by the *Electropathic System*, at the Institute, during the first four years of its establishment. The record is good, and challenges admiration of the world:

Name of Disease.	No.
Rheumatism	1540
Neuralgia	1492
Dyspepsia	1467
General Debility	1410
Fever and Ague	1269
Dumb Ague	1210
Bronchial Affections	1136
Asthma	1049
Female Irregularities	1022
Mercurial	933
Scrofula—long standing	922
Paralysis	890
Disease of the Eye	832
Catarrh in the head	705
Catarrh in the lungs	608
Liver complaints	600
Incipient Consumption	582
Panama Fever	503
Deafness—total and partial	480
Mental Derangement	471
All other—and among which is almost every nameable disease	2,186
Total	21,373

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit. Let them go, they will not be missed.

Persons seeking remedial assistance, may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface, by its energy, while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon mercurial diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity forces itself out of the body. This result has been arrived at by testing the water after an Electro Magnetic Bath. After such tests have been found in the water the patient is not troubled any more with those pains peculiar to the diseases. In all other cases it forces to the surface and is washed off by the bath. The whole system in its application is a luxury, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure all the time. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES.

SAN FRANCISCO, April 18, 1860.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied with chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this eighteenth day of April, A. D., 1860. P. BARRY, Notary Public.

The undersigned takes this method of acknowledging publicly the benefits he received from the treatment applied to him at the Electropathic Institute, while suffering under a terrible infliction:

This is to certify that I have been under Electropathic treatment at the Electropathic Institute, 645 Washington street. When I applied to Dr. Josselyn I was cramped up with rheumatism, and also had the coast ague. So bad was I that, without relief, I don't think I could have lived more than one week. The Doctor, with his instrument, relieved me the first treatment from all pain, and perfectly cured me of all disease in twenty treatments, without the use of medicines. I cordially recommend all afflicted to patronize this Institute, for it is truly a blessing to the afflicted, and the operation is very pleasant. I wish to thus publicly thank Dr. Josselyn for his care and sympathy.

JOSEPH SEGER, of Bolinas Bay.

September 19, 1860.

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this 19th day of Sept., A. D. 1860. P. BARRY, Notary Public.

SACRAMENTO, Oct. 10, 1860.

DR. JOSSELYN—Dear and Honored Sir: You requested me to let you know how I feel after being at home three weeks. Well, sir, I have been here a little over two weeks and there is no return of that very unpleasant trouble. My sleep is sound, and there is no disturbance of the regular laws of nature. I feel as strong as I ever did before bad habits had weakened my system. Not only is the general debility entirely disappeared, but the local trouble has gone. I feel so strong that there is no fear of its return. Considering that you only took one month to cure a disorder of seven years standing, I think your system almost miraculous. Accept my sincere thanks, and publish this if you please. I have sworn to it, as you will see.

C. BOWMAN.

State of California, County of Sacramento—ss.

Subscribed and sworn to before me, this tenth day of Oct., A. D., 1860. CHAS. HART, Notary Public.

HORNITAS, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it; and Mercurial pains as you state them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you would cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can, by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON Jr.

To J. H. Josselyn, M. D., Resident Physician, at the Electropathic Institute

NEVADA, Nov. 8, 1860.

DEAR DOCTOR: Pursuant to agreement, upon my arrival, I sit down to pen you a few lines in acknowledgement of the great service you have rendered me, in relieving me of that painful case of neuralgia and rheumatism. When I look back and see the gallons of medicines I have swallowed to no purpose, and then to think how soon you cured me, I am astonished. You were only twelve days performing a cure of the trouble, for which I had taken medicine over six months. Dear Doctor, if you could see the wonder exhibited by my friends, who can hardly believe that a cure was performed without medicines, but here I have been cured, and I have not taken a drop of medicine from you, nor from any one else, while being treated by your splendid Instrument I shall try to show my gratitude by sending every sick man I come across to you. Yours, till death,

FRANCIS GARLAND.

To J. H. Josselyn, M. D., Resident Physician, Electropathic Institute.

State of California, County of Nevada—ss.

Subscribed and sworn to before me, this eighth day of Nov., A. D., 1860. F. SPAULDING, Notary Public.

YREKA, Nov. 10th, 1860.

DR. JOSSELYN—Dear Sir: Your letter, dated October 16th, is before me. You wish to know how my bronchial troubles are. Now, Doctor, that looks a great deal like a joke. I once had such an affection of several years' standing, but thanks to your natural mode of treating disease, it has gone to be numbered with the things of the past. Since my return I have not felt the slightest trouble from it. When you pronounced me well I did not expect to ever hear from it again. Any one who sits under treatment of that *Improved Instrument* of yours will have the same feelings. It imparts vitality to the system so rapidly that confidence is at once established. I have to thank you that you did not refuse to treat me because I could not pay you the whole of your reasonable charge; inclosed is the balance due you, and God bless you for the kind treatment I received at your hands.

Yours, ever grateful, WM. GARDNER.

State of California, County of Siskiyou—ss.

Subscribed and sworn to before me, this tenth day of Nov., A. D., 1860. B. F. WELLITS, Notary Public.

This is to certify that I, the undersigned, was troubled with dumb ague accompanied with rheumatism, very badly. My disease was taken in Washoe. After having exhausted medicines without benefit, I applied to Dr. Josselyn, at the Electropathic Institute, on the first day of November. After taking twenty treatments with his Improved Electropathic Instrument I am perfectly cured, having been entirely relieved of all pain or inconvenience. I feel as strong as I ever did when in the best of health. I cheerfully recommend all afflicted to his care, as being the best physician I ever became acquainted with. One great advantage, he uses no medicines, but cures by a process which is perfectly natural. The time occupied in my case was thirteen days.

D. O. HARRA.

November 14th, 1860.

State of California, City and County of San Francisco—ss.

Personally appeared before me, D. O. Harra, and subscribed and sworn to the above certificate, on this fourteenth day of November, A. D., 1860. P. BARRY, Notary Public.

SAN FRANCISCO, Aug. 3d, 1861.

To the Directors and Resident Physician of the Electropathic Institute.

SIRS: You requested of me a certificate of the cure you performed in my case. Below I append it:

This is to certify that I was troubled with a swelling which commenced in my ankles, and gradually extended upward until it effected my whole body. I sought the best medical aid in New York and Boston, and they all pronounced it dropsy. Hoping to retrieve my health, I visited California in February last. I consulted the Resident Physician at the Electropathic Institute; and now, after five months of treatment, and waiting to see its effects, I am pronounced well by competent judges. It did not take but three months of treatment to cure me, but I waited to see that it did not return. I feel perfectly assured from what I saw while under treatment that Electricity as applied at the Institute will cure any disease to which the human family is liable.

Now, gentlemen, you can make what use you please of this certificate. With my thanks to the Resident Physician for his kind attention, I subscribe myself,

Your thankful patient,
MRS. C. A. CARLTON

Opinions of the Press.

The advantages of electricity as a remedial agent, are universally admitted by the medical and scientific world. It requires, however, experienced skill to apply this remedy efficiently, and this skill of application is possessed in an eminent degree by Dr. J. H. Josselyn, of the San Francisco Electropathic Institute. Particulars of his method of practice can be obtained by reference to his advertisement in another column. The Doctor is well known to us as a scientific gentleman, and an ardent devotee to his profession. He is no pretender, but has conferred incalculable benefit on those who were so fortunate as to seek relief at his hands. For those who desire speedy and permanent relief from the rheumatic pains, so prevalent in this region, we can recommend no surer remedy, than a visit to Dr. Josselyn at his rooms in San Francisco, No. 645 Washington street.—[Placerville Republican.

ARE YOU SICK!—We wish to say a word to those that are sick. We have in this city an Institution known as the Electropathic Institute, situated at 645 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician who has no superior in the city. He has been in charge of the Electropathic Institute for several years, and has been uniformly successful in his treatment of the numerous patients that have placed themselves under his charge. The Electric treatment will cure many diseases that cannot be reached by any other mode. Dr. Josselyn gives his personal attention to all of his patients, and is always ready to give advice to those that may call upon him. His charges are very moderate, and we cannot do the sick a greater favor than to recommend them to call on him before placing themselves in charge of another.—[San Francisco Daily Journal.

We call the attention of our readers to the advertisement of Dr. Josselyn's Electropathic Institute. Voluntary and unsolicited we make the following statement, proving its beneficent effects, particularly in rheumatic cases. Some months since we were on an editorial trip, visiting the mountains. The stage-coach upset, and landed all the passengers, including the writer, below in the valley, where the Deer Creek overflowed by receiving the additional material, extraneous to its usual contents. For some hours exposed in our wet clothes, to night wind and weather, we soon felt the effects of the accident in the mountains—pains in the back, hip, and legs; so much so, that for weeks we hardly could walk. Treatments of all kinds were applied but without avail, until our attention was called to the Electro-galvanic Baths and appliances of the above Institute. Thank God, after two weeks we have been fully restored, and enjoy now the free use of our limbs and body, as fully as previous to the involuntary bath in Deer Creek.—[Dr. H. Brent, Ed.—True Pacific Messenger.

ELECTROPATHY.—Electricity has long been classed among the most effective medical agents. It possesses great advantages over the systems of therapeutics heretofore relied upon, as it reaches more certainly the seat of disease, especially in nervous or rheumatic complaints. The Electropathic Institute, No. 645 Washington street, under the charge of its able Resident Physician, Dr. J. H. Josselyn, has attained a well-merited celebrity for the many cases which have resulted favorably from the skillful application of this invaluable remedy.—[Daily Morning Star.

A GOOD INSTITUTION FOR THE SICK.—One of the very best places in the city for the care of the sick is at the Electropathic Institute, 645 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician of great experience, and no one can do the sick no greater favor than to recommend them to give the Electropathic Institute a trial.—[Weekly Journal. 13

The California Farmer.

SAN FRANCISCO:

FRIDAY .....MAY 27, 1864

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them on their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address,

PUBLISHER CALIFORNIA FARMER, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

330 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the FARMER OFFICE. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mail, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 330 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Send along your Greenbacks,

Don't be afraid to send along your Greenbacks. These we TAKE AT PAR in payment for all back dues to the FARMER for subscription. So send them along, now is the time. This is a better speculation than mining stocks, for it is as pleasant to read a newspaper when one knows he has paid for it, the digestion is better and a man feels happy, and if happy, then he feels rich. So pay prompt and you will "strike a lucky lead."

Clerk and Assistant Wanted.

We want an active intelligent business clerk in our office. We want a person who has a knowledge, to some extent, of agriculture, horticulture, the science of botany, and the seed business. A man of correct habits, and willing to give his time to business, closely; a young man free from incumbrances on his time so that he can apply himself to business wholly. A knowledge of the languages would be desirable, and of mineralogy, also. Application only to be made between the hours of 4 and 5 p. m., and by none who cannot give the best of references.

Books Received.

The following new books were received too late to be noticed last week, viz:

The Illustrated Horse Management. This book is a large, well bound, well printed, and finally illustrated work, of near 600 pages, edited by Edward Mayhew, Esq., M. R. C. V. S., author of the *Illustrated New Doctor*, and other works.

This work should be in the hands of every owner of a horse. It is for sale by Roman & Co.

Vigor—A novel, by Walter Barrel Clerk. *Eliza Warden, or the Early Days of one of the World's Workers*, a story of American life.

A Romance of Real Life, sold by Roman & Co.

Ten Acres Enough.—This is a practical treatise for the million, and shows how a very small farm may be made to keep a large family. Here's a book for those who say "farming don't pay." It shows how to work a farm. We hope every farmer will get a copy, which can be bought at Roman's.

Parlor Theatricals.—here is a little book that will serve to amuse and instruct children of all ages, from 6 to 60, in happiness. Play, play, play! Parents and children, brothers and sisters, play, play, play! Roman & Co. has these books.

Woman and her Era.—Here we have a book that takes hold of the basis of human happiness, and the world's vital interests. It is a work that speaks of the most momentous matters ever printed. It is a work, a notice of which we shall reserve until we read it, so as to speak of it as it deserves; for it has been written by one who has seen much of the world and humanity, and should know how to speak upon such subjects. The writer's name is somewhat celebrated as a leader in the cause of woman's rights, and as a woman, has made herself famous in the history of California. *Woman and her Era* is edited by Mrs. Eliza W. Farnham. We shall speak of the book as it deserves, for it merits such a notice at our hands, the writer once occupying columns in this journal as a correspondent. The work is sold by Roman & Co.

GOOD WORDS FOR CALIFORNIA.—We are very glad to notice in many of our Eastern exchanges, extracts from California journals, and especially from the FARMER, about our crops, our progress as a State, and the bright and encouraging prospects held out to the immigrant. This is what we hail with pleasure. When our Eastern exchanges will copy the bright side of California we shall rejoice to give them the credit of being just to our State. In last dates we notice the Country Gentleman, Plowman, Rural American and others, are speaking of our products. That is right, keep on doing this and we will be grateful and return it seven-fold.

CHILI WHEAT FOR TULE LANDS.—The experience of many persons prove that *Chili seed wheat* is the best for *tule land*; the nature of the soil gives to the blade of wheat great strength and the heads of the wheat are very large in proportion. Would it not be a good plan for some person who has good mellow tule land to experiment each month, by planting, and see how late it could be sown and mature a crop. Who will try it now?

The steamer Golden City left last Monday for Panama. She took out $913,448 83 in treasure $25,000 for the Sanitary Fund, and 510 passengers.

The San Francisco Postoffice.

NO. II.

THIS institution seems to be an independent branch of our government, or rather an off-shoot of it, *independent* by itself—for to our mind and to thousands of others, it appears to be managed or conducted independent of the interests of individual citizens, of merchants, mechanics or any one save the *convenient interest* of those connected therewith. There is no disguising the fact that the mass of business men are now so thoroughly disgusted with the inconvenience and delay in obtaining their letters in any decent season after the arrival of the mails, that they find it economy to pay Wells, Fargo & Co., *ten cents* for each letter, and get them in *ten minutes* after the steamer touches the wharf, rather than wait two or three hours, till after midnight, and then be disappointed and wait till next morning. It certainly is cheaper for all important letters to be sent by *Express* for it is only paying *three cents per hour* for the time consumed in waiting at the Postoffice. It has been said that California is progressive in all her institutions and plans of business; all moves rapidly and shows progress save our *Postoffice*, and instead of being better than in former years, the old '49 times has come back again, and the long lines of waiting expectants, at the windows, every morning, show this—it is in keeping with all the rest. Strangers ask "what's up! Steamer in? Big mail?" But the fact is, as the *Jokers* in the line say, the folks inside are *trying to spell the names on the letters!* The names are very difficult *to read*, and it takes a good while—so wait patiently. But this matter is getting worse and worse. Delayed letters, miscarried letters, letters in the wrong box, letters a week from Sacramento or Marysville; these may seem trivial, yet *life and fortune* may be lost by the miscarriage of a single letter. We know of wrong letters being boxed and returned, and again found in same box, a week or two afterwards, and letters of importance to others.

On Monday, of this week, we know of many business men waiting for letters, at their boxes, till near midnight, and going away because they *were not distributed*. Letters, too, on Tuesday and Wednesday, were not in their Boxes at 12 o'clock, midnight. Many of our own letters and papers were delayed till near 8 o'clock, a. m., next morning, and we know of many others in a similar way. What is the object of boxes, if not to secure letters at the earliest moment after the arrival of the mails? The daily press, the past week, teem with complaints of citizens. As a sample we copy the following from the Bulletin:

EDITOR BULLETIN:—Postmaster Perkins is out again to-day with another long list of advertised letters. Among these I notice one for myself. I have had a box in the Postoffice since 1850, and and get letters daily and yet here is an important letter, plainly addressed to me, that has been lying in the office here for a week or more. This is downright carelessness, to say the least. Let me advise all parties holding boxes in the Postoffice to examine carefully the list of advertised letters, and they may there find some long missing documents. H. C. B.

If our government cannot afford to have clerks enough, and of the right kind, and pay them, let the people know it, and they will see to a remedy; but if we have a Postoffice let it be so managed that business men can get their letters in a proper time.

Under the administration of Mr. Weller how was it? He was always on hand *himself*, took an active working part, and pressed on the duties to a prompt completion, and we know we shall be sustained by the mercantile community when we say that rarely was it over thirty or forty minutes after the mail-bags reached the postoffice, of an evening, before every business man, with a box, had his letters; well-skilled efficient clerks, directed by Mr. Weller, completed the work speedily. As we said, in our last, such clerks as *Armstrong, Wadhams, Cassus* and Assistant Postmaster *Creighton* knew their duties and did them to the satisfaction of our citizens; they were polite, courteous, gentlemanly men.

Under the official days of Mr. Parker, changes were put in office and as soon as the new ones had time to learn their duty, the wheels moved on smoothly again. Mr. Parker was on *his post*, always, even till after midnight, if needed, and his management with his clerks, had accomplished much and promised more; his clerks were courteous and good men; some few are still on duty. But alas! times are changed, there is a screw loose somewhere, for the Postoffice is the cause of many hard words and some funny jokes. One thing is very certain, if any person will go down to Wells, Fargo & Co., they will see how quickly and promptly that thousands of letters are distributed, and their office closes at 10½ o'clock, p. m. Then go to Uncle Sam's Postoffice, and wait an hour or two, and then go home and *wait till morning*, and make up your mind that the *third Postoffice in the United States* is a "Slow Coach." The people are now crying out for the *good old days* when Armstrong and his co-workers made quick work with the mails, and we venture the *guess* that if either Armstrong, Wadhams or Creighton, should get up a petition among our merchants for the Postoffice they could *win the day*. We dont suppose our friend Creighton would leave his farm, or Armstrong and Wadhams their business, to be Postmaster, but this we do know, either would give us our letters in *double quick time*.

As an old Californian, and as a Journalist of over *ten years* we are free to say *we* have never heard so wide-spread complaint. We have no motive to prompt us but the *public good*, and we hope our Senators and Representatives in Congress will see what we have written and especially Hon. John Conness, and if *he* will look into this matter with an eye to the *real interest of the Postoffice*, we will guarantee to give him some information that shall satisfy him the half has not yet been told.

REAL ESTATE—A BARGAIN.—We have several farms and pieces of property, in various parts of the State, that we can sell at a great bargain. Those in want will do well to call and consult our Register Book of Farms, Orchards and Lands for Sale.

What our Country has Done, and What it can Do.

We publish in another column a sketch of American charity. We here give extracts from a work published by the New Yorker, to whom we alluded in the other article. Let the reader pause before he shall ever doubt the success of a cause or people that can show such resources as these:

"One of the merchant princes of our city has caused to be collected and printed, a systematic account of the free-will offerings of our people to the cause of our National integrity during the last three eventful, memorable years. These already amount in the aggregate, to over *two hundred millions of dollars!*—an amount which human history may in vain be challenged to parallel. And there never was an hour when our people were giving to this end more generously or more liberally than at present.

"But again: The American people have loaned to their country—that is, to its National State and Local organizations—for the prosecution of this war more than *two thousand millions of dollars*. This vast aggregate far exceeds all the money that is, or ever was, in the country, and is probably equal to a tithe of all the property that will be left in it when the war is over. And, as more is wanted, more will be forthcoming.

"And yet there are to-day too few who realize that to loan the Government in a crisis like this whatever money he can spare, is no less a patriotic duty than volunteering, or paying taxes, or contributing freely to the great charities that the war renders necessary. We are prone to forget that great rivers are made up of innumerable rills, and that a few hundreds from every third or fourth dwelling would amount to a total of hundreds of millions.

"Our Government needs money, and must need it so long as this tremendous struggle shall continue. After raising all it can by taxation, it must borrow two millions per day till the main strongholds of treason are extinguished or carried. And this money must be lent it by the people—by the many, not the few. Brokers and great capitalists have hitherto had the credit of supplying money for such contests; but this credit was fictitious—fallacious. They simply stood between the Governments which borrowed and the people who lent, charging the former one to five per cent for their agency. Our Government wisely appeals to the masses—whose cause it defends, whose creature it is—asking them to trust themselves for the sums necessary to prosecute their contest. It asks the man who has but $100, or even $50, that he does not need for his current expenses, to take of her a bond for that amount, giving her the money, and taking her promise to pay a dollar in gold after ten and within forty years, for each greenback dollar loaned her, with interest meantime in gold at the rate of five per cent per annum, which is equal to eight per cent in the currency actually lent.

"If you should happen to be one of those who have $1,600 in specie, laid by for a resource in the last emergency, you can to-day exchange this for about $1,700 in the greenback or legal-tender notes of the Government—but say $1,600—with this you can readily purchase at almost any National bank, or of some one in each city, the "Ten-Forty" bonds of the United States for a like amount, whereon you will receive $80 interest in gold per annum, with your $1,600 principal in gold after ten years—probably at the expiration of that term—long before which your bonds will be worth more than specie par in the market. Thus, for $1,000 in gold lent, you receive $80 in gold per annum, and $1,600 in gold at the maturity of your bond; though you doubtless sell it at par for gold much sooner, should you desire to do so.

"So, if your money is now in greenbacks or ordinary currency, you can invest it in the Government Loan and receive five per cent interest thereon in gold—equal to forty-eight per cent in the currency loaned, with your principal also payable in gold—a dollar for each paper dollar invested. Who can ask of his country better terms than these?"

City Cars go Empty.

It must be observed by our citizens that many of the cars go empty, or nearly so, through our city. Why is this? Is it because people have got sick of riding? No. The people will walk rather than ride, until those who would thus set at naught the law of the land come to their senses. The Omnibus Railroad Company, and all others, have most assuredly made a sad mistake in arraying the public against them, thus calling off a large source of revenue, and they never will regain it until they back square down, and come out peaceably and honorably, and adopt the old system of the *fare*, which the Legislature established. Such a measure would be wise; any other is most suicidal, and it will prove so. The attempt in New York to exact extra price has failed, as will be seen by the New York Post, of the 28th of April, which has the following:

"The owners of the Broadway stage lines announce that on and after Monday next, the rate of fare on their vehicles will be restored to the old standard of six cents. The stage owners have found their ten-cent extortion a losing experiment, and they are shrewd enough to see the wisdom of returning to a reasonable rate before their custom entirely disappears. Cheap rides are, therefore, again the rule in this city."

WALL STREET NEW YORK—MONTGOMERY STREET SAN FRANCISCO.—The furor of speculation, which has passed off from the Montgomery street pave, has begun in Wall street, New York. The wire-pullers, this side, struck a lead *there*, and report says that they are now mad for California Mining Stocks. Well, we can spare about a *Thousand Millions of Dollars* worth, i. e., in certificates—and have plenty left.

The oldest piece of furniture is the multiplication table. It was constructed more than 2,000 years ago, and is as good as new, and yet Professor Andrews has put an entire new dress upon it, so much that we should not recognise the figures of early days.

American Charity—American Resources.

At the commencement of our national troubles, when our glorious flag was assailed and cruelly and wickedly torn from the walls of Fort Sumter, the great *American Heart* gave a throb that vibrated to the utmost boundaries of the nation, and a vow was recorded that that very flag should again float upon those very walls, and receive the breath of heaven, purer and brighter, because it would then float as the true *emblem of freedom*.

Three years since that flag was swept to the earth by sacreligious hands, and it became necessary that it should be bathed in blood ere it became again fitted to open its bright and beautiful folds. For these three long years it has been swaying to and fro in the baptismal fount of a revolutionary era, the like of which the world has never seen.

When the dark shadow came over our nation and the war-cry broke forth, our Government called for aid from the people, and asked for a voluntary loan of $15,000,000 and 75,000 men. At that time this amount of money was supposed to be almost beyond the means of our own people, and that we should be obliged to go abroad to secure it; but the great *heart throb* that came with the fall of Sumter beat again, and millions upon millions came as the voluntary offering of our people, and hundreds of thousands of patriots sprung to arms. Again that heart throbs, and $3,000,000,000 was raised for the National Treasury, and 300,000 more for our army, and never more has the thought of going abroad for means to sustain our Government ever been conceived of among the American people. What a spectacle to the world is here presented, of the *resources* of our country; but our object is now to show her as she stands out amid the "din of war," amid all the cry of anguish of the dying and the dead. The seventy-five millions of dollars was as the electric spark—a flash; it was gone, and *two thousand millions* came easier than the first donation from the patriotic hearts and purses. But it was not only for the battle field that means were wanting. There were other fields of labor. "Humanity," cried out, the sick, wounded, and dying, want millions more; and with the same ready heart the means came. And now, what another spectacle is presented to the world of the mighty *benevolence* as well as *bravery* of the American people. The history of our charities stand out so noble, so brilliant, that the world looks on in amazement at the resources of our people. We feel it a duty in this connection to give the following data, which appears by facts which have been collected and published in a book in New York, which details all the minutiæ of all the contributions of the people for charitable purposes since the war begun—the various contributions from States, counties, and towns—such as have been freely given in all the calls for the armies, to solace the sufferers by the war. The amount by corporate powers has been the enormous sum of $187,209,608 62, that by associations for the sick and suffering $24,044,865 96, and for sufferers abroad $380,140 74; to this add the contributions for freed men, at the time of the New York riot and since, $639,644 13—and we have the grand total of $212,273,256 49—over *two hundred millions* of dollars voluntary donations, in addition to the enormous taxes, loans and aid, and this, too, while the most fearful domestic revolution has prevailed that the world ever saw. Who then, looking upon this picture of American charity, and American resources, can have a doubt of the final triumph of freedom and right?

Beautiful Pictures.

We would ask you, reader, do you love to look upon a picture, a beautiful picture? then go to the rooms of Robinson & Snow, on the corner of Sansome and Washington streets, and spend an hour, and look upon a few pictures there, that will awaken the noblest feelings of the human heart. There are three pictures there worth a walk of many miles.

The first, the grandest, and the noblest, is *Washington's Last Interview with his Mother*. There is something indescribably pure and holy in the scene and associations of this picture, and if mothers would go and stand before it, and look upon the mother of Washington as she is about to bless her son, the genius of good would assuredly inspire them with a new and higher conception of the responsibility which ever rests on the mother. This picture is one of the most impressive that we have ever seen, as relating to the life and character of the immortal Washington. That mother, and her prayers and blessings, molded the beautiful character of him, who was ever "first in war, first in peace, and first in the hearts of his countrymen." Dear should the memory be, of that mother, to the mothers of America.

Another picture there is, the *Perils of our Forefathers*. Here is seen our brave and heroic ancestors at their place of worship; and the open door of the church reveals them surprised by the savages, that come rushing upon them in all their hideous painted deformity. The scene of these armed worshipers in their Sabbath Temple, and the furious savages presents a picture not often beheld. This is a wild, fearful, but thrilling picture, revealing to us a power more than their words can convey, the perils that surrounded our patriot sires and their families in early time.

The third is the *American Christian Union*. This is a grand and beautiful picture. Wars have ceased, christians have redeemed the savage in man; here religion has restored man to the original image of his God, and here in this picture men of all creeds and nations have made a Christian Union, a *band of brothers*, to worship in the spirit of God, the spirit of Love. These three pictures we hope will receive that attention and study the original artist desired when he put upon canvas the ideal of his mind.

REAL ESTATE IN SONOMA.—We call especial attention to the real estate for sale in Sonoma, by Wm. Bihler, Esq. late the estate of G. P. Swift, Esq. The tract of land is one of the finest in that section and will be sold at a bargain. The soil is rich, location fine, title perfect.

A National Bank for California.

It is reported that the grand Financier, Chase, amid all his cares and plans, for the currency of the country, has not forgotten the source whence the *gold* comes from, and a writer in the Bulletin gives the following as the official words of the great Financier: "I am not at all annoyed at the currency quarrel in California. I can see great objections to a sudden change from gold to paper at the present time, and do not wonder that people shrink from it. After a while the change can be effected—when gold and paper approach each other more nearly. The best thing we can hope for now on the coast, would be a National Bank, redeeming its currency in gold. Such a bank, I should think, would be profitable, and there is nothing in the law to prevent the organization of one on that plan." Thus it will be seen Mr. Chase has an eye to what is needed. Now the question comes shall we have one. This is the State to begin a gold-redeeming currency.

PROMPT ARRIVAL OF THE MOSES TAYLOR.—The steamer Moses Taylor, of the People's Line, arrived here on the 25th inst., after a pleasant trip, giving satisfaction to the large number of passengers. She brought a great number of passengers, and from them we learn that they had a remarkably pleasant and agreeable time. We learn, too, that there is a very great and growing interest in the old States for this line. The people there, too, begin to see and appreciate how much the "M. O. Roberts Line," has done to increase immigration to our shores, and all over the interior the friends of this line are awake to the subject. Letters from friends in Wisconsin, another in Illinois say they are glad the FARMER takes much interest in this question, for the CALIFORNIA FARMER is found all through the Eastern States, and those who have kindred in California or turn their thoughts hitherward, look to the FARMER as their *Text-Book*, and they will get it. We are always glad to know that our efforts are appreciated and our advice followed. Our object is to build up California with good honest earnest workers, and we say to them "Come to us and it will do thee good." Come to California safely by the "People's Line, the M. O. Roberts line from New York, and you will have a pleasant, speedy, safe and economical trip.

THE REIGN OF CHARITY.—There is something peculiar in the atmosphere of California; as we have always said, California never does things by halves. There is now before our people the Sanitary Cause, the *Christian Commission* and the *Freedman's Association*, each and all in the cause of Humanity inseparably connected. The Trinity of good works—God speed them all. May they all be prosperous until every wound is healed, every heart made happy, and Freedom proclaimed everywhere, and the great cry shall go over the world, "Peace on earth, good will to man."

THE GRIDLEY BAG OF FLOUR.—Thirty thousand dollars for one bag of Flour! God "Grant" it may feed *thirty thousand sick and famishing souls*, if there are to be found, or bind up the wounds and pour wine and oil into their aching hearts. San Francisco will receive that *Bag of Flour* and add *thirty thousand dollars more*, so the "griddle cakes" will be largely increased for the soldiers, i. e., if the "Bellows" will *blow the fire*.

Electricity, What is it?—What is it? where does it come from? where does it belong? It is the Archimidean lever that can raise the world, for it can raise and restore life, when it is at its lowest ebb, and life is all the world to each of us. It is most unfortunate that mankind have so little faith in restoration, but we don't wonder, when there are so many quack medicines and frauds; but Electricity we know is the restorative and curative principle. It is the only remedy for the exhausted, worn-out, abused physical nature. To all such, a few hours study of the nature and power of Electricity, and a trial of the fine instruments, and application of them, at the Electric Institute, on Washington street, will convince any that we are right.

DISPLAY ROOMS FOR MERCHANDISE.—We were most pleasantly entertained, for an hour or two, recently in the splendid warehouse, or rather display rooms of Messrs Russell, Erwin & Co, on Battery street. This house are the agents for the celebrated Fire and Burglar Proof Safe—the Lillie Safe. They are also the manufacturers of hardware, tools, cutlery, etc, and their rooms contain all the various patterns of tools and sample goods, after the style of European houses. This warehouse is one of the largest in our city, and the style of management is truly elegant in its entire point of view. Goods from this house are sold by sample, and, another feature of advance, prices are based on U.-S. Treasury Notes which are received par for all goods in the house. The Russell, Erwin & Co. are among the largest manufacturers in the East and their style of goods and style of doing business introduce a new era in our mercantile trade. Strangers to our city, and all will find much to interest and gratify them by a visit to this place. We were indebted to Mr. Stone for courteously showing us the working of the famous safe, and all the plans and arrangements of their house.

CALIFORNIA BROOMS.—We are glad to know that our California brooms are so generally admitted to be superior to all the imported kinds. A short visit to the manufactory of Mr. Van Laak, on Davis street, gave us proof of the excellence of our Home Manufacture. Mr. Van Laak employs five hands constantly, and all he can make, about 100 dozen per week. He contracts for his "broom," grown to order, and he uses up fifty tons per year. he handles come from Oregon. He makes the best broom in the State; prices $4, $5 and $6 a dozen. He will exhibit at the Mechanic's Fair and try to win the Premium Prize.

BOWEN & BROS.—This well-known firm, wholesale and retail dealers in family groceries and all the "fine things" for the household, are now receiving and receiving many of those luxuries for which they have long been famous. Our friends in the country, when they visit the city, and all our ranchman, will find it to their interest to call and examine their assortment as it is one of the largest in our city, as will be seen by their card.

KEARY, BYRNE & CO.—This well-known, popular, and fashionable dry-goods establishment have added largely to their already splendid stock of goods. We call special attention to their card extra this

THAT EARTHQUAKE.—Hard! harder! hardest!! Some months ago, the last shake but one, it was said to be a tolerable *hard* shock. The last we had was a *frightener*—that was *harder* still, and the next, i. e., the one is—is—is—close by, that will of course be the *hardest*. But although the Flag of Truce we are all bound to go *under*—we are not scared—we shall "float" about one hundred years, or until "this cruel war is over."

IMPORTANT TO SETTLERS ON THE SUISOL RANCH.—All persons claiming lands on the Suisol Rancho, are given to the 8th day of June, 1864, at which time the contested cases between Gen. Vallejo and claimants and the settlers, are fixed for hearing. The day of trial, as advertised, is set for the 6th day of July. All claimants can procure printed notices containing a complete schedule of their claims, in the order of their trial, by applying at the Postoffice at Vallejo.

NIGGER CROAKERS.—We know lazy, shiftless, trifling devils, who never paid a dollar of taxes in their lives, who are bowling twelve out of the twenty-four hours about the enormous taxes we are burdened with. We know men, the seats of whose pataloons display a flag of distress at half-mast, who could not buy the toe-nail of a nigger if able-bodied slaves were selling at a dollar a dozen, who fly into a passion when they hear of an "attack upon slave property." We know men who never did a day's work in all their lives—save when borrowing or stealing were impossible—who are bowling like wolves against "niggers coming North to compete with the labor of poor white men." We know men who never had an entire dollar in all their lives, spend hours in expatiating upon the paper currency. There are queer people in the world. Nine-tenths of all the talk on the above topics is done by the class mentioned.—Prentice's Louisville Journal.

We should think that Prentice had recently visited Wall street, New York, or spent a little time in the purlieus of our Montgomery street, gathering items.

A remarkable petrifaction of an entire tree was lately discovered in the Baltimore mine, at Wilkesbarre, Penn., by the miners, while blasting for coal. The piece of trunk taken out weighs 5000 pounds; and still there remain the roots and the top of the tree embedded in the coal.

DIED.

At Tahiti, Society Islands, April 9th, Mr. BENJAMIN ROBBINS, aged 37 years, lately a resident of California.

Special Notice.

NOTWITSTANDING THE GREAT INCREASE OF duty on all Foreign Goods,

FOR SALE,

A WELL-IMPROVED 80-ACRE FARM, ONE MILE west of Petaluma.

Terms $1,000—half cash; one,

12 JOHN KENDALL.

THE PACIFIC METHODIST COLLEGE, VACAVILLE.—We have received the third annual catalogue of this college. It is now in a flourishing condition, sustained by some of our best and worthiest citizens, and numbers 118 boarding, and 72 day scholars, taken from almost all parts of the State, Rev. Wm. T. Lucky, President, three professors, and four teachers, a large and able board o trustees. These are evidences of prosperity, and we bid God speed to the cause of educating the young.

Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOma County lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P. Swift, Esq. containing 14,000 acres of land is offered for sale in Lots or farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality It is accessible to market, being adjacent both to Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point.

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the offices of Haight & Pierson, 622 Clay street, San Francisco or at the store of Mr. Paule, Sonoma.

17 WILLIAM BIBLER.

Winchester's HYPOPHOSPHITES

Act Promptly and Certainly in all Stages

....OF....

CONSUMPTION.

THEY IMMEDIATELY INCREASE the Strength, and deepen the color of the Pale Blood. They check the Night Sweats, always, in from seven to fourteen days; the appetite is at once invigorated, and the patient rapidly gains flesh; the cough and difficult breathing are speedily relieved; the sleep becomes calm and refreshing; the evacuations regular and uniform.

"In no instance," says Dr. Churchill, "have I found the Remedy fail to produce every thing that could be reasonably expected from it."

"I have no doubt whatever," says Dr. Townsend, of Chatham, Pa., "of the superior efficacy of the Hypophosites over all other medicines or methods hitherto discovered."

The Hypophosphites

Have a TWO-FOLD and SPECIFIC ACTION: On the one hand as a prompt and powerful

NERVOUS TONIC,

increasing the vital energy; and on the other as a generator of

New and Healthy Blood,

Invigorating the whole system. They should, therefore, be used in all cases of

Nervous and General Debility,

Wasting of Flesh, Loss of Strength or Appetite, Paleness or Deficiency of Blood, Languor or Listlessness, Cough, Night Sweats, Chronic Diarhea, Scrofulous Sores:

Also, in Chronic Bronchits, Asthma, the Debility or Weakness of Young Children, and as an INVIGORATOR to women of feeble vitality during gestation and the period of nursing.

WINCHESTER'S

Genuine Preparation of the Hypophosphites

Is the only reliable form of Dr. Churchill's Remedy, and is approved by the Medical Profession generally. USE NO OTHER, or any Remedy containing Iron.

CONCENTRATED SOLUTION in 7 oz Bottles, prepared expressly for California, $2 per Bottle—Three Bottles for $5 in coin. Circulars, free. Sold by all respectable Druggists, and by

California Cider and Vinegar.

THE UNDERSIGNED INVITE THEIR Friends and the Public to call at their Manufactory, 708 MARKET STREET, Exactly opposite Third street, to see somewhat of a curiosity in California: A CIDER MILL. And, if you wish, we shall be pleased to furnish you with new sweet Apple Cider, dripping right from the Press, and in its season the juice of Grapes, or any other Fruit Drinking new sweet Cider is known to be healthy, giving a ruddy glow to the complexion

Nearly all the Vinegar sold in San Francisco is a manufactured imitation, made from corrosive acids, and people have provided their families with what was sold as Cider Vinegar, but which was in fact a poison. We mean to keep nothing but CIDER and VINEGAR, and that genuine.

If we are to succeed in our experiment of substituting pure Vinegar for the villainous fluid which has injured the health of thousands in California, it can only be done by a general patronage, and we trust to receive a call from you.

Lebaron & Thresher,

Cider Mill, 708 Market street,
Exactly opposite Third street.

☞We have an Order Box at C. E. Collins, 602 Montgomery street, and will deliver Cider and Vinegar at any part of the City Free of charge. Orders sent through Wells, Fargo & Co., will be promptly attended to. 16-3m

21-1

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle-grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H & L AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories,

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL-OIL as a basis to their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural resin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest until, at the present time, they have established a manufactory of Rosin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply. The subscribers are now receiving native resin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 29, 1863.

JACOB ZECH, ESQ:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPFGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. ZECH.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

SACRAMENTO October 6th, 1863. 13-3m

Home Miscellany.

THE REAPER'S DREAM.

The road was lone; the grass was dank
With night-dews on the briery bank
Whereon a weary reaper sank.
His garb was old,—his visage was tanned;
The rusty sickle in his hand
Could find no work in all the land.

He saw the evening's chilly star
Above his native vale afar;
A moment on the horizon's bar
It hung,—then sank as with a sigh:
And there the crescent moon went by,
An empty sickle down the sky.

To soothe his pain, Sleep's tender palm
Laid on his brow its touch of balm,—
His brain received the slumberous calm;
And soon, that angel without name,
Her robe a dream, her face the same,
The giver of sweet visions, came.

She touched his eyes: no longer sealed,
They saw a troop of reapers wield
Their swift blades in a ripened field:
At each thrust of their snowy sleeves,
A thrill ran through the future sheaves,
Rustling like rain on forest-leaves.

They were not brawney men who bowed
With harvest-voices rough and loud,
But spirits moving as a cloud:
Like little lightnings in their hold,
The silver sickles manifold
Slid musically through the gold.

Oh, bid the morning-stars combine
To match the chorus clear and fine
That rippled lightly down the line,—
A cadence of celestial rhyme,
The language of that cloudless clime,
To which their shining hands kept time!

Behind them lay the gleaming rows,
Like those long clouds the sunset shows
On amber meadows of repose:
But like a wind the binders bright
Soon followed in their mirthful might,
And swept them into sheaves of light.

Doubling the splendor of the plain,
There rolled the great celestial wain
To gather in the fallen grain:
Its frame was built of golden bars,
Its glowing wheels were lit with stars,
The royal Harvest's car of cars.

The snowy yoke that drew the load
On gleaming hoofs of silver trode,
And music was its only goad;
To no command of word or beck
It moved, and felt no other check
Than one white arm laid on the neck,—

The neck whose light was overwound
With bells of lilies, ringing round
Their odors till the air was drowned:
The starry foreheads meekly borne,
With garlands looped from horn to horn,
Shone like the many-colored morn.

The field was cleared. Home went the bands,
Like children linking happy hands
While singing through their father's lands;
Or, arms about each other thrown,
With amber tresses backward blown,
They moved as they were Music's own.

The vision brightening more and more,
He saw the garner's glowing door,
And sheaves, like sunshine, strew the floor,—
The floor was jasper,—golden flails,
Swift rattling as a whirlwind sails,
Throbbed mellow music down the vales.

He saw the mansion,—all repose,—
Great corridors and porticos
Propped with the columns' shining rows;
And these—for beauty was the rule—
The polished pavements hard and cool,
Redoubled, like a crystal pool.

And there the odorous feast was spread:
The fruity fragrance widely shed
Seemed to the floating music wed.
Seven angels, like the Pleiad Seven,
Their lips to silver clarions given,
Blew welcome round the walls of heaven.

In skyey garments, silky thin,
The glad retainers floated in,—
A thousand forms, and yet no din,
And from the visage of the Lord,
Like splendor from the Orient poured,
A smile illumined all the board.

Far flew the music's circling sound,
Then floated back with soft rebound,
To join, not mar, the converse round,—
Sweet notes that melting still increased,
Such as ne'er cheered the bridal feast
Of king in the enchanted East.

Did any great door ope or close,
It seemed the birth-time of repose,—
The faint sound died where it arose;
And they who passed from door to door,
Their soft feet on the polished floor
Met their soft shadows—nothing more.

Then once again the groups were drawn
Through corridors, or down the lawn,
Which bloomed in beauty like a dawn:
Where countless fountains leap always,
Veiling their silver lights in spray,
The choral people held their way.

There, mid the brightest, brightly shone
Dear forms he loved in years agone—
The earliest loved—the earliest flown:
He heard a mother's sainted tongue,
A sister's voice who vanished young,
While one still dearer sweetly sung!

No further might the scene unfold,
The gazer's voice could not withhold,
The very rapture made him bold:
He cried aloud, with clapped hands,
"O happy fields! O happy bands,
Who reap the never-failing lands!

"O masters of these broad estates,
Behold, before your very gates
A worn and wanting laborer waits!
Let me but toil amid your grain,
Or be a gleaner on the plain,
So I may leave these fields of pain!

"A gleaner, I will follow far,
With never a look or word to mar,
Behind the Harvest's yellow car:
All day my hand shall constant be,
And every happy ear shall see
The precious burden borne to Thee!"

At morn some reapers neared the place,
Strong men, whose feet recoiled apace—
Then gathering round the upturned face,
They saw the lines of pain and care,
Yet read in the expression there
The look as of an answered prayer.

—Atlantic Monthly.

It is mentioned by Mrs. Hannah More that in her time it was the fashion for ladies to ornament their hats not only with flowers but with fruit; and Garrick, to ridicule the fashion, had a hat made for a scene in a comedy, with turnips and carrots by way of ornament. We are coming to that, again.

Humbug.—We consider the old man's reply to his son as to the meaning of the word humbug, nearer correct than Webster's. "Humbug, my son, is when your mother says she loves me, and dont saw the buttons on my shirt."

Good manners consist in the art of making those people easy with whom we converse. Whoever makes the fewest persons uneasy is the best bred in the company.

HASTENING TO DUST.

We are hastening on, we are hastening on
To the sleep of the years that are vanished and gone;
To the voiceless chambers that lie beneath,
To the silent halls of darkness and death!
Like the instant flashing, the fitful light
Of the passing meteors in their flight;
Like the sun-set hues of summer's eve,
Like the forms that in fancy's loom we weave;
Like the flowers that blush at the opening day,
We are blushing, and blooming and fading away!
Through life's chequered mazes of joy and woe,
Through the grief and the gloom of this vale below,
With the fair and the brave, and the proud and the just,
We are hastening to dust! we are hastening to dust!

Ye beautiful throng of the bright and the fair,
With your locks of glossy and golden hair,
With your sparkling eyes and their rays divine,
That languishing beam or brilliantly shine;
With their crimson lips and their coral strain,
As sweet as the wave-uttered song of the main;
With your forms that before and around us sweep,
Like the phantoms that float in the realms of sleep,
Midst hope, and joy, and faith, and trust,
Ye are hastening to dust! ye are hastening to dust!

Ye plumed band of the strong and the brave,
With your burnished swords and plumes that wave;
With your banners that stream on the breeze unfurled,
And your shouts that frighten the trembling world;
With your battles that burst like a flaming flood,
And pour out their gathered tides of blood;
With your red cannon's wrath and war, that make
The mountains, the valleys, the oceans quake;
With your bared arms and your uplifted lance,
And your darkened brow, and your fearful glance,
'Midst the saber's stroke and the dagger's thrust,
Ye are hastening to dust! ye are hastening to dust!

Ye scoffing tribes of the rich and proud,
With your necks unbent and your knees unbowed;
With the minion train of the mean and vile,
That crouch before you and fawn and smile;
With your spurning foot and threatening eye,
That stagger the poor as they pass you by;
With your melancholy tones of wrath and pride,
That frighten the fearful who wait at your side;
With your smiles of scorn and your frowns of hate,
With your robes of gold and your halls of state,
With all your pomp, and power, and trust,
Ye are hastening to dust! ye are hastening to dust!

Ye humble train of the lowly and meek,
Who wipe the tear from the aged cheek;
Whose voice the gathering cares beguile,
And maketh the heart of the sad to smile;
With your tears, that stream o'er the chilling bier
Of the pious that dwell no longer here;
With your smiles that bind up the broken heart,
And pour in the balm on the poisoned dart;
With your prayers that rise to the throne above,
And bring down the blessings of peace and love;
With the fair and the brave, the proud and the just,
Ye are hastening to dust! ye are hastening to dust!

DOMESTIC RECIPES.

Remedy for Diptheria.—The New York Tribune says: "We have just received a recipe for the cure of diptheria, from a physician who says that of 1900 cases in which it has been used not a single patient has been lost. The treatment consists in thoroughly swabbing the back of the mouth and throat with a wash made thus: Table salt, two drachms; black pepper, golden seal, nitrate of potash, alum, one drachm each. Mix and pulverize, put into a tea-cup half full of water, stir well, and then fill up with good vinegar. Use every half hour, one, two, and four hours, as recovery progresses. The patient may swallow a little each time. Apply one ounce each of spirits of turpentine, sweet oil, and aqua ammonia, mixed, every hour, to the whole of the throat and to the breast bone every four hours, keeping flannel to the part."

Preserving Tomatoes.—Put the tomatoes into a large dish; then pour on boiling water so that the rind or peel can be taken off. After which squeeze a good part of the juice out of the tomato while it is in the hand; then cut it into two to four pieces according to size. Cook for a few minutes until well heated through; bottle, using no corks, thick drilling only, cemented on the under side, put on mouth of bottle and pressed down and tied. Then with a spoon dip on the wax (resin with a little lard) until the top is covered; when cool, set in cellar and exclude the light. Prepared in this way, you will get the real genuine flavor of the tomatoes when cooked nearly equal to those just picked from the vines.

Beeswax.—To separate beeswax from the comb in the best manner. Tie it up in a linen or woolen bag, with a pebble or two to keep it from floating; place it in a kettle of cold water and place over the fire, as the wax melts it rises to the surface, while all the impurities remain in the bag.

Cementing Glass or China.—Provide some very finely powdered quicklime in a muslin bag. Take the broken ware and rub the edges with the beaten white of an egg. Take the lime and sift it thick over the edge rubbed with egg, press and bind the pieces together, and let them remain several weeks. For coarse crockery, rub the parts with white paint, made of white lead and linseed oil, press and bind until fully dry. They will last as long as new.

Cock-Roaches.—Procure from the druggists a small quantity of poke root, boil in water till the juice is extracted, mingle the liquor with molasses, and spread it on large platters or soup plates in places where they visit, and they will be slain by hundreds in the following morning. The root after being boiled, laid in closets, etc, will prevent their troubling you.

Secret of Eloquence.—I owe my success in life to one single fact, viz: At the age of twenty-seven I commenced, and continued for years, the process of daily reading and speaking upon the contents of some historical or scientific book. These off-hand efforts were made sometimes in a cornfield, at others in the forest, and not unfrequently in some distant barn, with the horse and cow for my auditors. It is to this early practice in the great art of all arts that I am indebted for the primary and leading impulses that stimulated me forward, and shaped and modeled my entire subsequent destiny. Improve, then, young gentlemen, the superior advantages you here enjoy. Let not a day pass without exercising your powers of speech. There is no power like that of oratory. Cæsar controlled men by exciting their fears; Cicero, by captivating their affection, and swaying their passions. The influence of the one perished with its author; that of the other continues to this day.—[Henry Clay.

Many of the waves of trouble, like those of the ocean, will, if we await them calmly, break at our feet and disappear.

Josh Billings' Advice.—Dere Girls:—Keep cool. A blessed futur awaits yu, enny how. Take lessons on the pianna at onst; pianuas are getting skase. Bi awl means larn to pla the nu song that has jist cum out. "When John Brown is over we are father Abraham cumming with this kruel war several strong." This stanza tuk the first premium at the state fair. Don't be afrade tew git married, yure ma want afraid. Larn how tew knit pudding bags to put yure hairs in. Be vartuous and pretty. Eat sliit peanuts, the will maik yu spri at figgers. Eat kulone water; the will maik a good smel. Let yure pettykoat, drag on the sidewalks, and if enny man steps on them and tares oph the rim slap his chops at onst. If you hav got smal feet, keep 'em hid—smal' feet has gone out ov fashun. Studdy travels; Tom Moores and Byrons and Gullivers, and Wandering Jews and Vallandighams is awl fust rate. If yu kan spare the time be lovly and sweet. Remember one thing, there ain't nuthing in this life worth living for but a rich husband; if yu dont believe me, ask yure ma. If yu hav red hair yu had better exchange it for black; black hair they tell me is going to be worn muchly next year. Dont hav enny thing tew du with the boys less tha mean bissiness. If yu dont know how tew skate, yu mite as well jine sume traveling nunery at onst for your played out.

In a lecture at Portland, Maine, the lecturer, wishing to explain to a little girl the manner in which a lobster casts his shell when he has outgrown it, said "What do you do when you have outgrown your clothes? You cast them aside do you not?" "Oh, no!" replied the little one, "we let out the tucks." The lecturer confessed that she had the advantage of him there.

A Scotch lady writes thus of gentlemen who use tobacco: "May never lady press his lips, his proffered love returning, who makes a furnace of his mouth, and keeps his chimney burning, may each true woman shun his sight, for fear his fumes would choke her, and none but those who smoke themselves have kisses for a smoker."

A lady complained to Frederick the Great, King of Prussia, that her husband had treated her badly. "That's none of my business," replied the King. "But he speaks ill of you" said she. "That is none of your business," he replied. Wise King that.

"Mornus," said a little fellow the other day, "is there any harm in breaking eggshells?" "Certainly not, my dear; but why do you ask?" "'Cause I dropped the basket just now, and see what a mess I am in with the yolk!"

At thirty we are all trying to cut our names in big letters upon the wall of this tenement of life; twenty years later we have carved it or shut up our jack-knife.

The body is the soul's house, and as the house grows old, it often lets in upon its inhabitant light from heaven through the chinks made by time.

NAPA

COLLEGIATE INSTITUTE,

For Young Ladies and Gentlemen.

NAPA CITY, CALIFORNIA.

Napa City, in point of location and Climate, is unsurpassed in the State. It is about four hours' ride by steamboat from San Francisco, and three by stage from Benicia. There will soon be a daily boat from the former place, and there are now two daily stages from the latter. There are extensive accommodations for Boarders in the College Building, with large and well-ventilated sleeping apartments. Teachers reside in the Building, and will have a constant oversight of the Students who are Boarders.

GOVERNMENT.

Young Ladies will receive no calls from any except Parents and Guardians. Ladies and Misses will not leave the College grounds, except in company with their Instructors. Young Men and Lads are not allowed to lounge about the Stores, Hotels, and Saloons of the Village. All pupils are required to attend Church on the Sabbath. Parents will choose the place of worship for their children.

MILITARY DEPARTMENT.

This Department has been opened with a view to the permanent establishment of a Military Academy on this Coast. From three to four years will be requisite to complete the course in this Department. The State has furnished us the necessary equipments for such a school. The Drills will be attended to daily.

TUITION.

Spelling and Reading, per month	$2 50
Common English, with the above, per month	4 00
Higher English, with the above, per month	6 00
Latin and Greek, with the above, per month	8 00
Janitor's Fees, per month	25

EXTRAS.

Board with Furnished Rooms, Light, Fuel, and Washing, per week	6 50
Military Branches, per month	3 00
Sword Exercises, twelve lessons	8 00

CALENDER.

The Collegiate year is divided into two Sessions of 21 weeks each. The first Session will begin July 25 and end December 16. The second Session will begin January 2 and end May 28. The Winter vacation will be two, and the Summer vacation eight weeks long.

☞ All articles of clothing should be plainly marked. Pupils will furnish their own Sheets, Pillow-cases, Towels, Napkins, and Lamps.

☞ Payments, half-yearly in advance. Pupils can enter at any time, and be charged from the time of entering. No deduction will be made for absence, except in cases of protracted illness. The month consists of four weeks each.

For further particulars address

W. S. Turner, A. M.,
Principal.

21-11

Hubbard Squash.

We have received another small invoice of the true "Hubbard Squash Seed," from the Alaskan races.

This is the best Squash in the world. It is a hard shell, and the only way to cook it is to saw the shell in halves and bake in the oven, then serve on the table in the shell. The flavor of the Squash is better than the best Sweet Potato, and for pies has never had an equal.

Seed for Sale at this Office.

BOWEN BROTHER,

WHOLESALE AND RETAIL DEALERS IN

STAPLE AND SELECT FANCY

GROCERIES,

Ship stores, Ranch and Farm Stores

AGRICULTURAL IMPLEMENTS.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it.

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 8 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

We are

NEW

AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparce, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of

COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 5-3m

GOD ALONE IS ENDLESS.

Nought eternal is
But that which is of God. All pain and woe
Are therefore finite. Can the robber steal
From God? All souls are His and Him derived,
And thus are good, and *Good alone is endless.*
But evil having birth from second causes,
Created things, gross matter, and their laws,
Is not from all eternity with God,
But hath a *recent origin*, and thus
Hath not an endless, but a casual being,
And must expire where its reign began.—[Festus.

A Physician passing by a grave-stone cutter's shop called out,—"Good morning, neighbor, hard at work, I see. You finish your grave stones as far as "In memory of," and then wait, I suppose, to see who wants a monument next."

"Why, yes," replied the oldjoker, "unless somebody's sick, and you are doctoring 'em, then I keep right on."

On a rough old sailor being asked by one of the members of a learned society to write a concise account of the manners and customs of a somewhat barbarous nation, whose territorics he had lately been exploring, he put down the following exceedingly brief summary of the characteristics of the people in question:—Manners, none. Customs, nasty.

The following peculiar "notis" was found posted in a little town in Delaware:

"REWARD.—Lost or strade from the Premuse of the subScriber, a sheep, all over white, one legg was blakk and half his body. All pussons shall receive five dols to bring him back. He was a she goat."

Greenbacks! Greenbacks!

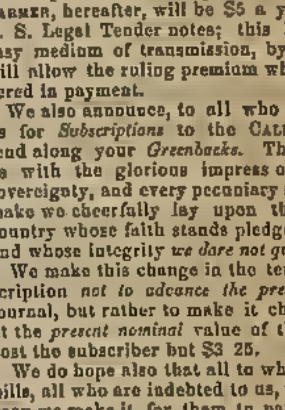
We receive Greenbacks for subscriptions to the California Farmer, and allow the ruling premium for Gold!

IT is a well known fact to all conversant with newspaper publishers, that since the war commenced the cost of publishing a paper has very greatly increased, so much so as to stop hundreds of papers, over the United States. Yet it has been our pride not to add cost to our *subscribers*, but to relieve them although we have made sacrifices of thousands to carry out our principles, and do what we esteemed our duty to uphold the credit of our country both by precept and example. From the first we announced that we would receive Treasury Notes at par for *Subscriptions to the Farmer*. But the notes were rejected, here, as currency and many of our subscribers have, in conformity with the custom, continued to pay us in gold; yet we have never refused greenbacks at their face value when sent us by subscribers, though it has subjected us to serious loss from our being obliged (from the rejection of the currency as mentioned), to pay gold in our disbursements. At the present cost of all articles, we could not do a paying business by receiving greenbacks at par, at our present rates. But to make the thing work equally for all our subscribers, as well as conform to what we think our duty, we propose to adopt the greenback basis, and raise our subscription price to $5 a year, payable in greenbacks.

As it is evident to us now that the people of California are determined to sustain the National Government and make Treasury Notes the medium of trade, generally, we announce as follows:

The price of subscription to the CALIFORNIA FARMER, hereafter, will be $5 a year, payable in U. S. Legal Tender notes; this being a safe and easy medium of transmission, by mail; and we will allow the ruling premium when gold is tendered in payment.

We also announce, to all who are indebted to us for *Subscriptions* to the CALIFORNIA FARMER, send along your *Greenbacks*. They will come to us with the glorious impress of our country's sovereignty, and every pecuniary sacrifice we may make we cheerfully lay upon the altar of that country whose faith stands pledged in these notes and whose integrity *we dare not question*.



We make this change in the terms of our subscription *not to advance the present cost* of our journal, but rather to make it cheaper to all, for at the *present nominal* value of the notes it will cost the subscriber but $3 25.

We do hope also that all to whom we have sent bills, all who are indebted to us, will now see how easy we make it for them to pay their dues. It must be remembered also that all who owe for this paper, a bill of six month's standing should, by the terms already heretofore announced, remit us $5, and g. b.'s to that amount will be very acceptable.

We shall now have the consciousness of having taken a true step to sustain the National Currency, and we shall know who will "go and do likewise."

We do hope that the friends of a good, sound National Currency will give us their aid and cooperate by sending us their names for the FARMER.

The Great Want supplied.

FAMILY

Cider & Wine

MILL,

WITH

Press Combined.

Costs but $15.

Grinds 6 to 8 bushels of Apples; 10 to 12 bushels of Grapes, Currants, or Berries, per hour.

Tears the Pulp Without Crushing the Seed.

Adapted to Wine Plants. Occupies less than 2 feet square, and is easily worked by one man.

Simple, Durable, and Cleanly.

The MILL and PRESS, with a Pamphlet containing full directions to make Wine and Cider in the best manner, will be sent on receipt of Price, $18 Weight 100 pounds. J. B. BROWN & CO.,
Peekskill, N. Y.,

Manufacturers of the Celebrated Peekskill PLOWS, best Iron beam Plows, Feed-Cutters, Land-Rollers, Water-Drawers, and other Agricultural Implements. Send for Illustrated Circular. [20-20-m

A Lady Teacher.

A LADY TEACHER OF EMINENT ABILITY AND qualifications, one who fully understands the great responsibility of the position, wishes a situation in some Seminary, or School, where she can have a responsible trust. The Lady has long been employed as a Teacher, and can bring the most ample testimony of ability and qualifications. A note addressed to A. B. L, care of Editor of Farmer, will be promptly attended to.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] May 26.

For some kinds of Grain and Produce, our market l easier, among which are Wheat, Barley, and Oats, Wheat having declined fully 20 cents per 100 wlib but a light export demand, and our local trade is not sufficient to require all that offers. Barley and Oats are also offered in quantities exceeding the demand, consequently sellers are compelled to reduce prices to meet buyers' views. We are of the opinion there is nothing to warrant the decline, certainly it cannot be the prospect of a large crop. In many sections of our State we have no reason to expect any crop, and from all the sources we are able to gain information we are fully satisfied that there will not be one-half of an ordinary crop. What we have on hand and all that will be produced there is a positive demand for. Our Coast trade, which is now an important item and rapidly increasing, together with a few export orders that are continually on the market are sufficient, in our opinion, to cause prices to remain firm, or advance in a short time. Farmers or holders of Grain do not consult their own interest by pressing the market at this particular time. Flour is a little easier, a matter that can be readily accounted for, viz: much of that on hand was manufactured at a time when Wheat ruled very low, and at present rates pay a handsome profit. At the high prices of Bran, Middlings, etc, our Millers are doing well on present manufactured Flour. A degree of economy is being practiced by all that is a new thing in California, all, we argue has a tendency against prices temporarily.

Hay, both old and new, is offering in sparring quantities, prices of this article are firm and high. Potatoes and Beans drag, holders are firm and consequently prices remain without change. We note an additional export of Wheat which goes to prove there are orders unfilled on the market, and *terms private* leads us to suppose a material advance was conceded to. Flour is being shipped continually. Wool is offering freely, much, however, of it is Burry and unsalable, there is, consequently, a great range in prices, from 12 to 22c being the range.

Our Exports are as follows: Per Brig Brewster, for Victoria, 5520 qr sks Flour, and 200 sks Barley. Per ship Brewster, for Boston, 490 bales Wool, 48 sks Mustard-seed, 145 sks Beans, etc. Per bark Clutha Belle, to Alberni, 1445 bf-sks Flour, 143 bales Hay, etc.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 9680 sks, Barley 5714 sks, Cornmeal 285 sks, Potatoes 528 sks, Flour 2750 qr-sks, Wool 1032 bales, Hay 1129 bales, Oats 960 bags, Salt 650 sks, Corn 41 sks, Bran 190 sks, Beans 120 sks.

Also Coastwise: Oats 2746 sks, Potatoes 2592 sks Wheat 557 sks, Barley 650 sks, Wool 70 bales.

Fruit was so high the earlier part of the week consumers would not buy, the result has been to bring down almost everything one-half.

BY CONTINENTAL TELEGRAPH

DATES TO MAY 26.

The Eastern dispatches are such as will tend to diminish anxiety as to the result of the campaign. The dispatches published over the signature of Stanton confirm the statement of hope over the situation.

From the time he crossed the Rapidan, Grant has maneuvered by the left, always menacing the right flank of the enemy and forcing him to fall back in a southeasterly direction. Thus when Grant's advance threatened to seize Spottsylvania, Lee was forced to quit his formidable lines in the Wilderness. Then the two Generals skirmished and maneuvered until the morning of the 19th, when Grant, having swiftly changed front at night, struck a smashing blow on Lee's right wing, capturing a whole division and 39 guns. Lee fell back behind the Po, and heavy rains caused a cessation of the fighting until the 17th, when skirmishing and maneuvering for position were resumed. On the morning of the 18th the enemy's rifle-pits on the right of Grant's lines were stormed and carried but no attack was made on the enemy's main works. On the 19th Lee made an effort to force his opponent back and to get at the Union supply trains, by sending Rhodes' division around Grant's extreme right. Rhodes reached the plank road to Fredericksburg, but encountered Tylers' division, mostly composed of raw troops who, however, behaved bravely, and after a severe fight, drove the enemy back in disorder. In the meantime, however, Grant had seized Guiney's station, on the Richmond and Fredericksburg railroad, in the rear of Lee's right flank, a movement which forced his adversary to choose between retreat from his fortified position or sacrifice the remnant of his communications.

Sigel advanced up the Shenandoah valley as far as Newmarket, had a fight with a rebel force under Breckinridge or Imboden—probably the latter—lost five pieces of artillery and 600 men and then retreated to Strasburg, a distance of 25 miles. If Sigel can guard the approaches to the Baltimore and Ohio Railroad, it is all that can be expected of him for the present. His movement was probably not a material portion of the plan of the campaign.

General G. W. Crook, who commands the extreme western column in Virginia, has been heard from. Crook penetrated to Newbern, Pulaski county, on the Virginia and Tennessee Railroad, about 90 miles from Lynchburg, defeated the rebel forces under Generals Jones and Jenks, burned the railroad bridge over New river, destroyed the track and captured 300 prisoners. General Jenks was mortally wounded and fell into Crook's hands. This disposes of a force which has been raiding into East Tennessee, West Virginia and Kentucky, and in connection with operations in East Tennessee prevents any possible use of that great line of railroad for a rebel retreat from Virginia.

General Grant commenced to flank Lee in earnest on the night of the 20th, Hancock's corps moving off upon the line of the railroad to Guiney's Station. Soon afterwards Lee's army began to fall back—a corps at a time—and during the night the strong position south of Spottsylvania was evacuated. The Secretary of War affirms that Grant's army is larger and better equipped than it was at the opening of the campaign. Lee's army is ascertained to be about 60,000 strong—having numbered between 85 and 90,000 previous to the great battles of the Wilderness and Spottsylvania.

Beauregard has been trying to dislodge Butler from his intrenched position at Turkey Bend, but the enemy have been repulsed and one of their Generals—Walker—has been captured.

Sherman occupied Resaca, on the 16th, after a desperate battle, Johnston's army was strongly posted, but various portions of the works were carried by storm, and on the night of the 15th the rebel army was withdrawn across the Oostanaula, leaving 2,000 killed and wounded, 700 prisoners, seven pieces of artillery and some stores. Sherman's loss was 3,400 killed, wounded and missing. Hooker, who did the heaviest fighting, was slightly wounded. Kilpatrick was painfully, and, it is feared, mortally wounded. Sherman's army consists of the corps of Hooker, Howard, Palmer, Schofield, Blair and Logan—six corps of infantry—with a corresponding force of artillery and cavalry. Johnston's retreat opened a rich section of country to this Union army.

On the night of the 18th Sherman reached and occupied Kingston, 22 miles south of Dalton and 62 miles northwest of Atlanta. General Davis' division had occupied Rome, the terminus of a branch railroad seven miles west of Kingston. The country was more open than favorable to military operations. The dispatch states that Hooker and Howard had overtaken Johnston two miles beyond Kingston.

General Sherman stopped at Kingston until May 23d. He had the cars running on the railroad, received veteran reinforcements, gathered supplies and rested his men, and was fully prepared for the march on Atlanta. Nothing is said of the whereabouts of Johnston. At Rome seven foundries and machine shops were taken—a fact which illustrates the importance of this section of Georgia to the "Confederacy."

Red River advices to the 14th of May state that Amiral Porter's fleet had succeeded in getting over the falls near Alexandria, and that the army lately under command of General Banks had left Alexandria for Semmesport and Fort De Russy, at which point General Canby had arrived.

General McDowell sailed for San Francisco on the 18th of May. This settles the question as to who is to be the commander of the Department of the Pacific.

Holloway's Pills and Ointment.—Neuralgia and Rheumatism are among the most difficult diseases to cure as from their attacks no tissue in the human body is exempt, no age, sex, or calling, secure. Holloway's medicines are, without exaggeration, the only safe and sure remedies for these afflictions. Sold everywhere.

Sold by all Druggists, at 30c, 75c, and $1 10 per box or pot. 207
HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM,

LIFE-SIZE BUST
....OF....
Thos. Starr King.

COPIES OF THE BUST OF THE LATE REV. THOS STARR KING, by P. J DEVINE, are soon to be issued to subscribers. The Bust and subscription list may be seen at Mead & Van Tassel's store, Montgomery street, or at Grant & Devine's Marble Yard, Sutter street, between Montgomery and Sansome streets. The public are invited to see the Autograph Subscription list which comprises many of Mr. King's personal friends.

Opinions of the Press.

The following criticisms are from the leading newspapers of the city:

After the many attempts at Busts of the late Thos. Starr King which have been made, it is gratifying at last to have one we can praise. It is a work of art, for expression is there as well as outline.—Bulletin.

Nothing heretofore executed, either as a portrait or bust, will equal it as a work of art or valuable memento of the dead.—Alta.

It is an admirable work, and is pronounced a perfect likeness of the deceased by those most capable of judging.—Democratic Press.

The friends of Mr King, who have critically watched Mr. Devine's progress, express themselves highly satisfied with the result. It exhibits a fidelity of likeness and artistic grace that has not yet been equaled.—Golden Era.

As a work of art it is wonderful, seeming to be exact and complete in every detail to which the eye may be directed or recollection recalled.—Sunday Mercury.

We have for many years looked with interest upon the labors of the artist. In the present effort he has been completely successful.—Cal. Farmer. 13-tf

EVERY VARIETY OF NATIVE GRASSES, the seed of which can be saved, will find a ready purchaser for the seed, on application at the Farmer Office. n17

Farmers and Immigrants.

LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOB F. DYE'S) on the East side of the Sacramento River, embraces many very superior Farms of

100 to 500 Acres each; also Vineyards, Gardens and Orchards,

bore all overflows, Fenced, having Dwellings, Barns, etc and throughout the year, large running streams, and irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of this Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Threshers, etc, are on the Ranch—"The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors

The "Job Dye Farm," of 250 acres—with Orchard, Vineyard, and Garden, with irrigating water, large Adobe House, and numerous outbuildings—will be rented to a satisfactory tenant

Apply to GEO. CHAMPLIN, Red Bluff P. O, or on the Ranch, or to
E. F. NORTHAM and R. B. WOODWARD,
Dec. 17—19-2m San Francisco.

Fine Farms for Sale.

YOU WHO WANT GOOD FARMS CAN SECURE them by applying to the Editor of the Farmer. The following can now be had:

FOUR VERY FINE FARMS in the splendid San Joaquin District, within a few miles of Stockton, all very productive.

ONE FARM about 20 miles from Stockton—valuable.

ONE FARM capable of great improvement and valuable, in Contra Costa County, near Pacheco.

A GOOD RANCH in Santa Cruz County—a good bargain.

A FINE FARM AND VINEYARD in the region of Mt. Diablo—can be made valuable.

Several STOCK RANCHES in various parts of the State, from $1,500 to $25,000; in all these, good and permanent settlers can find bargains. Address by letter, or in person, for particulars to Col. Warren, Editor of the Farmer. 23

PATENT RIGHTS FOR SALE.

THE FOLLOWING PATENT RIGHTS OF NEW AND valuable inventions (of which we have models to show their value) are now offered for the States of California and Oregon, and Utah and Washington Territories.

NO. 1. THE MECHANIC'S SPIRIT LEVEL.
Patented September 13, 1859.

This implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet out. Builders will do well to examine the model.

NO. 2. IMPROVED CLOTHES REEL AND BAR.
Patented January, 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery, or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines, neat when used and ornamental when not in use.

NO. 3. A CORN CULTIVATOR.

With this implement the soil is first thoroughly plowed and deeply pulverized, and on the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

NO. 4. A MUSKETO BAR.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

NO. 5. HYDE'S PATENT POST-DRIVER.

A most excellent labor and money-saving machine, for which we offer rights.

NO. 6. SEED-SOWER.

This is a new invention, and one of great importance to all who sow grain, or any garden seeds. The working model can be seen at the Farmer's Reading-room.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to
COL. WARREN, Editor Farmer.

Bee Keeper's Directory.

By J. B. HARBISON, Apiarian, Sacramento.

THIS BOOK HAS BEEN PREPARED BY THE Author with great care and the devotion of much time. From the experience of many years as an apiarian, the Author has given results that must be of great value to all who have Bees. Every person who contemplates keeping bees should have this book.
This Book is for sale by the Author at Sacramento, and by FARMER OFFICE. 1

Wants a Situation.

A PERSON FROM CANADA WISHES EMPLOYment of some kind, either upon a farm, care of stock, or would take a position in store for the sake of immediate employment in a permanent place. Reasonable wages only, would be asked till full capacity is known. 8

A Fine, House, Orchard and Vineyard
NEAR SACRAMENTO—FOR SALE.

A FINE HOUSE AND OUTBUILDings, and 30 acres of Land in the highest state of cultivation, with good Orchard and Vineyard, in full bearing. The Gardens are fenced in the very best manner, and having new cisterns of water for garden, stock, and house. The Fruit from this place commands the very highest price.
The place will be sold on easy terms: a long time to pay the most of the money, and interest only 7 per cent per annum. A smart business manager can make the payments off the place every year. Inquire of Editor Farmer. 15

Situation Wanted as Superintendent of Farm.

A GENTLEMAN, every way qualified for the superintendence of a large Farm, who is now in the Eastern States, wishes a permanent situation. He is a man of family, and every way qualified for such a place. Any one wishing a No. 1 Superintendent, within a little time, can secure a valuable man for such a place by addressing the Editor of the Farmer.

Fine House and Garden in Sacramento City

A LARGE, SPACIOUS, AND GENTEEL House and other buildings, with fine Garden, all finely located in the upper part of the city, containing a full half block—will be sold a bargain and on liberal terms of payment if applied for soon. Real estate is rapidly improving in Sacramento, and this is a rare chance. Inquire of editor Farmer. 15

English Steward, or Gardener.

A PERSON JUST ARRIVED FROM CANADA IS DEsirous of securing a place as Steward or Superintendent of a Farm. The very best references can be given of his character and capability for the situations. Apply at the office of Editor of Farmer or by letter. 21-6

A Miller Wants a Place.

A MILLER, WHO IS ALSO AN ENGINEER, wants a place where he can be permanently situated: he wants a good place in the country in preference; can bring the best references as to capacity and integrity. The advertiser is qualified, as a purchaser of Grain, and wishes a head position, if attainable, as that was his usual post. Apply at this office, n12

TRAVELING.

No Opposition until May 21, 1864.
THE PEOPLE'S
OPPOSITION
STEAMSHIP LINE
FOR NEW YORK
VIA PANAMA.
GREAT REDUCTION IN RATES

THE NEW AND FAST STEAMER
AMERICA
THOS. H. MORTON ..... Commander
Will be dispatched for
PANAMA,
Saturday, - - - May 21, 1864
From Mission street Wharf at 9 o'clock a. m.
Connecting at Aspinwall, by the PANAMA RAILROAD,
With the splendid Steamship
ILLINOIS
2,500 Tons.
FOR NEW YORK.

For further information, apply to
I. K. ROBERTS, Agent.
5-4d No. 101 Battery street, cor. of Pine, up stairs.

Pacific Mail Steamship Company

THE FOLLOWING STEAMSHIPS will be dispatched In the Month of June, 1864:
June 3d—ST. LOUIS, Wm. H. Hudson, Commander.
June 13—CONSTITUTION, J. T. Watkins, Commander.
June 23—GOLDEN AGE, Wm F. Lapidge, Commander.
From Folsom street wharf
At 9 o'clock, a. m, punctually.

FOR PANAMA.

Passengers will be conveyed from Panama to Aspinwall by the Panama Railroad Company, and from Aspinwall to New York by the Atlantic and Pacific Steamship Company.

A. B. FORBES,
Agent P. M. S. Co.
11 Corner of Sacramento and Leidesdorff sts.

Central Pacific Railroad,
.....AND.....
CALIFORNIA CENTRAL R. R.

ON AND AFTER MONDAY, APRIL 25th, UNTIL further notice, trains will leave the foot of K street, SACRAMENTO, as follows:

For Lincoln and Folsom, at ..... 6:15 a.m.
For Folsom, at ..... 10:30 a.m.

RETURNING.

Leave Folsom at ..... 3:30 p.m.
Leave Lincoln at ..... 10:45 a.m.

LELAND STANFORD,
13 tf President C. P. R. R. Co.

California Steam Navigation Company

Departure daily from Broadway wharf, at 4 o'clock, P.M.

CARRYING UNITED STATES MAIL.

THE FAST AND SPLENDID STEAMERS
CHRYSOPOLIS and YOSEMITE
Will leave on alternate days for SACRAMENTO, at 4 o'clock p. m., from Broadway wharf.

Steamer CHRYSOPOLIS, Chadwick, Master, will leave on Tuesdays, Thursdays and Saturdays. Steamer YOSEMITE, Poole, Master, will leave on Mondays, Wednesdays and Fridays.

Other steamers will also leave for STOCKTON every day at 4 o'clock, p. m. (Sundays excepted), from Broadway Wharf.

For Marysville and Intermediate Landings Every Day.

Steamer YOUNG AMERICA, Littleton, Master, and Steamer SWALLOW, Summers, Master, will leave Sacramento on alternate days, at 6 o'clock a. m.

ONE TRIP A WEEK FOR COLUSA, RED BLUFF, AND INTERMEDIATE LANDINGS.

The steamers LARK and GEM will leave for the above named places on SATURDAYS, at 7 o'clock, a. m. from the Storeship, foot of K street, Sacramento.

For freight or passage by any of the above boats, apply on board, or at the Office of the Company, corner of Jackson and Front streets.
v17-13 J. WHITNEY, JR., President.

Valuable Agricultural and Horticultural Books always for Sale at the California Farmer Reading-Rooms.

American Florist's Guide.
American Poulterer's Companion.
Allen on the Culture of the Grape.
Barry's Fruit Garden.
Bridgman's Gardener's Assistant.
Copeland's Country Life.
Cultivation of the Cranberry.
Downing's Fruit Book—new edition.
Downing's Cottage Residences.
Emerson's Florist and Flower Companion.
Fessenden's Complete Farmer.
Field on Pear Culture.
Flint on Grasses.
Flint's Milch Cows and Dairy Farming.
Flower Garden—by Breck.
Fruit, Flowers, and Farming—by Henry Ward Beecher.
Farrier and Stud-Book.
Grasses and Forage Plants—by Flint.
Holly's Country Seats.
Harris's Insects injurious to vegetation—splendidly illustrated.
Harbison's new Bee-Book.
How shall I choose a Cow?
Leibeg's Complete Chemistry.
Langstroth on Bees.
Lindsay on Morgan Horses.
Modern Horse Doctor—by Dr. Dadd.
Munn's Practical Land Drainer.
Sheep Husbandry—by Randall.
The Wheat Plant, Its Culture and Diseases—by Flint.
Youatt on the Horse.
Youatt on the Dog.
And many other valuable Books at lowest prices.

$2,500 Wanted on Real Estate.

THE SUM OF $2,500 is wanted on Real Estate in San Francisco County, upon land of undoubted title, worth double the amount. Address A. B. C., Farmers Office.

CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES.

VOLUME XXI. SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, JUNE 3, 1864. NUMBER 18.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

PUBLISHED EVERY FRIDAY MORNING.

BY WARREN & CO.

Office—No. 320 Clay street (up stairs), below Battery.
SAN FRANCISCO.

TERMS OF SUBSCRIPTION--IN GREENBACKS.

By mail, for one year, $5; for six months, $2 50. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or $5 a year in advance.

☞ Advertisements and Subscriptions must be paid or in advance.

JOB-WORK—Of every description, done with promptness, at fair rates orders will be faithfully attended to.

☞ All letters on business connected with the office should be addressed to PUBLISHER CALIFORNIA FARMER, San Francisco, Cal.

The Weather, Crops, Etc.

The past week has been rather a trying time to some crops, owing to the drying winds which have prevailed; yet notwithstanding this, news comes in from many sources giving a more cheering view of the crops than ever before. As an evidence that the crops will be better than was anticipated we can state that all sales of grain and flour are dull, with a downward tendency. Hay, about which so much fear was experienced, promises to be abundant in some places which, before the late rains, was almost given up. The fact is, in the promiscuous reports that sweep round our State about "short crops," etc., it is gathered, in many instances from interested parties, while from others it is from those whose vision and knowledge extend only a few miles right or left from their own grain-fields, and if they are of the class who *skin the soil*, their report will always be "short crops."

That "we shall have enough and to spare," we have never doubted. This high price of breadstuffs move is like the *high price of gold*, the speculator runs it up to 188—to 194—and wants to make it even 200; but why should gold be quoted at 191½ on Wall street, New York, by Brokers, when the United States Treasury sells gold certificates at 185? Why is not the price, at which Mr. Chase sells, the ruling quotation? So grain is often quoted at a rate, by a few, that the producer or seller cannot realize. We hope always to see the producer realize the highest market rate for his produce, but to effect this a change must be made in the system of sales and commissions.

Cultivation of Flax.

EDITOR CALIFORNIA FARMER:

As the production of Flax-fiber is creating quite a lively interest among the farmers of the Eastern States, the *modus operandi* in which it is grown and prepared for market in Europe may interest some of your readers. In the northern part of Ireland it is as much a staple as wheat in California:

The land after being in pasture from two to ten years, according to the circumstances of the cultivator, is richly manured and planted with potatoes in the manner described in a recent article on plowing, in the FARMER, termed the lazy-bed system; the following spring, about the 1st of April, it is sown with 1½ to 2 bushels to the acre, harrowed fine and rolled, but not plowed. When the seed-bowls turn yellow and before it is ripe it is put in a pond, two tier deep, set on end at an angle of about 45-degrees, and rocks placed on it to keep it under water; here it ferments, rises and finally sinks; this process requires from 8 to 16, 17 and 20 days, and some judgment is necessary to determine the proper time of taking it out. Next it is spread evenly over a meadow or pasture field, and in two or three weeks it is taken up, bound and sent to the mill, where it is first put through large cast-iron rollers and then scutched. One man (in a mill) will dress about 100lbs per day. The farmer now sells to the manufacturer and realizes from eight to sixteen shillings per stone of 14lbs, say about 12½ to 25 cents ₩ lb, according to quality—an acre yields from 400 to 700lbs. The spinning and weaving factories are more generally known: the most noticable feature is the bleach-green, when seen from a distance, and the sun shining upon it; its dazzling, snowy whiteness, relieved at intervals by the brilliant verdure, caused by the potash and other minerals in which it is boiled, presents an appearance which, as novelists say, may be imagined but cannot be described.

The linen is then bound in webs, 22 yards in length, and shipped to almost every nation on the face of the earth. California would no doubt yield a fine fiber, but at present prices of labor I do not think it would be profitable, even if it were practicable. Yours, etc. J. D.

A NEW SUBSTANCE.—A few days ago the workmen on a quartz vein near the Spring Creek quartz mill, discovered in the seams of the rock, a substance which resembles castile soap. Sheets a foot square were taken out, being from one-eighth to a half inch in thickness, and of a pale milky color. It is of the consistency of beef's tallow, with no grit or grain, does not dissolve in water, and possesses neither taste nor smell.—[Shasta Courier.

Horticulture and Hygiene

Agriculture bears an important relation to the Health Reform, and might be said to completely underlie it. Not only are the labors of the field and garden health-giving, but they furnish the materials which go to build up and sustain our bodies—nutriment—one of the primary necessities of existence.

A healthy bodily condition requires that we shall have proper food. This is the office of agriculture to furnish, by means of the culture of the soil.

Some persons may think that a consideration of the details of agriculture and horticulture does not come within the sphere of a health journal, and that all such matter should be excluded which has any reference to other than the favorite topics of medical students. But the science has everything to do with it. Take away an advanced state of agriculture, and what becomes of the Hygienic System? A healthful nourishment of the human body requires that our fruits, grains and vegetables shall be as perfect as possible, and produced in such abundance as to be available to all classes of persons at all times. To this end it is absolutely essential that all persons engaged in the rural arts, shall understand the precise condition of perfect vegetable growth—the essential mechanical and chemical conditions of the soil, influence of heat, moisture, air, sunshine and culture; the nature, structure, chemical properties, and the influence of vegetable and animal life, etc., etc.—which every person, whether a farmer or not, should know—affecting as they do the everyday life of each individual.

It seems to be the tendency of the professions to look upon rural husbandry as an avocation suitable to persons of inferior endowments, and to ignore the superior claims it has upon their attention. They are apt to regard the rough, democratic farmer, in coarse clothes, as a fit subject upon whom to exercise their duplicity and craftiness, rather than the honest, useful and worthy citizen, who is every way worthy of respect and esteem. Some of our professional Health Reformers are addicted to the aristocratic tendencies of professional life, and they need an overhauling.

We cannot hope very much for the advancement of Health Reform until the material conditions which it demands are produced. There are many directions in which the work must be first commenced. The whole rural industry of the country must undergo important changes, which it certainly will when there is sufficient general intelligence among the masses to appreciate the value of human health and happiness and the true means by which they are to be attained. Some of these changes might be enumerated thus:

1. A reduction of the hours of labor among the working classes of the country by means of more intelligent industry; that is, the employment of more brain power, and less wear and tear of muscle; more constructiveness to make a judicious use of the materials in hand, and thus give to character a more practical direction.

2. A diminution of artificial and pernicious habits, by which the individual becomes a slave to morbid appetites and inflamed passions. Among these habits we might enumerate the use of stimulants in the shape of alcohol, tobacco and poisonous and exciting foods, such as condiments and the various preparations of animal diet in their various stages and degrees of objectionableness.

3. More time for reflection and scientific knowledge, by means of which the individual capacity becomes increased for a noble and useful life, culminating in a higher civilization and better state of society.

4. More intellectual and spiritual power, growing out of the foregoing conditions, by means of which man will be enabled to appropriate all in the material and spiritual world that will give him a perfect bodily development and the largest soul-growth

All of the foregoing conditions are primarily based on the rural arts. All the professions and mechanic arts are auxiliary to and dependent upon rural husbandry, growing out of a higher civilization, and consequent multiplied human wants. To promote the development and progress of agricultural science is to subserve the highest interests of man. All the wealth and resources of a country are in proportion to the prosperous condition of its agricultural population, for they are the mainstays of all nationalities, without which commerce and the professions could not exist. The advancement of the rural arts, then, is the starting-point in all practical reform, and which must form the natural basis for the hygienic teacher.

The subject is too vast for more than a mere glance at present. We shall have occasion to refer to it again.—[Herald of Health.

SIRUPS INSTEAD OF BUTTER.—A Maine paper says: "People are getting into the habit of using sirups as a substitute for butter. It is found easier to contract such a habit than to form the habit of paying fifty cents a pound for butter. Many of the boarding houses find it impossible to procure butter. One of the grocers sent a runner one hundred miles into the country for butter, and succeded only in procuring one tub."

Sheep Husbandry.

The following facts, touching Sheep Husbandry, we clip from the Wool Grower of Cleaveland, as an important article for our State now, in the scarcity of food for sheep:

"It has been frequently asserted that no country adapted to Sheep Husbandry ever entered upon that branch of agriculture without becoming wealthy. Probably in no country, in proportion of the extent of territory, has the breeding and keeping of sheep been so extensively carried on as in England; and no country in the world can boast of more wealth. That this is the result of Sheep Husbandry alone, we do not believe; but we do believe that it is one of its principal sources of wealth. But we maintain that no farmer ever introduced sheep upon his farm, but his land was improved thereby, and if his sheep were properly cared for, his finances were also improved. And no farmer ever abandoned Sheep Husbandry, but his farm suffered in consequence, and his income proportionately diminished. In England he is considered a poor farmer, and not up to the spirit of the times, who keeps no sheep.

"It is a well established fact that on any pasture, stocked to its utmost capacity with cows, as many sheep may be added, and a horse introduced occasionally, and the pasture not impoverished, but improved. Sheep will feed upon the herbage which cows reject. It is an old adage, and a true one, that horses alone impoverish a pasture, cattle alone improve, but sheep alone enrich it. Where horses, cattle, and sheep, are allowed to feed in the same pasture, we always find the grass evenly cropped, no unsightly turfs of grass, with their rank, coarse growth, left to rot upon the ground, but all is economized.

"In England he who should talk of running out a pasture would only submit himself to ridicule. There it is always presumed that a pasture will be improved, and it is no rare occurrence to take one, two, and sometimes three crops of grain from a new broke-up pasture before applying manure; and commonly, when a field has been hard run in tillage for a number of years, so that its fertility has been impaired, it is seeded down, and converted into pasture in order to improve it. This the farmer calls laying it down to rest. The landlord never objects to his land being laid down to pasture; but the tenant is never allowed to plow up that which was down when he hired his farm, only under an expressed agreement. It would be, perhaps, well to state, in this connection, that in England dairy cows are never stabled during the night. In many cases they are milked in the pasture, and when driven up for that purpose, they are returned as soon as they have been milked. The English farmer does not confine the fertilizing powers of the sheep to his pasture, but he makes them fertilize his arable lands. In the vicinity of the Downs, it is a common practice to fold the sheep at night upon their arable lands, which feed upon the hills by day, and is about all the manure they apply.

"Mr. Hiram Barbus, in the Agricultural Report of 1860, quotes the following from Mr. Stephens, that a dressing thus given by three hundred sheep, is sufficient in one week for an acre of land, and is worth fifteen dollars, or five cents per head per week. Mr. Barbus asked the question: 'May not the universal deterioration of the lands in our rural towns be attributed to the fact that the keeping of sheep has been abandoned for that of cattle?' He says, 'it is laid down as a fact among English farmers, that the wealth and success of a farmer may be pretty well calculated by the amount of his sheep stock.' He asks another question, and gives the answer: 'What shall we do to improve our worn out pastures? When sheep were universally kept, this question was never asked, because sheep are ever improving the ground on which they feed.' It is stated that man is a universal benefactor, that makes only two spears of grass grow where one grew before. What must we say of sheep, that make four spears of grass grow where only one grew before, and two blades of grain, where before but one was raised, which clothes us with its fleece and feeds us with its carcass?

"The manure of sheep, if not equal to the guano and the droppings of fowls, ranks next as a fertilizer, and if not rich in ammonia, it is richer in the phosphates.

"Thirty-six pounds of sheep manure are considered equal to 100 pounds of common barn-yard manure. We well remember the time before the introduction of guano, when we collected the droppings of sheep, and put them in a barrel along with a quantity of water, and after giving them a good pounding, as some do clothes, till they were thoroughly macerated, the liquid was used to force vegetables, shrubs, and plants, and sometimes fruit trees, with results about equal to guano of the present day. But sheep have another element of fertilization, which I have not seen referred to in any report or essay on the subject. There is always exuding from the pores of the sheep an oily substance called yolk; this contains a large amount of potash and other alkaline matter. The amount thrown off in the course of a year is large, and is one of the best fertilizers known. This is to some extent washed off in heavy rains, hence the adage, that the sheep fertilizes the ground it lies upon, a fact which some of our large manufacturing establishments might profit by, if they would economize in the same manner the liquor in which the wool is cleansed, in place of letting it run into the river. And the fact that night soil is an excellent fertilizer might also be taken into consideration. It might not increase their dividends or make manure cheaper, but might make it a little more plentiful in the vicinity of large factories.

"The committee on Sheep Husbandry, as published in their report, in the Agricultural Report of 1860, say: 'That, to the question proposed in our circular, whether sheep improved pasture land, there has been from every return but one unequivocal yes, especially on those pastures where the coarse grasses, briars, and bushes are coming in.'

"J. E. Wright, Esq., in answer to the often asked questions, are sheep as beneficial to the soil as cattle, says: 'This question, I think, will meet with those who have had the experience of the culture of both cattle and sheep, with a ready answer, that the fertility of the soil can be better kept up with sheep than any other stock.'

"Mr. Joseph Reynolds says: 'A gentleman writing from Plymouth County, in 1859, remarks: Some of the finest examples are afforded here of the effects of feeding sheep upon pastures that have become exhausted of nutritious grasses, and grown to bushes, briars, brakes and moss. I have seen pastures to-day that had become almost worthless, but now green and smiling as a lawn, with every inch among the rocks covered with the richest pasture grasses, and not a blackberry vine, wild rose-bush, mullen, or other useless plant in sight. The sward does not seem bound and compact, but loose and porous, and filled with the most healthy and vigorous roots.'

"While Mr. Reynolds himself says: 'Experience shows that sheep-walks, instead of becoming exhausted, uniformly grow better and more productive, and then one of the most effectual means of destroying the bushes and mosses, and bringing back the sweet grasses to an exhausted pasture, is to turn upon it a flock of sheep.'

"While R. S. Fay, Esq., then Secretary of the Massachusetts Agricultural Society, and who has owned a large flock of Oxfordshire Downs, for the last ten years, in a very able essay, says:

"'We have constantly had under our eye a hundred-acre lot, upon which cattle a few years ago could not live, that maintains in good condition a large flock of sheep; and the improvement of the pasture has been so great, that a dozen head of cattle, beside the sheep, do well upon it.

"'The reasons for this are obvious to any one who has observed the habits of sheep; they are more indiscriminate feeders than cattle; they nip the shoots of almost every shrub, as well as weed, extirpating many kinds in the course of two or three years; they make room in this way for the grasses to come in where they have been shadowed out or otherwise displaced; the white weed, the broom, or wood waxen, as it is commonly termed, the golden rod, the blackberry vine, the blue berry, with many other similar plants, disappear before them, and the finer grasses, and white clover take their place.

"'This, however, is one of the advantages which sheep possess over cattle upon pastures which are impoverished—they scatter manure in the way to produce the largest benefit, besides it possesses in the highest degree the requisites essential to restoring to the land the phosphates which it loses by long depasturing with cattle.

"'The manure of the sheep suffers no waste, being in a highly concentrated form, and at the same time is minutely divided, and evenly distributed over the surface of the ground. So good and economical a distributer of manure is the sheep, that experienced farmers in England are feeding them, when in pasture, with oil-cake, for the additional benefit of the manure.'"

HEAVY IMPORTATIONS OF FOREIGN GOODS.—During the week ending on Saturday, the imports of foreign goods at this port were to the enormous amount of $7,468,933 in gold, or with gold at 75 per cent premium, equal to nearly $13,171,000 in currency. Of the importations, $1,340,534 were in dry goods, and $6,128,399 in general merchandise. The exports from the port during the week were of domestic produce and miscellaneous goods (inclusive of specie), $3,660,907 in currency, and of specie about $3,000,000, or equal to $5,250,000, with gold at 75 per cent premium. Thus our imports in a single week were, in currency value, equal to about $13,171,000, and our exports to about $8,920,000.—[New York News, April 20th.

THERE are nine States in which clover-seed is raised to any extent. They are Indiana, Illinois, Maryland, Michigan, New Jersey, New York, Ohio, and Pennsylvania, the latter State being the heaviest producer. The crop for 1863 is estimated at 806,448 bushels; in 1862 it was 1,035,760 bushels, showing a decrease of 229,342 bushels. California would excell them all in the cultivation of clover and raising seed for export, if it would but give proper attention to it.

New York Wool Market.

WALTER BROWN'S Monthly Wool Circular, issued May 1, says:

During the month under review there has been an increased activity in the demand for Domestic Fleece Wools, and prices have slightly advanced. A number of agents of the larger manufacturing companies have been in the market, some of whom purchased stocks sufficient to carry them over the ensuing summer. Consumers of this class will not, to say the least, be compelled to go into the country for supplies during the approaching clipping season.

It may not be unseasonable to advert here to the probable effect upon prices, both in the markets and the Wool growing districts of the West, of the passage of the bill now before Congress, which proposes to increase largely the duties on foreign Wools, and to suggest to manufacturers the expediency of anticipating their wants by purchases before this effect is felt in materially advanced rates. Believing these precautionary views will obtain to a considerable extent with consumers, we shall not be surprised to see during the month an increase in the number of buyers; and as stocks in market continue to afford good selections, we look for an animated trade at improving prices.

Pulled Wools have been active, and prices have advanced from 3@4c ₩ lb. The stock being light, and the demand good, there is a prospect of a still further rise in Wools of this description.

California Wools have sold freely at fair rates, and the market is in favorable condition for receiving the early lots of the spring clipping now en route by steamer, to arrive probably in the present month.

The demand for foreign Wools of all qualities has been active, and there has been considerable excitement among importers in consequence of the new tariff and the high rates of gold, and a rise in prices somewhat greater than that in American Wools has been established. Large sales have been effected, and the market continues very firm at the advanced figures. The stock has been materially reduced, although some of the large parcels have merely changed owners, and will be again offered for sale.

By the late foreign advices we learn that all the markets are firm, and prices of nearly all descriptions of Wool are higher.

We have reported the following sales during the past month: Fleeces, 1,440,000 lbs, at 67@80c; Pulled, 860,000 lbs, 56½@82½c; 205,000 lbs California, 25@52c; 3,900 lbs Cape, 37@42½c; 1,867 bales Mestizo, 37@40c; 3,500 bales Mediterranean; 1,255 bales Donskoi, 40@52½c; 40 bales Hungarian; 6,200 bales African; 21 bales Cordova; 246 bales East India; 60 bales scoured Australian, $1,00@$1,50; 600 bales Provence; 250 bales Chilian, 37½c; 115 bales Montevideo; 60 bales Rio Grande.

At Auction.—320 bales Cape, 27@45½c; 168 bales African, 22@35c; 9 bales Mestizo, 28½c.

In Boston, 1,700,000 lbs Fleece and Pulled, 65@83c; 14,000 lbs Canada, at 80c; 1,420 bales Foreign, 37@42½c.

At Auction.—Fleeces and Pulled, 275,000 lbs, 60@80c; 6,000 lbs, California, 30@42c.

The imports for the past month as published are: from Liverpool, 358 bales; London, 1,375; Marseilles, 1,063; Antwerp, 189; Havre, 160; Lisbon, 36; Taganrog, 587; Buenos Ayres, 61; Montevideo, 64; Port Elizabeth, 491; Cape Town, 606 bales. Total, 4,060 bales.

PRICES CURRENT OF CALIFORNIA WOOL.

LOYAL LADIES OF WASHINGTON AGAINST WEARING APPAREL OF FOREIGN MAKE.—The ladies of Washington, who have for some time past been preparing to organize themselves into a league, for the purpose of pledging themselves not to wear any apparel of foreign fabric during the continuance of the present war, held a meeting in Dr. Sunderland's Church, in Four-and-a-half street. The attendance was quite large, the large lecture-room of the edifice being quite full, and composed of some of the wealthiest ladies in Washington. There were but few gentlemen present. The meeting was organized by the election of Mr. McMurdy Chairman. A Constitution and By-laws were submitted for adoption, which, as is usually the case, called forth some debate. The gist of these documents was, that the ladies who should sign the articles of covenant should pledge themselves to wear no apparel of foreign fabric for three years, or during the war. Those ladies who approve of the league, and cannot sign its provisions on account of the official positions of their husbands, were respectfully invited to aid the cause by their voice and influence. Mrs. Ann S. Stephens, the authoress, delivered the opening address, which was very eloquent, and to the point. Dr. Sunderland, who was present, ventured to make some few suggestions, that it might be better not to adopt the resolutions and constitution at this meeting, in order that further consultation and discussion may be had on the subject, and what could not be done at the present meeting may be done at an adjourned one. The best of feeling and unanimity existed, and the ladies appear to be in earnest in the matter.—[Washington Republican.

Letters from an Old Californian at the East.

NUMBER NINETEEN.

New York, April 25th, 1864.

The 300th Anniversary of Shakspeare.

EDITOR CALIFORNIA FARMER:

One of the most interesting ceremonies I have witnessed in New York, was the laying of the corner-stone of the Statue of Shakspeare, on the 300th anniversary of his birthday, in the Central Park. The day was unusually beautiful and the accessories of the scene were charming. The bright blue sky with the softest of dreamy clouds; the warm sunshine, most cheering after the long interval of stormy weather; the bright hue of the fresh grass, the fluttering of birds in the trees and the delicate little flowers modestly hiding under the shadow of the rock. The foreground of the picture, at the commencement of the ceremony was very attractive. There were Hackett, Wheatley, and Davidge, representing the histrionic profession, Judge Daly appearing for the bar, Rev. Dr. Osgood and Father Hecker for the pulpit, Bierstadt and Wreymauld for painting and architecture, Halleck for poetry, Gunther for the merchants, and Astor for the bankers. Around this circle crowded an audience composed of representative people from all professions and classes. Among the ladies I noticed Mrs. Wood, Mrs. Hoey, Mrs. Williams, and Miss Avonia Jones. Judge Daly was the first speaker, and his remarks were as follows:

We assemble at this place to-day, the three hundredth anniversary of the birthday of Shakspeare, to lay the corner-stone of a memorial work of art to be erected here in attestation of the respect and veneration with which the memory of Shakspeare is cherished by the American people. We who speak the English tongue, and inherit with our language all the treasures of its literature have presented to us in the occasion which gives to this day its special significance an opportunity to do what will be done in England and Germany, to manifest by some public act, our sympathy with, appreciation of, and common property in the works which Shakspeare has left for the delight and instruction of mankind, and which, if we omitted to do, would be a reflection upon us as an intellectual and cultivated people. The time it is true, is not propitious. We are involved in war, but Germany is in the same situation, and it is a mark of the superior cultivation of both nations that with the heavy responsibilities, and great exactions which such an event creates, we can, notwithstanding, pay our tribute when it is appropriate that we should do so, to the greatest name in all literature. That title by common consent has been accorded to Shakspeare.

No writer of any age or nation, has sounded so deeply the depths of human nature, or portrayed with equal power the passions that deform and the virtues that dignify and adorn it. The productions of no other mind have satisfied so completely the varied tastes of men, and received to the same extent the applause of the multitude, with the admiration of the profound. While other great writers are marked by characteristics which distinguish them from each other, he appears to have possessed every merit of which they were separately capable, and to have had attributes of his own wherein none have approached him. In him the greatest contrasts unite and the most opposite qualities. The power of portraying with equal truth the ingenuousness of innocence, and the subtlety of craft; of exhibiting all that is high and noble, with all that is mean in human character. The most luxuriant and powerful imagination allied to the most delicate and playful fancy. An exuberant and overflowing humor combined with a subtle and penetrating wit. The highest soarings of human thought, and the profoundest maxims of human wisdom in connection with the most minute delineations of the weakness, the vices and the follies of men. He has, in a word, repesented the infinite diversity of human nature as no other man has ever painted it, and as probably no other man ever will. To his fame we can add nothing. He has built his own monument in his works, and was himself aware how perpetual that monument would be. To the unknown person whom he addressed the fifty-fifth sonnet he has, with prophetic consciousness of his future immortality, expressed himself in these words:

Not marble, nor the gilded monuments
Of princes, shall outlive this powerful rhyme,
But you shall shine, more bright in these contents
Than unswept stone, besmeared by sluttish time.
When wasteful wars shall statues overturn,
And broils root out the work of masonry,
No Mars' sword, no war's-quick fires shall burn
The living wreck of your memory.

And again, in the eighty-first sonnet:

Your monument shall be my gentle verse,
Which eyes not yet created, shall o'er read.
You still shall live (such virtue hath my pen)
Where breath most breathes, even in the mouths of men.

But feeling as we do, to quote again from his own works, that

Wherever the bright sun of Heaven shall shine,
His honor and the greatness of his name shall be.

We can and shall do honor to ourselves by adorning the Central and principal park of our city with a work to be executed by an American sculptor, which shall be alike commemorative of the events celebrated to-day, and of the state of the arts in this country, which shall present to all who visit this place in the hours of their recreation, among the many objects of nature and art which embellish it, the figure and expressive features of a man who was too universal to be the property of any one age or nation. While much there is connected with the celebration of the day that will pass away with the event and be forgotten, we propose at least to do something that will be permanent.

To the gentlemen of the dramatic profession we owe the inauguration of this monument, and to their exertions in the future we shall be largely indebted for its completion. From them this reverential duty comes most appropriately, for Shakspeare was himself a player, and I accordingly call upon Mr. Hackett, a distinguished member of that profession, a native of this city, and the oldest American actor present, to perform the ceremony of laying the corner stone.

Mr. Hackett then delivered the following brief address:

MR. HACKETT'S REMARKS.

Having the honor thus committed to me, I will proceed at once, in the presence of this assemblage, to lay the corner-stone of the first monument proposed to be raised in America to William Shakspeare, and afterward will rely upon one of my associate, Mr. William Wheatley, to close this ceremony, by adding some of his own to the sentiments which have just been so eloquently and impressively uttered by his honor, Judge Daly—my own voice being hushed in the performance of this reverential act.

The ceremony of laying the stone was then performed, Mr. Hackett taking the trowel and depositing the stone in its proper place. The band then played Mendelssohn's Wedding March, from "Midsummer Night's Dream," after which Mr. William Wheatley spoke as follows:

SPEECH OF WILLIAM WHEATLEY.

Standing as I do, in the midst of the wisdom and the reverence of our great city, I may well feel some diffidence in attempting to address you; here we find grave judges, statesmen, poets, authors, actors, all united in this, the three-hundredth anniversary of Shakspeare's birth, to do honor to his memory; the myriad-minded Shakspeare! the sweet Swan of Avon! the deer-stealer—of hearts!

"Each scene of varied life he drew,
Exhausted worlds and then imagined new."

It is plainly observable in our theatres that spectators of all classes and ages are never wearied of representations of Shakspeare; with every year of lengthening life the lovers of poetry, and the observers of mankind feel the links which bind their affections to him grow stronger; in youth his spirit and action of his scenes excite his attention and his imagination; in maturer years his wonderful variety and truthful delineation of his characters, and the exquisite beauty of his images that encircle every page, are more sensibly appreciated; and when many ordinary enjoyments of life are diminished by still advancing time, the reader recurs to Shakspeare, and finds his charm unbroken. Thus through all stages of life delighted and instructed.

We are inclined to yield free assent to the warmly expressed judgment of Hallam that "the name of Shakspeare is the greatest in our literature—is the greatest in ALL literature." I will detain you but a few moments longer, while I read these lines prepared for the occasion:

Three hundred years have passed away
Since by the Avon, gentle river,
A boon to cheer the hearts of men
Was sent to us by the great All-giver.

Who has not read his honey'd page?
Wept with maid-wife of Verona?
With Beatrice and Rosalind joyed?
And sighed with gentle Desdemona?

Who has not mourned with injured Lear?
Or wished success to mad Petrucio?
Who has not felt a moistened eye
At death of gallant, brave Mercutio?

Who has not revelled with Prince Hal?
Ah! me, what fancies rise up thickly,
We've robbed with Falstaff at Gadd's hill,
And quaffed sack, browed by Hostess Quickly.

Where'er our English language pours
Its wealth of song; where'er 'tis spoken
There "Avon's Swan" finds worshipers,
And there his charm can ne'er be broken.

Kings, purpled puppets of a day,
Dwell for a space in history's story,
The dust of ages yet to come,
Cannot efface our Shakspeare's glory.

And long as babbling Avon pours
Its rippling tribute to the ocean,
Long as the planets in the sky,
Keep on unchanged their heavenly motion.

So long shall Shakspeare's name be sung,
And homage to him be awarded,
His memory in all hearts kept green
Till the last syllable of time's recorded.

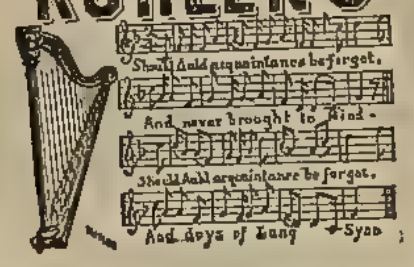
Mr. Wheatley performed his part in a brilliant manner, his recitation of the poem, in particular, enchanted his audience. It was a great treat. When he repeated the fourth verse he turned gracefully to Hackett who bowed low as the spectators appreciated and applauded the compliment. From some cause or other Mayor Gunther, to the amusement of everybody, broke down in his speech. His failure was the farce of the occasion.

It is the intention of the Park Commissioners to allow statues in honor of the great men of all countries, to be placed between the trees on the Mall. It is really worth a trip from California to New York, as the great Park is now called. I am a constant visitor and each visit reveals some new beauty. In the afternoon the spectacle is a splendid one; standing upon the elegant pavement of the terrace, the stranger sees passing by him all the aristocracy of New York and the display of brilliantly-dressed women, blood-horses, costly carriages, gorgeous liveries, not to speak of the flashy fast teams of the fast young men, and wonders at the luxury of New York at a time when the Nation is fighting for its very existence. But these votaries of pleasure, in justice let it be said, have been foremost in making the Metropolitan Fair a success. Their extravagance has been as conspicuous in their gifts to the sacred cause of charity as it is in their equipages in the Park. The more I see of New York the greater is its resemblance to the gayest city in the world, Paris. I hardly wonder at the fascination it seems to have for Americans, for the seeker after money, pleasure or instruction finds that here, where every attraction centres. Even in the ignorance and savage barbarity of the lower classes, New York resembles Paris. It is all now a brilliant, luxrious, dangerous, but fascinating city.

M. A. S.

VALUABLE RECIPE.—To kill squirrels, rats, mice, and gophers: Take white glass and beat as fine as meal; then mix up one quart of cornmeal with milk until it is in a proper state for baking. Add to that one-half teacup full of the fine pounded glass, stirring thoroughly through. Place portions of this mixture in barns, around gardens, and in the mouths of their dens, and then bid them farewell! This recipe has proved infallible with me. It will cost you nothing. Make the experiment as I have, and you will be satisfied.—[I. M. Evans, in the Oregon Farmer.

INJURIOUS EFFECTS OF DUST.—Recent investigations in France have revealed the fact that the use of threshing and winnowing machines are productive of an immense amount of bronchitis and diseases of the throat and chest among the laborers employed, who are exposed to an atmosphere of dust, which affects them so powerfully, that in some parishes there are whole families of confirmed invalids. To such an extent has the evil gone, that the Mayors have issued an order that all laborers employed near the machinery shall work in veils.



A CURIOUS PHYSIOLOGICAL FACT.—A late English paper informs us that a few days back a pig was killed at Mr. Cooper's brewery, Eastbourne, when it was discovered that it had three kidneys, which were submitted to Messrs. Colgate and Kent, surgeons, who pronounced the organization of all of them perfect. Will those who object to Spiritual Phenomena because they do not themselves see them, believe this fact without they see the kidneys? But perhaps then they would want to see the pig killed over again.

SANITARY FAIR BUILDINGS.—To show on what a magnificent scale these Fairs are conducted at Philadelphia, we give the extent of the buildings: Of the eight structures 200 feet in length, six have the frames up, two are nearly covered in, and four are floored. The building 500 feet long, on Race street, also has the frame up, and nearly covered in. The plan for the art gallery has been definitely arranged, and the contracts have been made for nearly all the buildings. The center building, of Gothic architecture, will be 500 feet long, 60 feet wide, and 50 feet in hight, and will form one of the most striking features of the exhibition. The gas-fitters are ready to commence work, and the plumbers are anxious to go to work. The material is coming, and it is estimated that not less than 1,000,000 feet of lumber will be used. The flagstaff, 200 feet in hight, is being prepared, and the derrick for its erection is already upon the ground. The buildings for the grand affair at St. Louis will be even more extensive. $80,000 was subscribed in a single day, by the merchants, as a work of preparation, in sums of $1,000 each.

Wrecks of Humanity.

WHY SHOULD THEY SINK?—The excitement of "the chase" has always been supposed to have a healthful tendency; but there is a kind of chase which breaks down the constitution, debilitates the frame, and shortens life. We mean the headlong, uninterrmitting hunt after the "almighty dollar," which is the great business characteristic of the present day. It begets other evils (unnecessary to name) which precipitate the fate of thousands. There is, however, a possibility of recovery from the prostration produced by these causes, long after their victim has ceased to hope for it. If we are rightly informed, the most astonishing cures of what is called general weakness and debility, which have ever been known in this country, have been effected through the agency of Doctor HOLLOWAY'S inestimable remedies. Mere skeletons of men, out of whom the very principle of vitality seemed to have been drained, have been restored to health and vigor by the operation of the Pills; and of the Ointment, in case of paralysis, rheumatism, etc, we hear an equally favorable account. If [redacted] will break down their energies by over exertion—if in their anxiety to "go ahead," they will overide the most precious of God's blessings, health—it is well they should know how to repair the mischief, when they come at last to realize the fact of their premature decay. The wrecks of humanity, who, without any particular disease, appear to be sinking from mere exhaustion, would find, without doubt, immediate relief from Doctor HOLLOWAY'S remedies.—[Phil. Tribune.

California Notes,

ABOUT

GRASSHOPPERS AND LOCUSTS.—No. 10

BY ALEX. S. TAYLOR.

SECOND SERIES.

Continued from the California Farmer of April 8th, 1864.

CRICKETS

A few miles north of the Truckee river we saw large swarms of crickets. They were round, plump, and fat. During the months of July and August, they frequently make their appearance in countless multitudes, covering whole acres of ground and laying waste all green things. It seems that these crickets are much used by the the Indians for food. In gathering them they drive the swarms into the Truckee river, having first separated the cricket-catchers into two parties. On striking the water, the crickets turn flat upon their backs, and are carried down by the current till they reach the large conical baskets held in the water by those in readiness. In a short time bushels are collected in this manner. The crickets are emptied from baskets into sacks, where they are kept till they die. They are then taken out and spread in the sun to dry. When cured they look much like raisins, and are carefully sacked and put away for winter.—[Cor. S. F. Bulletin, July 1861.

THE SEVENTEEN-YEAR LOCUST.

This insect, so called, is not the family of the locustæ but is entirely of distinct habits and characteristics. It has been known in North America for the last hundred and fifty years, making its appearance every seventeen years. It is known in natural history as the *Cicada Septendecem* order *Isnoptera*, section *trimera*, family *Cicadæ*. A popular illustrated account of it may be found in the Ohio Farmer of February 1863. The C. Septendecem is nearly *three times* the size and weight of the California migratory locust or grasshopper, and its mouth is furnished *with a sucker or trunk* and not with mandibles or jaws like the grasshopper. The body of the first is altogether differently arranged, very plump, of a dark brown color, with the wings much broader and more oval than the other. Its eggs are laid in the trunks or branches of trees, while that of the locust is deposited in the earth. The C. Septendecem has a pleasant, loud, chirping note while the C. California makes only a faintly-heard noise with its mandibles and legs. Strange to say, these two insects so widely different have been for so long a time confounded with each other in the popular mind.

LOCUSTS STOP THE SYRIAN RAILROAD.

A Smyrna journal of June 1863 gives the following curious account of a swarm of locusts stopping the cars of a railway "We continue to receive alarming accounts of the ravages committed by the locusts. The swarms have in many cases lodged on the Ottoman Railway and compelled the engine drivers to proceed with great precaution. The locusts on being crushed by the engine on the rails make them excessively greasy and slippery, so that the wheels will scarcely bite. The consequence is some degree of danger, and sand has to be dropped on the rails to give the wheels a hold. Several trains from Ephesus have been considerably behind time through the locusts taking possession of the line."

A similar affair to this happened in some of the Western States during the visitation of grasshoppers in 1855-56, and was noted in the American journals at the time.

Indianology.

THE PIUTE AND SHOSHONE RACES.

It is the theory of Boschmann of Berlin, the greatest of living philologists, that the Alta-California Indians of portions of Los Angeles county (as the Mission of San Juan Capistrano, etc.) are *offsets* of the Shoshones and Piutes of the Great Basin, or the western portion of the Nevada Territory. This view seems to have been also taken by Gallatin and Turner, and was derived from a comparison of vocabularies. We can see no reason to doubt the propriety of this assumption, as both Piutes and Shoshones have made raids into into South California before 1850.

There are great similarities in the tribal and geographical names of the eastern flanks of the Sierra Nevadas so far as known to the whites, whose knowledge of those districts has been immensely extended since 1860; and those positions of Southern California in the vicinities of Los Angeles, the Tejon, San Fernando, San Juan Capistrano, and also of the valley of Saticoy, near San Buenaventura Mission, on the coast not far south of Santa Barbara town: as, for instance, Washo, Mono, Coso, Taquimo, Tosoco, Ostago, etc; coming from north to the Tejon, over in the Saticoy valley, we have the Pirons, the Mopas, Sespes, Mugoos or Mugu, etc; and on the coast of Santa Barbara county to Pt Concepcion, we have Xuco, Anjay, Lillimoo, Zaco, Caco, etc; all sites of red Indian rancherias mentioned in former papers of Indianology. There are now, since 1860, easy trails and roads, known to the whites, all the way from the Oregon line along the eastern flanks of the Neradas to the Tejon Pass, and thence to the Ocean, miners pass over them every day; doubtless Indians have, for centuries, by canoes coastwise, and land, robbing war parties, raids doubtless accelerated by the possession of horses stolen from New Mexico and Texas, since the year 1650.

It is to be regretted that European and American earons could not employ a competent ethnologist to investigate, *on the spot*, the lingual and tribal affinities of the races of Utah, Nevada, and New Mexico. Such a traveling savan should be hardened with *no other charge*, and should spend at least three years of his time.

The names of the eight Moqui pueblos, and also some other Pueblo Indian towns of New Mexico, are very similar in lingual terminations and sound to those of the Pima, Papago, and Opato tribes of Sonora, and we have little doubt future philological investigations will prove all these pueblo or village clans of the Pacific Slope from the Utah line to the Southern Sonora *to be one and the same race*; have greater Toltecan than Azteca or Apache affinities.

Piano Covers, Music Stools, Music Racks,

ETC.

PICOLLO PIANOFORTES.

WE WOULD CALL PARTICULAR ATTENTION TO these beautiful instruments from our own manufactory in Paris, and which we can confidently recommend as equal in quality to those of any other European manufacturer.

PICOLLO PIANOFORTES are now in universal use on the continent of Europe, having completely taken the place of the old style of Square Piano. They possess all the merits over claimed for the Square Piano, with many advantages that are peculiar to themselves.

Our assortment comprises six different styles varying in price from $775 to $400 each.

Iron-framed Picollo Pianofortes.

These instruments are a "specialité" of our manufacture, are constructed with a special view to withstand the peculiar climate of the interior of California, and are warranted to stand any change of temperature.

Price $400 to $450 each.

STODART PIANOFORTES.

We have had the exclusive agency for the sale of these celebrated Pianos for the past twelve years, and refer with confidence, as to their quality, to the many hundreds of instruments themselves now in use throughout the whole extent of the Pacific Coast. A general assortment of these instruments will at all times be found in our warerooms, comprising Grand Action, Square, Upright, and Overstrung Pianos, in plain or richly carved cases. We offer them at the same prices at which they are sold at the manufacturers' warerooms in New York, thus saving to the purchasers here the cost of freight, insurance, interest, and attendant charges. Prices range from $240 to $500 each.

FRENCH HARMONIUMS.

In connection with our manufactory of Pianofortes at Paris, we have established a manufactory of FRENCH HARMONIUMS, suitable for parlors, music-halls and churches. These instruments, like our Pianofortes, are all in rosewood cases, and are made with the improved "transposition attachment," which enables the performer, in voice accompaniments, to adapt the instrument to any particular "key," thus entirely obviating the necessity of any transposition of the music. Nine varieties $100 to $1,000 each.

We beg to call attention to the fact that the Harmoniums of our manufacture possess many valuable improvements not to be found in any other instruments of this description, among which is the peculiar disposition of the reeds. This improvement is based upon purely scientific principles, rendering the reeds doubly sensitive as much less liable to become deranged or get out of order.

For full description of Picollo Pianofortes and Harmoniums send for descriptive catalogues.

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day School Bell, is now ready It contains about 200 choice songs, rounds, duets, trios, quartets, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Ted," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "April Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 825,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100 cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "That Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100, bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2 are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100, cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me." "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100 Cloth bound, embossed gilt 35 cents, $30 per 100 Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by

HORACE WATERS,

No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each.

RUTH: A SACRED CANTATA

contains 120 pages. Words by Rev. Sidney Dyer, music by Prof. Cult. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 312 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 35 cents, $25 per 100, cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

ELECTRICITY

THE

GREAT REMEDIAL AGENT.

Electricity as a Remedial Agent has, until recently, been but little known. An Electric Battery has been a terror from childhood up because a little battery gave a "start," and the thunder storm killed by lightning. Now it is better understood, and is and will be the sovereign remedy for many diseases heretofore considered incurable. The following series of articles and statistics, with facts and proof of the virtue of Electricity are worthy of attention. When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulations of the poisons which constitute disease. A great cry went up from the interested in the continued supremacy of the old system of one poison to cure another, that Electricity, as a Curative Agent, had been tried and had proved to be of but little if any value—thinking, poor souls, the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients there were those who were diving into the science of Electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, and every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the *Improved Instruments* of Dr J. H. Josselyn, Resident Physician at the Electropathic Institute 645 Washington street, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic System. From early morn till late at night, his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services.

The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed is Rheumatism, none has given the honorable practitioner more trouble to relieve, and no one has pretended to cure (I we except known empirics) permanently. But this subtle disease gives way before the Electropathic System in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of a relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

We allude to that kind of disease paraded by quacks in the journals of the day, a trouble which was never cured by medicine, only a little strength imparted by the use of tonics. The poor victim is kept taking medicines and paying for them until his last dollar is gone and then, as soon as he undertakes to work to obtain more funds, the trouble comes back in all its loathsomeness. To this disease Electropathy is peculiarly applicable, its action being upon the spermatic nerve, strengthens the secret ory organs, and at the same time, creating an equilibrium in the system, thereby preventing an elapse.

We dwell upon this disease because it is the bane of the youth of California, and one about which there has been more deception used than all others put together It is not necessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present very few Instruments in the world that can be depended upon. A good instrument costs very heavy, and cannot be purchased unless ordered, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only Instrument to be depended upon in the State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous imposters in the bathing line. The pure Magnetic bath is one of the most effective aids in the removal of disease from the system, but if given at the wrong time is likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury Persons in quest of the Bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy In fact the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unnecessarily administered, and if not necessary, advise the requisite remedy.

To Females,

the Directors would say, Electropathy is particularly applicable to your delicate and fragile systems, and to the numerous troublesome and painful diseases to which you are liable. Should you be irregular, a few treatments will restore the functions to the proper state without pain or inconvenience. Should you be weak and enfeebled, either general or local, this system imparts strength and vitality, making the recipient feel buoyant and youthful, where before they were languid and unable to enjoy the pleasures of life. One great blessing connected with Electropathy is, it purifies the system so thoroughly that it beautifies the complexion, making the coarse and freckled skin as pure and fair as possible, giving the patient a fresh and healthful look.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil foreboding and your system strengthened so that nothing can disturb the current of your life Several cases of insanity, arising from a derangement of the nervous system, have been permanently cured by this system. The Directors, in issuing this pamphlet, do it in the hope that it may be the means of awakening the public, who have not studied into such things, to a sense of their duties, and if possible prevent those who have the care of a rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse the origin. Also, that those in need of remedial agents may know where they can find them without resorting to taking the thousand and one poisonous nostrums that are continually palmed off as sovereign panaceas for all the ills of humanity. Avoid them all, they are snares set to rob you, and to your bodily injury at the same time. The following is a list of the cases which have been successfully treated by the *Electropathic System*, at the Institute, during the first four years of its establishment. The record is good, and challenges admiration of the world:

Name of Disease.	No.
Rheumatism	1589
Neuralgia	1492
Dyspepsia	1467
General Debility	1410
Fever and Ague	1262
Dumb Ague	1210
Bronchial Affections	1106
Asthma	1049
Female irregularities	1021
Mercurial	938
Scrofula—long standing	923
Paralysis	820
Disease of the Eye	838
Catarrh in the head	705
Catarrh in the lungs	698
Liver complaint	600
Incipient Consumption	582
Panama Fever	503
Deafness—total and partial	480
Mental Derangement	471
All others—and among which is almost every nameable disease	2,186
Total	21,373

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit. Let them go, they will not be missed.

Persons seeking remedial assistance, may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature to the body from the center to the surface, by its energy, while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon mercurial diseases is peculiar The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity forces itself out of the body. This result has been arrived at by testing the water after an Electro Magnetic Bath. After such tests have been found in the water the patient is not troubled any more with those pains peculiar to the disease. In all other cases it forces to the surface and is washed off by the bath. The whole system in its application is a luxury, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure all the time. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES.

SAN FRANCISCO, April 18, 1860.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied with chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this eighteenth day of April, A. D., 1860. P. BARRY, Notary Public

The undersigned takes this method of acknowledging publicly the benefits he received from the treatment applied to him at the Electropathic Institute, while suffering under a terrible infliction:

This is to certify that I have been under Electropathic treatment at the Electropathic Institute, 645 Washington street. When I applied to Dr. Josselyn I was cramped up with rheumatism, and also had the coast ague. So bad was I that, without relief, I don't think I could have lived more than one week. The Doctor, with his instrument, relieved me the first treatment from all pain, and perfectly cured me of all disease in twenty treatments, without the use of medicine. I cordially recommend all afflicted to patronize this Institute, for it is truly a blessing to the afflicted, and the operation is very pleasant. I wish to thus publicly thank Dr. Josselyn for his care and sympathy

JOSEPH SEGER, of Bolinas Bay.

September 10, 1860.

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this 19th day of Sept., A. D. 1860. P. BARRY, Notary Public.

SACRAMENTO, Oct. 10, 1860.

DR. JOSSELYN—Dear and Honored Sir: You requested me to let you know how I feel after being at home three weeks. Well, sir, I have been here a little over two weeks and there is no return of that very unpleasant trouble. My sleep is sound, and there is no disturbance of the regular laws of nature. I feel as strong as I ever did before bad habits had weakened my system. Not only is the general debility entirely disappeared, but the local trouble has gone. I feel so strong that there is no fear of its return. Considering that you only took one month to cure a disorder of seven years standing, I think your system almost miraculous. Accept my sincere thanks, and publish this if you please. I have sworn to it, as you will see. C. BOWMAN.

State of California, County of Sacramento—ss.

Subscribed and sworn to before me this tenth day of Oct., A. D, 1860. CHAS. HART, Notary Public.

HORNITAS, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and Mercurial pains as you state them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you would cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can, by spreading your fame up in these parts.

Respectfully yours, GEO PERRINSON JR.

To J. H. Josselyn, M. D., Resident Physician, at the Electropathic Institute

NEVADA, Nov. 8, 1860.

DEAR DOCTOR: Pursuant to agreement, upon my arrival, I sit down to pen you a few lines in acknowledgement of the great service you have rendered me, in relieving me of that painful case of neuralgia and rheumatism. When I look back and see the gallons of medicines I have swallowed to no purpose, and then to think how soon you cured me, I am astonished. You were only twelve days performing a cure of the trouble, for which I had taken medicine over six months. Dear Doctor, if you could see the wonder exhibited by my friends, who can hardly believe that a cure was performed without medicine, but here I have been cured, and I have not taken a drop of medicine from you, nor from any one else, while being treated by your splendid Instrument I shall try to show my gratitude by sending every sick man I come across to you. Yours, till death,

FRANCIS GARLAND.

To J. H Josselyn, M. D., Resident Physician, Electropathic Institute.

State of California, County of Nevada—ss.

Subscribed and sworn to before me, this eighth day of Nov., A. D., 1860.

F. SPAULDING, Notary Public.

YREKA, Nov. 10th, 1860.

DR JOSSELYN—Dear Sir: Your letter, dated October 16th, is before me. You wish to know how my bronchial troubles are. Now, Doctor, that looks a great deal like a joke. I once had such an affection of several years' standing, but thanks to your natural mode of treating disease, it has gone to be numbered with the things of the past. Since my return I have not felt the slightest trouble from it. When you pronounced me well I did not expect to ever hear from it again. Any one who sits under treatment of that *Improved Instrument* of yours will have the same feelings. It imparts vitality to the system so rapidly that confidence is at once established. I have to thank you that you did not refuse to treat me because I could not pay you the whole of your reasonable charge, inclosed is the balance due you, and God bless you for the kind treatment I received at your hands.

Yours, ever grateful, WM. GARDNER.

State of California, County of Siskiyou—ss.

Subscribed and sworn to before me, this tenth day of Nov., A. D, 1860.

B. F WELLITS, Notary Public.

This is to certify that I, the undersigned, was troubled with dumb ague accompanied with rheumatism, very badly. My disease was taken in Washoe. After having exhausted medicines without benefit, I applied to Dr. Josselyn, at the Electropathic Institute, on the first day of November. After taking twenty treatments with his Improved Electropathic Instrument I am perfectly cured, having been entirely relieved of all pain or inconvenience. I feel as strong as I ever did when in the best of health. I cheerfully recommend all afflicted to his care, as being the best physician I ever became acquainted with One great advantage, he uses no medicines, but cures by a process which is perfectly natural. The time occupied in my case was thirteen days.

D. O. HARRA.

November 14th, 1860.

State of California, City and County of San Francisco—ss.

Personally appeared before me, D.O Harra, and subscribed and sworn to the above certificate, on this fourteenth day of November, A. D., 1860.

P. BARRY, Notary Public.

SAN FRANCISCO, Aug 3d, 1861.

To the Directors and Resident Physician of the Electropathic Institute.

SIRS: You requested of me a certificate of the cure you performed in my case. Below I append it.

This is to certify that I was troubled with a swelling which commenced in my ankles, and gradually extended upward until it effected my whole body. I sought the best medical aid in New York and Boston, and they all pronounced it dropsy. Hoping to retrieve my health, I visited California in February last. I consulted the Resident Physician at the Electropathic Institute; and now, after five months of treatment, and waiting to see its effects, I am pronounced well by competent judges. It did not take but three months of treatment to cure me, but I waited to see that it did not return. I feel perfectly assured from what I saw while under treatment that Electricity as applied at the Institute will cure any disease to which the human family is liable.

Now, gentlemen, you can make what use you please of this certificate. With my thanks to the Resident Physician for his kind attention, I subscribe myself,

Your thankful patient,

MRS. C. A. CARLTON

Opinions of the Press.

The advantages of electricity as a remedial agent, are universally admitted by the medical and scientific world. It requires, however, experienced skill to apply this remedy efficiently, and this skill of application is possessed in an eminent degree by Dr J H. Josselyn, of the San Francisco Electropathic Institute. Particulars of his method of practice can be obtained by reference to his advertisement in another column. The Doctor is well known to us as a scientific gentleman, and an ardent devotee to his profession. He is no pretender, but has conferred incalculable benefit on those who were so fortunate as to seek relief at his hands. For those who desire speedy and permanent relief from the rheumatic pains, so prevalent in this region we can recommend no surer remedy, than a visit to Dr Josselyn at his rooms in San Francisco, No. 645 Washington street.—[Placerville Republican.

ARE YOU SICK?—We wish to say a word to those that are sick. We have in this city an institution known as the Electropathic Institute, situated at 645 Washington street. The establishment is under the charge of Dr J. H Josselyn, a physician who has no superior in the city He has been in charge of the Electropathic Institute for several years, and has been eminently successful in the treatment of the numerous patients that have placed themselves under his charge. The Electric treatment will cure many diseases that cannot be reached by any other mode. Dr. Josselyn gives his personal attention to all of his patients, and is always ready to give advice to those that may call upon him. His charges are very moderate, and we cannot do the sick a greater favor than to recommend them to call on him before placing themselves in charge of another.—[San Francisco Daily Journal.

We call the attention of our readers to the advertisement of Dr Josselyn's Electropathic Institute. Voluntary and unsolicited we make the following statement, proving its beneficent effects, particularly in rheumatic cases. Some months since we were on an editorial trip, visiting the mountains. The stage-coach upset, and landed all the passengers, including the writer, below in the valley, where the Deer Creek overflowed by receiving the additional material, obnoxious to his usual contents. For some hours exposed in our wet clothes, to night wind and weather, we soon felt the effects of the accident in the mountains—pains in the back, hip, and legs, so much so, that for weeks we hardly could walk. Treatments of all kinds were applied but without avail, until our attention was called to the Electro-galvanic Baths and appliances of the above Institute. Thank God, after two weeks we have been fully restored, and enjoy now the free use of our limbs and body, as fully as previous to the involuntary bath in Deer Creek.—[Dr. H. BIRX, Ed.—True Pacific Messenger.

ELECTROPATHY.—Electricity has long been classed among the most effective medical agents. It possesses great advantages over the systems of therapeutics heretofore relied upon, as it reaches more certainly the seat of disease, especially in nervous or rheumatic complaints. The Electropathic Institute, No. 645 Washington street, under the charge of its able Resident Physician, Dr J H. Josselyn, has attained a well-merited celebrity for the many cases which have resulted favorably from the skillful application of this invaluable remedy.—[Daily Morning Star.

A GOOD INSTITUTION FOR THE SICK.—One of the very best places to the city for the care of the sick is at the Electropathic Institute, 645 Washington street. The establishment is under the charge of Dr J. H Josselyn, a physician of great experience, and no one can do the sick no greater favor than to recommend them to give the Electropathic Institute a trial.—[Weekly Journal.

330 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the FARMER OFFICE. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 330 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Send along your Greenbacks,

Don't be afraid to send along your Greenbacks. These we TAKE AT PAR in payment for all back dues to the FARMER for subscription. So send them along, now is the time. This is a better speculation than mining stocks, for it is so pleasant to read a newspaper when one knows he has paid for it, the digestion is better and a man feels happy, and, if happy, then he feels rich. So pay prompt and you will "strike a lucky lead."

New Comers.—Homesteads.

Those New Comers to our State can always be sure to find valuable Homesteads, already highly improved, and for sale on favorable terms, by applying at our Office. New Comers who want important positions, as Superintendents of Farms Millers, etc, can always be informed of favorable chances.

Transactions of Agricultural Societies.

We would ask of those Societies in the Atlantic States and Europe, to whom we send our Journal, to send us the transactions of their several Societies, so that we may give the benefit of their perusal to visitors, from the several States, who are callers at our Reading-rooms. By this means we can lay before them the progress of Agriculture in their former homes, and thus advance the interest of both Atlantic and Pacific States.

Clerk and Assistant Wanted.

We want an active intelligent business clerk in our office. We want a person who has a knowledge, to some extent, of agriculture, horticulture, the science of botany, and the seed business. A man of correct habits, and willing to give his time to business, closely; a young man free from incumbrances on his time so that he can apply himself to business wholly. A knowledge of the languages would be desirable, and of mineralogy, also. Application only to be made between the hours of 4 and 5 p. m., and by none who cannot give the best of references.

TO READERS AND CORRESPONDENTS.

We take pleasure in calling the attention of our readers to the interesting letter of our happy New York Correspondent, whose letters afford much interest to his many friends here.

The new series of California notes, by A. J. Taylor, will be found valuable now, upon Grasshoppers and locusts. They should be carefully reviewed.

Mothers, read Cradle-time, by Florence Percy; tis beautiful. Read Lisle Lester's spicy letter on Dress Reform. Read Homes for the Working Classes.

We accept the kind invitation to the Collegiate Institute exhibition, for this evening, and regret we could not attend last evening also. We shall report the result of what we see and hear.

Look to our Market Reports for important facts about crops.

Specimen Sheaves of Grains, Grasses and Vegetable Productions.

We shall be very ready and willing to return any favors that may be granted to us in furnishing us with sample sheaves of Grain of all kinds, Grasses of every kind, and any rare or curious specimens of vegetables, to be placed in our Rooms for Exhibition, in order to show the various productions of our soil and climate. For any and all such we will cheerfully give an equivalent, and more too, besides feeling very grateful for the interest manifested in the progress of our State and its productions. As this is the season when our grains are being harvested, we hope our friends will remember us. All such specimens are marked with the name of the grower or contributor, and the place where grown, which makes each specimen of value and interest to all who see them.

Mineral Specimens.

We shall be very glad if those who are interested in the development of our rich mineral wealth, will forward to us, for our Exhibition Rooms specimens of the different ores of the various localities with such statistics as may, by publication, aid in advancing this great interest and, power of our State, for all such interest we shall be glad to make a suitable return, rendering a full equivalent for such favors.

Wool Raising.—We hope our wool-growers will not be in haste to dispose of their wool. Market East, and in Europe, is such as to promise a better thing for them by and by. If they will call at our office with their samples, we can give them some valuable information.

Our City Libraries.

We recently alluded to the many and valuable libraries with which our city is blessed, and the great good they have done, and are capable of doing when their full influence is brought to bear upon the mind and genius of our people.

The library of the Odd Fellows' Association of our city is an institution but little known outside of the brotherhood, yet it is one of great importance and value, and as a library has but few equals either in extent or in the excellence of the works found so admirably arranged in their handsome rooms.

The Odd Fellows' Hall and Library are in what was Tucker's Music Hall, corner Montgomery and Sommer street. The Odd Fellows, it will be remembered, recently purchased this building for about $100,000, and fitted it up for their uses, which has been done in the most splendid order, with rooms most elegantly furnished for all the requirements of the Order.

The Library, of which it is our present purpose to speak, consists of more than 7,000 volumes, and probably as select and rare a collection as can be found on this coast, and containing many ancient and highly valued works not to be found elsewhere. Neither our time or space would permit us to enumerate all we saw, yet we know we shall surprise our readers, when we say to them that one entire set of shelves is devoted to books relating to *Our own California and this coast*, and numbering more than 400 volumes. The first book that attracted our attention was the History of California, translated from the original Spanish of Miguel Vinegas, a Mexican Jesuit, published at Madrid 1758, and published in London 1759, more than *one hundred years ago*, and we consider it a singular incident with us, when, upon opening this old book, the first words that caught our sight were upon *The Soil of California*. So singular were the matters recorded that we here transcribe them, knowing that they would interest our readers. After the reader shall have finished these extracts we beg he will carefully re-read the closing words and see how true the words now, then written, the consequence of a love of silver and gold.

But if the soil of California be in general barren, the scarcity of provisions is supplied by the adjacent sea; for both in the Pacific ocean and the gulf of California, the multitude and variety of fishes are incredible. Father Antonio de la Ascencion, speaking of the bay of San Lucas, says: "With the nets which every ship carried, they caught a great quantity of fish of different kinds, and all wholesome and palatable: particularly holybuss, salmon, turbots, skates, pilchards, large oysters, thornbacks, mackerel, barbels, bonetos, soals, lobsters, and pearl oysters." And speaking of the bay of San Francisco on the western coast, he adds: "Here are such multitudes of fish, that with a net which the commodore had on board, more was caught every day than the ship's company could make use of: and of these a great variety, as crabs, oysters, breams, mackerel, cud, barbels, thornbacks, etc." And in other parts he makes mention of the infinite number of sardines, which are left on the land at the ebb, and so exquisite, that those of Leadro in Spain, then famous for this fish, do not equal them. Nor are fish less plentiful along the gulf, where to the above-mentioned species father Piccolo adds, tunnies, anchovies, and others. Even in the little rivulets of this peninsula are found barbels and and crayfish: but the most distinguished fish on both seas are the whales; which induced the ancient cosmographers to call California, Punta de Baleuas, or Cape Whale: and these fish being found in multitudes along both coasts, give name to a channel in the gulf, and a bay in the South sea.

From the fish I shall next proceed to the amphibious and testaceous kind. Of the former here are very few except the beavers above mentioned, if they are such, and the sea-wolves, or, as some call them, sea lions: these frequent some of the shores, and the desert islands of both seas.

The most remarkable among the testaceous kind is the tortoise; several kinds of wilks and other turbines are thrown up by the sea, in such numbers, that, in some parts, the shore is quite covered with them. On the coast of the South Sea are some small shell-fish, or cooches, peculiar to it, and, perhaps, the most beautiful in the world; the luster exceeding that of the finest Mother of Pearl, and appearing through a transparent varnish of a most vivid blue, like the lapis lazuli. It is thought that were these imported to Europe, the aqua marina would be no longer valued; these are univalves, and consequently different from the shell-fish in which the pearls are found, the latter being bivalves like our oysters. They are called Madres Perlas, and found in California, or rather, as Father Piccolo says, along the whole coast, and especially the adjacent islands, where there are so many banks of them that they may be counted by thousands. And this abundance of pearls has rendered California so famous, that great numbers of persons during the two last centuries, stimulated by avidity after this treasure, have visited California, searched every part of the gulf, and are still continually resorting hither with no other view, than that of enriching themselves by those pearls. The oysters in which they are found lie in great numbers on the banks in the gulf, and commonly called Hostias.

"The sea of California, says Father Jorquimada, affords very rich pearl fisheries, where, in three or four fathoms water, the hostias, or beds of oysters may be seen as plain as if they were on the surface of the water. He adds, that it was a practice among the Indians to throw the oysters into the fire, by which means the pearls were destroyed; for they used only the flesh of the fish; but the avidity of others has communicated its flame even to this simple people, who are now eager to get, and careful to keep, what they have seen so highly valued by foreigners. This fishery is carried on by divers; but as the water in the gulf is not very deep, it is attended with less labor and danger than those on the coast of Malabar, and other parts of the East Indies, if we may judge of the narratives given us of them. Great numbers resort to this fishery from the continent of New Spain, New Galicia, Culiacan, Cinaloa, and Sonora; and the many violences committed by the adventurers, to satiate if possible their covetous temper, have occasioned reciprocal complaints; nor will they ever cease while the desire of riches, that bane of society, predominates in the human breast.

Father Piccolo observes, that in the months of April, May, and June, there falls with the dew a kind of manna, which becomes inspissated on the leaves of the trees. He adds, that he tasted it, and though not so white as sugar, it had all the sweetness of it. The good father talks according to the common opinion, as if the manna dropped from the sky. But Botanists are agreed that it is a juice exuding from the plants themselves, in the same manner as gums, incense, balsams, resins, etc. It is no wonder that the trees of California should exudate manna, since many parts of Spain produce it in an astonishing plenty; and for medical uses, equal to that of Calabria, or Sicily. This was an advantage formerly little known in Spain, but his Majesty, on the representation of the royal college of physicians at Madrid, in 1752, gave orders that two of its members should make a further examination of the produce of manna. These were Don Joseph Minuart, and Don Christopher Velez.

But to the Library, of which, from the collection we only briefly examined, we with great satisfaction noticed a copy of the first Testament ever published in English, bearing date 1582; The Sacrament 1409, and an old Bible in Text, in Oak covers, date 1450. We examined a series of old maps with Harron's 100 voyages—a rare and valuable work—this shows California to be an island. These old works upon the history of our coast should induce all to read, for the destiny of California is very great.

We notice also that the collection of Cyclopedias is excellent. The National Cyopledia complete, Enclyclopedia Brittanica, 22 volumes, Little & Brown's Boston edition, also Appleton's New American edition, the Penny Cyclopedia, and the Edinburgh Cyclopedia, Audubon's History of Birds in 13 volumes, a Roman Catholic illuminated Bible with songs and chants, Hunt's Merchant's Magazine in 48 volumes, one of the best works ever published. These are a few only of what we noticed. This library contains all the leading works in every department of science and literature, history, biography, prose, and poetry—a library of instrinsic value, most highly creditable to the noble association that thus lays the foundation of usefulness and stability.

We can attest to the perfect order and system, neatness and beauty, in all departments. For courtesy, and assistance, and attention, we were indebted to the Librarian, J. Phillips, Esq., who kindly waited upon us, and showed us through the rooms—a happy time for our city and State, that such institutions are established.

[TO BE CONTINUED.]

The Whale Fisheries and Cod Fisheries.

Why is it our people are so slow to believe? It seems that the mantle of the unbelieving fisherman, "Thomas," has fallen upon many who otherwise would seem to have good sense. California, the Pacific Coast entire, has been known for more than a century to be, as it were, the great fishery or fishing grounds, from the "Leviathan of the deep," to the epicurean sardine, and it seems as if Nature and Providence was continually reminding us of our slowness, as a people, to recognize and improve the blessings that are in store for us.

Ten years ago, *Wm. Bailey, Esq.*, of the Pioneer Oil Factory, fitted out the first whale ship that went from the port of San Francisco, and experiments were made and many were successful, till misfortune and loss of eyesight prevented this worthy pioneer from reaping the full benefit of his Pioneer Enterprise. For years we have presented in this journal the value, the certainty, that the Whale Fishery would become one of the great sources of our wealth. Now San Francisco sends out quite a fleet of whaling vessels, and is fast becoming, as we have always said must be, the port of outfit and repairs for all the whaling fleets, instead of the Sandwich Islands. Why will not men read the signs of the times? Must Providence continue to *cast whales ashore*, to awaken attention to these fisheries.

The Cod Fisheries, too, these are destined to become a great source of wealth; these, combined with other kinds of Fisheries, sardines particularly, of which this coast abound. We ask special attention, while speaking of our fisheries, to the extract we give from the Early History of California, which will be found under the head of *Libraries*; here will be seen not only how rich we are in *Fisheries*, but in many other sources of wealth, not yet touched, and when these are all developed, we shall not have to chronicle so many alarming "panics," because the dry weather affects the "grain crops," nor because the "mines" cease working because "wildcat" monopolize all the avenues to a lawful pursuit of a legitimate business. No country under Heaven possesses such a diversified field of pursuit as California, and if men will not open their eyes to the blessings vouchsafed to them, others will come in and take these blessings from them. Labor, labor, labor will have its reward; but idleness, and waiting for something to turn up, never! Wildcats or any similar pursuit bring sorrow and loss.

The Voices of Music.

"Can we live it out?"

In our No. 12, of April 22d, we gave acknowledgment of some beautiful music from Kohler. Among the pieces was one, the title of which was *What a Beautiful World this might be*. We published the first stanza, and a correspondent becoming deeply interested in the sentiment, furnishes us with a series of inquiries relative to it, and asks in an earnest spirit, if in our present world, with the trials incident to life, with sickness, sorrow, and death, with friendships betrayed, hearts wrecked and made desolate, it is possible to *live out the spirit of the beautiful song*, and always feel that the world is beautiful?

We repeat the first stanza, and will be happy if any of our kind correspondents will take up the theme, and give answer to our inquiries, suggesting how the wrongs inflicted upon humanity can be averted, so the heart can always be kept joyful and happy, amid the contending ills that flesh is heir to. The words of the song are:

"Oh, what a world this might be,
If hearts were always kind,
If friendship, none would slight thee,
And fortune prove less blind."

We think when our own spirit becomes imbued with this principle of genuine love of humanity, that many of the ills of life disappear from the cheerful soul, as the morning mists disappear before the warm rays of a summer sun. The beautiful poet, Moore, says:

"They may rail at this life. From the hour I began it,
I've found it a life full of kindness and bliss;
And until they can show me a happier planet,
More social and bright, I'll content me with this."

The Great Basin and the Colorado.

The discoveries of California between 1860 and 1864 have brought to light many strange facts connected with the physical geography of the Pacific Domain, or at least proved more fully what have heretofore been only hypothesis and theory.

Among these is the existence of the valleys and plains of the Sierra Nevada, forming an immensely elongated basin or simulated table land, of many miles breadth, between the western and eastern peaks of that great range, and of its wealth in valuable minerals and good lands.

Another is that the Great Basin consists of an infinite number of inferior basins within itself, but inclosed inside the approximate lines and frontiers, laid down in Fremont's map of December 1853, into one general basin, seperated by a line of mountains from the northern confluents of the Colorado, which mountains rise from a base of only from one thousand to two thousand feet above the sea. This elevated basin is separated from a series of smaller basins which lay at its base to the southerly, to the Gulf of California, and all lying in the western aspects of the Colorado valley. On the southeast, however, five hundred miles from the Colorado, and only separated from the confluents of the river and the Gila by a few leagues, commences another or second series of interior basins, at the Rio Minbers, latitude 33°, and which run down into Chihuahua, and to the southeast as far as the City of Mexico, for a length of some 1400 miles.

The Mexican series of Basins is seperated on the north, so far as is explored to 1864, by a distance of some three hundred miles from the Utah series of basins, and crossed by rugged ranges of the West Del Norte mountains of 6,000 and 7,000 feet which completely inclose, to the south that of the Rio Minbres of the Copper mines, and to the north those of Salt Lake. The great Colorado and its confluents from the Rocky Mountains, divides the two series of basins between north and south by the Sierras of the San Francisco range and the immense table land of the Colorado Chiquito and Rio Virgin. But to the west the Colorado makes the boundary of a *third* series of basins, whose waters do not flow to the ocean, but sink within themselves precisely as found in the Great Basin of Utah, and the basins of the Minbres of East Arizona, and its neighbors the Casas Grandes, Mapimi of Paras, and so to that of Mexico City, all of which are on the tops of the range of the Great Sierra Madre range of Mexico.

The exploring miners inform us that the Colorado system of basins, commencing at Carisso Creek ascends very gradually up to the Coso Country, and there their waggons can easily pass by *level* passes almost imperceptibly into Fremont's basin, the rise being from 500 feet, like old fashioned stairs and steps, until Salt Lake itself is reached. And little doubt can now remain that all these basins of Utah and California, and turning a grand divide at the Tejon, which made the valley of the Tulares. We may be able to return to this subject in a few days, in some better prepared original notes which will show these facts of the basins and the aspects of the Colorado country in a clearer light to our readers.

The Great Rebellion.

"The American Conflict, or a History of the Great Rebellion in the United States of America, in 1860 and 1864," is the title of the historical work now in press, and soon to be issued to subscribers.

It is almost superfluous to say, that this work will be *the work of the age*, comprising as it will, the history of a civil war, which, for boldness on the part of the authors of it, and for wickedness of purpose, for magnitude, duration, and expenditure of human life, and cost of a nation's treasure, has no parallel in the world's history. That it will be a most valuable history, and a reliable one, there can be no doubt, when the source from whence it emanates is considered; for no man on our continent could so well and so faithfully compile such a work as Horace Greely, the great American Journalist.

Whatever bias some men might have in relation to this author as a politician, as a Historian for this work, it must be a truthful one, for it will be the monument of Horace Greely as a public author.

This important and valuable work will be printed on the best of paper, in two large double column octave, volumes of 600 pages each, and freely illustrated with maps, diagrams, and battle fields, sieges, naval actions, etc., with fine steel-plate engravings, of all the eminent personages connected with the rebellion, portraits of all men who are the renowned opponents of slavery, all the Union and Confederate Generals, naval officers, etc.

From the specimen pages which have been sent us in advance of the work, the superior style of it, and the excellent and finished style of the engravings, it can be truly said to be the most splendid work of the kind ever issued.

The value of the work will be from $3 50 to $6 00 a volume, according to style of binding. The work is sold exclusively by subscription. O. D. Case & Co., Hartford, Conn., and George Sherwood & Co., Chicago, Ill., publishers.

Crops in Napa.—Of the fruit and grain in Napa Valley, the Echo says: "Some crops of wheat look first rate, are headed out handsomely, and cannot fail to make good returns; while others, close by, are stunted, shrivelled, and of little or no value. Barley, as a rule, will yield beautifully, but the number of acres under cultivation is comparatively small. * * * The fruit prospect, especially for apples and peaches, never was better. So far as hay is concerned, there certainly will be an abundance, many acres sown in grain having been turned into the former commodity."

Perfumery.—There are some kinds of Perfumery that are an abomination in every sense, but good perfumes, good Cologne, Bay Water, etc., and some of Lubin's Extracts are really fine. We can invite those who deal in such things, to call and see our friend W. F. Krause, on California street below Sansome, and see a fine collection.

Important Items.

The Farmer's Club, of the American Institute, New York, is one of the best practical associations in our country, having for its object the discussion of the every-day occupation of the agriculturist.

At the meeting, April 19th, among the subjects of discussion, we notice "Sugar from the Butternut tree." The President, while discussing the matter of maple sugar and its production, remarked that as much sugar could be made from the Butternut tree as from the Sugar Maple, and the President gave it as his opinion, that in favor of the former was preferable.

Why do not our farmers plant forests of Sugar Maple and Butternut trees also? Why do not our land owners take a hint? A hundred acres of Sugar Maple planted here ten years ago, would have been worth a princely fortune now.

That Bag of Flour.

The Gridley Bag of Flour is undoubtedly destined to become the most celebrated Bag of Flour in the world. Already the sum of *sixty-three thousand dollars* has been paid, in gold, for it. Who would like a history of *that Bag of Flour?* We are pleased to know that George A. Johnson, the celebrated Daguerrean Artist, has completed a very admirable series of views of this renowned Bag of Flour, and has with a most noble and commendable spirit of philanthropy, conceived the plan of perpetuating the history of this affair, in these pictures. So that every person wherever the Sack of Flour has been can have a set of these pictures, and thus preserve its history, as connected with themselves and the Sanitary Cause; and to Mr. Johnson's praise and honor be it said, he has voluntarily resolved to *donate* the entire profits of the work to the *Sanitary Cause*, so that all who go to his rooms, or elsewhere, and buy a set of the pictures of the Sack of Flour, will at the same time aid the Sanitary Cause. Photographers, Booksellers, and all dealers in Pictures, on this coast, should secure these Pictures of Johnson, and thus aid the cause of Humanity. We learn that the first lot struck off were immediately taken to *Austin* where $5 a-piece will be paid for the same sake. Those who want them can call at Johnson's Rooms, Clay street, and see them; they are most interesting pictures, and we hope our generous and worthy artist may be so fortunate, in the laboring for this Cause, as to put $50,000 in the treasury of this noble enterprise. We intend, as soon as possible, to procure all the names, and publish the same, with the history of this famous Sack of Flour.

Libraries for the People.

How few of the people in this State know of the resources of this city for the improvment of the minds.

We have three or more splendid libraries, besides numerous reading-rooms, where merchants, mechanics, business men, laborers, and all classes can spend their leisure hours, or draw books therefrom for the improvement of their minds and hearts. It will be our purpose to gather the list and publish the same, so the just meed of praise that belongs to our State and city shall be awarded to us by people abroad. Our Mercantile Library, the Mechanics' Institute, and Odd Fellows' Hall, are each and all noble institutes, an honor to those who built them up and now manage and sustain them. Of each and all it will be our purpose to speak at length soon; having had a glance at them recently, we are in duty bound to speak of them as they deserve. (See Odd Fellows' Library in another column.)

Parker's New Billiard Rooms.—This new recherche establishment was thrown open to the public on Wednesday evening, May 26th, and we were pleased to see so many ladies visit this place on such an occasion. We only wish there had been more persons present and that they might have witnessed the trials of skill by some of the scientific players. We hope Mr. Parker will take a hint and appoint some special evening when ladies could come and witness the playing. "Away with the cigars and bar-room from the gay scene," and bring the ladies; try it, Mr. Parker, and let those who prefer the cigar and cup, show their colors. Mr. Parker deserves well, he has displayed great taste in this new room. We wish the game of billiards—a twin sister of chess, for the mind—could be introduced into every family. Private Billiard Rooms, in our fine dwellings, would be quite an acquisition. If Mr. Parker will only set apart some evening, every two weeks, for a special time for the ladies, under the same restrictions—no smoking and bar-room—then his now, most elegant beautiful billiard room would be graced by a splendid array of Beauty and Fashion. Parker's Billiard Rooms are by far the most splendid on the Pacific coast.

The New Cider and Wine Mill.—We call attention, again, to the excellent Cider and Wine Mill advertised in our journal, by the manufacturers, Messrs. Brown & Co., of Peekskill, New York, and we are glad to learn that a good supply will soon always be found at the Warehouse of The Rossiter, Erwin manufacturing Company, on Battery street, who are the *Sole Agents* for the coast. We have seen these mills operate, and know them to be not only good, but convenient and cheap. One can be seen at work, now, at Leberon & Thresher's, on Market street, No. 708. We advise those in want to call at the Warehouse, on Battery street, and see the fine Sample Rooms of this new firm.

Hypophosphites of Lime and Soda, the great curative for that terrible malady, consumption. This remedy is certain, go to the office of Dr. Winchester, Bush street. See the Doctor and read the admirable proof of cures and try the remedy, one of the best and most certain known.

Life Insurance.—Be sure that you have a Policy of Insurance on your Life. $10,000 Insurance on your life is just as good as $10,000 in Bank, for those who may be left behind you; those you love and wish to provide for.

ARTICLES RECEIVED AT THE CALIFORNIA FARMER EXHIBITION ROOMS, No. 320 Clay Street.

THE CALIFORNIA TEACHER.—We have received the June number of this excellent publication. Steadily onward and upward is the word with the Teacher. Its corp of editors can make it a most able advocate of the cause, and by what has already been done, it is evident they mean it shall succeed.

THE DAILY DISPATCH.—This is the name of a little, but sprightly new daily paper, which has been sent us. Nail the flag high neighbors Wheelock & Co., and you will win. Although we are flooded in our State with newspapers, there is plenty of room for good ones still. Work on bravely; the brave must win.

SPLENDID SAMPLES WOOL.—Messrs. Batchelder & Cotter, of Elk Grove, have presented us with samples of splendid wool, from their fine Spanish Merinos. These samples show that California can equal any part of the world, and are such as to do honor to the owners of a flock that will produce such wool. It would readily sell from 65 to 70 cents in New York.

HARDWARE REPORTER.—We have received from The Russell & Irwin Manufacturing Company, the large and handsome paper, The Hardware Reporter, and Iron and Steel Manufacturer's Circular. It contains much valuable information, which we shall note by and by.

HOW TO ADDRESS LETTERS.—We would earnestly request our patrons and friends, and all who correspond with this office, to be careful how they address their letters. Those for the editorial department, should be addressed to Col. Warren, Editor, and those on business to Warren & Co. And be sure to have each and all addressed to the California Farmer Office, No. 320 Clay street, San Francisco, as we do not receive our letters regularly, many being mislaid, or going to persons of similar names in our city.

PEOPLE'S LINE FOR JUNE 23.—If you wish prosperity to our State and her people, throw all your influence in favor of the People's Line of Steamers. It has saved tens of thousands of dollars to the toiling imigrant. The People's Line is the People's friend.

Kohler's Musical Warehouse is one of the places where can always be found a complete assortment of the best musical instruments ever imported into our State, together with every article connected with each branch of every musical department, both for Church, college, school, military, or festival. These assortments are always complete. Catalogues sent when desired. Their wholesale warehouse is No. 424 Sansome street, retail warehouse 420 and 422 Washington street.

Jacob Zech's Pianos.—We are truly glad to know of the success of the home manufactory of Jacob Zech. No man has labored harder than Mr. Zech to establish a Piano Manufactory, and he has succeeded completely. By the arrival of his material for finishing work and trimming, he has fine articles, sufficient for the making of fifty pianos, all of which he can sell as fast as made. Mr. Zech's pianos have acquired a very high repute, and worthily so.

Priced List of Pianos.—We have received the priced list of the pianos now for sale at the New York Warerooms of Siberia Ott, Esq., 748 Broadway, New York, together with a list of Melodeons. Prices of Instruments from $80 to $500, of which we shall speak more particularly hereafter.

Our Farmers in the Old States.—We return thanks to those kind friends that manifest their good will by sending their advertisements to us, and also their names as subscribers. We are glad to see the interest they manifest for our glorious State. It will pay them to read about California.

AN IMPROVED REAPER.—We call the attention of the farmers to the improved New-York Reaper imported by J. D Arthur & Son for the present year. The greatest improvement is the Steel Cutter-Bar, by which, it is claimed it preserves a capacity for mowing equal to its well-known superiority as a Reaper. We witnessed the performance of this machine five years ago, at the Alameda County Fair, where it received the prize. Its performance as a Mower has always been good, but this improvement in the cutter-bar makes it probably the best combined machine in the field. J D Arthur & Son have imported the New-York Reaper for the past seven years, steadily increasing their sales—no slight evidence of the value of the machine. Read the advertisement and go and look at the machine at the warerooms corner Washington and Davis streets.

KEANY, BYRNE & Co.—This well-known, popular, and fashionable dry-goods establishment have added largely to their already splendid stock of goods. We ask special attention to their card extra this

New York Combined Machine

STEEL CUTTER BAR,

Improved for 1864.

IMPROVED SPRING-SEAT,

IMPROVED CUTTER-BAR,

PROVED LIDING- UB,
That will not wear.

THE BEST

Reaper and Mower

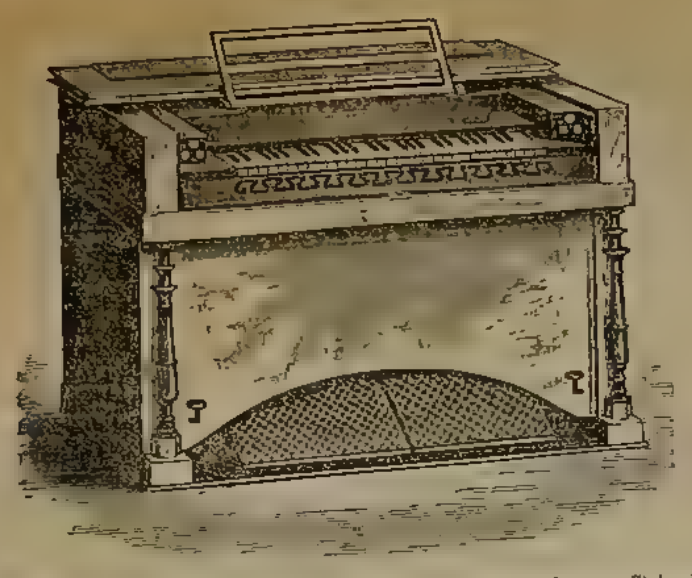
IN CALIFORNIA.

To the well known superiority of this Machine as a Reaper, we now guarantee an equal superiority as a Mower. The new Steel Cutter-Bar places it far in advance of all other combined Machines.

Also the California Giant Improved, and extras of all kinds, just received by

J. D. Arthur & Son,

IMPORTERS AND DEALERS IN



AGRICULTURAL IMPLEMENTS.

Corner of Davis and Washington streets,
San Francisco.

For Church, College, or Parlor.

Grand Cabinet Organs

These unrivalled Instruments are now the favorite with thousands of people in every State where they are known. This beautiful style of Instruments, from the delicate small Organ, suitable for a Lady's Boudoir or Chamber, to the large Pedal Bass Cabinet Organ, with their Power and Compass of Tone, stand unrivalled among the sources from whence Music is drawn.

These Instruments are now being introduced into California, and the undersigned have the sole agency of the same. From their first introduction into notice, they have been awarded the FIRST PREMIUM twenty-eight times, and on every occasion where entered: receiving ELEVEN SILVER MEDALS and SIXTEEN DIPLOMAS. The prices of these Instruments vary from $85 to $500—for particulars see pamphlets at Office.

KOHLER'S Musical Warerooms,

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 29, 1863.

JACOB ZECH, ESQ:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPEGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. Zech.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

Winchester's HYPOPHOSPHITES

Act Promptly and Certainly in all Stages

....OF....

CONSUMPTION.

THEY IMMEDIATELY INCREASE the Strength, and deepen the color of the Pale Blood. They check the Night Sweats, always, in from seven to fourteen days; the appetite is at once invigorated, and the patient rapidly gains flesh; the cough and difficult breathing are speedily relieved; the sleep becomes calm and refreshing; the evacuations regular and uniform.

"In no instance," says Dr. Churchill, "have I found the Remedy fail to produce every thing that could be reasonably expected from it."

"I have no doubt whatever," says Dr. Townsend, of Chatham, Pa., "of the superior efficacy of the Hypophosites over all other medicines or methods hitherto discovered."

The Hypophosphites

Have a TWO-FOLD and SPECIFIC ACTION: On the one hand as a prompt and powerful

NERVOUS TONIC,

increasing the vital energy; and on the other as a generator of

New and Healthy Blood,

Invigorating the whole system. They should, therefore, be used in all cases of

Nervous and General Debility,

Wasting of Flesh, Loss of Strength or Appetite, Paleness or Deficiency of Blood, Languor or Listlessness, Cough, Night Sweats, Chronic Diarhea, Scrofulous Sores:

Also, in Chronic Bronchitis, Asthma, the Debility or Weakness of Young Children, and as an INVIGORATOR to women of feeble vitality during gestation and the period of nursing.

WINCHESTER'S

Genuine Preparation of the Hypophosphites

Is the only reliable form of Dr. Churchill's Remedy, and is approved by the Medical Profession generally. USE NO OTHER, or any Remedy containing Iron.

CONCENTRATED SOLUTION in 7 oz Bottles, prepared expressly for California, $2 per Bottle—Three Bottles for $5 in coin. Circulars, free. Sold by all respectable Druggists, and by

J. WINCHESTER,

BEAUTIFUL LINES.

BY LYMAN W. HALL.

When friends forsake and men betray,
And hope's bright vision, seem to flee,
When joys seem fading fast away,
And nought but gloom and doubt we see;
How fitting then to cease from man,
To turn our ardent gaze on high,
The glories of that world to scan,
Where garnered hopes shall never die.

"First our flowers die,—and then,
Our hopes and fears,—and when,
These are dead, the debt is due,
Dust claims dust and we die too."

CRADLE-TIME.

BY FLORENCE PERCY.

The glory of the sunset fades away
From the tall church spires of the darkening town,
And on the waters of the western bay
The orange tints are sobering to brown.

This is the hour when the fond mother folds
Her infant closely to her pillowy breast,
And kissing off the little hand she holds,
Sings dreamily, and lulls her baby to rest.

For me, I hold all Fate has left to me—
A little golden ripple of fair hair;
I lay it on my bosom tenderly,
And try to think my babe nestles there.

Oh, golden hair! Where is the shining head,
The baby brow, which once you used to crown?
The tender eyes, with all their love unsaid,
Into whose depths my yearning soul looked down?

Oh, happy mother! through your window there,
I see you clasp and kiss your little child—
I see the clinging arms the flossy hair—
And how, oh! how shall I be reconciled?

The small soft hands which tangled down my hair
Are folded from their play for evermore—
The rosy feet which pattered here and there
Have danced their last across this silent floor.

The dainty robes are folded smooth and clean,
The half-worn shoes stand empty, side by side—
The basket that she heaped her playthings in
Lies half-filled, as she left it when she died.

The pot of flowers that she carried to and fro,
Or placed among her toys upon the floor,
Thrives undisturbed; though fair the blossoms blow,
No sweet voice coaxes for them any more.

These are her finger-marks upon the pane—
I guard them with a jealous carefulness;
And this dear pictured face still keeps its stain,
The misty halo of her frequent kiss.

And in these rooms where once her sweet voice rang,
Now soaring loud, now softly murmuring,
There floats the echo of a song half sung—
The last my darling ever tried to sing.

But you, aflush with happy motherhood,
Your child alive and warm upon your arm,
You look across into my solitude,
And tell me I must be resigned and calm;

That God is good and kind despite my grief:
That He has saved my babe from pain and woe,
And she is blest. Help Thou mine unbelief,
Oh, Healer! But I would that I could know

On what fair angel bosom rests to-night
The tender cheek I touched so reverently—
What white-robed spirit robs me of my right,
And takes my baby's kiss away from me!

The Dress Reform.

Lizzie Lester of the Pacific Monthly, while in Virginia City appeared in a dress that did not drag the cobble stones after her, and hearing that it attracted much attention and remark she replies through the press on the reform of her dress:

"My Dress.—Gentlemen of the Piute: Allow me to explain my position; I walked down one of your streets yesterday, and I noticed everybody looking at my *feet*. Now, I am very well aware I have very large feet, and this being the country where nothing but feet are thought of, I excused it with good grace, until I ascertained it was the style of dress that was creating such an excitement. I wore a dress that did not sweep the streets, but was of a very moral length, about to the tops of my gaiters. I beg leave to explain why I have so far departed from the custom of my people, and dared to shorten my dress-skirts. For several months I have tried to do my duty as street commissioner, or sweeper—take which term you like best—I have worn very long trails, of very excellent material, and have swept the pavements and crossings to the best of my ability. I have done this as long as I was able to do so, without pay or reward; in fact until I grew tired of it. I have gathered up straw, radish tops, tobacco juice, egg-shells, and mud, in my dresses just as long as I wished to! I have gracefully dipped the rich trimmings around my dresses into mud, water, restaurant filth, and street salad, just as long as decency would tolerate; therefore, when in the street, I shall wear only short dresses, if all christendom looks at my feet, and all the world condemn the fashion. These are my sentiments. LIZZIE LESTER."

Good Advice.—If the body is tired, rest; if the brain is tired, sleep. If the bowels are loose, lie down in a warm bed and remain there, and eat nothing until you are well. If an action of the bowels does not occur at the usual hour, eat not an atom till they do act, at least for thirty-six hours; meanwhile drink largely of cold water or hot tea, exercise in the open air to the extent of a gentle perspiration, and keep this up until things are righted; this one suggestion, if practiced, would save myriads of lives every year, both in the city and country. The best medicines in the world are warmth, abstinence and repose.—[Journal of Health.

Influence of Sunshine.—Light and Sunshine are indispensable to our highest physical well-being. Most persons in our larger cities and towns are very much shut out from the sun's rays, and the effect of this confinement is visibly depicted on the colorless cheek and faded countenance. Human beings, like plants, cannot thrive if constantly excluded from the sunshine. Farmers know something about this, as their ruddy faces and usually stalwart frames attest. Their common sense in regard to the air and sunshine is commendable, and goes far to mitigate the numerous pernicious habits to which many are addicted.

We know a preacher who, when speaking, constantly hammers the desk with his fist, to *rivet* the attention of his audience.

MOTHER'S WORK-BASKET.

BY A COUNTRY GIRL.

Ah, here is my mother's old basket,
Which always held work for the week—
And whatever we children wanted,
We always came hither to seek.
If Harry had broken his kite-string,
Or Willie's old fish-line gave out—
They came for repairs to the basket,
And tumbled its contents about.

In the top were bundles of sewing,
And happy children were we;
Were there jackets for Will and Harry,
Or aprons for Anna and me?
And these bright but forbidden scissors,
Which tempted us so, were beneath;
And some place of golden beeswax,
All checked with the print of our teeth.

How Anna kept dollie in fashion,
(Perhaps less becoming than gay),
With bits which she got from the basket,
And worked to advantage some way.
Ah, me! little Anna was fairest—
And soonest her journey was o'er:—
Now Will and Harry are bearded men,
And I—I am least of the four.

Oh, where is there jeweled casket,
Or talisman equal to this!
My mother's old willow work-basket,
With its memories painful bliss.
I think of the days of my childhood,
And weep as I could not weep then,
For I had a mother who loved me,
As no one will love me again.

[Valley Farmer, St. Louis, Mo.]

Homes for the Working Classes.

We find the following most admirable article in the New York Evening Post. This is a subject worthy the attention of the governments of every city and it will be a blessed day for the people everywhere when our rulers shall look with a true paternal care over those whose labors build up the very city they govern:

"In the better days of New York we were accustomed to speak of our municipal authorities as the City Fathers, because they were supposed to cherish a paternal tenderness of regard for the people whom they served. The title has fallen into disuse. It is an obsolete term, or one of ridicule and irony as applied to existing rulers. Will the day ever come when we can again employ it as a truly descriptive term? Are we ever destined to enjoy a wise, honest and watchful parental rule in this city, which will develop its resources, increase its attractions, and give health, comfort, protection and prosperity to all its vast population?

"Our city government ought to take a deeper interest in the condition of the poorer classes. This could be done by a wise and watchful regulation of tenement-houses, compelling the builders or owners to provide superior dwellings, better lighted and ventilated, more comfortable and wholesome. A man's character and that of his family is wonderfully influenced by the kind of home he lives in. Put him into a filthy cellar or a narrow garret, where there can be no cleanliness, no order or comfort, and and he is almost compelled to become squalid and brutal. His ambition and that of his wife, to appear respectable, are destroyed, and they soon are content to live like mere cattle. They are never the people they would be if they had a good home. The health and lives also of such families are greatly impaired by the close, filthy quarters they occupy, and thousands are sacrificed yearly from this

"How can it be otherwise in the wretched habitations in which parents and children are forced to keep up their abode, in the contracted alleys, the underground, murky and pestilential cellars, the dingy house with its hundreds of occupants, where each family cooks, eats and sleeps in the same room, without light or ventilation, surrounded by filth and an atmosphere foul, fetid and deadly? One-half of of our population live in tenement-houses, and 22,095 live in cellars. How can these people be cheerful, healthy or comfortable? How can they exercise their powers for good, or enjoy a substantial happiness?

"It should be one of the aims of our city government to take in hand this whole subject, and see that every family upon the island has, at least, a wholesome place to live in. It is not enough to half-sweep the streets once a month. Public health, decency and good order all require a more thorough and effectual supervision. Houses ought to be inspected as well as vegetables and meats. Near Paris model cottages have been erected, each of which accommodates four families, with four rooms each, at $30 a year rent, or $2,50 a month. This is what care can do, and might do in New York, if we had City Fathers instead of Rings and rogues. This is what we yet hope to see done, when the people make up their minds to have honest and capable authorities."

There are some very pretty but unhappily very ill-bred women, who don't understand the law of the road in regard to handsome faces. Nature and custom would, no doubt, agree in conceding to all males the right to at least two distinct looks at a very comely female countenance without any infraction of the rules of courtesy or the sentiment of respect. The first look is necessary to define the person of the individual one meets to avoid it in passing. Any unusual attraction detected in the first glance is a sufficient apology for the second—not a prolonged impertinent stare, but an appreciating homage of the eyes, such as a stranger may inoffensively yield to a passing image. It is astonishing how morbidly sensitive some vulgar beauties are to the slightest demonstration of this kind. When the lady walks the streets she leaves her virtuous indignation countenance at home; she knows well enough the street is a picture gallery, where pretty faces, framed in pretty bonnets, are meant to be seen, and every body has a right to see them.—[O. W. Holmes.

The Painter.—Unseen he sitteth at your fireside; pursues you closely in your daily walks; and with nice air, keen eye and acute mind, solves your every word and act, and from time to time roughly scribbles for his memento and your comment.

Why is a water-lily like a whale?—Because it comes to the surface to blow!

Death of Mrs. Clay.—The death of the widow of Henry Clay was not an unexpected event, for she had passed the eighty-third year of her age, and physical infirmities had long shown the premonitions of her decease. It is sixty-five years ago this spring since Lucretia Hart became the wife of Henry Clay, when he was about three years her senior. Her serene and happy temperament, when contrasted with the exciting anxieties of his political life, shows what a haven of rest Ashland must always have been when Mr. Clay was able to throw off the weight of public responsibility and seek repose in the bosom of his family. Those who knew Mrs. Clay can bear pleasant testimony to her cheerful assumption of household duties, her devotion as a wife, and her loving patience as a mother. Henry and Lucretia Clay had 11 children born to them, 6 daughters and 5 sons, of whom 3 survive. Theodore, the eldest, who has been for many years a lunatic under charge of Dr. Chipley, Thomas H. who is now abroad in diplomatic service, and John M. a stock farmer in Fayette county. As the moon derives its radiance from the sun, so the life of this good and pure Christian lady received the halo which surrounded the fame of her husband, and as we record her death the memory of the great, the noble, and the gifted Clay rises before us and he seems to stand before us in bodily presence; "in his habit as he lived," when all around "drew light and life and glory from his aspect." Upon the tomb where will repose the remains of Lucretia Clay, there need be no other epitaph to endear the spot to the American heart; than "The Widow of Henry Clay," though her virtues and her loving impulses have like winged angels, borne her to the mercy seat above, and recorded her name amid the glorious list of "the just made perfect."

Fires in Bedrooms.—Most people, even many intelligent reformers, have an idea that to sleep in a cold room is good—essential to health. This idea arises from the fact that bad ventilation and warm rooms are generally associated together. It is better to have an open fire in cool weather in your bed-room. The atmosphere is not only by this means constantly changed, but with the fire you will keep the window open, which will add greatly to the needed ventilation. But more than this, with the fire you will need fewer bed-clothes over you, which is a gain, as a large number of blankets not only interferes somewhat with the circulation and respiration, but prevents the escape of those gasses which the skin is constantly emitting. Even furnace or stove heat with an open window is better than a close room. Interchange with the external atmosphere depends upon the difference between the temperature of the air within and without.

Three Important Things.—Three things to love; courage, gentleness, and affection. Three things to admire; intellectual power, dignity, and gracefulness. Three things to hate; cruelty, arrogance and ingratitude. Three things to delight in; beauty, frankness and freedom. Three things to wish for; health, friends and a cheerful spirit. Three things to pray for; faith, peace and purity of heart. Three things to like; cordiality, good humor and mirthfulness. Three things to avoid; idleness, loquacity and flippant jesting. Three things to cultivate; good books, good friends and good temper. Three things to contend for; honor, country and friends. Three things to govern; temper, impulse and tongue.

NAPA

COLLEGIATE INSTITUTE.

For Young Ladies and Gentlemen.

NAPA CITY, CALIFORNIA.

NAPA CITY, IN POINT OF LOCATION AND Climate, is unsurpassed in the State. It is about four hours' ride by steamboat from San Francisco, and three by stage from Benicia. There will soon be a daily boat from the former place, and there are now two daily stages from the latter. There are ext nsive accommodations for Boarders in the College Building, with large and well-ventilated sleeping apartments Teachers reside in the Building, and will have a constant oversight of the Students who are Boarders.

GOVERNMENT.

Young Ladies will receive no calls from any except Parents and Guardians. Ladies and Misses will not leave the College grounds, except in company with their Instructors. Young Men and Lads are not allowed to lounge about the Stores, Hotels, and Saloons of the village All pupils are required to attend Church on the Sabbath. Parents will choose the place of worship for their children.

MILITARY DEPARTMENT.

This Department has been opened with a view to the permanent establishment of a Military Academy on this Coast. From three to four years will be requisite to complete the course in this Department. The State has furnished us the necessary equipments for such a school. The Drills will be attended to daily.

AGRICULTURAL IMPLEMENTS.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it.

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 8 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

We are

SOLE AGENTS

NEW

AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparce, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of

COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 5-3m

THINGS REQUISITE.

Have a tear for the wretched—a smile for the glad,
For the worthy, applause—an excuse for the bad;
Some help for the needy—some pity for those
Who stray from the path where true happiness flows.

Have a laugh for the child in her glee at thy feet;
Have respect for the aged; and pleasantly greet
The stranger that seeketh for shelter from thee—
Have a covering to spare, if he naked should be.

Have a hope in thy sorrow—a calm in thy joy;
Have a work that is worthy thy life to employ;
And oh! above all things on this side the sod,
Have peace with thy conscience, and peace with thy God.

—Chambers' Journal.

"PA," said a lad to his father, "I have often read of people poor but honest; why don't they sometimes say rich but honest?" "Tut, tut, my son," replied the father, "nobody would believe them."

FRESH air is forced into the tunnel under the Alps by applying the power of the water from the mountain streams.

ADVERTISING is the oil which wise tradesmen put into their lamps, and the foolish ones neglect to use.

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle-grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H & L AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories.

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL-OIL as a basis of their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural resin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest until, at the present time, they have established a manufactory of Rosin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply. The subscribers are now receiving native resin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] June 2

The Grain receipts, for the past week, have been large for this season of the year, and offerings in excess of demand, consequently and naturally the decline in prices has been a marked one. There seems a disposition on the part of buyers to hold off and fully determine the amount of the new crop before they take any decided steps, and the tightness of the money market is doubtless having a depressing effect on prices.

Potatoes, both old and new, are in large supply, at a decline in price. Barley, Oats, and Hay, have also partaken of the general decline, and so long as holders will force on the market more than there is a demand for, so long will prices decline and the market remain dull. We have no reason for changing our opinions relative to the incoming crops. At best the yield of the State cannot be half the usual quantity, and the depression that now exists must soon be over. Should holders be more firm and less disposed to sell, for a time, in our opinion they would be the gainers.

Of the new crop of Hay, on the market, large quantities are coming forward not properly cured. The past high prices has induced many to cut, press, and send to market, an article that will not keep, losing sight of the risks they take. Hay should be well cured and pressed from the stack, to make it desirable, all the inferior trash that offers has a depressing effect on the market.

Wool continues to be offered freely; the clover bur, that is so plentiful in California, is to be found in the bulk of it; this bur is a terror to buyers, but one that they use freely as an object, oftimes causing a material difference in prices.

Our Exports are as follows: Per British bark Coya, for Sidney, 3640 qr sacks Flour, 570 sks Oats; 10,110 sks Wheat. Per British bark Fanny Merriman, for Sidney, 3,055 hf-sks, 4,000 qr-sks Flour; 4,033 sks Wheat. Per bark Onward, for Honolulu, 130 hf 400 qr sks Flour, etc., etc.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 8446 sks, Barley 5918 sks, Cornmeal 445 sks, Potatoes 2262 sks, Flour 3309 qr-sks, Wool 621 bales, Hay 3219 bales, Oats 2449 sks, Salt 900 sks, Corn 282 sks, Bran 250 sks, Beans 159 sks; Straw 59 bales.

Also Coastwise: Barley 1778 sks, Potatoes 1896 sks, Wheat 2477 sks, Beans 535 sks, Wool 1052 bales, Oats 2599 sks, Flour 346 qr sks, Bran 75 sks, Rye 19 sks.

The variety of fruit, now, is quite respectable, although the quantity of each kind is small. The larger fruits are now beginning to feel the effects of the drouth, and from present appearances we may look for only a fair supply of good fruit, though we will have an abundance of small and infer

BY CONTINENTAL TELEGRAPH.

DATES TO JUNE 1.

Good news, stirring news is now coming over the wires. Soon the *electrical news* will startle every patriot and fire their hearts with joy. Let all be prepared to celebrate the Fourth of July with such a Jubilee as never was yet made since its first grand Hallelujah!

The news, we give, is the most important. Its results, we hope, will soon be decisive. Official dispatches of May 30th, at 8 p. m., says:

In the course of the afternoon Gen. Warren had pushed down on our left until his flank, under Gen. Crawford, reached a point west of Shady Grove Church. Crawford, having got detached from the rest of the corps, was attacked and driven back a little. The enemy then threw a force, which it appears consisted of Ewell's corps, upon Warren's left, attempting to turn it, but was repulsed. The engagement was short, sharp and decisive. Warren holds his ground at advantage, seven miles from Richmond. He reports that he has taken a considerable number of prisoners, and there are many rebel dead on the field. [Good for *Warren*, we like to see the Bunker Hill spirit in all of that name. On to Richmond, *Warren*, and crush the rebellion.—*Editor Farmer*]. Of his own loss he has made no report. His latest dispatch says that the enemy are moving troops to his left, apparently to close the approach to Richmond in that direction. On our right, an active conflict has been raging ever since dark, but has closed. So soon as the enemy attacked the left of Warren, Wright and Hancock were ordered to pitch in, but they did not seem to have been ready till after nightfall. No report yet received from them.

A dispatch from Gen. Grant dated May 31, 6 a. m., at Hawes's, has been received, as follows: "The enemy came over on our left last night, and attacked us. They were repulsed with very heavy slaughter. To relieve Gen. Warren, who was on our left, speedily, Gen. Meade ordered an attack by the balance of our line. Gen. Hancock was the only one who received the order in time to make an attack before dark. He drove the enemy from his entrenched line, and still holds it. I have no report of losses, but suppose them to be light."

Burnside's whole corps got across the Totopotamoy creek last evening, and is in full connection with Warren. The left of Hancock rests upon this side of the creek. The Sixth Corps is upon Hancock's right, and threatens the left flank of the enemy. Smith ought to arrive at Newcastle by noon, whence he can support both Warren and Burnside if necessary.

Sheridan, with Gregg's and Torbett's divisions of cavalry, is on our left flank; Wilson is on our right and rear, for the purposes reported in my former dispatch. The country thereabouts is very thickly wooded with pines, with good openings. Indications this morning are that the enemy has fallen back south of the Chickahominy.

STANTON.

The following was received from Gen. Butler, May 30th: "All day heavy firing was heard in the direction of Mechanicsville. Six refugees from Richmond report that Grant was on the Mechanicsville turnpike, and was driving Lee."

"A woman reports that a meeting was held yesterday, while she was in Richmond, to see whether the city should be surrendered or burned. The Mayor advocated surrender, and was put in Castle Thunder."

"The enemy attacked my lines yesterday, and were repulsed. To-day, all day, they have been demonstrating against my works on Spring Hill, on the eastern bank of the Appomatox, but were repulsed."

STANTON.

Gen. Sherman burned $1,000,000 worth of cotton, at Rome Georgia; his army is now rationed for the march to Atlanta. The people of Northern Georgia are crowding into Atlanta, awaiting the impending struggle. Hel was needed for the destitute women and children

☞ **Holloway's Pills and Ointment.**—Anxiety is the bane of human happiness—prudent people adopt measures to avoid it. Some insure their property while the more thoughtful assure their lives, but what is life without health? The wisest man secures his own well being, and in these remedies finds an indisputable policy of assurance against disease.

Sold by all Druggists, at 30c, 70c, and $1 10 per box or pot. 20 8

HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM, cor. Clay and Front streets, San Francisco, Cal

LIFE-SIZE BUST
....OF....
Thos. Starr King.

COPIES OF THE BUST OF THE LATE REV. THOS STARR KING, by P. J. DEVINE, are soon to be issued to subscribers. The Bust and subscription list may be seen at Mead & Van Tassel's store, Montgomery street, or at Grant & Devine's Marble Yard, Sutter street, between Montgomery and Sansome streets The public are invited to see the Autograph Subscription list which comprises many of Mr. King's personal friends.

Opinions of the Press.

The following criticisms are from the leading newspapers of the city:

After the many attempts at Busts of the late Thos. Starr King which have been made, it is gratifying at last to have one we can praise It is a work of art, for expression is there as well as outline.—Bulletin

Nothing heretofore executed, either as a portrait or bust, will equal it as a work of art or valuable memento of the dead.—Alta.

It is an admirable work, and is pronounced a perfect likeness of the deceased by those most capable of judging.—Democratic Press.

The friends of Mr King, who have critically watched Mr. Devine's progress, express themselves highly satisfied with the result. It exhibits a fidelity of likeness and artistic grace that has not yet been equaled.—Golden Era.

As a work of art it is wonderful, seeming to be exact and complete in every detail to which the eye may be directed or recollection recalled.—Sunday Mercury.

We have for many years looked with interest upon the labors of the artist. In the present effort he has been completely successful.—Cal. Farmer. 13-tf

Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOma County lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P. Swift, Esq. containing 14,000 acres of land is offered for sale in Lots or farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality It is accessible to market, being adjacent both to Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point.

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the offices of Haight & Pierson, 622 Clay street, San Francisco or at the store of Mr Paule, Sonoma.

17 WILLIAM BIHLER.

California Cider and Vinegar.

THE UNDERSIGNED INVITE THEIR Friends and the Public to call at their Manufactory, 709 MARKET STREET, Exactly opposite Third street, to see somewhat of a curiosity in California: A CIDER MILL. And, if you wish, we shall be pleased to furnish you with new sweet Apple Cider, dripping right from the Press, and in its season the juice of Grapes, or any other Fruit. Drinking new sweet Cider is known to be healthy, giving a ruddy glow to the complexion

Nearly all the Vinegar sold in San Francisco is a manufactured imitation, made from corrosive acids, and people have provided their families with what was sold as Cider Vinegar, but which was in fact a poison. We mean to keep nothing but CIDER and VINEGAR, and that genuine.

If we are to succeed in our experiment of substituting pure Vinegar for the villainous fluid which has injured the health of thousands in California, it can only be done by a general patronage, and we trust to receive a call from you.

Lebaron & Thresher,
Cider Mill, 709 Market street,
Exactly opposite Third street.

☞ We have an Order Box at C. E. Collins, 602 Montgomery street, and will deliver Cider and Vinegar at any part of the City Free of charge. Orders sent through Wells, Fargo & Co., will be promptly attended to. 16-3m

$2,500 Wanted on Real Estate.

THE SUM OF $2,500 is wanted on Real Estate in San Francisco County, upon land of undoubted title, worth double the amount. Address A. B. C., Farmers Office.

Farmers and Immigrants.

LAND FOR SALE OR TO RENT.

THE ANTELOPE RANCH,

(FORMERLY JOS F. DYE'S) on the East side of the Sacramento River, embraces many very superior Farms of

100 to 500 Acres each; also Vineyards, Gardens and Orchards,

here all overflows, Fenced, having Dwellings, Barns, etc nd throughout the year, large running streams, and Irrigating ditches.

The soil is from 3 to 10 feet deep, very rich, and adapted to Wheat, Barley, Oats, Tobacco, Chinese Sugar-Cane Fruits, etc.

The best market in the State is at Red Bluff, two miles above; at Tehama, three miles below the Ranch, and on the Ranch itself, for consumption in the northern portion of the State, Oregon, and the Humboldt Mines. The new Wagon Road from Red Bluff to the Humboldt Mines is within three miles of the Ranch.

Good Farmers (with families preferred) can hire these farms at low rates, or conduct them on shares, with privilege of purchase. Cash loans will be made, if desired, to assist in cultivating or holding crops, and every facility will be given.

Mowers, Headers, Threshers, etc, are on the Ranch—The Antelope Flour Mill," of large capacity, and high reputation, is on the Ranch, owned by the same proprietors

☞ The "Job Dye Farm," or 320 acres—with Orchard, Vineyard, and Garden, with irrigating water, large Adobe House, and numerous out-buildings—will be rented to a satisfactory tenant

Apply to GEO. CHAMPLIN, Red Bluff P. O, or on the Ranch, or to E F. NORTHAM and R. B. WOODWARD, San Francisco.

Dec. 17—19-9m

Fine Farms for Sale.

YOU WHO WANT GOOD FARMS CAN SECURE them by applying to the Editor of the Farmer. The following can now be had:

FOUR VERY FINE FARMS in the splendid San Joaquin District, within a few miles of Stockton, all very productive.

ONE FARM about 20 miles from Stockton—valuable.

ONE FARM capable of great improvement and valuable, in Contra Costa County, near Pacheco.

A GOOD RANCH in Santa Cruz County—a good bargain.

A FINE FARM AND VINEYARD in the region of Mt. Diablo—can be made valuable.

Several STOCK RANCHES in various parts of the State, from $1,500 to $25,000; in all these, good and permanent settlers can find bargains. Address by letter, or in person, for particulars to Col. Warren, Editor of the Farmer. 23

PATENT RIGHTS FOR SALE.

THE FOLLOWING PATENT RIGHTS OF NEW AND valuable inventions (of which we have models to show their value) are now offered for the States of California and Oregon, and Utah and Washington Territories.

NO. 1. THE MECHANIC'S SPIRIT LEVEL.

Patented September 13, 1859.

This Implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet out. Builders will do well to examine the model.

NO. 2. IMPROVED CLOTHES REEL AND BAR.

Patented January, 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery, or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines, neat when used and ornamental when not in use.

NO. 3. A CORN CULTIVATOR.

With this implement the soil is first thoroughly plowed and deeply pulverized, and on the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

NO. 4. A MUSKETO BAR.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

NO. 5. HYDE'S PATENT POST-DRIVER.

A most excellent labor and money-saving machine, for which we offer rights.

NO. 6. SEED-SOWER.

This is a new invention, and one of great importance to all who sow grain, or any garden seeds. The working model can be seen at the Farmer's Reading-room.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to COL. WARREN, Editor Farmer.

Bee Keeper's Directory.

By J. S. HARBISON, Apiarian, Sacramento.

THIS BOOK HAS BEEN PREPARED BY THE Author with great care and the devotion of much time. From the experience of many years as an apiarian, the Author has given results that must be of great value to all who have Bees. Every person who contemplates keeping bees should have this book.

This Book is for sale by the Author at Sacramento, and he FARMER OFFICE. 1

Wants a Situation.

COLLEGIATE INSTITUTE, BENICIA.

COMMENCEMENT EXERCISES
..AT THE..
Collegiate Institute, Benicia

We accepted the courteous invitation to be present at the Commencement Exercises and herewith report:

The customary Annual Exhibition of this excellent Institution took place last week at Sage's Hall, on Thursday and Friday, the exercises continuing both day and evening, and eliciting the warmest approbation of the very large audience present on each occasion. And as we listened to the recitations, declamations, and essays, our thoughts were refreshed upon the all important subject of education, and more than usually were we impressed with the importance of educational institutions to the State. We could not but feel the truthfulness of the assertion "that we are crazy on the subject of gold." Wealth, rapid wealth, appears to be the mad pursuit of the whole State. Nothing is talked of but stocks, interests, and incomes. Go into the streets, and every man you meet talks to you of money; go into the club-room, or parlor, and still the conversation is about money. It is the mania, not of the age, but of the State. Look at Mexico, at the South American States, and at old Spain, and see the results of such a mad pursuit of wealth. Shall we not take their warning, and change this all-absorbing pursuit after the mere material to those grander pursuits which elevate and ennoble a State? Is gold the object of life? Does a State's greatness depend upon its gold? No, men make a State, great men. With men, New England's rugged soil makes great States; and without men, educated men, our broad lands, our gold and silver, our fertile soil, our good harbors will be in vain, and California will degenerate, like those Spanish countries so famed for their gold and silver wealth.

What then is to be the counterpoise to this engrossing pursuit of wealth? We unhesitatingly say EDUCATION. It is education only, that can teach us the use of the material.

Here at Benicia are located three educational institutions which draw their support from the State at large: the Female Seminary, St. Catharine's Academy, and the Collegiate Institute. The former has just passed through a popular examination, and it is now our object to give some remarks in regard to the exercises of the latter.

EXAMINATION—THURSDAY.

The examination exercises on Thursday morning consisted of Algebra, U.-S. History, English Grammar, and Geography; in the afternoon Mental Philosophy, Latin classes, Arithmetic, and three classes in Surveying and Perspective Drawing. In all these exercises the pupils evinced a readiness, and an aptness that showed they had received that true oversight in their studies so essentially needed in early life to lay the foundation of a good scholar. The Exhibition of Thursday was very gratifying to all present. The pupils were prompt in their answers, and appeared to understand their subjects. The class in Surveying showed their field books, which were models of neatness and proved that they knew the practice as well as the theory of surveying. We were much pleased with the class in Draughting as they illustrated the principles of Perspective on the black-boards.

THE LAW SCHOOL DEPARTMENT.

The evening of Thursday was given to the Law School Department, and elicited unusual interest, the Hall being crowded to hear the essays of the law students.

The Benicia Law School was established as a Department of the Collegiate Institute in 1863. Acting upon the principle of becoming thoroughly acquainted with whatever promises to be for the advantage of our noble State, we took an early occasion to visit Benicia, and examine the law library, and the arrangements for the accommodation of students. We became satisfied that advantages were offered for laying the foundation of a thorough knowledge of jurisprudence, which could not be found elsewhere in California, and we were among the first to give the Law School a hearty welcome. We found a well-defined plan of the system to be pursued, one that has received the approbation of the first lawyers in the State. First on the list of those who indorse the plan of the School, and give it their hearty recommendation, stands the name of Hon. John Curry of the Supreme Court.

The school started with the design, which has been strictly adhered to, of grounding the student thoroughly in the principles of Law, and also of combining theory with practice. The students have a course of reading as well as of lectures, and are regularly examined in their studies. We regard the Moot-Courts as a great advantage. In them the students are not only exercised in discussing legal questions and forming habits of speaking, but in drawing all the forms required in the practical application of the Law. It is frequently made an objection to Law Schools that they are not practical. This is upon the supposition that the theory of the Law only is taught, which the student must learn at disadvantage while ignorant of the forms of practice. But the objection certainly does not lie against this School. No one ever supposed that for a student in an office to have his studies systematically directed, would not be far preferable to studying with only occasional and irregular assistance; or that he could not make greater progress in pleading and practice by studying the principles, drawing the forms and having his errors corrected, than by reading such papers as he should chance to meet in an office.

Since we last visited Benicia, the Law Library has been considerably enlarged, and a building erected for the accommodation of the Law Department. The Library contains all books necessary for reading or reference. The appearance of the students is that of earnest, intelligent young men, who will wield an important influence on the future of California. There are two classes connected with the School. On Thursday evening essays were read by the first class as follows:

PROGRAMME:

The Res Gestæ.....J. McKenna, Benicia.
The Common Law of Husband and Wife as modified by the Statutes of California.....G. Lamont, Suscol.
The Dividing Line between Real and Personal Property.....W. A. Anderson, Folsom
The Rights of Aliens.....J. W. Hook, Pacheco.
The Sphere of the Lawyer.....James A. Lamont, Suscol.

All the Essays bore evidence of careful and thorough reading, of much reflection, and of good powers of analysis. We noticed, particularly, one on "The Common Law of Husband and Wife," by G. Lamont, and one on "The Rights of Aliens," by J. W. Hook, perhaps because these were both on subjects vitally affecting the interests of California. These Essays contain much matter of interest and importance to our readers, generally, and we shall obtain them for publication. The *Res Gestæ*, by J. McKenna, was well written, and many nice distinctions drawn, with clearness and even elegance. The Speaker commenced by observing that the subject was too abstruse to be readily comprehended by those who had not given it particular attention. This seemed, considerably, to embarrass him; and his tone was much too low and indistinct for the convenience of the audience. "The Dividing Line between Real and Personal Property," by W. A. Anderson, was well written and delivered. A prominent part of the Essay was on the subject of "fixtures," and the degree of annexation which renders chattels a part of the freehold. "The Sphere of the Lawyer," by James A. Lamont, as might have been expected, from the subject, was rather a literary than a purely legal production. The dignity and importance of the Law, and the requirements of the successful Lawyer, were well summed up. Prominent among the requisites insisted upon, with earnestness, was the requirement that the Lawyer could never be in his proper sphere *unless elevated to the highest morality and the most refined honor.*

EXAMINATION—FRIDAY.

Friday morning's exercises were, Geometry, Science of Government (a study of immense importance to the youth of the present day), Reading of the First Class, Philosophy, Grammar, Geography of Second Class. We were particularly interested by the recitation in Natural Philosophy as the class exhibited a new style of apparatus, to illustrate how electricity might be applied as motive power. The audience was large, on the first day, but on the second day the buildings were crowded by people who came from all parts of the State, to witness the proficiency of their sons. We are glad to say, what we have said before, that "the Institute never disappoints its audience." The course of instruction is practical and the instruction thorough. Its patrons appeared highly pleased with the advancement of their sons. Among its pupils it enjoys the reputation of being a *working School*, and we believe it deserves it.

In the afternoon, History (Universal), Latin, Arithmetic Second Class. Reading of manuscript papers from the two Journals published by the scholars, the compositions of the several editors. These exercises were all of an interesting character, and gave great pleasure to the many parents present, and to a large circle of friends.

EXHIBITION.

The grand finale of this most interesting exhibition, was held on Friday evening when, as is usual on such occasions, *the best wine is kept for the last of the feast.* The following was the *Programme*, which we give in full to show the pupils engaged, on the occasion:

PROGRAMME.

Declamation—Nobility of Labor...J. W. Stevenson
Essay—In Union there is Strength.....J. Stephens
Declamation—The Casket of Temperance.....W. B. Lawton
Essay—Great Men, and what makes them Great.....Geo. Stone
Declamation—Hans and the Dandy.....P. Weinman
Dialogue—Scene from the Lady of the Lake,
Roderick Dhu.....J Stephens | Fitz James.....E. Hood
Declamation—The Maniac.....C. C. Smith
Essay—Light.....E. Hood
Selections from Cæsar

Cæsar.....J. W. Hook	
Brutus.....G. Lamont	Trebonius.....C. Death
Casca.....W. A. Anderson	Soothsayer.....M. Barr
Cassius.....J. A. Lamont	Calphurnia.....F. Weinman
Crima.....John Wood	Publius.....W. Raven
Decius.....J. W. Stevenson	Artemidorus.....J. Grindley
Antony.....J. Nichols	Populus.....J. Butler
Marullus.....J. Mariner	1st Citizen.....C. Hardenberg
Murellus.....T. Moore	2d Citizen.....W. C. Queen
Lucius.....P. Burrel	Servant to Cæsar C. Hayden
Flavius.....W. Haven	Populace.....J. Nesbit, etc

Essay—Republican Governments...J. W. Stevenson
Dialogue—The Speculators

Mr. Green.....C. Death	Mr. Hobbs.....W. Collins
Mr Slighty.....H. Hook	Mr Griggs.....J. Grindley
Hon. Crafty Fox.M. Schnabie	Mr. Saunders.....C. Hayden
Mr. Muldman.....J. Nichols	Mr. Tibbets.....J Mariner
Mr. Nobbs.....P. Burrel	Policeman.....T. Moore
Mr Muscle.....W. C. Queen	Boys..L. Tobias and B. Patten

Declamation—Union and Liberty...J. B. Tadsbury

Of these exercises we cannot speak at the length we would desire, as our columns would not admit of it, but as a whole, it was a most satisfactory exhibition, we know, by the expression of approbation and applause that was shown during the whole evening.

The selection, "Nobility of Labor," was an admirable piece, but we would urge the Speaker to a study of expression, in his speech, adding to it those graceful gestures that give force and power to words and sentences, and a manifestation that the Speaker *feels* the truths he would express. The Essay "In Union there is Strength," was very finely delivered, the pronounciation was *clear and articulate*, gestures graceful and earnest, which added to the eloquence of the theme. The Orator was showered with fragrant bouquets from the fair young ladies present from the other Seminary at Benicia; a very cheering reward for the cause of the Union. The "Casket of Temperance" was well spoken, the theme a noble one.

The Fifth Declamation, "Hans and the Dandy," by Master Weinman, was recited well, spirited and spunky, just like a Dutchman, well done. The "Maniac," was also well and finely delivered. The performance from "Julius Cæsar," was well done; the several parts of Brutus, Cassius, Mark Antony and others, were better rendered and elicited more applause than is often given to the Drama upon the legitimate stage. "Light," was admirably spoken; the address of the Speaker was excellent; he, too, was abundantly rewarded with a shower of fragrant bouquets, from the young ladies. The scene from "The Lady of the Lake," created much interest; fierce Rhoderick Dhu, and bold Fitz-James enacted the bloody scenes of former days; in a bloodless way, fought and struggled, and died, bold Roderick (for a brief time), his fall was a *heavy* one.

The Dialogue of "The Speculators," was a merry affair; it was a hard hit at the present times, and Montgomery street matters, and afforded great merriment. The closing Declamation, "Union and Liberty," was appropriate to the occasion and times, and well delivered.

The evening's exercises closed with the delivery of the Diplomas to the Graduating Class, of which we give the very appropriate, brief and admirable Address of Rev. S. Woodbridge, D. D., on that occasion, on another page.

When Mr. Platt and Rev. S. Woodbridge stepped upon the platform to bestow the well-earned honor upon these graduates, we should have been pleased to have seen all the other Pupils formed around them like the *back ground* of a picture. It would have *made a picture* at once interesting and imposing, for all were engaged in the same work. We suggest this for future Exhibitions.

THE CLOSING EXERCISES.

After the close of the Address, to the Graduating Class and the delivery of the Diplomas, Mr. Platt announced that the Hall would be cleared of seats and, the *practical* exhibition of the last declamation would be had of "Union and Liberty," i. e., the gentlemen would have the liberty to select the fair ladies, lead them upon the floor, and then in a happy union of hands enjoy the balance of the evening in the Terpsichorean art. The gay music from the Band at the Barracks, kindly officiating on the occasion, soon filled the floor with happy spirits, and for some hours all were gay and happy. Benicia can boast as bright a galaxy of beauty and talent and as etherial and accomplished dancers as any city. *We* can attest to that, presuming to be a *judge* of this most excellent exercise—and satisfactory.

Thus closed the happy exercises of the Collegiate Institute of Benicia. The Principal, C. J. Platt, Esq., may well be proud of his College, located on a healthy and beautiful spot, commanding one of the finest landscape views in our State, with large, spacious and fine buildings, surrounded with nice grounds. The apparatus and libraries are also complete within the College, and most excellent play-grounds and gymnasiums outside, with able Professors to aid him in his work. These do and must command success, and so well satisfied are we of its excellencies that we are desirous of having those valuable privileges widely known, to this end we give the true picture, of this admirable Institute, a prominent place on our first page, as it well deserves, and can recommend most earnestly to parents who seek a place for their sons, this eligibly located, healthy and prosperous Institute.

We have received several of the Essays delivered on the occasion, which we shall publish, especially that one of importance to "Social Life in California." "The Common Law of Husband and Wife, as modified by the Statues of California," by G. A. Lamot. Also the "Rights of Aliens."

We would here call attention to the most excellent Address of Rev. S. Woodbridge, which will be found on our fourth page, and also specially call the attention of Parents to the Card of the *New Term* of this College, in our columns this week.

Benicia Female Seminary.

This long established and admirably conducted College, for young ladies, held their Anniversary Exercises on Monday and Tuesday of last week,—the annual exercises of the year—by an Exhibition as is customary, to show the proficiency of pupils. This College has had about 150 pupils during the past year, under its charge, and the management has displayed an admirable fitness in the Principal, Miss Lamond, for the responsible trust which has been committed to her hands, that of Educating one hundred and fifty young females, who are to have a most important influence in establishing the character of the social life in the future of California. We regret we could not be present at that most interesting Public Exhibition, but we know it was of a high order, and reflected great credit upon the Principal and Teachers, and the Pupils, all. This is one of the oldest and best Seminaries of our State.

COLLEGE CATALOGUE.—We have received the first biennial catalogue of the San José Institute and Commercial College, located at San José. The catalogue contains a list of the Faculty, Board of Trustees, scholars, plan of studies, scholarships, etc., and presents a sketch of the Institute complete. We shall refer to it again.

Gathering and Keeping Fruit.

It is becoming a well understood principle that pears are improved by being gathered before fully ripe. Some should approach nearer maturity than others. But early apples should be fully ripe, as a general rule, before gathering. Late fall and early winter apples should not be eatable when picked, and all the late winter varieties should be gathered when too hard to yield to the pressure of the thumb, and always before heavy fall frosts. A dry time should be selected, if possible. There will be a few specimens not yet mature, but you can afford to throw them out to save the best and and the main crop. When a good keeping variety begins to drop freely from the tree, as is sometimes the case, secure the balance of the crop that remains on the tree as soon as possible; but they should not be mixed with those on the ground—not one should be saved with those picked. Windfalls will not keep, for, in addition to the injury sustained from the fall, they become heated by lying upon the ground exposed to the sun and hot air, and the ripening process already commenced is hastening it to rapid decay.

No matter how hot the weather is an apple is always cool while upon the tree, and in that condition should be taken care of, if we would have it keep in its most perfect condition for the full development of all the delicious juices with which it is so abundantly supplied. How to obtain it in that condition will be my purpose now to show. We have seen that it must be carefully gathered before it is too ripe, as it is commonly termed; but I say before it is ripe, for when it is *ripe* it is fit to eat, and that should certainly not be the case with winter apples when gathered.

We have also seen that heat hastens the ripening process, and that cold retards it. Apples should therefore, be kept cool, barely so as not to freeze. A minimum temperature of thirty-four degrees is probably about right, with as little fluctuation as possible.

It is not for the purpose of assuming to know more than the most of you about the best method of keeping apples, that I give the subject so large a space in this address, but it is to give it more prominence in our deliberations than it has heretofore had. I regard it as one of the points very much overlooked in all meetings of this kind.

Whether we regard the ripening process as a vital or a chemical action, it is quite sure that it should go on gradual and unchecked until all the good qualities are fully developed, and when the highest point of excellence is attained, then the fruit should be used. It is never so good as when just fully ripe; but is frequently eatable for a long time. Some varieties become dry and mealy, others tough and leathery. Others, by being kept very cool, will frequently remain in a very good condition for a very long time, or by the use of artificial means may be kept for an almost indefinite period.

I hold that the ripening process once commenced, goes on, no matter how cold, if frost is not present, slowly, perhaps, but uninterruptedly, until full maturity. Hence the importance of a cool cellar, which should always be dry and dark. It should be frequently aired, when the outside temperature will allow of it. Some varieties are much more sensitive to their treatment than others. The Winesap, for instance, which has a thick skin, may be abused a great deal in handling and but indifferently cared for in the cellar, and yet it will keep pretty well; that is it will rot but little; but, if kept close and warm, it is subject to a fungus that renders it scarcely tolerable to eat. But if it is kept cool and dry, all its best qualities are retained. It is also one of the varieties that does best kept on open shelves. The Belmont, on the other hand, which I regard as one of the best and most profitable apples, is very impatient of bad treatment. Its skin is smooth and thin, and flesh of a delicate texture. If roughly handled and kept in a warm room, it soon decays. If carefully handled and kept in a cool place, it keeps with very little waste till April or May. Indeed, it is, with me, one of the very best of keepers.—[Trans. Ind. Hort. Society.

Consumption of Coal.—At the last sitting of the Académie des Sciences Morales et Politiques M. Dallon gave the following interesting particulars on the consumption of coal: In 1789 France consumed 500,000 tuns of coal, 220,000 of which were imported; in 1811 the quantity was 773,000 tuns; in 1830 it rose to 1,800,000 tuns, and in 1847 to 7,600,000 tuns, 2,500,000 of which were imported. During the four following years—those of the Republic—there was a considerable diminution, the extraction in France being reduced to 4,000,000 tuns, and the importation to 2,100,000 tuns. In 1853 the consumption rose to 9,400,000 tuns, and in 1859 to 12,400,000 tuns. In 1863, the third year after the Convention of 1860, the quantity consumed was 15,000,000 tuns, 5,200,000 of which were imported, showing the immense increase of manufactures during a period of tranquility and order. At the commencement of the present century England produced 13,000,000 tuns; in 1838 the quantity rose to 26,000,000 tuns, and in 1862, to 84,500,000 tuns. England alone produces much more than half the coal extracted throughout the world. The production of coal in the United States is valued at 15,000,000 tuns; that of Belgium at 9,000,000, the Zollverein produced upwards of 14,000,000 tuns in 1862; so if England be omitted, France is one of the richest coal producing countries in the world. The production of coal is intimately connected with that of iron, in which article England again holds the first rank. In 1789 France only produced 69,000 tuns of cast iron. This quantity rose to 115,000 tuns in 1812; in 1830, to 347,773 tuns of cast iron and 237,379 of wrought iron; in 1847 the figures were respectively 602,772 and 376,686; in 1850 the production had fallen to 406,000 tuns of cast iron and 240,000 of wrought iron. A new rise occurred immediately after the Republic; in 1859 France produced 887,000 tuns of cast iron and 520,000 of wrought iron; and in 1863 it is vaguely stated at the enormous figure of 1,180,000 tuns of cast iron, and 705,500 tuns of wrought iron. The production of England is nearly 4,000,000 tuns of cast iron; that of the Zollverein, 531,593 tuns; of Sweden 143,000; of Austria 270,000, and of Belgium 161,000.—[Galignani.

Letters from an Old Californian at the East.

NUMBER TWENTY.

New York, May 2d, 1864.

Splendid Churches and Amusing Follies.

Editor California Farmer:

I was asked, the other day, what a stranger should visit in New York, after seeing Broadway, the Central Park, and the Picture Galleries. I answered, unhesitatingly, the Churches. They adorn all the new Avenues, and many of them are not only very costly, but beautiful specimens of architecture. Among the most attractive I would name St. George's, Trinity Chapel, Dr. Adam's Church on Madison Square, the Dutch Reformed and Brick Church in the Fifth Avenue, the Synagogue on Nineteenth street, the Broadway Tabernacle, and a host of smaller Churches that attract the eye in almost every direction. Many of these edifices have been irreverently but amusingly nick-named; for instance, the white marble Dutch Church on Fifth Avenue, is called the Shanghai Church; the Unitarian Church on Fourth Avenue, is known as the Beef-steak Church, and so on. These nick-names are suggested, of course, by peculiarities in the style of building.

The Sanitary Fair and Copperhead Influences.

The telegraph has, ere this, informed you of the net result of the great Metropolitan Fair. Considering the efforts made, the amount realized has disappointed everybody. New York, in proportion to its size, has not done as well as her sister cities. If the working-classes had aided the enterprise, as they would have done in California, the result would have been very different. The middle classes, on the contrary, were very generous. The shop-keepers gave more, in proportion, than the rich people. What can be expected, however, when the World, the Express, the News and a host of Eatonsville Gazettes, in the pay of the copperheads, use all in their influence, secretly if not openly against every loyal undertaking. In this case the doubt was sneakingly expressed, if all the money would be used for the benefit of the sick and wounded, and hints were thrown out that a portion of the funds would stick to the hands and pockets of some of the "Saints." At best, the good and charitable, of New York, get but faint praise for any effort they may make, but they must feel amply rewarded, when from every battle-field the prayer of the sick and wounded is uttered in their behalf, and when every returned soldier speaks with tearful eyes of the Sanitary Commission. I met an officer the other day in one of the Broadway stages, whom I have seen before, in California, although I do not recollect his name. In the course of his conversation he spoke of the gallantry of the black troops. "In the army," said he, "the colored troops have fought, themselves into an equality with the whites," and then he told me how one colored color-bearer, in particular, had distinguished himself by holding up his flag when its staff was shot away and who when both arms were useless, held the flag in his teeth. "Such splendid acts of heroism," in conclusion, he said, "were numerous enough during the late campaign alone in Florida to make the massacre of Fort Pillow and Plymouth, rallying cries in the mouths of white troops in the coming struggle."

For a wonder nothing is known of impending military operations and movements, and before we were aware of such an intention the significant fact is announced that the militia are to be called out to garrison the almost empty forts. The brooding quiet is the "calm before the storm."

May-Day and Moving.

May Day that is so beautifully celebrated in California, is a day of noise, dirt and confusion here. The dirty faces of the fashionables who are moving, in the vicinity of the Fifth Avenue, reminds me that after all there is not much difference between the far-apart classes of New York in the dark or on May-Day.

The City Railroads Surrender.—Cheap Fares.

The Omnibusses that struck for higher prices have been obliged to "back down," and the difference between the full stages of to-day and the empty and forlorn vehicles of last week, I hope will be satisfactory to all parties. The fares on the car-lines are very low. One car ride of seven or eight miles for five cents. The good people of this city have evidently learned that in Union there is strength. For instance, not only have they frustrated the efforts of the Omnibusses to exact ten cents fare, but they have conquered the butter and vegetable speculators. They find victory is very easily achieved by abstaining from the use of anything for which an exorbitant price is demanded. If the shoddy folk were wise they would not compel Congress to interfere with the tariff, but shoddyism and selfishness seem to be synonymous terms.

NUMBER TWENTY-ONE.

New York, May 9th, 1864.

The Impending Struggle.

In this solemn hour of our country's history, every thinking mind must feel a deep anxiety for the result of this week's contest that ought to drive, if it does not, every other thought from the mind. But I would stand amazed at the seeming ruthlessness and frivolty of this gay city, if I did not hear in the prayers of the ministers, on the Sabbath, the heart-felt applications for Divine interposition; if I did not see in the anxious faces of the congregations a deep sympathy with their prayers, if the papers, nearly filled with every minute particular of the struggle, to the exclusion of other news, if the bulletin-boards, surrounded with sober faces, did not tell me of a deep undertow of feeling which is not expressed by the paltry and foamy appearance of the human tide sweeping through the streets. I hope a patriotism is alive in every breast now, that will receive with humble thankfulness the tidings of victory, and that will show a heroic courage, if the news is of defeat. The Government can never give up the contest without a disgrace which will be unparalleled in the History of Nations.

Insolence and Ignorance of the Copperheads.

Last week the copperheads were triumphant. A loyal man could not walk the streets or ride in the cars or omnibusses without feeling the bitterness of knowing that a host of men surrounded him who would barter away, if they could, the life of the country, purchased by so many years of war, by so many noble lives, and made sacred by so many heroic conflicts, in this second war for Liberty. I scanned, closely, the faces of these miniature Benedict Arnolds. Many of them—shame that it is so—were Irishmen; some were Englishmen, of course, and worse than all most of them were Americans. When we call ourselves an enlightened people, are we speaking a falsehood? How is it that these men are so ignorant? How is it that brought up in a Republic they do not appreciate its value, that they sympathize with, if they do not aid those whose only apology for their crime of treason, is their love of slavery. There is a radical fault somewhere, and when the rebellion is over it must be ferretted out and remedied.

War Preferable to Slavery.

The more intelligent people, I find, are almost united in their reverence for the sacred cause in which we are engaged, and though deploring war as the greatest curse which can fall upon a people, many feel that it is better than that state of luxury and effeminacy and sin which threatened to sap at the roots of our National greatness, and which shows its fearful consequences in the selfishness and ignorance of so many of our people. It is most disagreeable to me to use the cant terms of "upper" and "middle" and "lower" classes, but in New York the distinctions are so marked that it is almost impossible to do without them; and here is another work before us "when this cruel war is over."

I hope the women of California will give a noble aid to the new patriotic covenant. I have no fears for them, but I do fear that it will be sometime before the gay butterflies of such cities as New York will glory in following the example of the women of the Revolution. I hope that I may be mistaken.

But while the loyal women of the country are pledging themselves to give up the use of foreign luxuries, are the men to indulge in every costly habit which they may have cultivated in times of prosperity. Surely it would not be right. Conscience should whisper in every patriot's ear. America expects every *man* to do his duty.

I hope you will publish in the Farmer the black roll of England. Every noble Irishman must blush to see so many Irish names; but thank God they are English office-holders. Irish names, on the list, have been blotted out by Irish blood that has been freely given for the holy cause of Liberty! and after all, the remembrance that John Bright is an Englishman, ought to make us forgive England, for her black roll of titled aristocrats.

I meet so many Californians, in Broadway, that sometimes I wonder if I am not dreaming, and that I am near the Lick House, on Montgomery street.

M. A. S.

DRY GOODS!

NEW SPRING and SUMMER FASHIONS,

O'CONNELL, RYAN & CO.,

83 J Street, Sacramento

We are in receipt constantly of all the NOVELTIES in NEW and RICH

DRESS GOODS!!

SILK MANTLES,
EMBROIDERIERS,
PARASOLS, ETC., ETC.

Our Stock of

IRISH LINENS,

in all Widths for FAMILY USE, as also Table Linens in Satin and Double Damasks, Napkins of finest fabric; Huck and Damask TOWELS are most extensive and complete. Our Prices for those Goods shall be found the lowest in the State.

BLACK AND COLORED SILKS

IN GREAT VARIETY.

We respectfully invite an inspection of the above. Our System is ONE PRICE.

O'CONNELL, RYAN & Co.
SACRAMENTO.

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED DIRECT a correspondence and business in Europe as to enable him to secure from the very best source—the most successful growers—their choicest seeds grown, of which he will always be in receipt, and in endless variety, imported directly from France and England, from well known and responsible houses; some of the most prominent are named in our catalogues.

It has been the experience of our best gardeners and growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be for a series of year, until more capital, experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover;	Hungarian Grass;
Kentucky Blue-grass;	Orchard Grass;
Red-top Grass;	Sainfoin Grass;
English Rye-grass,	Timothy Grass;
Red Clover;	White Dutch Clover;
Crimson Clover,	Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties)

BULBS:

LILIES, Amaryllis, Narcissus,	TULIPS, Anemones, Tuberoses, Gladiolus,	HYACINTH, Ranunculus, Peony-roots, Iris.

and in endless variety, imported direct from France and Germany.

From his long experience in the Seed Business (over thirteen years), and his very extensive stock of goods appertaining to an establishment of this kind, he has confident of his ability to satisfy his patrons.

Native California Evergreen

TREE AND SHRUB SEEDS,

For Exportation.

THE UNDERSIGNED, FROM HIS EXTENSIVE facilities and

Large Stock of Every Variety of Seeds

Can offer unusual inducements to

MERCHANTS IN THE TRADE, FARMERS AND LARGE RANCH OWNERS,

Who wish to be supplied in his line.

And would recommend that Orders for Seeds be sent DIRECT to the undersigned, through the Express or by Mail, otherwise parties run GREAT RISK of being imposed upon, in case their Orders should be filled by some Irresponsible Establishment.

☞ The Agents of Wells, Fargo & Co's Express are hereby authorized to act as Agents for the undersigned, in taking Orders for Seeds and receipting for the same.

The undersigned is also permitted to refer to Dr. Warren, editor of California Farmer, who has had experience of twenty years in the Seed and Nursery business, and is conversant with the high value of imported seeds, and their superiority to all other seeds.

☞ Send for a Catalogue.

13 San Francisco

The Oldest Commercial City.

The most ancient center of trade in the world, and one which still retains its mercantile currents, is Damascus. The caravan comes and goes as it did three thousand years ago; there are still the flock, the ass, and the water-wheel; the merchants of the Euphrates and of the Mediterranean still occupy with the multitude of their wares. From Damascus came the damson, blue plum, and the delicious apricot of Portugal; Damascus damask, the beautiful fabric of cotton and silk with vines and flowers raised upon a smooth, bright ground; the damask rose introduced into England in the time of Henry VIII; the Damascus blade, so famous the world over for its keen edge and wonderful elasticity, the secret of whose manufacture was lost when Tamerlane carried off the arts into Persia; and that beautiful art of wood and steel with silver and gold—a kind of Mosaic engraving and sculpture united—called Damascus inlaying, with which boxes and bureaus and swords and guns are ornamented. Damascus recalls what it was before the days of Abraham—a center of trade and travel—an island of verdure in a desert—a "predestined capital," with martial and sacred associations extending through more than thirty centuries. It was "near Damascus" that Saul of Tarsus saw the "light from Heaven above the brightness of the sun;" and the street which is called Straight, in which it was said "he prayeth," still runs through the city. The city which Mahomet surveyed from a neighboring height, and was afraid to enter, because it was given to men to have but one Paradise, and for his part he was resolved not to have his in this world; is, to this day what Julian called "the eye of the East," and Isaiah, "the head of Syria." It is still a city of flowers and bright waters; the streams from Lebanon, the "rivers of Damascus," the "rivers of gold," still murmur and sparkle in the wilderness of Syrian gardens. While Tyre and Sidon have crumbled on the shore; Baalbec is a ruin; Palmyra is buried in the sands of the desert; and Nineveh and Babylon have disappeared from the Tigris and Euphrates.

An Ounce Weight and a Ton Weight.

An ounce weight and a ton weight of iron will fall down a pit with equal speed and in equal time. Until about 300 years ago, all the learned men in the world disbelieved and denied it. Galileo, an Italian, taught the contrary to the popular belief. The University of Pisa challenged him to the proof. The leaning tower of that city was just the place for such an experiment. Two balls were obtained and weighed, and one was found to be exactly double the weight of the other. Both were taken to the top. All Pisa looked on, and crowds of dignitaries were confident that young Galileo, then obscure and despised, but honored and immortalized now, would prove to be in error. The two balls were dropped at the same instant. Old theory, and all the world, said that the large ball, being twice as heavy as the lesser, must come down in half the time. All eyes watched, and, lo! all eyes beheld them strike the earth at the same instant. Men then disbelieved their eyes, and repeated the experiment many times, but each time with the same result. The little ball was big enough to destroy a theory 2,000 years old; and had it been little as a pea, it would have destroyed it just as well, or even more quickly.

But how was this? Did not the earth draw down the larger ball which was double the weight of the smaller, with double force? Did not the double weight indicate the double force? Yes, truly; but in drawing down the large ball there was a double force of resistance to be overcome, and as the two forces acted in the same proportion on the large ball, and in the same proportion on the less, the velocity of the two was equal, though in bulk they were unequal. Let us suppose there to be two wagons, one with a load of five tons, and the other ten tons, and that the unequal loads are drawn by an equal horse power—should not their speed be equal though their weight is unequal? No, there must be double horse power to draw double weight to obtain equal speed. Let a ten-pound weight and a one-pound weight fall to the earth at the same time, and the earth must draw down the heavier weight with ten times greater force than the other that they may have equal speed, and it does so. A ton weight of iron and an ounce weight, leaving the top of a pit at the same instant, would, therefore, at the same instant fall to the bottom.—[Sci. American.

Wholesale Agents for

PRINCE & CO'S MELODEONS

—AND THE—

STODART PIANOFORTES.

Importers of

Piano Covers, Music Stools, Music Racks,

ETC.

PICOLLO PIANOFORTES.

WE WOULD CALL PARTICULAR ATTENTION TO these beautiful Instruments from our own manufactory in Paris, and which we can confidently recommend as equal in quality to those of any other European manufacturer.

PICOLLO PIANOFORTES are now in universal use on the continent of Europe, having completely taken the place of the old style of Square Pianos. They possess all the merits ever claimed for the Square Piano, with many advantages that are peculiar to themselves.

Our assortment comprises six different styles varying in price from $275 to $400 each.

Iron-framed Picollo Pianofortes.

These instruments are a "specialité" of our manufactory, are constructed with a special view to withstand the peculiar climate of the interior of California, and are warranted to stand any change of temperature.

Price $400 to $450 each.

STODART PIANOFORTES.

We have had the exclusive agency for the sale of these celebrated Pianos for the past twelve years, and refer with confidence, as to their quality, to the many hundreds of instruments themselves now in use throughout the whole extent of the Pacific Coast. A general assortment of these instruments will at all times be found in our warerooms, comprising Grand Action, Square, Upright, and Overstrung Pianos, in plain or richly carved cases. We offer them at the same prices at which they are sold at the manufacturers' warerooms in New York, thus saving to the purchasers here the cost of freight, insurance, interest, and attendant charges. Prices range from $240 to $500 each.

FRENCH HARMONIUMS.

In connection with our manufactory of Pianofortes at Paris, we have established a manufactory of FRENCH HARMONIUMS, suitable for parlors, music-halls and churches. These instruments, like our Pianofortes, are all in rose wood cases, and are made with the improved "transposition attachment," which enables the performer, in voice accompaniments, to adapt the instrument to any particular "key," thus entirely obviating the necessity of any transposition of the music. Nine varieties $100 to $1,000 each.

We beg to call attention to the fact that the Harmoniums of our manufacture possess many valuable improvements not to be found in any other instruments of this description, among which is the peculiar disposition of the reeds. This improvement is based upon purely scientific principles, rendering the reeds doubly sensitive as much less liable to become deranged or get out of order.

For full description of Picollo Pianofortes and Harmoniums send for descriptive catalogues.

PRINCE & CO'S

Melodeons, Double reed School Organs,

and Organ Melodeons.

Being the exclusive agents for the sale of these celebrated instruments in California, we are prepared to furnish them at the catalogue prices, sold at the warerooms of the manufacturer in the East. The assortment comprises twelve different styles of instruments ranging from $60 to $425 each. Illustrated catalogues, with full description and price of each instrument annexed, will be furnished on application.

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartets, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair true," "Auril Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 825,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100. cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100: clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2. are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents, $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS,

No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc. Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc Price 5 cents single, 50 cents per dozen, $3 per 100, postage 1 cent each.

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Cull. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2. are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

8 ALLEN & SPIER, SAN FRANCISCO

ELECTRICITY

THE

GREAT REMEDIAL AGENT.

Electricity as a Remedial Agent has, until recently, been but little known. An Electric Battery has been a terror from childhood up because a little Battery gave a "start," and the thunder storm killed by lightning. Now it is better understood, and is and will be the sovereign remedy for many diseases heretofore considered incurable. The following series of articles and statistics, with facts and proof of the virtue of Electricity are worthy of attention. When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulations of the poisons which constitute disease. A great cry went up from the interested in the continued supremacy of the old system of one poison to cure another, that Electricity, as a Curative Agent, had been tried and had proved to be of but little if any value—thinking, poor souls, the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients there were those who were diving into the science of Electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks and all by the *Improved Instruments* of Dr. J H Josselyn, Resident Physician at the Electropathic Institute, 645 Washington street, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic System. From early morn till late at night, his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services.

The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed is Rheumatism, none has given the honorable practitioner more trouble to relieve, and no one has pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic System in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of a relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

We allude to that kind of disease paraded by quacks in the journals of the day, a trouble which was never cured by medicine, only a little strength imparted by the use of nostrums. The poor victim is kept taking medicines and paying for them until his last dollar is gone and then, as soon as he undertakes to work to obtain more funds, the trouble comes back in all its loathsomeness. To this disease Electropathy is peculiarly applicable, its action being upon the spermatic nerve, strengthens the secretory organs, and at the same time, creating an equilibrium in the system, thereby preventing an elapse.

We dwell upon this disease because it is the bane of the youth of California; and one about which there has been more deception used than all others put together. It is not necessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present very few instruments in the world that can be depended upon. A good Instrument costs very heavy, and cannot be purchased unless ordered, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only Instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous imposters in the bath tub line. The pure Magnetic Bath is one of the most effective aids in the removal of disease from the system, but if given at the wrong times is likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of the Bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

To Females,

the Directors would say, Electropathy is particularly applicable to your delicate and fragile systems, and to the numerous troublesome and painful diseases to which you are liable. Should you be irregular, a few treatments will restore the functions to the proper state without pain or inconvenience. Should you be weak and enfeebled, either general or local, this system imparts strength and vitality, making the recipient feel buoyant and youthful, where before they were languid and unable to enjoy the pleasures of life. One great blessing connected with Electropathy is, it purifies the system so thoroughly that it beautifies the complexion, making the coarse and freckled skin as pure and fair as possible, giving the patient a fresh and healthful look.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil foreboding and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a derangement of the nervous system, have been permanently cured by this system. The Directors, in issuing this pamphlet, do it in the hope that it may be the means of awakening the public, who have not studied into such things, to a sense of their duties, and if possible prevent those who have the care of a rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse the origin. Also, that those in need of remedial agents may know where they can find them without resorting to taking the thousand and one poisonous nostrums that are continually palmed off as sovereign panaceas for all the ills of humanity. Avoid them all, they are snares set to rob you, and to your bodily injury at the same time. The following is a list of the cases which have been successfully treated by the *Electropathic System*, at the Institute, during the first four years of its establishment. The record is good, and challenges admiration of the world.

Name of Disease.	No.
Rheumatism	1580
Neuralgia	1492
Dyspepsia	1467
General Debility	1410
Fever and Ague	1382
Dumb Ague	1210
Bronchial Affections	1106
Asthma	1049
Female Irregularities	1022
Mercurial	938
Scrofula—long standing	922
Paralysis	890
Disease of the Eye	830
Catarrh in the head	705
Catarrh in the lungs	608
Liver complaints	600
Incipient Consumption	532
Panama Fever	563
Deafness—total and partial	480
Mental Derangement	471
All other—and among which is almost every nameable disease	2,186
Total	21,373

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit. Let them go, they will not be missed.

Persons seeking remedial assistance, may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of an subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface, by its energy, while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon mercurial diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity forces itself out of the body. This result has been arrived at by testing the water after an Electro Magnetic Bath. After such tests have been found in the water the patient is not troubled any more with those pains peculiar to the disease. In all other cases it forces to the surface and is washed off by the bath. The whole system in its application is a luxury, there being no pain or inconvenience attending upon it, but the reverse in the case, being one continued pleasure all the time. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES.

SAN FRANCISCO, April 16, 1860.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied with chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN GALLAGHAN.

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this eighteenth day of April, A. D., 1860. P. BARRY, Notary Public.

The undersigned takes this method of acknowledging publicly the benefits he received from the treatment applied to him at the Electropathic Institute, while suffering under a terrible infliction:

This is to certify that I have been under Electropathic treatment at the Electropathic Institute, 645 Washington street. When I applied to Dr. Josselyn I was cramped up with rheumatism, and also had the coast agua. So bad was I that, without relief, I don't think I could have lived more than one week. The Doctor, with his instrument, relieved me the first treatment from all pain, and perfectly cured me of all disease in twenty treatments, without the use of medicines. I cordially recommend all afflicted to patronize this Institute, for it is truly a blessing to the afflicted, and the operation is very pleasant. I wish to thus publicly thank Dr. Josselyn for his care and sympathy.

JOSEPH SEGER, of Bolinas Bay.

September 19, 1860.

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this 19th day of Sept., A. D. 1860. P. BARRY, Notary Public.

SACRAMENTO, Oct. 10, 1860.

DR. JOSSELYN—Dear and Honored Sir: You requested me to let you know how I feel after being at home three weeks. Well, sir, I have been here a little over two weeks and there is no return of that very unpleasant trouble. My sleep is sound, and there is no disturbance of the regular laws of nature. I feel as strong as I ever did before bad habits had weakened my system. Not only is the general debility entirely disappeared, but the local trouble has gone. I feel so strong that there is no fear of its return. Considering that you only took one month to cure a disorder of seven years standing, I think your system almost miraculous. Accept my sincere thanks, and publish this if you please. I have sworn to it, as you will see. C. BOWMAN.

State of California, County of Sacramento—ss.

Subscribed and sworn to before me, this tenth day of Oct., A. D., 1860. CHAS. HART, Notary Public.

HORNITAS, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it; and Mercurial pains as you state them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you would cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can, by spreading your fame up in these parts.

Respectfully yours, GEO PERKINSON JR.

To J H Josselyn, M. D., Resident Physician, at the Electropathic Institute

NEVADA, Nov. 8, 1860.

DEAR DOCTOR: Pursuant to agreement, upon my arrival, I sit down to pen you a few lines in acknowledgement of the great service you have rendered me, in relieving me of that painful case of neuralgia and rheumatism. When I look back and see the gallons of medicines I have swallowed to no purpose, and then to think how soon you cured me, I am astonished. You were only twelve days performing a cure of the trouble, for which I had taken medicine over six months. Dear Doctor, if you could see the wonder exhibited by my friends, who can hardly believe that a cure was performed without medicines, but here I have been cured, and I have not taken a drop of medicine from you, nor from any one else, while being treated by your splendid Instrument I shall try to show my gratitude by sending every sick man I come across to you. Yours, till death,

FRANCIS GARLAND.

To J. H. Josselyn, M. D., Resident Physician, Electropathic Institute.

State of California, County of Nevada—ss.

Subscribed and sworn to before me, this eighth day of Nov., A. D., 1860. P. SPAULDING, Notary Public.

YREKA, Nov. 10th, 1860.

DR JOSSELYN—Dear Sir: Your letter, dated October 15th, is before me. You wish to know how my bronchial troubles are. Now, Doctor, that looks a great deal like a joke. I once had such an affection of several years' standing, but thanks to your natural mode of treating disease, it has gone to be numbered with the things of the past. Since my return I have not felt the slightest trouble from it. When you pronounced me well I did not expect to ever hear from it again. Any one who sits under treatment of that *Improved Instrument* of yours will have the same feelings. It imparts vitality to the system so rapidly that confidence is at once established. I have to thank you that you did not refuse to treat me because I could not pay you the whole of your reasonable charge; inclosed is the balance due you, and God bless you for the kind treatment I received at your hands.

Yours, ever grateful, WM. GARDNER.

State of California, County of Siskiyou—ss.

Subscribed and sworn to before me, this tenth day of Nov., A. D., 1860. B. F. WELLITS, Notary Public.

This is to certify that I, the undersigned, was troubled with dumb ague accompanied with rheumatism, very badly. My disease was taken in Washoe. After having exhausted medicines without benefit, I applied to Dr. Josselyn, at the Electropathic Institute, on the first day of November. After taking twenty treatments with his Improved Electropathic Instrument I am perfectly cured, having been entirely relieved of all pain or inconvenience. I feel as strong as I ever did when in the best of health. I cheerfully recommend all afflicted to his care, as being the best physician I ever became acquainted with. One great advantage, he uses no medicines, but cures by a process which is perfectly natural. The time occupied to my case was thirteen days.

D. O. HARRA.

November 14th, 1860.

State of California, City and County of San Francisco—ss.

Personally appeared before me, D.O. Harra, and subscribed and sworn to the above certificate, on this fourteenth day of November, A. D., 1860. P. BARRY, Notary Public.

SAN FRANCISCO, Aug. 3d, 1861.

To the Directors and Resident Physician of the Electropathic Institute.

GENS: You requested of me a certificate of the cure you performed in my case. Below I append it:

This is to certify that I was troubled with a swelling which commenced in my ankles, and gradually extended upward until it effected my whole body. I sought the best medical aid in New York and Boston, and they all pronounced it dropsy. Hoping to retrieve my health, I visited California in February last. I consulted the Resident Physician at the Electropathic Institute; and now, after five months of treatment, and waiting to see its effects, I am pronounced well by competent judges. It did not take but three months of treatment to cure me, but I waited to see that it did not return. I feel perfectly assured from what I saw while under treatment that Electricity as applied at the Institute will cure any disease to which the human family is liable.

Now, gentlemen, you can make what use you please of this certificate. With my thanks to the Resident Physician for his kind attention, I subscribe myself,

Your thankful patient,

MRS. C A CARLTON

Opinions of the Press.

The advantages of electricity as a remedial agent, are universally admitted by the medical and scientific world. It requires, however, experienced skill to apply this remedy efficiently, and this skill of application is possessed in an eminent degree by Dr. J. H. Josselyn, of the San Francisco Electropathic Institute. Particulars of his method of practice can be obtained by reference to his advertisement in another column. The Doctor is well known to us as a scientific gentleman, and an ardent devotee to his profession. He is no pretender, but has conferred incalculable benefit on those who were so fortunate as to seek relief at his hands. For those who desire speedy and permanent relief from the rheumatic pains, so prevalent in this region, we can recommend no surer remedy, than a visit to Dr. Josselyn at his rooms in San Francisco, No. 645 Washington street.—[Placerville Republican.

ARE YOU SICK?—We wish to say a word to those that are sick. We have in this city an institution known as the Electropathic Institute, situated at 645 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician who has no superior in the city. He has been in charge of the Electropathic Institute for several years, and has been uniformly successful in his treatment of the numerous patients that have placed themselves under his charge. The Electric treatment will cure many diseases that cannot be reached by any other mode. Dr. Josselyn gives his personal attention to all of his patients, and is always ready to give advice to those that may call upon him. His charges are very moderate, and we cannot do the sick a greater favor than to recommend them to call on him before placing themselves in charge of another.—[San Francisco Daily Journal.

We call the attention of our readers to the advertisement of Dr. Josselyn's Electropathic Institute. Voluntary and unsolicited we make the following statement, proving its benedicent effects, particularly in rheumatic cases. Some months since we were on an editorial trip, visiting the mountains. The stage-coach upset, and landed all the passengers, including the writer, below in the valley, where the Deer Creek overflowed by receiving the additional material, extraneous to its usual contents. For some hours exposed in our wet clothes, to night wind and weather, we soon felt the effects of the accident in the mountains—pains in the back, hip, and legs, so much so, that for weeks we hardly could walk. Treatments of all kinds were applied but without avail, until our attention was called to the Electro-galvanic Baths and appliances of the above Institute. Thank God, after two weeks we have been fully restored, and enjoy now the free use of our limbs and body, as fully as previous to the involuntary bath in Deer Creek.—[Dr. H. Bibb, Ed.—True Pacific Messenger.

ELECTROPATHY.—Electricity has long been classed among the most effective medical agents. It possesses great advantages over the systems of therapeutics heretofore relied upon, as it reaches more certainly the seated disease, especially in nervous or rheumatic complaints. The Electropathic Institute, No. 645 Washington street, under the charge of its able Resident Physician, Dr. J. H. Josselyn, has attained a well-merited celebrity for the many cases which have resulted favorably from the skillful application of this invaluable remedy.—[Daily Morning Star.

A GOOD INSTITUTION FOR THE SICK.—One of the very best places in the city for the care of the sick is at the Electropathic Institute, 645 Washington street. The establishment is under the charge of Dr J H. Josselyn, a physician of great experience, and no one can do the sick no greater favor than to recommend them to give the Electropathic Institute a trial.—[Weekly Journal. 12

The California Farmer.

SAN FRANCISCO?

FRIDAY .....JUNE 10, 1864

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address PUBLISHER CALIFORNIA FARMER, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the FARMER OFFICE. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Send along your Greenbacks,

Don't be afraid to send along your Greenbacks. These we TAKE AT PAR in payment for all back dues to the FARMER for subscription. So send them along, now is the time. This is a better speculation than mining stocks, for it is so pleasant to read a newspaper when one knows he has paid for it, the digestion is better and a man feels happy, and, if happy, then he feels rich. So pay prompt and you will "strike a lucky lead."

New Comers—Homesteads.

THOSE New Comers to our State can always be sure to find valuable Homesteads, already highly improved, and for sale on favorable terms, by applying at our Office. New Comers who want important positions, as Superintendents of Farms Millers, etc, can always be informed of favorable chances.

Transactions of Agricultural Societies.

WE would ask of those Societies in the Atlantic States and Europe, to whom we send our Journal, to send us the transactions of their several Socities, so that we may give the benefit of their perusal to visitors, from the several States, who are callers at our Reading-rooms. By this means we can lay before them the progress of Agriculture in their former homes, and thus advance the interest of both Atlantic and Pacific States.

Clerk and Assistant Wanted.

We want an active intelligent business clerk in our office. We want a person who has a knowledge, to some extent, of agriculture, horticulture, the science of botany, and the seed business. A man of correct habits, and willing to give his time to business, closely; a young man free from incumbrances on his time so that he can apply himself to business wholly. A knowledge of the languages would be desirable, and of mineralogy, also. Application only to be made between the hours of 4 and 5 p. m., and by none who cannot give the best of references.

TO AGRICULTURAL SOCIETIES ABROAD

Exchange of Seeds, Books, Etc.

HAVING established large and spacious Reading Rooms, in this city, which contain Libraries, Cabinets, and hundreds of Newspapers, all free to those who wish to enjoy the benefits thereof, we now ask coöperation from all Agricultural Associations in the Old States and Europe, for the *Exchange of Seeds, Specimens, Books, Etc.* We shall be happy to reciprocate any and all favors, and comply with any direction made to us connected with such an enterprise.

TO OUR PATRONS AND FRIENDS AT BENICIA, VALLEJO AND SUISUN VALLEY.—This number of the FARMER will prove particularly interesting to you, we know, as it contains a sketch of the Exhibition of the Collegiate Institute, and the most admirable Address to the Graduating Class, by the Rev. S. Woodbridge, and also two Letters from New York by Professor Sarles, formerly connected with this College; the letters of Mr. Sarles are full of that true patriotism, that is so much needed now.

TO READERS AND CORRESPONDENTS.

We have a valuable Essay on Electricity, which will appear next week.

OAKLAND.—A sketch of Oakland, and it its improvements, crowded out; will appear next week.

BENICIA BARRACKS.—Our visit to this place, we shall give in our next. A *Sketch of Benicia and her Improvements*, will also appear.

"Sister Clare," and "Single Blessedness," received and accepted. Will appear soon.

The "*Three Witnesses*, or Perjury Unmasked," *received*. Shall place them before the *Inquisitorial Power*, if O K., will put them on the Rack.

HOW TO ADDRESS LETTERS.—We would earnestly request our patrons and friends, and all who correspond with this office, to be careful how they address their letters. Those for the editorial department, should be addressed to Col. Warren, Editor, and those on business to Warren & Co. And be sure to have each and all addressed to the California Farmer Office, No. 320 Clay street, San Francisco, as we do not receive our letters regularly, many being mislaid, or going to persons of similar names in our city.

WOOL RAISING.—We hope our wool-growers will not be in haste to dispose of their wool. Market East, and in Europe, is such as to promise a better thing for them by and by. If they will call at our office with their samples, we can give them some valuable information.

Thunder Away with Your Big Guns.

Up with the Stars and Stripes. Ring out a Merry Peal of Bells, and let the word go forth "*The Union Now and Forever, One and Inseparable.*"

"Forever float that Standard Sheet!
Where breathes the foe but falls before us?
With FREEDOM'S SOIL beneath our feet,
And FREEDOM'S BANNER streaming o'er us."

Yesterday about noon the booming cannon told the glorious news of the Union Spirit that prevailed at Baltimore, the result of which, as it passes over the wires, will electrify every man's heart, and its influence will be to our country like a mighty victory. On the receipt of this news, up went the Glorious Stars and Stripes, and soon our city looked gay and glad with the *Banner of Freedom waving o'er us.* Men's faces *shone out*, all were glad, all hopeful; it comes to us an omen of good news at hand. Let us be thankful to God for the *Loyal Spirit* now circulating in the hearts of hearts. Let us prepare for the coming Fourth of July, for we shall hear glad tidings and they will be of great joy to our people.

The result of the Baltimore Convention is the nomination of ABRAHAM LINCOLN, of Illinois, for President, and ANDY JOHNSON, of Tennessee, for Vice President, by ACCLAMATION!!! This is one of the Greatest Triumphs, Politically and Nationally that has transpired since the war began. The Life History of Abraham Lincoln is known. Such a President and Vice President, for the next four years, will put our country into a safe position. We give a brief sketch of the life of Andy Johnson, from the Bulletin:

"Andy Johnson, Vice-President—fair match for Abraham Lincoln, President. Johnson is peculiarly one of the people. He was born at Raleigh, North Carolina, in 1808, lost his father at 4 years of age, at 10 was apprenticed to a tailor, and at 17 he set up for himself in that business. He learned the alphabet on the tailor's board, and diligently employed his evenings, after his work was done, in learning to read. To write and cipher he learned after marriage from his wife—in this respect repeating the experience of many enterprising Southern youth unblessed with the advantages that wealthy parentage confers. Under the tuitilage of his wife he made rapid improvement. In 1826 he removed to Tennessee, taking up his residence at Greenville, and the good people of the village elected him first Alderman, afterwards Mayor, and then member of the Legislature. In 1840 he was chosen one of the Democratic Electors of the State. In 1841 he went to the State Senate; in 1843 to Congress, and stayed there till 1853, when he was elected Governor of Tennessee, and in 1855 re-elected to the same high place. In 1857 he was sent to the United States Senate for the full term of six years. When State after State seceded, Johnson girded himself to save Tennessee from the folly. Throughout the war he has been a bulwark for the Union. When country or slavery, one or the other, was to be sacrificed, he urged that there could be no hesitation on such a question, and went in for the abolition of slavery and for every means to save the Union. His influence more than that of any other border State man saved the border States to the side of liberty, loyalty and the Constitution. His nomination strengthens the ticket, and increases the assurance that Lincoln will be easily re-elected."

The enthusiasm and joy that pervaded our city on the *reception* of the National Acclaim for ABRAHAM LINCOLN, AS PRESIDENT, increased rapidly, until the business houses had closed and the people at liberty, when it burst forth into Bonfires and Illuminations, and the gathering of the masses at our Public Halls, where it could be safely said that *Tens of Thousands* of our people came out into the streets and public places to manifest their exceeding joy at this most auspicious event. Platt's Hall was crowded, at an early hour, to repletion. The Hall in front and the streets, were made impassable for the dense throng. The roar of artillery, bonfires and the shouts of happy thousands were the clear and undeniable proofs that the hearts of our people are sound to the core for the Union. The Addresses were full of the genuine fire of Patriotism and if any treason-hatchers or traitors were among the crowd, their faintest hopes of success must have *yielded* to the evidence before them, that there is no *earthly* power that can aid them in their unhallowed work, and *Heaven* is clearly on the other side. Confession of sins and repentance, like that of *Peter*, may save some, the rest must share the fate of Judas Iscariot. California, by her noble Patriotism will send tidings of our loyalty to the Parent Government, that will brighten her escutcheon of Fame, brighter than the shining ore of her mountains. California will be true to herself and the country.

Extra Farmers—Complimentary.

We send Extra Numbers, of our FARMER, to many distinguished people of this State, and abroad, in the hopes that all may interest themselves in our Journal and the cause it pleads. We shall be very grateful for all the kind coöperation we can have from home and abroad. Those of our friends who may be disposed to aid us by forming "Clubs," or by becoming subscribers, we shall be most happy to receive them, and shall be pleased to welcome them to our Hall, Reading Room and Library, where we know we can show them much of interest to them. Those who feel a desire to peruse Agricultural and Scientific papers from other States and Europe, will find them on file at our Rooms, where all can come freely. Our Brother Editors, especially from the country, are cordially invited.

ARE YOUR BOOKS AND PAPERS SAFE?—Fire, Burglars and Safe Breakers are among the many dangers that threaten the property of our merchants. But if they are wise and procure the "Lillie Safe," they may laugh at these kinds of calamities, for Lillie makes them *safe*. See particulars in our columns.

Drought—Short Crops. Good Cultivation Always Pays

It has ever been the motto of this journal to urge the highest state of cultivation in every department of agriculture, knowing full well that no permanently good or great results can ever flow from any other course. We have noticed a great many paragraphs going the rounds of the newspapers, where the condition of the crops is given. Sad stories are told of short crops, ruined farmers, etc., etc. These are *results*, but we learn but little of the *causes*. What is now wanted most, is the clear and explicit statement of the causes of short crops, the whys and the wherefores.

We are among those who do not believe that the dry season alone could have produced a famine price for grain. Nor do we believe that the present dry season alone need have greatly reduced our crop; for had our grain-growers but have given half the attention to the study of their own legitimate business—that of farming—that they have to "feet," the result would have been better crops. The fact is, our farmers are asking too much of Nature and Providence, and Nature is now rebuking them for ingratitude.

What would be thought of the Principal of a large manufactory, or a large farm, if he should ask his men to work day after day without food? And yet farmers ask the earth to give of its strength and substance year after year, without giving back to the earth the food necessary to sustain the crops put upon it.

The continual cropping the earth year after year with the same product, never returning anything back, is downright robbery—a violation of all the laws of nature, good sense, or wisdom. When will farmers, when will grain-growers reflect upon the importance of a change in these practices? When will they commence a series of better plowing, subsoiling, or a rotation of crops? From all parts of the State we hear of good crops, where any of these things have been practiced; and where they have not there is the usual cry, *short crops!* Yet, what else should be the result? Where nothing is given, nothing should be the result. And yet grain-growers expect a harvest year after year from the same land, even where they have never given it a particle to enrich or restore it to fertility, though they have cropped it for years. Is this just? Would the same persons expect the strength of hired men, horse, or ox, to whom he had never given food?

Farmers may say they cannot manure 100, 500, or 1000 acres, for a grain field. Yet they can do it by plowing in a green crop, planting it one or more years with corn, potatoes, squashes, or have it summer-fallowed.

Farmers say, "Our land does not yield so well as formerly." That is true; but where is its strength gone? It has been overworked, and it cannot yield as formerly, until its strength is restored again, any more than a man who is exhausted with labor and famishing with hunger can work, until he is refreshed with food and sleep.

Our farmers and grain-growers, with the well established fact before them, that we live in a dry climate, and that we are asking Nature to change laws, and give us a crop at a period of the year when the earth demands rest, should do the best they can to assist Nature to do this work. This they can do by a judicious system of cultivation, or by using those lands and of that character of soil as are adapted to the crop and the climate.

If, in a dry season, stockmen drive their horses down on the Tules, or up to the mountains, then cultivators should change their base of operations; and we ask the reader's attention to the fact, furnished us from McCall's Ranch, near Antioch, where 80 bushels of wheat per acre will be the crop this year—this *dry* year—and barley that will be as much or more. The samples of both can be seen at our office. "But this is new land," says the reader, "and that always yields more." Now we will give some other facts here of another kind. We had the pleasure of a visit from one of our subscribers from Monterey County—M. O. Ireland, Esq. And what says this cultivator? He gives us his experience, and that is, all his land pays. A field of 70 acres looks well, and will yield well, and would have been better had it been planted earlier. It is good, however, but planted on a field that had been used as a rotative field—where last year was grown potatoes. The wheat will give *fifty bushels per acre.* Why this heavy yield this season of drought? Because it had a root crop under soil last year. And, says Mr. Ireland, "*I plow my land for potatoes three times, and deeper every time, and my grain-land every year, deeper and deeper; and my crops are as good as any for five years.*" Let our farmers and grain-growers note these facts. Here we have facts that rotation of crops, deep and repeated plowing, will give heavy yields, even in a season of drought. Now, will farmers be so good as to remember these facts. *We know they are so.*

Mr. Ireland informs us that the rains in March had a wonderful effect upon the crops; and the barley and potatoes, where properly attended to, are as good as for many years past; yet that great and fertile tract of land, known as the Pajaro Valley, will not send forth those great crops of former years; and why? They have been *worked to death*, and cannot yield until they are fed and have rest.

We end as we began. Good results, or great results can never be expected, except by a judicious system of rotative crops; and until this is done we must suffer the penalty of poor management and short crops.

Reports on Colleges and Schools.

PROFESSING to be the warm friend of the cause of Education we shall always be glad to receive, from every part of our State, Reports of all Colleges and Schools, together with such Essays as shall tend to advance Literature, Science, Morals or Social Life; and shall be especially grateful to our fair correspondents for communications for our "Home Department," of such Essays or subject matter as they may please to forward us, as connected with Schools and Homes.

The Pacific Railroad.

By the advertisements of this company, they now have the road open to New Castle, *thirty-one miles* from Sacramento, and only three and a half from Auburn, and are now carrying passengers and freight in great numbers and quantity, and receiving a very handsome income. Every day revenls to our people the great and increasing advantages that must result to our State from the opening of this road.

The Supreme Court of California have now decided in their favor, in relation to the subscription of San Francisco County Bonds. And the Supreme Court have issued their *pre-emptory order* for the city bonds of *six hundred thousand dollars* in aid of this road. This is as it should be. This will materially aid the road, and hasten on the great work, and carry the iron road rapidly on into the mountains. They, in return, will send over this road gold and silver enough in a few years to lay a railroad track of *gold* from Virginia City to San Francisco, and pay to stockholders, besides, the biggest dividends ever paid on railroads in the world. Such is our belief.

Now is the time to take a pleasant trip to Auburn and vicinity. Go, try the Pacific Railroad; the work is perfectly done.

Worms in Raspberries.

HAVING seen it reported that Raspberries, of the present year, contain *worms* within the berry, we have taken some pains to examine the fruit, and find that it is almost a *universal thing*. Each berry containing from three to ten of these little "mites." They are *too small* to be seen by the naked eye, yet an ordinary pocket microscopic glass will discover the "little fellows" sporting merrily in the nectared cup of this delicious berry. The question naturally arises, shall the fruit be eaten—or shall we reject it altogether? This is the result of our examination. After serious reflection, we come to this conclusion: The peculiar condition of the season is such that a bad cultivation, perhaps, has induced nature to hide these little animalcula in the berry, as a peculiar medical "antiseptic," against any Summer Complaint, and a good-sized dish of these berries would not contain more than *one thousand of these little fellows*, and if we did not know they were there we would not mind them. So we advise those who are nervous about such things, to smother the fruit with sugar and cream, *shut their eyes*, and eat away. These little winged creatures are as harmless as "shrimps," and dont look half as *ugly*, and we believe will not trouble the stomach half as much. So our advice is "*eat away*," the more you eat the *livelier* you will be. If you dont believe us, examine for yourselves, and then eat to your heart's content.

Crops in Napa—Wheat, Corn, Etc.

[THE following items we take from a private letter, they show that all we have said about crops, is about the right mark. Good word comes from many quarters, however dry it may be at others.]

"We shall have full two-thirds of a crop of wheat in this valley; some of it is now ready for the reaper. About half the usual crop of hay has been cut. The little barley that was sown has done well, and will yield full as much, if not more, to the acre, than common. The corn promises well. Mr. Amesbury, west of town, has some of the finest pieces of corn I ever saw; it does not seem to know anything of the drouth. Col. Allen also has a fine piece, and there is more in the vicinity. Napa has a more lively aspect, of late, than common. Many people are visiting the valley and its famous springs. We say to all, come up and enjoy yourselves, at our famous Calistoga Springs."

Barley, Wheat and Grasses on Tule Land.

We have received at our rooms, from McCall's ranch, three miles from Antioch (Sherman Island), 1 stand of wheat, containing 90 heads, very extra quality; several stands barley, and a fine bunch of meadow fescue, three feet high. This grain was planted upon the top of the soil, or *ashes* of the tule burned off, then the grain trod in by sheep. Some was brushed in, some harrowed in; the present crop promises an enormous yield, some estimate it as high as *eighty bushels per acre.* This trial of tule land, for grain, is also a great point gained; they are *now* sowing grain, even in June, believing they can grow *two or more crops of grain per year.* These samples were kindly presented to our rooms by Thomas Hill, Esq, of this city, who brought them down from the ranch. There are several very superior lots of land and ranches, in this vicinity, and they are all doing well. John McCall, Esq., from whose ranch these specimens came, is very successful in his orcharding, gardening, grain, bees, etc. Bees do very well. We shall take an early opportunity to visit and examine these tule lands, which must eventually become some of our very richest, most productive and most profitable ranches in our State.

CROPS IN TUOLUMNE COUNTY.—Pleasant news is sent to the Stockton Independant from this region. The writer says; "The verdant valleys, rich with the choicest gifts of nature, present a charming contrast to the scorching barrenness of the plains; for never have the mountain ranches presented a better appearance or a more luxuriant crop than at present, and the consequent anticipations of the mountain farmers are as hopeful as those of the plains are despondent. This great contrast is to be accounted for in several ways. In the first place, the rains here have been more copious and and frequent than on the plains, and again the valleys surrounded in many cases by high mountains, obtain the benefit of the rain drawing gradually from them, and in many cases partially shaded from the morning and evening sun by the same means."

[In addition to this the mountain and hill-side, contain more Virgin soil—it has not been overworked.—[ED. FARMER.

A Gold Watch Earned.—The money saved by patronizing the People's Line will buy one of Tucker's splendid watches.

What is Music? No. 2.

"The man that hath not music in himself,
And is not moved with concord of sweet sounds,
Is fit for treasons, stratagems, and spoils.
Let no man trust him."

So says Shakspeare. And the immortal Milton says that music is the

"Untwisting all the chains that tie
The hidden soul of harmony."

Tis said—

"The heart is a harp of a thousand strings."

And the wonder is that it keeps in tune so long. Those who love music, and those who understand it, are not often privileged in this country, to have what Milton say, those "chains that tie the hidden soul of harmony" unloosed. It is not often that the finest chords of the soul are touched. They are not unloosed because the *master hand* has not touched the keys.

Many will remember with a saddened pleasure, how the true interest for music was awakened in our city, when the lamented Starr King gave his splendid oration on Music, at Platt's Hall, Feb. 10. That description of the power of music vibrated with an electric thrill upon all the chords of the "Harp of a thousand strings," in many a breast.

Who, that heard that oration, does not remember the orator's description of the wonderful melodies that played around the soul of Handel, were he was composing his great Oratorio of the Messiah. And as Starr King described the beauty and sublimity of that greatest of all musical compositions, in the way he alone had the power to describe, who did not feel that music of a higher order, than is the common lot of man, dwelt within the orator's soul. We remember that peroration of King's eloquence in speaking of Handel's Messiah, for we *felt* every word he uttered; for it had been our good fortune to have heard *that* Oratorio given as it has rarely ever been given since.

It was our happiness to be present in Exeter Hall, London, December, 1846, on the occasion of the performance of that Grand Oratorio, Handel's Messiah. With Madame Anna Bishop, then in all her fresh glory, as Prima Donna, and assisted by over 500 of the best musical talent of England, there in that noble hall, with such an array of talent, with the largest and finest organ of England, we heard Handel's Oratorio of the Messiah performed. Then and there we enjoyed to the full that great masterpiece of all harmonies, so truthfully described by Starr King, on the eve of Feb. 16 last. Then and there we felt what music was, and what power it had upon the soul; and when that grand organ swelling its mighty voice in the great Hallelujah chorus. We felt there was a power in music that is not called into being by any ordinary performance. That organ shook that majestic hall, as the full chorus broke forth, even the very pavement in the street trembled. Tears were the best impression of the power we felt that night in London; and many around us were affected in tears by the grandeur, glory, and power, of that Oratorio, whose words are so full of sublimity and beauty, and the music of which is so full of majesty and power. And when we listened to the eloquent oration here on these shores, we lived over again the joy we experienced in that scene in Exeter Hall, London, nearly twenty years ago, and our heart went out in gratitude to the Orator for the exquisite pleasure we enjoyed.

California is destined to be a great musical emporium. There is here, happily, an increasing love for music, from which we draw a happy omen, when we see so much in the social life that causes fear; for music will come in as a great harmonizer, and restore again the love of the *Good, True, and Beautiful.*

We here copy one of the finest descriptions of the power of music we ever read. We take it from a private letter of one who is now no more. The writer copied it from her private journal for our especial use. It was a description of the effect produced on Lizzie by "Light's piano playing," dated Aug. 16, 1861.

☞ "With blow after blow upon the instrument, and his whole force, he planted large columnal masses of sound like the Giant's Causeway. The tempest rained, hailed, thundered, moaned, and shrieked round those Saratic columns, in every cry that the tempest could utter in its wildest paroxysms of wrath. Then we were borne along through countless beauties of rocks, and sky, and foliage, to a grove by the side of which was a fountain, that seemed one of the eyes of the earth, so large and darkly brilliant was it, and so deep and serene. Here we listened to the voices, or rather the songs of birds, when the wind by degrees diminished, fluttered, and ceased."

Thus one who truly loved music described its power, and while copying these words, we again ask, What is music? and to what extent its power on the soul? That "Harp of a thousand strings." "*We must play on sweet keys would we keep them in tune.*" The last quotation is from one whose harp is now *tuneless and strengthless*; even the case has been wafted upon the waves of time a "wreck in life" on a barren shore.

We shall be glad always to have the friends of music favor us with "thoughts in tune" at any *time.*

SUPERIOR SEA ISLAND COTTON SEED.—We have 100lbs very superior *Sea Island Cotton Seed*, the best ever imported into this State. The crop of Sea Island, from which this seed was taken, was so superior that it sold in New York for about *one dollar per pound.* The seed is put up in 4lb packages and for sale at the FARMER OFFICE.

LATEST.

A dispatch from General Sherman, dated Chattanooga, June 7th, 6 P. M., says: "I've been to Allatoona Pass, and find it very admirable for my purpose. It is the gate through the most eastern range of the Alleghanies, and it now becomes as much so to us as it has been to the rebels—easily defended from any direction. The roads hence from Allatoona south into Georgia, are large and good, and the country more open." The dispatch further states that the enemy is not in our immediate front, but his signals are at Lost Mountain, on the Kenesaw.

Dispatches from Gen. Canby to the third, report favorable satisfactory progress in reorganizing his command. STANTON.

A dispatch from Mr. Dana, at headquarters, at 8:30 last night, says the Richmond Examiner of the day speaks of the defeat of General W. O. Jones by Hunter, twelve miles beyond Staunton. General Jones was killed on the field. His successor in command retreated to Waynesboro, and now holds the mountains between Charlottesville and Staunton. The paper further states that no hospital or stores were captured by Hunter. Another dispatch announces that our forces occupied Staunton. STANTON.

ARTICLES RECEIVED AT THE CALIFORNIA FARMER EXHIBITION ROOMS, No. 330 Clay Street.

The Music.—The "Waters" of the musical firmament, from New York, sends us another and fine collection of new music, to keep us in tune. Among the new pieces are the "Little Ballad Girl," and "Leave me with my Mother," two beautiful songs, from that excellent composer, Stephen C. Foster. These are to be added to the Foster Melodies. The "Dying Drummer," "This Head never Struck me Mother." The music of those two is by Mrs. Parkhurst, whose many fine songs do her great honor. Also the "Tender Alliance Schottische," by the same. "Les Lanciers," the new order of this excellent dance is now added by Johann Mouck to his collection of "The Beauties of Terpsichore." These, with other pieces of rare and beautiful music, came to us from Horace Waters, Esq., of New York, who is sending world-wide his collections of music.

Another New Song.—We have been favored with copies of that grand patriotic song, "The National Rally," the words of which are by Eliza A. Pittsinger, and the music by Martin Simonton, Esq. This inspiring song for the Union heart has been published in the Flag, and has been admirably sung by Signor Abecco, and by Wambold. It should be the song of our people, to lead them on to victory.

We have received from the Rev. Mr. Chase, of Petaluma, a minature or bird's eye view of Petaluma, presenting a very pretty picture of the place. Petaluma is one of our most prosperous inland towns.

We have received a fine collection of grains, wheat, barley, etc., from McCall's Ranch, near Antioch. The samples are the finest we have seen this year, and give promise of the best crop in the State. See mention of those grains in another column.

Exercises of the Collegiate Institute at Napa City.

The numerous Public and Private Colleges and Schools, which are now having their examinations, and closing their Spring Terms, make the month of June the *Literary Month* of the year. We regret we could not be present at all the various Colleges and Schools, from whence we have received kind and courteous invitations; but not having the power of ubiquity we are obliged to deputize some kind friend to aid us in this work. From our kind correspondent, "Clio," we give the following sketch of the closing of the above named College, which we are happy to know is winning golden opinions from the people of Napa county:

EDITOR CALIFORNIA FARMER:

The principal attraction the past week has been the examination of the students of the Collegiate Institute, and their exhibition given on yesterday eve (June 3d). The term just closed has been a decided success. A larger number of pupils than ever before have been in attendance, who, taught by such an able corps of teachers as Prof. W. S. Turner and Lady, Capt. Allen, Misses Chase and White, must, of a necessity, form an institution of learning, that the county, yes, the State, may well be proud of. This is now our pet school, and attracts the attention of the whole community.

The examination was conducted with the utmost rigor, and the several classes gave evidence of the most thorough, complete, and practical instruction.

The entertainment on Thursday eve., at the Methodist Church, was a grand affair. I know not why the Church was selected for this purpose instead of the equally spacious hall of the college, unless it might be to give the large numbers who could not gain access to the room, a chance to look through the windows, which could not be at the college hall, it being in the second story. It is a sufficient index to the interest the people take in the college and its doings, to see them convene to witness the closing. Long before dark the Church was filled to overflowing, and gents were passed out, to give room for the ladies to pass in.

The exercises were commenced with prayer by Rev. W. S. Urmy, of Suisun, and consisted of declamations, orations, songs, coloquys, instrumental music, etc., the actors leaving little room for criticism. An essay, by Miss A. White, entitled "God made the Country, Man made the Town," is worthy of especial notice. [We shall be happy to publish this, as well as other essays from this college.—ED. FARMER.] It is seldom one has the pleasure of listening to such beautiful thoughts, so well expressed. "The Shepherds Tell me," sung by Misses Buffington and Gridley, and Mr. Gregg, is a gem, and was well performed. The dialogue, "Flowers and Music in a Sick Room," by the Misses Buffington and White, was superbly rendered, and its sentiment the most beautiful. I believe it is one of the greatest pleasures to which mortal man is heir, to listen to those inspiring thoughts that raise his mind from earth to heaven, and associates it with all that is pure and holy, noble and good, beautiful and true; such is the effect of "Flowers and Music in the Sick Room," as performed by the above named ladies. Prof. Julius Cæsar Hannibal brought the house down with his lecture on the 'Rights of the Caled Popol-la-tion.' 'Lea Jayense,' by Miss Chase, was magnificent. Other pieces are worthy of mention, but I fear this article is already too lengthy. The entertainment closed at 12 o'clock, and though the hour was late, the audience had been held spell-bound, and dispersed, well pleased. The next term commences on the 26th of July.

CLIO.

NAPA, June 4th, 1864.

VALUABLE CARGO.—The mail steamer, John L. Stephens, left for Mazatlan recently, with a cargo valued at over $150,000. This shows the greatly increasing trade of the Mexican ports. Machinery, merchandise and produce, with our quicksilver, were the leading items of freight.

PATENT HAT RACK.—We invite attention to the advertisement of the new Patent Hat Rack on exhibition at our office. A good mechanic can make a very handsome sum of money with this patent.

ADDRESS

To the Graduating Class of the Benicia Collegiate Institute, June 3d, 1864, by the Rev'd S. Woodbridge, D. D.

YOUNG GENTLEMEN:—In the absence of a distinguished personage, who it was hoped would have addressed you upon this occasion, the duty seems to devolve upon me,—and certainly also I esteem it a privilege, to present your diplomas. I say *privilege*, because having attended the various examinations that have exhibited your progress, ever since you became connected with the Institute, I know that you deserve, and I am pleased to be permitted to assist in conferring so just an honor. *Duty*, because in the great Republic of Letters to which we belong, every more advanced student,—though it be but in years, is bound to lend what encouragement he can, to those toiling in this noble service.

In glancing back to that long array of students, with which my memory is familiar, during a period of more than thirty years, I am impressed with their varied success. Many have utterly failed in their expectations. A large proportion hold comparatively insignificant positions. A few, only, have attained to eminence.

In searching for the cause of the difference, it does not seem to exist in the fewness of prizes offered in the lottery of life. Nor yet is it the lack of ability in the students themselves; for many a brilliant intellect holds an inferior place, while others, of minor capacity, have attained to eminence. Nor is the explanation to be found in that peculiar and mysterious arrangement of events, known as fortune, by which some persons are so prospered and others retarded. Of course every observer recognizes that Mighty Government beyond our control, many of whose decisions are quite inexplicable. Sometimes its irresistible tide sweeps us on to success and glory; and then, again, it bears us back to grief and ruin. All that we can do in the former case, is to endeavor to guide our barks with discretion, lest they be dashed upon surf-beaten rocks; and in the latter, tenaciously cling to the best anchorage we can find, until the tide again has turned.

But within the range of our control, it seems to me, that the greatest error into which students have fallen, and which has ruined or retarded the majority, lies in the neglect of one of the important priciples of our profession: In the language of the schoolmen, *subjective should always govern the objective*. If the steed masters his rider, the latter may anticipate being unhorsed, or run away with. When the ship controls the mariner, wreck or foundering in the deep is very near at hand. When the elements become masters—water, or fire, or the atmosphere, or the earth, we have flood or conflagration, the tornado or the earthquake.

We are placed, every one, in the centre of his universe; the horizon extending far out in every direction. Within the range of our vision, there is much land to be occupied; means to be devised and employed, grand results to be achieved. In that universe the soul is monarch; and from the throne of Omnipotence itself falls the solemn command, "subjice et impera," subdue and control. Both the means and the end, lying outward from ourselves, are to be made tributary to us.

If now we descend from our high position, and renouncing forethought, discretion and intelligence, with inferior arms plunge into the arena, as mere combatants, that instant, defeat becomes almost inevitable. At once that man lays aside his eminence, and gives predominance to the objective in any form over himself, he enters upon the road to grief. It may be to yield himself to undue love of riches, and he is sold (and in the slang sense), to mammon. It may be to rank; and for a mess of pottage he has lost his birthright. It may be to appetite; and he will become a drunkard or a glutton. It may be to a passion; and his spirited steed, given to bear him to victory and glory will hurry him, a miserable captive into the ranks of the enemy. Even knowledge, and reason, and piety itself are but objectives, to be employed, not to enslave the soul, but to elevate it to a loftier rank, and a higher honor.

But (it may be inquired) is not such a high subjectiveness, such control, a form of selfishness? It is exactly the opposite. In scripture phrase, it is "the crucifixion of the flesh with the affections and lusts thereof."

Then is it not asceticism? Not at all. It merely places the soul in the attitude of command. It rejects nothing that is right; only it keeps all things in subjection. If any inclination is perilous, the soul will chain it, as though it were a wild beast. If there be any easily besetting sin, double guards are to be set against it, and temptation will be avoided. But for the rest,

> "No pent up Utica contracts our powers,
> The boundless Continent is ours."

But may not this disposition lead to arrogance, pride, or undue ambition? In other words having subjected our emotions, shall we not now yield to them. Consider that all evil lies close adjoining to the good; is but an excess or defect of it. Virtue lies in selecting the due medium.

What I have termed subjectiveness or the control of self and the control of the means and the objects of life, is no short-sighted view of immediate personal interest, nor does it repudiate any of the just influences by which we may find our interests subserved. It is an education of all of man to accomplish man's grand destiny. Taking for the guide the counsels of heaven, it learns us knowledge, virtue, temperance, frugality. It makes us heroes in the battles of life. It teaches us to tread the world, the flesh, and the devil under our feet.

But it also gives a double zest to the pleasures of life; adds a double brightness to all that is beautiful; gives to the body, health; to the heart, glowing and delightful affections; to the mind, the eagle glance of intellect; to the purpose, a tenacity proportionate to the value of the object pursued; to the whole nature, that divine elevation worthy of our immortal destiny.

Young Gentlemen! fall not from that glorious career upon which you have entered! Spurn to become slaves! Rule yourselves; your passions, your appetites, your studies, your time, your bodies, your souls, the world itself; and by God's help you shall become more than conquerors. *Subjice et impera.*

JOHN W. HOOK, JAMES A. STEPHENS and JOHN W. STEVENSON, having completed your course of study with honor, receive these Diplomas, the highest distinction conferred by this Institution. May God speed you on your way!

"LILLIE ON SAFES."—*Chilled Iron Safe Described.*—The base, or the foundation of the Chilled Iron Safe, is a frame or box made of bars of wrought iron, one fourth inch thick by one and a half to two and a half inches wide, crossing each other at right angles, and placed near each other, forming a complete net-work. The inside of this box is filled with sand, and placed in a mold with an open space all round the outside, of one and one-fourth to two inches (according to size and character of Safe), and into this space is poured Cast Iron, which becomes thoroughly chilled and hard, like the plow-point throughout.

Inside of this iron body, which is without joints, is attached the best Fire Proof Composition yet known, and held firmly in a perfect air-tight chamber; the composition being from three to four inches thick.

Agents for Lillie's Safes "The Russell & Erwin Manufacturing Company," 106 and 108 Battery street, San Francisco.

COFFEE AND SPICES.—Talk about your Fragrant Mocha, and your Spicy Jokes. Just go to Messrs. Marden & Folger's Manufactory of Spices, and it is no joke, but a reality. This firm is working away bravely, for *Home Manufactures*, and doing all they can to show that we can manufacture as good articles here as can be imported. Let every well wisher to our State encourage them.

THE PEOPLE'S LINE OF STEAMERS.—Let all *The People* who intend to take a trip to the *Old States* soon, *Remember the People's Line.* The new steamer, *Moses Taylor*, will be ready the 23d, I. K. Roberts, Esq., Agent. Remember the 23d.

THE COLLEGIATE INSTITUTE,

BENICIA—FOR MALES ONLY. The next session of this Institute will commence on the

Twelfth Day of July, 1864.

The Institute has lately increased its facilities both for the comfort of its Pupils and for their instruction. Persons wishing full particulars in regard to the courses of study, etc., will receive a circular by applying to the Principal.

TERMS, PAYABLE THREE MONTHS IN ADVANCE;

Pupils under fourteen, for Board and Tuition per month.....$30 00
Pupils over fourteen.....32 50
Washing, per month.....2 50

No extra charge is made for book-keeping nor for the Modern or Ancient Languages. No charge is made for bedding, rooms or lights. No Entrance Fee is charged.

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 29, 1863.

JACOB ZECH, ESQ:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPPGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. ZECH.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist,
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

SACRAMENTO October 6th, 1863. 13-3m

Coffee. Coffee.

ARDEN & FOLGER'S

CELEBRATED

FAMILY COFFEE

Is now used in every First-Class Hotel and Principal Restaurant in San Francisco. We have received the following certificates from the proprietors since we have introduced our NEW PATENT ROASTER:

The undersigned, having tested the quality from all the different manufacturers of Coffee in the city, cheerfully recommend MARDEN & FOLGER'S as

Superior to any Brand,

Either foreign or domestic.

HARDENBERG & DYER, Russ House.
L. LELAND & CO, Occidental Hotel.
ALSTROM & JOHNSON, Lick House
J. W. SARGENT, American Exchange.
F. E. WEYGANT, International.
C. A. JAMES, Railroad
STEVENS & OLIVER, Restaurant.
GREENE'S Restaurant
UNITED STATES Restaurant.
NEW YORK Restaurant
TEHAMA Restaurant
PORTER & COLLINS, Restaurant
ENGLEBERG & WAGNER, Restaurant.

We are putting up the above Coffee in Fancy Glazed Papers for the trade, and ask but a fair trial to substantiate the above recommendation

Order MARDEN & FOLGER'S JAVA COFFEE from any of the Grocers, or from our own manufactory.

P. S.—The brand of Pioneer Mills Coffee is second quality, and has no reference to the above brand.

MARDEN & FOLGER,

Home Miscellany.

THE SONG OF THE RAVEN.

BY C. ROSE, FIRST KENTUCKY.

[When the Army of the Cumberland retook the battlefield of Chickamauga, on the 27th of November, hundreds of our dead of the 19th and 20th of September lay upon the field still unburied.]

A RAVEN sat on a bloody stone
And pecked away at a fleshless bone,
Singing his song in a raven tone
That echoed wild as a spirit's moan—
War! war! war!

Then he flapped his wings and hopped away,
Over the ground of the dreadful fray,
In search of more nutritious prey,
Shouting aloud his ominous lay—
War! war! war!

Still flapping his wings, he hopped around,
To a noble form stretched on the ground,
A human frame on an ancient mound,
Still shouting aloud the doleful sound—
War! war! war!

Then lighting there on the hero's breast,
Where a form of beauty once found rest,
Where a fond affection oft was blest,
He cried as he plumed his raven crest,
War! war! war!

Soon the moldering flesh was torn apart
With a raven's skill and a raven's art,
Till the evil bird had reached the heart,
Crying again with an angry start—
War! war! war!

The heart that once so proudly beat
In the quiet home or busy street,
With its hopes of life, was raven's meat;
Mixed was the song with the morsel sweet—
War! war! war!

When the red moon lighted up the east,
The bird of fate prolonged his feast,
With his idle time from Satan leased,
And hoarsely croaked like a savage beast—
War! war! war!

And with fiendish pride he sank his beak,
Tearing the flesh from the manly cheek,
Swallowing still each quivering fleak,
Whilst the echoes caught his angry shriek—
War! war! war!

Then lifts his head of the blackest dye,
The blood-stained beak strikes the hero's eye,
And in echoes reaching to the sky,
Still harsher comes the raven's cry—
War; war! war!

That cheek, that eye, that so kindly smiled
With a loving trust so pure and mild,
To bless, perhaps, a wife and child,
Was food for the bird with song so wild—
War! war! war!

THE MAIDEN'S VISION.

I DREAMED of a noble spirit—
It came, oh, so close to me;
I looked far into depths of beauty
As the sun looks into the sea.

I listened to gushing music,
That murmured, and rose, and fell,
Till my soul was full of gladness,
Of joy that no words can tell.

For life seemed to have a newness
It never before had known;
And I said to myself, "Oh, never
Will my spirit feel alone!"

Then I lifted my own poor spirit
Up to this noble one,
As lovingly as the spring-bud
Lifts itself up to the sun.

I thought to speak to the vision—
To ask, "Would it always stay?"
But alas! it suddenly vanished—
Passed in silence away.

And then I sat by the window,
And nothing saw or heard,
Save the sigh of the passing breezes,
And the song of a fleeing bird.

But so long as I live in the earth-life,
Or as a spirit in heaven above,
I will bless the hour and the vision
Of Beauty, of Light and Love.

—[Banner of Light.

Death by Drink, Crinoline, and War.

On March 22d a collection was made for the sufferers from the Sheffield flood in London, after a sermon by the Rev. Newman Hall. In his introductory observations he referred to the value of human life and the universal shock of distress at the loss of 250 lives by the recent flood. But, he said, we should be consistent, and not be indifferent to still greater loss of life from causes more familiar. Far more people perished in England every week by strong drink than were lost in that flood. The coroner for West Middlesex had told him that during the last year he had held 1,093 inquests. There were 33 cases attributed to excessive drinking, 379 accidents, 52 suicides, and 521 sudden deaths. The coroner said that, judging from the evidence given, two-thirds of the suicides, half the accidents, and one-third of the natural deaths were directly or indirectly caused by excessive drinking. This would give 457 deaths from drink in a single district under one coroner's observation during a single year. Reference was then made to the danger arising from the present fashion of female attire. Out of 48 deaths by burning under the same coroner's notice last year, 23 were of persons above 10 years old, and of those, 21 were females, the majority, if not the whole of whom were victims to "extended dresses." On the same authority it is said that, in three years, no less than 2,500 women had been thus burnt to death. The preacher then referred to the wholesale ravages of war, and expressed surprise that many who were shocked at the loss of 250 lives by the flood at Sheffield should often talk recklessly of war, and advocate England engaging in hostilities when the first battle would in all probability, destroy ten times as many lives.

A BIT OF ADVICE FOR BOYS.—"You are made to be kind," says Horace Mann, "generous and magnanimous. If there is a boy in the school who has a club foot, don't let him know you ever saw it. If there is a boy with ragged clothes, don't talk about rags in his hearing. If there is a lame boy, assign him some part of the game which does not require much running. If there is a hungry one, give him part of your dinner. If there is a dull one help him to get his lesson. If there is a bright one, be not envious of him; for if one boy is proud of his talents, and another envious of them, there are two great wrongs and no more talents than before. If a larger boy has injured you, and is sorry for it forgive him, and request the teacher not to punish him. All the school will show by their countenance how much better it is than to have a great fist.

The Farmer's Home.

THE farmer's aim should not be a merely mercenary one—to accumulate money for the mere love of money; to hoard it like the miser; to put it out at interest like the usurer; or to invest it in railroad stock, or paper cities in the far west, like the restless speculator—but as a means of happiness and comfort to himself and family. It should be his ambition to create for his children a beautiful, pleasant and happy home, where the young spirit shall gather strength, energy and beauty, and sweetness for the future, and the memory of which shall be a beacon light to guide through all the many paths of life. To do this he should spare no pains, no expense which his purse will allow. Of course there must be a limit where pecuniary matters are concerned. But wealth can never confer happiness, and should only be regarded as one of the means. There are many trifles which are within the reach of almost everybody, that do much toward making home pleasant and happy.

When the young farmer is locating himself, and building his home nest, let him do so with an eye to comfort and convenience as well as profit. If his home must be small, let it be comfortable and pleasant. And there is no necessity that it should stand close to the roadside, unadorned with tree or shrub, vine or flower. These are the free gifts of the All Father, alike accessible to rich or poor. And their presence will do much toward making home attractive. But too often the farmer, who is busy with his broad acres of grain, thinks it wholly beneath his notice to plant trees, because he thinks they will bring him no return in money. And the wife too often weary with the care of her household, neglects what she considers a minor matter, and sacrifices her love for the beautiful upon the shrine of mammon. And thus her home has none of the graceful appendages of tree or flower, to render it attractive to their children. Yet it is a mistaken notion that it is labor lost or economy misapplied, to spend money to adorn their home. There is no investment that pays so large a dividend in the golden currency of happiness, as that which is invested in home comforts and every-day enjoyments, mental luxuries, and social and intellectual pleasures. I do not mean to be understood that the farmer or family should be extravagant and launch into all the foolish follies of the times. But *he has a right* to a pleasant, attracting, and beautiful home. By his own industry he creates the means of enjoyment for others as well as himself. He is no idler in the social hive, and it is fitting that he should enjoy the wealth he creates. Let him surround himself with the refinements of taste and cultivation, and his own mind, if rough and uncultivated, will insensibly yield to the silent influence of its surroundings, and be softened and refined by the atmosphere of his home. Let him cultivate the soil of intellect with the same diligence that he does mother earth, and it will yield a rich return in happiness.

If he has children he can leave them no richer inheritance than the memory of a happy home, combined with the social and moral culture their natures will receive by breathing its atmosphere of love and peace, and sharing in its intellectual pleasures. It cannot be denied that there is a sad deficiency in farmer's homes; indeed I may truthfully say that many wealthy farmers *have no home*, and, with all their broad acres are poor indeed in all that constitutes the elements of true happiness. They may have large houses where they resort for their meals and lodgings, where their children grow up like young animals, strong, vigorous and healthy, but with minds uncultivated, morals untaught, and with no high aims to nerve them to action—no hopes or aspirations, save those centered in making money, or, perhaps, if their parents are so unfortunate as to be very wealthy, their only aim in life is to spend it in scenes of corruption and vice. We cannot expect the children whose young lives drew in the air of such a home, to go forth into the world to bless it by deeds of active goodness, or that they will cherish a loving regard for their parents, or know anything of the sacred influence of a *true home*. But let the farmer, instead of an avaricious desire to add to the number of his acres, deepen the culture of his farm, study to increase its fertility; and if he has a surplus of cash let him spend it in his home. Let him *educate* his children. I do not mean that he should send his daughters to a fashionable boarding school, for that would be a piece of unmitigated folly. I do not mean that he should even send his sons to some distant college, far away from the gentle influence of sister and mother, to meet the temptations of youth alone. But he should educate them together, first in the home circle, where parent and child should all be students, and then they should share the advantages of the same school, where their tasks should be the same, their pleasures and pastimes one. But, after all, home education is by far the most important. Here the intellectual and social faculties may all be cultivated together and grow in harmony. Around the evening fire may be reared, broad and deep the foundation of future greatness, upon the firm and enduring basis of goodness. The farmer may invite to his home circle, the good, the great, the gifted of all ages and all climes, and under their silent influences the minds of children may be molded and fitted for a true life, and his own soul will feel the polish of such lofty intercourse. His sons will grow up to the stature of manhood physically and mentally, and be forever safe from the seductions of vice; they will feel no pleasure in the low and debasing scenes of dissipation. The memory of home and its lofty pleasures will be a talisman forever.

Thus, if the farmer wishes to make an investment that shall yield a rich return, and a perennial inheritance for his children, a mine of wealth to them in all coming time, a legacy to the world, let him invest in home comforts, in books, in pictures, flowers, social pleasures, and educational privileges for himself and children, not in making for them a fortune. Teach them to swim, make them practical, energetic, true men, and women, too, and they will breast the roughest sea, and need not your golden bladders to keep them afloat.

DOCTRESSES.—So the ladies are beginning to take the medical profession by storm. Apothecarie's Hall has been forced to admit Miss Elizabeth Garrett within its sacred precincts. Nor this alone, the pertinacious young lady, after duly listening to lectures, has bravely faced the examiners, and passed in triumph. If she is equally successful in her future examinations, she soon will be Dr. Elizabeth! The prospect is serious. The strong-minded women who maintain that whatever a man can do a woman can do, ignore the essential difference produced by sex; and, as a matter of fact, there is nothing a woman can do well which a man cannot do better if he likes. Men make the best epics and *entrees*; they excel women alike in painting pictures and in blacking boots. And most people would feel indisposed to consult a feminine doctor if one of the male sex could anywhere be found. Of what use, then, will be Miss Garrett's diploma? What branch of practice will she chose? Will she prefer male or female patients? Much has been said, by advocates of feminine surgery, in favor of doctresses for ladies, who might be supposed more willing to confide the details of their ailments to a woman than to a man. As a matter of fact it will be found that women do not believe in women; they naturally and wisely prefer to be advised by one whose strong will suffices to control their own. In serious illness, the doctor must be a despot. His utterances must have Medo-Persian infallibility. He must never be disobeyed. A woman in this responsible position would be useless.—[London Public Opinion.

THE FIRST PRINTED BOOK.—It is a remarkable and most interesting fact, that the very first use to which the discovery of printing was applied, was the production of the Bible. This was accomplished at Mentz, between the years of 1450 and 1455. Guttenberg was the inventor of the art, a goldsmith furnished the necessary funds. This Bible was in two folio volumes, which have been justly praised for the strength and beauty of the paper, the exactness of the register, and the luster of the ink. The work contained twelve hundred pages and being the first ever printed, of course involved a long period of time and an immense amount of mental, manual, and mechanical labor; and yet for a long time after it had been furnished and offered for sale, not a single human being save the artists themselves, knew how it had been accomplished.

INFLUENCE OF FLOWERS.—During the raid of Quantrell in Kansas, and the sacking and ravaging of Lawrence, the gang came to the residence of George Ford, whose neat house was surrounded with flowers. The soldiers appealed to their leader to spare the place as, "it was too pretty to burn;" he assented and the house was spared, almost the only building left. Mr. Ford says now he shall cultivate flowers as long as he remembers the rebellion. The charms of a few flowers touched the hearts of men whom no misery or suffering, in the midst of which they were reveling, could reach, and saved from destruction the house referred to. Who does not love flowers, and who will not devote a little space to them. They refine, they elevate.

WE should be timid in our happiness. If the flowers around us exhale a keener fragrance, and the peal of the bell sound nearer, both are signs of storm.

NAPA
COLLEGIATE INSTITUTE.
For Young Ladies and Gentlemen.

NAPA CITY, CALIFORNIA.

NAPA CITY, IN POINT OF LOCATION AND Climate, is unsurpassed in the State. It is about four hours' ride by steamboat from San Francisco, and three by stage from Benicia. There will soon be a daily boat from the former place, and there are now two daily stages from the latter. There are extensive accommodations for Boarders in the College Building, with large and well-ventilated sleeping apartments Teachers reside in the Building, and will have a constant oversight of the Students who are Boarders.

GOVERNMENT.

Young Ladies will receive no calls from any except Parents and Guardians. Ladies and Misses will not leave the College grounds, except in company with their Instructors. Young Men and Lads are not allowed to lounge about the Stores, Hotels, and Saloons of the village. All pupils are required to attend Church on the Sabbath. Parents will choose the place of worship for their children.

MILITARY DEPARTMENT.

This Department has been opened with a view to the permanent establishment of a Military Academy on this Coast. From three to four years will be requisite to complete the course in this Department. The State has furnished us the necessary equipments for such a school. The Drills will be attended to daily.

TUITION.

Spelling and Reading, per month	$2 50
Common English, with the above, per month	4 00
Higher English, with the above, per month	5 00

1 SAN FRANCISCO

AGRICULTURAL IMPLEMENTS.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it.

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 6 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

We are

SOLE AGENTS

NEW AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparse, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of

COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 3-3m

OUTWARD BOUND.

Far upon the unknown deep,
Where the unheard ocean's sound
Where the unseen islands sleep,
Outward bound,

Following toward the silent west
O'er the horizin's curving rim,
To those islands of the Blest—
Me with me, and I with him—
Outward bound.

Nothing but a speck we seem
In the waste of waters round;
Floating, floating like a dream
Outward bound.

Yet within that tiny speck
Two brave hearts, with one record,
Past all tumult, grief, and wreck,
Outward bound.

—Dinah Maria Mulock.

"MARY," said one pretty girl to another, "can you make up your mind to marry that odious Mr. Snuff?" "Why, my dear Julia," was the reply, "I don't know but what I might take him at a pinch."

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle-grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H & L AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories.

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL-OIL as a basis of their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural resin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest until, at the present time, they have established a manufactory of Rosin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply. The subscribers are now receiving native resin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] June 9.

In our Grain Market we note a better feeling as far as Wheat is concerned; both an export and active milling demand exists. As regards Barley and Oats, the quantity is far in excess of present requirements. New Barley is also offering and prices are easier for the buyer. Our late ruling rates made it an inducement for holders of Oats in Oregon and the northern coast to ship here. These shipments have alarmed California holders and caused many to sell who otherwise would have held and realized better rates. If we are to place any reliance upon reports from the country, the crop will be short; all agree that Oats in particular is the poorest crop we have. Hay, both new and old, is sparingly offered, and prices are well sustained. Beans are neglected, all that find a market sell at a low figure. Wool is coming in freely but the high price of gold is a great barrier to buyers on Eastern account.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 3910 sks, Barley 3455 sks, Oats 1330 sks, Potatoes 665 sks, Salt 200 sks, Wool 805 bales, Hay 1250 bales, Beans 80 sks, Cornmeal 110 sks, Flour 470 qr-sks, Bran 96 sks, Corn 523 sks.

Also Coastwise: Corn 705 sks, Barley 939 sks, Wheat 433 sks, Potatoes 660 sks, Beans 513 sks, Wool 42 bales, Oats 3210 sks.

p12

BY CONTINENTAL TELEGRAPH.

DATES TO JUNE 7.

When Grant advanced from the Pamunkey it was found that the rebels were strongly intrenched on the hills near Mechanicsville, north of the Chickahominy, covering the approaches to three bridges across that stream. Grant opened communication with his new base of supplies, and skirmished along the whole front to feel the enemy's position. The cavalry were very active. Negro troops were stationed at the White House, and Smith's corps approached on the left of the Army of the Potomac. The enemy repeatedly assaulted Grant's lines, and once endeavored to cut his new line of communications, but were invariably defeated with heavy loss, all arms of the service having full play in that region. Sheridan, on the extreme left, attacked Fitzhugh Lee's cavalry at Cold Harbor, about five miles east of Mechanicsville, and routed them, whereupon the Sixth Corps occupied the position. Meantime, Hancock advanced on the right, evidently between Mechanicsville and the railroad, and on the afternoon of June 1st a general assault was ordered. This resulted in the capture of a portion of the enemy's works and a number of prisoners. Smith's corps is mentioned as being engaged in this fight, so that the whole army was concentrated.

The rebels made an attack on Saturday evening, June 4th, but were repulsed. The lines of the opposing armies are said to have been so close on Sunday that a lull, under the circumstances, is remarkable. The heaviest fighting of the past week occurred on the 1st and 3d of June, and from the details telegraphed it is apparent that the rebels suffered a heavy loss, besides slowly yielding the ground they fortified.

Sherman's operations have been somewhat delayed by heavy rains, which rendered the roads very bad. But under date of the 6th, he reports to the Secretary of War that by a movement round the rebel right, he had succeeded in compelling the enemy to evacuate a very strong position in the vicinity of the hills north of the Chattahoochee. McPherson defeated Cheatham's corps, May 27th, at New Hope Church. Sherman says that in the movements which compelled Johnston to retreat the Union loss was less than that of the enemy. The result was secured by strategy. The rebel journals abuse Jo. Johnston for being whipped.

☞Holloway's Pills and Ointment.—Anxiety is the bane of human happiness—prudent people adopt measures to avoid it. Some insure their property while the more thoughtful assure their lives, but what is life without health? The wisest man secures his own well being, and in these remedies finds an indisputable policy of assurance against disease.
Sold by all Druggists, at 30c, 70c, and $1 10 per box or pot. 20s
HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM,

LIFE-SIZE BUST
....OF....
Thos. Starr King.

COPIES OF THE BUST OF THE LATE REV. THOS STARR KING, by P. J. DEVINE, are soon to be issued to subscribers. The Bust and subscription list may be seen at Mead & Van Tassel's store, Montgomery street, or at Grant & Devine's Marble Yard, Sutter street, between Montgomery and Sansome streets. The public are invited to see the Autograph Subscription list which comprises many of Mr. King's personal friends.

Opinions of the Press.

The following criticisms are from the leading newspapers of the city:

After the many attempts at Busts of the late Thos. Starr King which have been made, it is gratifying at last to have one we can praise. It is a work of art, for expression is there as well as outline.—Bulletin

Nothing heretofore executed, either as a portrait or bust, will equal it as a work of art or valuable memento of the dead.—Alta.

It is an admirable work, and is pronounced a perfect likeness of the deceased by those most capable of judging.—Democratic Press.

The friends of Mr. King, who have critically watched Mr. Devine's progress, express themselves highly satisfied with the result. It exhibits a fidelity of likeness and artistic grace that has not yet been equaled.—Golden Era.

As a work of art it is wonderful, seeming to be exact and complete in every detail to which the eye may be directed or recollection recalled.—Sunday Mercury.

We have for many years looked with interest upon the labors of the artist. In the present effort he has been completely successful.—Cal. Farmer. 13-tf

Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOma County lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P. Swift, Esq. containing 14,000 acres of land is offered for sale in Lots or farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality. It is accessible to market, being adjacent both to Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State.

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point.

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the offices of Haight & Pierson, 622 Clay street, San Francisco or at the store of Mr. Paule, Sonoma.

17 WILLIAM BIHLER.

California Cider and Vinegar.

THE UNDERSIGNED INVITE THEIR Friends and the Public to call at their Manufactory, 709 MARKET STREET, Exactly opposite Third street, to see somewhat of a curiosity in California: A CIDER MILL. And, if you wish, we shall be pleased to furnish you with new sweet Apple Cider, dripping right from the Press, and in its season the juice of Grapes, or any other Fruit. Drinking new sweet Cider is known to be healthy, giving a ruddy glow to the complexion.

Nearly all the Vinegar sold in San Francisco is a manufactured imitation, made from corrosive acids, and people have provided their families with what was sold as Cider Vinegar, but which was in fact a poison. We mean to keep nothing but CIDER and VINEGAR, and that genuine.

If we are to succeed in our experiment of substituting pure Vinegar for the villainous fluid which has injured the health of thousands in California, it can only be done by a general patronage, and we trust to receive a call from you.

Lebaron & Thresher,
Cider Mill, 709 Market street,
Exactly opposite Third street.

☞We have an Order Box at O. E. Collins, 602 Montgomery street, and will deliver Cider and Vinegar at any part of the City Free of charge. Orders sent through Wells, Fargo & Co., will be promptly attended to. 16-3m

FOR SALE,

A WELL-IMPROVED 80-ACRE FARM, ONE MILE west of Petaluma.

Terms $4,000—half cash at least,

17 JOHN KENDALL.

Winchester's HYPOPHOSPHITES

Act Promptly and Certainly in all Stages
....OF....
CONSUMPTION.

THEY IMMEDIATELY INCREASE the Strength, and deepen the color of the Pale Blood. They check the Night Sweats, always, in from seven to fourteen days; the appetite is at once invigorated, and the patient rapidly gains flesh; the cough and difficult breathing are speedily relieved; the sleep becomes calm and refreshing; the evacuations regular and uniform.

"In no instance," says Dr. Churchill, "have I found the Remedy fail to produce every thing that could be reasonably expected from it."

"I have no doubt whatever," says Dr. Townsend, of Chatham, Pa., "of the superior efficacy of the Hypophosites over all other medicines or methods hitherto discovered."

The Hypophosphites

Have a TWO-FOLD and SPECIFIC ACTION: On the one hand as a prompt and powerful

NERVOUS TONIC,

Increasing the vital energy: and on the other as a generator of

New and Healthy Blood,

Invigorating the whole system. They should, therefore, be used in all cases of

Nervous and General Debility,

Wasting of Flesh, Loss of Strength or Appetite, Paleness or Deficiency of Blood, Languor or Listlessness, Cough, Night Sweats, Chronic Diarrhea, Scrofulous Sores:

Also, in Chronic Bronchitis, Asthma, the Debility or Weakness of Young Children, and as an INVIGORATOR to women of feeble vitality during gestation and the period of nursing.

WINCHESTER'S

Genuine Preparation of the Hypophosphites

Is the only reliable form of Dr. Churchill's Remedy, and is approved by the Medical Profession generally. USE NO OTHER, or any Remedy containing Iron.

CONCENTRATED SOLUTION in 7 oz Bottles, prepared expressly for California, $2 per Bottle—Three Bottles for $5 in coin. Circulars, free. Sold by all respectable Druggists, and by

J. WINCHESTER,

At the AGENCY DEPOT, 206 BUSH STREET, opposite the [new] Adelphi Hotel, San Francisco.

TRAVELING.

Opposition Day June 23, 1864.

THE PEOPLE'S
OPPOSITION
STEAMSHIP LINE
FOR NEW YORK
VIA PANAMA.
GREAT REDUCTION IN RATES

THE OPPOSITION STEAMSHIP
MOSES TAYLOR

J. H. BLETHEN ..... Commander
Will be dispatched for

PANAMA,

Thursday, ... June 23, 1864

From Mission street Wharf at 9 o'clock a. m.

Connecting at Aspinwall, by the PANAMA RAILROAD, With the Magnificent New Steamship

GOLDEN RULE
3,500 Tons.

FOR NEW YORK.

The GOLDEN RULE is the largest, fastest, and most elegant Steamship on the Atlantic Ocean.

For further information, apply to
I. K. ROBERTS, Agent,
5-tf No. 101 Battery street, cor. of Pine, up stairs.

Pacific Mail Steamship Company

THE FOLLOWING STEAMSHIPS will be dispatched In the Month of June, 1864:

June 3d—ST. LOUIS, Wm. H. Hudson, Commander.
June 13—CONSTITUTION, J. T. Watkins, Commander.
June 23—GOLDEN AGE, Wm F. Lapidge, Commander.

From Folsom street wharf
At 9 o'clock, a. m, punctually.

FOR PANAMA.

Passengers will be conveyed from Panama to Aspinwall by the Panama Railroad Company, and from Aspinwall to New York by the Atlantic and Pacific Steamship Company.

A. H. FORBES,
Agent P. M. S. Co.,

Central Pacific Railroad

ON AND AFTER MONDAY, JUNE 6, 1864, UNTIL further notice, the trains of the Central Pacific Railroad will be run as follows:

UP TRAINS LEAVE
Sacramento at 6:15 a. m., arrive at Newcastle at 7:30 a. m.
Sacramento at 1 p. m. arrive at Newcastle at 2:30 p. m.
Sacramento at 5 p. m. arrive at Newcastle at 6:30 p. m.

DOWN TRAINS LEAVE
Newcastle at 6:45 a. m. arrive at Sacramento at 8:00 a. m.
Newcastle at 10:30 a. m. arrive at Sacramento at 11 a. m.
Newcastle at 6 p. m. arrive at Sacramento at 7:30 p. m.

The 6:15 a. m. and 5 p. m. up trains connect at the junction with the cars of the California Central Railroad for Lincoln, and the 3:15 a. m. train connects at the same place with the cars for Folsom.

The 6:45 a. m. down train connects at the junction with the cars for Lincoln, and receives passengers from Folsom for Sacramento; and the 10:30 a. m. train connects at the same place with the cars for Folsom, and at Sacramento with the steamers for San Francisco.

On Sunday one train only will be run, leaving Sacramento at 6:15 a. m. and Newcastle at 10:30 a. m.

Stages for Virginia City, Dutch Flat, Nevada, and intermediate places connect with the cars at Newcastle at 10:30 a. m. Stages for Marysville or any other points north connect with Lincoln at 7:30 a. m.

LELAND STANFORD,

TERMS OF SUBSCRIPTION--IN GREENBACKS.

By mail, for one year, $5; for six months, 2 50. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or $5 a year in advance.

☞ Advertisements and Subscriptions must be paid for in advance.

JOB-WORK—Of every description, done with promptness, at fair rates orders will be faithfully attended to.

☞ All letters on business connected with the office should be addressed to PUBLISHER CALIFORNIA FARMER, San Francisco, Cal.

Business Dull—Short Crops.

Short Crops will put men to thinking, and make them feel the importance and value of the agricultural interests of our State.

Why is it that intelligent men will so often look with seeming indifference upon what is termed agricultural matters, and say, *they are not interested in agriculture?* Does such an expression denote intelligence?

What subject, next to the great theme of our country and its present struggle, is so much spoken of as the subject of the present *drought and loss of crops?* What has so much affected the business community, as the short crops? Go through the State among the trading community, and the dullness of trade and the hard times are all placed to the condition of the crops!

There is no disguising the fact that a short crop most materially affects trade everywhere, and although we may have a *full half crop* this year of our grains and fruits, yet that deficit will be the small sum of *ten millions of dollars*, and such a sum must affect trade, and materially derange it to a considerable extent, and there is not a merchant trader or business man, but what will feel more or less the effect of a short crop. Let no one say they have *no interest in agriculture*, for it is the *life-blood of the State*.

Said Napoleon, "Agriculture is the soul, the basis of my Empire!" And Washington, Clay, Webster, Jackson, Calhoun, and Cass, were all believers in the truth, that agriculture is the base of all our prosperity.

We were conversing a few months since with a Dry Goods Merchant, in a city of the interior, upon the subject of the agricultural interests as affecting all business. But he could not see that the Dry Goods trade, as a business, had any connection with agriculture, and, like the masses, he could not see how it could affect his business. Meeting the same person last week, we inquired if business was prosperous in his region, when, with much emphasis, he remarked, "Oh, business is very, very dull. No business, for the crops are all lost!" We reminded him of his former remarks—that he could not see how agriculture affected him; but, said he, "I see it *now*. Anything that affects the farmer's interests affects us all; and I have changed my opinion. I am now satisfied that agriculture is the great interest of this State. Our grain, our wool, our wine, and our varied productions, are the life-blood of business, as you, Mr. Editor, have always asserted; and when crops are short, or any calamity affects the farmer, all must feel it. And I repeat what I said, because I see my error, and shall hereafter appreciate this great interest as it deserves." We were glad to notice these results, and all business men must so think before we ever reach the prosperity we desire.

Vineyards in the Mountains.

We had a call from Mr. Walton, of Drytown, whose vineyard we visited last summer, and found a good foundation begun; saw Mr. W. was fast destroying his future by *excessive irrigation*; we appealed to him, explained the wrong he was doing his vineyard and his future hopes. This year he has given his vineyard water but once, instead of water adopts our plan, deep and constant cultivation; Mr. W. sees his former error, and finds how much better is both the soil and crop. Last year his soil was hard baked, his vines looked sear and yellow, now the vines are green and thrifty, the soil light and porous, fresh and moist, and his crop promises to be an abundant one. He has about 2,500 vines, and will make about 1,500 gallons of wine. Mr. Walton has also invented a new wine press, of which we speak in another column. We are really glad to see and hear of the reform, and better system of cultivation, among the workers of our land, for it is an omen of future success.

Mr Walton also brings us good news of the Sexton Gold Lead, of which we spoke last year as being very rich. Judge Sexton and others we [illegible] year, hoarding up gold quarts in a [illegible] *dollars* per hour. Their lead is now being developed, and is very rich. It is called the "Drytown Quartz Company." They are putting up a mill. Their shaft is now down from 50 to 70 feet, striking it rich [illegible] to know our friends are doing well. They deserve it.

Good Cultivation! Good Cultivation!

We have pleasant calls now very often at the Farmer Reading-room, from the cultivators in the country, and we are glad, and very grateful, for the interest they evince, and the samples they bring to our rooms of their products, so that we may know of their labors and successes.

A few days since, our friend and subscriber, Mr. Fifield, of Fifield & Brother, near San Mateo (head of San Mateo Creek), who have a very fine farm of over 1,000 acres, and well cultivated, called on us at our rooms to speak of the season, and give us items of practical utility.

Fifield & Brother (the elder recently deceased, a most worthy and excellent man, whose heart was ever kindly disposed, and always in the right place) have proved by their example that they know how to take care of a farm, even in a dry season. They go for deep plowing and thorough cultivation; they bestow great care upon their land when plowing; if the plow slips out of the ground, they stop the team, back up, reset their plow, and faithfully plow every foot of the soil. They never allow blotches of unplowed land to disgrace their fields. Let farmers remember this. They never skim the surface, because they have not teams enough to plow deep. They have plenty of teams, and being well fed, are strong, and able to plow deep, well, and thoroughly; and the result is good crops, full crops, and crops that pay. This season, fields of barley that were thought advisable to cut green for hay, gave *three tuns of hay to the acre.*

W. J. Fifield (now the surviving partner) has a good dairy. His stock is not your long, lank, lean stock, but improved American stock, crosses of Durham, etc. And the result of all this is good crops, and it *pays well.*

Settler's Rights.

The great and long agitated subject of "The Suscol Rancho" is now about to be settled. After years of trials and troubles, lawsuits, ejectments, riots, murders, and every calamity that is conceivable, the whole subject matter, proof pro and con, is to come before the Register Court for a final hearing and decision. Hundreds of cases and witnesses innumerable will be brought forward. Heaven grant a full and fair hearing, and let the "right prevail." Our State has suffered in all her interests by the long delays about "land titles." Millions of dollars have been expended; honest settlers have toiled, suffered, and died; and honest owners in many cases have suffered too by reckless squatters, who had not a shadow of a claim as a pre-emptor. What we want is Justice and Right for all.

Moisture Produced in a Dancour.—Mr. J. J Mapes in the Working Farmer, says: "No one can doubt that if each square foot of surface of the soil could be made to receive daily as much moisture as we see collect in a few hours on the surface of a pitcher of cold water, that the plants contained in a soil so wetted would be sustained. The immediate surface soil, from the washing of rain and other causes, becomes compact and smooth and does not present as large an amount of surface as when stirred and roughened. After disintegration, the atmosphere can readily enter the soil and on meeting with the colder particles below the surface, is robbed of the moisture it contains, while the increased absorbent quality of the soil by being rendered pulverent, takes up each dose of moisture as received and makes room for the reception of a new quantity. It is for this reason that frequent hoeing is found to prove so beneficial to plants. And it is also from similar causes that underdrained and subsoiled land suffers less from drought than land plowed only a few inches deep. All garden crops should have the soil frequently disturbed during dry weather and in addition to the displacement of weeds, which is very desirable, the gardener will find that his plants can then supply themselves with moisture."

The Peaches have Come.—The first peaches of the season made their appearance in our market this week. These first fruits are not—as they were in former years, large blushing-cheeked samples of a pound each—but small and almost tasteless. Twenty-two peaches were sold for *one bit each*—$2 75. Ten years ago the first peaches sold at $1 to $2 50 each. Poor and neglected culture compels Dame Nature to show a proper resentment, and for neglect she pays by shriveled fruit, and it will always be so. Nature knows always the generous cultivator and repays for every favor shown.

Gophers and Squirrels.—The dry season must always tend to increase the number and the destructive energy of these pests of the farmer and orchardist. The dry weather, too, is the breeder of the *grasshopper*, gressuly, aphis, etc. ank as troubles never come singly, these evil follow drought. Cultivation, stirring the ground in dry weather, produces moisture, and this always checks the ravages of insects, etc.

A Bust of that Patriot Starr King—it costs but $10—and is the only bust that is a likeness of that great man.

Exhibition at the Pavilion, Oakland, of the Students of the Oakland College.

Accepting a courteous invitation to be present on this festive occasion, we enjoyed a speedy trip across the Bay in company with friends, and attended this very interesting affair.

That Oakland is destined to be to our city what Brooklyn is to New York, no one can any longer doubt; for on this occasion, when the ferry-boat reached the pier, we noticed that the passengers were so many, that it required four large cars to take them, and each car was crowded to the full, and many without seats, the greater portion being permanent residents of Oakland, and these our largest business men of San Francisco.

Having a little time we took a peep at this rapidly improving city, and give the result added to our notes on Oakland, in another column. We then proceeded to the pavilion, which at the earliest hour was crowded with friends of the students, the citizens of Oakland and vicinity, and by 8 o'clock the center of the Pavilion was literally choked up with wide awake humanity—a very gay, happy, and joyous group of the lovely and loveable young ladies and gentlemen, of all the region round. The outside seats, aisles, and wings of the hall, were filled by a mass of people packed as close as a paper of pins. This large crowd almost entirely prevented the hearing of the exercises, by reason of their continually talking and whispering, a practice in public assemblies that should be severely rebuked. In this instance there was some excuse, by reason of the dense crowd, and the discomfort of standing nearly three hours. We regretted to notice many of the male sex retaining their seats, while ladies stood up near them for hours. This does not argue well for their gallantry. We hope some of these young students, at the next festival will "speak a piece" on gallantry, as applicable to this subject.

The Pavilion was neatly festooned, the glorious Stars and Stripes being the ruling [illegible] the evening. A stage was erected with a drop curtain, making the appearance quite [illegible] in the decoration of the hall, and in the [illegible] and sentiments of the exercises, [illegible] College must be sound Union. Would to Heaven all our colleges and schools would impress upon the minds of the people the value of our Union.

The exercises on this occasion were conducted by the Rev. Mr. Brayton. After the opening prayer, music was given, then came addresses, declamations, recitations, dramatic scenes, more music, original compositions, songs, tableaux, and military displays. These were all of interest, the audience only regretting that by reason of the crowd present, and the disposition of many to talk and whisper, the greater portion of all was lost, save to those immediately in front of the stage.

The great crowd present, however, is a grand proof of the earnest interest taken in the cause of education in our State—a State that can now boast of more public and private schools and colleges, than any other State in the Union, according to their population, outside of New England.

We were much pleased to see [illegible] heard. Some of the young people needed a little electricity to inspire them and give them life, animation, gestures, etc., indicative of the interest they should evince in the words they uttered. Some were little difficult but generally "well done" should be the word of encouragement.

Among those that we could distinctly hear and notice, was R. W. Tompkins. His recitation of the death of Ca[illegible] was remarkably well done—clear enunciation, calm yet earnest—it was *well done.* In the farce, the part of Dick Calmleigh, by J. F. Clark, was very well sustained. Jennie H[illegible] personated the young lady well, and they showered him with bouquets to reward him for it. "Rum's Musical," by D. T. Fow[illegible] In the "Army Scene," where it was attempted to show that "discretion [illegible] was personated by A. W. Burrell admirably. We think he must have read of the battles at Bull Run—it was so well done.

An original poem, by Chas. W. Stoddard, was a fine performance, well-styled—good elocution, grace, [illegible] and the ladies crowned him with fragrant flowers. The Dying Soldier was excellently done by A. W. Burrell. "Bigotry," an original essay, by A. [illegible] was very well delivered.

"A Glimpse into the Country," by [illegible] was a very creditable original piece, very finely spoken and from real nature, only in its manners, and well done. The young ladies crowned him with their [illegible]

[illegible] poem in French. He evinced the marks of a fine scholar.

We would wish to speak of others, but the repeated interruptions by talking and whispering in the ball, and the [illegible] great during portions of the recital, that the students spent their strength for naught. This we regret, and [illegible] many others. The whole session, however, was a pleasant one.

The "whistle of the mi[illegible] those who were [illegible] time had come; and [illegible] it merrily to the [illegible] deck, "over the Bay" [illegible] excursions of the present [illegible] certain, with its colleges [illegible] three, and several private [illegible] Oakland will [illegible] (for Benedict [illegible] see which shall win [illegible] California!

Our Sea-girt Forts at Benicia.

How little do we know of our troops on the coast, either at Benicia, Mare Island, Alcatraz, or Fort Point. Newspaper reports only [illegible] to thousands, but say that these garrisons and defenders of the richest State in the Union, bristling with gleaming bayonets, and guarded with cannon, that could defy the bravest army on earth; but let our citizens go and [illegible] of our right arm of defense, and they will see how strong we are (?), one thousand [illegible] hundreds and fifties, into squads of ten—[illegible] more guard, who sourly walks their rounds.

Eternal vigilance is the price of liberty. Can it be when we hear that treason is at Mare Island, treason at Fort Point, treason at Alcatraz, and when he who commands all the forces of the coast is charged in our public journals [illegible] outrage. Can [illegible] when our citizens shall go and visit these places, they will learn more than they can from a newspaper. They will learn what cannot be told in print. Let citizens go, see, hear and feel for [illegible] Eternal vigilance is the price of Li[illegible] country to produce all the varied kinds of [illegible]

The Government property here must have cost Uncle Sam millions. The grounds are extensive, covering hundreds of acres. At the Barracks there are eight buildings, quarters for eight companies, one building each; and there are only three companies now there, under command of Lieut.-Col. Hooker. The Quarter-Master Department is under Capt. W. P. Sweasy. The Ordnance Department, arsenal, and arms, are under Col. Whittlesey, who relieved Capt. McAllister. The buildings are generally neat and [illegible] but the grounds around are not as they should be. They are dry and sear, uneven and neglected. They should be graded, cultivated, and put down to clover, and made to yield [illegible] for the cavalry, as [illegible] to the Department. Vegetables could be raised, and a large expense saved to our Government, which could be done by the soldiers, who have nothing to do but to [illegible] the time or more, drink, and spend [illegible] money. Under the charge of Capt. Stoole, years ago—one of the best and most gentlemanly and faithful officers, ever on our coast—this kind of work was done by our soldiers, and why not now it [illegible] work—either work or fight.

A fine hospital of stone is near by. The officers' quarters are large very fine residences, elegantly [illegible] and a little distance are the cavalry stables. A new mansion is being built for the commander. When completed it will be very handsome, nay elegant.

Our Government is very, very liberal in providing for those who step forward in its defense. They to return should ever be as ready, and ever faithful to the best interest of the country. Their time, strength, mind and heart, should be for the country.

We don't believe there is another Government in the world that is so kind to soldiers as ours, as we judge by those at Benecia. We saw a fine billiard table, Sutler's office. We saw a fine billiard table, bar-room and Faro table; there the soldiers were [illegible] for horse, and at this [illegible] they were spending their time, strength, and money. At this the case of all our garrisons and defenses on this coast? Are these [illegible] soldier duties? With such training, God save our country in the hour of danger. We do no wonder [illegible] desertion [illegible] as it is. [illegible] Drunkenness [illegible] to speak [illegible] and there [illegible] supposed, in time of peace prepare for war, but we see no preparation here. One hundred men during [illegible] the garrison at Benicia would [illegible] would [illegible] to command and [illegible] the men in order, and [illegible] and [illegible] of blocks, [illegible] hands ready for action. We hope the people will look to this matter, for all is at stake should danger come.

[illegible]

Growing Plants in Rooms.

We are frequently inquired of relative to the growth and care of plants in rooms, many of our lady subscribers finding it difficult to grow plants successfully. Nothing is easier in the world than to have a good collection of healthy blooming plants.

The great majority of persons think they must not let the *cool air* blow on them. This is one of the great mistakes. Fresh pure air is what they need most. Pure good soil, and careful training, will always insure a fair collection of parlor plants.

Those who undertake to grow pot plants at home are very apt to do so without considering that they *need care*. And the right kind of care needed requires a *knowledge* of plants, and the food and training they demand. We found, on perusing the last number of the New York Horticulturist, a good article, which we here transcribe. *Want of knowledge* is the cause of failure in growing plants in the house, and this knowledge is very easily acquired. The writer says:

"Want of knowledge, in fact, may be said to cover the whole ground; still, no amount of knowledge will command success in the absence of the first two conditions; for Nature, in respect of her laws, is an arbitrary mistress. We do not propose, in the present article, to supply this knowledge, the want of which is so keenly felt by many, but rather to point out in what it consists, and how and where it may be obtained. We shall from time to time, however, give an article on the subject, and endeavor to make it plain to the understanding of all.

"We may say, in the first place, and in a general way, that there exists, among those who desire to grow plants in rooms, no small degree of ignorance of the nature and wants of plants, and and any great measure of success in their culture, under such circumstances, cannot reasonably be expected. We do not expect a man to develop the best qualities of the horse without some considerable knowledge of his nature and wants; we do not expect a mechanic to become a skilled workman without a knowledge of the materials used in his profession; we do not expect a man to excel in the art of painting without a knowledge of the laws of color, perspective, etc; and so of all the sciences and arts. Why, then, should we expect any one to grow plants in perfection without some knowledge of their nature and wants? It is true that some persons, by dint of long practice, will learn how much heat, light, and water, is needed to sustain some of the simplest and hardiest forms of vegetable life; but this is very different from that knowledge which comprehends the *laws* of vegetable life, and their application to its multifarious manifestations; and the difference between these two degrees of knowledge is not greater than the different degrees of pleasure which each affords. There are others who *admire* flowers, but will not take the trouble to learn how to grow them, and consequently never know how to *love* them. Such persons have little conception of the amount and degree of pleasure of which they thus deprive themselves. As between a simple *admiration* and a true *love* of flowers, there is all the difference that there is between mere animal appetite and a profound intellectual feast. There is nothing that gives so much vigor and elasticity to the mind as the love and study of nature, and there is nothing that yields a purer or more lasting pleasure; when it includes, as it naturally should, a reverent love of the Father, there is nothing that erects such a firm barrier between the heart and the cankering ills of the world without. A true lover of plants is a lover of his fellow-man and of good works.

"But let us be a little more specific, and see what is wanted by those we are more directly addressing. A scientific knowledge of Botany is desirable, as it greatly enhances our love, and makes us so familiar with the constitution of vegetable life, that we are enabled, almost at a glance, to determine the wants of a particular plant; but such a knowledge of Botany is not indispensible to the culture of plants. It is indispensible, however, that the nature of any particular class of plants grown should be studied practically, so as to become familiar with their wants in reference to soil, light, heat, and moisture. A practical knowledge of this kind is best obtained by growing the plants; but if one is confined to this source of knowledge alone, many mistakes are made at first, much time is consumed, and not a few plants ruined. The proper course is to begin with a few plants of the easiest culture, such as the Scarlet and Sweet-scented Geraniums, the Calla, Sweet Alyssum, etc. Consult some intelligent grower, read the best writers on the subject, such as Rand, Buist, Bridgeman, etc., and subscribe for one or more good horticultural magazines. These may be considered indispensable aids, and will be found very pleasant companions. Careful reading and patient practice will open the road to success, and pave it with gems of the most brilliant hues. You may live in a world of your own creation, peopled with angel forms, always wearing the radiant smiles of the blessed. Flowers are great humanizers, ripening and mellowing the heart for the better life. Wherever you see a few plants in a window, however humble the house may be, you may take it for granted that goodness has not altogether taken its departure from its inmates. Inestimable soothers and comforters under all afflictions, we would not part with our knowledge of plants for all the pelf the world contains. Bring up your children to love plants, and you will put them in possession of one of the brightest links in the chain that connects time with eternity.

To smile at the jest which plants a thorn in another's breast, is to become a principal in the mischief.

Sheep Husbandry.

The farmer never ought to keep black or gray wooled sheep. Their fleeces are never so valuable as white ones, for they are restricted in their use. They cannot be used for any other color than black, and that is never so lively as black from white wool. A very slight mixture of black fibers is a serious injury to worsted wool. Never buy or keep sheep with black legs or faces, for if when young you cannot find black fibers in the fleece, they will come in as the sheep grows older, and materially affect its value. Mr. Flint, in his Report of the Royal Agricultural Society's Fair, held in London, says that a Cotswold ram which obtained the second prize was much tinctured with gray, which was generally regarded as a defect.

The value of worsted goods depending, to a great extent, upon the brightness of the colors, the clearness of the whites, or the luster of the blacks, whatever prevents obtaining these desirable objects depreciates the value of wool in which it is found; consequently unwashed wool, if not disposed of soon after being sheared so that it can be scoured before sweating, will be so stained by the yolk that a pure white cannot be obtained, and the tendency will be to dull whatever color is imparted to it. In addition to worsted goods known as Mouslin Delaines and Lastings, there are a large variety made with cotton warps, silk warps, and cotton with silk and cotton stripes; and also all woolen Merinos and Thibets, none of which are made in this country. This demand must be supplied from a foreign market, while nothing stands so much in the way of their being produced here as the right kind of stock. And in no country in the world is this class of goods better adapted to the wants of the people than in this. There is nothing surpasses all worsted or worsted and cotton goods for gentlemen's summer wear, for they are as light as cotton or linen, and when their durability is considered they are as cheap; and when compared with woolen goods, their lightness, cheapness, and durability, would, if produced in sufficient quantities, take their place to a great extent in the summer season. While the variety and richness of colors which can be imparted to worsteds, and their warmth when compared with cottons, render them very desirable goods for ladies' and children's winter clothing, and what renders them more particularly desirable for children is the fact that they can scarcely be made to take fire.

It is not because the right kind of wool cannot be produced in this country that we are indebted to foreign manufacturers for these goods. There is a sufficient variety of wool produced in this country to produce all the varied kinds of worsted goods produced in the world. We lack nothing but quantity; and we have this advantage over every country in the world: ours is the only one that can boast such a varied production. England can produce no such wool as the Merino of Vermont, Michigan, Ohio, New York, and other States, while Saxony can be produced with care, equal to the finest Silesia. During the past summer, Germany yielded to Vermont the palm for producing Merinoes. George Campbell, Esq, of Vermont, exhibited twelve sheep at the exhibition of all nations at Hamburg, and obtained three prizes; first prize for the largest quantity of wool, second prize for the largest staple, third prize for the quality and quantity combined. And Mr. R. S. Fay exhibited at the Essex Fair, in 1857, an Oxford Down buck, raised in this country, which had obtained a prize in England. This, we suppose, should forever set at rest the question whether the climate of this country is adapted to raising wool or sheep equal to England or the continent of Europe.

All classes of wool adapted to the production of worsteds, are equally adapted to the production of all the open napless woolens, and the endless variety of coatings and fancy cassimeres, which are at the present time in such great demand with a fair prospect of continuing so, increase the farmer's prospect of a good and steady market for coarse and middle wools for many years to come, before the supply will be equal to the demand. And long wools can be felted and produce a firm cloth, though the process is slower than with short wool, and the nap longer, on which account it makes more waste in shearing.

Instead of taking out the curl intended for felted cloths, it is left in the fiber, the process of felting being an increase of the curl, which shrinks the cloths, and locks the curls and serrations together. In making broadcloth the felting is performed after the weaving. Napping the cloth is a process of combing after the cloth is made, which is made by passing the cloth over a revolving cylinder, the surface of which is covered with teasels, and the little hooks lay hold of the fibers which are upon the surface of the cloth, and draw out the tip of the fiber, the roots being held fast by the points of the serrations, which, as we have before observed, are always directed to the tip. If the fiber is only held by the tip it is always drawn out and wasted; if it is weak it will break off leaving its root in the cloth, but another fiber must be drawn out to supply its place, and thus the cloth is robbed of stock, and tender wool renders the cloth also tender. Cloth being but an aggregate of fibers, if they are weak it will be weak also; consequently the farmer will understand that it is highly important that all kinds of wool have strong staples. When the cloth is subjected to the action of the teasels it is moistened, and their continued action upon the exterior fibers lays them straight upon the surface in the same manner as they grow upon the animal's back, and the hand passed over the surface the way the nap lays finds it soft and smooth, because that is the direction the scales point; passed the other way it has a rough feeling, because it is drawn against the points of the serrations.

And now, when we take into consideration that almost every man in the United States wears a broadcloth coat, and almost every lady a cloak of the same material, and that it is all imported, what a vast field of enterprise in this direction appears to be forced upon the manufacturer and farmer to supply the demand and keep at home the large amount of wealth which is annually sent out of the country! And when we consider the extent of those regions of country, where the land is almost, if not entirely unoccupied, and much of that which is improved is producing corn for which they have scarcely any market, we wonder what has so long kept the farmer from directing his attention to sheep husbandry. For though the sparsity of population may not make it an object for him to raise mutton, yet there are sheep that would pay him well to produce wool without regard to other considerations. The fine-wool sheep would be best adapted to these sections, and the farmer may be assured that this class of wool will be wanted for the production of fine broadcloth.—[Ohio Wool Grower.

Report of the Commissioner of Patents.

The introductive report of the Commissioner of Patents (Hon. D. P. Holloway), is just issued—we give the following statistics showing the operations of the Patent Office:

Number of applications made in 1863	6,014
Patents granted, including re-issues and designs	4,179
Caveats filed during the year	787
Applications for the extension of patents	40
Patents extended	42
Patents expired December 31st, 1863	968

Of the patents granted there were to—

Citizens of the United States	4,048
Subjects of Great Britain	58
Subjects of French Empire	37
Subjects of other foreign governments	27
	4,170

The following is the statement of the Patent Fund:—

Amount to the credit of the Patent Fund Jan. 1863	$33,351 15
Amount paid in during the year	195,593 29
Total	$233,934 44
Deduct amount of expenditure during the year	189,414 14
Balance to the credit of the Pat. Fund Jan 1, 1864	$44,540 30

NAPA
COLLEGIATE INSTITUTE.

For Young Ladies and Gentlemen.

NAPA CITY, CALIFORNIA.

NAPA CITY, IN POINT OF LOCATION AND Climate, is unsurpassed in the State. It is about four hours' ride by steamboat from San Francisco, and three by stage from Benicia. There will soon be a daily boat from the former place, and there are now two daily stages from the latter. There are extensive accommodations for Boarders in the College Building, with large and well-ventilated sleeping apartments. Teachers reside in the Building, and will have a constant oversight of the Students who are Boarders.

GOVERNMENT.

Young Ladies will receive no calls from any except Parents and Guardians. Ladies and Misses will not leave the College grounds, except in company with their Instructors. Young Men and Lads are not allowed to lounge about the Stores, Hotels, and Saloons of the village. All pupils are required to attend Church on the Sabbath. Parents will choose the place of worship for their children.

MILITARY DEPARTMENT.

This Department has been opened with a view to the permanent establishment of a Military Academy on this Coast. From three to four years will be requisite to complete the course in this Department. The State has furnished us the necessary equipments for such a school. The Drills will be attended to daily.

TUITION.

Spelling and Reading, per month	$2 50
Common English, with the above, per month	4 00
Higher English, with the above, per month	6 00
Latin and Greek, with the above, per month	8 00
Janitor's Fees, per month	25

EXTRAS.

Modern Languages, each, per month	$2 00
Music, with Piano, per month	8 00
Embroidery, per month	3 00
Painting in Oil and Water Colors, per month	4 00
Board with Furnished Rooms, per week	5 00
Board with Furnished Rooms, Light, Fuel, and Washing, per week	6 50
Military Branches, per month	3 00
Sword Exercise, twelve lessons	8 00

CALENDER.

The Collegiate year is divided into two Sessions of 21 weeks each. The first Session will begin July 25 and end December 16. The second Session will begin January 2 and end May 23. The Winter vacation will be two, and the Summer vacation eight weeks long.

☞ All articles of clothing should be plainly marked. Pupils will furnish their own Sheets, Pillow-cases, Towels, Napkins, and Lamps.

☞ Payments, half-yearly in advance. Pupils can enter at any time, and be charged from the time of entering. No deduction will be made for absence, except in cases of protracted illness. The month consist of four weeks each.

The Sanitary Sword.

Among the numerous objects of intense interest at the New York Sanitary Fair, was the celebrated sword of the Trophy Room. This sword was to be the talisman of public opinion, or award of merit for the most distinguished General in our armies. It was understood that each voter was to pay one dollar, and deposit his or her vote for the Chieftain of their choice. The grand result was as follows:

General Grant	30,291
General McClellan	14,500
All others	103
Total	$44,963

Majority for Grant, over all, 15,619

Thus giving nearly $50,000 to the Sanitary Fund, a very happy idea, thus the sword heals the wounds it makes.

A Longitudinal River.—A river that runs east or west crosses no parallel of latitude; consequently, as it flows towards the sea, it does not change climate, and the crops that are grown at its mouth are grown also at its sources; and from one end to the other of it there is no variety of productions—it is all of wheat and corn, wine, oil, or some other staple. Assorted cargoes, therefore, cannot be made up from the produce which such a river brings down to market. On the other hand, a river that runs north or south crosses parallels of latitude, changes its climate at every turn, and, as a traveler descends it, he sees new agricultural staples abounding. Such a river bears down to the sea a variety of productions, which one or another of the nations is sure to want, and for which one will send to the market at its mouth or the port whence they are distributed over the world. Its advantages are equally great for trade between the different sections through which it flows, as the staples of those sections are unlike, and productions lacking in one part of its course are supplied in another. The assortments of merchandise afforded by such a river are the life of commerce, they give it energy, activity and scope. Such a river is the Mississippi, and the Mississippi is the only such a river in the world!—Scientific American.

Mexican Weights and Measures.—We give the following, as the terms are often quoted in our State.

A Mexican Arroba is		25	pounds,
"	Quintal	100	"
"	Carga	300	"
"	Fanega	2½	bushels
"	Vara	33	in. Eng.

Opinions of Professors of Music on Jacob Zech's Pianos.

San Francisco, December 29, 1863.

Jacob Zech, Esq:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior square piano, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. BETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADDERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPEGEL, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. ENELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. Zech.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GLEINER, Piano Maker.

Piano Covers, Music Stools, Music Racks,

ETC.

PICOLLO PIANOFORTES.

WE WOULD CALL PARTICULAR ATTENTION TO these beautiful instruments from our own manufactory in Paris, and which we can confidently recommend as equal in quality to those of any other European manufacturer.

PICOLLO PIANOFORTES are now in universal use on the continent of Europe, having completely taken the place of the old style of Square Pianos. They possess all the merits ever claimed for the Square Piano, with many advantages that are peculiar to themselves.

Our assortment comprises six different styles varying in price from $275 to $400 each.

Iron-framed Picollo Pianofortes.

These Instruments are a "specialité" of our manufacture, are constructed with a special view to withstand the peculiar climate of the interior of California, and are warranted to stand any change of temperature.

Price $400 to $450 each.

STODART PIANOFORTES.

We have had the exclusive agency for the sale of these celebrated Pianos for the past twelve years, and refer with confidence, as to their quality, to the many hundreds of instruments themselves now in use throughout the whole extent of the Pacific Coast. A general assortment of these instruments will at all times be found in our warerooms, comprising Grand Action, Square, Upright, and Overstrung Pianos. In plain or richly carved cases. We offer them at the same prices at which they are sold at the manufacturers' warerooms in New York, thus saving to the purchasers here the cost of freight, insurance, interest, and attendant charges. Prices range from $240 to $500 each.

FRENCH HARMONIUMS.

In connection with our manufactory of Pianofortes at Paris, we have established a manufactory of FRENCH HARMONIUMS, suitable for parlors, music-halls and churches. These instruments, like our Pianofortes, are all in new wood cases, and are made with the improved "transposition attachment," which enables the performer, in voice accompaniments, to adapt the instrument to any particular "key," thus entirely obviating the necessity of any transposition of the music. Nine varieties $100 to $1,000 each.

We beg to call attention to the fact that the Harmoniums of our manufacture possess many valuable improvements not to be found in any other instruments of this description, among which is the peculiar disposition of the reeds. This improvement is based upon purely scientific principles, rendering the reeds doubly sensitive and much less liable to become deranged or get out of order

For full description of Picollo Pianofortes and Harmoniums send for descriptive catalogues.

PRINCE & CO'S

Melodeons, Double reed School Organs,

and Organ Melodeons.

Being the exclusive agents for the sale of these celebrated Instruments in California we are prepared to furnish them at the catalogue prices, as sold at the warerooms of the manufacturer in the East. The assortment comprises twelve different styles of instruments, ranging from $60 to $425 each. Illustrated catalogues, with full description and price of each instrument annexed, will be furnished on application.

HORACE WATERS, Ag't,
No. 481 Broadway, N. Y

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartette, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Led," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 825,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100, cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2 are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100, cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, paper covers, 20 cents, $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc. Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 72 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100, postage 1 cent each.

RUTH: A SACRED CANTATA

contains 136 pages. Words by Rev. Sidney Dyer, music by Prof. Colt. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

ELECTRICITY

THE

GREAT REMEDIAL AGENT.

Electricity as a Remedial Agent has, until recently, been but little known. An Electric Battery has been a terror from childhood up because a little battery gave a "start," and the thunder storm filled by lightning. Now it is better understood, and is and will be the sovereign remedy for many diseases heretofore considered incurable. The following series of articles and statistics, with facts and proof of the virtue of Electricity are worthy of attention. When it was pronunciated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulations of the poisons which constitute disease. A great cry went up from the interested in the continued supremacy of the old system of one poison to cure another, that Electricity, as a Curative Agent, had been tried and had proved to be of but little if any value—thinking, poor souls, the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients there were those who were diving into the science of Electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the *Improved Instrument* of Dr. J. H. Josselyn, Resident Physician at the Electropathic Institute, 645 Washington street, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic System. From early morn till late at night, his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services.

The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most formidable diseases to which Californians have been exposed is Rheumatism; none has given the honorable practitioner more trouble to relieve, and to no one has pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic System in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of a relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

We allude to that kind of disease paraded by quacks in the journals of the day, a trouble which was never cured by medicine, only a little strength imparted by the use of tonics. The poor victim is kept taking medicines and paying for them until his last dollar is gone and then, as soon as he undertakes to work to obtain more funds, the trouble comes back in all its loathsomeness. To this disease Electropathy is peculiarly applicable, its action being upon the spermatic nerve, strengthens the secretory organs, and at the same time, creating an equilibrium in the system, thereby preventing an elapse.

We dwell upon this disease because it is the bane of the youth of California; and one about which there has been more deception used than all others put together. It is not necessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present very few Instruments in the world that can be depended upon. A good instrument costs very heavy, and cannot be purchased unless ordered, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only Instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous imposters in the bathing line. The pure Magnetic Bath is one of the most effective aids in the removal of disease from the system, but if given at the wrong time is likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this Bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unreasonably administered, and if not necessary, advise the requisite remedy.

To Females,

the Directors would say, Electropathy is particularly applicable to your delicate and fragile systems, and to the numerous troublesome and painful diseases to which you are liable. Should you be irregular, a few treatments will restore the functions to the proper state without pain or inconvenience. Should you be weak and enfeebled, either general or local, the system imparts strength and vitality, making the recipient feel buoyant and youthful, where before they were languid and unable to enjoy the pleasures of life. One great blessing connected with Electropathy is, it purifies the system so thoroughly that it beautifies the complexion, making the coarse and freckled skin as pure and fair as possible, giving the patient a fresh and healthful look.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil foreboding and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in issuing this pamphlet, do it in the hope that it may be the means of awakening the public, who have not studied into such things, to a sense of their duties, and if possible prevent those who have the care of a rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse the origin. Also, that those in need of remedial agents may know where they can find them without resorting to taking the thousand and one poisonous nostrums that are continually palmed off as sovereign panaceas for all the ills of humanity. Avoid them all, they are snares set to rob you, and to your body injury at the same time. The following is a list of the cases which have been successfully treated by the *Electropathic System*, at the Institute, during the first four years of its establishment. The record is good, and challenges admiration of the world:

Name of Disease.	No.
Rheumatism	1580
Neuralgia	1492
Dyspepsia	1467
General Debility	1410
Fever and Ague	1322
Dumb Ague	1210
Bronchial Affections	1108
Asthma	1049
Female Irregularities	1000
Mercurial	938
Scrofula—long standing	923
Paralysis	890
Disease of the Eye	872
Catarrh in the head	705
Catarrh in the lungs	608
Liver complaint	600
Incipient Consumption	582
Panama Fever	560
Deafness—total and partial	490
Mental Derangement	471
All other—and among which is almost every nameable disease	2,186
Total	21,373

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit. Let them go, they will not be missed.

Persons seeking remedial assistance, may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface, by its energy, while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon mercurial diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, worm in a liquid state, by its own specific gravity forces itself out of the body. This result has been arrived at by testing the water after an Electro Magnetic Bath. After such tests have been found in the water the patient is not troubled any more with those pains peculiar to the diseases. In all other cases it forces to the surface and is washed off by the bath. The whole system is its application is a luxury there being no pain or inconvenience attending upon it, but the reverse in the case, being one continued pleasure all the time. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES.

San Francisco, April 18, 1860.

This is to certify that I have been under the treatment of Dr Josselyn, at the Electropathic Institute, and that he has cured me. My disease was muscular, accompanied with chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this eighteenth day of April, A. D., 1860. P. BARRY, Notary Public.

The undersigned takes this method of acknowledging publicly the benefits he received from the treatment applied to him at the Electropathic Institute, while suffering under a terrible infliction:

This is to certify that I have been under Electropathic treatment at the Electropathic Institute, 645 Washington street. When I applied to Dr Josselyn I was cramped up with rheumatism, and also had the coast ague. So bad was I that, without relief, I don't think I could have lived more than one week. The Doctor, with his instrument, relieved me the first treatment from all pain, and perfectly cured me of all disease in twenty treatments, without the use of medicines. I cordially recommend all afflicted to patronize this Institute, for it is truly a blessing to the afflicted, and the operation is very pleasant. I wish to thus publicly thank Dr. Josselyn for his care and sympathy.

JOSEPH SEGER, of Bolinas Bay.

September 19, 1860.

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this 19th day of Sept., A. D. 1860. P. BARRY, Notary Public.

Sacramento, Oct. 10, 1860.

Dr. Josselyn—Dear and Honored Sir: You requested me to let you know how I feel after being at home three weeks. Well, sir, I have been here a little over two weeks and there is no return of that very unpleasant trouble. My sleep is sound, and there is no disturbance of the regular laws of nature. I feel as strong as I ever did before had habits had weakened my system. Not only is the general debility entirely disappeared, but the local trouble has gone. I feel so strong that there is no fear of its return. Considering that you only took one month to cure a disorder of seven years standing, I think your system almost miraculous. Accept my sincere thanks, and publish this if you please. I have sworn to it, as you will see. C. BOWMAN.

State of California, County of Sacramento—ss.

Subscribed and sworn to before me, this tenth day of Oct., A. D., 1860. CHAS. HART, Notary Public.

Hornitas, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it; and Mercurial pains as you state them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you would cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can, by spreading your fame up in these parts.

Respectfully yours, GEO PERKINSON Jr.

To J H Josselyn, M. D., Resident Physician, at the Electropathic Institute

Nevada, Nov. 8, 1860.

Dear Doctor: Pursuant to agreement, upon my arrival, I sit down to pen you a few lines in acknowledgement of the great service you have rendered me, in relieving me of that painful case of neuralgia and rheumatism. When I look back and see the gallons of medicines I have swallowed to no purpose, and then to think how soon you cured me, I am astonished. You were only twelve days performing a cure of the trouble, for which I had taken medicine over six months. Dear Doctor, if you could see the wonder exhibited by my friends, who can hardly believe that a cure was performed without medicines, but here I have been cured, and I have not taken a drop of medicine from you, nor from any one else, while being treated by your splendid Instrument. I shall try to show my gratitude by sending every sick man I come across to you. Yours, till death,

FRANCIS GARLAND.

To J. H. Josselyn, M. D., Resident Physician, Electropathic Institute.

State of California, County of Nevada—ss.

Subscribed and sworn to before me, this eighth day of Nov., A. D., 1860.

F. SPAULDING, Notary Public.

Yreka, Nov 10th, 1860.

Dr. Josselyn—Dear Sir: Your letter, dated October 16th, is before me. You wish to know how my bronchial troubles are. Now, Doctor, that looks a great deal like a joke. I once had such an affection of several years' standing, but thanks to your natural mode of treating disease, it has gone to be numbered with the things of the past. Since my return I have not felt the slightest trouble from it. When you pronounced me well I did not expect to ever hear from it again. Any one who sits under treatment of that *Improved Instrument* of yours will have the same feelings. It imparts vitality to the system so rapidly that confidence is at once established. I have to thank you that you did not refuse to treat me because I could not pay you the whole of your reasonable charge; inclosed is the balance due you, and God bless you for the kind treatment I received at your hands.

Yours, ever grateful, WM. GARDNER.

State of California, County of Siskiyou—ss.

Subscribed and sworn to before me, this tenth day of Nov., A. D., 1860.

B. F. WELLITS, Notary Public.

This is to certify that I, the undersigned, was troubled with dumb ague accompanied with rheumatism, very badly. My disease was taken in Washoe. After having exhausted medicines without benefit, I applied to Dr Josselyn, at the Electropathic Institute, on the first day of November. After taking twenty treatments with his improved Electropathic Instrument I am perfectly cured, having been entirely relieved of all pain or inconvenience. I feel as strong as I ever did when in the best of health. I cheerfully recommend all afflicted to his care, as being the best physician I ever became acquainted with. One great advantage, he uses no medicines, but cures by a process which is perfectly natural. The time occupied in my case was thirteen days.

D. O. HARRA.

November 14th, 1860.

State of California, City and County of San Francisco—ss.

Personally appeared before me, D. O Harra, and subscribed and sworn to the above certificate, on this fourteenth day of November, A. D., 1860.

P. BARRY, Notary Public.

San Francisco, Aug. 3d, 1861.

To the Directors and Resident Physician of the Electropathic Institute.

Sirs: You requested of me a certificate of the cure you performed in my case. Below I append it:

This is to certify that I was troubled with a swelling which commenced in my ankles, and gradually extended upward until it effected my whole body. I sought the best medical aid in New York and Boston, and they all pronounced it dropsy. Hoping to retrieve my health, I visited California in February last. I consulted the Resident Physician at the Electropathic Institute; and now, after five months of treatment, and waiting to see its effects, I am pronounced well by competent judges. It did not take but three months of treatment to cure me, but I waited to see that it did not return. I feel perfectly assured from what I saw while under treatment that Electricity as applied at the Institute will cure any disease to which the human family is liable.

Now, gentlemen, you can make what use you please of this certificate. With my thanks to the Resident Physician for his kind attention, I subscribe myself,

Your thankful patient,
MRS. C. A. CARLTON

Opinions of the Press.

The advantages of electricity as a remedial agent, are universally admitted by the medical and scientific world. It requires, however, experienced skill to apply this remedy efficiently, and this skill of application is possessed in an eminent degree by Dr. J. H. Josselyn, of the San Francisco Electropathic Institute. Particulars of his method of practice can be obtained by reference to his advertisement in another column. The Doctor is well known to us as a scientific gentleman, and an ardent devotee to his profession. He is no pretender, but has conferred incalculable benefit on those who were so fortunate as to seek relief at his hands. For those who desire speedy and permanent relief from the rheumatic pains, so prevalent in this region, we can recommend no surer remedy, than a visit to Dr. Josselyn at his rooms in San Francisco, No. 645 Washington street.—[Placerville Republican.

Are you Sick?—We wish to say a word to those that are sick. We have in the city an Institution known as the Electropathic Institute, situated at 645 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician who has no superior in the city. He has been in charge of the Electropathic Institute for several years, and has been uniformly successful in his treatment of the numerous patients that have placed themselves under his charge. The Electric treatment will cure many diseases that cannot be reached by any other mode. Dr. Josselyn gives his personal attention to all of his patients, and is always ready to give advice to those that may call upon him. His charges are very moderate, and we cannot do the sick a greater favor than to recommend them to call on him before placing themselves in charge of another.—[San Francisco Daily Journal.

We call the attention of our readers to the advertisement of Dr. Josselyn's Electropathic Institute. Voluntary and unsolicited we make the following statement, proving its beneficent effects particularly in rheumatic cases. Some months since we were on an editorial trip, visiting the mountains. The stage-coach upset, and landed all the passengers, including the writer, below in the valley, where the Deer Creek overflowed by receiving the additional material, extraneous to its usual contents. For some hours exposed in our wet clothes, to night wind and weather, we soon felt the effects of the accident in the mountains—pains in the back, hip, and legs, so much so, that for weeks we hardly could walk. Treatments of all kinds were applied but without avail, until our attention was called to the Electro-galvanic Baths and appliances of the above Institute. Thank God, after two weeks we have been fully restored, and enjoy now the free use of our limbs and body, as fully as previous to the involuntary bath in Deer Creek.—[Dr. H. Ernst, Ed.—True Pacific Messenger.

Electropathy.—Electricity has long been classed among the most effective medical agents. It possesses great advantages over the systems of therapeutics heretofore relied upon, as it reaches more certainly the seat of disease, especially in nervous or rheumatic complaints. The Electropathic Institute, No. 645 Washington street, under the charge of its able Resident Physician, Dr J H. Josselyn, has attained a well merited celebrity for the many cases which have resulted favorably from the skillful application of this invaluable remedy.—[Daily Morning Star.

A Good Institution for the Sick.—One of the very best places in the city for the care of the sick is at the Electropathic Institute, 645 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician of great experience, and no one can do the sick a greater favor than to recommend them to give the Electropathic Institute a trial.—[Weekly Journal 13

The California Farmer

SAN FRANCISCO

FRIDAY.....JUNE 17, 1864

☞ Those who receive a number of the FARMER with the paragraph marked, will understand that it is sent to them of their own subscription having it will pass their specimen and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or handing it to those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address Publishers CALIFORNIA FARMER, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

330 Clay street—Marble Building—Up Stairs.

The Editorial Rooms and Museum of the FARMER Office are always open, and visitors cordially invited to make a visit in scrutiny to those who take an interest in the productions of our State. Samples of all the cereals, grains, grasses, fruits, models, inventions, patents, and specimens in Natural History innumerable, are constantly being added.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the FARMER Office. Members of the Press, and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mail, as well as Foreign Newspapers, Periodicals, and Magazines, are upon the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coals and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farming, etc., at the Farmer's Reading room, 328 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Send along your Greenbacks,

Delinquents will please send along your Greenbacks. These we must have to pay for all back dues to the FARMER for subscription. So send them along, now is the time. This is a better speculation than filling stocks, for it is so pleasant to patronize a newspaper, when one knows he has paid for it, the obligation is better and a man feels happy, and, if happy, then he feels rich. So pay prompt and you will "strike a lucky lead."

New Comers.—Homesteads.

THOSE New Comers to our State can always be sure to find valuable Homesteads, already highly improved, and for sale on favorable terms, by applying at our Office. New Comers who want important positions, as Superintendents of Farms or Mines, etc, can always be informed of favorable chances.

Transactions of Agricultural Societies.

We would ask of those Societies in the Atlantic States and Europe, to whom we send our Journal, to send us the transactions of their several Societies, so that we may give the benefit of their perusal to visitors, from the several States, who are daily at our Reading-rooms. By this means we can lay before them the progress of Agriculture in their former homes, and thus advance the interest of both Atlantic and Pacific States.

Clerk and Assistant Wanted.

We want an active intelligent business clerk in our office. We want a person who has a knowledge, to some extent, of agriculture, horticulture, the science of botany, and the seed business. A man of correct habits, and willing to give his time to business, closely; a young man free from incumbrances on his time so that he can apply himself to business wholly. A knowledge of the languages would be desirable, and of mineralogy, also. Application only to be made between the hours of 4 and 5 p. m., and by none who cannot give the best of references.

TO AGRICULTURAL SOCIETIES ABROAD

Exchange of Seeds, Books, Etc.

HAVING established large and spacious Reading Rooms, in this city, which contain Libraries, Cabinets, and hundreds of Newspapers, all free to those who wish to enjoy the benefits thereof, we now ask coöperation from all Agricultural Associations in the Old States and Europe, for the *Exchange of Seeds, Specimens, Books, Etc.* We shall be happy to reciprocate any and all favors, and comply with any direction made to us connected with such an enterprise.

TO READERS AND CORRESPONDENTS.

We ask, especially, the attention of our readers to the Essay on "The Law of Husband and Wife," on our sixth page. It will be found of valuable interest to all in the married relation.

We have an excellent criticism upon the "Drama," the Metropolitan Theater and its new management, called Mimic Life, by "Ricardo," will appear next week—too late for this. We regret it because we desire to *have* approving words sent forth for those accomplished ladies, Mrs. Hayne and Miss Ince, who are striving nobly to elevate the Drama, they having the hearty good will of all who appreciate the true Drama.

Numerous Letters and Contributions were too late for notice this week.

Oakland and her improvements, in type, but crowded out this week.

Our Bills Sent.

We must ask those to whom we have sent bills to remit us at once. We have offered them the liberal opportunity of paying in U. S. Treasury notes at par, and it seems to us that every principle of honor and justice should induce a compliance with such an offer. We are happy to say, however, that we have many subscribers that still send us *gold*, for their back dues, as they felt they could not do otherwise.

We must remind all our subscribers that our terms are, where payment has been delayed over six months, $1 additional is charged; this will guide them in their remittances; thus a subscription, over due one year, would be $6, and so on. We wish all bills settled up by our New Volume, of July. Now is the time to remit.

Patent Rights.

It has been and will be one of our specialties to aid all who desire to secure "Patent Rights," and to give them information and assistance in preparing their papers. We know we can facilitate them greatly, in this matter, as we have all the Laws and Rules of Action touching these things. Many models can be seen at our Office and Reading-rooms, where all are invited freely.

The Memorable 17th June, 1775.

THIS eventful day occurs on the publication day of this Journal. Revolutionary times—we hail it as one of the grandest epochs of our country's history. The day, and its associations, have ever been familiar to us as connected with our early boyhood days, birthplace and family heritage; Bunker Hill being very familiar to us, from infancy; as a son of Middlesex county, a county whose borders inclose not only Bunker Hill but Lexington and Concord. It was our good fortune to be present when Daniel Webster delivered his great Oration on the Laying of the Corner Stone of the Monument, in presence of that most illustrious Guest of our Nation, LAFAYETTE, the Patriot, Confrere and Companion in Arms of GEORGE WASHINGTON, the Father of his Country. Who does not remember the thrilling, closing words of Webster, on that occasion, as he described the completion of the monument? "And when the last stone shall be raised, etc.,"

"The morning sun shall gild it with his beams,
And its last lingering rays shall play about its summit."

The 17th of June should always be a sacred day to the American breast and it should ever be observed as the Baptismal and Christening Day of the American Revolution.

By request of a subscriber and friend, to republish that noble Address to the American Flag, (by Joseph Rodman Drake), we do so, selecting this day and event as a most appropriate occasion:

When freedom from her mountain hight
Unfurled her standard to the air,
She tore the azure robe of night,
And set the stars of glory there!
She mingled with its gorgeous dyes
The milky baldric of the skies,
And striped its pure celestial white
With streakings from the morning light!
Then, from his mansion in the sun,
She called her eagle-bearer down,
And gave into his mighty hand
The symbol of her chosen land!

Flag of the free heart's only home,
By angel hands to valor given!
Thy stars have lit the welkin dome
And all thy hues were born in heaven;
Forever float that Standard Sheet!
Where breathes the foe but falls before us?
With FREEDOM'S SOIL beneath our feet,
And FREEDOM'S BANNER streaming o'er us.

Flag of the brave! thy folds shall fly,
The sign of hope and triumph high!
When speaks the signal trumpet's tone,
And the long line comes gleaming on:
Ere yet the life-blood, warm and wet,
Has dimmed the glistening bayonet,
Each soldier's eye shall brightly turn
To where thy meteor glories burn;
And as his springing steps advance,
Catch war and vengeance from the glance!
And when the cannon's mouthings loud
Heave in wild wreaths the battle-shroud,
And gory sabers rise and fall,
Like shoots of flame on midnight pall!—
There shall thy victor glances glow,
And cowering foes shall fall beneath
Each gallant arm that strikes below
That lovely messenger of death!

Flag of the seas! on ocean's wave,
Thy stars shall glitter o'er the brave,
When death careering on the gale,
Sweeps darkly round the swelling sail,
And frighted waves rush wildly back
Before the broadside's reeling rack,
Each dying wanderer of the sea
Shall look at once to heaven and thee,
And smile to see thy splendors fly
In triumph o'er his closing eye.

Birthday Testimonials.

THE birthdays of children are the rainbows in the family circle. Keep them, keep them ever bright, for the rainbow stands between thee and the clouds behind them.

June, the month of roses! We can well remember a rainbow day this month. It was June 1st, a bright day among some happy little ones, and big ones too, for it was Flora's birthday. She is a joyous, bright, and beautiful child, stamped in every feature with a living intelligence, and joyous in her young spirit, and as happy as the spotless lamb that gambols on the mountain side. We esteemed it a glad occasion to be a guest at this birthday festival, and remember the beaming brightness of that happy spirit, and if ever the bright goddess that reigns queen of the Floral kingdom, assumes mortal shape, we saw her personated that day, in this happy creature—this child Flora, the namesake of the "Goddess of flowers."

Only five years old, and yet so intelligent, Only five years old, and yet for her a birthday party of nearly a score, she made and prepared with her own hands a dish of tea for each guest and handed it round in her golden cups, better prepared than many a woman who calls herself wife could prepare it. Happy Flora! happy in thy own spirit, happy in thy surroundings of loving parents, brothers and sisters, may thy opening life be symbolical of thy future; may thy years coming be all bright years, all rainbow hued, driving away the clouds, and those that love thee, and those thou lovest so well, see thee still a Flora, a living type of the beautiful. The little cluster of flowers thou gavest us, and those of thy pet brother, we cherish for their innocence and beauty; these too are types of thy loving good nature.

Oh, cherish the birthdays—the birthdays of children—for they are the purest and brightest guides to happiness; even

"The tears down childhood's cheek that flow,
Is like the dew-drop on the rose;
When next the summer breeze comes by
And waves the bush, the flower is dry."

Keep children happy then in their childhood sports, for

"By sports like these all their cares beguiled;
The sports of children satisfy the child."

What is Music? No. 3.

We have in two numbers asked what is music?

In this number we can reply.

Julien himself, and his violin, both are

"Viols full of odors sweet."

"Music resembles poetry; in each
Are numerous graces which no methods teach,
But which a master hand alone can reach."

Like magic power, the word went forth that Julien was to utter "music" at Platt's Hall on Wednesday afternoon, and when the hour came there was an audience present, of which any artist might well be proud.

Who is Julien? Paul Julien was born in France, in 1841. We first hear of him as a musical prodigy, 7 or 8 years old, with his violin entrancing his auditors, and, like a noble youth, supporting his parents by his earnings. He arrived in New York with Madame Sontag, in 1852, and there created great interest by his wonderful performance. He is now but in the morning of life, yet a noon-day glory is about him. It has been our pleasure to listen to Paganini, to Vieuxtemps, and Ole Bull, but we must say he is without a rival in the world, unless we should name Sivori.

Julien, the boy-prodigy of Paris, is now the man-master of the instrument he loves. He can touch it and it will speak; he can whisper to it, breathe upon it, and it will give forth the harmonies that are in his own soul. Perfect in his own art, Paul Julien is beyond the critic's power. One might as well attempt to portray the hues of the rainbow, as to tell of the melodies that Paul Julien can draw from the strings of his harp—for to him it is a harp, aye, a flute, or any instrument he likes—it utters sounds at his will. His power over the instrument is that of an absolute monarch. It answers to his call. There is a spiritual communion that is wonderful. His ease and grace of handling, and his perfect execution is marvelous. Never has Platt's Hall had such an audience before; and when it is remembered that it was in the daytime, it is a proof that all else of business or pleasure was merged in Paul Julien, or his wondrous power and skill. Paul Julien *can* tell us what is music?

We have said that his performance was above criticism therefore we need only say that each and every performance only endeared him the more, and made the wrapt listener still wish to hear again. If the most deathlike silence, if spontaneous heart applause, is testimony of satisfaction and approval, then Paul Julien secured it more than any artist that ever came before an audience in that Hall. From delight to rapture, each succeeding piece enchanted all. The noble, the grand, the sublime, the delicate, soft strains, each and all won, by turns, until the listener *felt* the music.

Paul Julien's Concert was a noble triumph. The Orchestra, for this occasion, was a grand one, and grandly they performed. It is admitted that it was the best orchestral performance ever given in San Francisco. Professor Herold was King.

Kohler's Grand Piano seemed to know also that Prof. Schmidt wanted its sweetest sounds, and it gave them.

Miss Richings was truly herself and a "Queen of Song," a nightingale would have been jealous had one have perched near by.

The Bianchi's, with their volumes of sweet sounds touched the hearts of all, and the only regret that we heard expressed, was "sorry it is over," and yet the audience had been in the Hall *four hours*. Such is the "Power of Music," and its a grand thought to know we can have such enjoyments.

Wednesday next a *Charity Concert*, another glorious occasion, and another full Hall of the "Lovers of Sweet Sound."

The San Francisco Postoffice.

NO. III.

THERE is an old saying, "from bad to worse," and so it seems with the "third postoffice of the United States," that of San Francisco. Formerly, we could sometimes get our letters by the Sacramento route by 11½ p. m., but latterly we don't get them till morning, and now and then not at all. We have several letters that have been addressed to us that never came to hand. "From bad to worse," is most assuredly the result of these repeated changes; and let any one of our citizens, who has been conversant at all with the Postoffice, just peep in now and see *how readily (!)* the batch of *new clerks* handle letters, they would not wonder it takes *so long to sort the mails*. The fact is, it is an outrage upon the business community, not to have intelligent scholars, men competent to read the superscription of letters, and be qualified to *sort the mails*.

At the present time there is a very great and growing discontent in the community against the Postoffice management. Letters are miscarried; often placed in the wrong boxes; merchants that have had boxes for years have valuable letters mislaid, and after weeks *advertised*. There is an evident looseness about the whole concern that needs overhauling.

Where are the old and faithful clerks that were so competent and reliable? Have they been removed to give room to illiterate and incompetent favorites? Where are the cheerful, pleasant, and familiar faces of those clerks, whose courteous and gentlemanly demeanor won the esteem of the whole community? Does any one believe those who now have taken their places are competent to act? Go stand at the delivery, and call for letters and see *how long it takes the new clerks to spell out names*, and their competency is proved.

Why should faithful clerks be removed? Are more faithful ones put in their places? Are the new clerks *truer to the Union, more honest*, more intelligent? Do the new clerks accomplish the work in less time, and do it more carefully? We know not; else there would not be such a universal complaint against the Postoffice.

What a shame, that a city like San Francisco should have her whole routine of business correspondence deranged. This is no trifling matter. Business success, family comfort, friendship, health, and life itself, is jeopardized by this mismanagement.

We repeat what we have asked before, who does not remember the admirable system, perfect in all its parts, of our Postoffice under the management of C. L. Weller, Esq. Never was the Postoffice on this coast better managed. And when S. H. Parker, Esq., had it, it was rapidly approximating the same high stand, when, for his trying to improve it, he was beheaded.

When these gentlemen were at the head of the Postoffice they were *always* at their post till *midnight*, or all night if needed. Who ever sees the present Postmaster *at work* urging on the delivery at night? Perhaps he don't belong to the *working class*; but it is important that the *head* of the Department should *oversee* and know when work is well done, that is, *if he is capable to do it*.

We have suffered the loss of letters, and other inconveniences, with hundreds of others, and not a day passes but what we see and hear of the grossest errors and blunders of the Postoffice, and if it was properly managed, and had competent clerks, this complaint could not exist.

We have received numerous letters from business men, and have been called on many times, and information imparted to us relative to occurrences, that seem so preposterous, that we wish the Postmaster-General, or his assistant, or even the Hon. John Conness himself, could *just peep* in, we think they would all feel ashamed. We give herewith a part of a letter we have received, to show that there is cause of serious complaints, and the matter has assumed such a shape that it must be corrected. We have plenty more proofs like this.

"MR. EDITOR: Having observed in your journal, in the Bulletin, and other papers, very severe, but just censure, of the manner in which our Postoffice is conducted at the present time, I wish to bring to your notice another just cause of complaint. After having been a box-holder for *ten years*, a friend of mine observed in the advertised list, of May 25th, a letter addressed to him. Calling for it, *five letters* in all were handed him, two having been advertised April 27. One of these letters was postmarked Austin, April 27, and advertised May 18. That letter would have been of great value to him had it been placed in his box on its arrival. After delay it was valueless! He asks, 'Where is his redress?'"

We have seen the envelope with the stamps, date, and advertised marks.

Such carelessness is without excuse, and so numerous are the public complaints, that the fault cannot all be laid to incompetent clerks, for if the *head* was capable and efficient, changes and reform would take place; but when good, careful, long, and well trained clerks are removed to make room for favorites, men from the interior, who know nothing of such duties, it is certainly treating our merchants and business men with contempt, thus to trifle with their business interests.

We have noticed in several of our city papers repeated complaints, all founded in justice; but we have never seen but one newspaper attempt to *defend* our Postoffice, and that paper the American Flag. This we deeply regret, for we have always been taught that the American Flag never placed its beautiful folds around any grievous wrong *against the people*, nor attempted to defend wrong; yet recently it made a very bold assertion, and said that the many attempts to reproach the present Postmaster were not based on truth, and that some of the articles in the weekly journals *were very wide of the truth*. The only reply necessary to the Flag we take from their own columns, of June 4:

LATE COMING.—A buckskin purse, containing a remittance of $45, was received by us about the 18th of May. It came by express, and as no explanatory letter accompanied it, we were at a loss to whom credit should be given for the amount. Yesterday a letter came to hand, by post, from F. Wagner, Esq., inclosing the names of certain subscribers at Sawyer's Bar, from whom the aggregate sum had been collected in respective amounts, in payment of advance subscription to the Flag. This explains the matter. The letter is dated May 18th. What has kept it so long on the road?

So it seems Mr. Flag occasionally gets letters only *seventeen days* from Sawyer's Bar. We have other and more important facts for hereafter, even questions more momentous.

We hope the new Postoffice Agent will overhaul the country Postoffices; they need it badly. If the Agent will call on the *people* he will get facts.

We are glad to know that a special agent of the Government to examine into the affairs of our Postoffice, arrived on the last steamer—E. R. Crane, Esq. He comes at an opportune moment. Let our merchants and business men, those who have suffered, give Mr. Crane *facts*, and he will soon rectify and make a change, and any change must be for the better. The people of San Francisco have suffered great inconvenience of late.

And why, let us ask, should not the citizens of Mission Dolores have a Postoffice? Why should hundreds and thousands of letters that belong to the Mission residents all be stopped at San Francisco? Why should they have no accommodation? Our city is rapidly extending, and the Mission deserves accommodation as well as any of our neighbors.

STREET RAILROADS.—It seems that the street railroad companies begin to feel, in their pockets, the loss of public confidence, and the barren condition of trade suggests immediate action on their part to avert greater losses, for it is evident by empty cars that people will walk, and not ride, until the railroad companies come to their senses. We are pleased to know, also, that a well-signed petition has been presented to the Board of Supervisors, requesting them to decline to approve the Act of the Legislature of April 1, 1864, granting an extension of time to certain railroad companies, unless they shall at once and in good faith comply with the spirit of their franchises and run their cars directly through on each route at a charge of one legal fare. This is as it should be. The people are sovereign. The Legislature has said what shall be, and the people say, answer.

To Passengers on the Steamers Eastward Homo.

REMEMBER the "Golden Rule" Line for the 23d this month.

The M. O. Robert's New York Line, and the People's Line of California, are the same, the same line of steamers. On the 23d of this month the new and magnificent steamship, Golden Rule, one of the largest and finest steamships yet completed for California travel, takes her place in line, and sails from New York, as the herald of the increased facilities and comfort, as well as safety and convenience, for the people of California. This noble steamer will steam it direct to the Isthmus; after this trip she will take her place on this side, and give to the People's Line two steamers per month. Then this line will make quicker time than any line on the Pacific.

This line will then have the Golden Rule, the Illinois, the America, and the Moses Taylor. The last new steamer is a model of beauty and symmetry, strong as oak and iron can make her, safe as genius and skill can guard from danger, either by fire, steam-explosion, or sea danger, swift as comfort or business demands. She will sweep over the ocean at a speed of nearly fifteen miles an hour. This she has done on a trial trip, and guided and manned by officers and men of experience and skill, her passages will be speedy and safe.

This new steamship is rated at 3,500 tons; her length is 310 feet long, 44½ feet wide, 34½ feet deep. She has been built for safety, having her water-tight compartments; her engines are the largest class, and of great power. Every effort in building this steamer has been a success. The Golden Rule is one of the best steamers afloat. Fresh air, comfortable saloons, and sleeping apartments, being a *sine qua non* with the owners; she can, without doubt, challenge any steamer to excel her.

The People's Line have set up the "Golden Rule" as a standard of action, and the people will flock to it and take passage on the ships of this line, knowing that each and all will have every comfort and convenience needed, and that these steamers will have enough of the good things, eatable and drinkable, to satisfy any passenger, in whatever class of passage they shall take, that the Roberts' Line (the People's line) are guided by the "Golden Rule," and must see the passengers shall be satisfied.

We, as journalists, having constant communication with passengers who come to our sanctum, visiting our reading-rooms regularly, learn that this line do care for the people. We have received several letters from our friends at Panama that went down on the last trip of the Moses Taylor, and they assure us that, having traveled to and from New York often, they have never made the passage with such comfort and satisfaction as since the People's Line has been established; and that since the people themselves begin to see that *they owe it entirely* to this line for the reduction of the prices of passage, they feel that it is the first duty of every friend of California, all who wish to build up our State, to use their personal influence with their friends, not only to sustain the line nobly, but to aid to make it stronger, confident that by doing so great additional benefit will result to the traveler by increasing facilities and comforts on this line, until the M. O. Roberts Line of New York, the People's Line of California shall be as celebrated for its speed, safety, comfort, and luxury of all the steamers on the line as the Company have become famous for their bravery and fortitude, in facing the "Lion of the ocean," that once monarch of the Pacific reigned Vanderbilt.

Remember, then, all you who intend sending home for your friends or kindred to come, or who may be going on a business or pleasure trip, your first duty is to give your whole influence to the People's Line of Steamers, of which I. E. Roberts, Esq., is the well known and popular agent here. Their new building is situated on the corner of Pine and Battery street, San Francisco.

A new feature of interest to us all, in relation to ocean travel, is the news just received of the sale of all the Vanderbilt steamers to a new company. We have this as an evidence that the People's Line has had the power to subdue the monopoly on the ocean, and Vanderbilt is no longer the controller of everything, for he has sold his four steamers, the Champion, Ariel, North Star, Ocean Queen, and given up the contest. He has at last found, that long and deep as his purse may be, there is a power yet with the people that can bring him to terms. Vanderbilt finds that tyranny will not succeed with a free people, thanks to the energy and courage of the Roberts Line, the opposition for the people have now triumphed, and all the energy of the people sustain the People's Line.

The America is expected next week. The reason this line does not make the same time as the Pacific Mail, on coming, is, that the passengers coming by steamer from New York, await the arrival of the down steamer. But while they wait they are generously provided for by the Company. Passengers are at no expense. This line is never beaten on this side down, but gains one or two days each trip on the old line. The last trip of the Ocean Queen (old line) was 19 days to Aspinwall. This line is usually 8½ days, thus showing a gain which will be permanent.

Brushes.—If a *new broom* sweeps clean why should not a *new brush*? One of the best stocks in our city—and the only complete one—is that of Newman Brothers, on Battery street; and surely if *new* brooms and *new* brushes are good, a *New* man must surely have good ones. So go and call on Newman Brothers.

SPECTACLES.

Among the many advantages possessed by the improved spectacles, for sale by Mr. Muller, of this city, are a greater density of material, perfect surface, and are ground of a concave, convex, mirror form, thereby giving a larger scope to vision, most admirably adapted to the organ of sight. These qualities being united, form the most perfect lens, transmitting rays without unequal refraction, and obviate the blur consequent on the reflection from the minute cavities found on the most finished surfaces of other lenses. It is this perfect transmission of light, joined to their peculiar form, that enables the wearer of these spectacles to prosecute the most trying labors of the eye without those distressing results which follow the use of all other glasses. The spectacle lens in common use, termed double convex, have but one focus, and that being in the center admits of a perfect vision only through the center. Now, as the eyes, in rolling from side to side, depart from this point, they are affected by the distortions incident, and occasions, in weak eyes, fatigue and pain, and in strong eyes, a more frequent change of glass for those of higher power, than is caused by the simple flattening of the eye by age; or, to use the language of many, they make the eye grow older. Could the glass be attached to the eye so as to move with it, or the head be made to turn and accommodate the sight, while the eyes remain fixed, the double convex lens would not be so objectionable. But as neither of these plans could be very well accomplished, an easier method to remedy this important defect in all hitherto constructed helps to the defective human vision, is desirable. This end is obtained in these glasses, which, having not only a central focus, but for all practical purposes, one throughout, the objection above named is obviated, as they will enable the wearer to perceive objects at every angle of vision with all the correctness of the natural sight. Having tried these glasses of Mr. Muller's, we can say to all, who, like ourselves, have a constant strain upon the eye, by reason of editorial labor by night, as well as by day, and we say to all professional men, go to Mr. Muller and get these improved spectacles, and preserve, not only your eye-sight, but save yourselves the pain that results from using glasses not fitted to the eye.

"LILLIE ON SAFES."—*Structure of Sheet-Iron Safes Described.*—The Sheet-Iron Safe is made of sheet-iron plates from one-sixteenth to one-twelfth of an inch thick, banded round the outedge with light bar iron, the larger safes having a band across the center. This constitutes the whole iron work, adding the door-flanges and back plate and the door way and front flanges; except in some cases a thin plate of hardened steel is placed inside, and this is called a Burglar-Proof Safe.

Agents for Lillie's Safes "The Russell & Erwin Manufactoring Company," 106 and 108 Battery street, San Francisco.

YOSEMITE VALLEY.—The present is the favorable time to visit the Yosemite Valley, the grandest and most glorious scenery in the United States, the most varied, the wildest and most quiet. It is the place for all who love to view nature as it comes from the hand of the creation. Robison & Snow, corner Sansome and Washington, have a fine illustration of this Valley, a gem of a picture for which they take subscriptions.

PROSPERING.—The Mariposa Gazette says: More new buildings have been erected in this place during the past six months than during any like period within our recollection. Many are made necessary by the improvements going on connected with the Mariposa vein. Mariposa is without doubt the most thriving mining town, just at this time, in the Southern mines.

RURAL PICTURES.—Farmers decorate your *Home* with Beautiful Pictures. Far better to spend your money to "Beautify Home," than in many other ways, in which money is daily expended.

Wood and Willow-ware.

Newman Brothers

BRUSH MANUFACTURERS AND IMPORTERS OF all kinds of

Wood and Willow-ware,

HAVE FOR SALE:

NEWMAN BROTHERS,
20 No. 303 Battery street, near Sacramento.

Partner for Commission Business.

A REAL BUSINESS MAN, WITH CAPITAL OF $2,000 to $3,000, who desires to invest in a very safe and profitable business already established, may hear of an opportunity by addressing with real signature, S. S. F., care of Farmer Office. All communications strictly confidential. 20-tf

Specimen Sheaves of Grains, Grasses and Vegetable Productions.

We shall be very ready and willing to return any favors that may be granted to us in furnishing us with sample sheaves of Grain of all kinds, Grasses of every kind, and any rare or curious specimens of vegetables, to be placed in our Rooms for Exhibition, in order to show the various productions of our soil and climate. For any and all such we will cheerfully give an equivalent, and more too, besides feeling very grateful for the interest manifested in the progress of our State and its productions. As this is the season when our grains are being harvested, we hope our friends will remember us. All such specimens are marked with the name of the grower or contributor, and the place where grown, which makes each specimen of value and interest to all who see them.

Mineral Specimens.

We shall be very glad if those who are interested in the development of our rich mineral wealth, will forward to us, for our Exhibition Rooms specimens of the different ores of the various localities with such statistics as may, by publication, aid in advancing this great interest and power of our State, for all such interest we shall be glad to make a suitable return, rendering a full equivalent for such favors.

OUR THEATERS.—No city in the United States contributes so much (per capita), for the support of Theaters as San Francisco. The history of the Theaters, and the sums spent nightly and monthly, would astonish the world. Dull times! Hard times, and money scarce, and yet *Five* fine Theaters, one Circus, Museum, several minor places of amusement, and $100,000 per month paid out of the pockets of the people, these "hard times." It is certainly due to Mr. Maguire to say he has kept up the Drama, in California, and his new "Academy of Music," is indeed a credit to him.

The Power and Strength of the Lillie Safe.—We examined a piece of the material of which the Lillie Safe is made, "chilled steel." It was from a door that had been broken by reason of the owner forgetting his combination. We tried the material with the best quality of steel file, but the file gave way. No perceptible impression was made on the material. It is not only unimpressible by steel, but safe from fire, lock pickers, and powder blasters. There is only one way you can break the Lillie safe: forget your combination, then you *must break it open.*

The Benicia Law-School.

THE THIRD SESSION OF THE BENICIA LAW SCHOOL will commence on the

Twelfth Day of July,

And continue twenty-one weeks. A new class will be formed at the commencement of the term.

It is the design of the School, by a systematic and thorough course of instruction, to afford advantages for the study of the Law which cannot be obtained by the usual method of reading in an office.

For circular obtaining full information, address
J. E. ABBOTT, Benicia,
C. J. PLATT, for the Trustees.
Benicia, June 6, 1864. 20

THE COLLEGIATE INSTITUTE,

BENICIA—FOR MALES ONLY. The next session of the Institute will commence on the

Twelfth Day of July, 1864.

The Institute has lately increased its facilities both for the comfort of its Pupils and for their instruction. Persons wishing full particulars in regard to the courses of study, etc., will receive a circular by applying to the Principal.

TERMS, PAYABLE THREE MONTHS IN ADVANCE:

Pupils under fourteen, for Board and Tuition per month	$30 00
Pupils over fourteen	35 50
Washing, per month	2 50

No extra charge is made for book-keeping nor for the Modern or Ancient Languages. No charge is made for bedding, rooms or lights. No Entrance Fee is charged.
19 C. J. PLATT, Principal.

Calistoga Springs.—Ho! for Calistoga! That seems to be the watchword. Calistoga will ruin all our physicians; for all that go to Calistoga are restored. We hear, by recent discoveries, that some persons, while searching for wild flowers among the "Arcadian groves," found the long-sought for springs, the "elixir of life." These waters smooth wrinkles, restore the bald-headed, gives beauty for wrinkles, and changes the aged to youth and blooming beauty again. Everybody is going to Calistoga. Surely Mr. Brannan deserves honor, for he has really converted a waste into a paradise.

PRESERVE YOUR SIGHT

BY PURCHASING PERFECT SPECTACLES

—AT THE—

EMPORIUM,

C. MULLER, Optician,

No. 3 Montgomery street (Masonic Temple),

SAN FRANCISCO.

OLD FRAMES RESET WITH SUITABLE GLASSES, or BRAZILIAN PEBBLES.

Having made the above particular Branch of business my Exclusive Study for many years, I have obtained a thorough knowledge of

The Eye and all its Changes,

together with ten years practical experience, I am enabled to decide with certainty on the mere inspection of the eye what sort of lens is best suited to correct the defected vision.

☞Every Spectacle will be accurately adjusted to the eye, so as to enable the wearer to pursue the most minute employment, either by day or candle light, with perfect ease and satisfaction, without creating that sense of weakness or fatigue to the organ generally complained of.

P. S.—Citizens, and Strangers visiting the city, are respectfully requested to call and receive a Descriptive Circular of a most Valuable Improvement in SPECTACLES.

C. MULLER,

SISTER CLARE.

Sister Clare—beautiful Sister Clare,
Hiding her face, all night she weeps,
Is it watching that bleaches the hair?
For I'm sure she never sleeps,
And I found a gray thread
In her hair.

Ah, Sister Clare, I remember it well,
Was to have been wedded this June,
But there's a muffled sound to the bell,
The Sexton's forgotten the tune,
He should'nt toll marriage bells,
Like death-knells.

Sister Clare—stately and tall—how slow,
A shadow she moves through the room,
What ails Sister Clare? I guess I know
What she thinks in the twilight's gloom;
She's thinking of the dead,
In his tomb.

Our Sister Clare—blue-eyed Sister Clare,
How could she, would she love him so
As to tear the dark braids of her hair,
Or wait till they blanched to snow,
Ere she married again,
In the June?

And at last they twine her bridal wreath,
How quiet and tearless she lies,
And the bells toll as if it were death,
That lieth asleep in her eyes,
'Stead of the bridal dream
Of Sister Clare.

C. E. R.

GLORY.

BY ISAAC MCLELLAN.

Glory—It is the battered mail,
All weather-stained and eat with rust,
Which haugeth as a hatchment frail
Above the champion's dust;
'Tis the defaced, faint sculptured verse
The leaning grave-stones bear,
Which the unlettered monk may scarce
Read to the pilgrim there.
Men barter life, and love, and joy,
Lured by the phantom, fame;
And die, that in the minstrel's song
May be embalmed their name;
In ballads sung by wandering bards,
In legendary tale,
Recited to carousing churls,
Over their evening ale.

Ambition—'tis a gilded dream;
And glory—'tis but breath;
Delusive, dazzling meteors,
Leading to dusty death.
For this, the hero trained to arms
Forsakes his old ancestral seat,
Leaves his broad acres, and the bliss
Of home, that makes this life so sweet;
Forsakes his little ones at play,
Or couched in soft elysian dreams,
And drowns in tears the tender eye
That only in his presence beams;
Forsakes the dear domestic joys,
The fireside's social mirth,
The evening song, the festal dance,
To wander o'er the earth.

O! what remaineth as the prize
Of all the blood so lavish shed,
Of all the travel and the toil,
Of all the tears poured o'er the dead,
When death had broken the strong man's spear,
And crushed his war-horse in career?
Nought but the bard's song, and the sere,
And faded wreath that strews his bier.

Forth to the field, at flush of morn,
A plumed and sworded brave he rides;
His harnessed war-steed champs the bit,
And spurns the dust with frantic strides;
His bugle to the foeman's tramp,
And clanging kettle-drum replies;
And where the bravest of the brave
Beneath the shock of battle dies,
His black plume floating o'er the plain
Sweeps like a raven o'er the slain.

Thus in the dew of youth, the prime
Of manhood, forth he goes,
To trample kings beneath his feet,
To humble emperors, his foes;
With mailed step to mount the throne,
And grasp the sceptre as his own.
Where'er he rides, the lurid flames
Of cities light the midnight air;
The blazing cot and dome illume
The horizon with their glare.

The garden with its rosy bloom,
A paradise of floral sweets,
Becomes a desert and a waste,
In all its safe retreats.
The marble hall, the hamlet roof,
Lie low in smouldering heaps,
Where the wild foxes love to lurk,
And the venomed adder creeps;
And every hearthstone blushes red,
Where blows were struck, and blood was shed.

Forth still he rides—with all the pride
Of manhood in his fiery veins,
Proud in his youthful strength and bloom,
To dare the fierce campaign,
Lured on by glory's cheating gleam,
Ambition's empty dream.
Long are the evening sunbeams cast
Their sad smiles o'er the embattled field,
Low lies he with his shattered spear,
And with his broken shield.
His fair locks clotted thick with gore,
His mouth agape, his forehead seamed
With scars; his eyelids fixed and glazed,
That late with manly courage beamed;
His strong frame trampled on the moor
By cuffi churl and clownish boor.

True Hospitality.—I pray you, O excellent wife, cumber not yourself or me to get a curiously rich dinner for this man or woman who has alighted at our gates; nor a bed-chamber made at too great a cost. These things, if they are curious in them, they can get for a few shillings in any village. But rather let the stranger see, if you will, in your looks, accents and behavior, your heart and earnestness, your thought and will, which he cannot buy at any price in any city, and which he may well travel twenty miles, and dine sparely and sleep hardly, to behold. Let not the emphasis of hospitality lie in bed and board; but let truth, and love, and honor, and courtesy, flow in all thy deeds.

Anecdote of Thackeray.—Never was increase of fortune more gracefully worn or more generously employed. The struggling artist and small man of letters, whom he was sure to find at home or abroad, was pretty sure to be assisted if he learned their wants. I know of many a kind act. One morning, on entering Mr. Thackeray's bedroom in Paris, I found him placing some Napoleons in a pill box, on the lid of which was written. "One to be taken occasionally."

"What are you doing?" said I.

"Well," he replied, "there is an old person here who says she is very ill, and in distress, and I strongly suspect that this is the sort of medicine she wants."

The Common Law of Husband and Wife as Modified by the Statutes of California.

By G. A. Lamont, read at the Commencement Exercises of the Collegiate Institute, Benicia, June 2d, 1864.

The importance of the law in its relation to the subject of husband and wife needs no vindication. Whether viewed intrinsically, in its workings between the parties themselves, or relatively, with reference to other branches of the law, its paramount importance in every municipal code must be patent to all. The peace of families, the prosperity of the community, and the advancement of society, are all legitimate objects of its immediate supervision. To the practical lawyer in this State, a clear idea of this subject will be of very great advantage; for while few topics in the jurisprudence of California are at present more indefinite and unsettled, none present a more prolific field for future litigation.

In an epitome like the present, on a subject so vast and comprehensive, we can only give a brief outline of its most important features. And first, in order to arrive at a clear idea of the law as it exists at present, we must pass briefly in review some of the most important points on which our Statute and the Common Law concur.

As regards the subject of marriage and divorce, the disability of the husband and wife to give evidence for or against each other, the liability of the husband for all torts of the wife, the law has undergone no material change in this State.

Our law regards marriage merely as a civil contract. The age of consent is fixed by statute at 14 for both males and females. Marriages between relatives nearer in degree of consanguinity than cousins, also between a white person and a negro, or between a white person and a mulatto, are declared absolutely void. Divorces in this State are granted with considerable facility.

Impotence, adultery, extreme cruelty, fraud, etc, are among the causes of divorces enumerated by the Statute (Wood's Digest, p 491). There are two kinds of divorce in this State, as at Common Law, viz: divorce *a vinculo matrimonii*, and divorce *a mensa et thoro*; but under the Statute, either may be granted in the discretion of the Court. But it has been held that a *reasonable* discretion must be exercised by the Court, and in Conant v. Conant 10 Cal. R. p 249, the rule is laid down to be, that to entitle to a decree for an absolute divorce from the bonds of matrimony, the applicant must be an innocent party and without fault.

Public policy forbids the husband and wife to give evidence for or against each other. Nor is either allowed to divulge anything imparted to the other; and this estopel still obtains though the parties separate by mutual consent or are subsequently divorced. The law presumes the greatest confidence to exist between the parties to this intimate relation, and to avoid the mischief which must inevitably follow a disclosure interposes this imperative rule.

The husband is answerable for all torts of the wife, the law presuming them to be perpetrated through his connivance, or at least with his permission. But as the law never imposes a liability without vesting its preventive, the husband in this instance is allowed to use all moral persuasion to curb the vicious propensities of his mate, and if these prove abortive, he can even impose gentle restraints upon her liberty.

Thus much have we premised by way of giving an idea of those subjects on which the Common Law and Statute Law are materially the same. But when we turn to the subject of property, which vitally affects the happiness of the domestic relations, we find that the statutory provisions have made such deep innovations on the rules and principles of the Common Law as to render it almost obsolete, and in its stead a system has been instituted similar, in many respects, to the Civil or Roman Law.

At Common Law, the husband and wife were regarded as one person; or rather the legal existence of the wife was suspended, or entirely merged in that of the husband. As a result of this, she could neither sue nor be sued, except in a few cases, without joining her husband; and this disability extended even to injuries to her person or her real property. Immediately upon marriage, the wife's chattles vested either absolutely or conditionally in the husband. In her real estate he only acquired a right to the rents and profits during coverture, unless by the birth of a child he became seized of a life estate by courtesy. When a man married a woman seized at any time during the coverture of an estate of inheritance, and had by her issue born alive which was capable of inheriting her estate, the husband, on the death of his wife, took a life estate in all her real property (4 Kent's Com. 27). This, however, is important to us merely as a matter of curiosity as courtesy is abolished in this State.

The wife's chattles personal in possession vested absolutely in the husband upon marriage. It was held necessary to a good title to her choses in action, that they be reduced into possession; and if he neglected to possess them during her life they did not survive to him, but inured to the wife's representatives. So it was with her chattels real; they became vested in the husband, not absolutely, but sub modo. Thus, in the case of a lease for years, the husband had a right to receive the rents and profits, and might, if he pleased, sell, surrender, or dispose of it, and if he survived the wife it became to all intents and purposes his own. Yet, if he neglected to dispose of it during coverture and the wife survive him, he could not dispose of it by will (4 Kent's Com. p. 121). As a result and consequence of this interest acquired by the husband in the wife's estate, he was held liable for all debts contracted by her previous to marriage, and this liability must be assumed even though he recieve no property or other benefit from the alliance, for, in the words of Blackstone, "he adopted her and her circumstances together."

At Common Law, the wife on the death of the husband, became entitled to dower, which consisted of one-third of all the lands and tenements whereof the husband was seized, at any time during coverture, to have and to hold for the term of her natural life. This was formerly one of the most complicated topics which the legal votary had to encounter; but, as in California no estate in dower is allowed to the wife (Wood's Digest, p. 488) we will not stop to discuss it here, but cheerfully dismiss it, with only a sigh for its departed greatness."

Having thus given a short and necessarily very imperfect view of the manner in which marriage affects the property of the respective parties at Common Law, we will now revert succinctly to our statutory provisions on the same subject, and endeavor by construing them with the Common Law doctrine to discover their main points of difference.

Our Statutes provide that all property, both real and personal, owned by the wife prior to marriage, and all acquired afterward by gift, bequest, devise, or descent, shall remain her sole and seperate property, and that all property, both real and personal, owned by the husband before marriage, or acquired subsequently by gift, bequest, etc, shall be his separate possession (Wood's Digest, Art. 2605).

This provision, it will be noticed, is diametrically opposed to Common Law. In an action concerning the wife's separate property, it is optional with her to join her husband or sue alone (Practice Act, sec. 7 and 15, Cal. R., p. 308).

Yet, although the wife, with reference to her separate property, may sue alone, she can neither mortgage, nor sell, without the husband join in the conveyance. But it appears that the strict rules observed in the deeds of conveyance in general do not apply to the husband in this case; for it was held in the case of Ingoldsby V. Juan et al., 12 Cal. R. p. 564, that a deed properly executed and acknowledged by the wife conveying her separate property, with the assent of the husband under written, not under seal, but properly acknowledged, was sufficient to pass title.

All property acquired after marriage, by either husband or wife, except by gift, bequest, devise, descent, etc., also all the rents and profits of their separate estates become common property (Wood's Digest, p. p. 487 and 488). There had already been some question raised, and doubt expressed, as to the constitutionality of the Statute declaring the rents and profits of the wife's separate estate common property.

Art. 11, Sec. 14th, of the Constitution of California provides that "all property, both real and personal, of the wife, owned or claimed by her before marriage, and that acquired afterwards by gift, etc., shall be her separate property."

This provision is entirely silent, as to the disposition of the rents and profits; and from this very silence, it would certainly not be a very absurd inference to conclude that the rents and profits were intended to follow the possession. The substance of the Statute is to give all the rents and profits of the wife's separate estate to the husband, leaving her only a reversionary interest. The value of property consists mostly in the rents and profits; and when the husband has the absolute power of disposing of these rents and profits without the consent of the wife, what becomes of her right of property in her separate estate during coverture (7 Cal. R., p. 272)?

According to the Statute a full and complete inventory of the wife's separate property shall be made out and recorded. Now, whether a failure to file the inventory would make a sale by the husband of the wife's separate estate valid, is a very important question, and one not positively settled.

It was strongly intimated, however, by the Supreme Court, in the case last alluded to, that the title of the wife to her separate property should not be divested for want of registration. If this be the construction of the Statute, the husband through the laches of his wife, induced possibly through collusion, would be suffered to assume an appearance of possessing property which might be a means of defrauding his creditors.

Contrary to Common Law, the separate property of the wife alone is liable to be seized for her debts contracted before marriage, nor the husband liable for her contracts made before marriage. In this State the husband exercises plenary authority over the common property. The term, common property, embraces all interests acquired by either party after marriage, except by gift, grant, devise, etc. He can dispose of it absolutely, as though it were his separate property. No acknowledgment of the deed of conveyance by the wife is necessary except in the conveyance of a homestead (15 Cal. R., p. 131); yet the husband cannot dispose of the wife's share of the common property by will.

Upon the dissolution of the community by the death of the husband, one-half of the common property goes to the wife in lieu of dower, which does not exist in this State, and the other moiety to his personal representatives, the whole being subject first to the payment of the husband's debts. Upon dissolution by death of the wife, the common property remains in the surviving husband (Statutes '61, p. 311). Our Statutes also provide that the wife, by conforming with certain requisites, may become a sole trader, and that the property acquired by her in this capacity shall not be accessible to her husband's creditors.

The law on the subject of homestead is of the highest importance, but this we must also pass without comment, merely observing, by the way, that either husband or wife can have property to the value of $5,000 recorded as a homestead, which exempts it from execution. The homestead is a species of joint tenancy, which, on the death of either husband or wife, inures to the benefit of the other; and neither can dispose of it without the other's consent and join in the transfer.

From the whole tenor of the statutes in reference to this subject, it is evident that the Legislature has kept in view the unique maxim of Judge Story, "that the laws made for the protection of females are a sure test of the progress that civilization has made;" yet, although adopted with the laudable intention of ameliorating the condition of the wife, there have been grave doubts expressed as to their success, and after a careful examination of the subject, it is the opinion of many of our most able lawyers that they have signally failed, and that the interests of the wife are in a more precarious position to-day under the laws of California than they were at Common Law. The abolition of dower may be considered the most severe stroke. It will be remembered that at Common law, the wife at the death of the husband was endowed of a life estate of one-third of all the real property, of which the husband had been at any time seized, and this was not liable during her life to his creditors. Now, under our Statutes the wife has no interest in the husband's separate property, and only a half interest in the common property, and this only after his creditors are satisfied.

And it must be remembered that the common property is entirely under the husband's control, and he can dispose of it even to the roof that covered her head, and her only means of safety is in a resort to the homestead law. Now what remains to the surviving wife? Only the remote possibility of inheriting one half of the common property, and her separate estate, at least according to the reading of the Statute, and deprived of all the rents and profits.

It is useless for us to amplify or lament upon the chaos which now pervades this subject in all its branches. Whether we are to become victims of that sentence which Blackstone so unhesitatingly pronounces upon all dissenters from the established principles of the Common Law, or whether the excellence of our untried system will develop, when the ameliorating influence of time has smoothed down its rugged points, the future alone can determine.

California Cider and Vinegar.

THE UNDERSIGNED INVITE THEIR Friends and the Public to call at their Manufactory, 708 MARKET STREET, Exactly opposite Third street, to see somewhat of a curiosity in California: A CIDER MILL. And, if you wish, we shall be pleased to furnish you with new sweet Apple Cider, dripping right from the Press, and in its season the juice of Grapes, or any other Fruit. Drinking new sweet Cider is known to be healthy, giving a ruddy glow to the complexion.

Nearly all the Vinegar sold in San Francisco is a manufactured imitation, made from corrosive acids, and people have provided their families with what was sold as Cider Vinegar, but which was in fact a poison. We mean to keep nothing but CIDER and VINEGAR, and that genuine.

If we are to succeed in our experiment of substituting pure Vinegar for the villainous fluid which has injured the health of thousands in California, it can only be done by a general patronage, and we trust to receive a call from you.

Lobaron & Thresher,

Cider Mill, 708 Market street,
Exactly opposite Third street.

☞ We have an Order Box at C. E. Collins, 602 Montgomery street, and will deliver Cider and Vinegar at any part of the City Free of charge. Orders sent through Wells, Fargo & Co., will be promptly attended to. 16-3m

MASON & HAMLIN'S

For Church, College, or Parlor.

Grand Cabinet Organs

These unrivalled Instruments are now the favorite with thousands of people in every State where they are known. This beautiful style of Instruments, from the delicate small Organ, suitable for a Lady's Boudoir or Chamber, to the large Pedal Bass Cabinet Organ, with their Power and Compass of Tone, stand unrivalled among the sources from whence Music is drawn.

These Instruments are now being introduced into California, and the undersigned have the sole agency of the same. From their first introduction into notice, they have been awarded the FIRST PREMIUM twenty eight times, and on every occasion where entered: receiving ELEVEN SILVER MEDALS and SIXTEEN DIPLOMAS. The prices of these Instruments vary from $85 to $500—for particulars see pamphlets at Office.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 8 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's rest is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

We are

SOLE AGENTS

IN SAN FRANCISCO AND MARYSVILLE

FOR THE

HAINES "ILLINOIS" HEADER.

This is the ONLY HEADER, which, during the past SIX YEARS has stood the test and given satisfaction; all others, which have been tried, have proved failures, and have been withdrawn from the Market as unsaleable

NEW AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparce, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of

COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 8-3m

AN ANGEL IN THE HOUSE.

How sweet it were, if, without feeble fright,
Or dying of the dreadful beauteous sight,
An angel came to us, and we could hear
To see him issue from the silent air
At evening in our room, and bend on ours
His divine eyes, and bring us from his bowers
News of dear friends, and children who have never
Been dead indeed—as we shall know forever.
Alas! we think not that we daily see
About our hearths—angels that are to be,
Or may be if they will, and we prepare
Their souls and ours to meet in happy air—
A child, a friend, a wife, whose soft heart sings
In unison with ours, breeding in future wings.
—[Leigh Hunt.

VERY CAREFUL.—A youth was lately leaving his aunt's house after a visit, when, finding it was beginning to rain, he caught up an umbrella that was snugly placed in a corner, and was proceeding to open it, when the old lady, who for the first time observed his movements, sprung towards him, exclaiming, "No, no, that you never shall! I've had that umbrella twenty-three years, and it has never been wet yet, and I am sure it shan't be wetted now."

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle-grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H & L AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories,

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL-OIL as a basis to their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural resin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest until, at the present time, they have established a manufactory of Rosin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply. The subscribers are now receiving native resin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] June 16.

Our Grain and Produce Market is very fine, holders evincing no immediate disposition to sell. Our receipts, for the past week, have been very light, buyers have had a difficulty in obtaining supplies, and in some instances have conceded to an advance in price. New Barley has appeared in the market and sold readily at three cents ₱ lb. Receipts of Hay are on the increase, but the demand is good, and prices now rule high. Potatoes, of the new crop, are offered in sparing quantities and command the highest price they have done for years. We are advised of some parties in Napa county that have already commenced harvesting their wheat. This county bids fair to be one of the best in the State, for yield, this season; in some parts the crop is fair, and the aggregate yield will be fully half a crop, while many other counties are almost a failure. The accounts we recive from the Coast are very conflicting, and no definite or reliable opinion can be formed, as yet, to the quality or quantity. Oregon is shipping us of Feed and Feed-Grains; we note a receipt of Bran and Oats By Barque Industry. The prices ruling here, at present, will, in our opinion, cause considerable quantities to come from the Northern Coast and Oregon. The demand for Flour is active, sales of considerable magnitude have been effected for Mexico and the interior, the past week.

Wool is in large supply and dull of sale; many buyers, for Eastern account, are temporarily out of the market. Our factories here have bought largely and are reported to have a good supply on hand.

Our exports are as follows: Per bark D. M. Hall, for Victoria, 600 sks Barley; 137 hf 400 qr-sks Flour; 121 sks Oats, etc., etc. Per Hamburg bark Antonia, for Hong Kong, 265 bbls, 949 hf and 594 qr-sks Flour, etc. Per schr Eliza, for Tahiti, 25 bbls, 100 hf and 200 qr-sks Flour, etc. Per British bark Clodian, for Sidney, 11,000 qr-sks Flour; 224 sks Oats; 9,274 sks Wheat. Per British bark Isle of France, 7024 qr-sks Flour; 5998 sks Wheat.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 3014 sks, Barley 3222 sks, Potatoes 1674 sks, Wool 426 bales, Hay 1620 bales, Corn 55 sks, Flour 6340 qr-sks, Bran 248 sks, Salt 500 sks, Oats 441 sks, Beans 86 sks, Cornmeal 394 sks, Straw 150 bales, Onions 50 sks, Rye 27 sacks.

Also Coastwise: Wool 76 bales, Oats 300 sks, Potatoes 1604 sks.

The quantity of fruit coming in, increases every week, but the demand is so good, that prices are still very high.

Kohler's Musical Warehouse is one of the places where can always be found a complete assortment of the best musical instruments ever imported into our State, together with every article connected with each branch of every musical department, both for Church, college, school, military, or festival. These assortments are always complete. Catalogues sent when desired. Their wholesale warehouse is No. 424 Sansome street, retail warehouse 620 and 622 Washington street

Jacob Zech's Pianos.—We are truly glad to know of the success of the home manufactory of Jacob Zech. No man has labored harder than Mr. Zech to establish a Piano Manufactory, and he has succeeded completely. By the arrival of his material for finishing work and trimming, he has fine articles, sufficient for the making of fifty pianos, all of which he can sell as fast as made. Mr. Zech's pianos have acquired a very high repute, and worthily so.

Fine Statuary.—We call attention to the card of Messrs Domiano Mancarini & Co., whose work-rooms are on Clay street, and where collections of beautiful designs in plaster can always be found for the parlor, the study, or the garden—designs as beautiful can be desired or conceived of. These artists show by their work that they are master workmen. It was at this place that the bust of Starr King, modeled by Mr. Devine, was cast—the only bust that is a likeness. They will be happy to receive orders for any work in their line, and those who can appreciate the beautiful can procure rare models of beauty and taste for a very little money. A few pieces in a garden or dwelling add much to its adornment. 'Beautify home' should be the motto of all.

Bowen & Bass—This well-known firm, wholesale and retail dealers in family groceries and all the "good things" for the household, are now receiving and opening many of those luxuries for which they have long been famous. Our friends in the country, when they visit the city, and all our ranchmen, will find it to their interest to call and examine their assortment as it is one of the largest in our city, as will be seen by their card.

Patent Hat Rack.—We invite attention to the advertisement of the new Patent Hat Rack on exhibition at our office. A good mechanic can make a very handsome sum of money with this patent.

☞ **Holloway's Ointment and Pills.**—Quinsy or inflammation of the throat is very prevalent during the Spring and Fall of the year. Thousands of persons have immediate recourse to these medicines on the first symptom of attack, and thus not only save time but even dispense with the advice or attendance of a physician. Colds produced by the rapid and frequent changes of the atmosphere during this season, are speedily cured by the pills. These remedies fortify the body against the inclemencies of the winter.

Sold by all Druggists, at 30c, 70c, and $1 10 per box or pot. 16?
HOLLOWAY'S PILLS and OINTMENT may be always obtained of Messrs. CRANE & BRIGHAM,

A MILLER, [illegible] WHO IS ALSO AN ENGINEER wants a place where he can be permanently situated. He [illegible] can bring the best references as to capacity and integrity. The [illegible] is a purchaser of Grain, and wishes a head position, if obtainable. [illegible] Apply at this office. m12

LIFE-SIZE BUST

....OF....

Thos. Starr King.

COPIES OF THE BUST OF THE LATE REV. THOS STARR KING, by P. J. DEVINE, are soon to be issued to subscribers. The Bust and subscription list may be seen at Mead & Van Tassel's store, Montgomery street, or at Grant & Devine's Marble Yard, Sutter street, between Montgomery and Sansome streets. The public are invited to see the Autograph Subscription list which comprises many of Mr. King's personal friends,

Opinions of the Press.

The following criticisms are from the leading newspapers of the city:

After the many attempts at Busts of the late Thos. Starr King which have been made, it is gratifying at last to have one we can praise. It is a work of art, for expression is there as well as outline.—Bulletin

Nothing heretofore executed, either as a portrait or bust, will equal it as a work of art or valuable memento of the dead.—Alta.

It is an admirable work, and is pronounced a perfect likeness of the deceased by those most capable of judging.—Democratic Press.

The friends of Mr King, who have critically watched Mr. Devine's progress, express themselves highly satisfied with the result. It exhibits a fidelity of likeness and artistic grace that has not yet been equaled.—Golden Era.

As a work of art it is wonderful, seeming to be exact and complete in every detail to which the eye may be directed or recollection recalled.—Sunday Mercury.

We have for many years looked with interest upon the labors of the artist. In the present effort he has been completely successful.—Cal. Farmer. 13-tf

Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOma County lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P. Swift, Esq. containing 14,000 acres of land is offered for sale in Lots or farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality. It is accessible to market, being adjacent both to Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State.

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point.

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the office of Haight & Pierson, 622 Clay street, San Francisco or at the store of Mr. Paule, Sonoma.

[illegible] and deeply pulverized, and—on the return it smoothly and perfectly fills up and [illegible] the ground through the [illegible] A very valuable implement [illegible]

NO. 4. A MUSKETO BAR. [illegible] description of [illegible] of wood.

This will be much wanted in California as it is simple in its construction, [illegible] and can be affixed very cheap to all [illegible] Hotels, public houses and private families will find it a useful invention.

NO. 5. HYDE'S PATENT POST-DRIVER.

A most excellent labor and money-saving machine, for which we offer rights.

THIS SPLENDID [illegible] CONFECTIONERY [illegible] Western Saloon [illegible] all the [illegible] and [illegible] to all [illegible] Farmer's Meeting [illegible] and sold [illegible] public to [illegible] desirous to purchase either County, City, Town, or Individual Rights, [illegible] to

[illegible] Farmer.

Winchester's HYPOPHOSPHITES

Act Promptly and Certainly in all Stages

....OF....

CONSUMPTION.

THEY IMMEDIATELY INCREASE the Strength, and deepen the color of the Pale Blood. They check the Night Sweats, always. In from seven to fourteen days; the appetite is at once invigorated, and the patient rapidly gains flesh; the cough and difficult breathing are speedily relieved; the sleep becomes calm and refreshing; the evacuations regular and uniform.

"In no instance," says Dr. Churchill, "have I found the Remedy fail to produce every thing that could be reasonably expected from it."

"I have no doubt whatever," says Dr. Townsend, of Chatham, Pa., "of the superior efficacy of the Hypophosites over all other medicines or methods hitherto discovered."

The Hypophosphites

Have a TWO-FOLD and SPECIFIC ACTION: On the one hand as a prompt and powerful

NERVOUS TONIC,

increasing the vital energy; and on the other as a generator of

New and Healthy Blood,

Invigorating the whole system. They should, therefore, be used in all cases of

Nervous and General Debility,

Wasting of Flesh, Loss of Strength or Appetite, Paleness or Deficiency of Blood, Languor or Listlessness, Cough, Night Sweats, Chronic Diarhea, Scrofulous Sores:

Also, in Chronic Bronchitis, Asthma, the Debility or Weakness of Young Children, and as an INVIGORATOR to women of feeble vitality during gestation and the period of nursing.

WINCHESTER'S

Genuine Preparation of the Hypophosphites

Is the only reliable form of Dr. Churchill's Remedy, and is approved by the Medical Profession generally. USE NO OTHER, or any Remedy containing Iron

CONCENTRATED SOLUTION in 7 oz Bottles, prepared expressly for California, $2 per Bottle—Three Bottles for $5 in coin. Circulars, free. Sold by all respectable Druggists, and by

Oakland and Her Improvements.

While we of San Francisco are boasting of the extension of our city to the Mission, and on downward to San Jose, our neighbors, across the Bay, are rapidly marching on to be a city of importance, and a city of "Beautiful Homes." We have no lands to sell, "over there" consequently, no "ax to grind," yet we are fully satisfied that although real estate may have advanced three, four or five hundred per cent within two years—it has not reached its maximum yet, by a long odds. By the establishment of the New Ferry route, the rail road and centering the depot up town, Oakland has been made and great credit is due to C. Minturn, Esq., and his associates, for that enterprise that has done so much to build up this place and consequently build themselves up.

This improvement is not all confined to the immediate city proper, it extends far and wide, the facilities to cross and dwell there causes other facilities. Hotels for boarders, stables, stores and workshops, have been erected, and with them come business and new enterprises, and these in turn create others. At Oakland will be found some of the finest and most costly mansions in our State, but we cannot name them now, suffice it to say that hundreds of our merchants and business men now make their homes at Oakland, and have added their interests, sympathies and wealth to build it up. Several large blocks of buildings have been erected on the main street, of which we have spoken before.

The new Cosmopolitan Hotel, kept by G. Pation, Esq., is a fine hotel; a new, spacious brick hotel, A No. 1, large dining hall, fine parlors and sleeping apartments, of which there are thirty, all newly, neatly and finely furnished, and the whole hotel admirably ventilated. Mr. P. has two other hotels he uses for sleeping rooms, and we are glad to know he is well sustained. Visitors from our city can always secure excellent attentions and the best accommodations. No bar room—consequently no noise or disturbance. The Hotel is only a few steps from the cars.

The Old Eagle Hotel is now carried on by Mr. A. Anderson, who is the owner and keeper of the hotel. It has some 15 or 20 rooms, and good accommodations. The old steamers stop at the wharf now, and yet the lower part of the city looks dull. It was a sad mistake to stop the running of steamers awhile.

Messrs. Shattuck & Milligus have their new stables in excellent order, with good horses and carriages, so that people can have a pleasant ride into the fair country around Oakland, and as fine rides as can be found. They have their stables arranged with about 40 improved stalls; these give air and full ventilation to the horse, who needs fresh air as much as man. This stable is convenient for those who reside out a few miles and wish to keep their carriages handy at the cars.

A ride to Nolan's Garden will be pleasant. The garden grounds are about two miles out on the Telegraph Road, a pretty spot, enclosing about five acres, with a fair range of glass, a pretty conservatory and forcing houses, and a fair stock of plants. Mr. Nolan is master of his business, an educated Florist, and has a love for it. The blooming and propagating houses will be about 300 feet long, and as good a collection of plants as can be found. We noticed some superb Fuchsias in bloom, with new varieties of Geraniums, and many new and rare plants. We hope visitors will not omit a visit to Nolan's Gardens. His conservatory is well placed, being east by north, so that the afternoon sun shall not burn or scorch the plants, but allow the house to cool down. This should be borne in mind by builders; for the morning sun is what is most wanted. After 11 noon the sun is not needed much. One hour before 12 is always better than two hours after twelve.

The Telegraph Road will give a pleasant ride out to the hills. Along that road will be seen many fine garden spots. Near the pass through the hills, Dr. Barlow J. Smith has recently established his Home Water Cure, a very fine location indeed, and connected with it a good farm. This must be a fine place for invalids. Dr. Smith's family will insure to patients a good home, and the water cure is the place for invalids. Opposite we visited D. J. Hough. This is a pretty spot, and here we saw the beautiful garden of some 20 to 30,000 nursery trees, raised by Mr. Hough.

These lands, with many other lands around, are on the celebrated Don Vincente Peralta claim, that has become very much noted. Now, however, that trouble in a measure is settled, as to titles, to hundreds of happy homes.

The Peralta Homestead is a pleasant spot, and greatly improved of recent years. From this point back to Oakland it may be called a perfect garden for fruit. We noticed the following growers: John Kelsey, a well known fruit-grower, with a good supply of strawberries and raspberries, whose fruits have been in our markets for years; James T. Ashley, strawberries; Mr. Kelley, a farmer and orchardist; Mr. Colby, a farmer; Mrs. Tubbs, blackberry grounds; Luke Doe, a 40-acre farm, a fine plum orchard, and a very neat cottage and home spot. A. Horsey has a 20-acre farm. S. E. Alden, Esq., has a splendid farm, back from the road, of 360 acres, under a high state of improvement, and one of the finest in all that region. John Lusk, a grower of strawberries and raspberries, and a maker of wine, a well known fruiterer in our market. Harry Linden has his home here. Mrs. Evoy has a pretty spot, with a collection of handsomely grown mountain pines, which add greatly to the beauty of the place. Mr. Weston has a fine location for a home. J. Mora Moss, Esq., has a splendid location, and will have a splendid villa residence. Near to him is the Pacific Female College, on a beautiful eminence, formerly the ground of C. C. Brown, Esq. The location of this college is one of the finest in our State. It is a superb building, and of the finest style of architecture, and is termed the Italian villa, or chateau style; it is very large, with a spacious observatory, commanding one of the finest views of our Bay, the Golden Gate, up river, etc. The college is well endowed, well sustained, and full of pupils. The cost of building was over *thirty thousand dollars.* The college will accommodate one hundred pupils. It owns some thirty acres of land, and it will shortly become a splendidly adorned place. From this to the city are located the residences of Kimball Brothers, builders of the college (Washoe miners); they have a fine home, fruit grounds, etc., Mr. Wallis, A. C. Brown, W. F. Boardman, Rev. Mr. Wadsworth, Mr. Flint, of Flint, Peabody & Co., the Hobart place, G. W. Founten's beautiful gardens, Mr. Delger's fine ground, Mr. Potter's elegant spot, with others, which brings us back again to the business places.

The Oakland mills, of Messrs. Kimball & Potter, are doing a good business, a real live family mill, turning out all needed comforts, the very best of flour, Indian meal, buckwheat, cracked wheat, rye meal. These are family luxuries, and the mills must do well.

G. H. Fogg, agent of the Clinton Mills, has an office near by. The Clinton Mills turns out No. 1 flour. Oakland may now be said to be a real live city. It has awakened from its former lethargy and put on new garments. Opposite the railroad depot, Mr. Bacon, formerly of the Express, has fine livery and sale stables, called the Railroad Stables, a good place for the sale of horses. Mr. Bacon is an excellent man, well known, and reliable for this business.

The College of California is an institution of itself. This, and Mrs. Blake's Institute, with many other private residences, we shall speak of hereafter, for Oakland, as we have said, is to be to San Francisco what Brooklyn is to New York, and it is now rapidly on the road to fame and prosperity.

In our pleasure and business excursions we are indebted to friends for many courtesies, for which we are grateful; they are so numerous that we cannot name them all, but we "dunno forget."

Look to your Bulbs.—Those who have Hyacynths, Tulips and other bulbous roots, that have done blooming, as soon as their foliage has died down, take up the bulbs. Save all off-sets, separately, and lay the large bulbs in dry sand, or on a shelf, in a cool shady place, till autumn. All off-sets should be planted in small beds, separately, in the autumn. Never take up bulbs till the foliage has dried up, as the strength of the leaves, goes to the root.

Price of Grain.—Why should grain-growers complain? those that have about a third crop, receive as much money, for the grain is now nearly three times as much as last year—the *dollars and cents* to every good farmer will be more than last year in despite of the drought.

Summer Gardening.—Prune down your roses those that are perpetual, prune off as fast as they bloom, cutting out old wood. Then with showering and fine and constant cultivation, continual blooming, all the season, will be the result.

Summer Annuals.—Mignonette, Sweet Olyssum, Drummond's Phlox, Pansies, etc., may be planted all summer. For continuous flowering deep, rich, fine soil only, is required.

The Rights of Aliens.

By J. W. Hook, of the Benicia Law School—Read at the Commencement Exercises of the Collegiate Institute, June 2d, 1864.

Man is a creature of a social disposition, and from his very nature incapable of existing when estranged from the rest of his kind. In accordance with this great principle we find him seeking the society of his fellow-man. Building their habitations in the same vicinity, they form cities, towns, and villages.

When these congregations are formed, it becomes absolutely necessary that they should have some supreme head or power, which shall regulate their mode of government, protect the peace of the community by quelling all disputes and quarrels which naturally arise between the different classes of people, and regulate their mode of procedure with foreign nations. Although the laws which are established to effect these results, restrict, in some degree, the free exercise of the rights which man has from his Maker, still, in order to produce these results which are absolutely necessary for the preservation of society, some such laws must be promulgated.

It seems to be one of the evil traits of man, when thus united in bodies, to exercise hatred and perpetual enmity towards all other communities. By reason of this enmity, and also to prevent any foreign nation from obtaining a dangerous power beyond their own dimensions, the law makes a distinction between the rights, disabilities, and duties of the different classes of people. These laws were formerly very strict, and exercised the greatest severity against all strangers. But as civilization advanced, and civilized nations began to see the great benefit derived from cultivating the sympathies and trade of foreign nations, these laws became, in a great measure, obsolete, and have continued to decrease in severity, until those of our country, at the present time, present a mere shadow of what formerly existed among other nations.

At the Common Law, the people were classed into aliens, denizens, and native born citizens. The word citizen comprehended all persons born within the jurisdiction and under the allegiance of the king, including equally men, women, and children. But in the United States we have no intermediate class called denizens, and the ordinary rights of citizens are restricted expressly to white persons, thereby excluding mixed and colored races. Under the term citizen is also embraced all naturalized persons, born out of the allegiance of the government.

The rigor of the Common Law is also subject to a few exceptions. One of which provides that all persons born out of the allegiance of her majesty (Queen Annie), whose parents were, at the time of the birth of such person, subjects of the English Government should be considered citizens to all interests whatever. Provided, that neither of the parents were, at the birth of such person, attainted with any crime, or in the service of any foreign power then at war with the Crown of England.

The second class of persons were denizens, who are aliens born but have obtained letters patent to make them subjects. The denizen possessed greater rights than an alien, but not so extensive as a natural-born citizen. He occupied a place directly between these two classes. He was not eligible to any office, nor could he inherit any real estate or personal property. However, since this class does not exist in this country, it is needless to show their rights and disabilities.

The third class, and that now under discussion, is aliens.

An alien, is any person born out of the allegiance and jurisdiction of the United States, who has not since been naturalized under its Constitution and laws. This is subject to the exception of all persons born out of the country whose parents were, at the time of their birth, citizens of the United States. There are two kinds of aliens, viz: alien friends, and alien enemies. This distinction depends upon whether the country of which they are subject is at peace or war with our own country.

It may be necessary to state here that all the rights which aliens possess, either here or elsewhere, are confined almost exclusively to alien friends. Alien enemies have only such as the government in whose territory they are found may grant from time to time, and it would be inconsistent with the safety and welfare of our State, to allow them to remain within the country without restrictions, thus giving them a power which might be turned directly against the donor. However, it has been decided in Massachusetts that when they are allowed to remain they have all of the rights of alien friends, on the ground that their residence is lawful until they are ordered away by competent authority, and this residence gives them a right to protection.

Firstly, I will consider the rights and disabilities of aliens as they existed at the Common Law, and then some of the changes that have been made by the statutes of the country. By the old Common Law their rights were very limited and it might be said that they had none whatever, except what were absolutely necessary for the protection of commerce. An alien could not, under any circumstances, inherit property, either personal or real. He could obtain no title in land by purchase, although he could purchase for the use of another, and if he did purchase an entail in land greater than for life, it became immediately vested in the king. The rule was founded on the principle that a free-hold interest in the soil required an allegiance equally as permanent, which an alien could not give, since it would be inconsistent with that which he owed to his natural liege lord. Also for the reason that it would give foreign countries an opportunity of exercising great power in the affairs of the country, as was strikingly illustrated in the means by which Russia brought about the dismemberment of Poland. Nor could any but an alien merchant purchase a lease for years, or a house, and as these indulgences were allowed wholly for the purpose of protecting and advancing commerce, even in these cases if he died before his lease expired, it was forfeited to the King, and did not descend to his heirs or representatives. For in no case was an alien allowed to inherit property. On this principle, if an alien had a son, and was afterwards naturalized, after which he had another son, this last son would inherit to the exclusion of the former. Where an alien female declared her intention of becoming a citizen, but died before she was fully naturalized, it was held that her husband could not inherit through her. Yet an alien could acquire property in any kind of personal estate by purchase, but not devise, being subject to higher duties at the Custom House than native born citizens. An alien female could not be endowed by the Common Law, and that, if her husband was a native born citizen, unless she married by the special license of the King. Nor could a husband alien be tenant by courtesy They were deemed incompetent to hold any office of trust, even the lowest. They were incapable of serving on juries, and in general were wholly incompetent to take any part in the affairs of the State. And it was almost impossible for these strangers to change their condition. The power of naturalization being vested only in Parliament, an alien could not be naturalized except by having a special Act passed in his favor, which could be done only on very rare occasions.

But these laws grew up when everything presented a far different aspect from that which the world now assumes. In the United States, the most sweeping changes have been made, and instead of repelling aliens, we place them almost on a level with our own citizens. Some of these changes I will now proceed to investigate.

The first great change we meet in our statutes, is that in reference to the means of naturalization, in which the Common Law process is completely changed; which, however, I will not take up in this place, but will proceed to the changes made in regard to the rights of aliens to hold and enjoy real estate. Section 17, Art. 1st of the Constitution of this State provides

"That foreigners who are, or may hereafter become, *bona fide* residents of this State, shall enjoy the same rights in respect to the possession, enjoyment and inheritance of property as native born citizens."

A non-resident foreigner may inherit, but he must claim and tender proof of his right to the property within five years after he shall have inherited the same, or it will be forfeited to the Government. But if he claims the property and tenders proof of his claim any time within the five years after forfeiture, he will be entitled to the proceeds of the estate. Of course, an alien can not hold any public office, or exercise any part in the affairs of the State. Still, he acquires all these rights by being naturalized, except that he is not capable of holding the office of President of the United States, nor of Governor of some of the States; while at Common Law he had no right to hold an office of any description, even if he had succeeded in becoming a citizen by the process of naturalization.

There has, however, been one exception to the general rule of indulging strangers in every respect, and granting them every privilege that is consistent with the welfare of our country. This exception is in the case of Chinese, and it hardly deserves the name of an exception, being simply an attempt to exclude them from this State by means of oppressive taxation, which has never been fully carried into execution. The first Act that was passed to produce this result, took effect September 1st, 1855, and imposed on the masters of vessels bringing within this State persons not capable of becoming citizens of the United States, a tax of fifty dollars for each person so brought here. This Act was, however, declared unconstitutional and void in the case of the People vs. Downer.

The Court relied chiefly on the authority given in the Passenger Cases, 17 Curtis' R., 125. The second Act was was passed April 26, 1858, forbidding any Chinese or Mongolians to enter this State after the 1st day of October, 1858, making it unlawful for any person to bring them here.

This Act was, however, considered so clearly unconstitutional that the case in which it was overthrown was not considered of enough importance to be reported.

The third Act that was passed tending to the exclusion of the Chinese, took effect April 26th, 1862. It imposed a tax of $2 50 a month on every person of the Mongolian race in this State. The Act, like the two preceding, was entirely overthrown in the case of Ling Sing vs. Washburn, 20 Cal. R., 534, the principal argument being, that the right of Congress to regulate commerce with foreign powers is exclusive, and that this extends to every species of commercial intercourse, and may be exercised upon persons as well as property. If the power to impose such a tax be acknowledged, no limit can be set to its exercise, and it may be used so as not only to diminish, but wholly destroy, the carrying of passengers. From these decisions, which have the high sanction of the Supreme Court of the United States, it is plain that the rule of granting protection to strangers has a firm foundation in the laws of our country, and that the enmity that formerly existed between the different nations of the globe is fast giving way to the reason and common sense of the age. Restraints, in some degree, have been put on the rights of aliens by the laws of every nation. By the English Common Law they were looked upon as a people with whom the English were in a state of perpetual war, and frequently we find one stranger arrested for the debt, or punished for the misdemeanor of another, all being considered enemies, and therefore reprisals might be made in the first that could be found. They were considered only as sojourners coming to a fair or market, and were obliged to employ their landlords as brokers to buy and sell their comodities

Although foreigners have been obliged to remain in their own countries for centuries from the oppressive laws that have been enacted, still, each succeeding year has added greatly to their rights; and if we wish to trace these rights through all of the changes which they have undergone, we shall have to mark the course of civilization as it has continued to advance on its westward course, and the point of the globe on which it now rests will be seen to have made the greatest changes in the mode of treating foreigners; and these changes will be seen to have contributed vastly to the advancement of that civilization. To receive strangers into our country and grant them every privilege that is compatible with its safety, is simply granting admission to the three great motive powers of every nation, namely: strength, by increasing our population; wealth, since immigration either temporary or permanent is a prominent cause of intercourse and traffic; and wisdom, by receiving the learning, and being brought in contact with the inhabitants of the rest of the world.

If these reasons are not sufficient to sustain our laws, let us exclude strangers entirely from our shores and learn by our own experience what the records of China and Japan can show.

We come now to that which distinguishes the United States, more than all, in her treatment of foreigners, viz: her Laws respecting Naturalization, which we have only time very briefly to glance at. These Laws are passed by Congress, and are, consequently, uniform throughout the United States. In England a person can only be naturalized by a special Act of Parliament; and even then can hold no office whatever. But in America, in the time of the Colonies, and since, foreigners have been wanted, not discouraged, it was one of the grievances stated in the Declaration of Independence, that the King had endeavored to prevent the population of the States by obstructing the laws respecting naturalization.

In considering the subject of Naturalization, we may inquire, first—Who may be Naturalized; 2d—The process of Naturalization; 3d—The effects of Naturalization.

By the Act of Congress of April 14th, 1802, it is provided that any alien, being a free white person, may be admitted to become a citizen of the United States, or any of them, on fulfilling the conditions required in the Act. Under this section, it has been decided that a married woman may be naturalized, and that, without the consent of her husband. It has also been decided that under this law, Indians cannot be naturalized. This decision had reference to Indians born within the borders of the United States; but it is probable that aside from this, should the question come up in the United States Courts, upon any Indian from without the limits of the United States, presenting himself for naturalization, he would be rejected on account of his color, and that it would be held that the word "white" excludes not only the black race, but all other colors. Such has already been the decision in California.

The subject of color, with especial reference to the Chinese, came up for the first time in the case of The People v. Hall, 4 Cal. R. 399. Chancellor Kent in the 2d Volume of his Commentaries, page 72, says: "The Act of Congress confines the description of aliens capable of naturalization to free white persons. I presume this excludes the inhabitants of Africa and their descendants; and it may become a question to what extent persons of mixed blood are excluded, and what shades and degrees of mixture of color disqualify an alien from application for the benefits of the Act of Naturalization. Perhaps there might be difficulties also as to the copper-colored natives of America, *or the yellow or tawny races of Asiatics, and it may well be doubted whether any of them are white persons, within the purview of the Law.*" The Court, in the case above mentioned, allude to this, and say: "We are not disposed to leave this question in any doubt. The word "white" has a distinct signification, which *ex vi termini*, excludes black, yellow, and all other colors."

The question still remains as to what extent persons of mixed blood are excluded, and what shades and degrees of mixture of color disqualify an alien from application for the benefit of the Act of Naturalization. By the Statues of California (Wood's Digest p. 330), it is declared that every person who shall have one-eighth part or more of negro blood, shall be deemed a mulatto, and every person who shall have one-half of Indian blood, shall be deemed an Indian. Whether the Supreme Court would follow its reasoning in the case of The People v. Hall, and class the Chinese with the Indians as regards color, remains to be decided; no case of an admixture of European and Asiatic blood having, so far as we are aware, presented itself.

We will next consider the process of naturalization, taking first the cases which usually present themselves, and then noticing the exceptions. The Supreme, District, or Circuit Court of any of the States, or of the territorial districts of the United States, or any Circuit or District Court of the United States; in fact, every court of record, having a seal and clerk, may admit aliens to citizenship. The Court admitting such alien, must be satisfied that he has resided within the United States five years at least, and within the State or Territory where such court is held, one year at least, and that during that time he has behaved as a man of good moral character, and attached to the principles of the United States. The oath of the applicant is in no case allowed to prove his residence. Nor can the residence and good moral character of the applicant be established by affidavits; but must be proved in court by the testimony of witnesses (Anon. 7 Hill, 137). The powers conferred upon the Courts to naturalize aliens are judicial, not ministerial, and require an examination into each case, sufficient to satisfy the court:

It is in general necessary that the alien shall have declared on oath or affirmation, before some court capable of naturalizing aliens, two years at least before his admission to citizenship, that it was his *bona fide* intention to become a citizen of the United States, and to renounce forever all allegiance and fidelity to any foreign Prince, State, Sovereignty, and particularly by name the Prince, etc, of whose realm the alien may be a subject. Aliens arriving here before the age of eighteen, and residing here five years, may be naturalized, if of the age of twenty-one, without this preliminary declaration, provided they state on oath that it has been their intention for five years to become a citizen of the United States. If the alien has borne any hereditary title, or been of any order of nobility, he must make an express renunciation of his title, or order of nobility.

If an alien, who has made the requisite preliminary declaration, dies before becoming naturalized, his widow and children are considered as citizens of the United States.

By complying with these simple conditions, any white person may become an American citizen. A person thus duly naturalized becomes entitled to all the privileges and immunities of native-born subjects, except that a residence of seven years is requisite to enable him to hold a seat in Congress, and no person but a native-born citizen is eligible to the office of Governor in some of the States, or to the office of President of the United States.

Making a Purchase—First Impressions.

[We take the following pleasing story from the admirable little book, "Ten Acres Enough." We have others to follow. They are worth reading:]

The owner of these eleven acres had been for some months in the furnace of pecuniary affliction. He was going the way of ninth-tenths of all the business flesh within the circle of my acquaintance. As a purchaser I did not seek him, nor to his representative did myself or my wife let fall a single word indicating that we were pleased with the property. When $1,500 were named as the price, I did indulge in some expression of surprise, thinking it was quite enough. Discovering subsequently that the owner was an old city acquaintance, I dropped in one morning to see him, and for an hour we talked over the times, the markets, the savage rates demanded for money, and how the spring business was likely to turn out. On real estate I was mute as a mouse, except giving it as my decided opinion that some holders were asking greater prices than they would be likely to realize.

This side-thrust brought my friend out. He mentioned his house and eleven acres, and eagerly inquired if I did not know of some one who would buy. With as much indifference as I could assume, I asked his terms. He told me with great frankness that he was compelled to sell, and that his need of money was so great, that he might possibly do so whether the debtor got anything or not. He urged me to find him a purchaser, and finally gave me the refusal of the place for a few days.

Now, the plain truth was, that my anxiety to buy was quite as great as his was to sell. During the next week we met several times, when he invariably inquired as to the prospect of a purchaser. But I had no encouragement to offer. When I thought I had fought shy long enough, I surprised him by saying that I knew of a purchaser who was ready to take the property at a thousand dollars. He sat down and indulged in some figuring, then for a few moments was silent, then inquired if the offer was a cash one, and when the money could be had. I replied, the moment his deed was ready for delivery.

It was evident that the offer of instant payment determined him to sell at so low a price—cash was everything. Opening his desk, he took out a deed for the property, ready to execute whenever the grantee's name, the date and the consideration should have been inserted, handed it to me, and said he accepted the offer, only let him have the money as quickly as possible.

I confess to both exultation and surprise. I had secured an unmistakable bargain. The ready-made deed surprised me, but it showed the owner's necessities, and that he had been prepared to let the property go at the first decent offer. The natural selfishness of human nature has since induced me to believe that I could have bought for even less, had I not been so precipitate. His searches and brief of title were also ready; a single day or two was enough to bring them up—he had been determined to sell.

The transaction seemed to involve a succession of surprises. His turn for a new one came when he found that I had inserted my wife's name in the deed. So, paying him his thousand dollars, I returned with the deed to my wife, telling her that she had now a home of her own; that, come what might, the property was hers; that the laws of New Jersey secured it to her, and that no subsequent destitution of mine could wrest it from her. This little act of consideration was as gratifying a surprise to her as any that either buyer or seller had experienced. If rejoiced at my having secured the place, it gave to it a new interest in her estimation, and fixed and made permanent the attachment she had spontaneously acquired for it. Her gratification only served to increase my own.

It is thus that small acts of kindness make life pleasant and desirable. Every dark object is made light by them, and many scalding tears of sorrow are thus easily brushed away. When the heart is sad, and despondency sits at the entrance of the soul, a little kindness drives despair away, and makes the path cheerful and pleasant. Who then will refuse a kind act? It costs the giver nothing—just as this did; but it is invaluable to the receiver. No broader acres, no more stately mansion, whether in town or country, could now tempt my wife to leave this humble refuge. Here she has been ever happy, and here, I doubt not, she will end her earthly career.

In a week the house was vacated and cleansed, and we were in full possession. My wife was satisfied, and my children were delighted, and I had realized the dream of 20 years! One strong fact forced itself on my attention the first night I passed under my own roof. The drain of $300 per annum into the pocket of my city landlord had been stopped. My family received as safe a shelter for the interest of a thousand dollars, as he had given them for the interest of five thousand! The feeling of relief from this unappeasable demand was indescribable. Curiously enough, my wife voluntarily suggested that the same feeling of relief had been presented to her. But in addition to this huge equivalent for the investment of a thousand dollars, there was that which might be hereafter realized from the cultivation of eleven acres of land.

This lodgement was effected on the first of April, 1855. When all our household fixings had been snugly arranged, and I took my first walk over my little plantation, on a soft and balmy morning, my feeling of contentment seemed to be perfect. I knew that I was not rich, but it was certain that I was not poor. In contrasting my condition with that of others, both higher and lower upon fortune's ladder, I found a thousand causes for congratulation, but none for regret. With all his wealth, Rothschild must be satisfied with the same sky that was spread over me. He cannot order a private sunrise, that he may enjoy it with a select circle of friends, nor add a single glory to the gorgeous spectacle of the setting sun. The millionaire could not have more than his share of the pure atmosphere that I was breathing, while the poorest of all men could have as much. God only can give all these, and to many of the poor he has thus given. All that is most valuable can be had for nothing. They come as presents from the hand of an indulgent Father, and neither air nor sky, nor beauty, genius, health, or strength, can be bought or sold. Whatever may be one's condition in life, the great art is to learn to be content and happy, indulging in no feverish longings for what we have not, but satisfied and thankful for what we have.

Letters from an Old Californian at the East.

NUMBER TWENTY-TWO.

New York, May 23d, 1864.

Copperhead Mendacity backed by the Secession Press.

EDITOR CALIFORNIA FARMER:

While this momentous drama is being enacted which is probably to decide the fate of the rebellion, the affairs of this commercial city move on apparently as if no great historic events were in progress. At first, and in the presence of the spontaneous burst of joy, which was exhibited by the loyalists, treason hid its abashed head, but now that the people have become accustomed to the bulletins from the army of the Potomac, and are busy in their daily avocations, the myrmidons of Jeff. Davis are again to be constantly heard, in the grog-shops, in the cars, and down in William street, where the curious Californian can witness the banquet of the ravens. It is a grand sight to see the California merchants, in New York, who are making money by this very speculation in gold, using every effort to discourage the shameless gambling in National honor, which is making the name of New York a reproach and which is creating a popular sentiment throughout the land which will soon make itself most disagreeably felt. The World, Journal of Commerce, News and Express, are so open in their hostility to the Government that they stop at no outrage. The World and Journal of Commerce were caught in one of their own traps. I have time and again warned your readers against the quotations copied from the World in the money articles of the San Francisco papers. They were written here for stock-jobbing purposes, and you can understand how reliable they are. The Brooklyn editor, who is caged in Fort Lafayette, is only a convenient black sheep.

Civilization vs. Barbarism.

The state of the city, last week, was a well deserved punishment. Added to the ruinous effect on business, of the work of the World, the car-drivers, street-sweepers and stevedores were all on a strike, and I need not tell your readers that it was not a peacable one. The large and efficient body of policemen were on duty day and night, and companies of the State militia were constantly on guard at the armories. The World, on the one side, was siding the gold-ravens, and the News, on the other, was striving to excite the worst passions of the ignorant and brutal classes, who, during the memorable riot week, rivalled in their atrocities the worst page of Indian barbarity, or the Christian massacres of chivalry men, like Forest or Quantrell. Yet we are told that this is an Age of Civilization! It is rather the Age which is to be made memorable by the great battles fought between Civilization and Barbarism.

All Nature Blooms—in Central Park.

In contrast to the confusion which has clouded the streets of the city, is the smiling appearance of Nature. The foliage is so rich, so graceful, so fragrant, that my eyes drink in and my senses are intoxicated by the loveliness of the mantle of flowers. The most enthusiastic descriptions can only half picture the attractions of the Central Park. It is like a Garden of Eden, but not only the foliage wonderfully luxurious, the grass of the richest color, the flowers of the rarest variety, the singing-birds also seem to know that here they are free—delightful! But the effect of the marble bridges and terraces seen through such charming vistas, is constantly calling forth exclamations of pleasure. One does not know which to admire most, Nature or Art! I often spend my mornings in rambling through this beautiful Park. I am, but perhaps I ought not to be, astonished that I meet more French and Germans than Americans. However, in the afternoons, all the beauty and fashion of the metropolis crowd every Avenue. The scene is then one of great brilliancy and is the great sight of New York.

As I have returned to the noise and dust of the city let me say, regretfully, that the wretched policy of Home Manufacturers and Dealers, threatens to render the patriotic movement of the Women of America, a failure. M. A. S.

The Wounded Soldier Boy Gathering Flowers.

"Nature never did betray the heart that loved her."

How beautiful the following touching incident of the war, as related in one of the New York papers. Such a little hero could not die, he got well we know:

"Far down the plankroad, where Hancock fought, beyond the thickest rebel dead, lay a boy severely wounded, perhaps not less a soldier that he was but a boy. He had fallen the day before when we were farthest advanced, and had remained unmolested within the rebel lines. They had not removed him, and he was alone with the dead, when I rode up. The poor fellow was crawling about gathering violets. Faint with the loss of blood, unable to stand, he could not resist the tempting flowers, and had already made a beautiful bouquet. Having caused a stretcher to be sent for, I saw him taken up tenderly and borne away, wearing a brave, sweet, touching smile.

PATRIOTIC.—On the occasion of a Magic-Lantern Exhibition, the scene of the Children of Israel crossing the Red Sea was given, and the small children were asked if they could tell what it meant? One little fellow immediately sang out, *Burnsides crossing the Rappahanock.*

INCREASE OF WOOL TRADE.—In 1857, only 65 bales of Wool were shipped from the Port of San Francisco. The number of bales of Wool received at our wharfs here from January to June, five months, was 17,750, being nearly 400,000 pounds, and this was an increase of about 5,500 over last year. The amount of wool sent abroad, this year, during the same time was 1,500,000 lbs, about 200,000 lbs more than last year. Thus from the small amount of 65 bales, California increased to 17,500 bales, and this in only five months of the year. What will the whole year be?

PREMIUM ON BABIES.—The subject of offering premiums for the best specimens of babies is being agitated in various parts of the country. Whether agitators themselves intend the perpetration of a serious proposition or a comical farce, the subject is worthy of a sober second thought. *Why are not infantile specimens of humanity—men and women in minature—as worthy of attempts to improve the breed as chickens, and pigs, and calves, and colts, and lambs—minature Shanghais, hogs, oxen, horses, and sheep?* Is not the *human animal* as susceptible of cultivation as the *beasts that perish?* And is he not as *deserving*, yea, as *needy of cultivation?* Answer that, wiseacres in the *rearing* of domestic animals, and ye ignoramuses in the rearing of children!—N. Y. Ex.

[It seems that by the increasing knowledge attained in the science of physiology, there are questions that have been made light of in time past, that will again appear and re-appear until truth is established.]

We are often harsh when we feel ourselves strong, and show indulgence only when we are painfully conscious that we are in need of it ourselves.

NAPA

COLLEGIATE INSTITUTE,

For Young Ladies and Gentlemen.

NAPA CITY, CALIFORNIA.

NAPA CITY, IN POINT OF LOCATION AND Climate, is unsurpassed in the State. It is about four hours' ride by steamboat from San Francisco, and three by stage from Benicia. There will soon be a daily boat from the former place, and there are now two daily stages from the latter. There are extensive accommodations for Boarders in the College Building, with large and well-ventilated sleeping apartments. Teachers reside in the Building, and will have a constant oversight of the Students who are Boarders.

GOVERNMENT.

Young Ladies will receive no calls from any except Parents and Guardians. Ladies and Misses will not leave the College grounds, except in company with their Instructors. Young Men and Lads are not allowed to lounge about the Stores, Hotels, and Saloons of the village. All pupils are required to attend Church on the Sabbath. Parents will choose the place of worship for their children.

MILITARY DEPARTMENT.

This Department has been opened with a view to the permanent establishment of a Military Academy on this Coast. From three to four years will be requisite to complete the course in this Department. The State has furnished us the necessary equipments for such a school. The Drills will be attended to daily.

TUITION.

Spelling and Reading, per month	$2 50
Common English, with the above, per month	4 00
Higher English, with the above, per month	6 00
Latin and Greek, with the above, per month	8 00
Janitor's Fees, per month	25

EXTRAS.

Modern Languages, each, per month	$2 00
Music, with Piano, per month	6 00
Embroidery, per month	3 00
Painting in Oil and Water Colors, per month	4 00
Board with Furnished Rooms, per week	5 00
Board with Furnished Rooms, Light, Fuel, and Washing, per week	6 50
Military Branches, per month	3 00
Sword Exercises, twelve lessons	8 00

CALENDER.

The Collegiate year is divided into two Sessions of 21 weeks each. The first Session will begin July 25 and end December 16. The second Session will begin January 2 and end May 23. The Winter vacation will be two, and the Summer vacation eight weeks long.

☞All articles of clothing should be plainly marked. Pupils will furnish their own Sheets, Pillow-cases, Towels, Napkins, and Lamps.

☞Payments, half-yearly in advance. Pupils can enter at any time, and be charged from the time of entering. No deduction will be made for absence, except in cases of protracted illness. The month consists of four weeks each.

For further particulars address

W. S. Turner, A. M.,

21-11 Principal.

CALIFORNIA MARBLE WORKS.

John Grant. F. J. Devine.

Grant & Devine,

Sutter street, bet. Montgomery and Sansome,

OFFER FOR SALE

MANTLES, GRAVE-STONES,

MONUMENTS, TOMBS,

TABLE-TOPS, GRATES, TILES,

And every description of Marble Work.

Sculpture, Carving, Lettering,

And all kinds of ORNAMENTAL WORK will receive special attention.

Grant & Devine are constantly in receipt, from their quarries in Tuolumne County, of the finest and purest Marble, which they manufacture into the above. They respectfully solicit the patronage of persons requiring any articles in their line.

MARBLE sold by WHOLESALE and RETAIL, in the slab and block.

GRANT & DEVINE,

20-13 Sutter street, between Montgomery and Sansome.

North Point Dock Warehouse.

STORAGE

Can be procured in this well known Warehouse on the most favorable terms.

Every facility is offered for storing Wheat, Barley Flour, and other Domestic Produce.

Advances

Made on approved Merchandise.

WM. T. COLEMAN & CO.,

23 Proprietors.

NEW SPRING

—AND—

Summer Dry-Goods

—AT—

KERBY, BYRNE & CO'S,

No. 7,

Montgomery street.

WE ARE RECEIVING ADDITIONS,

BY EVERY STEAMER,

To Our Unequaled Stock of

Staple and Fancy

DRY GOODS!

Our STOCK comprises every article usually kept in a well conducted Store.

WE HAVE NOW ON HAND VERY SUPERIOR

SILKS,

....OF....

EVERY STYLE,

SUITABLE FOR THE HOUSE, THE STREET,

OR EVENING.

....ALSO....

DRESS GOODS:

POPLINS, CHALLIES,

EMPRESS CLOTH,

ORGANDIES,

PRINTED JACONET,

FRENCH CALICOES,

CALICO ROBES.

—ALSO—

A LARGE LOT OF

SUMMER SHAWLS,

VERY HANDSOME, AND AT

Only $5,00 Each:

BROCHE AND CASHMERE SHAWLS,

Mourning Shawls,

AND A COMPLETE ASSORTMENT OF

MOURNING GOODS:

BLACK BOMBAZINES,

EMPRESS CLOTHS,

MERINO, ALPACA,

ENGLISH CRAPE,

CRAPE COLLARS AND SETS,

CRAPE VEILS,

MOURNING HANDKERCHIEFS, ETC

FURS:

SOLD MUCH BELOW COST DURING THE SUMMER SEASON.

A Good Variety of

CLOAKS

AND

CLOAKING,

Always on hand.

—ALSO—

Hosiery,

Gloves, Muslins,

Sheetings, Linens, Flannels,

Quilts, Blankets,

Towels, Table Covers, Lace Curtains,

Ladies' and Men's Undergarments,

Laces, Embroideries,

Parasols,

ETC, ETC.

ADDRESS WORKING VIRGIN IN ITALY.—A few years ago, the parish priest of Matelica, near Ancona, while giving the benediction to the people assembled in the church, suddenly exclaimed, "A miracle!" and pointed to the picture of the Madonna, the eyes of which appeared to roll. The people saw and believed, the news spread, and crowds hastened to the church to witness the miracle, when the District Judge arrived with a police force and took forcible possession of the picture. Upon examination it was found that a spider's web covered the eyes, and that the illusion was produced by the draught caused by the lighted candles, which made the web move. The populace, however, grew outrageous, a scuffle ensued, and the captain of the National Guard, in endeavoring to quell the tumult, received a blow on the head with a bludgeon. In consequence of this the priest and several of the rioters were arrested.

[The above is in keeping with a similar abomination that was enacted at the Santiago burning. It is such doing that keep the wourld in dark ages—the penalty, human life by thousands.]

TO DISTINGUISH ARTIFICIALLY-COLORED WINES.—Mr. M. Blume gives the following simple test:—"Saturate a piece of bread crumb with the wine to be tested, and place it in a plate full of water. If the wine is artificially colored, the water very soon becomes colored reddish violet; but if the coloring matter is natural, the water, after a quarter or half an hour, is but very little colored, and a slight opalescence only is perceptible. The test depends upon the difficult solubility of the real coloring matters of wine in water free from tartaric acid.'

[Let this be tried.]

WEIGHT OF A SHEEP FOR MUTTON.—The usual estimate of the gross and nett weight of sheep, is that the dead carcass will weigh one half the gross weight; and therefore, when sheep are sold at five cents a pound alive, the price is equivalent to ten cents a pound for the meat, sinking the pelt and all the offal, so that the butcher, if he should sell the carcass at cost, would have the pelt, rough fat, head, &c., for a profit.

A FURRIER, wising to inform the public that he would make up furs in a fashionable manner out of old furs which ladies had at home, appended the following to his advertisement: "N. B.—Capes victorines, etc., made up for ladies in fashionable styles, *out of their own skins*."

[Hear him, what a wretch! Would he skin women alive?]

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 20, 1863.

JACOB ZECH, ESQ:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior square piano, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. BEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPPOER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. ZECH.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

—AND THE—

STODART PIANOFORTES.

Importers of

Piano Covers, Music Stools, Music Racks,

ETC.

PICOLLO PIANOFORTES.

WE WOULD CALL PARTICULAR ATTENTION TO these beautiful instruments from our own manufactory in Paris, and which we can confidently recommend as equal in quality to those of any other European manufacturer.

PICOLLO PIANOFORTES are now in universal use on the continent of Europe, having completely taken the place of the old style of Square Pianos. They possess all the merits ever claimed for the Square Piano, with many advantages that are peculiar to themselves.

Our assortment comprises six different styles varying in price from $275 to $400 each.

Iron-framed Picollo Pianofortes.

These instruments are a "specialité" of our manufacture, are constructed with a special view to withstand the peculiar climate of the interior of California, and are warranted to stand any change of temperature.

Price $400 to $450 each.

STODART PIANOFORTES.

We have had the exclusive agency for the sale of these celebrated Pianos for the past twelve years, and refer with confidence, as to their quality, to the many hundreds of instruments themselves now in use throughout the whole extent of the Pacific Coast. A general assortment of these instruments will at all times be found in our warerooms, comprising Grand Action, Square, Upright, and Overstrung Pianos, in plain or richly carved cases. We offer them at the same prices at which they are sold at the manufacturers' warerooms in New York, thus saving to the purchasers here the cost of freight, insurance, interest, and attendant charges. Prices range from $240 to $500 each.

FRENCH HARMONIUMS.

In connection with our manufactory of Pianofortes at Paris, we have established a manufactory of FRENCH HARMONIUMS, suitable for parlors, small halls and churches. These instruments, like our Pianofortes, are all in rosewood cases, and are made with the improved "transposition attachment," which enables the performer, in voice accompaniments, to adapt the instrument to any particular "key," thus entirely obviating the necessity of any transposition of the music. Nine varieties $100 to $1,000 each.

We beg to call attention to the fact that the Harmoniums of our manufacture possess many valuable improvements not to be found in any other instruments of this description, among which is the peculiar disposition of the reeds. This improvement is based upon purely scientific principles, rendering the reeds doubly sensitive and much less liable to become deranged or get out of order.

For full description of Picollo Pianofortes and Harmoniums send for descriptive catalogues.

PRINCE & CO'S

Melodeons, Double reed School Organs,

and Organ Melodeons.

Being the exclusive agents for the sale of these celebrated instruments in California, we are prepared to furnish them at the catalogue prices, sold at the warerooms of the manufacturers in the East. The assortment comprises twelve different styles of instruments ranging from $60 to $425 each. Illustrated catalogues, with full description and price of each instrument annexed, will be furnished on application.

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartetts, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair true," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 625,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO: 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2. are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious." "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc. Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 33 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Cull. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

HORACE WATERS, Ag't

ELECTRICITY

THE

GREAT REMEDIAL AGENT.

Electricity as a Remedial Agent has, until recently, been but little known. An Electric Battery has been a terror from childhood up because a little Battery gave a "start," and the thunder storm killed by lightning. Now it is better understood, and is and will be the sovereign remedy for many diseases heretofore considered incurable. The following series of articles and statistics with facts and proof of the virtue of Electricity are worthy of attention. When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulations of the poisons owhich constitute disease. A great cry went up from the interested in the continued supremacy of the old system of one poison to cure another, that Electricity, as a Curative Agent, had been tried and had proved to be of but little if any value—thinking, poor souls, the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients there were those who were diving into the science of Electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks, and all by the *Improved Instruments* of Dr. J. H. Josselyn, Resident Physician at the Electropathic Institute, 645 Washington street, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic System. From early morn till late at night, his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services.

The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed is Rheumatism; none has given the honorable practitioner more trouble to relieve, and to one has pretended to cure (if we except known empirics) permanently. But this subtle disease give way before the Electropathic System in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of a relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

We allude to that kind of disease paraded by quacks in the journals of the day, a trouble which was never cured by medicine, only a little strength imparted by the use of tonics. The poor victim is kept taking medicines and paying for them until his last dollar is gone and then, as soon as he undertakes to work to obtain more funds, the trouble comes back in all its loathsomeness. To this disease Electropathy is peculiarly applicable, its action being upon the spermatic nerve, strengthens the secretory organs, and at the same time, creating an equilibrium in the system, thereby preventing an elapse.

We dwell upon this disease because it is the bane of the youth of California; and one about which there has been more deception used than all others put together. It is not necessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present very few Instruments in the world that can be depended upon. A good instrument costs very heavy, and cannot be purchased unless ordered, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only Instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous imposters in the bathing line. The pure Magnetic Bath is one of the most effective aids to the removal of disease from the system, but if given at the wrong time is likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this Bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unreasonably administered, and if not necessary, advise the requisite remedy.

To Females,

the Directors would say, Electropathy is particularly applicable to your delicate and fragile systems, and to the numerous troublesome and painful diseases to which you are liable. Should you be irregular, a few treatments will restore the functions to the proper state without pain or inconvenience. Should you be weak and enfeebled, either general or local, this system imparts strength and vitality, making the recipient feel buoyant and youthful, where before they were languid and unable to enjoy the pleasures of life. One great blessing connected with Electropathy is, it purifies the system so thoroughly that it beautifies the complexion, making the coarse and freckled skin as pure and fair as possible, giving the patient a fresh and healthful look.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil forebodings and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in issuing this pamphlet, do it in the hope that it may be the means of awakening the public, who have not studied into such things, to a sense of their duties, and if possible prevent those who have the care of a rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse the origin. Also, that those in need of remedial agents may know where they can find them without resorting to taking the thousand and one poisonous nostrums that are continually palmed off as sovereign panaceas for all the ills of humanity. Avoid them all, they are snares set to rob you, and to your bodily injury at the same time. The following is a list of the cases which have been successfully treated by the *Electropathic System*, at the Institute, during the first four years of its establishment. The record is good, and challenges admiration of the world:

Name of Disease.	No.
Rheumatism	1580
Neuralgia	1422
Dyspepsia	1467
General Debility	1410
Fever and Ague	1262
Dumb Ague	1210
Bronchial Affections	1106
Asthma	1049
Female Irregularities	1022
Mercurial	938
Scrofula—long standing	922
Paralysis	890
Disease of the Eye	832
Catarrh in the head	705
Catarrh in the lungs	608
Liver complaint	600
Incipient Consumption	582
Panama Fever	503
Deafness—total and partial	450
Mental Derangement	471
All other—and among which is almost every nameable disease	2,186
Total	21,373

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit. Let them go, they will not be missed.

Persons seek no remedial assistance, may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature to the body from the center to the surface, by its energy, while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon mercurial diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity forces itself out of the body. This result has been arrived at by testing the water after an Electro Magnetic Bath. After such tests have been found in the water the patient is not troubled any more with those pains peculiar to the disease. In all other cases it forces to the surface and is washed off by the bath. The whole system in its application is a luxury, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure all the time. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the institute:

CERTIFICATES OF CURES.

SAN FRANCISCO, April 18, 1860.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied with chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this eighteenth day of April, A.D., 1860 P. BARRY, Notary Public.

The undersigned takes this method of acknowledging publicly the benefits he received from the treatment applied to him at the Electropathic Institute, while suffering under a terrible infliction:

This is to certify that I have been under Electropathic treatment at the Electropathic Institute, 645 Washington street. When I applied to Dr. Josselyn I was cramped up with rheumatism, and also had the coast aque. So bad was I that, without relief, I don't think I could have lived more than one week. The Doctor, with his instrument, relieved me the first treatment from all pain, and perfectly cured me of all disease in twenty treatments, without the use of medicines. I cordially recommend all afflicted to patronize this Institute, for it is truly a blessing to the afflicted, and the operation is very pleasant. I wish to thus publicly thank Dr. Josselyn for his care and sympathy.

JOSEPH SEGER, of Bolinas Bay.

September 19, 1860.

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this 19th day of Sept., A. D. 1860. P. BARRY, Notary Public.

SACRAMENTO, Oct. 10, 1860.

DR. JOSSELYN—Dear and Honored Sir: You requested me to let you know how I feel after being at home three weeks. Well, sir, I have been here a little over two weeks and there is no return of that very unpleasant trouble. My sleep is sound, and there is no disturbance of the regular laws of nature. I feel as strong as I ever did before bad habits had weakened my system. Not only is the general debility entirely disappeared, but the local trouble has gone. I feel so strong that there is no fear of its return. Considering that you only took one month to cure a disorder of seven years standing, I think your system almost miraculous. Accept my sincere thanks, and publish this if you please. I have sworn to it, as you will see. C. BOWMAN.

State of California, County of Sacramento—ss.

Subscribed and sworn to before me, this tenth day of Oct, A. D., 1860. CHAS. HART, Notary Public.

HORNITAS, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it; and Mercurial pains as you state them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you would cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can, by spreading your fame up to these parts.

Respectfully yours, GEO. PERKINSON Jr.

To J. H. Josselyn, M. D., Resident Physician, at the Electropathic Institute

NEVADA, Nov. 6, 1860.

DEAR DOCTOR: Pursuant to agreement, upon my arrival, I sit down to pen you a few lines in acknowledgement of the great service you have rendered me, in relieving me of that painful case of neuralgia and rheumatism. When I look back and see the gallons of medicines I have swallowed to no purpose, and then to think how soon you cured me, I am astonished. You were only twelve days performing a cure of the trouble, for which I had taken medicine over six months. Dear Doctor, if you could see the wonder exhibited by my friends, who can hardly believe that a cure was performed without medicines, but here I have been cured, and I have not taken a drop of medicine from you, nor from any one else, while being treated by your splendid Instrument I shall try to show my gratitude by sending every sick man I come across to you. Yours, till death,

FRANCIS GARLAND.

To J. H. Josselyn, M. D., Resident Physician, Electropathic Institute.

State of California, County of Nevada—ss.

Subscribed and sworn to before me, this eighth day of Nov., A. D., 1860.

F. SPAULDING, Notary Public.

YREKA, Nov. 10th, 1860.

DR. JOSSELYN—Dear Sir: Your letter, dated October 16th, is before me. You wish to know how my bronchial troubles are. Now, Doctor, that looks a great deal like a joke. I once had such an affection of several years' standing, but thanks to your natural mode of treating disease, it has gone to be numbered with the things of the past. Since my return I have not felt the slightest trouble from it. When you pronounced me well I did not expect to ever hear from it again. Any one who sits under treatment of that *Improved Instrument* of yours will have the same feelings. It imparts vitality to the system so rapidly that confidence is at once established. I have to thank you that you did not refuse to treat me because I could not pay you the whole of your reasonable charge; inclosed is the balance due you, and God bless you for the kind treatment I received at your hands.

Yours, ever grateful, WM. GARDNER.

State of California, County of Siskiyou—ss.

Subscribed and sworn to before me, this tenth day of Nov., A. D., 1860.

B. F. WELLITS, Notary Public.

This is to certify that I, the undersigned, was troubled with dumb ague accompanied with rheumatism, very badly. My disease was taken in Washoe. After having exhausted medicines without benefit, I applied to Dr. Josselyn, at the Electropathic Institute, on the first day of November. After taking twenty treatments with his Improved Electropathic Instrument I am perfectly cured, having been entirely relieved of all pain or inconvenience. I feel as strong as I ever did when in the best of health. I cheerfully recommend all afflicted to his care, as being the best physician I ever became acquainted with. One great advantage, he uses no medicines, but cures by a process which is perfectly natural. The time occupied in my case was thirteen days.

D. O. HARRA.

November 14th, 1860.

State of California, City and County of San Francisco—ss.

Personally appeared before me, D. O. Harra, and subscribed and sworn to the above certificate, on this fourteenth day of November, A. D., 1860.

P. BARRY, Notary Public.

SAN FRANCISCO, Aug. 3d, 1861.

To the Directors and Resident Physician of the Electropathic Institute.

SIRS: You requested of me a certificate of the cure you performed in my case. Below I append it:

This is to certify that I was troubled with a swelling which commenced in my ankles, and gradually extended upward until it effected my whole body. I sought the best medical aid in New York and Boston, and they all pronounced it dropsy. Hoping to retrieve my health, I visited California in February last. I consulted the Resident Physician at the Electropathic Institute; and now, after five months of treatment, and waiting to see its effects, I am pronounced well by competent judges. It did not take but three months of treatment to cure me, but I waited to see that it did not return. I feel perfectly assured from what I saw while under treatment that Electricity as applied at the Institute will cure any disease to which the human family is liable.

Now, gentlemen, you can make what use you please of this certificate. With my thanks to the Resident Physician for his kind attention, I subscribe myself,

Your thankful patient,

MRS. C. A. CARLTON

Opinions of the Press.

The advantages of electricity as a remedial agent, are universally admitted by the medical and scientific world. It requires, however, experienced skill to apply this remedy efficiently, and this skill of application is possessed in an eminent degree by Dr. J. H. Josselyn, of the San Francisco Electropathic Institute. Particulars of his method of practice can be obtained by reference to his advertisement in another column. The Doctor is well known to us as a scientific gentleman, and an ardent devotee to his profession. He is no pretender, but has conferred incalculable benefit on those who were so fortunate as to seek relief at his hands. For those who desire speedy and permanent relief from the rheumatic pains, so prevalent in this region, we can recommend no surer remedy, than a visit to Dr. Josselyn at his rooms in San Francisco, No. 645 Washington street.—[Placerville Republican.

ARE YOU SICK?—We wish to say a word to those that are sick. We have in this city an institution known as the Electropathic Institute, situated at 645 Washington street. The establishment is under the charge of Dr J. H Josselyn, a physician who has no superior in the city. He has been in charge of the Electropathic Institute for several years, and has been uniformly successful in his treatment of the numerous patients that have placed themselves under his charge. The Electric treatment will cure many diseases that cannot be reached by any other mode. Dr Josselyn gives his personal attention to all of his patients, and is always ready to give advice to those that may call upon him. His charges are very moderate, and we cannot do the sick a greater favor than to recommend them to call on him before placing themselves in charge of another.—[San Francisco Daily Journal.

We call the attention of our readers to the advertisement of Dr. Josselyn's Electropathic Institute. Voluntary and unsolicited we make the following statement, proving its beneficent effects, particularly in rheumatic cases. Some months since we were on an editorial trip, visiting the mountains. The stage-coach upset, and landed all the passengers, including the writer, below in the valley, where the Deer Creek overflowed by receiving the additional material, calculous to its usual contents. For some hours exposed in our wet clothes, to night wind and weather, we soon felt the effects of the accident in the mountains—pains in the back, hip, and legs; so much so, that for weeks we hardly could walk Treatments of all kinds were applied but without avail, until our attention was called to the Electro-galvanic Baths and appliances of the above Institute. Thank God, after two weeks we have been fully restored, and enjoy now the free use of our limbs and body, as fully as previous to the lovolocutory bath in Deer Creek.—[Dr. H. RUHE, Ed.—True Pacific Messenger.

ELECTROPATHY.—Electricity has long been classed among the most effective medical agents. It possesses great advantages over the systems of therapeutics heretofore relied upon, as it reaches more certainly the seated disease, especially in nervous or rheumatic complaints. The Electropathic Institute, No. 645 Washington street, under the charge of its able Resident Physician, Dr. J. H. Josselyn, has attained a well-merited celebrity for the many cases which have resulted favorably from the skillful application of this invalu ble remedy.—[Daily Morning Star.

A GOOD INSTITUTION FOR THE SICK.—One of the very best places in the city for the care of the sick is at the Electropathic Institute, 645 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician of great experience, and no one can do the sick no greater favor than to recommend them to give the Electropathic Institute a trial.—[Weekly Journal. 12

The California Farmer.

SAN FRANCISCO:

FRIDAY .....JUNE 24, 1864

☞ Those who receive a number of the Farmer with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or passing it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address Publishers California Farmer, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the Farmer Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the Farmer Office. Members of the Press, and Strangers, are particularly invited to avail themselves of those rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc., at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Send along your Greenbacks,

Don't be afraid to send along your Greenbacks. Those we take at par in payment for all back dues to the Farmer for subscription—let it be understood, however, that when payments have been delayed six months $1 additional will be charged for each year. Send them along, now is the time. This is a better speculation than mining stocks, for it is so pleasant to read a newspaper when one knows he has paid for it, the digestion is better and a man feels happy, and, if happy, then he feels rich. So pay prompt and you will "strike a lucky [illegible]"

New Comers—Homesteads.

Those New Comers to our State can always be sure to find valuable Homesteads, already highly improved, and for sale on favorable terms, by applying at our Office. New Comers who want important positions, as Superintendents of Farms Millers, etc, can always be informed of favorable chances.

Transactions of Agricultural Societies.

We would ask of those Societies in the Atlantic States and Europe, to whom we send our Journal, to send us the transactions of their several Socities, so that we may give the benefit of their perusal to visitors, from the several States, who are callers at our Reading-rooms. By this means we can lay before them the progress of Agriculture in the former homes, and thus advance the interest of both Atlantic and Pacific States.

Clerk and Assistant Wanted.

We want an active intelligent business clerk in our office. We want a person who has a knowledge, to some extent, of agriculture, horticulture, the science of botany, and the seed business. A man of correct habits, and willing to give his time to business, closely; a young man free from incumbrances on his time so that he can apply himself to business wholly. A knowledge of the languages would be desirable, and of mineralogy, also. Application only to be made between the hours of 4 and 5 p. m., and by none who cannot give the best of references.

TO AGRICULTURAL SOCIETIES ABROAD

Exchange of Seeds, Books, Etc.

Having established large and spacious Reading Rooms, in this city, which contain Libraries, Cabinets, and hundreds of Newspapers, all free to those who wish to enjoy the benefits thereof, we now ask coöperation from all Agricultural Associations in the Old States and Europe, for the *Exchange of Seeds, Specimens, Books, Etc.* We shall be happy to reciprocate any and all favors, and comply with any direction made to us connected with such an enterprise.

TO READERS AND CORRESPONDENTS.

We ask attention to the criticisim on the Metropolitan Theater. We are glad our excellent correspondent has spoken a good word for the accomplished Lady Managers who are striving to present the Drama in a superior manner in our city; they deserve well at the hands of our citizens.

Our spirited and accomplished New York correspondent gives our readers another interesting letter. His many friends will hail it with a welcome.

We hope our readers did not overlook the excellent Essay of one of the students of the Law School at Benicia, published in last week's issue, on "The Law of Husband and Wife." It is worthy a careful reading to all in the married relation.

The Essay from the same College, this week, upon the "Law of Aliens," should be carefully read.

Laid Over.—We have been obliged to lay over many articles intended for this weeks issue. Contributions to the Physics, Hygiene and Thermology of the Sacramento river—a valuable paper, by Dr. T. M. Logan, will appear next week.

A valuable communication on Electricity—laid over till next week.

Several valuable Essays, and letters received, will all have due attention.

ARTICLES RECEIVED AT THE CALIFORNIA FARMER EXHIBITION ROOMS, No. 320 Clay Street.

We have received a very valuable relic of olden times, being a piece of the ship Cadmus in which the Marquis De La Fayette came to America, in 1777. It is a fine piece of the planking, with a spike through it. We return thanks to E. C. Stock, Esq., for this valuable specimen of olden time.

We received a fine specimen of silver ore from the Gov. Low claim, of Reese river, N. T., kindly presented to us by Mr. S. E. Magary, late of the Postoffice Department.

Shall we have a State Fair?

This question, we see, is now asked, not only by the Sacramento Union, but by other papers in that region, and elsewhere. This is an important question, important, not only to the city of Sacramento, and the State Society, but to the cause of agriculture all over our State, and its name, fame, credit, and prosperity generally.

The trying hour has now come for the State Agricultural Society. "Prosperity makes friends, adversity tries them." The few first years of the State Agricultural Society were very prosperous. The people generally were full of enthusiasm and good will to the institution. If there were any complaints, it came from those who desired to "rule or ruin," or wanted all the prizes. In the early years, the working officers, and all the officers, did their duty, for the love of it. No officer was *fed*, and it was not until the constitution was designedly changed, and salaries attached, that the scramble for office, and the location of the Fairs, placed the "plague spot" upon the Society, and the disease then affixed has brought it to death's door, from which it can never recover, except by a sea voyage and change of climate.

We not only profess to be the warm friend of agriculture and the State Society, but we profess to be the friend of Sacramento too. We know we love them all, and therefore wish to see them all prosper in the highest degree; and we are satisfied that if the earnest counsel of this journal had been heeded in 1855 and '56, and in all later years, the State Agricultural Society would now have been one of the most prosperous societies of the land, instead of being as it is to-day, hopelessly bankrupt. Faithful friends will always give faithful counsel, even though that counsel may wound, but the faithful, skillful surgeon "wounds but to heal."

In October 1855, just when a most prosperous and happy State Fair had been nearly concluded, the spirit of faction manifested itself at the annual meeting. There were those *out* that wanted to be *in*. Many of the *true friends* of agriculture will remember that annual meeting, and remember it with sorrow. Then and there the plague spot of party appeared. Changes were made in the government to favor those that were *out*. Then came the desire to change the constitution of the Society to *suit their views*, and from offices of honor and love of the cause, they became offices that cost the Society from $2,500 to $5,000 per year, a sum equal to the entire amount granted by the State annually. At this time the Society was free of debt, and had money to a considerable amount in the treasury for the coming year. This was the Autumn of 1855. The result of the annual meeting was a change, a dissention which has been on the increase ever since. We had served the Society three years, as one of the Board, free of charge, and at a heavy sacrifice of time and money.

How true that prediction, the present state of affairs will answer best. There were then some ten or twelve persons who desired the control of that Society, they obtained it, placed themselves in power and plunged the Society into ruin; and where are they? Let the real friends of the old State Agricultural Society look round and call for that clique of 1855 (we have their names in capitals preserved) and where are they?—scattered as the winds of Heaven scatter chaff, never to be gathered up again.

The State Agricultural Society, by the record, is $19,000 in debt—without any appropriation, as formerly, from the State—a season of drought upon the farming interest—hard times upon the very class that would aid them, and without the generous sympathy of the Farmers of other counties, on account of the cruel and suicidal course the Society has pursued in past years towards those who were its best and warmest friends.

This is true! "but pity 'tis, 'tis true."

Could the State Agricultural Society have been left in the hands of its real friends from 1856 to the present time, such was its influence for good, numerous as were its abiding friends, that it would have marched boldly on in the road of prosperity, until to-day it would have had its own Hall and Grounds, a Library and a Cabinet that would have been the pride of the State, and $100,000 in the treasury. Of this, we have not one shadow of doubt, and Sacramento City would have been its permanent "Home;" that would have been our wish and our glory, for from the first conception of this institution until the assassin blow came, this was a cherished wish of our heart and soul. But alas! what is the prospect now?

Let the truth be spoken bravely; let the real friends step forth and apply the remedy and all may yet be well. Sacramento is famous for brave and noble deeds, let her make one atoning sacrifice for the State Agricultural Society, and she will have her reward; and this counsel comes from one that knows it is the only possible way by which redemption and salvation can come.

The State Society is $19,000 in debt, no State appropriations, no combined interest for the Society and its welfare, and no possible prospect for a successful Fair the present year at Sacramento.

Now comes the question of duty to the Society, to the cause and to the State. What shall be done? If the Society fails to hold a Fair at Sacramento, Agricultural Park and grounds revert to the original donors, and the Society loses it forever.

If the Society should hold a State Fair at San Francisco, even though it be a prosperous one, it loses the Park and Grounds; and then if the Society, from sheer necessity, in order to hold the ground, resolve to hold a Fair at Sacramento, it is in the face of an almost moral certainty of a ruinous failure—a case worse than Park and Grounds.

What then, under these circumstances, is the duty of the present Board of Managers? Shall they strive to save the Grounds, and retard or ruin the cause of Agriculture? or shall they give up the Grounds and awaken a *new love of Agriculture* that shall come back to them in such abundance, or shall enable them to purchase *better* Grounds?

By present appearances, and we appeal to the very best friends, even at Sacramento, there is little or no prospect for a Fair there this year. Let, then, the Society act boldly and break away from all local and selfish considerations, join the Mechanics Fair here, and make a united and grand demonstration, even at the sacrifice of Park and Grounds, if it needs must be.

If Sacramentans who own the Park and Grounds will not yield one year in this hour of need and adversity, if they will have the "pound of flesh," if they will claim the forfeiture—then let them have it, but let the State Agricultural Society be a *State Institution*, incorporated for the good of the whole State; let it be independent of all local consideration; let it act free and nobly. Do this, break away from all restraints, and give its influence to other parts of the State for one or two years, and it will naturally go back to Sacramento, with all old wounds healed, with new and increased power and prosperity; aye, and without the incubus of debt. We believe such a move would bring a prosperity to the Society which it can never obtain in any other way.

If the owners of the Park and Grounds adhere to their claim and hold the Society—then let the Society give back their donation, and go to work and labor for the cause itself, and they will have their reward.

The San Francisco Postoffice.

NO. IV.

The San Francisco Postoffice is a Public Institution, established for the public good, and therefore when it is so managed that the great mass of the people suffer, then the press should speak out plainly and truthfully. In all the remarks made in this journal it has been our earnest endeavor to speak simply of matters of fact, in the hope that the evils we spoke of might be remedied. In this effort we were guided solely by a desire to do a public good by calling attention to great and growing evils that existed in our Postoffice.

We had no partisan feeling, no personal or political ends to gratify. We spoke of public evils and aimed at a remedy, that remedy we know *must come*. In our remarks we spoke of the removal of faithful and competent clerks to make room for favorites, for those who were not acquainted with the business of the office, by reason of such removals the public suffered, in these opinions we were sustained by many other journals. In the remarks we have made, we notice that one journal, the American Flag, has seen fit to assert that we are in error in our statement that the Postoffice is not well managed.

The Flag asserts that, under the *present* management, the Postoffice is in *better* condition than ever before; that the Southern Mails have *never* before been delivered in the morning early, and that there has been but *four removals* since the present Postmaster came into power.

Relative to the personal remark of the Flag, of a quarrel, it is an error; we have no quarrel, never having spoken to the Postmaster but twice in our life; and when the Flag says the Postoffice was never so well managed, we really cannot think they who are strangers to the Postoffice of this city can so well judge as those who have had business there for *fifteen years*. There is *one short paragraph* that *amuses us*. The Flag, in alluding to our remarks on the Postoffice, speaking of themselves, says: "*We make no assaults in malice.*" Will the columns of the Flag, for the last *month, week* or *day* verify such a statement? To sustain us in what we have asserted, we give the following note, sent us relative to the Postoffice, it came from good authority, if not true our columns are open to refute them:"

San Francisco, June 23d, 1864.

Col. Warren: Having noticed in the Flag, of June 19th, an article referring to the Postoffice in this city, I will merely say that the Flag has been imposed upon in regard to its information, or it purposely misrepresents the facts. It says that only *four* have been removed, still *thirteen* new appointments have been made. As a matter of course an equal number had to be removed to make room for the new appointees. There is now a night force of four, three of which are old clerks, consequently *ten removals* must have been made. Seven new clerks are at the delivery windows, one at the register desk, one at the stamp window, two in the mailing department, one at the newspaper table, and one as janitor for the office. The above are facts well known to this community. I would also inform the Flag that a letter mail leaves San Francisco *twice* every week for Sawyer's Bar. It wont do Mr. Flag, for all the whitewashing you can do, to make the present incumbent appear to have ability enough to fill the position of a head to the S. F. Postoffice, cannot make the public believe it. Truth.

We would further ask, have not the dead letters nearly or quite doubled since the present Postmaster has been in power, while the advertised letters have been largely increased? Was not the newly appointed Clerk at the Foreign Window placed there after he had been refused a recommendation from a former Postmaster because he *was not qualified* for such a place?

Is the Postmaster ever on duty in the evening?

Relative to the delivery of the Sacramento and Northern mails, and the Stockton and Southern mail, we assert boldly that under the administration of Mr. Weller and Mr. Parker the following was always the rule:

The mails from the North arriving by the Sacramento boat were always opened and distributed instantly upon the arrival of the boat. The mails on the Stockton boat were delivered at the office at 6 o'clock A. M., and were then immediately distributed, always in season for the earliest morning applicants.

With such proofs, we think that what we have heretofore said is fully established. Besides this, we have been shown by box-holders numerous letters addressed to other parties, that were placed in their boxes, persons of whom they had never heard. Here is another fact: a gentleman called at the K window just before the removal of a clerk, and a slip of paper was handed him on which was written the following words:

"As the K Clerk is about to leave you must look out for your letters."

[We have the original note.]

What does such a note signify?

The following facts appear in the Alta of this morning:

Healthy Activity.—A gentleman who has had a box in the Post Office for years, and is in the receipt of a large number of letters daily, showed us yesterday a drop letter, which was post marked "San Francisco, June 18th, 1864," but was not dropped into his box until the 22d, four days after it was post marked. He has visited the Office, and emptied his box twice a day, for months, and knows to a dead certainty that the letter in question never reached the box until the 22d instant. The work of "reform" goes bravely on.

We here call attention to the following very important matter: Recently, a friend called and ascertained the number of letters received by Wells, Fargo & Co., on the down mail for an evening. They were *sixteen hundred!* The regularity and promptness with which this House do their business, and the business-like activity of their Clerks is such, that they receive the greater portion of business letters now. The people, for the sake of dispatch, had rather pay 400 per cent more than the cost by Uncle Sam's slow coach—for it costs now 400 per cent more (stamps only cost about 1½c each, being bought with greenbacks), and yet, while every letter by Wells, Fargo & Co. pays Uncle Sam his postage, the *people pay the extra.* And what would this amount to per week, month or year? Beyond all question, the other mails that come in by day would increase the amount hundreds per Express. But suppose from all sources, it was 1,500 letters per day, what is the extra the people pay? Fifteen hundred letters per day is (say 26 days per month) about 40,000 letters monthly; 8 cents on each, extra, would be $3,200 per month, or nearly $40,000 per year which would be saved each year to our business community and the people, if the Postoffice was what it should be. These are facts that cannot be gainsayed.

The following was published by the City paper:

Mr Postmaster Weller has made many valuable improvements in the Postoffice of this city since it has been under his control. In no branch of the public service has there been so much promptness, system, and so earnest a desire to please and accommodate the public as in this. The employes in the office, so far as we know, and we are acquainted with a large number of them, are gentlemen of character and capacity, and discharged their duties with fidelity and dispatch. Mr Weller, it will be seen from the card below, intends making some additional arrangements, which will result much to the public convenience, we have no doubt.

To the Public—I have to inform the community that there is now a letter-box upon each of the boats plying between this office and Sacramento and Stockton. Letters deposited in these boxes properly prepaid will hereafter be promptly taken out immediately upon arrival at this office, and at Sacramento Stockton, and be treated the same as those in the bagged mail. Bills of lading, not intended to go through the post-office, should be unsealed and given into the hands of the clerks of the boats, and not put in the letter boxes.

I have also to announce that I am prepared to deliver letters at the residences or business places of all persons who will leave their names and places for that purpose at my office. Letters from the interior of the State will be delivered each morning before the usual business hours. Letters from the Atlantic States will be delivered, if requested, at the earliest practicable moment after the assortment and distribution of the mails. Parties, so desiring, can have their letters from the interior carried to them, and their letters from the Atlantic put into their boxes.

The mails from Sacramento and above are now assorted every night, immediately upon arrival, and the office is open half an hour thereafter, for deliver of all letters called for, box or otherwise.

The office at Sacramento is now opened at 6 a. m., each day, which will afford an early delivery of letters there.

At Nevada, I am assured, letters will be delivered as early as by expresses. And it is expected that similar arrangements will be made at all the larger offices in the State.

So that I feel an assurance that as good service will be done through the United States mails as it is possible for the expresses to do. I hope therefore the community will let their correspondence pass through the legitimate channel. C. L. Weller, Postmaster.

October 16, 1857.

The following is from the Report of the Chamber of Commerce:

A number of improvements have been instituted in the management of the office. Box rents have been reduced 50 per cent; arrangements have been made for opening the up-country mails *immediately upon their arrival at night, and the office kept open for one hour thereafter for delivering the same.* Mail bags, we are also informed, have been placed on each of the mail steamers, with a view of accommodating the public, by transmitting their correspondence to the latest possible moment. *The Postmaster has also given notice that such of the public as choose may have their letters delivered anywhere within the city, by leaving an order and their address at the office, within the rate established by law.*

W. Bartlett, Chairman.
Ina P. Rankin.
Daniel Gibb.

[For the California Farmer.]

Mimic Life.

I believe in the doctrine, that where there is but little evil there must be much good. I grow indignant sometimes when I hear, "Dramatic readings are well enough, but there are so many minor evils connected with a theater, and our boards are so often disgraced by trashy plays, and corrupting sentiments (?), that I never go." Ten to one this frank Pharisee has never been to the theater half a dozen times in his life.

This reminds one of a farmer who might have a promising field of wheat, and because a few tares sprang up in it, abandoned it altogether instead of taking hold and wrestling with the tares while yet 'twas time. The drama wants the encouragement of good men in order to make its regeneration effectual and permanent. Managers, to save themselves pecuniarily, must, in a measure, pander to the tastes of an audience. But if that audience be composed of moral men and women, those who would frown upon a corrupting sentiment and applaud an ennobling one, how different the result! One of the greatest engines of humanity and progress would be laboring for the refinement, morally and intellectual, of our generation. Why is it so potent? Why! because it reaches a class who are isolated and shut out from the refining influences of good society. The news-boy, the boot-black—who shall say that the divine spark of aspiration and genius of many a self-made man was not illuminated into active life under the influence of the drama? There are many men who do not hear or even read a fine, ennobling sentiment, during the day, or perchance the week—men who never, or seldom, cross the threshold of a church—to such men the drama is a bible, a gospel, a preacher. O, how earnest should then, that a pure morality be taught to these immortal souls. And this serves as a reminder of the recent auspicious opening of the Metropolitan Theater, under the management of Mrs. Hayne and Miss Ince, two ladies of twin reputation for unblemished character and dramatic ability. Of whose hands, I am sure, nothing but exalted and refining pieces will be presented.

We had a foretaste of what Mrs. Hayne, in her part but lady-like little speech, promised us she should continue to have, in the representation of Knowles' play, The Hunchback. Glorious old Hunchback! I always loved it, and often as I have witnessed its performance, I never tire. Miss Ince, as Julia, pleased me in some passages, but did not quite come up to my ideal of Julia's character. At times she was too vehement, but with some toning down she would have excelled. Mrs. Hayne's well-known talent was observed in a minor part—I should like her as Julia, I think. Mr. Taylor excels himself as Master Walter. Mr. Lawler I never fancied for a lover, and can't imagine why Julia should grow thin and pine away because Mr. (Mellish) didn't take her to his heart. Poor Julia shut out from the world, a recluse with Master Walter, it is no wonder the city turned her head. Pts only poor human nature, but I never did blame Julia, it was all stupid Master Walter's fault. He might have known that a woman will be gay and fashionable wherever she finds anybody to admire her.

But now to what an old author entitles

The most excellent and Lamentable Tragedie, of Romeo and Juliet. As it hath beene sundrie times publiquely Acted, by the Kings Majesties Servants at the Globe. Newly corrected, augmented and amended; London Printed for John Smethwick, and are to be sold at his Shop in Saint Dunstanes Churchyard in Fleetestreete vnder the Dyall. 1599. (In 4 leaves.

When I place the press and the pulpit in the scale of human civilization, I am overwhelmed with awe and wonder at the stupendous power they exert. But in scanning over and summing up the various agencies that are at work among men, for good or for evil, sifting and delving through the web of refinement, elevating and inspiring them to true nobility of soul and sentiment—as it should and will do—the most potent of all seems to me to be the Drama. I use the word in its truest, strictest, purest sense. If I would speak of Christianity, I would sum up its essence in one name, Christ. Of art, I might take a typical representative in an Angelo or a Raphael, and so all great and lasting influences have had expression or perfection through some human champion. Either the *ideal* is the creation of the man, or the man is the created result of the ideal. Thus the Drama did not create its great representative—grand, towering in colossal grandeur, like a great monument, whose shadow is flung back down the corridors of the centuries, and across the thresholds of our very homes, and in our sanctuaries; in judicial hall, and on the orator's lips, in every library of our land, we have one name upon the shelves, upon which the dust never gathers, and that name is Shakspeare. I laugh in my sleeve at my own paltriness, as the homely one's eulogy looks, when he thinks of the most brilliant gems of praise have long ago been exhausted in setting for him a crowning diadem.

But Shakespeare did not find an army of materials ready drilled at his command; all was chaos, civilization was young, the true drama scarcely born, therefore he was not the leader and refiner of other men's ideas, but the originator and founder, the father of the drama. Shakspeare was an original, Luther was a reformer, a regenerator. It is only by such a comparison that I can draw the line of distinction between the real original ideas on the one hand, and the idealization of a known perfection on the other. Shakspeare created a type and originals. Luther created and regenerated the type, the original idealized by another, Christ. But I am wandering over the paper like one "out of his head" in taking a very round about and crooked way to get to Romeo and Juliet.

When this play was announced, I determined to witness its performance, but not without misgivings as to the result. To read it, is to love it over in the silence of the voiceless mind's heart, but to see it poorly mimicked is a literal murder. I must confess I was agreeably disappointed; for, in Miss Ince's Juliet I found an interpretation and realization of my own conception of the ill-fated Juliet. From the balcony scene to the last tragic end in the tomb of the Capulets, she was superb, Of Mrs. Hayne's Lady I have much to say. I was chagrined and pained to see her in a dress so unbecoming, and a character for which she was so little fitted. I hope it was but an experiment, for I have never yet seen a woman who possessed enough of the matronly attributes to perform the role of the ardent wife successfully. There is the soft soprano voice, the woman's walk, the woman's poise of the head, the woman's smile, and sigh, and laughter, all giving an effeminate cast to the character, which will only find true delineation through a perfect divine type of manhood. I looked in vain for the passionate and pathetic expression of such a love as one conceives Romeo's to have been, the despair that shakes the sturdiest masculine frame, and would have found expression in the depths of tone and voice. I would rather be wooed than hear her woo.

Mr. Courtaine's description of that wee fairy spirit of dreams was a gem, and his Mercutio a very fine piece of acting. Mrs. Judah's Nurse was unsurpassable. Indeed, in that line of character, I have never seen her excelled.

Upon the whole the piece was a success, and these two gifted ladies will be countenanced by an appreciative public, in their efforts to raise the drama and exalt the *power* behind the throne. C. F.

Mattresses.—The most extensive manufactory of mattresses in our city, probably in our State, is that of Messrs. J. & C. Schreiber, on Sacramento street, near Sacramento. Mattresses of every description are made by them, and in a perfect workmanlike manner; and all their work is guaranteed.

Washington.

"Pater Patriæ."

That beautiful white marble bust of the "Father of his Country," recently placed in Pioneer Hall! Like purely white! stainless as the name and fame of the immortal Washington, is that priceless gift of our honored early Pioneer, P. Dewey, Esq., to the Society of Pioneers. We hope such deeds will be duly appreciated. We know they will. Such a gift not only tends to elevate public taste, but it promotes public virtue. Let our public places—our Halls, Academies, Reading Rooms, our Libraries and our homes be supplied with statuary, paintings and works of Art and Science; it is no extravagance to do so, for the love of the beautiful teaches no waste, it rather teaches economy and prudence that we may secure that which is costly,—we save, that we may spend.

We know that this gift will do good. The same noble donor presented a similar bust of Franklin to the Mercantile Library. Thus we have the two busts—Washington and Franklin—the gift of Mr. Dewey, in these two noble institutions of our city. The bust of Washington is from the purest Carrari Marble, the work of the celebrated sculptor Dominico Mencori, of Florence. A beautiful pedestal came with the bust. We learn with pleasure that the Pacific Mail Co., and Wells, Fargo & Co., conveyed these works of Art free of cost from New York. This is a highly commendable act, as the charges may be considered a handsome donation to those Societies.

Twenty-four superb paintings were also donated to the Mercantile Library by Mr. Dewey.

We saw the beautiful paintings also just added to the Pioneer Hall. Grand, superb! our own scenery; California landscapes, by our best artists, too. The value of these four paintings is $1,000.

Exhibitions of the Academy of Notre Dame, and Santa Clara College, S. J.

These excellent Institutions of learning hold their usual commencement exercises at their respective Colleges next week—the Santa Clara College, at Santa Clara, on Monday, June 27th, at 11 A. M., and the College of Notre Dame, on Tuesday, 28th, at 9 A. M. This happy arrangement will give the parents of pupils, their friends and the friends of Education an opportunity, by taking the early morning train of the San José Railroad, to arrive in season, on Monday, to visit the College and ground, and be prepared to attend the exhibition of the two Colleges, and return to the city on Tuesday evening.

These two well endowed, and very popular Colleges, have every advantage for pupils. They have the largest number of Professors of any Institutions in our State, and the most complete Philosophical Apparatus, with special department for teaching almost every branch of Art or Science. These Colleges have large and spacious gardens and play grounds, and complete gymnasiums. The Santa Clara College has a large and spacious theater for dramatic performances. No expense or pains has been spared to make these Colleges the best in the State. We only wish every other College in our State was as well endowed, and with the same advantages, it would be well for our Commonwealth. We shall be most happy to accept the very courteous invitations which have been kindly sent us for these interesting occasions.

Commencement Day of Ignatius College, San Francisco

The Fifth Annual Commencement of this College will be on the days and evenings of June 28th, and July 1st. The College is situated on Jessie street, west of Fourth, and is a large and flourishing institution. The exercises will be of an interesting character, and we return our acknowledgments for a card of invitation to their exercises, which we shall endeavor to attend.

"LILLIE ON SAFES."—*Sheet-Iron Safes not Reliable as a Fire Proof.*—My next proposition is to show why the Sheet-Iron Safe is not *Reliable* against fire. To answer this proposition, intelligibly, it may be proper first, to explain what constitutes the Fire Proof principle itself, as applied to the safe. The Sheet Iron Safe Manufacturer use Calcined Plaster, Water Lime mixed with clay or some other article which is an absorbent, for the reason, as they allege, that these materials will absorb and retain the most water, and will therefore produce the most steam when heated, admitting that the steam is really the non-conductor. Now it becomes self-evident that this composition must be placed in an air-tight chamber, which must remain air-tight, not only until the fire reaches it, but during the fire, or the steam will escape and the fire proof qualities be lost. Admit this and how is it possible for the Sheet-Iron Safe to be a *Reliable* fire proof, or its chamber to be air-tight, or if air-tight, to remain so? The sides and ends are neither locked or rivetted together, the composition is sure to rent through the iron sooner or later, and in case of fire if severe, the sheet iron springs, warps and twists into all shapes, leaving the composition without protection, and the safe powerless to withstand the fall of timbers upon it, or its own fall.

Agents for Lillie's Safes "The Russell & Erwin Manufacturing Company," 106 and 108 Battery treet, San Francisco.

THE MECHANIC'S FAIR.—This coming Festival of the Industrials of our City and State, promises to be a grand one. The New Pavilion, on Union Square, will be on a grand scale, covering nearly the whole square. We have not yet seen the list of Premiums, but we are informed they will be on a grand scale. Our mechanics should make the coming Fair one of honor for them.

No tidings from the missing steamer Golden Age, which is now six days over due.

Partner for Commission Business.

A REAL BUSINESS MAN, WITH CAPITAL OF $2,000 to $3,000, who desires to lay it in a very safe and profitable business already established, may hear of an opportunity by addressing with real signature, S. S. F., care of Farmer Office. All communications strictly confidential. 20-tf

San Joaquin Agricultural Society.

This most efficient Agricultural Society has sent out its large Posters containing its plan of action, for 1864, with Rules and Regulations, List of Premiums in each Department, Officers, etc. We are truly glad to know that amid drouth, dull times, and speculation in feet, nothing daunted, San Joaquin was the first to send forth her call to the farmers to prepare for the Annual Festival and Fair. The San Joaquin District offer a liberal List of Premiums of over $6,000. An excellent Board of Directors, with Dr. Holden, their worthy and ever active President, we feel sure that if there is a successful Fair anywhere, this year, Stockton will be the place. We hope all that can will most heartily coöperate and make a prosperous time of it. The Premium Lists and Plans can be seen at our Reading Rooms.

The Bank of California.

The first Bank under the new State Law, in California, is announced, and is to be ready for business on the 5th day of July.

If ample capital, all paid in, in gold coin, if able, competent, honorable business men, fully qualified for the control and management of a large Institution will ensure stability and success, and give a promise of advancing and facilitating the immense business that must be transacted in our city through the instrumentality of Banking Institutions, then we have a guarantee that the Bank of California will do this for the Pacific coast.

A Banking Institution like the one now presented, must have connection with, and transact business for, our merchants throughout our whole country and Europe, for wherever the canvas of our ships whiten the seas, or wherever the Stars and Stripes float, there will be felt the influence of the "gold of California," and the enterprise of her business men, and their business will be done in a measure by exchanges and thus will be transacted by our Banks, and the best, strongest and safest will do that business. The Circular of the "Bank of California," must commend itself to business men as of a character to insure what is much needed in our State for its future development.

THE FRUIT SEASON.—Fruit has commanded very high prices during the season, thus far, and although the crop of many fruits has not been large the nett income to every grower, almost, has been larger than heretofore, owing to the extra prices received. Messrs. Addison & Martin always have a supply of the best in the market.

The Law School at Benicia.—By reference to our advertising columns it will be seen that the new term of the Collegiate Institute commences on the 12th of July. At this College there is a Law Department, under the charge of Professor Abbott, a gentleman every way qualified for this important department. This new feature in the College gives to it an additional value and we are truly glad to know that the Collegiate Institute of Benicia, under the charge of Mr. Flatt, is now in a most prosperous condition. Mr. Flatt most truly deserves prosperity.

The Bank of California.

INCORPORATED UNDER THE LAWS OF THE STATE.

BANK OF LONDON.

THE UNDERSIGNED GIVES NOTICE THAT THE above named Corporation has been organized for the purpose of carrying on the Banking and Exchange Business, in all its branches, in this City and in the interior of this State, the neighboring State and Territories, and with Mexico; also with the Atlantic Cities, Europe, China, and the East Indies; for which they are provided with ample facilities, and in conformity with articles of association will commence operations on the 5th day of July next, at the Banking House now occupied by DONAHOE, RALSTON & Co., Corner of Washington and Battery streets

With the view of giving to the business of the corporation all the efficiency and promptitude of a private banking firm, together with that confidential seclusion of private business matters so generally desired, the immediate management of its affairs is committed exclusively to D. O. MILLS and WM. C. RALSTON, as President and Cashier respectively, to whom, or either of them, the customers of the Bank will apply in business matters. The regular meetings of the Board of Trustees will take place monthly.

The undersigned deem it advisable to call particular attention to the following peculiarities of their organization, which are positively binding on all its members.

FIRST.—Sales of its Capital Stock can be effected only after due appraisement by Stockholders selected for that special purpose; and the Trustees of the corporation have, in all cases, the right to become purchasers of the Stock appraised at the appraisement, for the benefit of the remaining Stockholders. This restriction is printed upon each certificate of Stock.

SECOND.—Loans cannot be made to Stockholders, except upon collaterals other than their Shares in the Capital Stock of this Bank.

LIFE-SIZE BUST

....OF....

Thos. Starr King.

COPIES OF THE BUST OF THE LATE REV. THOS STARR KING, by P. J. DEVINE, are soon to be issued to subscribers. The Bust and subscription list may be seen at Mead & Van Tassel's store, Montgomery street, or at Grant & Devine's Marble Yard, Sutter street, between Montgomery and Sansome streets The public are invited to see the Autograph Subscription list which comprises many of Mr. King's personal friends,

Opinions of the Press.

The following criticisms are from the leading newspapers of the city:

After the many attempts at Busts of the late Thos. Starr King which have been made, it is gratifying at last to have one we can praise. It is a work of art, for expression is there as well as outline.—Bulletin.

Nothing heretofore executed, either as a portrait or bust, will equal it as a work of art or valuable memento of the dead.—Alta.

It is an admirable work, and is pronounced a perfect likeness of the deceased by those most capable of judging.—Democratic Press

The friends of Mr. King, who have critically watched Mr. Devine's progress, express themselves highly satisfied with the result. It exhibits a fidelity of likeness and artistic grace that has not yet been equaled.—Golden Era.

As a work of art it is wonderful, seeming to be exact and complete in every detail to which the eye may be directed or recollection recalled.—Sunday Mercury

We have for many years looked with interest upon the labors of the artist. In the present effort he has been completely successful.—Cal. Farmer. 13-tf

SINGLE BLESSEDNESS.

Sixty-five to-day—bless me how the years run,
Old and alone—it seems but a day,
Since three little children played in the sun,
Yet those three little children are gray.
The other two married and bore and reared,
A renewal of youth for their age,
While I sit alone—deadened and bleared,
My heart beating the bars of its cage.

"Here's Uncle"—and the soft arms twine about,
My proud old neck, and cling like a vine
To my knees—a tear—a tear—'twas the thought,
Alas that none such as these are mine,
To smooth the pillow, to close the eyes,
At the last summons to wait and weep,
When life's staff snaps short and the old man lies,
Down in death to his rockerless sleep.

C. F. R.

TELL ME YE WINGED WINDS.

BY CHARLES MACKAY.

Tell me ye winged winds,
That round my pathway roar,
Do you know some spot
Where mortals weep no more?
Some lone and pleasant dell,
Some valley in the West,
Where, free from toil and pain,
The weary soul may rest?
The loud wind softened to a whisper low
And sighed, for pity, as it answered—"No!"

Tell me, thou mighty deep,
Whose billows round me play,
Know'st thou some favored spot,
Some island far away,
Where weary man may find
The bliss for which he sighs,
Where sorrow never lives,
And friendship never dies?
The loud waves rolling in perpetual flow,
Stopped for awhile, and sighed to answer—"No!"

And thou, serenest moon,
That with such holy face
Dost look upon the earth,
Asleep in night's embrace,
Tell me, in all thy round,
Hast thou not seen some spot
Where miserable man
Might find a happier lot?
Behind a cloud the moon withdraw in wo,
And a voice, sweet and sad, responded—"No!"

Tell me, my secret soul,
O, tell me, Hope and Faith,
Is there no resting place
From sorrow sin and death?
Is there no happy spot,
From sorrow, sin and death?
Is there no happy spot,
Where mortals may be blessed,
Where grief may find a balm,
And weariness a rest!
Faith, Hope, and Love—best boons to mortals given,
Waved their bright wings, and whispered—"Yes, in Heaven!"

SAD EYES.

The face was fair; the lips soft and ruby; the cheeks warm with summer flushes; but the large, brown eyes were sad. It was not a painful, but a tender sadness, that lay like a thin veil over their brightness. You hardly noticed it at first; but the shadow of Mrs. Percival's eyes grew more and more apparent the oftener you looked into them. They were full of light when she spoke—dancing, rippling light; but this faded out with a quickness that half surprised you, making the shadow which came after it the more noticeable.

"What can it mean?" said one friend to another. They were speaking of Mrs. Percival, and her sad eyes. Is that peculiar look hereditary—a mere transmitted impression of the soul upon the body—or is it the sign of an inward state? "Do you know anything of her early history?"

"Something."

"Is she happy in her marriage?"

"I am afraid not."

"Then it must be her own fault," was answered.

"Perhaps it is."

"Every one speaks well of Mr. Percival. I have seen a great deal of him, and hold him in very high regard."

"In no higher regard than he is held by his wife, who knows, better than any one else can know, his worth as a man."

"And yet you said just now that you did not think her married life a happy one."

"There is a shadow upon it. As the wife of Mr. Percival she is not, I fear, in her true place."

"Are you serious in this?"

"Entirely so."

"While to me it seems that is just in her true place. Both are well educated, social and attractive; and both seem governed by high moral principles; and both have noble aims in life. Their department towards each other, so far as I have noticed it, is uniformly kind; and I have observed the reciprocation of little attentions while in company, not usual among married partners. They are superior to most of those around us, and, as I have read them, eminently fitted to each other."

To this it was replied:

"The very elevation of character to which you refer, makes this reunion the more inharmonious—the lack of fitness the more fatally apparent. Lower natures may feed on husks; but these cannot. May be satisfied with a compact that secures external good; but these must have interior likeness."

"Which does not, as you believe, exist in the case of Mr. and Mrs. Percival."

"I am very sure it does not. Hence the sad eyes that look into the world so hopelessly."

This was said of Mr. and Mrs. Percival. Let us go back a few years, and come near them in the time when this union was formed. There had been too great ardor of pursuit on the side of Mr. Percival. The beautiful girl who flashed across his way in life so dazzled him by her mental and personal charms, that he resolved to secure her hand, no matter what difficulties might intervene. And he soon found an obstruction in the way. An artist named Liston, a young man of genius, but modest and shrinking, as such men usually are, had already been attracted by this lovely girl, and she was meeting his slow and timid approaches with such tender invitations as maiden delicacy would permit. The more she saw of him the more he charmed her. He was so different from other young men, into whose society she has thrown—so unworldly; so single of heart; so noble in all the aspirations to which he gave utterance. In her eyes, he seemed to stand apart from the world; to be of another quality—more refined, more intellectual, purer. She loved him, so far as she dared give liberty to her feelings, seeing that he held himself at a farther distance from her than some ventured to approach. In him, the faint Ideal of her soul's companion stood forth embodied. When he drew near, she moved instinctively to meet him, the pulses of her interior life beating quicker and stronger. When he stood afar off, it seemed as if a thin veil of shadow had fallen around her.

The quick eyes of Henry Percival soon discovered the truth. He saw that the maiden was deeply interested in the young artist, and also that Liston worshipped her at a distance, fearing to approach, lest the beautiful star in whose light his soul found light should veil itself as a rebuke to his advances. And seeing this, he resolved to press in boldly; to win the maiden for himself; to carry off the prize another was reaching out to grasp. Percival had been more in the world than Liston; possessed a more cultivated exterior; understood men and things better; was more self-confident. Whatever he undertook to do, he strained every nerve to accomplish. Difficulties only stimulated new effort. From a boy up he had moved steadily to the accomplishment of his ends, with a vigor and persistence that usually brought success.

"She will be mine!" So he declared, in his heart, though he fully understood the relation which Liston and the maiden bore to each other. So resolved, when he knew that love had grown up between them, and that she was to the young artist as the very apple of his eye.

It happened in this case as it happens in many others. As the bold lover advanced, the less confident one retired. Percival drew very near, draping himself in sunshine, while Liston stood afar off, in shadow, looking from his dim obscurity with sad eyes upon the only being he had met who embodied his ideal of a woman. If he had drawn near—if he had given the maiden clearly intelligible signs of what was in his heart, Percival would have sought her hand in vain. But she seemed in her eyes so pure and noble, so elevated above common mortals, and himself of such little worth, that he dared not approach and enter the lists as an openly declared suitor. The ardor of Percival had no abatement. He pressed his case with an impetuosity that bore down all obstructions, almost extorting from the doubting and bewildered girl a promise to become his wife. If Liston had not shown apparent indifference—had not held himself aloof—this promise, repented of almost as soon as made, would never have been given. Had she known that her image was in his heart, treasured and precious, Percival's suit would have been idle. But she did not know; and in her blindness she went astray, losing herself in a labyrinth from which she never escaped.

The effect on Liston, when it was known that Percival, and the maiden he so worshiped was engaged, was very sad. He lost for a time all heart in his work—all interest in life. An intimate friend, who knew of his attachment, and understood the meaning of his altered state, divulged the secret, and so it became public property, finding its way to the maiden's ears.

"Did you know," said a gay friend, "that you are charged with a serious crime?"

"I have not heard of the accusation. What is the crime?" she answered smiling.

"The crime of breaking a heart."

"Ah! Whose heart? There was a change in the expression of her face; the smile dying out.

"Liston's."

"Why do you say that?" she asked, catching her breath, and showing pallor of countenance.

"Oh, haven't you heard anything about it? Why it's the talk all around. He was dead in love with you, it seems, but had'nt the courage to say so; proving the truth of the old adage, that 'Faint heart never won fair lady.' And now he's moping about, and looks so woe-begone, that everybody is pitying him."

"I'm sorry that he should have pain on my account," was answered, with as much indifference as could be assumed. "Not a very serious case I imagine."

"Oh, but it is; he fairly worshiped you," replied the friend. "Do you know that an asylum is talked of?"

"Don't don't say anything more, if you please! It's all gossip and exaggeration, of course; but still of a kind I must not hear. You forget that I am to be married in a few weeks."

The laughing light went out of the gay friend's countenance; for she saw more than she expected to see.

A few weeks passed, and the wedding night arrived, when the pale-faced maiden, true to her promise, but false to her heart, took up the burden of wifehood, staggering under the weight as it came down upon her stooping shoulders. The young husband, when he kissed her almost colorless lips, and gazing into her pure face, said, "Mine!" looked into sad eyes, and felt that his ardent word but half expressed the truth—that she was not, and never could be, all his own. He too had heard of Liston's attachment, and of the effect produced on him when the fact of the engagement became public, and something more than a feeling of triumph found its way into his heart. There was at first a vague sense of uneasiness, followed by doubts and questionings. Smarting suspicion crept in. He became keen-eyed. But all he discovered was a dim veil dropping down over the countenance of his betrothed, and diminishing the splendors of its sunshine. In his eagerness to grasp the angel whose beauty had fascinated his gaze, he had rubbed a portion of luster from her wings.

But she had taken her place by his side, and no allurement could have drawn her thence, though she walked in perpetual shadow, and though sharp stones cut her feet at every step. She was too strong in purity and truth to waver from the line of duty. The path might be difficult, but she would turn aside, even though she failed. She had the courage to die, but not to waver.

"Mine!" said Percival, when his hot kisses were laid on the almost irresponsive lips of his bride, and even as he said it, way down in his innermost convictions, another voice answered—"Not mine!"

So their wedded life began. It took nearly a year for Liston, the artist, to recover from his disappointment. A few times during this period he met Mrs. Percival, and read in her inward-looking eyes that she was not a happy wife; and more than this he read, penetrating by quick-sighted perception the veil in which she had enveloped herself. After this period, he was master of his soul again, and dwelt in his art. But all who met him noticed, and many spoke of, a subdued sadness in his eyes. Years passed, and though he went into society, Mr. Liston did not marry. As an artist he rose steadily, and some of his works attracted much attention. Among them was a personification of "Hope," in the single figure of a woman exquisitely beautiful, yet showing in every feature of the tenderly pure face, trial and triumph.

"Have you seen Mr. Liston's 'Hope,' at the Academy?" asked a friend addressing Mrs. Percival, a few days after the painting had been placed on exhibition.

"Not yet," was answered.

"You must see it. Every one is charmed. And, do you know, it bears a remarkable likeness to yourself; I've heard several persons speak of this. By the way, is it a compliment or an accident? It is said that he is one of your old admirers."

The friend laughed, and in laughing, so dimmed her own vision, that she did not see the strange, startled look, which came, for an unguarded moment, into Mrs. Percival's eyes.

In company with her husband, Mrs. Percival went to see the "Hope" of Mr. Liston. Something in the ideal figure held her as by fascination. Mr. Percival recognized the likeness, and, with a sense of weariness. Many times from the painting his eyes turned to the countenance of his wife. Its expression was not satisfactory. There was more in it than admiration for a fine picture. From the painting, he saw her once turn half around, suddenly, as if spoken to; but no voice had reached his ear. He turned also, in the same direction, and looked into the artist's face; but did not encounter his eyes, for they were resting on his wife. The act of Mrs. Percival was but momentary. She turned again to the picture, at the same time placing her hand on the arm of her husband, and, by a movement, intimating her wish to leave that part of the gallery. Mr. Percival did not fail to observe that his wife's interest in the exhibition was from this time partial and forced.

"Are you not well?" he asked, in his usual kind, but half-constrained manner.

"My head is aching," she answered, forcing a smile.

"Shall we go home?"

"If you have staid long enough," was replied.

And so they went away, not again venturing to look at Mr. Liston's "Hope," and not again visiting the Academy while it was there.

The eyes of Mrs. Percival were just a little sadder after this, and so were the artist's eyes; and the heart of Mr Percival was just a little heavier. But all three were pure enough, true enough, and strong enough to bear the burdens this great error had laid upon them, though in bearing there was pain that made life wearisome.

Alas for those sad eyes! See well to it maiden, that in accepting some boldly wooing lover, you do not, like Mrs. Percival, commit one of life's saddest errors, and so look out with dreary eyes upon the world through all your coming years.

And see to it, over ardent young man, that in the eagerness of pursuit you do not make captive one who can never be wholly your own. See to it that you do not rob another of the good designed for him, and at the same time rob yourself of the highest blessing in life. The soul-lit eyes that so charm to-day, may haunt you with accusation through all the coming years; the face so bright and beautiful, wear a perpetual vail of shadows. In the name of all the heart holds sacred beware of an error here! T. S. A.

Progressive Women.

We hear London often spoken of as "smoky" London. It seems to be in a fair way to end in smoke and as our fashions are copied from London and Paris we presume we shall see them copied now. The Court Journal of that great city has the following.

"Smoke seems to be increasing in the metropolis, not from coal but from tobacco. We have lately seen several very flagrant uses of the weed by females. A lady, whose name was known to us, and for whom we would vouch in all things, save the smoke, we espied, recently, through the drawn blinds of her carriage having a few whiffs from her *cigarette* on the sly. A long draw, and down went the *cigarette* by the side, while the smoker leaned back and revelled in the smoke slowly emitted. But the worst fact remains to be told; that the *cigarette* frequently contains a strongly opium-steeped tobacco, and hence, rather than from the love of the pure weed, arises the gratification of *cesdames* who take to smoking."

A Sensible Girl.—A young and pretty girl attended a ball at Oshkosh, Wisconsin, decked off in short skirts and pants. She was the only one present in the mode. The other ladies were shocked—very much shocked! They regarded her short skirts as immodest. She quietly remarked that if they would pull up their dresses about their neck as high as they ought to be, their skirts would be as short as her's.

A Sweet Conundrum.—A very sweet compliment is paid to the fair sex in the following: "What is the reason that men never kiss each other, while the ladies waste a world of kisses on feminine faces," said the Captain to Gussie the other day, up at Normal. Gussie cogitated a minute, and then answered: "Because the men have something better to kiss, and women have not." The captain "saw it," immediately.

California Cider and Vinegar.

THE UNDERSIGNED INVITE THEIR Friends and the Public to call at their Manufactory, 708 MARKET STREET, Exactly opposite Third street, to see somewhat of a curiosity in California: A CIDER MILL. And, if you wish, we shall be pleased to furnish you with new sweet Apple Cider, dripping right from the Press, and in its season the juice of Grapes, or any other Fruit. Drinking new sweet Cider is known to be healthy, giving a ruddy glow to the complexion.

Nearly all the Vinegar sold in San Francisco is a manufactured imitation, made from corrosive acids, and people have provided their families with what was sold as Cider Vinegar, but which was in fact a poison. We mean to keep nothing but CIDER and VINEGAR, and that genuine.

If we are to succeed in our experiment of substituting pure Vinegar for the villainous fluid which has injured the health of thousands in California, it can only be done by a general patronage, and we trust to receive a call from you.

Lebaron & Thresher,

Cider Mill, No 47 Metropolitan Market.

☞ We have an Order Box at C. E. Collins, 602 Montgomery street, and will deliver Cider and Vinegar at any part of the City Free of charge. Orders sent through Wells, Fargo & Co., will be promptly attended to. 16-3m

AGRICULTURAL IMPLEMENTS.

BUCKEYE MOWER.

To Farmers:

WE, WITH GREAT CONFIDENCE OFFER THE BUCKEYE MACHINE, for this reason: knowing it to be Superior to any MOWER for sale, and that it will sustain the reputation it has made for the past THREE YEARS in surpassing any other Mower in the following respects:

Being better Made; much Stronger and more Durable; will Run lighter, Cut much closer with greater ease to the team, and no side draught.

We can bring twenty Farmers to say the Buckeye is SUPERIOR to any Mower, to one who can be found prejudiced against it.

The BUCKEYE MOWERS are of two sizes, cutting 4 feet, and 4 feet 8 inches.

The "Buckeye" as a Reaper.

The important advantages which belong to the BUCKEYE as a Mower are retained in the REAPER, and can be used either as a Mower or Reaper by attaching the Platform and Reel.

Though importing largely of them, we have been unable, for two years, to supply the demand.

They are better adapted to the wants of California Farmers than any Combined Machine for sale. It will adapt itself to every surface of ground, will run lighter and deliver its grain easier and better than any other Reaper. The Reaper's seat is directly over the axle of the Machine, instead of being on the Platform where it adds greatly to the draught.

We are

SOLE AGENTS

NEW AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparse, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of

COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained.

THE PILGRIM MOTHERS.

Ye taught to spurn the tyrant's claim,
And bow to God alone!
Ye kindled in their breasts the flame
That trembles in your own!
In after years flowed purple gore,
And fields were strowed with dead—
Firm hands the starry banner bore—
Aggression trembling fled.

Oh! Pilgrim Mothers! though ye lie
Perchance in graves unknown,
A memory that cannot die,
Hath claimed ye for its own.
A sacredness to that bleak shore,
Your dust shall we impart;
Your requiem—the ocean's roar!
Your shrine—a nation's heart!

The following was posted in his house, a few days since, by a Poughkeepsie business man:

"HEADQUARTERS HOUSE OF—

General Order No 1—Julia: Until the price falls, no more butter will be used in our family.

JAMES."

He had barely reached the counting house when a special messenger handed him this:

"James: Until butter is reinstated, no more tobacco will be used in this house.

JULIA, Chief of Staff."

It is said that butter won.

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle-grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H & L AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories.

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL-OIL as a basis of their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural resin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest until, at the present time, they have established a manufactory of Resin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply. The subscribers are now receiving native resin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

Special attention will be paid to importing Books that may be wanted and cannot be otherwise obtained. A general assortment of Books always on hand, including all the New Publications. 21-6

Wanted.—Improved Property.

A GENTLEMAN WANTS A HOUSE AND LOT IN the

CITY, OR OAKLAND,

Or a small improved Farm, containing from 20 to 100 acres of land, within the influence of the sea-coast, and of easy access to the city; for which he offers to exchange

First-class Improved Lots in New York,

Within three miles of Wall-street Ferry, accessible by steam and horse cars; or will exchange

First-class Ecase-River Mining Stock.

For further particulars inquire of the Editor of the California Farmer 10-tf

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] June 24.

THERE are no new features to note and but a few changes in the market prices of produce since our last report. The change, however, is in favor of the buyer. Wheat, Barley and Oats are in more free supply, and new grain, both Wheat and Barley, having made their appearance, buyers seem disposed to hold off and use up stock on hand instead of entering the market. At present this temporary absence and apparent indifference can have but slight effect on prices. Holders are too well convinced of the limited stock on hand and the unfavorable prospects to concede to any very great depression in prices. New Potatoes, in consequence of the very high price that did rule, last week, have been offered very freely. The offerings have been beyond the demand, and they being a perishable article, have sold at a material decline.

Hay arrives more freely. An impression exists that there is a large amount cut, and that the supply will be large, in consequence of grain and tale that many have harvested for Hay. In our opinion cut all of the grain that will not mature, and as much tule as is possible, the quantity will be less than we usually have. The great bulk of the land that ordinarily produces Hay, and from which we depend for our supplies produces nothing this year. The grain crop being short, the quantity of Hay required will be larger than usual.

Our exports are as follows: Per schooner Union, for Manzilla, 1,000 bf 600 qr-sks Flour, etc. Per steamer John L. Stephens, for Victoria, 40 qr-sks Flour, 39 sks Onions, etc. Per British brig Belvidere, for Hong Kong, 1,000 sks Wheat; 1619 qr-sks Flour, etc. Per bark Smyrniote, for Honolulu, 140 bf and 450 qr-sks Flour; 227 sks Wheat, etc. Per Russian ship Cazarewitch, for St. Paul's Harbor, 2000 bf-sks Graham Flour.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 3299 sks, Salt 200 sks, Barley 5087 sks, Oats 155 sks, Flour 2050 qr-sks, Wool 240 bales, Cornmeal 130 sks, Straw 388 bales, Hay 1852 bales, Beans 80 sks, Hides 80, Potatoes 1240 sacks.

Also Coastwise: Wheat 1954 sks, Barley 936 sks, Oats 1841 sks, Beans 461 sks, Bran 3171 sks, Wool 385 bales, Potatoes 130 sks, Flour 80 qr-sks, Hay 39 bales.

BY CONTINENTAL TELEGRAPH.

DATES TO JUNE 19.

General Grant's flank movment to the James river commenced on Sunday, 12th. The movement was executed with great celerety and apparently without serious opposition. On the 14th, Grant was at Bermuda Hundred, Butler's headquarters, and the army was landing that day. General Butler's demonstrations on Petersburg were evidently designed to keep the rebels there on the defensive during the execution of this extraordinary flank march. By this movement Grant uncovered the land routes to Washington, and placed himself between Lee and the South. Sheridan, the meanwhile, was sent towards Gordonsville and Charlottesville to complete the distruction of the railroads and depots, a necessary precaution, in order that the rebel army might not advance northward with such rapidity as not to be easily overtaken, or draw supplies from Gordonsville. It was also supposed that Sheridan would co-operate with Hunter in a movement on Lynchburg and the southern communications of Richmond. Such was the situation in Virginia on Tuesday, 14th.

The Austrian Archduke Maximilian arrived at Vera Cruz on May 28th. Henceforth the civil war in Mexico assumes the definite character of a struggle between monarchy and republicanism. Max opens his career by liberating some of Forey's victims. This implies a condemnation of that General's policy, or a desire to play, for a time at least, a magnanimous part.

At the Philadelphia Sanitary Fair on the evening of June 16th, the President of the United States said: "Grant is this evening in a position, with Meade and Hancock, whence he can never be dislodged by the enemy until Richmond is taken." He declared his purpose of sending the Lieutenant General all the reinforcements necessary to capture the rebel Capital.

On the evening of the 16th, Gen. Wm. T. Smith, with a portion of the Eighteenth Corps, attacked and carried by storm the main line of entrenchments covering the city of Petersburg, capturing sixteen pieces of artillery, several stand of colors and 300 or 400 prisoners. The city is on the east of the Appomattox and this success placed it under the guns of the Union forces. The attack on Petersburg, which Smith opened in brilliant style on the even of the 15th, gradually developed into a severe, protracted and bloody battle. It appears that, on discovering the object of Grant, Lee, who was posted at Malvern Hill, hurried his forces across the river above Fort Darling, and thus reinforced the garrison at Petersburg. The dispatches speak of the entire rebel army being at that point, but it is not probable that Lee would thus uncover the south side of Richmond. Grant's lines were gradually extended around Petersburg on the north, east and south, and on the 16th, 17th, 18th and 19th the various corps, by brilliant and bloody charges, captured several redoubts and lines of intrenchments, and approached at some points to within a half mile of the city. On Sunday morning Burnside stormed a work on the left, taking six pieces of artillery and five hundred prisoners, making the aggregate of captures during the whole struggle for Petersburg twenty-eight guns and about two thousand five hundred prisoners. Shells had been thrown into the city but no regular bombardment appears to have been ordered. The gallantry displayed by the Union troops in repeatedly storming the enemy,s intrenchments indicates that the army was in the mood for great achievements. These charges upon fortified positions are the severest tests of infantry. Meanwhile Grant accompanied Butler and Admiral Lee in a reconnoissance up the James river. If Lee's army had been concentrated at Petersburg it is likely Grant's attention would have been directed to the contest at that point. The rebel force there was probably a corps under Beauregard, instructed to make an obstinate resistance to gain time for rebel preparations further north. However that may be, the repeated assaults upon the enemy's works, resulting almost every time in the Union forces getting nearer the city, indicated that no time was to be wasted in digging parallels.

☞ **Holloway's Pills.**—Epilepsy or Falling Sickness As preventatives from a recurrence or in establishing a permanent cure of these periodical fits, whether arising from a plethoric or enfeebled constitution, Holloway's Pills have been eminently successful in every instance. They not only purify but equalize the circulation of the vital fluids, stimulate the torpid action of the functions and invigorate the system. For apoplexy and rush of blood to the brain, they are the only antidote.

Sold by all Druggists, at 30c, 70c, and $1 10 per box or pot. 18 8

Winchester's HYPOPHOSPHITES

Act Promptly and Certainly in all Stages ....OF....

CONSUMPTION.

THEY IMMEDIATELY INCREASE the Strength, and deepen the color of the Pale Blood. They check the Night Sweats, always, in from seven to fourteen days; the appetite is at once invigorated, and the patient rapidly gains flesh; the cough and difficult breathing are speedily relieved; the sleep becomes calm and refreshing; the evacuations regular and uniform.

"In no instance," says Dr. Churchill, "have I found the Remedy fail to produce every thing that could be reasonably expected from it."

"I have no doubt whatever," says Dr. Townsend, of Chatham, Pa., "of the superior efficacy of the Hypophosphites over all other medicines or methods hitherto discovered."

The Hypophosphites

Have a TWO-FOLD and SPECIFIC ACTION: On the one hand as a prompt and powerful

NERVOUS TONIC,

increasing the vital energy; and on the other as a generator of

New and Healthy Blood,

Invigorating the whole system. They should, therefore, be used in all cases of

Nervous and General Debility,

Wasting of Flesh, Loss of Strength or Appetite, Paleness or Deficiency of Blood, Languor or Listlessness, Cough, Night Sweats, Chronic Diarhea, Scrofulous Sores:

Also, in Chronic Bronchits, Asthma, the Debility or Weakness of Young Children, and as an INVIGORATOR to women of feeble vitality during gestation and the period of nursing.

WINCHESTER'S

Genuine Preparation of the Hypophosphites

Is the only reliable form of Dr. Churchill's Remedy, and is approved by the Medical Profession generally. USE NO OTHER, or any Remedy containing Iron

CONCENTRATED SOLUTION in 7 oz Bottles, prepared expressly for California, $2 per Bottle—Three Bottles for $5 in coin. Circulars, free. Sold by all respectable Druggists, and by

J. WINCHESTER,

Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOma County lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of C. P. Swift, Esq. containing 14,000 acres of land is offered for sale in Lots or farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality It is accessible to market, being adjacent both to Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point.

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the offices of Haight & Pierson, 622 Clay street, San Francisco or at the store of Mr. Paulo, Sonoma.

17 WILLIAM BIHLER.

California Grass Seeds.

EVERY VARIETY OF NATIVE GRASSES, the seed of which can be saved, will find a ready purchaser for the seed, on application at the Farmer Office. n12

TRAVELING.

Central Pacific Railroad

ON AND AFTER MONDAY, JUNE 6, 1864, UNTIL further notice, the trains of the Central Pacific Railroad will run as follows:

UP TRAINS LEAVE

Sacramento at 6:15 a. m., arrive at Newcastle at 7:50 a. m.
Sacramento at 1 p. m. arrive at Newcastle at 2:30 p. m.
Sacramento at 5 p. m. arrive at Newcastle at 6:30 p. m.

DOWN TRAINS LEAVE

Newcastle at 6:45 a. m. arrive at Sacramento at 8:40 a. m.
Newcastle at 10:30 a. m. arrive at Sacramento at 12 m.
Newcastle at 5 p. m. arrive at Sacramento at 6:40 p. m.

The 6:15 a. m. and 5 p. m. up trains connect at the junction with the cars of the California Central Railroad for Lincoln, and the 5:15 a. m. train connects at the same place with the cars for Folsom.

The 6:45 a. m. down train connects at the junction with the cars for Lincoln, and receives passengers from Folsom for Sacramento; and the 10:30 a. m. train connects at the same place with the cars for Folsom, and at Sacramento with the steamers for San Francisco.

On Sunday one train only will be run, leaving Sacramento at 6:15 a. m. and Newcastle at 10:30 a. m.

Stages for Virginia City, Dutch Flat, Nevada, and intermediate places connect with the cars at Newcastle at 7:30 a. m.

Stages for Marysville or any other points north connect at Lincoln at 7:30 a. m.

LELAND STANFORD,
President C. P. R. R. Co.
19 tf

California Steam Navigation Company.

Departure daily from Broadway wharf, at 4 o'clock, P. M.

CARRYING UNITED STATES MAIL.

THE FAST AND SPLENDID STEAMERS
CHRYSOPOLIS and YOSEMITE

Will leave on alternate days for SACRAMENTO, at 4 o'clock p. m., from Broadway wharf.

Steamer CHRYSOPOLIS, Chadwick, Master, will leave on Tuesdays, Thursdays and Saturdays. Steamer YOSEMITE, Poole, Master, will leave on Mondays, Wednesdays and Fridays.

Other steamers will also leave for STOCKTON every day at 4 o'clock, p. m. (Sundays excepted), from Broadway Wharf.

For Marysville and Intermediate Landings Every Day.

Steamer YOUNG AMERICA, Littleton, Master, and Steamer SWALLOW, Summers, Master, will leave Sacramento on alternate days, at 6 o'clock a. m.

ONE TRIP A WEEK FOR COLUSA, RED BLUFF, AND INTERMEDIATE LANDINGS.

The steamers LARK and GEM will leave for the above named places on SATURDAYS, at 7 o'clock, a. m. from the Storeship, foot of K street, Sacramento.

For freight or passage by any of the above boats, apply on board, or at the Office of the Company, corner of Jones and Front streets.

v17 13 J. WHITNEY, JR., President.

PATENT RIGHTS FOR SALE

THE FOLLOWING PATENT RIGHTS OF HIGH valuable inventions (of which we have models after their value) are now offered for the States of California, Oregon, and Utah and Washington Territories.

NO. 1. THE MECHANIC'S SPIRIT LEVEL.

Patented September 13, 1859.

This Implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet. Builders will do well to examine the model.

NO. 2. IMPROVED CLOTHES REEL AND RACK.

Patented January, 3, 1860.

This valuable domestic piece of furniture can be used in Laundry, the Kitchen, the Nursery, or Chamber, and is made plain or ornamental; standing in the same relation a piece of important furniture as does Wheeler & Wilson Sewing Machines, neat when used and ornamental when in use.

NO. 3. A CORN CULTIVATOR.

With this implement the soil is first thoroughly and deeply pulverized, and on the return is smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

NO. 4. A MUSKETO BAR.

This will be much wanted in California. It is simple in contrivance, perfect in its working, and can be offered cheap to all styles of bedsteads. Hotels, public houses or private families will find it a useful invention.

NO. 5. HYDE'S PATENT POST-DRIVER.

A most excellent labor and money-saving machine, for which we offer rights.

NO. 6. SEED-SOWER.

This is a new invention, and one of great importance to those who sow grain, or any garden seeds. The working model can be seen at the Farmer's Reading-room.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who are desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

COL. WARREN, Editor Farmer.

A. H. TODD & CO.,

Produce Grain Brokers

AND

General Commission Merchants

Office—No. 46 Clay street, New Market SAN FRANCISCO.

Terms for buying or Selling Grain, Flour or Wool: Amount under $5000, 2½ per cent; $5000 and over, ½ per cent. On Stock, Hay, Fruit, Potatoes, Butter, Cheese, Poultry, Etc, etc, amounts under $3000, 5 per cent; over $3000, 3 per cent. Liberal Cash Advances on Consignments. Prompt returns and the highest market prices guaranteed.

Splendid Windmill for Sale.

ONE OF DR. FRANK JOHNSON'S SELF-REGulating Windmills is offered at a low price, if sold for immediately. This is a good 12-foot mill, 1 horse power, of the very best make and model, and finished in the most workmanlike manner. For particulars inquire of the Editor of California Farmer.

Situation Wanted as Superintendent of Farm.

A GENTLEMAN, every way qualified for the superintendence of a large Farm, who is now in the Eastern States, wishes a permanent situation. He is a man of family and every way qualified for such a place. Any one wanting a No. 1 Superintendent, within a little time, can secure a valuable man for such a place by addressing the Editor of the Farmer.

Fine Farms for Sale.

YOU WHO WANT GOOD FARMS CAN SUIT them by applying to the Editor of the Farmer. The following can now be had:

FOUR VERY FINE FARMS in the splendid San Joaquin District, within a few miles of Stockton, all very productive.

Several STOCK RANCHES in various parts of the State from $1,500 to $25,000; in all these, good and permanent settlers can find bargains. Address by letter, or in person for particulars to Col. Warren, Editor of the Farmer. 21

Iron Pipe for Farmer's Use.

THE UNDERSIGNED IMPORTS ALL SIZES of Iron Pipe for irrigating purposes generally, together with all fixtures to complete the same.

THOMAS DAY,
732 Montgomery street,
13-tf San Francisco.

A Miller Wants a Place.

A MILLER, WHO IS ALSO AN ENGINEER, wants a place where he can be permanently situated: he wants a good place in the country in which he once can bring the best references as to capacity and integrity. The advertiser is qualified, as a purchaser of Grain, and wishes a head position, if attainable, as he was his usual post. Apply at this office.

CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES.

VOLUME XXI. SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, JULY 1, 1864. NUMBER 22.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

PUBLISHED EVERY FRIDAY MORNING.

TERMS OF SUBSCRIPTION--IN GREENBACKS.

By mail, for one year, $5; for six months, 2 50. For a club of five new subscribers, a sixth copy will be sent gratis. When payments are delayed six months $1 additional will be charged.

To City subscribers, delivered by carrier, 12½ cents a number or $6 a year in advance.

☞ Advertisements and Subscriptions must be paid for in advance.

JOB-WORK.—Of every description, done with promptness, at fair rates orders will be faithfully attended to.

☞ All letters on business connected with the office should be addressed to PUBLISHER CALIFORNIA FARMER, San Francisco, Cal.

Commencement Day at the Santa Clara College, S. J.

Monday last was a happy as well as a busy day, with the Fathers of this celebrated college, as well as with that noble band of nearly two hundred students, their parents, friends, and the citizens of the neighborhood for many miles round.

The morning train of cars from our city showed how great was the interest felt on this occasion; for a crowd went down to enjoy this festive scene.

What an institution for all this section of country is the San Jose Railroad. It will be the means of adding millions of wealth to the people, in addition to the facilities of intercourse, besides giving back to the stockholders a liberal reward for their investment. Very great praise is due to A. H. Houston, Esq., the President, and his able co-operators, for efficiency in the management of the road. Everything moves like clockwork, in order and precision, all in the employ being courteous, obliging, and attentive to the wants of travelers. A trip to San Jose is now one of real pleasure and comfort.

The morning of this festival was a beautiful one; a clear and balmy atmosphere made all the large party in attendance feel happy. The varying scenery along this road, in spite of the cry of drought, shows an abundance of remarkable fertility and beauty. Many of the fields are still a living green to the very hill-tops.

The morning train at 8 arrived shortly after 10, and soon the people were seen flocking to the grand arena for collegiate honors.

The Santa Clara College buildings cover a large tract of land. The building are all spacious, and most excellently adapted to the purpose of an educational institution. There is no college in our State so liberally endowed and so well provided. Having been courteously shown all the buildings, and their uses, by the kind Fathers, we intend in our next to give a sketch of them and the grounds, as a matter of justice to the cause of education. There are none that can surpass them.

The hour of the opening exercises was 11 o'clock a. m. From the observatory of the new and beautiful building the glorious stars and stripes (in full number, every star there) waved proudly, and gaily, showing that the true spirit of attachment to the Union was there.

The pupils were happy as they gathered around their friends, and they seemed to say:

"Our early days?—how often back
We turn on life's bewildering track,
To where, o'er hill and valley, plays
The sunlight of our early days!"

The exercises were held in the Dramatic Hall, a building 100 by 80, erected for such occasions; and large as it was it was soon filled to its utmost capacity. We should think twelve to fifteen hundred (perhaps more) persons were present; a large number from our city, and all parts of the State, the facilities of the San Jose Railroad giving many an opportunity of attending that could not otherwise have enjoyed these happy scenes. This hall was decorated with specimens of drawing, and mottoes in a dozen languages, the work of the students.

The exercises commenced with an introduction by the college band, and was a most honorable proof of their proficiency in music. An "Introductory Dialogue," by two young pupils was a very pleasant affair, and well spoken, by C. Argues and W. Cook, the figure of the cherry tree was excellent as a figure of speech.

"The Last of the Americans" (Daniel Webster), by F. Walton, was well delivered. The essay contained very many well pointed truths.

"Napoleon Musing at St. Helena," by J. Estudillo, was very finely pictured.

"Our Railroad," by J. Murphy, M. Murphy, and Thomas Sutherland, was a witty, pleasant, and happy hit.

"The Atheist," by W. C. Kennedy, was ably prepared and well delivered. His defense of home institutions by arguments against Atheism was most excellent.

"Poland," by C. Splivalo—unhappy Poland—was a very fine production, and splendidly delivered. We shall publish the essay.

"Providence," by S. Inge, was an excellent lecture.

"Hurry and Leisure," by J. Townsend, a grand hit off upon the times, and greatly amused the audience.

"Copper." This was a lecture on practical assaying, quantity and quality, by assay and analysis, by F. Walton. The student seemed to understand his subject well.

Telegraphing was performed with two batteries on the stage, by questions and messages from the audience. The operators on the register and sounder were J. and C. Townsend, and they displayed a correct knowledge of the operation.

During the exercises, and between the several performances, the audience was feasted by music of a most excellent order. The music by this band is not often surpassed, even by old and regular musicians. The other pieces on the piano and and violin, by all the numerous students, showed, not only an ear for music, but a soul for it too.

The Overture, Fra Diavolo (Quartet), on the two pianos, by F. Walton, I. Gutierrez, J. Hermann, and J. Platt, was truly very finely done.

Overture, Muette de Portici (Quartet), by the same, excepting J. Hermann, whose brother (F. Hermann) was in the piece, which was excellently done.

Overture, Wedding March (Quartet) by J. Platt, J. Stanford, L. Sage, L. Haggin, was most creditable indeed.

The "Fairy Dance" (Quartet), by the brothers F. and D. Aguilar, Haggin, and I. Gutierrez, was also done well.

"La Fille du Regiment," by F. Lighston and L. Sage; Ojos Criollos—Traviata, by F. Walton, and J. Hermann, were all most gratifying to the audience.

Etude de Concert (violin), J. Hermann; Pleyel's Duet, by N. Long, P. Vallejo. These were beautifully done; undoubtedly Paul Julien can surpass them; but, young gentlemen, you have made your mark. We have rarely heard college musical performances by young men so well listened to or so well applauded.

THE PUZZLED DUTCHMAN.

This was a drama by the junior students, and the play was most creditably performed. The characters were:

Peter, Czar of Muscovy.....James Hermann
Admiral Warenskoff.....T. Shaw
Baron Von Clump.....Jas. Baird
Count de Marville.....L. Durand
Van Dunder.....A Dodge
Peter Stanmitz.....H. Cook
Van Block.....J. Hoesch
Officer.....C. Linley
Waiter.....R. Cockrane

Where all did so well, it would be wrong almost to particularize; but some of the students would put to the blush many older heads upon the stage in our city. Its execution gave the audience many a hearty laugh.

During the recess, the good Father Accoltil, S. F., announced that a collection would be taken up for the Sanitary Fund. This was promptly done, and $110 was announced as the result; while this was being done the band played with fine effect "The Star Spangled Banner." This closed the afternoon performance. It was about 3 p. m. As the San Jose Railroad Company, with their ever ready desire to accommodate the people all occasions, had announced that a special train would leave Santa Clara at 12 midnight, this induced all to stay and enjoy the

THE EVENING EXERCISES.

The early hour of half-past seven found the hall filled to overflowing, with an attentive and earnest audience, the largest ever attending the college exhibition.

Music from the band discoursed finely, till the audience were all ready and seated.

A LECTURE ON GALVANISM,

as a source of Light, Heat, and Motion, was illustrated very finely by W. C. Kennedy, C. Townsend, F. Aguilar, L. Sage, and very much to the satisfaction and gratification of the large audience. The Drummond Light from an immense battery, heat by lightning, firing of cannon in the college yard at a distance, fusing various refractory substances, volatizing copper and silver; these were all experiments of very exciting interest. Galvanism as a source of motion was shown, by running electric engines on a track to and fro on the stage before the audience, then pumping water, and running a sewing machine, all well and successfully performed, and much to the credit of the student.

Then followed the drama of Henry the Fourth, by the junior students.

This play was cast to eighteen of the students: Henry the Fourth—H. Veuve; Prince of Wales—C. Splivalo; Sir Henry Vernon—J. Stanford; Sir John Falstaff—J. Townsend. The Play was well cast and admirably played—much better than it is often performed on the boards in older Theaters. Sir John Falstaff was very wittily presented and the whole was a success. Music between the acts enlivened the scene.

After this was the conferring of the Degrees and the distribution of Premiums. Among the Pupils were several whose breasts were decorated with three, four and five medals. It was such testimonies that proved the excellence of this Institution, by the proficiency of the Pupils.

The whole exercises of the evening were of a high character, most gratifying to parents and friends, and reflecting the highest honor upon the Fathers of the college, and the students, who have thus been so carefully educated. It was the hour of midnight before the hall was cleared. We have never enjoyed an examination better. We shall give in our next a sketch of the college and grounds, and all appertaining to it. The courtesies we received, the entertainment enjoyed, the luscious fruits there, made the whole affair a feast of reason and a flow of soul—an occasion long to be remembered.

Exhibition at the Academy of Notre Dame.

The closing exercises of this distinguished college were held at the college in San Jose, on Tuesday, the 28th, at 9 a. m., and many who had attended the interesting services at Santa Clara the day before were present here also, as some had sons at one and daughters at the other. The exercises were held in the school-hall, as the new pavilion intended for the occasion on the grounds, fell into ruins the day previous; perhaps it was a kind providence that this occurred before its use, else, had it fallen during the exercises, injury or loss of life might have been the result.

The hall was superbly wreathed, and walls covered with works of art by the pupils.

The exercises commenced at 9 a. m. None were admitted to this college save by special invitation, else no place could have held the crowd that would rush to this always interesting exhibition. At the appointed time the hall was filled with guests, when, as the sisters entered and took their places, the doors opened and the pupils entered in couples, gracefully bowing, and took their seats. The young ladies were all robed in pure white, with bodices of blue. All appeared the very picture of health and happiness. Such a number (about 200) all thus assembled, so many in one college, cannot be found elsewhere, and as they then appeared before the audience, there seemed but one heart and voice; all said, "How beautiful." It was indeed a very *Vision of Beauty*.

"To them new beauty largely given,
From deeper fountains looked and smiled,
And like a morning dream from heaven,
The women gleamed within the child."

The opening exercise was a performance on the piano, and song by the senior pupils. Of these performances, it was admitted they were of the very highest order. The young ladies almost made the pianos speak, so admirable did they play. Where all were so excellent it were best perhaps not to particularize.

An original prologue, composed by Miss Rice, was spoken by two young ladies in fine taste. The names of the young ladies were Miss L. Duncan and Miss S. Armstrong.

A series of exercises by the little girls won great applause. An original dialogue, on "Distribution," and spoken by about a dozen young pupils, was a most happy affair. The little Prima Donna of the piece performed her part with masterly skill. Two pieces of music by these little ones were performed most creditably. These little happy spirits, ready for good impressions, seemed like

"Wax to receive, and marble to retain."

A dramatic exercise, in French, "La Service Interesse," by 12 young ladies, very finely and appropriately arrayed, with French straw-hats and flowers, was admirably performed. The young ladies in their acting were perfectly self possessed, graceful in gesture and movement, and in their discourse (in French) gave proof that the French language was as familiar as their own tongue. All was well done. The principal actress was particularly excellent.

"Oh! How sweet the Hunter's Song" (a duet), by Miss M. Stanford and M. Bissenmenger, was very finely performed.

"Flattery"—A moral drama, by six young ladies, was excellent in sentiment, and very perfect in all the parts presented, and was received with many plaudits.

Then came more music, and several duets on the piano, which was followed with a German dialogue by five pupils.

The drama "St. Agnes," translated into English, by the pupils, was one of the most interesting and attractive exercises of the exhibition. It required in all its parts about 20 young ladies, it was most admirably sustained. Rarely has an audience seen so purely good acting. The part of "St. Agnes," by Miss L. Landers, "Sabine," by Miss L. Lightner "Beatrice," by Miss J. Higgins, were very finely sustained. In fact, all the parts, the acting, speaking, gestures, and movements, were performed with the highest degree of credit to the young ladies. There was an ease and grace about their acting, superior by far to much we see on the stage.

In this drama several pieces of music were executed, which reflected great credit on the young ladies. "Prayer from Othello," by M. Strakosch, for the left hand alone, performed by Miss A. Sharp, was admirably performed.

"Ave Maria" was performed and sung by Miss M. Stanford sweetly and grandly.

"The Wanderer," performed on the piano and harmonium, was beautifully executed by Misses S. Armstrong and A. Sharp.

There was one grand performance on *four Pianos*, by eight young ladies, which for excellence in playing, or precision in time, has never been surpassed in any Seminary of Learning.

This completed the morning exercises, at about 1½ p. m., much to the gratification of a large and intelligent audience. Many of the most estimable families of our city were present, and many from other parts of the State. Many present regretted that the excellent vision of these beautiful maidens was not photographed, so that it could be preserved. As the poet said:

"I have been often dazzled by the blaze
Of sunlike beauty; but till now ne'er knew
Perfected loveliness—all the harmonies
Of form, of feature, and of soul, displayed."

So experienced many on this occasion.

The afternoon exercises commenced at 2 p. m., with the best selections of music, and a grand chorus.

The young pupils were very happy in all their performances, and won unbounded applause. The closing musical pieces were of a high order, and splendidly executed. Then followed the original poem, by Miss L. Burwell, which appears in our columns. It is a beautiful poem, and Miss B. may feel proud of it. It was most beautifully spoken, and won great applause.

Then followed the distribution of Prizes. These were very numerous and valuable, evincing very great liberality on the part of the Lady Superior and those who control it. This service occupied four hours and was interspersed with many choice selections of music, on the Piano and singing, all of the very highest order. Duets and Quartets, superbly performed. Among the varied acts of Distribution was the Coronation for Good Conduct, nor any sight more beautiful than these youthful maidens with their bright crowns upon their fair brows. Among the musical artistes that were distinguished were Miss M. Stanford, Misses Landers, Armstrong and a few others.

"Ever be happy"—the grand chorus from the Enchantress closed the day. The Rev. Bishop of Monterey then made a brief, happy, and complimentary address, and the scene closed.

This exhibition has added to the already high credit of this academy, and honor to the lady Superior, and the sisters.

About 150 guests returned on the extra train, at 8 p. m. This exhibition will long be remembered as the happiest yet occurred. Of this college we shall speak further soon.

Union College Festival.

We acknowledge the reception of complimentary cards to the happy festival of this college, which came off last evening. It was a very happy affair indeed. The vestibule leading to the hall from the mansion was gaily dressed, as also the hall, with flags and wreathes.

This festival was gotten up by the young gentlemen of the college. Parents, and friends of the institution were the guests, and we must say that the students appeared to much advantage. In each department were committees with their rosetts, red, white, and blue.

A large number of prominent citizens were present. Among the guests were the officers of the Russian war vessels, and also our gallant Commander, Woodworth, of the Narragansett.

The "Soirse Dansante" of the Union College was indeed a recherche affair. The grand bevy of beautiful ladies, richly, and many superbly dressed, as they waltzed gaily amid the sterner sex, seemed like the beautiful flowers that sway to and fro amid the foliage, that, although it may be *green*, nevertheless adds to the beauty of the whole bouquet.

At midnight a superb supper table was displayed in the adjoining hall, where all were as ready to *dance* attendance, as they were to the fine music they had left behind.

Dr. Huddart, the Principal of the college, and his accomplished lady, were the planets, around which the smaller stars, however brilliant, moved in harmonious circles.

The gaily dressed hall, the splendid music, the happy throng, will be a picture bright in the memory of many a young heart for years to come. It was a most happy and highly creditable affair for all, and we rejoice to know that the Union College is thus prosperous. We most sincerely wish it success, as one of the lights that shall guide our State to a higher degrees of honor and fame.

TULE HAY.—Ross Sargent informs the Stockton Independent that there are about 250 men employed making hay on those lands, and he thinks that the whole quantity produced this year will range between eight and twelve thousand tons; but on as close an estimate as he can make at present, the amount will certainly not exceed the latter figure. At $20 per ton this would realize the handsome sum of $240,000. It is very questionable, says the Independent, however, whether that quantity will be produced, and we are rather inclined to believe that 10,000 tons will be as much as will be procured this season.

A PARTING VISION.

[An Original Composition, by Miss L. Burwell, Pupil in the Academy of Notre Dame, and spoken at the close of the Annual Exhibition, July 28th, 1864.]

And have these happy days flown by, is every pleasure past,
And on the world's wide ocean must my little bark be cast?
Must I depart from this dear home, must I renounce a dream
That colored life with happiness, or made all sorrow seem
Like April rains that only fall to make the sky more bright,
Or infant's tears that overflow and leave the heart more light?
This day, so sad, will usher in a new and varied life,
Which 'neath gay buds and blossoms may hide many an angry strife;
It seems to offer pleasure rare, that fills my heart with joy—
May not its brilliant prospects contain some base alloy?
My spirit, sad and fearful, seeks a lone secluded spot,
Where once I passed bright sunny hours that cannot be forgot.
'Twas a scene of heavenly beauty, an Eden here below,
Where the sunshine loved to linger and the perfumed zephyrs blow;
The earth was moist and freshened from lately fallen showers,
And the breezes cool were laden with the breath of opening flowers.
The quiet was but broken by the merry birdlings song,
And a sporting, laughing cascade whose waters streamed along.
Smiling Pleasure e'er was with me, she pointed out the way—
I thought not then of danger, as when guided by her say;
But a misty vail descended, obscuring all the earth,
And for an instant silenced was every sound of mirth;
Surprised I turned to see it, oh! the scene that met my view,
Rare are such entrancing visions and to mortal's gaze most few.
The orient sun was resting on a crimson cloudlet bright,
And another, silver-tinted, floated near the home of light,
Far beyond, the sky was darker, than at midnight's solemn hour,
And I heard the distant thunder rolling by with threatning power.
Above that frowning heaven in its mildest depths there shone,
In bright relief, oh! gloriously, a brilliant varied zone.
Tints of amber, emerald, ruby, and the richest Tyrian dye,
Glittered like the rays of opal, in that somber western sky.
They extended earthward slowly—they inclosed me with their beams,
And I felt the rainbow's beauty fill my heart with gladsome streams
Of happiness like Heaven. Oh! I wished in that short hour,
For an arch to gild my zenith, when fearful clouds might lower,
Upon my knees, unconsciously I sank, with hands upraised,
Upon the brilliant scene above enraptured still I gazed;
A loving one oppressing me—I uttered not a word,
Too strong—too deep the feelings that my utmost being stirred,
But far above the rainbow arch the great Creator heard!
Our silence often reaches Him—no breath then thrilled the air,
My fervent loving thoughts, my very being was a prayer,
And that silent prayer was answered, as I gazed the rainbow fled,
But among the clouds an angel form was hovering in its stead,
It smiling looked upon me with its gentle star-like eyes,
And descending, laid a mantle wove of the rainbow dyes,
Bound my trembling form, then whispered, take courage child, behold!
The name that glittered, upon the heart in characters of gold,
'Twas the rainbow's gentle spirit, Hope, she kindly took my hand,
And told me 'mid life's changing scenes she by my side would stand,
That she would gladly cheer me in each rising hour of woe,
That my darken'd heaven should always be made radiant with her bow.
But to-day my soul so weary, sees not one celestial gleam,
And the Angel, Hope, forsakes me like that bright and glorious dream.
Time has vanished, oh! too quickly, though for it no sigh was breathed,
As each sister year came to me with pleasure's blossom wreathed.
But now they all are fled with all the joys that blest my youth,
Where's the promise Hope hath made, why sinks my heart beneath the truth
That from these scenes of pleasure I forever must depart?
In vain I try to hush these sighs! the bitter tears will start,
My heart rebels! 'tis anguished! oh, it cannot, must not be,
I cannot say beloved home, this last farewell to thee!
E'en Hope's promise is forgotten, all, all is dark and still,
Only gloomy sad forebodings my soul with sorrow fill.
Where is now my Heavenly mantle with its rainbow-tinted dyes,
That the Angel brought so lovingly from out the summer skies?
Comest thou, oh wished for moments, hast thou at last drawn near?
Will now my youth's bright vision to my weary soul appear?
Ah! yes. Behold that rainbow! How its gentle spirit speaks,
Again I look upon her face so radiant, glorious, meek.
Sweet Hope! thou thou art faithful, thy presence well I know
Will cheer my stricken spirit and relieve this weight of woe;
I feel thou givest me courage to breathe a last farewell,
To all my heart has cherished, to all it loves so well,
To those who guarded fondly my childhood's tender years,
Who urged me gently onward, and wiped away my tears.
I turn with grateful feelings, with love that's ever new,
Though now I must leave them—must bid a last adieu
To all my tender friends of youth! my heart's last loving cry,
Will assure of my affection while it breathes a fond good-by.
My rainbow's guardian spirit now extends her promise bright,
Embracing this dear Convent in their brilliant varied light,
She fills my soul with glowing hope, 'twill to me be given,
To see her radiant-tinted bow encircling all in Heaven.

New Music at Kohler's.—We have a collection of new and rare music from Kohler's, of which we shall speak next issue.

The Garden—Female Management—Comforts and Profits.

[We give another Chapter from "Ten Acres is Enough." There is so much good sense in this little book that we intend from time to time to give some of these practical truths. The book, we trust, will awaken a new interest in the Farmer and Gardener's wife. The book is for sale by Roman.]

I mentioned some time ago that the wife of the former owner of this place had left it with a world of regrets. She had been passionately fond of the garden which now fell to us. As daylight can be seen through very small holes, so little things will illustrate a person's character. Indeed character consists in little acts, and honorably performed; daily life being the quarry from which we build it up and rough-hew the habits that form it. The garden she had prepared, and cultivated for several years, doing much of the work of planting, watching, watering, and training with her own hands, bore honorable testimony to the goodness of hers. She had filled it with the choicest fruit-trees, most of which were now in full bearing. There was abundance of all the usual garden fruits, currants, gooseberries, grapes, and an ample asparagus bed. It was laid out with taste, convenience and liberality. Flowers, of course, had not been omitted by such a woman. Her vocation had evidently been something beyond cooking her husband's dinners. But her garden bore marks of long abandonment. Great weeds were rioting in the borders, grass had taken foothold in the alleys, and it stood in need of a new mistress to work up into profitable use the store of riches it contained. It struck me that if one woman could establish a garden like this, I could find another on my own premises to manage it.

After I had got through with the various plantings of my standard fruits—indeed, while much of it was going on—I took resolute hold of the garden. It was large enough to provide vegetables for three families. I meant to make it sure for one. With all the lights and improvements of modern times, and they were many, three-fourths of the farm gardens in our country are still a disgrace to our husbandry. As a rule the most easily raised vegetables are not to be found in them; and the small fruits, with the exception of currants and gooseberries, are universally neglected. Many of our farmers have never tasted an early York cabbage. If they get cabbages or potatoes by August, they think they are doing pretty well. They do not understand the simple mysteries of a hot-bed, and so force nothing. Now, with this article, which need not cost five dollars, and which a boy of ten years can manage, you can have cabbages and potatoes in June, and and beans, tomatoes, cucumbers, and squashes, and a host of other delicious vegetables, a little later.

By selecting your seed, you can have salad, green peas, onions, and beets, by the last of June or before without any forcing. A good asparagus bed, covering two square rods of ground, is a luxury that no farmer should be without. It will give him a palatable dish, green and succulent from the bosom of the earth every day, from May to July. A good variety of vegetables is within the reach of every farmer the year round. They are not only an important means of supporting the family, paying at least one half the table expenses, but greatly conducive to health. They relieve the terrible monotony of salt junk, and in the warm season prevent the fevers and bowel complaints so often induced by too much animal food.

Neglect is to much the rule. A row of currants, for example, is planted in a garden. It will indeed bear with neglect; but an annual manuring and thining out of old wood, would at least triple the size of the fruit, and improve the quality. The row of currants will furnish a daily supply of refreshing fruit to the table for months together. Why should its culture then be totally neglected, when a row of corn by its side of equal length, which will supply only a single feeding to a pen of hogs, is most carefully manured, watched, plowed, and hoed? I have sometimes seen farmers who, after expending large sums in establishing a young orchard of trees, would destroy one-half by choking them with a crop of oats or clover, because they could not afford to lose the use of the small strip of land a few feet wide in the row, which ought to have been kept clean and cultivated.

I began by deepening the garden soil wherever a spade could be put in. I hired a man for this purpose, and paid him ten dollars for the job, including the hauling and digging in of the great pile of manure I had found in the barnyard, and the clearing up of things generally. I would have laid out fifty dollars in manure, if the money could have been spared, but what I did afforded an excellent return. My wife and eldest daughter, Kate, then in her eighteenth year, did all the planting. I spent five dollars in buying for them a complete outfit of hoes, rakes, and trowels for garden use, lightly made on purpose for female handling, with a neat little wheel-barrow to hold the weeds and litter, which I felt pretty sure would have to be hoed up and trundled away before the season was over.

They took to the garden manfully. I kept their hoes sharpened with a file, and they declared it was only pastime to wage warfare on the weeds with weapons so keen. Now and then one of the boys went in to give them a lift; when a new vegetable bed was to be planted, it was dug up and made ready for them. But the great bulk of all other work was done by themselves.

Never has either of them enjoyed health so robust, or appetites so wholesome. As a whole year's crop of weeds had gone to seed, they had millions of the enemy to contend with, just as I had anticipated. I did not volunteer discouragements by repeating to them the old English formular, that

"One year's seeding
Makes seven years' weeding,"

but commended their industry, exhorted them to persevere, and was lavish in my admiration of the handsome style in which they kept the grounds. I infused into their minds a perfect hatred of the whole tribe of weeds, enjoined it upon them not to let a single one escape and go to seed, and promised them that if they thus exterminated all, the next year's weeding would be more recreation.

I will say for them, that all our visitors from the city were surprised to see the garden so free from weeds, while they did not fail to notice that most of the vegetables were extremely thrifty. They did not know that in gardens where the weeds thrive undisturbed, the vegetables never do. As to the neighbors, they came in occasionally to see what the woman were doing, but shook their heads when they saw they were merely hoeing up weeds—said that weeds did no harm, and they might as well attempt to kill all the flies—they had been brought up among weeds, knew all about them and "it was no use trying to get rid of them."

But the work of weeding kept on through the whole season, and as a consequence, the ground about the vegetables was kept constantly stirred. The result of this thorough culture was, that nearly everything seemed to feel it, the growth was prodigous, far exceeding what the family could consume. We had every thing we needed, and in far greater abundance than we ever had in the city. I am satisfied this profusion of vegetables lessened the consumption of meat in the family one-half. Indeed, it was such, that my wife suggested that the garden had so much more in it than we required, that perhaps it would be as well to send the surplus to the store where we usually bought our groceries, to be there sold for our benefit.

The town within half a mile of us contained some five thousand inhabitants, among whom there was a daily demand for vegetables. I took my wife's advice, and from time to time gathered such as she directed, for she and Kate were sole mistresses of the garden, and sent them to the store. They kept a regular book-account of these consignments, and when we came to settle up with the storekeeper at the year's end, were surprised to find that he had eighty dollars to our credit. But this was not all from vegetables—a good deal of it came from the fruit-trees.

After using in the family great quantities of fine peaches from the ten garden-trees, certainly three times as many as we could ever afford to buy when in the city, the rest went to the store. The trees had been so buckled by the worms that they did not bear full crops, yet the yield was considerable. Then there were quantities of spare currants, gooseberries, and several bushels of common blue plums, which the curculio does not sting. When my wife discovered there was so ready a market at our own door, she suffered nothing to go to waste. It was a new feature in her experience—everything seemed to sell. Whenever she needed a new dress for herself or any of the children, all she had to do was to go to the store, get it, and have it charged against her garden fund. I confess that her success greatly exceeded my expectations.

Let me now put in a word as to the cause of this success with our garden. It was not owing to our knowledge of gardening, for we made many blunders not here recorded, and lost crops of two or three different things in consequence. Neither was it owing to excessive richness of the ground. But I lay it to the unsparing warfare kept up upon the weeds, which thus prevented their running away with the nourishment intended for the plants, and kept the ground constantly stirred up and thoroughly pulverized. I have sometimes thought one good stirring up, whether with the hoe, the rake, or the cultivator, was as beneficial as a good shower.

When vegetables begin to look parched and the ground becomes dry, some gardeners think they must commence the use of the watering-pot. This practice, to a certain extent, and under some circumstances, may perhaps be proper, but as a general rule it is incorrect. When watering has once commenced it must be continued, must be followed up, else you have done mischief instead of good; as, after watering a few times, and then omitting it, the ground will bake harder than if nothing had been done to it. Not so with hoeing or raking. The more you stir the ground about vegetables the better they are off; and whenever you stop hoeing, no damage is done, as in watering. Vegetables will improve more rapidly, be more healthy, and in better condition at maturity by frequent hoeing than by frequent watering This result is very easily shown by experiment. Just notice, after a dowy night, the difference between ground lately and often stirred, and that which has lain unmoved for a long time. Or, take two cabbage plants under similar circumstances; water one and stir the other just as often, stirring the earth about it carefully and thoroughly, and see which will distance the other in growth.

There are secrets about this stirring of the earth which chemists and horticulturists would do well to study with the utmost scrutiny and care. Soil cultivated in the spring, and then neglected, soon settles together. The surface becomes hard, the particles cohere, they attract little or no moisture, and from such a surface even the rain slides off, apparently doing little good. But let this surface be thoroughly pulverized, though it be done merely with an iron rake, and only a few inches in depth, and a new life is infused into it. The surface becomes friable and soft, the moisture of the particles again becomes active, attracting and being attracted, each seeming to be crying to his neighbor, "Hand over, hand over—more drink, more drink." Why this elaboration should grow less and less, till in a comparatively short time it should seem almost to cease, is a question of very difficult solution; though the varying compositions of soils has doubtless something to do with the matter.

But let the stirring be carefully repeated, and all is life again. Particles attract moisture from the atmosphere, hand it to each other, down it goes to the roots of vegetables, the little suction fibers drink it in; and though we cannot see these busy operations, yet we perceive their healthy effects in the pushing up of vegetables above the surface. The hoe is better than the water-pot. My garden is a signal illustration of the fact.

To Smith's Gardens.—It has been determined by the Central Pacific Railroad Company to run their cars, on Sunday afternoons, past the Tivoli House to a point nearest to the gate of Smiths' Gardens. Passengers will then have to walk a distance of not more than eighty or ninety rods, and the avenue will be so fixed that dust shall cause no annoyance. It is probable that in the course of time a branch track will be extended from the curve up to near the gate. The public will now have cheap and pleasant means of visiting the Tivoli House and Smiths' Gardens, retreats so desirable in Summer time. We believe the road will continue to be liberally patronized. The time-table by which the trains will be run on Sundays is published in the Bee.

A Good Crop for a Dry Season.—Mr Jacob Shaw, of Hamilton township, in this county raised over one thousand bushels of grain on about forty acres of land. The crop was grown on red land, generally considered of a poor quality. This land stood the drouth and produced well by good farming. Mr. Shaw is one of our most reliable and systematic farmers. This shows what our county is capable of producing, provided farming is carried on in the proper manner.—[Union Record.

When we see a young lady with a sweet beauty spot on her cheek we feel like kissing her on the spot.

NAPA
COLLEGIATE INSTITUTE.
For Young Ladies and Gentlemen.

NAPA CITY, CALIFORNIA.

NAPA CITY, IN POINT OF LOCATION AND Climate, is unsurpassed in the State. It is about four hours' ride by steamboat from San Francisco, and three by stage from Benicia. There will soon be a daily boat from the former place, and there are now two daily stages from the latter. There are extensive accommodations for Boarders in the College Building, with large and well-ventilated sleeping apartments Teachers reside in the Building, and will have a constant overslight of the Students who are Boarders.

GOVERNMENT.

Young Ladies will receive no calls from any except Parents and Guardians. Ladies and Misses will not leave the College grounds, except in company with their Instructors. Young Men and Lads are not allowed to lounge about the Stores, Hotels, and Saloons of the village. All pupils are required to attend Church on the Sabbath. Parents will choose the place of worship for their children.

MILITARY DEPARTMENT.

This Department has been opened with a view to the permanent establishment of a Military Academy on this Coast. From three to four years will be requisite to complete the course in this Department. The State has furnished us the necessary equipments for such a school. The Drills will be attended to daily.

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED by a correspondence and business in Europe as to enable him to secure from the very best source—the most careful growers—their choicest seeds grown, of which he will always be in receipt, and in endless variety, imported directly from France and England, from well known and responsible houses; some of the most prominent as named in our catalogues.

It has been the experience of our best gardeners and growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be for a series of year, until more capital, experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover;	Hungarian Grass;
Kentucky Blue-grass;	Orchard Grass;
Red-top Grass;	Sainfoin Grass;
English Rye-grass,	Timothy Grass;
Red Clover;	White Dutch Clover;
Crimson Clover,	Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.)

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties)

BULBS:

LILIES,	TULIPS,	HYACINTHS,
Amaryllis,	Anemones,	Ranunculus,
Narcissus,	Tuberoses,	Peony-roots,
	Gladiolus,	Iris,

and in endless variety, imported direct from France and GERMANY.

From his long experience in the Seed Business (over thirteen years), and his very extensive stocked and appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

13 SAN FRANCISCO.

Agricultural Anecdote.

A short time since, writes a correspondent from San Francisco to the Golden Gate, I visited Major ——— at his princely residence, in San Jose. After the usual hospitalities, and the chat which they naturally suggested, the conversation turned on the different branches of culture, which are always as you know, favorite topics with me.

I was then invited by my host, to visit his grounds, being first introduced to the wonderful productions of his vegetable garden. From thence we went out to the vineyard, thence to the fruit grounds, with their shaded avenues, and last of all to a field of five acres of beets, sown on a spot of alkaline ground. Here the product was so enormous that the simplest truth would seem extravagant. After digging hard for at least half an hour, the Major succeeded in extracting one beet from the ground, observing at the same time: "This is for Mrs. ———, a lady from the East, who says, after all the cry about the wonderful productions of California, she has never seen anything yet double the size of our Eastern vegetables.' So saying, the Major set off, sweating and puffing, with his wheelbarrow load of *beet*.

On arriving at the house, he called the lady to the front door, and bowing gracefully, said: "Madam, permit me to introduce you to this beet, the product of one year's growth, and that on alkaline land. It weighs sixty pounds; and this, Madam, is but a *baby*, compared with some that are grown in our valley."

The whole crop, in fact, were monsters, and thick as they could well stand in the ground; and I must confess my still greater astonishment, when told that twenty-five or thirty head of cattle had been fed from this field for some months, and you could scarce detect the loss of a beet. And what is still of greater importance to the culturist of California, is the fact, that this crop has completely restored the land, by absorbing the excess of alkali, and thus preparing it for general use.

Following up the above suggestions, I would recommend that the curious cultivator of the soil, should try sugar-cane along with the beets, alternating and arranging them so that the beets would not be too much shaded by the cane. We have waste alkaline lands, in millions of acres, that might not only be reclaimed, but be made to sustain immense dairies during the process. The time is at hand when California will not only produce her own sugar, but supply other States. The earth, like a generous mother, waits with her hidden treasures, ready to bestow them on the most enterprising and industrious of her children.

Opinions of Professors of Music on Jacob Zech's Pianos.

San Francisco, December 29, 1863.

Jacob Zech, Esq:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

B. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. E. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPPGEIL, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. Zech.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

—AND THE—

STODART PIANOFORTES.

Importers of

Piano Covers, Music Stools, Music Racks,

ETC.

PICOLLO PIANOFORTES.

WE WOULD CALL PARTICULAR ATTENTION TO these beautiful instruments from our own manufactory in Paris, and which we can confidently recommend as equal in quality to those of any other European manufacturer.

PICOLLO PIANOFORTES are now in universal use on the continent of Europe, having completely taken the place of the old style of Square Pianos. They possess all the merits ever claimed for the Square Piano, with many advantages that are peculiar to themselves.

Our assortment comprises six different styles varying in price from $275 to $100 each.

Iron-framed Picollo Pianofortes.

These instruments are a "specialité" of our manufacture, are constructed with a special view to withstand the peculiar climate of the interior of California, and are warranted to stand any change of temperature.

Price $400 to $450 each.

STODART PIANOFORTES.

We have had the exclusive agency for the sale of these celebrated Pianos for the past twelve years, and refer with confidence, as to their quality, to the many hundreds of instruments now in use through out the whole extent of the Pacific Coast. A general assortment of these instruments will at all times be found in our warerooms, comprising Grand Action, Square, Upright, and Over-strung Pianos, in plain or richly carved cases. We offer them at the same prices at which they are sold at the manufacturers' warerooms in New York, thus saving to the purchasers here the cost of freight, insurance, interest, and attendant charges. Prices range from $240 to $500 each.

FRENCH HARMONIUMS.

In connection with our manufactory of Pianofortes at Paris, we have established a manufactory of FRENCH HARMONIUMS, suitable for parlors, music-halls and churches. These Instruments, like our Pianofortes, are all in rosewood cases, and are made with the improved "transposition attachment," which enables the performer, in voice accompaniments, to adapt the instrument to any particular "key," thus entirely obviating the necessity of any transposition of the music. Nine varieties $100 to $1,000 each.

We beg to call attention to the fact that the Harmoniums of our manufacture possess many valuable improvements not to be found in any other instruments of this description, among which is the peculiar disposition of the reeds. This improvement is based upon purely scientific principles, rendering the reeds doubly sensitive and much less liable to become deranged or get out of order.

For full description of Picollo Pianofortes and Harmoniums send for descriptive catalogues.

PRINCE & CO'S

Melodeons, Doub reed School Organs,

and Organ Melodeons.

Being the exclusive agents for the sale of these celebrated instruments in California we are prepared to furnish them at the catalogue prices, and at the warerooms of the manufacturer in the East. The assortment comprises twelve different styles of instruments, ranging from $60 to $425 each. Illustrated catalogues, with full description and price of each instrument annexed will be furnished on application.

THE DAY SCHOOL BELL.

40,000 copies Issued. A new Singing Book for Schools and Seminaries, called the Day school Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartets, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little boat," and "Little Ted," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos 1 and 2, which have had the enormous sale of 823,000 copies. Prices—paper covers, 25 cents, $20 per 100, bound 30 cents, $25 per 100, cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christmas Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100, bound 25 cents, $20 per 100: clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "I shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels come?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2 are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100, cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, paper covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where Liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc. Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100, postage 1 cent each.

RUTH: A SACRED CANTATA

contains 128 pages. Words by Rev. Sidney Dyer, music by Prof. Cult. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price.

THE ATHENÆUM COLLECTION.

contains 312 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels come?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices—single copies, bound, 65 cents, $55 per 100, cloth bound, embossed gilt, 75 cents, $65 per 100. Mailed at the retail price.

ELECTRICITY

THE

GREAT REMEDIAL AGENT.

Electricity as a Remedial Agent has, until recently, been but little known. An Electric Battery has been a terror from childhood up because a little Battery gave a "start," and the thunder storm killed by lightning. Now it is better understood, and is and will be the sovereign remedy for many diseases heretofore considered incurable. The following series of articles and statistics, with facts and proof of the virtue of Electricity are worthy of attention. When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulations of the poisons which constitute disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another, that Electricity, as a Curative Agent, had been tried and had proved to be of but little if any value—thinking, poor souls, the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients there were those who were diving into the science of Electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the *Improved Instruments* of Dr. J. H. Josselyn, Resident Physician at the Electropathic Institute, 645 Washington street, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic System. From early morn till late at night, the instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services.

The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed is Rheumatism, none has given the honorable practitioner more trouble to relieve, and so one has pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic System in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of a relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

We allude to that kind of disease paraded by quacks in the journals of the day, a trouble which was never cured by medicine, only a little strength imparted by the use of tonics. The poor victim is kept taking medicines and paying for them until he last dollar is gone and then, as soon as he undertakes to work to obtain more funds, the trouble comes back in all its loathsomeness. To this disease Electropathy is peculiarly applicable, its action being upon the spermatic nerve, strengthens the secretory organs, and at the same time, creating an equilibrium in the system, thereby preventing an elapse.

We dwell upon this disease because it is the bane of the youth of California, and one about which there has been more deception used than all others put together. It is not necessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present very few instruments in the world that can be depended upon. A good instrument costs very heavy, and cannot be purchased unless ordered, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the pernicious impostures at the bathing line. The pure Magnetic Bath is one of the most effective aids in the removal of disease from the system, but is given at the wrong time is likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this Bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unnecessarily administered, and if not necessary, advise the requisite remedy.

To Females,

the Directors would say, Electropathy is particularly applicable to your delicate and fragile systems, and to the numerous troublesome and painful diseases to which you are liable. Should you be irregular, a few treatments will restore the functions to the proper state without pain or inconvenience. Should you be weak and enfeebled, either general or local, this system imparts strength and vitality, making the recipient feel buoyant and youthful, where before they were languid and unable to enjoy the pleasures of life. One great blessing connected with Electropathy is, it purifies the system so thoroughly that it beautifies the complexion, making the coarse and freckled skin as pure and fair as possible, giving the patient a fresh and health ol look.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil forebooding and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in issuing this pamphlet, do it in the hope that it may be the means of awakening the public, who have not studied into such things, to a sense of their duties, and if possible prevent those who have the care of a rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse the origin. Also, that those in need of remedial agents may know where they can find them without resorting to taking the thousand and one poisonous nostrums that are continually palmed off as sovereign panaceas for all the ills of humanity. Avoid them all, they are snares set to rob you, and to your bodily injury at the same time. The following is a list of the cases which have been successfully treated by the *Electropathic System*, at the Institute, during the first four years of its establishment. The record is good, and challenges admiration of the world:

Name of Disease.	No.
Rheumatism	1580
Neuralgia	1492
Dyspepsia	1410
General Debility	1292
Fever and Ague	1210
Dumb Ague	1106
Bronchial Affections	1049
Asthma	1022
Female Irregularities	938
Mercurial	920
Scrofula—long standing	890
Paralysis	832
Disease of the Eye	705
Catarrh in the head	608
Catarrh in the lungs	600
Liver complaint	582
Incipient Consumption	563
Panama Fever	480
Deafness—total and partial	471
Mental Derangement	
All other—and among which is almost every nameable disease	2,168
Total	21,373

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit. Let them go, they will not be missed.

Persons seeking remedial assistance, may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface, by its energy, when the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts, and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon mercurial diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity forces itself out of the body. This result has been arrived at by testing the waters after an Electro Magnetic Bath. After such tests have been found in the water the patients not troubled any more with those pains peculiar to the disease. In all other cases it forces to the surface and is washed off by the bath. The whole system in its application is a *luxury*, there being no pain or inconvenience attending upon it, but the reverse in the case, being one continued pleasure all the time. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES.

SAN FRANCISCO, April 18, 1860.

This is to certify that I have been under the treatment of Dr. Josselyn at the Electropathic Institute and that he has cured me. My disease was mercurial, and accompanied with chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this eighteenth day of April, A. D., 1860. P. BARRY, Notary Public.

The undersigned takes this method of acknowledging publicly the benefits he received from the treatment applied to him at the Electropathic Institute, while suffering under a terrible infliction:

This is to certify that I have been under Electropathic treatment at the Electropathic Institute, 645 Washington street. When I applied to Dr. Josselyn I was cramped up with rheumatism, and also had the coast ague. So bad was I that, without relief, I don't think I could have lived more than one week. The Doctor, with his instrument, relieved me the first treatment from all pain, and perfectly cured me of all disease in twenty treatments, without the use of medicines. I cordially recommend all afflicted to patronize this Institute, for it is truly a blessing to the afflicted, and the operation is very pleasant. I wish to thus publicly thank Dr. Josselyn for his care and sympathy.

JOSEPH SEGER, of Bolinas Bay.

September 19, 1860.

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this 19th day of Sept., A. D. 1860. P. BARRY, Notary Public.

SACRAMENTO, Oct. 10, 1860.

DR. JOSSELYN—Dear and Honored Sir: You requested me to let you know how I feel after being at home three weeks. Well, sir, I have been here a little over two weeks and there is no return of that very unpleasant trouble. My sleep is sound, and there is no disturbance of the regular laws of nature. I feel as strong as I ever did before bad habits had weakened my system. Not only is the general debility entirely disappeared, but the local trouble has gone. I feel so strong that there is no fear of its return. Considering that you only took one month to cure a disorder of seven years standing, I think your system almost miraculous. Accept my sincere thanks, and publish this if you please. I have sworn to it, as you will see.

C. BOWMAN.

State of California, County of Sacramento—ss.

Subscribed and sworn to before me, this tenth day of Oct., A. D., 1860. CHAS. HART, Notary Public.

HUMBOLDT, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it; and Mercurial pains as you state them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you would cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can, by spreading your fame up in these parts.

Respectfully yours, GEO PERKINSON Jr.

To J. H. Josselyn, M. D., Resident Physician, at the Electropathic Institute

NEVADA, Nov. 8, 1860.

DEAR DOCTOR: Pursuant to agreement, upon my arrival, I sit down to pen you a few lines in acknowledgement of the great service you have rendered me, in relieving me of that painful case of neuralgia and rheumatism. When I look back and see the gallons of medicines I have swallowed to no purpose, and then to think how soon you cured me, I am astonished. You were only twelve days performing a cure of the trouble, for which I had taken medicine over six months. Dear Doctor, if you could see the wonder exhibited by my friends, who can hardly believe that a cure was performed without medicines, but here I have been cured, and I have not taken a drop of medicine from you, nor from any one else, while being treated by your splendid Instrument. I shall try to show my gratitude by sending every sick man I come across to you. Yours, till death,

FRANCIS GARLAND.

To J. H. Josselyn, M. D., Resident Physician, Electropathic Institute.

State of California, County of Nevada—ss.

Subscribed and sworn to before me, this eighth day of Nov., A. D., 1860. F. SPAULDING, Notary Public.

YREKA, Nov 10th, 1860.

DR. JOSSELYN—Dear Sir: Your letter, dated October 16th, is before me. You wish to know how my bronchial troubles are. Now, Doctor, that looks a great deal like a joke. I once had such an affection of several years' standing, but thanks to your natural mode of treating disease, it has gone to be numbered with the things of the past. Since my return I have not felt the slightest trouble from it. When you pronounced me well I did not expect to ever hear from it again. Any one who sits under treatment of that *Improved Instrument* of yours will have the same feelings. It imparts vitality to the system so rapidly that confidence is at once established. I have to thank you that you did not refuse to treat me because I could not pay you the whole of your reasonable charge, inclosed is the balance due you, and God bless you for the kind treatment I received at your hands.

Yours, ever grateful, WM. GARDNER.

State of California, County of Siskiyou—ss.

Subscribed and sworn to before me, this tenth day of Nov., A. D., 1860. D. F. WELLITS, Notary Public.

This is to certify that I, the undersigned, was troubled with dumb ague accompanied with rheumatism, very badly. My disease was taken in Washoe. After having exhausted medicines without benefit, I applied to Dr. Josselyn, at the Electropathic Institute, on the first day of November. After taking twenty treatments with his Improved Electropathic instrument I am perfectly cured, having been entirely relieved of all pain or inconvenience. I feel as strong as I ever did when in the best of health. I cheerfully recommend all afflicted to his care, as being the best physician I ever became acquainted with. One great advantage, he uses no medicines, but cures by a process which is perfectly natural. The time occupied in my case was thirteen days.

D. O. HARRA.

November 14th, 1860.

State of California, City and County of San Francisco—ss.

Personally appeared before me, D. O. Harra, and subscribed and sworn to the above certificate, on this fourteenth day of November, A. D., 1860. P. BARRY, Notary Public.

SAN FRANCISCO, Aug. 3d, 1861.

To the Directors and Resident Physician of the Electropathic Institute.

SIRS: You requested of me a certificate of the cure you performed in my case. Below I append it:

This is to certify that I was troubled with a swelling which commenced in my ankles, and gradually extended upward until it effected my whole body. I sought the best medical aid in New York and Boston, and they all pronounced it dropsy. Hoping to retrieve my health, I visited California in February last. I consulted the Resident Physicians at the Electropathic Institute; and now, after five months of treatment, and waiting to see its effects, I am pronounced well by competent judges. It did not take but three months of treatment to cure me, but I waited to see that it did not return. I feel perfectly assured from what I saw while under treatment that Electricity as applied at the Institute will cure any disease to which the human family is liable.

Now, gentlemen, you can make what use you please of this certificate. With my thanks to the Resident Physician for his kind attention, I subscribe myself,

Your thankful patient,
MRS. C. A. CARLTON.

Opinions of the Press.

The advantages of electricity as a remedial agent, are universally admitted by the medical and scientific world. It requires, however, experienced skill to apply this remedy efficiently, and this skill of application is possessed in an eminent degree by Dr. J. H. Josselyn, of the San Francisco Electropathic Institute. Particulars of his method of practice can be obtained by reference to his advertisement in another column. The Doctor is well known to us as a scientific gentleman, and an ardent devotee to his profession. He is no pretender, but has conferred incalculable benefit on those who were so fortunate as to seek relief at his hands. For those who desire speedy and permanent relief from the rheumatic pains, so prevalent in this region, we can recommend no surer remedy, than a visit to Dr. Josselyn at his rooms in San Francisco, No. 645 Washington street.—[Placerville Republican.

ARE YOU SICK?—We wish to say a word to those that are sick. We have in the city an Institution known as the Electropathic Institute, situated at 645 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician who has no superior in the city. He has been in charge of the Electropathic Institute for several years, and has been uniformly successful in his treatment of the numerous patients that have placed themselves under his charge. The Electric treatment will cure many diseases that cannot be reached by any other mode. Dr. Josselyn gives his personal attention to all of his patients, and is always ready to give advice to those that may call upon him. His charges are very moderate, and we cannot do the sick a greater favor than to recommend them to call on him before placing themselves in charge of another.—[San Francisco Daily Journal.

We call the attention of our readers to the advertisement of Dr. Josselyn's Electropathic Institute. Voluntary and unsolicited we make the following statement, proving its beneficent effects, particularly in rheumatic cases. Some months since we were on an editorial trip, visiting the mountains. The stage-coach upset, and landed all the passengers, including the writer, below in the valley, where the Deer Creek overflowed by receiving the additional material, extremes to its usual contents. For some hours exposed in our wet clothes, to night wind and weather, we soon felt the effects of the accident in the mountains—pains in the back, hip, and legs; so much so, that for weeks we hardly could walk. Treatments of all kinds were applied but without avail until our attention was called to the Electro-galvanic Bat and appliances of the above Institute. Thank God, after two weeks we have been fully restored, and enjoy now the free use of our limbs and body, as fully as previous to the involuntary bath in Deer Creek.—[Dr. H. SIEK.—*Ed True Pacific Messenger.*

ELECTROPATHY.—Electricity has long been classed among the most effective medical agents. It possesses great advantages over the systems of therapeutics heretofore relied upon as it reaches more certainly the seat of disease, especially in nervous or rheumatic complaints. The Electropathic Institute, No. 645 Washington street, under the charge of its able Resident Physician, Dr. J. H. Josselyn, has attained a well merited celebrity for the many cases which have resulted favorably from the skillful application of this invaluable remedy.—[Daily Morning Star.

A GOOD INSTITUTION FOR THE SICK.—One of the very best places in the city for the cure of the sick is at the Electropathic Institute, 645 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician of great experience, and no one can do the sick no greater favor than to recommend them to give the Electropathic Institute a trial.—[Weekly Journal.

The California Farmer.

SAN FRANCISCO:

FRIDAY .....JULY 1, 1864

☞ Those who receive a number of the Farmer with this paragraph marked, may understand that it is sent to them or their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address

Publisher California Farmer, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

330 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the Farmer Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the Farmer Office. Members of the Press, and Strangers, are particularly invited to avail themselves of those rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 330 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Send along your Greenbacks,

Don't be afraid to send along your Greenbacks. Those we take at par in payment for all back dues to the Farmer for subscription—but it be understood, however, that when payments have been delayed six months $1 additional will be charged for each year. Send them along, now is the time. This is a better speculation than mining stocks, for it is so pleasant to read a newspaper when one knows he has paid for it, the digestion is better and a man feels happy, and, if happy, then he feels rich. So pay prompt and you will "strike a lucky lead."

Transactions of Agricultural Societies.

We would ask of those Societies in the Atlantic States and Europe, to whom we send our Journal, to send us the transactions of their several Socides, so that we may give the benefit of their perusal to visitors, from the several States, who are callers at our Reading-rooms. By this means we can lay before them the progress of Agriculture in their former homes, and thus advance the interest of both Atlantic and Pacific States.

Clerk and Assistant Wanted.

We want an active intelligent business clerk in our office. We want a person who has a knowledge, to some extent, of agriculture, horticulture, the science of botany, and the seed business. A man of correct habits, and willing to give his time to business, closely; a young man free from incumbrances on his time so that he can apply himself to business wholly. A knowledge of the languages would be desirable, and of mineralogy, also. Application only to be made between the hours of 4 and 5 p. m., and by none who cannot give the best of references.

TO AGRICULTURAL SOCIETIES ABROAD

Exchange of Seeds, Books, Etc.

Having established large and spacious Reading Rooms, in this city, which contain Libraries, Cabinets, and hundreds of Newspapers, all free to those who wish to enjoy the benefits thereof, we now ask coöperation from all Agricultural Associations in the Old States and Europe, for the *Exchange of Seeds, Specimens, Books, Etc.* We shall be happy to reciprocate any and all favors, and comply with any direction made to us connected with such an enterprise.

Times of Holding Fairs for 1864.

The following are the times appointed for holding Fairs the present year, by the Agricultural and Mechanical Societies of California, so far as we have obtained them:

San Joaquin District—At Stockton, commencing September 13, and continuing four days.

Mechanic's Fair—will commence in this city, August 30, and probably continue as long as the interest is maintained.

The San Pablo District Fair—Will be held at Napa City, commencing

[Will the Secretaries of other Societies that have appointed Fairs, please notify us of the time, that we may complete the list for the State?]

Our Next Number.

It has been our custom always to claim the week of our Glorious Independence as a *week of rest and recreation.* We hope good news and Tidings of Great Joy will come to us all, so that the day now near at hand shall indeed and in truth be a Day of Jubilee for the Nation. With this hope and a wish of Joy to all, we shall issue our next number on the 15th July, our usual day.

TO READERS AND CORRESPONDENTS.

We have before us "Lettice and I," a happy little poem, by our Attentive correspondent, C. French Richards, Esq. It will appear soon.

Letters from "Hawthorn Grove," Dorchester, Mass., received.

"Poland," by C. E. Spilvalo, an original essay, delivered at the Santa Clara College, at the commencement this week, will appear next week. We have the promise of others.

The Number of the Farmer.—We invite the special attention of our readers to this number of the Farmer. Begin now—send us five dollars—you never can invest to better advantage, it will pay a more certain, permanent return than Gould Curry.

Ripe Grapes.—Lewis Gadeac, merchant and gardner at Thompson Flat, has been dealing out ripe grapes to his customers, during the past week. These grapes are grown at the foot of Table Mountain, on red gravelly soil, and of the best quality. Who can beat it?—[Union Record.

Independence Day.

"A day, an hour of virtuous Liberty,
Is worth a whole Eternity of bondage."

Thear should be the thoughts of every American citizen as he prepares to celebrate the *Birthday of Freedom.* As we intend to give a full report of Fourth of July proceedings, as *results*, it is not needed to tell what ought *to be done*—we had rather report what has been done. We have faith to believe that we shall have *great deeds* that have been performed, to chronicle of that day. One thing is certain, from appearances, this Day, in California, will be kept with more than usual enthusiasm. Everything promises a glorious observance of it. Business of all kinds will be suspended and our people will give themselves to the Day and the Cause. "The Day we Celebrate," near at hand, seems to inspire them to say,

"Oh! give me Liberty!
For were even Paradise my prison,
Still I should long to leap the crystal walls."

The San Francisco Postoffice.

N. O. V.

We are now in hopes to see the evils which the whole public have suffered by means of mismanagement in the Postoffice of this city soon remedied. The Hon. John Conness will soon arrive in our city, and as he was undoubtedly instrumental in the change made, we think If he regards his own *fame* he will go and truthfully examine into the Postoffice management, and such is our regard for the man we think he must at once see that *another* change is needed. We trust he will examine into the charges and act without fear, favor or partiality, when he shall do this, the evil complained of will soon cease. What this journal has said and done has been solely for the public good. After our city Postoffice is made right, we presume there are not a few country Postoffices that the people will like to see put right also.

In all the complaints that have been made, thus far, they have emanated from sources undoubted, all capable of full substantiation, and these complaints are constantly increasing. The Sunday Mercury of June 26th has the following complaint:

A Question for the Postoffice Clerks.—Several letters and manuscripts entrusted to the Postoffice, both for us and by us, have miscarried. Will the clerks take the trouble to ascertain the whereabouts of the missing documents? The best thing our correspondents can do, when they have money or special documents to send us, is to transmit by Wells, Fargo & Co.

The Bulletin of the 29th of June has a long and well justified complaint against the clerks of the Postoffice and the Postmaster. In answer to this truthful and just statement, made by one of our most prominent and respectable merchants, the following abusive card appeared in the Morning Call of June 30th, published no doubt with the knowledge and consent of the Postmaster:

A lie out.

Editors Morning Call:—The article in the Evening Bulletin of this date, entitled "Another Sample of Reform," etc., is an unqualified falsehood, from beginning to end, as far as the facts are concerned.

Yours, etc., W. P. Adams, Box Clerk.

June 29th, 1864.

This called out the following, from the merchant, in reply:

The Proof Furnished.—One of the clerks at the Postoffice having rushed into print with a denial of the statements made in last evening's *Bulletin* relative to a recent instance of mismanagement at that institution, our informant requests us to publish the following affidavit, the original of which is duly signed, sealed and stamped:

card.

I hereby certify that the article in the *Bulletin* headed "Sample of Reform," was strictly true; and I will add that the letter for my son was not placed in my box for several days after it was called for at Mr. Perkin's office, and refused delivery. The letter for my daughter, from Oakland, was received eight days after date.

S. D. Arthur, San Francisco.

Subscribed and sworn to before me this 30th day of June, A. D., 1864. Orin V. Sawyer, [Seal and stamp.] Notary Public.

Is there no remedy for these evils? Let our merchants at once circulate a petition, and forward it to the Postmaster General, and we shall soon have the reform needed. We find, *this day*, three papers in our box belonging to other offices, also a letter plainly directed to another Box—four errors in one day. Comment is needless. Numerous facts have come to our notice of other mistakes, but let these suffice till we see if the evils are remedied.

Crops in the Great San Jose Valley.

What of the drought? Let those who hear so much of the drought in the San Jose and Santa Clara valleys, those who fear a famine for man or beast, just go and visit those gardens of our land, and in order to see them truly, go to that grand seminary of learning, the Santa Clara College, go up into the observatory (about 100 feet above the college grounds) and take a view of the magnificent landscape from there. A grander scene was never pictured than an hundred miles circuit around, one grand panoramma of beauty.

This view presents no scene of drought or mildew, but one of beauty and fertility—orchards and vineyards, gardens and fields, richer than the mines of Golconda, and wheat in plenty. To a casual observer, the stacks of grain, the mountains of hay, and the vast amount yet spread over the plain, it would seem there was enough hay, and grain, and fruit, and luxuries to supply the whole State. It is one vast sea of plenty. We only wish every speculator would go to this observatory and see what we saw this week—we don't think we are very near a famine.

The St. Ignatius College has had a grand exhibition this week. We regret we could not be present personally. We shall, however, report it in full.

Gold vs. Greenbacks.

We have for a considerable time past advertised that we would receive *Treasury Notes*, at par, for our paper, at $5 per year; also for back dues. We did this in the hope that many who were indebted to us would *promptly pay up*, and thus give us the *many thousands* due us, so that we might use them to advantage enough to cover loss. We did this at the opening of the new year, so as to close up old accounts. We did it also upon principle, believing it was the duty of every Unionloving man to maintain the credit of the Government currency. We naturally supposed that many persons might have a little of this money that they had taken at *par*, and they could now pay it to us for dues to our journal, and by doing this promptly, by mail, it would save us the cost of collections and commissions, etc., and sometimes give this amount to our patrons. We regret to notice, however, that many persons who are amply able to *pay in gold*, although they may be indebted for two or more years will make it a matter of speculation *buy greenbacks and thus* pay us only 50 cents on the dollar—this is all we get now, at present rates. We are, however, ready to abide our *original* offer and take *greenbacks* at par—provided it is sent at once. But we wish all to understand that those who *have delayed payments should add* $1,00 *per year, when they send the money*, as it is according to the terms *advertised in our columns.* We are happy to know, however, we have still many who appreciate our efforts, and send us what is justly due and—send it in gold.

We have received the following letter As it is so good, and we appreciate the tone of it so much that we cannot refrain publishing it. If all our subscribers had the same spirit we should be encouraged much more in our work.

To show how much we appreciate such a subscriber, we now donate our paper to him for the present year, and until the sun of prosperity shines fairer on him; we extend this with our best wishes.

—June 4th, 1864.

Editor California Farmer:

Some ten days before I received the inclosed bill, I forwarded to your address $5. I desire to know if you received it? I have just received volume XXI, No. 18, of the Farmer, and on examination of the bill I discover that it is the last number I am entitled to. Before you receive this you will have forwarded two or three numbers of the incoming year. On that account (as soon as I can), I will endeavor to send you $5 more, and receive the benefit of the Farmer one more year. It is hard work to raise and spare the money; for be it known that I was totally prostrated by the great flood. It is up-hill work, this recovering from destruction by flood. I am also advanced in years, am broken in health, I therefore trust that you will forgive my seeming neglect in not promptly forwarding the money for the Farmer. On account of the above facts I send you "greenbacks," also because I am a believer in them, and shall be until this wicked rebellion is ground down as fine as flour, and the Government pays the last dollar of our National Debt.

Whenever you can, consistently, cry aloud for our Government and country, and spare not.

Yours, in friendship, *

We will show how much we really receive in a case where a person may have been indulged say *four years*—and we have many such. Suppose the account had commenced four years ago:

First year due, in advance,	$5.00
Bank interest, 12 months, 2½c would be 10c ₹ month or $1,20 ₹ year—4 years,	4.80
do do 2d year,	5.00
do do 3 years interest,	3.60
do do 3d year's subscription, etc.,	5 00
do do 2 year's interest,	2 40
do do 4th year's subscription,	5.00
do do 1 year's interest,	1.20
Due, with interest at Bank rates	$37.00

The simple Bank interest, as above, would be $12 00.

Suppose a subscriber, owing for four years, now sends us twenty dollars in greenbacks: If we sell them at market rates we receive $10; if we have been obliged to pay interest meanwhile, then we have *actually* donated the paper *four years* and paid the subscriber *two dollars* for taking it. Or if he sends us the $1 addition, per year, we receive in greenbacks $37 00 and get really only $18 50, or an actual loss of $1 50, besides interest, $13 00, we get really $6 50 nett for four years, or equal to $1 38 per year. We make this demonstration to show subscribers the real condition of a *delayed subscription.*

As we have as many names on our *Delinquent List* as the *present* times will warrant, we hereby give notice that we shall *send our bills* to all who are now delinquent; we shall then send them one or two papers to give them an opportunity to pay us promptly, even in greenbacks, if paid we shall continue their paper at same rates; those that do not pay we shall stop their paper, and then claim our pay for past years, *strictly on our terms*, as in former times, and place old delinquents on the record of *by-gones* which will be open for inspection so that any one may see how much we are the sufferer and who we suffer by.

People's Line of Steamers.

The fine steamer America, came into port, all safe and sound, in good time, bringing a large number of passengers and a heavy freight list. This line is now winning golden opinions from the thousands that travel in their ships. From a number of passengers, that came here in the Moses Taylor, we have had the most satisfactory reports of the voyage; we have also many proofs from the passengers, that while they were on the Isthmus waiting the down steamer, every possible attention was paid to them by the agents of the line. They received good fare, kind treatment and many favors, and from all that we have met that came, we hear they are so well pleased that they say they shall use their best influence to induce all to travel on this Line.

Soon the *Golden Rule*, the Company's new steamer, will be placed on this side, and then we shall have two steamers, each side, for the People's comfort and protection. I. K. Roberts, Esq., the able agent this side will soon announce the departure of the next steamer. Let those who are thinking of an *Eastern trip*, remember the *People's Line*, and wait their day, and let every influence be used everywhere to sustain this Line liberally.

Reform in Medical Practice.

We give the following views on electricity, as of great importance at this time, when so much can be done for the cause of health reform.

It may not be uninteresting to the friends of reform in the medical world, to peruse a concise history of the introduction of electricity as a therapeutic agent, and the remarkable success which has attended its judicious application. Unfortunately, notwithstanding its wide-spread celebrity about the commencement of the present century, this remarkable remedial agent has been suffered to fall into disrepute, not on account of its inefficacy, but from the "shocking" manner in which it has been employed; and it is for the purpose of placing the materials of investigation in the hands of all who look with hope to the development of this principle, which is so fertile in its application, so immediate and so safe in its operation, and which is destined, ere long, to work as great a revolution in the medical world as it has already in the physical, that we have been induced to present the following facts on the subject, confidently believing, from past experience, that in the hands of science, this unique and harmless agent bids fairer to deprive "sickness of its sting, and consumption of its fearfulness," than anything else in the world. Its peculiar merits have been so clearly demonstrated by the most incontrovertible evidence, and the belief that we cannot over-estimate the importance of such labors as to look to the discomfiture of our common enemy, *disease*, is ample apology, if any be required for placing some facts before the reader to show what electricity can do as a remedial or curative agent.

"It has been said, "Life is only known to us empirically. We acquire a knowledge of disease in the same way; and the same method is adopted in the cure," and it may be justly doubted whether we shall advance much in a knowledge of diseases, or of the proper remedies for them, until we first obtain a scientific knowledge of the organization which constitutes animal life. We have a very accurate knowledge of the astronomical or animal organization, but none whatever of the invisible motive power which generates and controls that life. We can see the ropes, levers, and pulleys, by which motion is produced, but nothing of the sympathetic and invisible forces which guide and direct their action. It was the obvious importance of a knowledge of these forms upon which the immaterial or spiritual sources of medicines act, that first induced an investigation, and which has subsequently given the application of *electricity* as a curative agent, the celerity and success it has obtained. A recapitulation of the main features thus elicited would, we fear, prove too tedious to the general reader, while it would convey some idea, at least, of the time and labor to resist the authority of established systems of errors, and to check their career of mischief, even when the clearest truths are brought forward to oppose the most manifest absurdities. Suffice it to say, that the theory of the motive power of the system, is the result of an inductive process which elicited the true causes of universal motion, and the laws by which it is governed.

Commencing with the brain, we find an organization representing five magnetic poles, two in the organs of casuality, two in the organs of amitiveness, and a very large one in the center of the brain, requiring at least two magnetic axes, which must cross each other in the center of that organ. When the heart is laid open and distended in a circular form, it is found by the manner in which it is constructed to have four large poles in its circumference, the axes of which cross each other in the center pole of the heart, like those of the circumference of the brain. These forces radiate along the ligaments of braces called the *columnæ carneæ*, causing expansions and contractions. We shall not dwell upon the number and situations of these poles, but proceed to show the force which sustains them is *electricity*, the natural element of the nervous system, the connecting link between mind and matter, the most subtle known; that it circulates the blood, it is the cause of voluntary and involuntary motion, pervades all the chemical changes in the system, the decompositions and recompositions, and always coöperates with vitality in imparting health and strength to the human system; and to prove not that it is the generating agent of animal life, but its importance in the preservation of that life.

The principle of vitality in its highest relations has hitherto escaped analysis. All its functions, however, in the mineral system, are performed through the intervention of physical agents, and in strict accordance with the known laws of chemical affinity and material forces above alluded to. These agents are of two kinds: First, principles and affinities which are commonals to unorganized matter; and secondly, a force which is peculiar to living structures, the special agent or material principle of vitality, which is manifested in two distinct forms in the nervous system and in the life of the tissues. In both cases it is associated with a physical organization, and reacts with other physical agents. Vitality does not consist, however, in a detached principle, nor is it a simple element, but the result of a combination of elements, the highest and most active of which is electricity, which is to our organism as wind is to soil, or steam to engines. Distinctly, therefore, electricity is not vitality, though it possesses relations which constitute it the vitalizing force—a power which produces vitality when brought into exercise upon other elements themselves bearing proper relations to each other, and hence its advantage in controlling disease. These duodynamics, or moving powers in animate and inanimate matter, may at first appear very strange and unaccountable, even to men of science who have little or no knowledge of this subject; but they are so self-evident to the initiated as to preclude the necessity of a solitary remark, further than to refer to the manner of gilding metals by the actions of these forces in the solutions of gold, so familiar to every intelligent mind. Nothing can equal the adaptation of these forces, for besides their unlimited power, which can make a world tremble like a leaf, the great velocity of their motions, and their almost inconceivable minority, enables them to penetrate the most minute orifices, and construct an infinite variety of bodies of every form and size, and produce molecules the smallest structure with the same geometrical accuracy as in the largest.

It is now nearly fifty years since the identity of the magnetic forces with the vital principle, and the complete magnetic organization of the body system was fully established and expanded, which abounds with evidences so conclusive, so forcible, that no enlightened person, or disinterested physician, can evade them in conscience, or neglect them in practice, without incurring the reproach of all who have impartially examined the subject. Notwithstanding these facts and the advancement of medical and philosophical science, which is daily and hourly contributing an almost meridian splendor in illustration and estimation of this important aid to the cause of our common humanity, there are not a few medical men, who, prizing the *verda antiqua* of their very errors and barbarisms above all the dawning of an age so fertile in universal improvement, still continue to practice the uncertain, exploded and every varying astrological treatment, of their ancient masters who were priests, physicians and astronomers, with all the complacency of tranquil ignorance and irrepressible authority and profess to regard electricity as a very limited remedy, adapted to cure only paralysis, neuralgia, rheumatism, and a few other special diseases for which it was first used, and with surprising success about the begining of the present century. The extraordinary rapidity with which this potent, yet harmless therapeutic agent is capturing the convictions of the truly learned and intellectual members of the profession, as well as the thinking portion of the community, seems to warrant the conclusion that it will ultimately effect a complete revolution, and simplify in the most extraordinary manner, and consequently elevate the study and practice of medicine from a very uncertain and ever changing art to the character, dignity, and rank of a science, and bear striking contrast to those imposters who

"Warp nonsense round
In pomp and darkness, till it seems profound;
Play on the hopes, the terrors of mankind
With changeful skill;
While reason, like a grave-faced mummy stands
With her arms swathed in hieroglyphic bands."

We shall continue the subject hereafter.

Use and Abuse of Spectacles.—Spectacles should never be too soon had recourse to, nor too long delayed. Many injure their eye sight by adopting the use of magnifiers too suddenly and before they have any need of them: whilst others actuated perhaps by a desire of concealing their age, refrain from employing them long after the period when glasses would not merely have afforded valuable assistance, but have proved a means of saving their sight. Such conduct is as dangerous to sight as it is ridiculous. The eye, when once deficient from advancing years, or some other cause, if refused assistance, is necessarily strained by every attempt to perceive near objects, and suffers more in a few months, by forced exertion than in as many years, if assisted by such glasses as would render vision easy and agreeable. It would evidently be absurd to fix upon any period of life at which glasses should be first employed, or the eye should be assisted by spectacles of a higher grade than those made choice of in the first instance; but it may be laid down as a general rule, that whenever a person of forty years or upwards finds that, in order to see small objects distinctly, he is obliged to remove them further from the eye than formerly, and illumines them more especially by candle-light, that he moves as it were instinctively, nearer the light, in order to see with facility. The discovery that the sight thus beginning to be impared by age, is made gradually in consequence of the difficulty which the individual experience in reading small print, nibbing a pen, threading a needle, and the like. On attempting to examine any small object close to the hand, after looking at it constantly for some time, it appears confused and its outline becomes obscure, as if it were seen through a mist, very minute objects, such as the characters of a well printed book, are either not discerned at all, or they appear obscure, running into one another, or double, and if the attempt to see such objects is persevered in, the eye soon feels fatigued, and the head begins to ache so that he is obliged to turn them to other objects, in order to give them some relaxation; and if the sight on awaking in the morning, is very weak, and does not recover its customary degree of force for some hours, then he may, if he has not hitherto used glasses, begin to use them, or if he has already had recourse to those of a very slight magnifying power, he may change them for a pair of greater power. Although the eye, after middle life, loses the power of distinguishing near objects with correctness, it generally retains the sight of those that are distant. Instances, however, are not wanting of persons of advanced age requiring the aid of spectacles to enable them to see distances as well as near objects. Further truths are found at Mellus' Masonic Temple see card.

Good Clothing for the Fourth of July.—A good suit of clothes—a well fitting suit shows a gentleman of taste. We do not mean a flashy, dandy suit, that has to be cried into notice by huge placards, or undue means, but we do mean a neat, tasty, good suit, such as all men should wear on the 4th of July, so as to make them feel confident and comfortable. A man of merit, if he be poor, cannot feel as he should when he is compelled to dress shabbily. And, however he would wish to feel and be, he cannot feel independent on that glorious Fourth, near at hand, if he is compelled to go forth in a mean ragged clothes. Messrs. Sherman & Co. have prepared themselves with a stock of goods especially to meet the wants of all, and would invite the public to them. See card.

Not a-miss—a rich and lovely widow.

ARTICLES RECEIVED AT THE CALIFORNIA FARMER EXHIBITION ROOMS, No. 220 Clay Street.

Another copy of the specimen pages of the American Conflict, by Horace Greely. This work, for its intrinsic value, and the beautiful style in which it has been gotten up, must commend the admiration of all.

The address delivered before the Ohio Wool Grower's Association, at Columbus, Ohio, January 6, by Henry S. Randall, Esq, together with the transactions of the Convention, of the 5th and 6th. This address is a most important one, with valuable statistics. We shall give it to our readers soon.

The new Seed Catalogue of Messrs. J. M. Thorburn & Co., New York, his wholesale and retail list of prices.

The Circular of the American Pomological Society. It is now announced that its 10th Session will be held at Corinthian Hall, Rochester, New York, September 13, 1864, at noon, and will continue several days. All the Horticultural, Agricultural and Pomological Societies in the United States and British Provinces, are invited to send delegates.

The great New York State Fair will be held at Rochester the following week, and the Pomological Exhibition will place its entire exhibit before it and make it a grand show. The Circular is issued by its distinguished President, M. P. Wilder.

We have received a splendid collection of Music, from Horace Waters, Esq., New York. Particulars next week.

We have also received valuable documents from Hon. Isaac Newton, of the Agricultural Department, Washington, D. C.

We have received catalogues of the following Colleges: Colleges at Benicia, Napa, San Jose and Santa Clara.

The California Teacher—a grand number—has been placed on our table. We shall notice it in our next.

Death of the Yosemite Pioneer.

We learn that Captain John S. Boling, who first pioneered the way into the great Yosemite Valley, has recently gone to the Great Valley of the Shadow of Death. It was Capt. Boling and his gallant Company, in connection with Capt. Kuykendall's Company, and a volunteer party under the late Judge Marvin, conducted by Major James D. Savage, during the fall of 1850 and spring of 1851, that formed an expedition against the Mono tribe of Indians, with their chiefs, Pe-Tomkit (Town-quiet), Pasquel and Pan-Watche (Na-zak-qud). (*Moral*—White, or lost, wild Indians disecularized). They pursued the Indians from the Mariposa settlements, the Fresno and Chowchillas, clear over the mountains to the east of Lake Mono. On the return trip the companies separated taking different directions. While descending the western slopes of the California range Capt. Boling came to an open glade where were numerous groves of wild-plum trees, bending with luscious fruit, there were also abundance of smaller fruits, and to quote our informant, "there was also about one grizzly-bear to every three plum-trees—the "bars" were feasting on the fruit—consequently we went down into the valley and encamped for the night where we had a regular "blow-out" of plum-pudding and bear-steaks." The party remained a few days, resting in the valley, and then returned to camp, on the Chowchillas. Such were the incidents that led to the discovery of the Yosemite Falls and Valley.

"LILLIE ON SAFES."—*Chilled Iron Safes Fire-Proof.*—My next proposition is to show that the chilled-iron safe is reliable against fire. It will be noticed at once, by referring to the structure of the chilled-iron safe, that the exterior is a solid body of chilled iron of great strength and thickness, and perfectly air-tight, cannot be sprung by heat, or the fall or timbers, or by its own fall, and has a solid basis to construct the fire-proof chamber upon, which makes it not only air-tight in the first instance, but it must remain so, as well in the fire as out. Consequently, the safe comes out of the fire with its contents not even discolored, and instead of being warped, sprung, twisted and shapeless, like the sheet-iron safe is sound and perfect, ready for another contest with the elements.

Agents for Lillie's Safes "The Russell & Erwin Manufacturing Company," 106 and 108 Battery street, San Francisco.

KEEP WARM.—In a climate like San Francisco, with bleak, chilly, sweeping winds, our people should dress warm, especially the children and females—good warm, fine flannels, genial, woolen under-dresses. Everybody should wear flannels, and by night plenty of blankets, by this means disease is warded off, health prom ted, and personal comfort secured. In order to do this, it is necessary to know where the best blankets, flannels and woolen undergarments can be found. Messrs Kerby, Byrne & Co, with their usual foresight and judgment, and desire to meet the wants of their many patrons, imported largely of all these articles, and of the very best qualities and styles. These will always be readily shown to customers by their ever attentive and courteous salesmen, and sold at the lowest rates, and only one price, at this establishment.

ARTHUR & SON'S NEW STORE.—Messrs. Arthur & Son of the well-known agricultural warehouse, formerly on the corner of Washington and Davis streets, have now taken the large brick warehouse corner of California and Davis, where they will hereafter be happy to see their friends, and show them a fine stock of goods in the agricultural line. We wish them abundant success in this new and excellent location.

PERIODICAL LITERATURE.—G. H. Bell, as will be seen by his card in our columns, has almost every periodical known, and will furnish them at the lowest rates to his patrons. Bell's periodical depot is on the corner of Merchant and Montgomery. He is one of those indefatigable men that are always on their post at work. He has the hope that he has sold the great Prize Picture at London, among the prizes of the Art Union of London, and that it will come to San Francisco.

FASHIONABLE DRY GOODS AT SACRAMENTO.—The many patrons of the FARMER in the Sacramento Valley, must not forget that Messrs. O'Connell, Ryan & Co. have recently been offering a large stock of beautiful goods for the ladies and families. As they know so well how to please their many customers, we do not wonder at the large trade they are now doing.

Furniture for the Household.—We herald in our columns the Furniture Warehouse of J. W. Stringer, 520 Washington street. Our readers from the country should remember that this place is worthy their particular attention. The furniture from this house will always give satisfaction, being made to order to please customers. The parlor and chamber sets are of their own home-make. We are pleased to say, also, that Mr. Taylor, for many years the popular salesman at J. G. Clark & Co. is at this house. His friends, and purchasers of furniture for many years, will be glad to call and see him, and trade with him at Mr. Stringer's, and where they will always be satisfied with their purchases.

A FARMER'S LAND MEASURE.—Every farmer should be familiar with land measuring, yet very few ever think of being correct in this matter. They can very readily know the number of acres in their several lots. Farmers should have their various pieces of land measured, and this they can do in the following easy way: A strong rod or pole sixteen and a-half feet long; with this measure the length and breadth of the lot, and divide by 160, and this gives the acres; thus, a piece 32 rods long, and 20 rods wide, gives 640 rods, or four acres exactly.

Sales of Lillie's Safes, at New York and Philadelphia, from January 1 to May 1, 1864.

TO BANKS.

To the Mercantile Bank, Oswego, N. Y one Bank Safe,
To the Sixth National Bank, New York City, one National Bank Safe.
To the 4th National Bank, New York City, one Bank Safe.
To the Corn Exchange Bank, New York City, one Bank Safe.
To the 1st National Bank, Warwick, R. I. one National Bank Safe,
To J. P. Morgan & Co., Bankers, 1 National Bank Safe,
To the 1st National Bank, Tarrytown, N. Y., 1 National Bank Safe,
To the 1st National Bank, Plainfield, N. J., one National Bank Safe,
To the 1st National Bank, Somerville, N. J., one National Bank Safe,
To Brown Brothers & Co., Bankers, New York. one Bank Safe,
To the 2d National Bank, Philadelphia, 1 Bank Vault.

BANK OF LONDON,
THE UNDERSIGNED GIVE NOTICE THAT THE above named Corporation has been organized for the purpose of carrying on the Banking and Exchange Business, in all its branches, in this City and in the interior of this State, the neighboring State and Territories, and with Mexico; also with the Atlantic Cities, Europe, China, and the East Indies; for which they are provided with ample facilities, and in conformity with articles of association will commence operations on the 5th day of July next, at the Banking House now occupied by DONAHOE, RALSTON & Co., Corner of Washington and Battery streets.
With the view of giving to the business of the corporation all the efficiency and promptitude of a private banking firm, together with that confidential seclusion of private business matters so generally desired, the immediate management of its affairs is committed exclusively to D. O. MILLS and WM. C. RALSTON, as President and Cashier respectively, to whom, or either of them, the customers of the Bank will apply in business matters. The regular meetings of the Board of Trustees will take place monthly.
The undersigned deem it advisable to call particular attention to the following peculiarities of their organization, which are positively binding on all its members.
FIRST.—Sales of its Capital Stock can be effected only after due appraisement by Stockholders selected for that special purpose; and the Trustees of the corporation have, in all cases, the right to become purchasers of the Stock appraised at the appraisement, for the benefit of the remaining Stockholders. This restriction is printed upon each certificate of Stock.
SECOND.—Loans cannot be made to Stockholders, except upon collaterals other than their Shares in the Capital Stock of this Bank.

Home Miscellany.

WILD FLOWERS FROM THE MOUNTAINS.

[We think the following tribute to the "Flora" of our mountains, a real gem of Poesy.]

THE FIRST SMILE.

On, what is so beautiful under the skies,
As the first loving smile that looks out of the eyes?
When the features light up for the first time on earth,
With the first glow of light and the first flash of mirth;
Or what is so free from earth's sorrows and art,
As the first merry laugh that rings out of the heart?
When the soul newly born to this wide world of care,
As pure as a snow-drop, as fresh, and as fair,
Its world folded up in its fond mother's embrace,
All its knowledge of life, the bright smile on her face,
When its little heart throbs with the first thrill of bliss,
Beings wooed into life by a fond mother's kiss.

BERTHA BAY.

JUST BEFORE THE BATTLE, MOTHER.

Just before the battle, mother,
I am thinking most of you,
While upon the field we're watching,
With the enemy in view.
Comrades brave, around me lying,
Filled with thoughts of home and God,
For well they know that on the morrow
Some must sleep beneath the sod.

Chorus—Farewell, Mother, you may never
Press me to your heart again,
But you won't forget me, mother,
If I'm numbered with the slain.

Would that I were with you, mother,
And the loving ones at home,
But I can't desert our banner,
'Till in honor I can come.
Tell the traitors all around you
That their cruel works we know,
In every battle kill our soldiers
By the help they lend the foe.

Chorus—Farewell, mother, you may never, etc.

Hark! I hear the bugle sounding,
'Tis the signal for the fight,
Now may God protect me, mother,
As he ever does the right,
Hear the battle cry of Freedom;
How it echoes on the air,
Yes, We'll rally round our standard,
Or we'll perish nobly there.

Chorus—Farewell, mother, you may never, etc.

THE DEAD MOTHER.

On an exceedingly cold and blustry evening in the latter part of the month of December, in the year 1835, I had occasion to call at the Washington Hotel—which, doubtless, many of my readers will remember stood on the site of the present noble superstructure, the property of A. T. Stewart, Esq., on the corner of Broadway and Reade street to confer with an old friend who was sojourning within its comfortable walls.

The business—for my visit was strictly of a business character—had reference to the disposal of a patent on a machine for cutting straw; and, although I had no pecuniary interest involved, I was sufficiently interested to make it a just pretext for facing the inclement weather; in fact, so accustomed had I become by long years of toil and exposure to storm, cold and sunshine, that I thought little of the night, and walked Broadway careless of the cutting wind which, as I crossed an exposed street would strike me in the face, biting smartly into my sea-hardened skin, and leaving behind it a stinging sensation that was not so disagreeable to me as, on that night, it must have been to more sensitive persons.

I had crossed Duane street, and was half way down the block, when, near a door-way, I heard a sobbing cry, as if from a child in deep distress.

Nor was I disappointed in my conjecture. Turning my head, my eyes rested on a girl of apparently ten years of age, who stood close to the closed door, evidently seeking to escape the piercing cold and the penetrating wind. It was a vain effort. I looked sharply at the little one—the light of the street lamp shone full in her face—and, to my inexpressible distress I found that she was very thinly clad. On her feet, there were, it is true, shoes; but her legs were stockingless. On her person there was a short, thin dress of calico, while around her shoulders she had a faded and torn shawl, that gave her but little warmth. Her dress, I felt, was better suited to a warm evening in August than a bleak one in December.

Had a thousand dollars been offered me, I could not have passed by that little waif without offering her relief. My heart bled for her. I felt the tears, for the moment, fill my eyes; that I brushed them away as I approached the poor, storm-exposed, sobbing child.

"Little one, I said," while I vainly endeavored to suppress a choking sensation in my throat, "how is it you expose yourself to this terrible weather? Why do you not go home? The street at this hour, at any time, is no place for one of your years, and so thinly clad, too."

The child answered my question with sobs.

"Speak, my poor girl," I continued, in softer tones. "Have you no home?"

"Yes, sir;" she whispered, as her little, fragile body trembled in the wind like an aspen leaf, "but mother is sick, and there is no fire, and we are very hungry."

"My God!" I cried, as I advanced a step toward the child, and threw a part of my cloak over her. "Where do you live?"

"In Elm street, sir. Close by."

"I will go there with you," I responded "Take my hand and lead me to your mother."

The child placed her cold, thin hand in mine; and with a trembling voice, in which, however, I thought I detected a tone of gladness, desired me to turn back to Duane street. Through this avenue we walked on to Elm street, a few doors from the corner of which there stood, at the time, a two-story frame building, which had once been painted yellow, but which by the action of the atmosphere and the dust of the streets had assumed a dirty brown color. Toward this dingy, tumble-down dwelling the little girl led me.

Bitterly cold and stormy as was the night, the door stood wide open, giving ingress, unquestioned, to a hall-way that was on the flooring and walls an inch thick with dirt. There was no light in the passage way; but, fortunately, an oil lamp burning in the street shed a feeble ray into it, sufficient to show me that there was, a few steps from the door, a rickety flight of stairs that led to the second story.

"Ma is above," said the child, as she looked up at my face with her large, soft eyes. "Oh, sir, I'm sure ma will be so glad you have come to her."

"I trust, my child," I replied, "that I may be enabled to relieve your mother and yourself before it is too late."

"This way, sir," cried the girl, as she released my hand, and ran before me up a second flight of stairs that led into the attic bed-rooms.

I followed closely, and as I reached the landing the child opened a door, and softly said:

"Ma, are you asleep? Here is a kind gentleman who says he will help us."

No answer was returned to this appeal by the inmate of the dark, cold room.

"Here, child, what is your name?" I asked.

"Susy, sir. That's ma's name, too."

"Take these pennies, Susy, and go to the corner grocery and buy a candle. I will remain here until you return."

The child unhesitatingly took the money, and went as directed.

In a few minutes she returned with the candle, which I at once lighted by the aid of a pocket phosphorous-machine that had just come into use.

As the light illuminated the apartment, I glanced hastily around it. Not a single article of furniture was there in it. On the street-side of the room, the ceiling rapidly declined until it was within two or three feet of the flooring, while the wall which divided it from the apartment adjoining, was broken in many places. In one corner there was a fire-place, in which there were ashes, the remains of a former fire, and in a corner opposite, I noticed a bundle of straw on the floor, on which lay a heap of rags. Toward this pile, the child ran on entering the room, and falling on her knees cried out, with joy,

"Oh ma! here's a good kind gentleman who says he will help us."

To this second appeal no answer was returned.

"Hush, Susy," I said, as I approached the child; "perhaps your mother is asleep. If so, do not awaken her until we have a good fire and something nice and hot for her and you to eat."

"Oh, sir," the child suddenly screamed, as she looked wildly at me, at the same time throwing herself prone on the heap of straw and rags, "Oh, sir! ma is so cold! Ma, dear ma, wake up! It is I, Susy. See here is a gentleman who wants to speak with you. He says he will help us. Ma, dear ma! Oh, you are very, very cold!"

A thought flashed through my mind.

"Susy," I whispered, as I knelt by her side and held her to me. "Little one, I fear the worst. Your poor mother," as I spoke, I gently drew the thin woolen shawl and tattered blanket aside, and saw that Death had been beforehand with us "is beyond human hope or care. She is with the angels in Heaven, where she will ever look down upon and guide you through this vale of tears. You have lost a mother on earth, little one; but there is One in the land where sorrow is not—where love reigns supreme—where, if you are good and kind, you will rejoin her—the loved and lost.

The child, as I spoke, looked at me as if she did not, for the moment, comprehend my words, then, with a wild cry, threw herself by the side of her dead mother and sobbed as though her heart would break. She had realized the great change which had taken place. Death until that hour, was unknown to the child. Even amid all her sufferings, she had never realized the thought that her mother's sickness could possibly eventuate in depriving her of her love and watchful companionship.

I had no desire to soothe the child. Better I thought, leave her to her agony until it had expended itself; and then, if possible, provide for her until such times as she could be properly taken care of by those who had a right to her guardianship.

After a time the child's sobs became less frequent, and finally they ceased to convulse her emaciated body, which cold and the want of proper nourishment had almost reduced to a skeleton.

"Susan," I said, as kindly as I could speak. "Susan, have you no friends or relatives?"

"None, sir."

"What! were you and your mother left entirely alone in this great city?"

"Father, so ma told me often, went to sea one day, and the ship sank in its depths, taking all on board down with it."

"Has your mother never mentioned any one else as being related to you and her."

"No, sir; but here," and the child drew from the bosom of the corpse a small oval locket, and handed it to me.

Opening it, I found that it contained the miniature of a gentleman of prepossessing appearance, apparently about twenty-five years of age.

"Who is this supposed to represent, Susan?" I asked.

"My father, sir."

The features were not unfamiliar.

"Come," I said, rising. "Look at your mother, and, then I will take you to my home where you will be well and kindly cared for, until something better can be done in your behalf."

The child did as I suggested. Her grief was renewed, but it soon expended its force. When she had become sufficiently calm, I covered the face of the dead, and then with sad reluctance the bereaved one followed me down the flight of stairs to the street.

At the corner I met a watchman to whom I told, in substance, the story I have just related. At its conclusion I handed him my card. Leaving him, I walked with Susy by my side toward Broadway where, fortunately, I found an omnibus, which in a little time conveyed us to within a few doors of my residence.

My wife, to whom I briefly related to my adventure, like the good soul she is, took the child in her arms, and retired with her to her room, where, from the mysterious depths of her wardrobe she soon collected garments that were warm and comfortable, and suited to Susy's size. Next, she made her sit down and eat; and afterward, with winning words poured balm into her lacerated heart until she fell into a calm, sweet sleep, such perhaps as she had not enjoyed for months.

The following morning, at an early hour, I was at the house of the dead, and with the assistance of a sexton on whom I had called on my way down, had the body encoffined before the arrival of the Coroner.

I gave my testimony as to the manner in which I found the body. On being dismissed, a medical gentleman who had previously examined the deceased, declared that the woman had died of consumption, the disease being hastened by want of proper medical attendance and nutricious food.

A verdict was given in accordance with the facts; and I was subsequently permitted to inter the body. On the plate of the lid I had inscribed "Susan Grales, aged —." The family name I obtained from the little girl.

* * * * * * *

Little Susan remained at our home eight months after her mother's death, growing daily in beauty and intelligence. My wife became very fond of her, and treated her as her own child.

One day a stranger called at the house and desired to see me. He was requested to walk into the parlor, where I was seated, reading one of Cooper's novels. I rose as the gentleman entered.

"I presume I am addressing Mr. Ampet?" said the visitor.

"That is my name, sir. Pray be seated. Can I do anything for you?"

The visitor paused a moment, and then said, in a low, sad voice:

"Sir, my name is Grales. I am the husband of the woman whom you found dead last Winter in an old house in Elm street. I have been for weeks, months, searching for her and my little daughter's place of residence. At length I came accidentally across an undertaker, who gave me your address, informing me at the same time that you were the kind-hearted gentleman who had paid her funeral expenses and took to your home and heart my motherless child."

The features of the man were older by a dozen or more years than those in the miniature, but they were in every other respect the same.

I will not go over the meeting of Susan with her father. The reader can well imagine all that transpired.

I found that Mr. Grales was not altogether unfortunate. During his unanticipated and prolonged residence abroad he had accumulated quite a competence; and, although he wrote frequently to his unfortunate wife, inclosing from time to time drafts on banking-houses in New York, they never, for some unexplained reason, reached her—hence her suffering, poverty, sickness and death. Her belief was that her husband had perished in the midst of the ocean.

Upward of a quarter of a century has passed since the night I first met Susy in Broadway. The last time I saw her was at Central Park, coolly seated by the side of two lovely girls—her daughters. She recognized me on the instant, and springing from her carriage, ran to my side and embraced me, calling me her "father." And I—I called her, as of old, Susy. She insisted on my taking a seat by her side, and chirped away as merrily as her daughters about the past and the present.

Susan's father died a few months subsequently to her marriage, which was a happy one, leaving her his entire fortune, of which, I am happy to say, the income is religiously expended in clothing and educating poor motherless girls, such as she had been.—[N. Y. Dispatch.

Woman's Influence.

The influence of the female character is now felt and acknowledged in all the relations of her life. I speak not now of those distinguished women, who instruct their age through the public press; nor of those whose devout strains we take upon our lips when we worship; but of a much larger class; of those whose influence is felt in the relations of neighbor, friend, daughter, wife, mother. Who waits at the couch of the sick to administer tender charities while life lingers, or to perform the last acts of kindness when death comes? Where shall we look for those examples of friendship that most adorn our nature; those abiding friendships, which trust even when betrayed, and survive all changes of fortune? Where shall we find the brightest illustrations of filial piety? Have you ever seen a daughter, herself perhaps timid and helpless, watching the decline of an aged parent, and bolding out with heroic fortitude to anticipate his wishes, to administer to his wants, and to sustain his tottering steps to the very borders of the grave?

But in no relation does woman exercise so deep an influence, both immediately and prospectively, as in that of mother. To her is committed the immortal treasure of the infant mind. Upon her devolves the case of the first stages of that course of discipline which is to form, of a being perhaps the most frail and helpless in the world, the fearless ruler of animated creation, and the devout adorer of its great Creator. Her smiles call into exercise the first affections that spring up in our hearts. She cherishes and expands the earliest germs of our intellects. She breathes over us her deepest devotions. She watches over us, like a guardian angel, and protects us through all our helpless years, when we know not of her cares and her anxieties on our account. She follows us into the world of men, and lives in us, and blesses us, when she lives, not otherwise upon earth.—[J. G. Carter.

Ike Marvell (Donald G. Mitchell) penned many beautiful and long to be remembered sayings, but the following is among his latest and best: "Don't keep," he observes, "a solemn parlor, into which you go but once a month, with your parson and sewing society. Hang around your walls pictures, which tell stories of mercy, hope, courage, faith and charity. Make your living room the largest and most cheerful in the house. Let the place be such that when your boy has gone to distant lands, or even when, perhaps, he clings to a single plank in the lone waters of the wide ocean the thought of the still homestead may come across the desolation, bringing always light, hope, and love. Have no dungeons about your house, no room you never open, no blinds that you ever shut."

The red cheeks, the white teeth, and the blue eyes of a lovely girl, are as good a flag as a young soldier, in the battle of life, need fight under.

A Lady Teacher.

A LADY TEACHER OF EMINENT ABILITY AND qualifications, one who fully understands the great responsibility of the position, wishes a situation in some Seminary, or School, where she can have a responsible trust. The Lady has long been employed as a Teacher, and can bring the most ample testimony of ability and qualifications. A note addressed to A. B. L, care of Editor of Farmer, will be promptly attended to. 10

AGRICULTURAL IMPLEMENTS.

NEW AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparce, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grass, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of

COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 5-3m

Literary Shrubbery.

NEVER AGAIN.

Broken the golden chord,
Severed the silken tie!
Never again will the old days come,
Darling, to you and I.

Dead the beautiful Past!
Scattered around its bier
Pale thoughts lie thick and memories
Of days that were so dear.

Memories? Fold them up—
Lay them sacred by.
What avails it to dream of the past?
The future for you and I.

Broken the silken chord.
Severed the golden chain,
Linking us with the beautiful days
That never can come again!

A printer, whose talents were but indifferent turned physician. He was asked the reason of it, and replied: "In printing, all the faults are exposed to the eye, but in physic they are buried with the patient, and one gets off more easily."

The human race is divided into two classes—those who go ahead and do something, and those who sit still and inquire, "Why wasn't it done the other way?"

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle-grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H. & L. AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories,

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL-OIL as a basis of their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural resin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest until, at the present time, they have established a manufactory of Rosin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply. The subscribers are now receiving native resin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] July 1.

The passing month of June has been the dullest one ever recollected, for many years, in the Grain and Produce markets and business generally. In Grain, prices have fluctuated very much, in consequence of the advance in rates, and the very general belief that our home demands and local requirements will consume the stock on hand and the bulk of the incoming short crop. Shippers and Exporters have been compelled to leave our market. The absence of this demand and the insufficiency of local trade have acted detrimentally in keeping prices steady. The disposition on the part of holders to realize their views have caused the offerings to be very light and in some cases a material advance has been conceded. Those cases are isolated for in a short time an increase on the market of offerings would be attended with a decline in prices. At the present there is no perceptible disposition on the part of buyers to enter the market, except for their immediate demands. The new crop will soon be upon the market, and until a correct opinion can be formed as to the quantity we will have no material change.

Potatoes are represented as promising very poorly (we refer particularly to the early crop), and prices are well sustained.

Hay comes forward in sparing quantities. The high prices of all kinds of feed act favorably in sustaining the price of Hay. Barley has receded somewhat and Oats are dull sale, at prices demanded by holders.

Our exports are as follows: Per bark A. A. Eldrege for Honolulu, 108 bf and 400 qr-sks Flour; 100 sks Oats, etc. Per bark Sirius, for Hong Kong, 2,000 bbls Flour. Per bark Carlotta, for Puenta Arenas, 1500 bf-sks Flour, etc.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 12,511 sks Barley 7,447 sks, Potatoes 415 sacks, Bran 924 sks, Flour 5,142 qr-sks, Wool 159 bales, Hay 1746 bales, Corn 175 sks, Straw 65 bales, Beans 400 sks.

Also Coastwise: Wool 275 bales, Wheat 580 sks, Oats 527 sks, Potatoes 556 sks, Barley 333 sks, Beans 850 sks, Corn 310 sks, Hay 30 bales.

Market well supplied with fruit and prices low.

New York Wool Market.

THOMAS Constantine's Monthly Wool Circular of June 1st says; During the greater portion of the past month, the market for Domestic Fleece was quite active, and considerable was sold at improved prices, which had the effect of bringing to light several large lots that had been held by speculators; most of those lots are now in the hands of manufacturers, and the stock of desirable Fleece Wool is now light; those who are fortunate enough to hold good lots, are firm in price, deeming such stock the most desireable property they can hold under existing circumstances.

During the past month, prices have advanced from 5 to 7 cents per lb, in view of the advanced rates of Duties.

The new Clip will, no doubt, open high, and we presume it will be some time before much of it finds its way into the markets, from the fact that a heavy duty will be levied upon Foreign Wools, and thereby (to some extent at least) prohibit importations, and with this idea, farmers will hold as firm, and probably firmer than last season, thereby rendering it difficult for buyers to operate. Some small lots of new clip are coming in from New Jersey, and our adjoining neighborhoods, which are readily taken at from 70 to 75cents per lb. These Wools are well washed and little or no twine on them, which make them desirable stock.

As the season will soon open for shearing in the West I deem this a proper time to make a few remarks relative to the price, condition, and putting up the new clip. I would advise farmers not to be led too far into the belief that exorbitant prices can or will be paid, but rather let a fair remuneration according to quality and condition satisfy, for by putting prices of Domestic wool at too high a figure, may again compel manufacturers to resort to the use of foreign stock; there is a point to which the prices of Domestic Wool can be carried, and beyond which it will not be wise to go, as it would frustrate to a consierable extent the benefit expected to accrue from the New Tariff, therefore, I would advise farmers to study the matter well over, and candidly and fairly decide upon the subject of selling, bearing in mind the old and appropriate adage, "Live and let live."

In reference to the condition and manner of putting up the new clip: I would recomend that more care be taken in washing the sheep. Some sections of the West that have heretofore borne the character of getting up their Wool in good order, are fast losing that reputation by allowing their sheep to run too long after washing; last season some farmers allowed their sheep to run from four to six weeks before shearing, thereby giving time for the grease to get started into the Wool again, so that when it is shorn it is almost in as bad condition as unwashed Wool; and not satisfied with this, they frequently put inside the fleeces (when they tie them up), all their tags in an unwashed state, this is fraud, and as such, the parties who do it are liable to punishment, and we hope buyers will be more cautious in their examinations, so that the farmer who does up his Wool in good condition and honestly, may receive the reward of well doing.

Another point to which I would refer, that of putting on an unnecessary quantity of twine; we find sections, particularly in this State, and the State of Michigan, where the article used for tying up fleeces, and called twine, approaches the character of ropes, and of which there will be sometimes from forty to fifty feet, weighing from four to six, and sometimes eight ounces on each fleece, this increases the cost of the Wool to manufacturers, which added to the shrinkage in cleansing, brings the clean Wool to such a high figure, that although we may have a heavy Tariff, still, Foreign Wool may be the cheapest to manufacturers after all.

Pulled Wools have been in good demand at improved prices, desirable lots have generally been taken as fast as they have been brought in.

California Wool is in very light stock; nearly all being sold, except a few scattering low, rough bury marks; there has been considerable inquirey for the better grades, but it will be some weeks before the new clip arrives. Foreign Wools have also been quite active, and considerable has changed hands at prices in propotion to the rates of gold. During the latter part of the month some of our importers went to the dealers, and bought Cape Wool at full markes rates, for the purpose of holding for speculation. We have a fair supply in market, but out considerable is not present offered for sale.

Liverpool Wool Market.

JOHN L. BOWNS & Bro's Wool Circular, 14TH MAY 1864, says: The Liverpool sales of Sundry Wools, at wich 20,124 bales were offered and 8,230 sold, closed yesterday. There has been a full attendance of home and continental buyers, the former took more than their usual propotion, and were the most willing purchasers. All well-conditioned medium and coarse Wools, particularly those with long staple, sold freely at prices tending decidedly in favor of sellers, current kinds being fully 10 per cent higher than at our Feb sales; but a quantity of faulty old stock—brought out by the high prices at which good Wools are selling—had to be withdrawn. For the U. States purchases are almost suspended.

London.—Public Sales of fine Wools—Colonial and Foreign—commenced here on the 5th inst. Competition is active, and prices are tending upwards, frequently showing a decided advance on those current at the close of last March series. Prime well-conditioned Port Philip washed Fleece Wools, of which there is now a large selection are taken eagerly at 26d to 29d per lb., being still dearer than at that period, when unusualy scarce. Sydneys are in good demand, but, as a rule, stout combing Wools are, in propotion, higher than clothing descriptions, and the low qualities, if deep grown, are more valuable than the finer portions of the same flock. Wools in the grease are in much request for export to the continent, and command extreme prices. Cape Wools have turned this week somewhat in favor of the buyers, competition for Belgium being rather slack. Superior greasy 10d to 11d, ordinary to average 9d to 9½d.

1864. 1864.

HARVEST MACHINES.

TREADWELL & CO., Importers and Dealers in Agricultural Goods and Hardware, offer for sale, at their Stores in San Francisco, Sacramento, and Marysville, the following desirable Machines, etc:

"WOOD'S" PRIZE MOWER.

"KIRBY"
Combined MOWER & REAPER.

BALL'S OHIO, THE ORIGINAL
"BUCKEYE,"

Winchester's HYPOPHOSPHITES

Act Promptly and Certainly in all Stages
....OF....

CONSUMPTION.

THEY IMMEDIATELY INCREASE the Strength, and deepen the color of the Pale Blood. They check the Night Sweats, always, in from seven to fourteen days; the appetite is at once invigorated and the patient rapidly gains flesh; the cough and difficult breathing are speedily relieved; the sleep becomes calm and refreshing; the evacuations regular and uniform

"In no instance," says Dr. Churchill, "have I found the Remedy fail to produce every thing that could be reasonably expected from it"

"I have no doubt whatever," says Dr. Townsend, of Chatham, Pa., "of the superior efficacy of the Hypophosphites over all other medicines or methods hitherto discovered."

The Hypophosphites

Have a TWO-FOLD and SPECIFIC ACTION: On the one hand as a prompt and powerful

NERVOUS TONIC,

increasing the vital energy; and on the other as a generator of

New and Healthy Blood,

Invigorating the whole system. They should, therefore, be used in all cases of

Nervous and General Debility,

Wasting of Flesh, Loss of Strength or Appetite, Paleness or Deficiency of Blood, Languor or Listlessness, Cough, Night Sweats, Chronic Diarhea, Scrofulous Sores!

Also, in Chronic Bronchitis, Asthma, the Debility or Weakness of Young Children, and as an INVIGORATOR to women of feeble vitality during gestation and the period of nursing.

WINCHESTER'S

Genuine Preparation of the Hypophosphites

Is the only reliable form of Dr. Churchill's Remedy, and is approved by the Medical Profession generally. USE NO OTHER, or any Remedy containing Iron.

CONCENTRATED SOLUTION in 7 oz Bottles, prepared expressly for California, $2 per Bottle—Three Bottles for $5 in coin. Circulars, free. Sold by all respectable Druggists, and by

J. WINCHESTER,

At the AGENCY DEPOT, 206 BUSH STREET, opposite the (new) Adelphi Hotel, San Francisco.

Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOMA County lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P. Swift, Esq. containing 14,000 acres of land is offered for sale in Lots or farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality It is accessible to market being adjacent both to Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point.

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the offices of Haight & Pierson, 622 Clay street, San Francisco or at the store of Mr. Faulo, Sonoma.

California Cider and Vinegar.

THE UNDERSIGNED INVITE THEIR Friends and the Public to call at their Manufactory, 642 MARKET STREET, Exactly opposite Third street, and see somewhat of a curiosity in California: A CIDER MILL. And, if you wish, we shall be pleased to furnish you with new sweet Apple Cider, dripping red from the Press, and in its season the juice of Grapes or any other Fruit Drinking new sweet Cider is known to be healthy, giving a ruddy glow to the complexion.

Nearly all the Vinegar sold in San Francisco is a manufactured imitation, made from corrosive acids. As people have provided their families with what was sold as Cider Vinegar, but which was in fact a poison, we mean to keep nothing but CIDER and VINEGAR and that genuine

If we are to succeed in our experiment of substituting pure Vinegar for the villainous fluid which has been the health of thousands in California, it can only be done by a general patronage, and we trust to receive a call from you.

Lebaron & Thresher.

Cider Mill, No 47 Metropolitan Market.

☞ We have an Order Box at C. E. Collins, 602 Montgomery street, and will deliver Cider and Vinegar to any part of the City Free of charge. Orders sent through Wells, Fargo & Co., will be promptly attended to. 16-3m

The Farmers, Speculators.

The unsteady and speculative condition of our grain market we know is sometimes caused by the desire of some farmers to become speculators. Ask our millers who are the greatest speculators, and they will tell you the farmers. They say the farmers will often fly from contracts made for their grain, if the market is rising and they can get more, but they will hold the miller to his contract if it is a falling market, i. e. they become speculators *de facto* and, as millers say, they don't stick to their contracts. This is all wrong. Farmers should never become speculators, as that term is understood; they should never imperil their word or bond merely to get an advance, for by so doing they jeopardize all their future, and we feel confident, from facts within our own knowledge, that the farmers have greatly suffered by reason of the wrong they have practiced in not always adhering to every engagement, even though it may have endangered hundreds, or even thousands of dollars of loss. We are glad to know that this does not apply to all farmers, many of whom are the reverse of this.

THE STARS OF SEVENTY-SIX.

ANNIVERSARY ODE.

BY ELIZA A. PITTSINGER.

[We give our readers the benefit of the following beautiful and appropriate "Anniversary Ode," which was published in the American Flag. This is one of the best efforts of the authoress, and we are glad to know that her various and numerous pieces are to be issued in a volume—it will have a large and ready sale.]

Tune your harps and lift your voices!
Bear your gleaming banners forth!
Freedom lives and truth rejoices
'Neath the day star of the North.
Wake ye sons and blooming daughters,
Come and join the festive throng,
Blend the strains our fathers taught us
With the music of your song!

Glow ye fountains of inspiration!
Burn, ye stars of Seventy-Six!
For this festal of our Nation
Must a grander one prefix,
Ever on must be the motto,
Onward still Creation's call—
Hear it whispering from the grotto,
Hear it from the banquet-hall!

Progress gleams upon our banners,
From the lips of wisdom glows—
Suns that dim the hot savannas
Cannot quench our crystal snows;
Progress! shout our boldest sages,
Progress! an opic sings,
Bearing on illumined pages
Prophecies of grander things.

Who would tame the haughty eagle,
And his soaring pinions bind?
Who enchain or curb the regal,
Mighty marches of the mind?
Who would strike the chains asunder,
Wisely linking race to race?
And the blazing orbs outnumber
Circling through the vibrant space?

To the realms of inspiration
Who on spirit wings would mount,
And assail its exhalation
To a world-adjusted count?
Who would span the depths of ocean,
And the meteor's brilliance shun?
Who would check the wild commotion
Of his orbit from the sun?

Hush! my fancies thus digressing—
Let your wandering pinions fix
All the ardor of their blessing
On the stars of Seventy-Six!
To my theme again returning,
Still my thoughts intensely soar
To the hopes that now are burning
For the fate of Sixty-Four.

War, what is thy hidden mission?
What thy destiny with man?
What dread powers thy deeds commission
In the darkness of their plan?
Who that treads the broad dominions
Of thy tempest-riven shrine,
May on soul illumined pinions
Scan the depths of thy design?

What inspired god may beckon
From the zenith of his thought,
When the Victor-Hand may beckon
Back the chaos it hath wrought?
When that power, unknown, but knowing
From the transient fit the good,
Wisely times the grand bestowing
Of a greater Brotherhood.

San Francisco, July 2, 1864.

Letters from an Old Californian at the East.

NUMBER TWENTY-THREE.

New York, June 4, 1864.

The War.

Editor California Farmer:

The every day of life of the great city would hardly convey an idea of war to an ignorant observer. The crowds of people who throng the streets, intent on business and pleasure, seem larger than ever; but to one acquainted with the characteristics of this vast hive, the signs of an excited state of the public mind are quite evident. The newspapers, like the Herald, and Times, are eagerly read wherever and whenever the busy people find time, and the bulletin boards are always surrounded by a crowd. I speak of the Herald, and Times, particularly, because a person who is not a regular subscriber is constantly bothered by the reply, "all gone sir," while the "but here's the World, Tribune, and News," is equally unsatisfactory. The "extras" are issued at every opportunity, and the sharp little newsboys often cheat anxious individuals into giving ten cents for them. At first the people were impatient to hear of the capture of Richmond, but now they understand Grant better, and are anxious to know, not if Richmond has surrendered, but if Lee is so placed that he must surrender unconditionally. The Copperheads have changed in their tune. They say they suppose Richmond will be taken, but Lee will only change his position to a stronger place. I suppose they mean he will retreat victoriously, like Johnson. Talking o Copperheads reminds me that I was finding fault with the Southern sympathizers of New York, the other day, when my friend replied to me by showing the Monitor and Democratic Press. I could only reply that I supposed the leniency of the Administration towards the traitors of the North had made them bolder everywhere. Before leaving California, I used to have some violent arguments with certain aristocratic Irish people, who defended the British peerage in its unfriendliness towards the North, and whose sympathies, I could easily see, were with the rebellion, but I was not prepared to see the organ of the Roman Catholic Church in California take such a disloyal position What does it mean? As for the Press, it is like the Varieties, and its opinions of equal importance. I suppose it is not worth while to express any indignation at the appearance of either paper. I shall not, hereafter, be so ready to claim that California has fewer hypocrites and traitors than other States.

Stocks.

The sudden fall in the value of first-class mining stocks has created a considerable excitement among the Californians here. The speculators are trying hard to get up a great mining fever in New York. It is doubtful if they will succeed, for the depression of all mining securities on the Pacific Coast is well known and freely commented on.

Fremont.

I suppose the nomination of Fremont for the Presidency will not be hailed with acclamation in California. The only warm friend of Fremont's, that I ever talked with, among the pioneers, was Thos. C. Larkin.

Steamboats.

I had occasion to visit the new Hudson River steamboat "St John," yesterday. She is about four times handsomer than the Yosemite. It was my impression that the Sacramento boats were at least equal to those on the Hudson. It is not so; judging by the St. John. Her main saloon well deserves to be called magnificent. I likewise had an opportunity of visiting the Persia, but she is not, to my mind, equal to the Constitution. The furniture, however, is much handsomer. I hope the Pacific Mail steam-ship line will have some of their new boats on this side, or compel Vanderbilt to change his dirty tubs for something respectable in the shape of steamers.

The Worm Nuisance.

In my last I spoke with delight of the appearance of the foliage. The pleasure is much marred by the nuisance of "measuring worms," as they are commonly called. Brooklyn, in particular, is infested by them, and, unfortunately, they abound in the pleasantest localities. The Central Park is not disturbed by them. The beautiful little birds, who seem to know by their tameness that it is their home, are able to make a grateful return for their freedom.

Paintings.

I have been twice to see Rossiter's celebrated picture "Eve in the Garden of Eden." It is one of the most successful of his efforts. It is more like a sleeping Venus than Eve. The tone of the picture I certainly find fault with, but the drawing and coloring are very fine. The picture is exhibited in a darkened room, by gas light, and opposite is a large mirror in which the visitor can see a reflection of the picture. I have never seen a more delicious effect. On the one side was the work of man, on the other the result of enchantment.

At Schaus' gallery, on Broadway, are a number of admirable pictures. A Californian in New York, cannot spend a morning more profitably than by visiting Schaus', Goupils, and Brady's galleries.

Amusements.

Wallack's Theater is still the "Maguire's" of New York. I think I like Miss Coombs better than Mrs. Hoey; but the great pleasure of Wallack's is not the brightness of any particular star, but the perfection of the simplest and most unimportant characters. I have likened the theater to Maguire's, because it is the most fashionable place of amusement in New York. I am delighted to read in the Boston papers that the German Opera is appreciated at last. In New York, the company were miserably patronised, but in Boston the people are enthusiastic, and crowd every performance. I have never heard such orchestra playing in my life, and was amazed at the coldness of the public here. In music, fashion reigns in New York to the exclusion of merit.

The Draft.

The approaching draft does not excite any uneasiness now, as the militia and police forces are awake and ready for any emergency. The success of our national arms renders a draft much less unpopular than it otherwise would be, and everything in New York appears to be going on smoothly. Let me copy what the World says about Gold:

Rebel Influences in Wall Street.—Some people are given to imagine that the price of gold is a good evidence of the nature of the news from our armies, whether favorable or unfavorable, and that in fact Wall street is the grand and infallible indicator how the war is going. If gold operations were fairly conducted, and the quotations from day to day represented the *bona fide* value of the article, it might be a safe index in this particular. But this is not so. Wall street is, in a measure, in the hands of rebel sympathizers and direct rebel agents, who create a fictitious price for the purpose of showing the embarrassed condition of affairs at the North, to dispirit our people and give comfort to the enemy and his agents.

There is nothing substantial in the way these gentry carry on the proceedings except the sucess which attends them. A rebel agent nominally buys or sells with another with whom he is in collusion, at a high rate, neither of them having a dollar with which to operate; and this quotation is immediately blazoned abroad as the price of gold, whereas there is really no gold at all represented in the transaction. The merchants who want gold to pay duties purchase it as they would calico or broadcloth to meet their needs; but the speculators run the price up or down to suit their own nefarious ends. That these people are in the interest of the rebellion is evident from the prominence which all the Southern papers give to the gold quotations in Wall street, which they sometimes give at a hundred per cent more than the true rate. Thus the Charleston *Mercury* of the 20th quotes gold at 176, but adds that these figures probably mean 186, and, further, that this is only the premium, thus making the actual price of gold in New York 296. No doubt these statements, absurd as they are, are greedily swallowed by hundreds in the rebel States. This is the mode by which the gold market is regulated to further the ends of traitors North and South.

New York, June 11th, 1864.

Boarding Houses in Europe.

You may recollect that it was my intention to have visited Europe this year; thinking that some of the information may be useful to those of your readers, who contemplate a similar excursion, I copy from my note-book as follows: In Liverpool separate apartments, reasonable in price and respectable in locality, can be had at Parry's public library, at the top of Renshaw street, also at Mount Pleasant, very near. In London apartments similarly situated can be found in Warrick, leading from Regent street, also in Bremer street, Golden Square, resorted to by the theatrical people, is very well spoken of, the rooms are said to be very large. In Paris, Rue Mont Thabor, back of the Rue de Rivoli, is an admirable locality. No. 36, Rue Mont Thabor, is a small place occupied by excellent people, the price is very moderate owing to its being an old-fashioned house. I copy these memorandum because it is difficult for a person, traveling in a quiet way, to find a resting place in the three great cities, which unites cheapness with respectability.

I have spoken of meeting a number of Americans who have returned from Europe who advise me against making an outward-bound trip, at present, but their objections seem to be unknown to the crowd of travelers who are filling up all the berths in the steamers.

Fashionable Churches.

Last Sabbath I attended divine service at Christ Church, Fifth Avenue, the rector is our old friend Rev. F. O. Ewer, who has the reputation of being one of the pulpit orators of New York. In consequence the congregation is very large and strangers are accommodated by camp stools placed in the aisles of the Church. The sermon was a most interesting one and I could see that it made a profound impression upon the minds of his hearers. The music was not very good but the soprano singer in one of the solos made a grand attempt to exhibit her knowledge of trilling that while it might have afforded the leader infinite satisfaction disturbed the devotions of the congregation.

The Effects of the War.

No matter where you go you are constantly reminded of the presence of war. Promenading Fifth Avenue on Sunday afternoons about every fourth lady is attired in the somber habiliments of mourning. Lounging on Broadway almost side by side are the dandies and the wounded soldiers. In the Central Park, mixing with the gay crowd, you can see officers on crutches, and groups of soldiers whose faces and bandaged limbs show that they have been in the ranks where danger grapples with men. In the Art Galleries, nearly half the pictures are scenes in camp. In my weekly visit to Schaus' and Goupil's I was delighted by some plaster groups, the work of a young New York artist, by the name of Rogers. They describe vividly the scenes in a soldiers' life, and you would not be able to hide the smile at the comicalities of some of the groups, nor the tear that would involuntarily moisten your eye at the exquisite pathos with which scenes of death and carnage are represented. The faces and figures are wonderfully truthful. The price marked upon them was so cheap ($15 for the large groups), that I asked the clerk if there was no mistake. In reply he told me that Mr. Rogers was more desirous of having his works universally known than anxious to make money and that the price afforded a very small profit, but the sale of these figures is consequently very large.

I visited, the other morning, the exhibition of the Natural Academy of Design. Here, too, the pictures illustrative of the contest in which we are engaged are very numerous. One of them, in particular, deeply touched me; it represented a scene in one of the hospitals. The patient looks of the soldier as he struggled to bear the agony of his wound, uncomplainingly, haunted me for days. Near this picture was the portrait of a broker who speculates largely in gold. I knew of the fact by the scornful words of a lady who wondered if the managers of the exhibition were innocent of inviting the contrast. If the owner of "a portrait of a gentleman" could have heard the rest of the remarks and could have looked into the pale scornful face of the girl, who evidently appreciated the truthfulness of the hospital scene, he would have demanded the permission to take his picture home. Hereafter what an agreeable position will copperheads, speculators in gold, and army contractors occupy! The friends who have danced around the conflagration which the gallant soldiers and sailors of the country are slowly but surely conquering; those who have openly fought against us will be forgiven, but these miniature Arnolds never! I say *miniature* Arnolds, because they resemble him in treachery only, certainly not in genius or courage.

Grant Meeting.

The Grant meeting was a great success, although it was considered untimely. Let me copy a few of the remarks of that distinguished democrat, of the old school, Hon. James Brady:

We do not come here this evening for any political or party purpose. Inclined to such a sentiment, or impelled by such a motive, I should not have presented myself here at all; but we do come to render justice to the merits of him who stands at the head of the army, and to every officer who fights with him, and to every private who serves faithfully in the ranks ("Good" and applause.) We have come here to express our gratitude to those who have served in the past, as well as those who render service in the present, and while we remember the name of Grant in Virginia, we do honor to the name of Sherman, who is attacking another portion. (Cheers). While we express, so far as we can, our confidence and admiration of those who have the supreme commands, we have not forgotten our great cavalry officers, Averill, Kilpatrick and Sherridan—(Good—and applause)—men of whom we at the North can say, what no Southerner can say about the rebels, that neither of them ever perpetrated such dastardly and miserable acts as those which have disgraced Quantrell and Forest. (Renewed applause.) I congratulate you that we meet here on Saturday evening; although if the mere presence of numbers were to attest the success of the assemblage, Saturday evening, at 6 o'clock, would not seem to be the best time to draw together the laboring classes, who about that hour receive their wages; but everybody knows what the sentiment of this city has at last come to be. It was not always as it is when I speak to you now. Within the sound of my voice, feeble as it is, in houses where these tones can be heard, traitors have been living since this revolution has broken upon us. In the luxurious clubs of men within the sound of my voice have been the skulking and spurious Southerners, who stayed here among us, making money, not having the courage to share in the danger to which they invited their brothers at home. ("That's so," and applause.) I see one of them in this crowd—

A voice—Name him—Call him out.

Mr. Brady—I beg your pardon; we will not imitate the example of the South, which won't permit a man, and never did permit a man, to express his sentiments, unless they agreed with those that prevailed there. Thank God we are for freedom, and I shall permit no interruption in my individual case, nor in the case of classes. We were troubled with a set of truculent traitors born at the North, who would rather that their country should be murdered than one of their dogmas disproved—("Good" and cheers)—men who did not have the audacity to assist in the assassination of the Union; who stood with their dark lanterns in appropriate places, holding them in such a position that they covered their precious carcasses, but shed light upon the heart into which the reeking dagger of the paracide was to be planted. (Cheers and laughter.) We are done with the sneaking, miserable dastards, who, when the "extras" came about the time of the battle of Gettysburg, skulked into the corners of drinking saloons, though men of what they call a high station in society, and trembled and faltered because they were afraid, really afraid, that the American Flag had prevailed. We have done with them; these men belonged to what they called "the peace party." ("Groans for them," said an individual in the crowd; the groans were promptly given.) And it is now, continued Mr. B., in such fragments that the only view you can catch of a man belonging to the peace party is to see them hurry forward lest some of the falling bricks may destroy their miserable life. We are done with them; and as I congratulated you at the beginning that we had a united army, so now I tell you we have a united North. ("Yes, yes," and cheers.) I have characterized these wretched traitors who have been amongst us. There is another class of men who have not been fervent and warm-hearted in supporting their country during the war, but who, nevertheless, have never desired that the Union should be destroyed or disgrace visited upon our arms—a class of men who unfortunately have mistaken the right to criticise the acts of the administration for the right to go against the national existence. They are seeing their way clear out of the erroneous path into which they permitted themselves to be misled. As sure as you stand here, of all the men at the North who heretofore have in any way permitted themselves to be arrayed, even for one instant, against the prosecution of the war, the residue now left is so small that on any rainy day it can meet under an umbrella in the Park. (Laughter and applause.) Let me tell you another thing, and you will have it verified in your personal experience—that all these men who have undertaken to set up their own peculiar opinions against the existence of the country, it will one day or other be required to produce more witnesses in a court of justice to prove that they were not always loyal to the Union than they could ever call to prove that a generous emotion stirred in their bosoms. (Laughter and cheers.)

The result of the Baltimore Convention has given great satisfaction. The ticket will unite the conservative republicans and war democrats. The Border State lords have sworn never to yield as long as Lincoln is President. They may now have a chance to try which is the stronger, the people or the politicians.

The concluding excitement of the week is the victory of the left wing of Lee's army, in New York—of course I refer to the Lamar gold speculators. In some cases 1 ₱ cent per day has been paid for money in order to work out this triumph. Is it not infamous that a well known band of traitors dare to tamper with the currency of the whole nation? The "opposition," as the copperheads delight to call themselves, oppose the gold bill in Congress, and in answer to the appeal of the people, who are suffering by their treachery, answer mockingly, "The Union and the Constitution." These traitors merit the burning reproach applied to them by by Parson Brownlow.

The greatest consternation is exhibited by some of the Californians, in New York, at the mining news from the Pacific. Is even the Gould & Curry, they ask, with pale faces, worthless? *Quien sabe?*

M. A. S.

The Siamese Twins.

The Siamese Twins.—A correspondent of the Macon, Ga., Telegraph, who lately visited the Siamese twins, gives the following account of them.

"Your readers have no doubt seen those remarkable individuals, the Simese twins, but few of them, perhaps, have been to their houses and seen them in their domestic relations. Though united by a ligament, as strong as life itself, they live a mile apart—spend alternately three days at one and the other's house—and allowing no circumstance to deter their departure from one to the other when the regular time arrives. The one at whose house you visit them leads the conversation and acts as master of ceremonies, while the other speaks only as occasion or politeness may require. One has eight and the other nine children, but one of whom is in the war; the rest being girls and little boys. The twins are good neighbors, intelligent men, and thoroughly patriotic. They are, to all appearances, two separate and different men, with very little social resemblance, and a marked contrast of character. Eng is much the most positive, self-willed and uncompromising. They are seldom both sick at the same time. why should death result from a separation of persons so unlike, and so little subject to be afflicted by each other's infirmities."

Here is a subject for the physiologyst of the age, if these two strange beings thus united are so different in character, will, power of feeling, if the sickness of one does not effect the other, why may not the chord that binds them be severed with safety? For it is self evident if fatal sickness comes one or the other must die if still united, why not sever the chord now? Let medical men answer?

A Boston paper tells this little bird story: "A pair of robins, whose twitter enlivens the groves of Newburyport, have manifested their love for the 'land of their birth,' and their loyalty to the Union, weaving into the fabric of their nest for this season a paper copy of the American flag, 'red white and blue,' and inserting beneath a brass thimble, mouth upward like a mortar, doubtless to serve for its defence. The nest, we are sorry to say, was robbed of four eggs and knocked from its perch by some mischievous boys."

[We give the above as a very beautiful incident and worthy of preservation.]

Imports and Exports.

The following tables of imports and exports will awaken great interest in all who regard the prosperity of our country. These tables will show how rapidly our country is growing poorer and poorer by her excessive imports. These facts should awaken thought to the subject. We take the following from the bi-monthly report of the Agricultural Department at Washington:

"If statistics ever taught a truth that patriotism demands should be heeded, it is those we here present on the imports and exports of the country at New York, since January 1, 1864.

Imports of Foreign Dry Goods at New York for three months from January 1.

Entered for Consumption.

	1862.	1863.	1864.
Manufactures of Wool	$5,735,960	$6,000,178	$10,516,319
do Cotton	2,062,735	2,297,489	3,259,580
do Silk	2,048,818	2,977,314	6,319,632
do Flax	1,582,068	2,672,456	3,102,297
Miscellaneous dry goods	486,226	963,641	1,467,544
Total	11,531,797	14,870,678	$24,806,092

Withdrawn from Warehouse.

	1862.	1863.	1864.
Manufactures of Wool	$1,566,107	$877,907	$1,723,016
do Cotton	1,208,961	477,613	867,578
do Silk	1,231,930	674 991	1,084,296
do Flax	570,718	321 498	860 480
Miscellaneous dry goods	183,861	115,287	159,156
Total	4 753,727	2,527,208	4,696,526
Add above amt entered	11 531,797	14,870,678	24 806,092
Total thrown on market	16,310,584	17,297,886	29,502,338

To this amount for dry goods add the imports of other articles for the first three months of 1864, viz; $31,068,186, and the total imports for these months are $60,570,714 at New York. This is the value in gold. To ascertain the cost in currency, about fifty-five per cent should be added. This would make the importations at New York, for the three months of January, February, and March, of the value of $93,884,606.

Exports from January 1 to April 6 at the port of New York

Domestic Produce.

Clover seed, from Sept 1, 1863, to April 1, 1864, tons....1,204
from Sept 1, 1862, to April 1, 1863 do 6,670
Timothy-seed, from Sept 1, 1863, to April 1, 1864, bags....397
from Sept 1, 1862, to April 1, 1863, do 2,976

	From Jan. 1.	Same time last year.
Flour, barrels	836,066	672,823
Rye Flour, do	1,271	2,270
Cornmeal, do	25,602	30,999
Wheat, bushels	3,700,529	3,634,855
Corn, do	72 901	2,178 650
Rye, do	405	17,256
Barley and Malt, do	130	51,130
Oats, do	11,977	[illegible]
Peas, do	64 614	57,754
Cotton, bales	4 863	295
Hops, do	11,317	12,677
Tobacco, hogsheads	5,527	3 665
Manufactured, pounds	772,394	694,923

Provisions, Etc.

Pork, barrels	49,356	52,334
Beef, do	10 703	12,479
Beef, tierces	32,136	30,497
Cut meats, pounds	58,516,633	100 654 855
Butter, do	4,656,093	5,564,385
Cheese, do	8,509,772	5,792,153
Lard, do	12,398,456	51,063,332
Tallow, do	12,111,570	11,977,795

The *value* of exports produce from New York from January 1 to the 4th of April in *currency*, is as follows: 1862, $34,903,292; 1863, $54,137,715; 1864, $42,734,973.

The national account sums up thus, for the first three months of 1864:

Imports	$60,584,606
Exports	42,734,973
Balance against the people	51,149,633

Is it any wonder, then, that to meet the great demand of gold for exportation which such a trade creates, the difference between currency and gold widens every day, despite the efforts of government to lessen it.

How to obtain Neat's Foot Oil.

A writer in the *Country Gentleman* thus describes the process of making this oil:—

"The process of obtaining this kind of oil is very simple, and many farmers often throw away enough feet annually to furnish oil sufficient to keep all their harness, shoes, and leather machine belts in the best condition. By breaking a bone of the leg of a fat bullock or cow, it will be found full of an oily substance which often appears as rich and edible as a roll of excellent butter. This is neat's foot oil, and it is sometimes surprising to see how much a single foot and leg will yield when it is properly treated.

"In order to extract the oil, wash the hoofs clean then break up the shin bones, the finer the better, and cut the hoofs and bones into small pieces. Then put them in a kettle of any kind and pour in water enough to cover the bones. The kettle should never be filled so full that the water will boil over the top of it. The finer the bones are broken, or cut, or sawed, the sooner the oil will be driven out. Now, let the kettle be covered as tightly with a lid as it can be conveniently, and boil the bones thoroughly all day. Of course, it will be understood that more water must be poured into the kettle as it evaporates.

"The object of covering the kettle with a close lid, is to retain the heat as much as possible, and thus expel the oil from the bones. The hot water and steam will liquify the oil and expel it from the bones, when it will immediately rise to the surface of the water. Therefore it is very important that the water should not be allowed to evaporate so low that the oil that has risen to the surface of the water should come in contact with the dry hoofs and bones, as much of it will be absorbed by them, and will be lost unless it be again expelled by boiling.

"When there appears to be oil enough on the surface of the water, pour in a pailful or two of cold water to stop the boiling, or let the fire burn down. Now dip off the oil in some clean vessel, and boil them again until there is oil enough to be dipped off again. The oil that is obtained by the first boiling is purer than that which is obtained at the second or third boiling.

"There will be some water among the oil which must be evaporated; therefore, put the oil in a clean kettle and heat it just hot enough to evaporate the water, and the oil will be ready for use. Great care must be exercised in heating the oil, so as not to burn it. As soon as the oil begins to simmer a little, the oil may be removed from the fire, as the water has evaporated. Water in oil, heated to the boiling point, will be converted into steam almost instantaneously, as may be seen by allowing a few drops to fall into boiling oil or hot lard. [This occurs from the difference of temperature at the boiling point of the two liquids, that of linseed oil being 597°.—Eds.] Let the oil be kept in a jug corked tightly, and it will be ready for use at any time for years to come. In very cold weather, however, it will require a little warming before using it."

A Valuable Scientific Paper.

We have received from Dr. Thos. M. Logan, a valuable pamphlet entitled "Contributions to the Physics, Hygiene and Thermology of the Sacramento River." This pamphlet we esteem of so much value to science that we give it a place entire in our columns, with the hope that all those who are interested, not only in "Health," but in floods and causes of floods, and their effects upon the soil (and here the farmers are interested) will peruse this document, as they will find very much to interest them.

Dr. Logan unexpectedly received the appointment as chairman of a special committee on the Medical Topography and Epidemic Diseases of the Pacific coast from the "American Medical Association," and although his appointment was not made till late last year, yet, as has been truly said, a world-wide spread influenza has prevailed over the whole country, this succeeded by what is usual, measles, scarlatina (very fatal in our State) and many other diseases, the report submitted by Dr. Logan is evidence that a better appointment could not have been made. What has been done is well done. Dr. Logan has done much for science in our State. His "Tide Map" of the Sacramento river is a valuable work—it can be seen at our office—and his meteorological tables have all been honorable testimonials to him. The services of such men, those who have grown up with our State, are beyond price—their works praise them.

The following paper, which was prepared as an appendage to a chart of the Hydrography, Meteorology and Hyctography of the Sacramento river, was read some time ago before the California Academy of Natural Sciences. It is now for the first time published in the hope that as a contribution to the physical history of the great commercial highway of California, it may prove acceptable to naturalists and physicians, who know how to estimate facts, although they may not always be able to supply them straightway to utilitarian purposes.

The chart was prepared and published at the instance of the Surveyor General, who was desirous of preserving in concise form among the State archives, for future reference, as much statistical information as possible in regard to the floods of 1862–63. And although it is not intended to apply the facts thus furnished, and others now to be presented, to support or oppose any general or special theory respecting the Levee system, or provisions against future inundations, still we think that the value of a simple knowledge of these facts cannot be too highly estimated.

In this view of the subject we shall at once proceed to consider the Physics of the river, in connection with the Sacramento basin. The extensive water shed of the Sacramento River comprises, we might say, two distinct basins. The one, with which we are all familiar, and of course the largest of two, extends from the Sierra Nevada Range to the Coast Range—being an average distance of 160 miles across from east to west; and is about 180 miles from north to south, or from Lassen's Butte to the meeting of the waters of the San Joaquin, which, together with the Sacramento River, debouches through the Straits of Carquinez in their passage to the Bay of San Francisco. This area equals about 27,000 square miles, besides which there is also the Pitt River, or upper Sacramento district; and it is a remarkable fact that this basin drains the north side of the Lassen's Butte Range, the summit of which is 9,000 feet, and which bounds the southern basin. Although these two basins are connected by the narrow straits, which sever Mount Shasta from the Lassen's Butte or western Sierra Nevada Range, Dr. Newberry (see Pacific R. R. exploration reports, vol. 6) is decidedly of opinion that, at a remote period, this western Nevada Range united with Mount Shasta, now ascertained by Prof. Whitney to be the highest mountain within the limits of the United States, viz: 14,440 feet above the sea-level, and forming the calumniating point of the Cascade and Sierra Nevada Range; but that the Pitt River in its winding course of more than 150 miles before reaching Mount Shasta, and descending from the Goose Lake district of the Sierra Nevada Range, forced itself a channel, first through the Pitt hills, and ultimately severed the Lassen's Butte Range from Mount Shasta. The drainage area of the Pitt River basin equals fully 2,000 square miles, and is singular in its conformation throughout. For the greater part of it constitutes a high plateau some 4,000 feet higher than is attained at Shasta city or Fort Reading, and for nearly a hundred miles the river has cut itself a canon through a succession of walls of volcanic rock, descending by a succession of plateaus to the western chain of the Sierra Nevada. (See Pacific R R. Co. Reports, Vol. 6.) As a water-shed this Pitt River basin by means of its greater altitude is of nearly equal importance to the larger area running south from Lassen's Butte: for the rain-falls and snows over its whole area are hardly less than three-fold greater per mile than the average of the southern basin. Supposing therefore a high freshet in the southern water-shed equals three inches per day, and would produce over its whole area of 27,000 square miles 188,179,200,000 cubic feet of water, and the same freshet equaled nine inches in the Pitt River or Cascade Range district for 9,000 square miles, we should have to double the amount above stated in estimating the whole of the probable amount of water brought down day by day, while the storm lasted.

Nor need it be objected that this amount was chiefly snow in the last flood, for it was so immediately followed by warm rains that the Surveyor General reports that scarcely any more remained in the mountains. To proceed then, the two basins would yield the enormous quantity of 376,358,400,000 cubic feet of water, which would fill more than seven channels, each 400 miles long and 500 feet broad and 50 feet deep: or, in other words, it would require more than ten times the capacity of the Sacramento river to carry it off, without overflow: assuming the principle, as an approximation, that it may take the same time to run out, that it runs in.

Before dismissing this branch of our subject, we will refer again to Dr. Newberry's Geological Report of the Shasta and Cascade Range basin.

He states that the characteristics of the canons unmistakably indicate glacial origin; such glaciers must have extended over large surfaces in the Cascade mountains, and formed the deep canons through which the streams draining these mountains and the plateau of the great basin uniformly flow. In the magnitude of such excavations, often in the most resistant material, there is evidence that the amount of precipitation which formerly supplied them was much greater than now. With the former existence of glaciers in the Cascades, the average temperature must have been much lower than at present, to produce which, either there existed a great and radical difference in the climate of the coast, without a change of elevation, or, the climate remaining the same, the elevation of the coast must have been several thousand feet higher than at present. All the vapor which floats above these mountains would then have been congealed and precipitated, and the amount of moist air so precipitated upon the mountains would have been vastly greater than now. For instead of the mountains presenting isolated peaks rising above the line of congelation, they would form an unbroken wall, of which the summit, white with perpetual frost, would rob of all its moisture the wind, then, as now, flowing over it from the Pacific. This precipitation, though greatest on the western slopes, and forming by its congelation sheets of ice, which would reach far down its sides, crowding themselves into the angular valleys, which now lead toward the Pacific, would also extend its influence to the eastern slope, fill many of its basins, now dry, with water, give greater volume and efficiency to the streams, enable them to score deeply the surfaces of the plateau, and force mountain barriers to reach the ocean, cutting deep channels in its shores where we now find them. (See Pacific R. R. Exploration Reports, Vol. 6.) It must be obvious that in attempting to approximate to ever so imperfect an estimate of the head waters of the Sacramento in times of freshets, great as the volume of water undoubtedly is, we must banish from our minds the idea that these deep canons and chasms have been caused by the simple freshets known in our generation; for Lieut. Beckwith in the work cited, states that from the most reliable information he could obtain from the residents of two or three years standing, it appears that the amount of snow which falls upon the mountains is large, but upon the river itself is small—never exceeding four or five inches in depth; and the river-banks being completely sheltered from the winds, snow never accumulates in drift—being deposited in the sheltered sides of the mountains long before reaching the stream. The river is also never choked up with ice, but rises at least ten feet in times of freshets.

BANK OF LONDON,

THE UNDERSIGNED GIVE NOTICE THAT THE above named Corporation has been organized for the purpose of carrying on the Banking and Exchange Business, in all its branches, in this City and in the interior of this State, the neighboring State and Territories, and with Mexico; also with the Atlantic Cities, Europe, China, and the East Indies; for which they are provided with ample facilities, and in conformity with articles of association will commence operations on the 5th day of July next, at the Banking House now occupied by Donahue, Ralston & Co., Corner of Washington and Battery streets

With the view of giving to the business of the corporation all the efficiency and promptitude of a private banking firm, together with that confidential seclusion of private business matters so generally desired, the immediate management of its affairs is committed exclusively to D. O. Mills and Wm. C. Ralston, as President and Cashier respectively, to whom, or either of them, the customers of the Bank will apply in business matters. The regular meetings of the Board of Trustees will take place monthly.

The undersigned deem it advisable to call particular attention to the following peculiarities of their organization, which are positively binding on all its members

First.—Sales of its Capital Stock can be effected only after due appraisement by Stockholders selected for that special purpose; and the Trustees of the corporation have, in all cases, the right to become purchasers of the Stock appraised at the appraisement, for the benefit of the remaining Stockholders. This restriction is printed upon each certificate of Stock.

Second.—Loans cannot be made to Stockholders, except upon collaterals other than their Shares in the Capital Stock of this Bank.

NO. 408 CALIFORNIA STREET,

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED SUCH a correspondence and business in Europe as to enable him to secure from the very best source—the most skilful growers—their choicest seeds grown, of which he will always be in receipt, and in endless variety, imported directly from France and England, from well known and responsible houses; some of the most prominent are named in our catalogues.

It has been the experience of our best gardeners and growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be for a series of year, until more capital, experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover; Hungarian Grass;
Kentucky Blue-grass; Orchard Grass;
Red-top Grass; Soissofoin Grass;
English Rye-grass, Timothy Grass;
Red Clover; White Dutch Clover;
Crimson Clover, Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c]

Tobacco Seed.

13 SAN FRANCISCO.

To Pot an Egg in a Small Necked Bottle.—This seemingly impossible act is performed as follows: Soak the egg in strong vinegar; in about twelve hours, its shell will become soft, so that it may be extended lengthwise without breaking, and thus inserted into the neck of the bottle; by pouring cold water with some soda dissolved in it, upon it, when in the bottle, it will resume its former figure and hardness when the water can be poured out. This is a complete curiosity, and baffles those not in the secret to find out how it is accomplished.

A writer says: We are often troubled with severe coughs, the results of a cold of long standing, which may turn to consumption and premature death. Hard coughs cause sleepless nights, by a constant irritation in the throat, and a strong effort to throw off offending matter from the lungs. The remedy I propose has been tried by me, and often recommended to others with good results, which is simply to take into the stomach, before retiring at night, a piece of raw onion, after chewing. This esculent, in an uncooked state, is very heating, and tends to collect the waters from the lungs and throat, causing immediate relief to the patient. Sliced onion, in a raw state, will collect poison from the air, and also from the human system when taken internally, or externally applied to the arm-pits.

It was one of Boston's own poets, we believe, who in some magazine article first gave that city the soubriquet "the hub of the Universe." It was done in playful irony, as intimating that Boston was considered by its people as chief among the cities. It was a Canadian official, if we mistake not, who, on the celebration of the opening of the Grand Trunk railroad between Montreal and Portland, called the latter city "the natural seaport o Canada." This title, "the natural seaport," has ever since been proudly accepted by the Portlanders.

Sickly Bet.—In Marysville the other day, a man offered a bet as follows: That if the Federal Flag waved over Richmond in thirty days, he would take a dose of ipecac, every day for thirty days; if, at the end of thirty days, the Confederate flag waved over that city, his opponent to take the same dose for the same period. The offer was accepted. The Copperhead that offered that bet will have a chance to spew out some of his treason.

PICOLLO PIANOFORTES.

WE WOULD CALL PARTICULAR ATTENTION TO these beautiful instruments from our own manufactory in Paris, and which we can confidently recommend as equal in quality to those of any other European manufacturer.

PICOLLO PIANOFORTES are now in universal use on the continent of Europe, having completely taken the place of the old style of Square Pianos. They possess all the merits ever claimed for the Square Piano, with many advantages that are peculiar to themselves.

Our assortment comprises six different styles varying in price from $275 to $400 each.

Iron-framed Picollo Pianofortes.

These instruments are a "specialité" of our manufacture, are constructed with a special view to withstand the peculiar climate of the interior of California, and are warranted to stand any change of temperature.

Price $400 to $450 each.

STODART PIANOFORTES.

We have had the exclusive agency for the sale of these celebrated Pianos for the past twelve years, and refer with confidence, as to their quality, to the many hundreds of instruments themselves now in use throughout the whole extent of the Pacific Coast. A general assortment of these instruments will at all times be found in our warerooms, comprising Grand Action, Square, Upright, and Overstrung Pianos, in plain or richly carved cases. We offer them at the same prices at which they are sold at the manufacturers' warerooms in New York, thus saving to the purchasers here the cost of freight, insurance, interest, and attendant charges. Prices range from $240 to $500 each.

FRENCH HARMONIUMS.

In connection with our manufactory of Pianofortes at Paris, we have established a manufactory of FRENCH HARMONIUMS, suitable for parlors, music-halls and churches. These instruments, like our Pianofortes, are all in rosewood cases, and are made with the improved "transposition attachment," which enables the performer, in voice accompaniments, to adapt the instrument to any particular "key," thus entirely obviating the necessity of any transposition of the music. Nine varieties $100 to $1,000 each.

We beg to call attention to the fact that the Harmoniums of our manufacture possess many valuable improvements not to be found in any other instruments of this description, among which is the peculiar disposition of the reeds. This improvement is based upon purely scientific principles, rendering the reeds doubly sensitive and much less liable to become deranged or get out of order.

For full description of Piccolo Pianofortes and Harmoniums send for descriptive catalogues.

PRINCE & CO'S

Melodeons, Doub reed School Organs,

and Organ Melodeons.

Being the exclusive agents for the sale of these celebrated instruments in California, we are prepared to furnish them at the catalogue prices, as sold at the warerooms of the manufacturer in the East. The assortment comprises twelve different styles of instruments, ranging from $60 to $425 each. Illustrated catalogues, with full description and price of each instrument annexed, will be furnished on application.

Opinions of Professors of Music on Jacob Zech's Pianos.

San Francisco, December 29, 1863.

Jacob Zech, Esq:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPPGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. Zech.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

Sacramento October 6th, 1863. 13-3m

HORACE WATERS, Ag't,
No. 481 Broadway, N. Y

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-School Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartettes, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pale tree," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 825,000 copies. Prices—paper covers, 25 cents, $20 per 100; bound 30 cents, $25 per 100; cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 300 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2 are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100; cloth bound, embossed gilt, 50 cents, $45 per 100. 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freemen's Gathering," "Columbia's King forever," "Marching Along," etc Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100; postage 1 cent each

RUTH: A SACRED CANTATA

contains 128 pages. Words by Rev. Sidney Dyer, music by Prof. Catt. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55, per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

HORACE WATERS, Ag't
481 Broadway, New York,
Publisher of the above Books.

NEW INSTRUMENTAL MUSIC.

"Idlewild," "Polka Caprice," by M. Keller; "Morning Prayer," by W. F. Muller; "Summer House of Roses," galop, by Mrs. Parkhurst, "Le Petit Polka," "West Point March," 25c each "Cinetepe Waltz," "L'Armetee Waltz," "Frederica Waltz," J. G. Bernard, 40c each. "We are coming Father Abraham," "Always look on the Sunny Side," "Brilliant Variations," by Charles Grobe, 50c each. "Shall we know Each Other There," for Guitar, by Bloomer, 25c. "Sunny Side," set of 20 easy arrangements for the piano, 10 by James Bellak, and 10 by Mrs. Parkhurst, 15c each. Mailed free.

HORACE WATERS,
Publisher, No. 481 Broadway.

EDUCATIONAL.

NAPA

COLLEGIATE INSTITUTE.

For Young Ladies and Gentlemen.

NAPA CITY, CALIFORNIA.

NAPA CITY, IN POINT OF LOCATION AND Climate, is unsurpassed in the State. It is about four hours' ride by steamboat from San Francisco, and three by stage from Benicia. There will soon be a daily boat from the former place, and there are now two daily stages from the latter. There are extensive accommodations for Boarders in the College Building, with large and well-ventilated sleeping apartments. Teachers reside in the Building, and will have a constant oversight of the Students who are Boarders.

GOVERNMENT.

Young Ladies will receive no calls from any except Parents and Guardians. Ladies and Misses will not leave the College grounds, except in company with their Instructors. Young Men and Lads are not allowed to lounge about the Stores, Hotels, and Saloons of the village. All pupils are required to attend Church on the Sabbath. Parents will choose the place of worship for their children.

MILITARY DEPARTMENT.

This Department has been opened with a view to the permanent establishment of a Military Academy on this Coast. From three to four years will be required to complete the course in this Department. The State has furnished us the necessary equipments for such a school. The Drills will be attended to daily.

TUITION.

Spelling and Reading, per month	$2 50
Common English, with the above, per month	4 00
Higher English, with the above, per month	6 00
Latin and Greek, with the above, per month	8 00
Janitor's Fees, per month	25

EXTRAS.

Modern Languages, each, per month	$2 00
Music, with Piano per month	8 00
Embroidery, per month	3 00
Painting in Oil and Water Colors, per month	4 00
Board with Furnished Rooms, per week	5 00
Board with Furnished Rooms, Light, Fuel, and Washing, per week	6 50
Military Branches, per month	3 00
Sword Exercises, twelve lessons	8 00

CALENDER.

The Collegiate year is divided into two Sessions of 21 weeks each The first Session will begin July 25 and end December 16 The second Session will begin January 2 and end May 28. The Winter vacation will be two, and the Summer vacation eight weeks long.

☞ All articles of clothing should be plainly marked. Pupils will furnish their own Sheets, Pillow-cases, Towels, Napkins, and Lamps.

☞ Payments, half-yearly in advance. Pupils can enter at any time, and be charged from the time of entering. No deduction will be made for absence, except in cases of protracted illness. The month consists of four weeks each.

For further particulars address

W. S. Turner, A. M.,
Principal.

21-11

THE COLLEGIATE INSTITUTE,

BENICIA—FOR MALES ONLY. The next session of the Institute will commence on the

Twelfth Day of July, 1864.

The Institute has lately increased its facilities both for the comfort of its Pupils and for their instruction. Persons wishing full particulars in regard to the courses of study, etc., will receive a circular by applying to the Principal.

TERMS, PAYABLE THREE MONTHS IN ADVANCE:

Pupils under fourteen, for Board and Tuition per month	$30 00
Pupils over fourteen	32 50
Washing, per month	2 50

No extra charge is made for book-keeping nor for the Modern or Ancient Languages. No charge is made for bedding, rooms or lights. No Entrance Fee is charged.

C. J. PLATT, Principal.

19

The Benicia Law-School.

THE THIRD SESSION OF THE BENICIA LAW SCHOOL will commence on the

Twelfth Day of July,

And continue twenty-one weeks. A new class will be formed at the commencement of the term.

It is the design of the School, by a systematic and thorough course of instruction, to afford advantages for the study of the Law which cannot be obtained by the usual method of reading in an office.

For circular obtaining full information, address

J. E. ABBOTT, Regista,
C. J. PLATT, for the Trustees.

Benicia, June 6, 1864. 20

HOTELS.

SOLANO HOTEL

..AND ..

LIVERY STABLE

Corner of E and First streets,

BENICIA.

The only Hotel in Benicia, and Stage House for four lines of Stages.

E. P. WEINMANN, Proprietor.

19

GOLDEN EAGLE

HOTEL

Corner Seventh and K streets,

SACRAMENTO.

THIS HOTEL IS OFFERED TO THE PUBLIC AS a "Home for Families," and for the Traveler.

The Proprietor has spared neither expense or care to make his Hotel one that shall always be acceptable and pleasant to all that may favor him with a call.

With ample accommodations by means of spacious Suites of Rooms for Families, and by recent enlarged accommodations, he is confident that visitors will always be satisfied and feel at Home.

Particular attention will always be paid to the comfortableness of the apartments, by well ventilated Rooms, clean Beds and Bedding, and strict attention to the wants of Boarders; while the TABLES will be provided with the very best the season affords.

Carriages, to and from the Hotel to the Railroad Cars and Steamers, at all times, Free of Charge to the Patrons of the Hotel. Hotel open all night.

☞ Connected with the Hotel is a Fire-proof STABLE expressly for the care of Horses and Carriages of the Patrons of the House.

D. E. CALLAHAN,
PROPRIETOR.

MISCELLANEOUS.

Winchester's HYPOPHOSPHITES

Act Promptly and Certainly in all Stages

....OF....

CONSUMPTION.

THEY IMMEDIATELY INCREASE the Strength, and deepen the color of the Pale Blood. They check the Night Sweats, always, in from seven to fourteen days; the appetite is at once invigorated, and the patient rapidly gains flesh; the cough and difficult breathing are speedily relieved; the sleep becomes calm and refreshing; the evacuations regular and uniform.

"In no instance," says Dr. Churchill, "have I found the Remedy fail to produce every thing that could be reasonably expected from it."

"I have no doubt whatever," says Dr. Townsend, of Chatham, Pa., "of the superior efficacy of the Hypophosites over all other medicines or methods hitherto discovered."

The Hypophosphites

Have a TWO-FOLD and SPECIFIC ACTION: On the one hand as a prompt and powerful

NERVOUS TONIC,

increasing the vital energy; and on the other as a generator of

New and Healthy Blood,

Invigorating the whole system. They should, therefore, be used in all cases of

Nervous and General Debility,

Wasting of Flesh, Loss of Strength or Appetite, Paleness or Deficiency of Blood, Languor or Listlessness, Cough, Night Sweats, Chronic Diarhea, Scrofulous Sores;

Also, in Chronic Bronchits, Asthma, the Debility or Weakness of Young Children, and as an INVIGORATOR to women of feeble vitality during gestation and the period of nursing.

WINCHESTER'S

Genuine Preparation of the Hypophosphites

Is the only reliable form of Dr. Churchill's Remedy, and is approved by the Medical Profession generally. USE NO OTHER, or any Remedy containing Iron.

CONCENTRATED SOLUTION in 7 oz Bottles, prepared expressly for California, $2 per Bottle—Three Bottles for $5 in coin. Circulars, free. Sold by all respectable Druggists, and by

J. WINCHESTER,

At the AGENCY DEPOT, 206 BUSH STREET, opposite the [new] Adolphi Hotel, San Francisco.

SAN FRANCISCO:

FRIDAY.....JULY 15, 1864

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them on their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address PUBLISHERS CALIFORNIA FARMER, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

330 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions: grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum of the FARMER OFFICE. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 330 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Transactions of Agricultural Societies.

We would ask of those Societies in the Atlantic States and Europe, to whom we send our Journal, to send us the transactions of their several Societies, so that we may give the benefit of their perusal to visitors, from the several States, who are callers at our Reading-rooms. By this means we can lay before them the progress of Agriculture in their former homes, and thus advance the interest of both Atlantic and Pacific States.

TO AGRICULTURAL SOCIETIES ABROAD

Exchange of Seeds, Books, Etc.

HAVING established large and spacious Reading Rooms, in this city, which contain Libraries, Cabinets, and hundreds of Newspapers, all free to those who wish to enjoy the benefits thereof, we now ask coöperation from all Agricultural Associations in the Old States and Europe, for the *Exchange of Seeds, Specimens, Books, Etc.* We shall be happy to reciprocate any and all favors, and comply with any direction made to us connected with such an enterprise.

Times of Holding Fairs for 1864.

THE following are the times appointed for holding Fairs the present year, by the Agricultural and Mechanical Societies of California, so far as we have obtained them:

San Joaquin District—At Stockton, commencing September 13, and continuing four days.

Mechanic's Fair—will commence in this city, August 30, and probably continue as long as the interest is maintained.

The San Pablo District Fair—Will be held at Napa City, commencing

[Will the Secretaries of other Societies that have appointed Fairs, please notify us of the time, that we may complete the list for the State?]

TO READERS AND CORRESPONDENTS.

WE ask our readers' special attention to the following in this week's issue:

Dr. Logan's valuable scientific paper, on the 6th page, also the Imports and Exports of our country for 6 months.

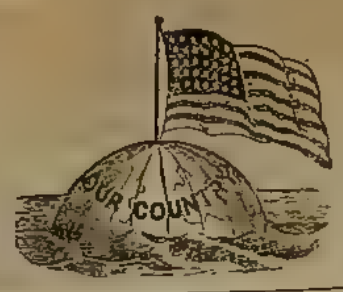
Adda Claro—Some thoughts of this writer worthy of note in the Home Department, and the story of a "True Woman" also. Our lady readers will find them pleasing.

Our readers who remember our New York Correspondent will find his pleasant letters in this week's issue, as usual full of interest.

The cause of education this month demands an extra share of our time. This we know will be approved of, as June and July are the months for schools and colleges. If we take good care of the *young plants*, the trees will yield good fruit.

"Poland"—By F. Spilvalo, is in type, but deferred till next week.

"Music"—Two fine collections, just received; "Woman and her Era," Letters on "Agricultural Fairs," all will appear next week.



Remember!—"Gold or Greenbacks!"

WE have generously offered, for six months or more, to take *greenbacks* at par, for *old dues*, but we wish those in arrears to *remember* our terms, as advertised are, *cash in advance*, or $1 per year extra, for delayed payments. We will give till *August 1st*, for those to pay that intend doing so. The present depressed rate enables all who ever *intend* to pay, to do so, easily. After *August* we shall make *new terms*. Bills will be sent and we expect *payment promptly*; as a matter of justice, gold should come. We leave all to their own sense of justice.

A New California Book Coming.

A Novel by our esteemed correspondent, C. E. Richards, Esq., is now in press, at Carleton's, New York. "*John Guilderstring's Sin*," will prove a valuable work if it is a Sensation Book, for we have every reason to believe it will do good and command a large and ready sale. The title of the work indicates the subject on which it will treat; it will develop great Physiological Truths. The author has chosen one of the greatest subjects ever brought before the mind.

WHAT CAUSES GOLD TO RISE?—If we import *two hundred millions* of dollars, in luxuries, more than we can pay for with our exports, is it any wonder that *gold is scarce*, when that is the only thing that will pay the debt? *Read the tables of Imports and Exports!*

Independence Day.

No State in our Union, we venture to say, has kept this day with more earnestness and sincerity than our own Eureka State.

The day was ushered in by the ringing of bells and the roar of cannon, and at early morn our whole city seemed to be in motion. Never have we seen such a universal giving up of every other business or pleasure to the observance of the day. At the appointed time the military, engine companies, and the various associations, were formed at their respective places, ready to join the grand cavalcade.

Dr. Sheldon, the Grand Marshal, was prompt and efficient, being well sustained by his Aids, and the cavalcade began its career of marching at the moment named. The pageant was a showy one, the turn-out of military very large; the fire companies looked fine; The various associations were generally in full numbers; the trades were represented; the children were most lively and joyous. But old Boreas, not having received a "special invitation card" from the civil or the military authorities, and the Grand Marshal in the numerous claims on his time, having failed to assign a place for the Wind in the cavalcade, it made such a fuss, and *kicked up such a dust*, that it spoiled all the fun. Never was there known such a "blow up" on the Fourth of July before. And what was remarkable, Boreas seemed to show his spite upon the beautiful little children, and their curly hair and white dresses, snarling the one, and tumbling and crumbling the other. However, they bore it with fortitude.

The grand display was a mile long, and *longer* in passing. Everybody saw enough, heard enough, and was cold enough, for a more unpleasant and uncomfortable day has not been experienced this season.

The exercises at the Theater—the oration and poem, etc., were all excellent, and gave general satisfaction. Everybody had plenty to do, and plenty to say, and plenty to eat—especially *dust*. Business was almost universally suspended, and the day given to the jubilant feeling that was appropriate.

The only, and the great error, that seemed to have been made on the Fourth, was the place for the display of the fireworks. No place more inappropriate could possibly have been selected, and the general opinion seemed to be to *rail* at the affair, as the railroad company were the only ones that were pleased. They pocketed the dimes without a single murmur.

But it is over, and we rejoice to know without any untoward event, save chills and colds, and these we understand are to be cured at the expense of the Grand Marshal and the railroad companies, as they were all *taken* at that "Slough of Despond" during the brilliant display of fireworks that few only could enjoy. Had Telegraph Hill or Russian Hill been selected, the whole city would have been illuminated, and the display, grand and satisfactory, as it was, the light went out in darkness and the beauty of all nearly lost. Another year we hope Union and Peace will illuminate the heavens from one end of our country to the other.

Sacramento, Marysville, Stockton, and all the interior cities and towns, were full of patriotism and glory, save a few dark spots where TREASON lurked. Stockton particularly had a proud day. The Sanitary Fair produced some $7,000 to $8,000 for the fund. One grand feature of Stockton was the gorgeous illumination scene on board the splendid clipper steamer Cornelia—Capt. Conklin She was at midnight in a blaze of glory. No such sight has ever before been witnessed. It was just such a gorgeous scene as one would expect from the Cornelia, her spirited captain, and his officers, who are co-workers in all such admirable affairs We may again refer to it.

ARTICLES RECEIVED AT THE CALIFORNIA FARMER EXHIBITION ROOMS, No. 330 Clay Street.

VALUABLE Congressional Documents, have been received through the politeness of Hon. Cornelius Cole.

Valuable Agricultural Books and Pamphlets from Hon. Isaac Newton, at the Agricultural Department at Washington, D. C.

A large collection of Catalogues of the Pianos and Organs from the warehouses of Siberia Ott, Esq, 748 Broadway, N. Y., whose collection is one of the largest in the emporium of that great State.

A copy of the Wool Report of the Boston Board of trade of 1863. The report is signed by Geo. Wm. Bond, Esq., and Geo. Livermore, Esq., the largest and most distinguished dealers in wool in New England. The report embraces many interesting facts, which we give in appropriate columns.

The San Francisco Postoffice.

NO. VI.

THE public is now so well aware of the condition of the San Francisco Postoffice, that it is unnecessary for us to give any more proof, that a change *must* come. Should the last old clerk or two run away, give up in despair or be removed, we dont think the machinery would go a great while, and we think the very best thing possible now, is a memorial from the citizens to the Postmaster General for a *relief*. We think two-thirds of our business men are ready to express their opinion that a change is necessary and *must be had*.

MANY of the new recruits, after getting their bounty money remind one of a printing-office in distress—because they go into *pie*.

The Steamer Yosemite and Washoe.

"Let Justice be done though the Heavens fall."

NO EVENT has occurred in our community for a long time which has occasioned more intense feeling or drawn forth so much and so general an expression of condemnation as the recent act of the collision of the two rival steamers, the Yosemite and the Washoe. The event was one likely to occur at some time from the very nature of the relation held by these two lines of steamers. But the nature and character of this collision, the time and place at which it occurred, rendered it one so apparently intentional that the public mind, highly excited by such a seeming high-handed wrong, becomes suddenly excited and expresses itself not only in judgment upon the act itself, but upon the commander of the steamer, the pilot and all hands.

For any act of premeditated wrong, of this kind, or for any act of carelessness, or neglect of duty, on the part of the commander, or of the pilot, or of any other officer on board, we have no word but that of utter condemnation, and punishment in the extreme. But let that punishment fall only on the *guilty party*, whoever it may be, whether it be the captain, pilot, or the directors of the company.

The press of our State has spoken, especially of this city, and we have waited patiently to see the spirit that has dictated its action. A writer over the signature of "W.," in the Bulletin, responds to the card of Captain Poole, but in a measure more to incite to acts of injustice than to subserve the cause of justice and right. We publish Capt. Poole's card.

CARD.—TO THE TRAVELING PUBLIC.

The undersigned, for many years in command of steamers on the inland waters of this State, can point with just pride to his past record as sustaining the assertion that he has always been vigilant and zealous in the protection of life and property committed to his care, and that he has never wantonly trifled with or deliberately injured the life or property of others. He feels that wherever he is known, notwithstanding the vituperation with which he has been assailed, he requires no justification; and from that portion of the community with whom he is unacquainted, he asks a suspension of opinion in regard to the collision between the steamers Washoe and Yosemite, until the result of the investigations in relation thereto can be made public and the blame fixed where it properly belongs.

E. A. POOLE,
Master Steamer Yosemite.

The article says:

"I have read Capt. Poole's card in the Bulletin with surprise. The coolness and confidence with which he parades his past career as captain of steam vessels to excuse his extraordinary act of running into the Washoe, is refreshing. Upon the same principle any respectable citizen might fire my premises, jeopardize the life of my family, destroy my property, and then fall back upon the merits and virtues of former life, and claim that always having been a clever fellow, generous, liberal and respectable, and having never been guilty of notorious, flagrant wrongs, therefore the public should suspend its opinion, and still esteem the incendiary a good man and virtuous citizen. Whatever claims Capt. Poole may have to the good opinion of the traveling community for having *simply done his duty*, there can be no excuse for the act of running into the Washoe."

The writer further says:

"This is an affair in which the people generally are interested."

"The public and the journals of California should therefore express themselves on all such matters in tones of the strongest condemnation; nor should any officer, however high in reputation he may have been previously rated, be excused for a wanton act."

We agree with "W." in this fully, and we will condemn any wanton act, by which life or property is jeopardized; but while we do this we will *not condemn any man*, unheard, or upon circumstantial evidence merely, lest by so doing we may condemn the innocent. In the case of the Yosemite and the Washoe a great calamity might have resulted. A gross dereliction of duty is very apparent, and to all appearances a gross and wickedly premeditated wrong. We shall do as the writer, W., says, *speak* out, and we now ask, who are the guilty parties? Who is the guilty man? All the blame seems to be placed upon the commander of the Yosemite, Capt. Poole. It is true that the commander is and should be responsible or at least accountable for those under him; but in the name of justice let us ask, may there not be some acts of wrong done on his steamer of which he is not cognizant and which he would condemn as ready as any person else? May it not *be possible that Capt. Poole* is entirely guiltless of this very great and wicked wrong? We have known Capt. Poole for *fifteen years*, personally, and intimately; we knew him on Mormon Island, as a trader, in 1849 and '50. We have known him through all his long years on the Sacramento river, as commander, and this is the first charge we ever heard uttered against him, therefore we say, in the name of Justice, withhold judgment until *he can be heard*. Were he ever so wrong he should be heard. What specious arguments are these of "W." in the Bulletin, "that however *good a man* may have been all is life before it is no excuse for a wrong act." Capt. Poole only asks *suspension* of a hasty judgment, he does not ask excuse, for he does not admit he is wrong. When it shall be proved that he is guilty of so foul a wrong, *then* let justice be done. But let us ask "W.," does not our courts, judges and jury, allways make a distinction between an old criminal and one who stands arraigned for the first time for wrong? It is an invariable rule that he whose past life is clean is recommended to mercy by the very jury that say "guilty," then shall not *one who has not yet been proved* guilty have mercy, have a hearing? Private malice and revenge may stimulate to popular violence and innocent parties may suffer. We desire not to be misunderstood. We would not lift our voice or write one word to defend those who should be guilty of so heinous a sin as that of running down a steamer or vessel under any circumstances, for our own life has been more than once endangered thereby, neither would we have the innocent suffer. Having known Capt. Poole so long and so well we only speak the convictions of our own heart, and we do this voluntarily. No living soul has ever desired or prompted us to give an opinion, save "W." of the Bulletin, who demands the opinion of the whole press, we therefore give ours, and believing Capt. Poole to be *innocent*, we shall cling to that belief until he is proved otherwise. We aver that this terrible outrage could have been committed, and without the knowledge of the commander, too. We ask all reasonable men to reflect: Suppose, for instance, that the *owners* of these steamers desired to injure or damage the Washoe, so as to compel her to be hauled off, would they be likely to employ Capt. Poole to do this? Would they not be much more likely to urge him to avoid a collision, or any act that seemed like revenge for opposing their monopoly, would they not be more likely to say to Capt. Poole, be you courteous, conciliating and not manifest anything but good will, and perhaps we (the company), may buy him off and then if any other, or dangerous work is to be done, privately and without the knowledge of Capt. Poole, employ some other party to do it? And then when calamity should come Capt. Poole, not knowing, would be a witness in favor of the Company, and guiltless before God and man. But, says "W.," how could any body else do this while Capt. Poole is the commander of the steamer?

That is the easiest thing in the world. We will now suppose a case—remember we only *suppose* a case—which, were it so, would prove Captain Poole guiltless: Suppose a *Pilot* was privately engaged to cripple the Washoe, not intending to peril life; suppose, as usual, on making the wharf, Capt. Poole on his part promptly *pulls his bell* to stop the engine, and the Pilot (bribed without his knowledge), fails to obey his command and runs into the Washoe, who is the guilty party? Although Capt. Poole has command of the steamer, who controls the steamers course—the captain or the pilot? Should the pilot be bribed and the captain totally ignorant of it—is the *Captain* guilty? We do not say such a case exists—but might it not? If so, then would it not be just and right that Capt. Poole, as a gentleman known to our citizens for long, long years, as man unusually esteemed. Should not such a man be heard before he is condemned? As this is a case of great moment to the public we have given it a careful thought, and close as we began. "Let justice be done though the heavens fall."

Opposition Steamer Day.

THE traveling public will be glad to see the announcement of the People's Line for the 23d day of July, from this side. The America, a splendid ship, will leave on the day appointed, promptly, and will connect at Aspinwall, via the Panama Railroad, with the new and magnificent steamer Golden Rule. This new steamship, is, as advertised, the largest, fastest, and most elegant steamship on the Atlantic Ocean, and by this line passengers will be put through to New York, quicker, and with more comfort and dispatch than by any other route.

It is a most fortunate thing for our State and its inhabitants that we now have an honorable opposition line, one in whom the people can confide, therefore it will pay them to wait for this line a little time. Shortly, with the new steamers building, the M. O. Roberts Line of New York, and the People's Line of California, will furnish trimonthly or weekly lines, up to the full demands of the people, to whom they look for encouragement and support to maintain a line of steamers equal to any in the world, and at a *low rate of fare*. The people should all remember that it is for them to say whether the rates of fare shall be high or low. To the People's Line, the true Opposition Line belong the credit of reducing the fares, should that line ever be withdrawn the prices would be doubled instantly, so the people must testify their approval of low fares by giving their approval and support to the People's Line.

Physical Culture.

WE are very glad to know of the success of Dr. Lewis in the cause of Physical Education. We are happy to give the following evidence of his success:

The "Normal Institute for Physical Education," incorporated in 1860, and under the management of Dr. Dio Lewis, opened its Seventh Session on the fifth of July in Boston.

The demand for teachers of the New Gymnastics has become such, that the last two classes of Graduates, consisting of about ninety ladies and gentlemen, were at once engaged, and hundreds more might find profitable employment.

Well-known medical men assist in preparing the pupils to act as guides in Physical Culture.

In the department of Gymnastics, Dr. Lewis personally trains every candidate for the New Profession.

If any reader would know more of this pioneer institution in a new and noble profession, let him or her send for a full circular to Dr Dio Lewis, Boston.

We are glad to know we have a college of a similar character now in our city, under the charge of Mr. Robinson, where ladies and gentlemen are engaged in classes, and the school is in high repute.

"To Dr. Dio Lewis, more than to any other man in the country indebted for the present deep, *practical* interest in physical culture. He has done a noble work."—Mass. Teacher.

"We look upon Dr. Lewis as one of the benefactors of his race."—Grace. Greenwood.

"Success to Dr. Lewis's Gymnasium. No better Institution exists."—Knickerbocker.

"Dr. Lewis's book is the most practical, sensible work on this subject, extant in any language."—Continental Monthly.

Splendid Samples of Wool.

BACHELDER and Cotter, of Elk Grove, Sacramento County, have sent us twelve samples of their Spanish Merino wool, also twelve samples of the half-blood, very handsomely arranged on card. They have been very successful in raising a splendid Spanish Merino flock, one that cannot be surpassed in the State. At our last State Fair they won, not only general admiration, but the premiums, too. Some of the handsomest bucks and ewes ever shown in this or any other State have been bred by them, and their specimen animals will again win them honor.

Great Central Sanitary Fair, Philadelphia.

HAVING published the call of the officers of this Fair in May last, and becoming interested in it by a remembrance from California, we are happy to know that this Great Central Fair has been so eminently successful, realizing about one million *dollars*. We take the liberty to make a few extracts from a private letter addressed to us by one of the lady Directors, containg a beautiful silken badge, with the hymn alluded to, which we give in our columns. This hymn has been set to music, a copy of which we have also received. We hope our humble contribution of seeds may spring up into trees richly productive to the noble cause. This will amply repay us for what we have done.

PHILADELPHIA, June 18, 1864.

COL. WARREN.—*Dear Sir:* Your letters have all been received, also the parcel containing seeds for the benefit of our Sanitary Fair, for which please accept my thanks. They have been placed into the hands of scientific men to be raised and disposed of at the highest price possible, and credited to my department. I hope they will bring something handsome, and prove another "Golden Bag of Flour," for the sake of the cause in which we are all deeply interested. * * *

Our Fair closes a week from next Wednesday. It has been, I am happy to say, a complete success. There has never been seen in this county, before, such a splendid display of taste and beauty in the arrangement of the whole affair. It seems a pity to destroy the fairy scene of the Horticultural Department, the splendid display of art everywhere manifested, but the end attained, we must all fall back again into our quiet home-life, realizing the past few months only as a bright dream. Ours is the last of the series of Fairs for the Sanitary Commission. I trust that peace will soon be restored that the need of this great and good work may have its requirements lessened.

I am very glad you have Dr. Bellows with you, he is very pleasing, and untiring in his exertions in behalf of the soldier.

I inclose you our Inaugural Hymn, by O. W. Holmes. It is set to a very pretty German air, and quite appropriate to the times.

I will write you the fate of your offering, and trust it will realize our most earnest wishes.

With respect, very truly yours, E. B.

HYMN.

BY OLIVER WENDELL HOLMES.

Written expressly for the Great Central Fair.

FATHER, send on earth again
Peace and good will to men;
Yet, while the weary track of life
Leads thy people through storm and strife,
Help us to walk therein.

Guide us through the perilous path;
Teach us love that tempers wrath;
Let the fountain of mercy flow
Alike for helpless friend or foe,
Children all of thine.

God of grace, hear our call;
Bless our gifts, Giver of all;
The wounded heal, the captive restore,
And keep us a nation evermore
Faithful to Freedom and Thee!

A Soldier's Record.

IT is proposed by the ladies whose names are subjoined, to make a collection of extracts from the letters and diaries of soldiers, both officers and privates, for publication, in aid of the Sanitary Commission. It is believed that much material of interest might be thus brought to light, in Thrilling incidents of heroic conduct, and self-sacrificing patriotism, pure aims, and noble sentiments, expressed to mothers, wives and sisters on the eve of battle, from camp and field, post and out-post, ship and gunboat.

Persons possessing such records are earnestly invited to respond to this appeal, by sending copies of them, with date, name and circumstances under which written.

Editors are respectfully solicited to give this notice a conspicuous place in their journals, in order to effect its general circulation.

Communications may be addressed to Mrs. Clinton Newbold, No. 52 West Twenty-first street; Ellen Collins, No. 97 West Eleventh street; Susanah Shaw Minturn, No. 16 West Seventeenth street; Ellen R. Strong, No. 74 East Twenty-first street; Lydia Minturn Post, No. 61 West Twenty-eighth street.

We give the above notice gladly and hope every journal in the land will aid in this work. A volume of records of the noblest and purest thoughts that ever emanated from human heart will be the result, and we trust every facility will be given by the press, and by those who have letters, to the patriotic ladies engaged in this work, and forward them as desired.

THE COLLEGIATE INSTITUTE, BENICIA.—This fine College is now open, on its new term, and is an excellent place for boys; location fine, grounds 30 acres, large airy buildings, gymnasium, etc. The cost of this College and grounds, is over $[illegible],000; C. J. Platt, Esq., Principal; J. E. Abbot, Esq., Law Department.

California Made Whips.—Never buy an imported *Whip*, when you can purchase of Messrs. Main & Winchester a *better* and handsomer whip at the manufactory, and while sustaining our own home labors, save the gold from going abroad.

LILLIES' BURGLAR PROOF SAFE LOCK.—As an evidence of the high value and estimation given to this famous lock over all others, we can say that two of these locks have been affixed to the vaults of our City Fathers at City Hall, and four at the vault of the new Banking House of Donahue & Kelly corner of Sacramento and Montgomery.

Sheet-Iron Safes not Burglar Proof.—The next point is to show the Sheet-Iron Safe not Burglar Proof. It will be observed from noticing the structure of the Sheet-Iron Safe, that the steel plate is the only protection that can be given to the Lock. This plate will be found deficient first, from its want of solidity to protect the Lock against the action of the Burglar; second, for the reason that the temper may be extracted in a few moments, and the plate be drilled or cut through. But this is not all. The Safe may be bored into any point; sufficient powder applied to blow it to pieces, or it may be cut into in a very short time, or the band be easily pried off with the aid of a crowbar. Consequently it has been proved worthless as against Burglers.

Agents for Lillie's Safes "The Russell & Erwin Manufacturing Company," 100 and 102 Battery street, San Francisco.

Santa Clara College.

THE LIBRARY.

A visit over this College enables us to give some matters of interest, to the cause of education. We shall endeavor to give quite a history of this Institution in continuous numbers.]

The Library of the Santa Clara College contains over 10,000 volumes, and can truly be called the largest and most valuable collection of books in the State, if we judge them for their antiquity and adaptedness to History, Science, Education, and for such an Institute as is here established. The Library room is lofty and spacious, 40x40 feet, handsomely arranged, with shelves suitable for each department of literature, and as we have said it embraces everything valuable in History, ancient and modern, Biography, the best Prose and Poetical writers of all ages. Art, Science and Literature in all its phases. We wish it were possible to enumerate all the interesting works we examined, but we have only space to speak of the most rare:

A large volume—Annotations and Meditations on the Evangels, a very rare work, bearing date 1607, in grand, bold type; every feature of the Gospel, illustrated in tracts, these represented in figures, to the very life; perfect pictures of the scenes intended to represent "The child Jesus in the Manger when the Shepherds came to Him," is most admirably done; "The Last Supper," in all perfection, and several striking features connected therewith—Peter and Judas to the life. The "Day of Judgment"—wonderfully and vividly portrayed; the whole series are perfect illustrations; this is indeed a rare work, type clear and bright as if printed in the present century, the cuts are far superior to the majority now sent forth; everything connected with this work—the Natural History portion, fruit, flowers, and animals, all perfect.

Another branch of this Library is the Ecclesiastical portion, being a collection of old Bibles, some 200 volumes, from the first to the ninth century—the rarest collection, probably, in the United States. In this Library is found the works of the famous Bossuett, complete in fifty volumes. Here too are found the *four* first works ever printed: Cicero de Oratore, St. Augustine, Civitati Dais, Nastantius' New Testament. These were the first four volumes printed in Rome, by Duke Maserno; these volumes are printed on thick paper, clean and beautiful type, both better than now used, yet they bear date 1440—over four hundred years ago. The paper of these volumes is a soft brown color, perhaps a delicate *flesh color*, easy for the eye, and these old books are now perfect in their pages, the typography equal to the present day and wonderfully preserved; they are properly called the works of the "Fathers of the Church." Another rare work—the Old Church Chants, on parchment, *all written out* by the early monks, and beautifully illustrated in scenes of natural history, and in colors, too; this work goes back some 150 years. Thus Virgil, Horace and Cicero were all transcribed by Monks, else they would have been lost forever.

The rule of the old world Monastic Institutions was to work in the field, portions of the time, then to transcribe all the Classics, the Sacred Works, Poets, Histories of the Greeks and Turks. By this means they were all preserved by the Monks—the works of St. Benedict and others, the Old Monks of England, Germany and Switzerland, went to the wilderness-built Churches and Monasteries; from these sprang all the cities of Europe, such as Winchester, Manchester, Chichester—all cities ending in "*chester*," founded more especially by the Monks; this was their origin.

It would afford the student and man of learning great pleasure and satisfaction to visit this valuable library.

Adjoining is the "Medical Rooms," with a complete collection of the best medicines, imported from France, no pains or expense have been spared in this department. The next is the Bathing Rooms—hot, cold, and shower-baths for the whole College; next them are the convalescing rooms, as companion to the Infirmary, each and all complete in every part.

The President and Professor's rooms are also here, and neatly furnished.

The clothes room of the students is neatly arranged with shelves, all marked and numbered; this room has a teller who delivers the change of dress *twice* a week, on Wednesday and Saturday; two attendants select and place the clothes upon the student's bed, ready for all; the pupils never go to this place, when clothes are wanted they apply to the attendant, everything in perfect order. The Refectory is a fine room and will accommodate 200 pupils—there are about 160 attending now.

The dormitory for small scholars is a neat, clean, and well ventilated sleeping apartment, with two wings, containing over 100 beds, with the name on each bed of the pupil to whom it belongs. The rooms are well ventilated, and water is near, with force pumps of great power, so as to use in case of fire. It can flood the whole building.

The large study room in the new building is 75 by 40, with 75 desks, of new improved pattern. This is a fine and well ventilated room. The cover of the desks we esteem a great improvement. It is made in two halves, and slides out. This prevents the desk-lid, when lifted, from being used as a screen for talking to each other, for by this new plan it cannot occur.

A special study room for drawing has been prepared (linear drawing). Every pupil should be master of this art. Many of the drawings are splendidly done. The paints and drawing materials are all imported from France, and are of the very best quality. The cost of the new College building was nearly $40,000, and it is money well expended. We shall speak of the other buildings and departments in our next.

All the cows in the State ought to do their best now in the way of yielding milk, when butter is fifty cents a pound, and the makers of it afraid to sell at that price.

St. Catherine's Academy, Benicia.

The closing exercises of this Academy of Young Ladies, took place yesterday evening; it was a very satisfactory examination, to parents, pupils and friends, as well as highly creditable to the Lady Superior, the Sisters, and the management of the College. The day was pleasant, and made more so by the very beautiful position of the College; high up, nearly on the summit of the hills, commanding a most picturesque and perfect view of the country surrounding Benicia. The scenery around is in itself very fine; but by the position of the Academy the balmy breeze is felt in all its inland purity.

Many in passing Benicia, look upon the place as a barren spot, but to be fully appreciated and enjoyed, let them visit it, go upon its rolling hills and look upon the beautiful in nature, and Benicia will no longer be barren of beauty to them.

Benicia is the "Athens of the Pacific," as it is claimed to be—is so truly; a beautiful and fertile spot, and we are surprised that the landholders do not improve more, a soil so capable of high cultivation. But from the soil without we turn to the richer field of labor, the soil of mind and heart. Plants, not perishable, like the earth and its seasons, but to bloom forever and to yield fruit according as mind has been cultivated.

The pupils of St. Catherine's Academy number about 75, and are under the charge of Mother Louise and the Sisters, who are very much beloved by the pupils.

The Recitation Hall, standing high up on the hill, has the advantage of pure air and free light. The Hall was neatly festooned with evergreens, and on the walls were displayed the beautiful painting, embroidery, and needle-work of the pupils; some one hundred pieces all highly creditable, and drawings of very beautiful designs and execution.

The pupils all ranged on raised seats, at the end of the hall, presented a truly beautiful sight. The thought, uppermost in our mind was, how they possibly could form any conception of the part they are to play in the great Drama of the future of the Pacific.

The morning exercises commenced at 9 a. m., and continued to 1 p. m. The audience was large, many of the Fathers of the Church were present, and parents from various parts of the State, and the friends of the College. The exercises of the afternoon were from 2 to 5 p. m. The distribution of Premiums occupied an hour or more and caused considerable interest and excitement. The Pupils, crowned with bright wreaths and wearing their medals, presented a very beautiful appearance.

The recitation of the classes, the original essays and dialogues were all excellent, and the classes examined showed a thorough knowledge of their studies. The exercises in music were of a high order, generally. Some pieces were performed with marked excellence, receiving great applause. As these exercises were so near the time of our going to press, we shall defer our full notes until next week, when we intend to speak further of this excellent educational Institute. For the courteous invitation received, to be present at these exercises we return thanks, having enjoyed them very much.

Young Ladies' Seminary, Benicia.

Our readers will please see the notice of the new term of this excellent institution for the third of August. The last term was closed with great credit, both to the principal, Miss Lammond, and her corps teachers, and to the pupils themselves. It is a most fortunate thing for our State that we have so many excellent institutions of learning, and particularly so when these are devoted to the education of females. It is all important that girls should be educated, and well educated—not only the head, but the heart too; not merely intellectually, but morally.

The location of Miss Lammond's Seminary is admirable, a combination of most attractive scenery around the Seminary, and always healthy; the buildings large and convenient, with ample material in globes, apparatus, library, etc; a musical college, almost, there being eight pianos in practice, and Jacob Zech's (our own California make) a prominent voice among them.

When the great question of the future of California shall be properly considered, when it shall be remembered that the future weal or woe of this State will depend upon the manner in which the youth of the present time are educated, and more especially the females of the present day, when it shall be truly remembered that the girls of to-day will be the wives and mothers of the future, and the destiny of this great and growing State is to be in their hands, then, and not till then, can we rightly estimate the importance of the education of the female at the present day. We have a hope, however, for the future, when we know that such institutions as Miss Lammond's are making their good impressions upon those who are to wield so great an influence in the future.

Miss Lammond is eminently qualified for the high position she has assumed, appreciating truly the great responsibility resting upon her in forming character. She has secured for the new term the best of teachers in the several departments of the Seminary. In Languages: the French teacher is Mdme. Vonchamberg, a very distinguished lady, one that as a teacher will give promise of success; the Spanish, Senor Vallejo, an accomplished teacher; Music, Professor Hartman, whose name is a guarrantee of success; Painting, Professor F. A. Buttman, whose works of art are gems in many a collection of beautiful paintings. In addition to these are other teachers of high merit, not forgetting the useful, in the domestic economy and happiness of the female character. Miss Lammond has shown her sense of the responsibility of her position in thus securing, for her Seminary, teachers of the very highest character and ability, and we are confident that the numerous friends and patrons of this favorite Seminary will appreciate the effort.

The Benicia Female Seminary has done great good for the education of the females of California. Many a highly gifted mind has been made to shine, and we know of great good that has been accomplished. So we look to the future of this excellent college, while under the control of Miss Lammond, as destined to do a still greater amount of good than has ever yet been accomplished. We wish it unbounded success.

Mrs. Blake's Young Ladies Seminary, Oakland.

We regret that we could not be present at the exercises of this excellent Seminary, recently—duty called us elsewhere. We learn, however, that the examination passed off with great eclat. The whole series of exercises, literary and festive, were of high order, reflecting much credit upon the lady principal, her assistants, and the pupils also. We received a communication relative to these exercises, too late for publication. We regret we could not give the entire programme, but other exercises were in type and we were obliged to defer them.

Prospectus of St. Ignatius College.

The prospectus and catalogue of the scholars enrolls more than five hundred pupils, from August 1863, to June 1864, the largest number of pupils in any one College in California. This is a very prosperous Institution. It was established and opened in 1855, and now numbers about thirty professors and teachers.

We were present the last evening of the exercises, having just returned from San Jose and Santa Clara Colleges. The audience, at the St. Ignatius, was immense—we should think nearly three thousand. The dramatic representations were very fine. "David and Saul" was performed with great spirit. The pupils appeared to great advantage and won repeated plaudits for their correct acting.

The St. Ignatius is among the prominent Colleges of our land.—We have more to say in our next.

School Books.—We invite the attention of our readers to the card of Tyler & Brothers, in our Journal. This firm has prepared a very full collection of books, so that orders from colleges, schools and academies, can always be supplied at short notice, and on the most favorable terms.

D. & H. W. SMITH'S American Organs.

SIBERIA OTT, Wholesale Agent,

748 Broadway, New York City.

THE

PERFECT AND BEAUTIFUL

Musical Instrument

IN THE WORLD

FOR THE

American Home Circle.

WITH THE MOST PERFECT CONFIDENCE, we call the attention of the public to the AMERICAN ORGAN, as an instrument long desired in the Family Circle, and with our patent improvements is adapted to all kinds of Music, more especially to Sacred Music, with its sustained tones and harmonies, so much desired and sought for in American homes.

The AMERICAN ORGANS are superior to all other instruments of the kind, in many important particulars.

They are superior in their greater fullness and completeness of tone, volume and power. They are superior in expression, quickness of action, and elasticity of touch, rendering them perfect in rapid movements.

They are superior in quality and beauty of tone, and when controlled by the DOUBLE BELLOWS and BLOW PEDALS, Knee Swell, etc, the most charming effects can be produced, from the softest whisper of the Æolian harp to the full volume and power of the church Organ, thus enabling the performer to give expressions not to be found in any other instruments.

The TREMOLO stop has a pleasing and beautiful variety, sympathetic in quality, appealing to the tender emotions of the soul, producing effects the most charming and soothing; it is universally admired and appreciated. The KNEE SWELL gives the performer full control of the tone, enabling him to graduate from the *Pianissimo* to the *Fortissimo* at pleasure, and combines the effect of the Expression Stop of the French Organ in the AMERICAN ORGAN, more perfectly and easily managed.

With all these combinations and improvements of Double Bellows, Pedals and Swell, the AMERICAN ORGAN excels in Expression, Variety, and Power, and has all the quality and capacity of a full Orchestra, and to the hands of a master is capable of the most complete orchestral effects.

The AMERICAN ORGANS are superior in Mechanical finish of the action and interior portions of the Musical parts. The valves are of material expressly prepared to avoid all sticking, cracking, or decomposition, are thus durable and will be always in order.

The Keys, Reeds, etc, are perfect in their finish, and this gives the quickness and sprightliness of tone, brilliancy, etc, equal in every respect to the "percussion stop" of the French Organs, but not like them in danger of getting out of order.

The AMERICAN ORGANS are by far the most beautiful in exterior finish, forming a handsome piece of furniture for the Parlor, Boudoir, or Sitting Room, occupying but little space, and perfect and complete in every particular.

THE

AMERICAN ORGAN

Makes Home Attractive; and Refines and Elevates the Minds of All.

Beautiful in its Appearance and Effects.

The AMERICAN ORGANS are finished in Rich Rosewood Cases, varnished and polished, forming an elegant piece of Furniture. Also, in Black Walnut Cases, and in Oak, finished in oil, and especially adapted for Churches, Lecture and Lodge Rooms.

They take but little room, are only 35 inches high, and from 34 to 47 inches wide. *They cost but a trifle more than Melodeons*, and yet possess many times their advantages in musical capabilities.

Home Miscellany.

[For the California Farmer.]

LETTUCE AND I.

C. FRENCH RICHARDS.

I look 'cross the street to the rich man's house
With turrets and casements high—
There's crape on the door, and gloomily grand
A hearse goes mournfully by.

And Lettuce and I sit down with our love,
Reading each, heart unto heart,
Thanking God we are willing to go
When he shall bid us depart.

No ephemoral wreath, no castle is ours,
With turrets and casements high;
But Lettuce says, we have builded us ours
Imperishable in the sky.

We never were rich, but sometimes I think
A lord and lady we are,
When Lettuce sits down i'the twilight to sing
Touching softly her guitar.

They say we are old, but Lettuce seems young,
With her eyes of quiet brown—
Sure there's some silver flecking her hair,
Like dust on her wedding gown:

But she sings and smiles just as sweetly now
As when hair and gown were fair,
Wearing her years as light on her brow
As she wears her silver hair.

We look 'cross the way to the rich man's house
With turrets and casements high,
But 'tis not envy, nor the empty hearse
That brings the tear to our eye.

Adda Clare.

We copy a few thoughts of this lady from the Golden Era. However singular may be some of her ideas, we like to pick out the good ones and hold them up for all to enjoy. Some weeks since, amid a mass of subjects from every quarter of our country, we clipped the following that we esteem truthful and good—the subjects "Women" and "Babies."

Speaking of the health of women, she says:

"Happily, for a few years, a great change has been going on in the public standard for women. Organic disease has ceased to be cherished by sentiment, the heroine of romance no more wears the hectic flush, and the perforated lung is no longer admired in the female bosom.

"After all, I believe that when women become generally healthy, that brutal husbands will be much rarer than they are now; for what is more adapted to stimulate all the worst impulses of a bad man, than union to a miserable, pining, ill woman. None but the higher order of men can be intimately associated with a sick woman without despising her."

The last paragraph is worthy the special thought of women:

Speaking of the great and growing disregard of little children she thus speaks.

"The other day, I left my own little child at the circus, seated in a reserved chair. When I came back, a great strong, bearded man had pulled him out of his chair seated himself in it, and compelled the child to stand in the crowd, never offering to hold him. What a nature that man must have had, to whom that little pale face, and four tender years of age could plead nothing. I pity that man; something of the man was left out when he was fabricated.

"I do not mean now to say that every man, old, young, married, single, etc., in San Francisco is engaged in trampling down children in the streets and otherwise ill-treating them. To the willfully obtuse I will state that there are any number of exceptions to these remarks, and numerous gentlemen whom, should I include in them, I should be basely slandering; to those who do not misunderstand me this last remark is not offered.

"But a little child should be sacred to the roughest minds, and no man can have business important enough to make him offend one of these little ones. A little of the religion of kindness to the children would be a better investment than copper and silver, in that treasure-house where neither "moth nor rust can corrupt," and where there is no depreciation and no panic in the market. Let humorists be sarcastic about children let men of the world sneer at them, and let it be fashionable to find them nuisances, for my own part I think the world would be a poor place without their sweet little faces, in which there is no speculation and no calculation, and I say God bless the children and make them better men and women than we are in our generation.

"To those who shall treat these lines with contempt, I can only remind them of the sacred lips which said of him "who shall offend one of these little ones, it were better for him that a mill-stone were tied about his neck, and he were cast into the depths of the sea."

The last two paragraphs are surely full of beauty and truth and we hope these words will be treasured, as they should be, and have their effect.

Boys.—Boys, when they are boys, are queer enough. How many ridiculous notions they have, and what singular desires, which in after life change and shape themselves into characteristics Who remembers when he would have given his birthright for a rocking horse, and his new suit of clothes for a monkey? Who forgets the sweet faced girl, older than himself, against whose golden hair he leaned and wept his grief away? Who recollects when the thought of being a circus rider appeared greater than to be a President; and how jealously he watched the little fellows that wore spangled jackets and turned somersets, and desired to become like them? If memory preserves not these caprices, or something similar, the boy is lost in the man. Happy visions! they come quickly and go quickly, leaving us ever to sigh for a return of what can never be again.

If you wake up thirsty, diet, that is, eat nothing; if you have diarrhea, be quiet, that is, do nothing, drink nothing; and if not better in twelve hours, send for a physician.

THE TRUE WOMAN.

[We give our readers the following very beautiful story, "a waif" on the stream of time. It is a picture of a "True Woman," beautiful as it is true, and as there is a fearful panic over our State, and the prospect of many ruined fortunes, we point to this noble woman as an example worthy of imitation to all those wives who may be similarly situated in these trying times—and happy will be those men and those homes where the "True Woman" is found.]

"I'LL have to go Mary, there's no help for it."

She looked—the lady to whom these words were addressed—in a way which showed it had struck and hurt her. She was scolloping a child's skirt, and the needle-work had followed her rapid fingers along the flannel like a line of snowy foam, but now the work fell suddenly, unheeded to the floor.

"Ah, John, has it come to that?" asked Mary, the wife of John Malcolm; and the soft words were spoken with a kind of gasp, as though just beneath them by a mighty swell and rush of feeling that well nigh overpowered her voice.

"Yes, Mary, it must come. God knows I've struggled hard as any man to weather the storm, and I could have done it, too, if those western houses hadn't gone under. But they'll carry us with it."

"I can't realize it yet, John," looking at him in a half-bewildered, half-frightened way, that was pitiful to see; the shock for the moment had half stunned her.

"O Mary, it was hardest for your sake," and the words came in a sharp groan which is terrible to hear from the lips of a strong man. The tones roused her at once into a full consciousness of what had befallen them, and the part she must bear in it

"Don't John—don't take it so hard," her voice struggling through a sob into a note of cheerfulness, and her lips fashioning a smile, which though weak at first, you felt certain would grow stronger each moment; just as you had the sweet promise of the day when the first faint sunbeams struggle weakly out of the morning mist.

"I could have borne up, Mary, if it had not been for you and the children; but that thought cuts me to the core—it's more than I can bear."

And for the first time the young wife and mother heard a sob from the lips of her husband, as he bowed down on the arm of his chair. The pride of his manhood gave way at last, and John Malcolm wept like a little child. Then the woman's heart, the woman's power to cheer and comfort and strengthen, roused themselves, the wave went over her but one moment, and then Mary Malcolm forgot herself, and rose up to the hight of her true womanhood—to the exaltation of self sacrifice.

"John," said the soft brave officer, "do not say that again. Let everything else fail, the heart of your wife never will."

And now she has come close to him, and he felt her small arms around his neck, and her head lay on his shoulder, as tender and confiding as in the days of their brightest prosperity. All through one day he had been looking forward to this hour, and shrinking away from it; and once or twice—God for give him—he had glanced out of his office window to the river, which rolled its dark sullen waters in the distance, and a fierce temptation had rushed over him to hurry out and bury all his pain and anguish under the dark ruffled sheet of water. But John in his secret distress, knew that the temptation was the voice of the devil entering into his soul; he was a man who feared the Lord and kept His commandments; he put the temptation aside.

The young husband had not doubted his wife's heart for a moment; but he had expected to see her almost stricken to the earth, with the first tidings of the ruin of the house in which he was the heaviest partner. He knew that her youth had been nurtured in all the grace and luxury that wealth confers, and he feared the thought of going into the chill and darkness of poverty. He had not looked for loud lamentations, or bitter reproaches, but he dreaded the silent tears, the mute despair of the white face.

So John Malcolm raised his hot face, stained with the tears that were shed for her sake, and looked into the eyes of his wife; she answered with a smile that set her face in a new sacredness and beauty to her husband's eye—a smile so sweet and tender to him, so brave and defiant for the worst the world could do for them, and it said to him at once all that her words would and could not.

"Ah, Mary, my wife," said the merchant, "I thought when I came into my house an hour ago, that I was a ruined man; but I feel now as though I were a rich one."

"Ruined with me and the children, John?" and now there was a faint reproach in her voice; but she clung closer to him.

"But Mary, poor child, you don't know what it is to be poor, to give up so much of ease and luxury to which you have been accustomed."

"You say that, John, before you have tried me, and seen what of courage, and powers of self-sacrifice there are in my nature."

The noble words had a fitting emphasis in the sweet smile, in the steadfast, dauntless tones.

"But we shall have to give up the house, Mary."

"Well, we can be just as happy in a smaller one. Our love has a broader foundation than stately rooms and costly furniture. We'll take a cosy little cottage somewhere in the country, and instead of three servants get along with none."

Hearing these words, John Malcolm looked at his wife, but he did not then say what was in his heart—a thanksgiving to God for the angel he had sent to walk with him. He took her hand and held it close in his, while he told her of the temptation which had beset him before the failure of his house became certain—a temptation by yielding to which he could have saved himself from failure.

But it must have been by dishonest means; by taking advantage of others in his power—in short, by a fraud, which though man's laws never could reach, God's did, with that eternal "Do unto others as you would they should do unto you."

"O, thank God! thank God! you were delivered from this evil," said Mary Malcolm. "I had rather you should go down to your grave without a dollar than have committed this sin," and the tears filled her blue eyes as she spoke.

And afterwards there fell a little silence between the two, husband and wife. It was broken by the latter. She looked into the man's face, and her fingers sifted themselves through the dark hair that had no specks of gray, and her look, bright, grateful, loving and touching, conveyed a great deal.

"What is it, Mary?"

"I was thinking, John, how much better off I am to-day than thousands of wives throughout the land. How many there are who sit in their lonely homes, wearing the slow hours away, with hopes and fears for husbands that are gone to the war, and whose dreams at night are filled with visions of battle fields where the one beloved face lies white and ghastly on the sodden grass, with no hand to offer the last cup of water, no ear to catch the last low word. Ah, John, my eyes have never searched, as so many eyes do, for your name among the list of killed and wounded; and 'failed' seems a word to thank God for, when I think of that."

She was crying now—the broken merchant's wife—crying for joy.

"Mary," said John, "I never thought of all this, never once; thank God for it, through this day, that has been the darkest and brightest day of my life; for out of the thick cloud has its blessed light shined."

And after awhile their talk went on the practical matters and uses which so nearly concerned them—the retrenching their expenses, and selling off the furniture at once, and settling themselves in the cottage as Mary called it, always giving it a sweet flavor of home.

"I can get a clerkship, and we can contrive to live on a small salary, till the war is over, which God grant may not be long, and afterwards, doubtless, I shall see my way clear into business again. But, Mary, don't you know how folks will pity you behind your back, and say you've come down dreadfully in the world, and say that it's a shame you ever threw yourself away upon such a poor dog as I am."

"They don't know what they are saying, then, and I certainly shan't care for it."

Her smiles were clear and bright now, as sunshine that has struggled with the cloud, and come out of it triumphant.

"Well, Mary, a strong heart makes a stout arm, and I shall toil with both for you and the children, as a man does for those who are dearer than life to him."

"Dear John!" her hand fluttered down on his shoulder in a pretty caressing way, though the tones needed nothing more.

"I came home, Mary, a miserable, discouraged, broken-spirited man; and now I feel as brave, as cheerful, too, as I ever did in my life—aye, richer, for it needed this day and this trial to show me what the woman I have married was worth, and all she could be to me. Oh, Mary, if there were only more wives in the world like you."

Dear reader, have you ever stood, like this woman, face to face with adversity? And have you, too, learned in what spirit to take it?

The Sanitary and Christian Commission.

Their work will tell, and the good accomplished will never be fully known and appreciated until the war is over, and the soldiers' tongues unloosed. Then the South will know the North better, and the spirit of fraternal love will be revived, and the Union restored to beauty and glory. We give items elicited from the wounded soldiers, which were gathered at the battle of Fredericksburg. These are facts, and they show the heart's current:

"There can be no doubt at all as to the despondency of the rebel soldiers who have fallen into our hands. Yesterday, at Belle Plain, while dressing the wounds of a soldier of the Forty-fifth Georgia regiment, a surgeon said to him: 'We are glad to help you; a wound covers all differences. May be you'll find the Yankees are not, after all, the bad fellows you expected to find them.' 'Oh, sir,' he said in reply, as a grateful look came into his face, 'I've found out already that there are kind-hearted, true men at the North.' Continuing the conversation, he remarked that the people of the South were not animated by any such hatred of the loyal North as was attributed to them; the war was the work of a few leaders; the masses had nothing to do with it. Lately conversing with a member of the Thirty-seventh Alabama regiment, now here in hospital, with four wounds in his breast and head, he remarked that his time of service expired last Fall, but 'the scoundrels wouldn't let him go;' they compelled every man, he said, to stay in the ranks, whether he would or not; but, he added, 'they can't keep me any longer.' These men, of course, fight stubbornly and bravely, but they do it only under the domination of a brutal instinct."

Patent Hat Rack.

THE PROPRIETOR AND PATENTEE WOULD invite public attention to a new

PATENT HAT RACK

which is now on exhibition at the California Farmer Reading-room This is an entire new thing in style, and of peculiar form. It is a valuable invention and worthy the attention of Furniture Dealers, and Inventors. This Invention is patented and the undersigned will sell Rights for the County or State, or other parts of the Pacific Coast. This Patent was sold for a high price in New York. Call at Farmer Reading-rooms and see the model. For particulars call on Editor of Farmer. 13-3m

$2,500 Wanted on Real Estate.

THE SUM OF $2,500 is wanted on Real Estate in San Francisco County, upon land of undoubted title, worth double the amount. Address A. B C., Farmers Office.

ELECTRICITY

THE GREAT REMEDIAL AGENT.

Electricity as a Remedial Agent has, until recently, been but little known. An Electric Battery has been a terror from childhood up because a little Battery gave a "start," and the thunder storm killed by lightning Now it is better understood, and is and will be the sovereign remedy for many diseases heretofore considered incurable. The following series of articles and statistics, with facts and proof of the virtue of Electricity are worthy of attention. When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulations of the poisons which constitute disease. A great cry went up from the interested in the continued supremacy of the old system of one poison to cure another, that Electricity, as a Curative Agent, had been tried and had proved to be of but little if any value—thinking, poor souls, the word of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients there were those who were diving into the science of Electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the *Improved Instruments* of Dr J. H Josselyn, Resident Physician at the Electropathic Institute, 615 Washington street, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic System. From early morn till late at night, his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services.

The charges, too, are not as heavy as by the old system, besides there is no med cine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed is Rheumatism, none has given the honorable practitioner more trouble to relieve, and no one has pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic System in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of a relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

We allude to that kind of disease paraded by quacks in the journals of the day, a trouble which was never cured by medicine, only a little strength imparted by the use of tonics. The poor victim is kept taking medicines and paying for them until his last dollar is gone and then, as soon as he undertakes to work to obtain more funds, the trouble comes back in all its loathsomeness. To this disease Electropathy is peculiarly applicable, its action being upon the spermatic nerve, strengthens the secretory organs, and at the same time, creating an equilibrium in the system, thereby preventing an elapse.

We dwell upon this disease because it is the bane of the youth of California; and one about which there has been more deception used than all others put together. It is not necessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present very few Instruments in the world that can be depended upon. A good instrument costs very heavy, and cannot be purchased unless ordered, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only Instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous imposters in the bathing line. The pure Magnetic Bath is one of the most effective aids in the removal of disease from the system, but if given at the wrong time is likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of the Bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unreasonably administered, and if not necessary, advise the requisite remedy.

To Females,

the Directors would say, Electropathy is particularly applicable to your delicate and fragile systems, and to the numerous troublesome and painful diseases to which you are liable. Should you be irregular, a few treatments will restore the functions to the proper state without pain or inconvenience. Should you be weak and enfeebled, either general or local, this system imparts strength and vitality, making the recipient feel buoyant and youthful, where before they were languid and unable to enjoy the pleasures of life. One great blessing connected with Electropathy is, it purifies the system so thoroughly that it beautifies the complexion, making the coarse and freckled skin as pure and fair as possible, giving the patient a fresh and healthful look.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil foreboding and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in issuing this pamphlet, do it in the hope that it may be the means of awakening the public, who have not studied into such things, to a sense of their duties, and if possible prevent those who have the care of a rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse the origin. Also, that those in need of remedial agents may know where they can find them without resorting to taking the thousand and one poisonous nostrums that are continually palmed off as sovereign panacea for all the ills of humanity. Avoid them all, they are snares set to rob you, and to your bodily injury at the same time. The following is a list of the cases which have been successfully treated by the *Electropathic System*, at the Institute, during the first four years of its establishment. The record is good, and challenges admiration of the world:

Name of Disease.	No.
Rheumatism	1580
Neuralgia	1402
Dyspepsia	1367
General Debility	1310
Fever and Ague	1262
Dumb Ague	1210
Bronchial Affections	1106
Asthma	1049
Female Irregularities	1022
Mercurial	938
Scrofula—long standing	922
Paralysis	890
Disease of the Eye	833
Catarrh in the head	705
Catarrh in the lungs	603
Liver complaints	600
Incipient Consumption	562
Panama Fever	561
Deafness—total and partial	480
Mental Derangement	471
All other—and among which is almost every nameable disease	2,168
Total	21,373

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit. Let them go, they will not be missed.

Persons seeking remedial assistance, may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface, by its energy, while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon mercurial diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity forces itself out of the body. This result has been arrived at by testing the water after an Electro Magnetic Bath. After such tests have been found in the water the patient is not troubled any more with those pains peculiar to the disease. In all other cases it forces to the surface and is washed off by the bath. The whole system in its application upon it, but the reverse is the case, being one continued pleasure all the time. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES.

SAN FRANCISCO, April 18, 1860.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied with chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco—ss.
Subscribed and sworn to before me, this eighteenth day of April, A. D., 1860. P. BARRY, Notary Public.

The undersigned has used the above method of acknowledging publicly the benefits he received from the treatment given him at the Electropathic Institute, while suffering from a terrible infliction:

This is to certify that I have been under Electropathic treatment at the Electropathic Institute, 615 Washington street. When I applied to Dr. Josselyn I was confined with rheumatism, and also had the chills and fever, so that, without relief, I don't think I could have lived one week. The Doctor, with his instrument, relieved me from first treatment from all pain, and perfectly cured the disease in twenty treatments, without the use of medicine. I cordially recommend all afflicted to patronize this institution, for it is truly a blessing to the afflicted, and the operation is very pleasant. I wish to thus publicly thank Dr. Josselyn for his care and sympathy.

JOSEPH SEGER, of Solano County.

September 19, 1860

State of California, City and County of San Francisco—ss.
Subscribed and sworn to before me, this 19th day of September, A. D. 1860. P. BARRY, Notary Public.

SACRAMENTO, Oct. 13, 1860.

DR. JOSSELYN—Dear and Honored Sir: You request me to let you know how I feel after being at home a few weeks. Well, sir, I have been here a little over two weeks, and there is no return of that very unpleasant trouble, my sleep is sound, and there is no disturbance of the regular laws of nature. I feel as strong as I ever did before the disease had weakened my system. Not only is the general debility entirely disappeared, but the local trouble has gone, and so strong that there is no fear of its return. Considering that you only took one month to cure a disorder of seven years standing, I think your system almost miraculous. Please accept my sincere thanks, and publish this if you please; I am sworn to it, as you will see. C. BOWLES.

State of California, County of Sacramento—ss.
Subscribed and sworn to before me, this tenth day of October, A. D., 1860. CHAS. HART, Notary Public.

HORNITAS, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it; and Mercurial pains as you state it to be. I feel as gay as a lark, no pain or bad feelings, no weakness, but perfectly well, and all done by you in three weeks without one drop of medicine. You had hard work in making me believe before you commenced that you would cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my earnestness. Doctor, you have my thanks, and I will boast you all I can, by spreading your fame up in these parts.

Respectfully yours, GEO. PERRINGER, Jr.

To J. H. Josselyn, M. D., Resident Physician, at the Electropathic Institute

NEVADA, Nov. 8, 1860.

DEAR DOCTOR: Pursuant to agreement, upon my arrival at home I sit down to pen you a few lines in acknowledgement of the great service you have rendered me. In returning me from a painful case of neuralgia and rheumatism. When I left you and see the gallons of medicines I have swallowed to no purpose, and then to think how soon you cured me, I am astonished. You were only twelve days performing a cure of the trouble, for which I had taken medicine over six months. Dear Doctor, if you could see the wonder exhibited by me to friends, who can hardly believe that a cure was performed without medicines, but here I have been cured, and I have not taken a drop of medicine from you, nor from any one else, while being treated by your splendid instrument. I shall try to show my gratitude by sending every sick one that come across to you. Yours, till death,

FRANCIS GARLAND.

To J. H. Josselyn, M. D., Resident Physician, Electropathic Institute.

State of California, County of Nevada—ss.
Subscribed and sworn to before me, this eighth day of November, A. D., 1860. F. SPAULDING, Notary Public.

YREKA, Nov. 10th, 1860.

DR. JOSSELYN—Dear Sir: Your letter, dated October 1st, before me. You wish to know how my bronchial affections are. Now, Doctor, that looks a great deal like a joke. I had such an affection of several years' standing, but thanks to your natural mode of treating disease, it has gone and never bothered with the things of the past. Since my return I have not felt the slightest trouble from it. When you promised me well I did not expect to ever hear from it again. Any one who sits under treatment of that *Improved Instrument* of yours will have the same feelings. It imparts vitality to the system so rapidly that confidence is at once established. I have to thank you that you did not refuse to treat me because I could not pay you the whole of your reasonable charge; inclosed is the balance due you, and God bless you for the kind treatment I received at your hands.

Yours, ever grateful, WM. GARDNER.

State of California, County of Siskiyou—ss.
Subscribed and sworn to before me, this tenth day of November, A. D., 1860. B. F. WELLITS, Notary Public.

This is to certify that I, the undersigned, was troubled with dumb ague accompanied with rheumatism, very badly. The disease was taken in Washoe. After having exhausted medicines without benefit, I applied to Dr. Josselyn, at the Electropathic Institute, on the first day of November. After having twenty treatments with his improved Electropathic Instrument I am perfectly cured, having been entirely relieved of all pain or inconvenience. I feel as strong as I ever did when in the best of health. I cheerfully recommend all afflicted to his care, as being the best physician I ever have acquainted with. One great advantage, he uses no medicine but cures by a process which is perfectly natural. The time occupied in my case was thirteen days.

D O. HARR.

November 14th, 1860.

State of California, City and County of San Francisco—ss.
Personally appeared before me, D O. Harr, and subscribed and sworn to the above certificate, on this fourteenth day of November, A. D., 1860. P. BARRY, Notary Public.

SAN FRANCISCO, Aug. 31, 1860.

To the Directors and Resident Physician of the Electropathic Institute.

SIRS: You requested of me a certificate of the cures performed in my case. Below I append it.

This is to certify that I was troubled with a swelling which commenced in my ankles, and gradually extended upward until it effected my whole body. I sought the best medical aid in New York and Boston, and they all pronounced it dropsy. Hoping to retrieve my health, I visited California in February last. I consulted the Resident Physician of the Electropathic Institute; and now, after five months of treatment, and waiting to see its effects, I am pronounced well by competent judges. It did not take but three months of treatment to cure me, but I waited to see that it did not return. I feel perfectly assured from what I saw while under treatment that Electricity as applied at the Institute will cure any disease to which the human family is liable.

Now, gentlemen, you can make what use you please of this certificate. With my thanks to the Resident Physician for his kind attention, I subscribe myself,

Your thankful patient,
MRS. C. A. CARLTON

Opinions of the Press.

The advantages of electricity as a remedial agent, are universally admitted by the medical and scientific world. It requires, however, experienced skill to apply this remedy efficiently, and this skill of application is possessed in an eminent degree by Dr. J. H. Josselyn, of the San Francisco Electropathic Institute. Particulars of his method of practice can be obtained by reference to his advertisement in another column. The Doctor is well known to be a scientific gentleman, and an ardent devotee to his profession. He is no pretender, but has conferred incalculable benefits on those who were so fortunate as to seek relief at his hands. For those who desire speedy and permanent relief from the rheumatic pains, so prevalent in this region, we can recommend no surer remedy, than a visit to Dr. Josselyn at his office, San Francisco, No. 615 Washington street.—[Placerville Republican.

ARE YOU SICK?—We wish to say a word to those that are sick. We have in this city an institution known as the Electropathic Institute, situated at 615 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician who has no superior in the city. He has been in charge of the Electropathic Institute for several years, and has been uniformly successful in his treatment of the numerous patients that have placed themselves under his charge. The Electric treatment will cure many diseases that cannot be reached by any other mode. Dr. Josselyn gives his personal attention to all of his patients, and is always ready to give advice to those that may call upon him. His charges are very moderate, and we cannot do the sick a greater favor than to recommend them to call on him before placing themselves in charge of another.—[San Francisco Daily Journal.

We call the attention of our readers to the advertisement of Dr. Josselyn's Electropathic Institute. Voluntary and unsolicited we make the following statement, proving its beneficent effects, particularly in rheumatic cases. Some months since we were on an editorial trip, visiting the interior. The stage-coach upset, and landed all the passengers, including the writer, below in the valley, where the Deer Creek overflowed by receiving the additional material, extending to its usual contents. For some hours exposed to wet clothes, to night wind and weather, we soon felt the effects of the accident in the mountains — pains in the back, limbs and legs, so much so, that for weeks we hardly could walk. Treatments of all kinds were applied but without avail. Finally our attention was called to the Electro-galvanic Bath and appliances of the above Institute. Thank God, after two weeks we have been fully restored, and enjoy now the free use of our limbs and body, as fully as previous to the involuntary bath in Deer Creek.—[Dr. H. Bien.—El Dorado Pacific Messenger.

ELECTROPATHY.—Electricity has long been classed among the most effective medical agents. It possesses great advantages over the systems of therapeutics heretofore resorted to, as it reaches more certainly the seat of disease, especially in nervous or rheumatic complaints. The Electropathic Institute, No. 615 Washington street, under the charge of its able Resident Physician, Dr. J. H. Josselyn has obtained a well merited celebrity for the many cases which have resulted favorably from the skillful application of this invaluable remedy.—[Daily Morning Star.

A GOOD INSTITUTION FOR THE SICK.—One of the very best places in the city for the cure of the sick is at the Electropathic Institute, 615 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician of great experience, and no one can do the sick no greater favor than to recommend them to give the Electropathic Institute a trial.—[Weekly Journal.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparse, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,
and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 5-3m

Literary Shrubbery.

SONNET TO GARIBALDI.

TENNYSON, after visiting Garibaldi, addressed him the following sonnet:

"True thinker and true worker, hand in hand,
Unlike, but yet how like each bears his part:
Hero and poet with the same great heart.
In one the life-blood of the southern land
Pulses with sudden throb, as beat the waves
Where the blue sea his rocky islet laves;
The other, master of the mighty rhyme,
Had pierced the dusky mantle of past time,
And seen the shadows of the noble dead;
The knightly throng, with Arthur at their head—
Writing their Idylls in deathless song;
Deeming perchance, such life a dim ideal—
Its gentle strength, its fearless scorn of wrong—
Or Garibaldi gazed, and found it real."

In the course of an examination for B A., at Cambridge, under an examiner whose name was Payne, one of the questions was: "Give me a definition of happiness?" to which a candidate returned the following laconic answer—"An exemption from Payne."

"I am glad this coffee don't owe me anything," said a financier at breakfast; for, if it did, I don't believe it would ever settle."

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle-grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H & L AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories,

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL-OIL as a basis to their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural resin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest until, at the present time, they have established a manufactory of Rosin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply. The subscribers are now receiving native resin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] July 15, 1859.

Our Market for Grain and Produce the past two weeks has shown much firmness. Prices have been well sustained and show an upward tendency. Sales of Flour have been effected of considerable magnitude for export as well as Government, etc., at prices fully up to ruling rates of Wheat, Barley and Oats, and command full figures, holders evincing no anxiety to dispose of present stocks. Receipts of both old and new Grain are very light. Millers have some difficulty in obtaining supplies for their immediate use.

The Hay and Potato Market is well sustained; all the offerings find ready sale, at no material change from last week's quotations. There is but a limited demand for Wool. The bulk of the choice parcels on the Market has been taken, and of the quantity still on hand but little other than burry or inferior remains to select from.

Our exports are as follows: Per brig Shoot Anchor for Victoria, 213 sks Barley, 780 qr-sks Flour, 205 sks Oats, etc. Per British Bark Collingwood, for Melbourne, 13,751 hf 438 qr-sks Flour.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 5054 sks, Barley 3279 sks, Potatoes 442 sacks, Bran 30 sks, Flour 2374 qr-sks, Wool 141 bales, Hay 3761 bales, Corn 1210 sks, Straw 183 bales, Oats 915 sks, Salt 300 sks, Onions 60 sks.

Also Coastwise: Wool 424 bales, Wheat 634 sks, Potatoes 50 sks, Barley 770 sks, Beans 611 sks, Buckwheat 50 sks, Flour 100 qr-sks.

A REAL BUSINESS MAN, WITH CAPITAL OF $2,000 to $5,000, who desires to invest in a very safe and profitable business already established, may hear of an opportunity by addressing with real signature, S. S. F., care of Farmer Office. All communications strictly confidential. 20-tf

Situation Wanted as Superintendent of Farm.

A GENTLEMAN, every way qualified for the superintendence of a large Farm, who is now in the Eastern States, wishes a permanent situation. He is a man of family, and every way qualified for such a place. Any one wishing a No. 1 Superintendent, within a little time, can secure a valuable man for such a place by addressing the Editor of the Farmer.

English Steward, or Gardener.

A PERSON JUST ARRIVED FROM CANADA IS DESirous of securing a place as Steward or Superintendent of a Farm. The very best references can be given of his character and capability for the situations. Apply at the office of Editor of Farmer or by letter. 21-3

California Grass Seeds.

EVERY VARIETY OF NATIVE GRASSES, the seed of which can be saved, will find a ready purchaser for the seed, on application at the Farmer Office. n12

Splendid Windmill for Sale.

ONE OF DR. FRANK JOHNSON'S SELF-REGULating Windmills is offered at a low price, if called for immediately. This is a good 12-foot mill, 3-horse power, of the very best make and model, and finished in the most workmanlike manner. For particulars inquire of the Editor of California Farmer. 10

A Lady Teacher.

A LADY TEACHER OF EMINENT ABILITY AND qualifications, one who fully understands the great responsibility of the position, wishes a situation in some Seminary, or School, where she can have a responsible trust. The Lady has long been employed as a Teacher, and can bring the most ample testimony of ability and qualifications. A note addressed to A. B. L, care of Editor of Farmer, will be promptly attended to. 10

NEWMAN BROTHERS,

20 No. 303 Battery street, near Sacramento.

LIFE-SIZE BUST

....OF....

Thos. Starr King.

COPIES OF THE BUST OF THE LATE REV. THOS STARR KING, by P. J. DEVINE, are soon to be issued to subscribers. The Bust and subscription list may be seen at Mead & Van Tassel's store, Montgomery street, or at Grant & Devine's Marble Yard, Sutter street, between Montgomery and Sansome streets. The public are invited to see the Autograph Subscription list which comprises many of Mr. King's personal friends.

Opinions of the Press.

The following criticisms are from the leading newspapers of the city:

After the many attempts at Busts of the late Thos. Starr King which have been made, it is gratifying at last to have one we can praise. It is a work of art, for expression is there as well as outline.—Bulletin

Nothing heretofore executed, either as a portrait or bust, will equal it as a work of art or valuable memento of the dead.—Alta.

It is an admirable work, and is pronounced a perfect likeness of the deceased by those most capable of judging.—Democratic Press.

The friends of Mr. King, who have critically watched Mr. Devine's progress, express themselves highly satisfied with the result. It exhibits a fidelity of likeness and artistic grace that has not yet been equaled.—Golden Era.

As a work of art it is wonderful, seeming to be exact and complete in every detail to which the eye may be directed or recollection recalled.—Sunday Mercury.

We have for many years looked with interest upon the labors of the artist. In the present effort he has been completely successful.—Cal. Farmer. 13-tf

PATENT RIGHTS FOR SALE.

THE FOLLOWING PATENT RIGHTS OF NEW AND valuable inventions (of which we have models to show their value) are now offered for the States of California and Oregon, and Utah and Washington Territories.

NO. 1. THE MECHANIC'S SPIRIT LEVEL.

Patented September 13, 1859.

This implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet out. Builders will do well to examine the model.

NO. 2. IMPROVED CLOTHES REEL AND BAR.

Patented January, 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery, or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines, neat when used and ornamental when not in use.

NO. 3. A CORN CULTIVATOR.

With this implement the soil is first thoroughly plowed and deeply pulverized, and on the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

NO. 4. A MUSKETO BAR.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

NO. 5. HYDE'S PATENT POST-DRIVER.

A most excellent labor and money-saving machine, for which we offer rights.

NO. 6. SEED-SOWER.

This is a new invention, and one of great importance to all who sow grain, or any garden seeds. The working model can be seen at the Farmer's Reading-room.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

COL. WARREN, Editor Farmer.

Coffee. Coffee.

MARDEN & FOLGER'S

CELEBRATED

FAMILY COFFEE

Is now used in every First-Class Hotel and Principal Restaurant in San Francisco. We have received the following certificates from the proprietors since we have introduced our NEW PATENT ROASTER:

The undersigned, having tested the quality from all the different manufacturers of Coffee in the city, cheerfully recommend MARDEN & FOLGER'S as

Superior to any Brand,

Either foreign or domestic.

Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOma County lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P. Swift, Esq. containing 14,000 acres of land is offered for sale in Lots or farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality. It is accessible to market, being adjacent both to Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State.

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point.

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the offices of Haight & Pierson, 622 Clay street, San Francisco or at the store of Mr. Paulo, Sonoma.

17 WILLIAM DIHLER.

California Cider and Vinegar.

THE UNDERSIGNED INVITES THEIR Friends and the Public to call at their Manufactory, 708 MARKET STREET, Exactly opposite Third street, to see somewhat of a curiosity in California: A CIDER MILL. And, if you wish, we shall be pleased to furnish you with new sweet Apple Cider, dripping right from the Press, and in its season the juice of Grapes, or any other Fruit. Drinking new sweet Cider is known to be healthy, giving a ruddy glow to the complexion.

Nearly all the Vinegar sold in San Francisco is a manufactured imitation, made from corrosive acids, and people have provided their families with what was sold as Cider Vinegar, but which was in fact a poison. We mean to keep nothing but CIDER and VINEGAR, and that genuine.

If we are to succeed in our experiment of substituting pure Vinegar for the villainous fluid which has injured the health of thousands in California, it can only be done by a general patronage, and we trust to receive a call from you.

Lebaron & Thresher,

Cider Mill, No. 47 Metropolitan Market.

☞ We have an Order Box at C. E. Collins, 602 Montgomery street, and will deliver Cider and Vinegar at any part of the City Free of charge. Orders sent through Wells, Fargo & Co., will be promptly attended to. 16-3m

The State Agricultural Society—Its Management, Condition, Prospects, Etc.

We have received numerous letters like the following in all the past five or six years, and have refrained from entering into an extended discussion, because we did hope a change in the management of the Society would give a promise of "better days," to an institution *intended* to accomplish great good. But for five or six years the condition of the Society has been getting more and more embarrassed until at last we fear it is as "Solano" inquires, hopelessly involved. We know this letter of inquiry comes from a source worthy of reply, from one who takes a deep interest in the cause and progress of agriculture and one who has expended thousands for the good of the State, and for this reason we are in duty bound to respond. It will be impossible, however, for us to answer all these questions fully, and particularly now; it will require time, to collect data that is reliable. But we shall endeavor to give such answers and to offer such facts as we esteem it our duty to publish.

Having originated the establishing of this Institution, in the early years of our State, and having labored earnestly for the cause, we should be false to our duty should we fail to give such data as is within our knowledge, of an Institution that has received so much from the Treasury of the State, and the peoples' pockets. In order, however, that we may accomplish this duty in the best manner for the good of Society, the State and the friends of Agriculture all over the State, we shall be compelled to take up the work in a series of numbers, which we can only do hereafter, of which, No. 1, shall appear in the opening of our new volume, next week.

In the meantime, for general information, we would say that from all the information we can gather, the State Agricultural Society will not hold a Fair at their Hall, but only a show of stock, at the Grounds, with races, etc., and thus hold their title to Agricultural Park. State Agricultural Society, No. 1, next issue.

DENICIA, July 12th, 1864.

EDITOR CALIFORNIA FARMER.

Can you inform us, of this county, whether or not there is to be a State Agricultural Fair this season? If there is to be one, then will you please inform us whether it is to be held in connection with the Mechanic's Institute, at San Francisco, or by itself, on the grounds, at Sacramento?

We have seen it stated that the Agricultural Society is bankrupt—that its finances are in such a condition that it will not be able to hold a Fair this season, and that consequently all its grounds in Sacramento, with their improvements will, by by the condition of the gift, revert to the original donors of the land. Is this so? It is said that there has been bad management—if not, something worse, in the handling of the finances. We are told that the Agricultural Society has received from the State, alone, $100,000; that when it left Sacramento,—after the first State Fair—there was a considerable balance in the treasury and that since that time all that money has been expended, besides the amount taken in at the Hall and Fair Grounds, and the Society is now twenty thousand dollars in debt. Will you tell us how much truth there is in the above statements? Will you give us a full account of the past management and present financial condition of the State Agricultural Society? We also wish to know how much money the Society has received; how much has been paid out in premiums; how much in improvements; how much in salaries, and how much for *food* annually used during Fair time. It is said the Society is in a bankrupt condition; we wish to get at the facts and the cause. SOLANO.

AN EXHIBITION of sheep is advertised to be held in the hall of the Boston and Maine railroad depot, in Boston, on Wednesday the 6th August We understand that specimens will be shown of the Merino, Cotswold, Leicester, Texel, Southdown, Oxfordshire-Down, Scottish, Black-faced or Mountain, and perhaps other breeds. Free tickets of admission may be obtained at the agricultural warehouses in the city.

"Woman and her Era"

THIS is the title of a work recently issued in two volumes by Mrs. E. W. Farnham, at New York, whose name and fame as an advocate of "woman's rights" is very generally known on the Pacific Coast. The work before us, the authoress says, is the result of nearly a quarter of a century's labor and study. It must be admitted by every reader that these volumes evince much study and thought, and that in them are scattered many very important and valuable scientific truths.

Many portions of these books are unexceptionable, much that is in them is admirable because it is based upon physiological truths, upon the nature and powers of the human physique as tending to human development generally. Mrs. Farnham is a talented woman, possessing a fund of valuable knowledge with a retentive memory, and by a year of practice as a public lecturer she may be classed among those who are termed "eloquent woman lecturers."

The work before us has been carefully prepared so as to preach a certain doctrine. *Woman and her Era* comes before us comet like, it shoots up before us to startle, and perhaps to dazzle, by its peculiar light, it is written in a bold and masterly style.

A New-York cotemporary thus speaks of it:

"No knight of old ever flung his glove into the list with more defiant gallantry, no modern prize fighter ever 'shied his castor' into the ring with a greater confidence of victory, than she pitches her two volumes into the face of the whole male sex, and dares them to take up the gauntlet.

* * * *

"Mrs. Farnham contends that woman is the superior of man in her physiological structure, that she is a finer and more complex organization, endowed with higher powers, fraught with richer susceptibilities and charged with nobler duties. In short, sex itself is a higher grade of the development of the human being, and woman, as the highest form of human existence, is the 'Natural Soverign of the Globe.'"

"It is scarcely necessary to add," says the New York critic, "that Mrs. Farnham treats this subject with equal enthusiasm and vigor, at times, indeed, she is very animated, persuasive, and poetical; but her style is not always worthy of the thought; it is hard and untractable; she uses too many abstract words, is too oracular and didactic in tone, protracts her discussion to weariness, and wants the smooth and easy grace which is the charm of the best writing."

Such are some extracts from one of the leading journals of New York. From Harper's Monthly we take the following, and we do so because the title of the work and its author demand it. "Woman and her Era" are truly to regenerate the the world, i. e. the *true woman and her reign* will do so, but they will come in another form and another guise.

Harper says:

The idea of this work, as it is pompously announced by the author, is to demonstrate "the Superiority of Woman," not simply, as appears in the course of the argument, that she is superior in certain respects and for certain ends, but that she is absolutely superior. We say in the outset that in our judgment the book is every way a bad one: bad in purpose, bad in tendency, and bad in execution. To justify our opinion we proceed briefly to lay down its leading points, usually in the words of the author. The leading argument is thus stated in a syllogistic form: "Life is exalted in proportion to its Organic and Functional Complexity; Woman's Organism is more Complex and her Totality of Function larger than those of any other being inhabiting our earth; Therefore her position in the Scale of Life is the most exalted—the Sovereign one." The arguments by which the minor proposition is supported belong rather to the lecture-room of the anatomist than to the library of the non-professional reader. Michlet should have pondered it before writing his "L'Amour;" perhaps, in that case, one bad theory might have neutralized a worse one. The "Organic Argument" having been presented, the "Religious Argument" follows. From a mass of obscure utterances upon this point we extract the following, which we present as the last summary of the whole: "Organic Superiority is in itself proof positive of Super-organic Superiority.....Life is the most advanced which employs, in the service of the greatest number of powers, the most complex mechanism for the End of Use. We are therefore prepared to find in it" [the feminine structure] "the embodiment of a larger number of powers and higher aims in its Use,.....a deeper feeling for the Ends of Use, a more abiding faith in and loyalty to Development, as the one aim that makes life worthy of acceptance, and sweet in its passing taste, and on the other hand to see that its failure herein is more fatal and destructive than it is in the masculine life.....The feminine includes the masculine, transcending it in both directions." Herein lies the argument of the book, which is spread over two volumes of cloudy phrases. The final conclusion is reached near the close of the second volume. Here it is: "The question of Rights settles itself in the true statement of Capacities. Rights are narrowest where Capacities are fewest—broadest where they are most numerous.....It is plain, then, as between masculine and feminine, where the most expanded circle of Rights will be found; and equally plain the absurdity of man, the narrower in capacities, assuming to define the sphere of Rights for Woman, [he broader." Such is Mrs. Farnham's idea of "Woman and her Era." We trust that it will be long before Woman adopts it.

Having given these criticisms we append a few thoughts touching these two volumes, that have been so long promised to the world by this writer.

The author of these volumes has visited these shores, on several occasions; at each visit she has *made her mark*, and by her public lectures and her *private* teachings has won a name that will not soon be forgotten—many a household will long remember the "Woman and her Era."

Most unfortunately for a cause so noble as the "Elevation of Woman," the moral status is wanting in the teachings on these sublime subjects. We have all read of the child charmed by the serpent that came to his feet and looked up into his eye with that entrancing power, until all control was gone, and the child fell a victim to the delusion; so *some* books are put forth under a garb as delusive. The glowing metaphors and stealthy sophistry are like the glances and coils of the serpent, the slime of the serpent is not felt until the fangs are fixed so deep that it it is too late to save life—admirable and grand as some of these arguments would be, emanating from a pure source, yet, when the career of the writer in her life and teachings on the Pacific Coast is remembered, the slimy trail, and the wound of the venomous adder will long be remembered, from the shores of Santa Cruz to all the surroundings of this fair city, wherever those fatal doctrines, for which the same writer has been famous, have ever been scattered.

In years past, Abner Kneeland and his infidel doctrines had their day, so with the companions to that time, Fanny Wright, to whom the eastern public paid homage for awhile; but where there is the *moral balance power wanting*, permanent good can never be expected. A teacher of Woman's Elevation and Advancement must possess the very highest moral power, else it will manifest itself so clearly that, like the plague spot, we shall know it by the colors. So with all the phases in this new work, it is wanting in high moral sentiment, without which woman can never advance in her scale of being.

If the arguments of Mrs. Farnham were sound, if woman is so superior to man in all the finer, purer, and nobler sentiments, why should her progeny be so inferior? Woman is the creator of man in all save, perhaps, the physical strength. Certain it is the mental, moral, and affectionate powers are the creation, in a great measure, of the maternal fountain. The very nature of the child in all that is intellectual, moral, social and affectionate, is the result of a mother's influence and character; she makes or mars the man. It is true that there are many counteracting influences, but if that mother is pure and good, if she is refined and noble, if she is the delicate, chaste, and susceptible being thus pictured, then her offspring must inevitably bear that stamp, and it is because she is not always the ideal thus pictured that man is so perverse and wicked.

All will remember those remarkable influences of maternal power for good in our own American history: Washington's mother, Randolph's mother; also, that of Sir Benjamin West, where he says to his mother "that kiss made me a painter." The life training of Napoleon's mother, made Napoleon what he was—and so with every other man. It will be remembered, too, that sad case of the condemned criminal on the gallows who, calling out to his mother, said, "you, mother, have brought me to this."

All history, and every living being must testify to the power of maternal influence, and while we cheerfully and readily admit, as we have always advocated, their great power, we never can believe they all possess, universally, as a sex, all that is noble, pure and great, and that man is an inferior animal; were it so, was woman thus, our race would have made much more rapid advance in the *last two hundred years*.

That woman was *intended* by the Creator to be perfect, we admit; that she *should be so* we agree; that she *is not so* we lament, for, being the creator of men, when *she* fails of her standard man must fall below it.

Our motto is, and has been, give us educated and refined mothers and we will run the risk of the boys. And never until woman is highly educated, elevated and refined, pure and noble, never until the laws that govern our physical and moral natures are obeyed by *woman first*, can men be made better, or the world purified, all that may be written or said by the author of "Woman and her Era," to the contrary, notwithstanding.

Our object in giving this extended notice of these volumes is not to bring them into notice merely, but to present the subject of "Woman and her Era" before the public. It is a theme of the greatest moment, yet we do not believe it has been presented by this author as it should be, because she is not qualified for so great a cause—some one else will be found nobler, purer, and better, and then the cause will advance.

Remember!—"Gold or Greenbacks!"

We have generously offered, for six months or more, to take *greenbacks* at par, for *old dues*, but we wish those in arrears to *remember* our terms, as advertised are, *cash in advance*, or $1 per year extra, for delayed payments. We will give till *August 1st*, for those to pay that intend doing so. The present depressed rate enables all who ever *intend* to pay, to do so, easily. After *August* we shall make *new terms*. Bills will be sent and we expect *payment promptly*; as a matter of justice, gold should come. We leave all to their own sence of justice.

Poland.

[We give our readers the following original Essay on Poland, by C. R. Splivalo, which was admirably delivered at the Commencement Exercises of the Santa Clara College, on the 27th of June. We esteem it a very creditable production and it will be read with interest at the present time.]

LADIES AND GENTLEMEN:—The news of battles fought and victories lost or won, borne every day and every hour of the day across the continent, from the Atlantic sea board, on the obedient wings of the tamed thunderbolt, reminds us that a million of our brothers are standing in martial gear on the tented field, or sleeping the soldier's glorious sleep of death, for the maintainance of the integrity of that Republic, and the preservation of that liberty for which a Pulaski and Kosciusko imperiled their lives in the gloomy days of our revolution. When I think of the glorious sympathy with which America used to encourage all people struggling to be free, I feel that so great an office as speaking in behalf of oppressed Poland, should not be allowed to degenerate into hands like mine. I seem to hear the voice of that great man who, in the capitol of the United States, pleaded the cause of Greece, and welcomed her into the family of nations, with a dignity and splendor of eloquence that rivalled her own.

But the lips of Henry Clay are closed forever, and there is none to fill his place. Had he but lived, or could he now revisit the glimpses of the moon and speak his thoughts as of old, think with what potent magic he would rouse from end to end of the land the sympathy of his countrymen—for the home of Sobieski and Kosciusko.

> "Had he but lived, though stripped of power,
> A watchman on the lonely tower,
> His thrilling trump would rouse the land,
> When fraud or danger were at hand."

Would to God that in his passage to immortality, his mantle had fallen upon my shoulders, that I, too, might excite in your hearts feelings of indignation against the tyranny which has cloven Poland to the earth, and placed the armed heel upon her radiant forehead—of gratitude towards a sister nation whose sons rendered us such eminent service in the midnight of our adversity; and caused you to cry out from the very bottom of your hearts. God speed the white eagle of Poland wherever it soars, may victory light on the banner of Sobieski, whenever it waves in the breeze. About eighty years have passed since Poland occupied one of the highest stations among the nations of Europe. Governed by sovereigns of her own election who had no aim but the welfare of their country, no will but hers, Poland was made the asylum of every lover of peace and happiness, of every one who longed for the so rare blessings of freedom. Even Jews, the unhappy wanderers of earth, found an undisturbed abode within her borders. Her forces were composed of men who would rush headlong into the thickest of the fray to save their country from dishonor, and of men who for the space of twenty years formed the principal bulwark of Europe against the progress of the sworn enemies of Christianity. Her lands, teeming with vegetation, and cultivated to an inch, by her industrious inhabitants, made the trade of Poland one of the largest in the world. In a word, the name of Poland resounded from one end of the earth to the other carrying nothing but glory with it, and became a spell and a watchword to every lover of freedom.

Such, Ladies and Gentlemen, was the state of Poland when, in 1683, the formidable army of the Turks, which had so long loitered at the frontiers of Christian Europe, broke through them, and marking their cheekless career with fire and devastation halted at last before the gates of Vienna. Should Vienna fall, Christianity and civilization would fall with her. The Moslem was thundering at her gates; there was no hope left, but from Poland; what would Poland do? Help Austria? Help her bitterest foe? It would injure her ancient repute. But no! thus did not think John Sobieski, her magnanimous King. He saw Europe menaced; he saw civilization and Christianity threatened with destruction; he saw the tide of barbarism that had been again and again rolled back, about to sweep away all the land-marks of enlightened freedom in its resistless career; he saw all this, and forgetting Poland's grudge, bade his Poles gird on their armor and march bravely against the common foe. So they did—and John Sobieski, who justly deserves the name of the greatest of Poland's sons, routed the enemy, saved Europe, reestablished order in affrighted Vienna, and returned crowned with an immortal wreath of victory to meet the embraces and receive the heartfelt congratulations of his cherished subjects. Could Europe ever forget this? Could the warm and heartfelt gratitude of Austria ever grow cold? There are certain acts in the transactions of Europe, so vile, that it is impossible to believe they can have had their source in the bosom of Christians; acts so cruel, that even the unbridled ambition of an Al-Raschid, or the bloodthirsty men of Tamerlane, would have disdained to perpetrate. After the death of John Sobieski, in 1690, the blood-hounds of civil war were let loose upon her soil, and the Poles, once so united, so attached to each other, lost that harmony which had so long rendered them the heroes of Europe, and began to quarrel among themselves about the selection of a new King. Russia, Austria, and Prussia, under the false pretext of vicinage interfered, each one favoring a different party. At last it pleased Catherine, the Empress of Russia, to settle the dispute by appointing a Sovereign of her own choice under the name of Agusta III, while the other two Powers left the field to Russia, contenting themselves with the partition of about one-half the territory of Poland among themselves. From this fatal act dates the slavery of Poland—an act which will remain forever inscribed in indelible characters in Polish history, to bear witness against the base ingratitude of Austria and the rapacity of Russia, and which will remain stamped on the heart of every Pole to kindle his avenging wrath in the thickest of the fray. Up rose the astounded Poles, headed by the valiant Pulaski, fearlessly took up arms and marched against the destroyers of their liberty; but for what? to meet death at the mouth of the cannon; to be butchered like cattle beneath the blows of overwhelming numbers. Pulaski, after vainly attempting to rekindle, in the hearts of his countrymen, the almost extinguished flame of patriotism, resolved to die in a land free from the bonds of slavery, and so came to America to battle with her people for that independence, and for that renown which he in vain endeavored to acquire in his own country. He saw a new field opened for vindicating, with his sword, the same principles, the same rights of mankind, and the same unchangeable laws of justice, as for which he had wielded it with so much courage and singleness of purpose in his own country. He arrived at Philadelphia in 1777, during the darkest hours of our revolution. Would to God he had met in his own country that unbounded generosity, that heartfelt sympathy for his sufferings, which he met in the United States. Like a true Pole, like a true son of freedom, he fought the battles of our revolution, and at last found the death he always longed for, the death of a soldier, on the bloody banks of the Savannah. Kosciusko, after Pulaski's death, left the American army, in which he had acted a hero's part, to tender his talents and his sword to his own country. He soon, through his industry and his untiring zeal, collected a little band of patriots and marched towards Warsaw. Good fortune sped this undaunted phalanx, and after battling on the walls of Warsaw with a courage worthy of their ancient character, this heroic band succeeded in taking possession of that city, Kosciusko was unanimously proclaimed dictator. But soon the Russian army, headed by the famous Suwarrow, was seen approaching. Kosciusko again mustered a small army and prepared them for the coming onset, beneath the walls of Warsaw. The battle began on the 8th of June, 1796, and was maintained with equal valor on both sides. But alas! that into such a small band of heroes foul and sneaking treachery should have found its way. Yes, through the treason of one who deserves not the name of Poland, the little band was routed, and well may the school-boy exclaim again and again that "Freedom shrieked when Kosciusko fell." With the fall of Kosciusko the American and Polish hero, the Star of Poland, which had for a while gleamed above the horizon, was sunk in the thick gloom of oppresion. You have heard the history of Poland, you have compassionated with her in her sufferings, you have followed her to her grave, you have bedewed with your tears the sods beneath which her liberty lies buried, and will any one of you who claims the right of possessing a heart that feels, will any one of you now ask whether Poland should be free? If such a question were put to me by a free-born American citizen, by one who possesses all the blessings that an untarnished liberty can shower upon him, by one who has been born and nurtured on a soil which also was once defiled by a tyrant's foot, I would answer. Should your own country be free? Should your own country which once, not unlike to Poland, oppressed by the tyranny of England, now be what she is, the free and independent Republic of the United States, respected and loved by all the other nations of the earth? But no! let us not dwell upon such supposition. I know, too well, the feelings of your heart while musing o'er the fate of unhappy Poland. But now she has risen again; she has broken the chains that had bound her limbs and she is now struggling manfully to reestablish her independence; to behold herself once again as she was, Poland the free, Poland the mighty and respected. But at least one thing she requires of you, and it is this, that since you yourselves are now overwhelmed by the cares and dangers brought on by an accursed civil dissension, since you cannot give her a hand in the mighty warfare she is waging, she entreats you to mingle at least your hopes and fears with hers, and if at last she does fall, if fall she must, she may fall and lie buried deeply within your bosoms, she may fall, but not unavenged, not unwept. But she must not fall, as long as there is a God who wields the sword of justice, and who watches over the fate of Nations, to support her cause. No, she shall not, must not, fall. Her Star of Hope, its cloudy casement having already been pierced through and through, with vigorous arms, is now shining in all its splendor before her; it is recalling to her mind the days of her past happiness, the days in which she held the reins of Europe in her mighty hand, and it invokes her to fight bravely, to fight manfully, to fight as long as there is a Pole remaining to uphold her, to fight till she conquers or falls. She is now obeying that invocation; the hounds of war are devastating her territory, and her streams have dyed their sparkling waters with the crimson hue of Russian and Polish blood. She is bleeding, but not in vain; she is struggling, but for as noble a cause as ever nerved a patriot soldier's arm, for her altars and her firesides. And the pleasant gales that swept her lands bearing the harsh injunction of the tyrant's voice, now breathe nothing but *war. Away with the oppressors*—Liberty and Independence.

> But, turn my soul, from presages so dark,
> Great Poland's spirit is a deathless spark
> That's fanned by heaven to mock the tyrant's rage;
> She like the eagle will renew her age,
> And fresh historic plumes of fame put on—
> Another Athens after Marathon—
> Where eloquence shall fulmine, arts refine,
> Bright as her arms that now in battle shine.
> Come—should the heavenly shock my life destroy
> And shut its flood-gates with excess of joy,
> Come but the day when Poland's light is won,
> And on my gravestone shine the morrow's sun.
> Should fate put far—far off that glorious scene
> And gulfs of havoc interpose between,
> Imagine not, ye men of every clime,
> Who act or by your sufferance, share the crime,
> Your brother Abel's blood shall vainly plead,
> Against the "deep damnation of the dead."

A Valuable Scientific Paper.

[CONCLUDED.]

Leaving this branch of our subject to Geologists and Engineers, who may find, therein almost endless matter for useful reflection, we proceed to examine briefly the hygienic relations of the river.

Let us assume that the Sacramento river supplies on the average throughout the entire year a vertical column of water from 15 to 30 feet, for about 300 miles more or less above the city. Now if the mean elevation of the primary tributaries be estimated, the accelerating velocity which such a body of water would acquire in falling from this hight to a level with the city of Sacramento would be almost inconceivable, but little less probably than that of a shot fired from a cannon, instead of being as at present only from two to three miles per hour.

In falling down an inclined plane, this water parts with its velocity every moment by friction against air, rocks, banks, curves, the bottom of the channel, and other resisting media—hence affording time for important changes to be effected, before it reaches the more level parts of the valley. In the region of the lower Sacramento, the rain, the filteration-water of the river itself, and the watercourses in time of high water, do not run *into* but *from* the river, and consequently they carry off into the *tulares* or marshes, or low lands—animal, vegetable and mineral matters capable of solution, suspension, transportation and putrefaction. Hundreds of miles above the city of Sacramento the tributaries of the river—every swollen brook, rivulet and stream, reach the larger affluents charged with these matters, which during its journey towards the south, under the influence of a hot sun, undergo great modifications. New chemical compositions and decompositions must occur—the heavier debris sinking, and mineral and other matters being newly combined. Hence every condition exists favorable to the dissipation of deleterious gases arising from the putrescible matter in the water; and accordingly we find this whole region infested with intermittents. But though loaded with detritus on reaching Sacramento city, the river water, having undergone self-purification, becomes comparatively pure and salubrious—the more so, because the lower Sacramento is no longer a sewer to receive filth—the drainage during floods being in the opposite direction.

This theory is sustained by the comparative absence or diminished ratio of diseases attributable to marshes and inundations in the lower divisions of two of the largest rivers of the world—the Mississippi and the Amazon:—the one debouching near the border of the torrid zone—the other in its center. As stated by Dr. Bennet Dowler, of whose valuable paper on the Mississippi (See New Orleans Med. and Surg. Journal, Vol. XV, No. 4), we will freely avail ourselves, the Illinois river, during its periodical season of inundation, extends over an area approximating that of the lower Mississippi during the rise of the latter. The water of the former compared with that of the muddy Mississippi is clear.

The Amazon, running nearly parallel with the equator, has of course no variety of climate, so far as heat and cold are concerned, with the exception of that from the elevation or depression of the land and from the rainy or dry season. Its inundations extend beyond its banks for hundreds of miles—being in this and many other respects, including its hygienic influences analogous to the lower Mississippi.

The sanitary condition of Para, the largest town on the lower Amazon, situated one degree, eighteen minutes south, may be cited to prove this. Mr. Edwards, of New York, who resided in this city previous to an irruption of yellow fever there in 1850, says in his voyages, p. 252 et seq., "Multitudes of persons from the northern States now visit the south in search of health, or spend their winters in the West Indies, at great expense, and little gain, who in Para could reside for comparatively nothing, with a certainty of recovery. The novelty and beauty of the country, as well as the luxury of the climate, afford sufficient inducements to the invalid for seeking both health and pleasure in Para. Its climate is peculiarly favorable, the extremest heat being less than in New York. Para has no kind of epidemic. The people live to a good old age." He says that while intermittent fevers are rare on the banks of the Amazon, where he never met with but one case, they abound on its tributaries, instancing the Madeira river (pp. 163, 195). Of the lower Amazon, he says: "Its climate is singularly healthy." In the upper Amazon, Humboldt says, fevers are very prevalent. (Narrative, V. 164 Lond.)

We see no reason why this exemption from epidemics and fevers upon the lower Mississippi and Amazon may not be in some degree owing to the same hygienic influences as have been found to obtain in the lower Sacramento. The comparative purity of the waters, and the cooling effects of evaporation from a vast expanse of inundation, by lessening one of the principal causes of some diseases, namely heat, cannot be questioned as to sanitary influences. In fact, the highest authorities, even among miasmatists themselves, show that noxious gases may be absorbed or imbibed, or otherwise limited, or totally arrested by bodies of water. With regard to the proposition, so far as it relates to the Sacramento, the water is of unusual chemical purity—containing but one part in 23,000 of soluble material, according to a careful analysis by Dr. James Blake. (See Cal. State Med. Journal, Edited by J. F. Morse, M. D., April 1857.) We have found it to bear on an average, in mechanical suspension, one thousandth part by weight of harmless mineral sedimentary substances, consisting chiefly of clay, mica and fine particles of sand. Light, therefore, can but imperfectly penetrate its turbid, rapid, torturous current, and for this reason it is almost entirely devoid of infusorial and cryptogamic organisms, which have been supposed to vitiate more sluggish streams. This proportion of sedimentary matter is still vastly greater during a freshet. We are not aware that a sectional area admeasurement of the river has ever been made; but estimating the amount of water which passes down the river each second, during high water, at 327,600 cubic feet, we find on an average, there are carried in suspension past Sacramento city—(a certain portion being deposited as is shown by the elevation of the low, as well as high water marks on the chart),—150,569,012 and 389,485ths grains per second, or 38,717 and 8-10ths tons every hour, more or less, according to the stage of the American river—this affluent, owing to mining operations, being always most charged with detritus. The solid material, thus ascertained to be suspended in the water, is found on calcination to be sufficient to cover in one year a square mile to the depth of 256 and 5-10ths feet. With these facts before us we cannot refrain from the expression of our opinion that if the etiology of epidemics and endemics can be solved by the present methods of topographical and meteorological research, the Sacramento river and its influences must be paramount in unravelling the enigma of the diseases of its basin. In this latter point of view it may be examined by us on some future occasion as opportunity may permit. At present we will conclude this contribution to its natural history by referring to a tabular view of its temperature, being the first series of observations ever made. The contemporaneous temperature of the air and of well-water is also included for comparison.

Monthly mean temp.	River.	Wells.	Air.
January	45 00 deg.	57.00 deg.	45.50 deg.
February	49.75 "	57.33 "	54.02 "
March	50.75 "	57.33 "	59.45 "
April	56.00 "	57.25 "	63.12 "
May	60.00 "	60.00 "	70.35 "
June	72.00 "	59.00 "	73.45 "
July	74.00 "	59.00 "	71.03 "
August	61.33 "	59.33 "	68.84 "
September	70.00 "	59 33 "	62.56 "
October	54.66 "	58 00 "	53.26 "
November	48.66 "	59.00 "	46.70 "
December	44.66 "	57.00 "	
Means of 10 years,	58.20 "	58.18 "	59.91 "

It will be noticed in this table that the uniform temperature of well-water forms a strong contrast with the changeful alterations of wind and air. While, however, the marked horary change in the air which is not shown by the table, is enormous, that in the river is scarcely perceptible. Neither the maximum nor the minimum in the latter is ever found as great as in the former. The nearest approximation between the river and the air occurs at sunrise, or in the night. Yet, notwithstanding the difference in maximum, minimum, horary and diurnal, the annual mean of both, as shown in the table, is nearly the same, and coincides with that of well-water. Any marked diurnal or weekly change in the river, which, however, is extremely limited, is not so much owing to atmospheric changes as to the sudden rises and deliveries of its tributaries, more or less charged with melted snow and ice—as occurs in many other rivers. Humboldt says that for 27° latitude on both sides of the equator the temperature of the equinoctial seas is almost entirely independent of the atmosphere, being 83° to 84°; while the mean of the equatorial air is 79° to 80°.

It may not prove uninteresting, nor perhaps unprofitable, to close this paper with a few isolated data, illustrative of the thermology of some rivers, compiled by Dr. Dowler.

Temperature of the Mississippi for seven years: General Means—maximum, 85 75°. minimum 40-26°; mean, 63.14°.—[New Orleans Medical and Chirurgical Journal, July, 1858.

Temperature of the St. Lawrence, at Montreal, in July: Mr. E. S. de Rottermund says that this river and the Ottawa, which run together, without intermingling, for several leagues, have a temperature of 66°, the air being 82°.—[British Am. Journal Med, Sci. July 29, 1845.

In the temperate zones, says Humboldt, in Europe, the Danube and the Elbe, latitude 48—49°, attain, in the middle of summer, only from 17° to 19° C., (63° to 66° F.), the air being in the hottest month 18—19.5° C.; (65 to 67° F.—[Narrative VI., 588.

"Lieut. Lynch, U. S. N., who explored the river Jordan and the Dead Sea, in 1848, says that the width of the river in the lower part of its course averages 56 yards, and its depth 4 feet. On the 15th of April, it appears from his journal, the air rose 8° and the river 3°. In the same month he found the Sea of Galilee ranging from 70° to 90°, according to depth. The Dead Sea, less than 10 miles wide, was heated during a sirocco, on the 26th April, to 80°, and two days after to 82°, though on the 4th of May, a week later, the surface was 76° only. The air of the sirocco rose from 103° to 106°, blistering the eyelids. At Jericho, the river at 11½ A. M., was 74°, the air 82°.

"The Jordan, excepting its hallowed historical associations, is one of the most ill-arranged and worthless of streams—abounding in rapids, cataracts, shoals, whirlpools, rocks, angles and curves. Its tortuousness is almost four times as great as that of the lower Mississippi, as in 200 miles it traverses but 60 in a straight line. Such diminutive seas and tiny rivers become heated by the hourly changes of the air, and can have but little hygienic influence.

"Lieut. Lynch says that the most powerful microscope can detect no animalcules in the waters of the Dead Sea. The same, I believe, is true of the running water of the lower Mississippi. But the cause is different in each case. The former is truly a *mare mortuum*, having no living animals, and being positively deleterious to organic life: its mineral and saline ingredients amounting to one part in four. The absence of animalcular organisms in the lower Mississippi is probably owing either to its purity, notwithstanding the quantity of its suspended detritus, or to the opacity of its running water, whereby light is intercepted; or, perhaps, a cause may be found in the absence of microscopic plants or other food necessary to the animals—a peculiarity which does not obtain in the upper rivers. Professor Drake quotes Professor Bailey's researches, showing that the river at St. Louis contains numerous shoals of microscopic animals, twenty species of which the latter found in great numbers."—[Valley Mississippi, I. 71-2.

"Mollusks or shell-fish, at least such as inhabit the upper river, are not found, I believe, in the lower Mississippi. This, if true, is a fact that has not been, so far as I know, alluded to, much less explained, by naturalists. The absence of the food of these animals, as the *algæ* or *confervæ*, and other fresh water plants and infusional animals, or the want of a firm bottom of earth, sand or pebbles to rest on, and prevent suffocation in the fine mud, or the turbidity of the water, which arrests the transmission of light, or all of these combined, may serve to explain the non-existence of these bivalves, etc., affording, at the same time, a presumptive proof that the river is less productive of plants, infusoria, etc., than the upper shoal-rivers, and consequently purer and more salubrious. Such a course of hygienic reasoning may be far from being demonstrative, but it is at least suggestive."

The Rust of Wheat and its Remedies.

From the article on "The Wheat Plant," by Lewis Bollman, of Bloomington, Ind., published in the report of the Commissioner of Agriculture, we extract the following remarks in relation to rust:

"The oldest of our histories, the Bible, frequently alludes to it as common among the Jews, and represented it as one of the punishments inflicted on that disobedient people. They were warned that disobedience would be followed 'with blasting and with mildew;' and when thus punished, the prophet Haggai says: 'I smote you with blasting, and with mildew, and with hail, in all the labors of your hands; yet ye turned not to me, saith the Lord.' The Hebrew name for the rust, *yarcoon*, meaning a yellow color caused by moisture, is indicative of the cause and appearance of the disease then as we find them now. The Grecian and Roman writers have transmitted to us like names and causes. The Greeks called it *erusibe*, and the Romans *rubigo*. Ovid, describing the rubigalia, a religous festival established by one of the earliest rulers of Rome, makes the priest say, "If the sun fervently heats the moist stalks, then, O dread goddess, is the opportunity for thy dread wrath. Be merciful, I pray, and withhold thy rusting hands from the crops.' In all times, and among every civilized people, this disease existed, and a moist stalk heated by a hot sun is the cause of it; hence heavy dews, precipitated by clear, cool nights, succeeded by a hot sun during the day, soon develop the disease now as it did in the most ancient periods. It was not until the microscope was invented that the true nature of the disease was known. There is a species of plant which lives on the sap of other plants, called parasite. The rust and smut are plants of this character. The microscope shows that the rust is a perfectly formend plant, havig roots, stems, and branches, and producing seed too small for the unaided eye to discover. These exist in innumerable quantities in the atmosphere, awaiting the condition essential to their germination and development. What these are we have already seen. In the language of Ovid, they are the sun fervently heating on the moistened stalks. When this moisteure proceeds from showery weather, no danger need be apprehended; but when from dews precipitated by cool nights, then the rust rapidly develops itself. Whether the moisture in drying so rapidly causes a contraction of the outer portion of the stem so as to induce splitting, or whether the coolness of the night causes it is not certainly ascertained. Be this as it may, the result is the same—an imperceptible splitting of the straw through which the sap oozes out. The invisible and multitudious seed of the rust attach themselves to this sap, and burying themselves in it, rapidly vegetate, striking their roots into the openings of the straw, thus diverting to themselves the sap of the plant, which should go to the filling out and ripening of the grain. Hence it so rapidly shrivels, and often becomes worthless.

"What is the remedy against this evil? The Romans sacrificed a red bitch on the altar of the Goddess Rubigo, the priest entreating her to withhold her rusting hands. If the farmers could be persuaded to sacrifice all bitches to the goddess, then an altar ought to be erected to her on every farm, for the indirect benefit to the wheat crop by increased sheep husbandry would more than compensate all losses from the rust.

"The Jewish prophets regarding the blasting and mildew as a punishment for the sins of the people. When a people by rebellion, under such high condition of prosperity as exhibited by the census of 1860, seeks its own and the destruction of others, and the overthrow of the best government the world has seen, blasting and mildew of the wheat crop will not stay their impious hands. But regarding the remedy for rust, through the microscope, we find that it is not in all stages of the growth of the plant that the straw is liable to split under heavy dews and a hot sun. It is not in its growing state, but in its ripening stage only that this result is produced. Hence, whatever rapidly shortens the ripening stage lessens the danger. For this purpose there is nothing equal to stable manure, the precise effects of which on the soil and on the wheat crop will be stated under the head of manures. Another remedy is in immediate harvesting when the crop is affected by the rust. The following instructive experiments on this point I find in Mr. Klippart's essay on wheat. Mr. George D. Headricks, of Preble county, Ohio, writes Mr. Klippart as follows:—'In 1842 I had a large field seriously affected by rust, and, having read in the Genesee Farmer the necessity of early cutting, I put a hand cradle to work and left; was absent a few days, and, on my return, found my hand had cut only a few dozen of sheaves, avowing that it was so green he knew it would be worthless. I then procured hands, and had the field cut, but too late for more than half a crop, whilst the portion cut at first was plump, and had well filled-grains.'"

DRY GOODS!

NEW SPRING and SUMMER FASHIONS,

AT

O'CONNELL, RYAN & CO.,

83 J Street, Sacramento

We are in receipt constantly of all the NOVELTIES in NEW and RICH

DRESS GOODS!!

SILK MANTLES,

EMBROIDERIERS,

PARASOLS, ETC., ETC.

Our Stock of

IRISH LINENS,

in all Widths for FAMILY USE, as also Table Linens in Satin and Double Damasks, Napkins of finest fabric; Huck and Damask TOWELS are most extensive and complete. Our Prices for these Goods shall be found the lowest in the State.

BLACK AND COLORED SILKS

IN GREAT VARIETY.

We respectfully invite an inspection of the above. Our System is ONE PRICE.

O'CONNELL, RYAN & Co.

SACRAMENTO.

13-3m.

C. GROEZINGER,

DEALER IN

NATIVE CALIFORNIA

Red and White Wines

Brandies, Port, Sherry, Angelica, Etc.

N. W. Corner of Battery and Pine,

SAN FRANCISCO.

N. B.—We have a NEW MACHINE in our cellar for crushing Grapes, and will be happy to show grape growers how to make their wine. These machines we will sell.

22-3m

1864. 1864.

HARVEST MACHINES.

TREADWELL & CO., Importers and Dealers in Agricultural Goods and Hardware, offer for sale, at their Stores in San Francisco, Sacramento, and Marysville, the following desirable Machines, etc:

"WOOD'S" PRIZE MOWER.

"KIRBY"
Combined MOWER & REAPER.

BALL'S OHIO, THE ORIGINAL
"BUCKEYE,"
MOWER AND REAPER.

The MABURY HEADER.

THE GENUINE
RUSSELL THRASHER.

WOOD'S Self-rake Reaper.

REAPERS:

McCormack's, Manny's, Burrall's, Hussey's.

MOWERS:

Wood's, Union, Buckeye, Farmer.

Combined Machines:

Kirby, Buckeye, Manny, Eagle.

THRASHERS:

Russell's, Spencer's, Pitt's, Whitman's, Treadwell's, Emery's.

Horse-Powers.

PORTABLE Steam-Engines, ON WHEELS.

GOVE & INGERSOLL'S
Hay-Presses.

STEEL AND CAST
Plows, ALL KINDS.

SEEDS,

NO. 408 CALIFORNIA STREET,

Old Number 110,

Between Sansome and Montgomery streets,

SAN FRANCISCO, CAL.

THE UNDERSIGNED HAS ESTABLISHED SUCH a correspondence and business in Europe as to enable him to secure from the very best source—the most skilful growers—their choicest seeds grown, of which he will always be in receipt, and in endless variety, imported directly from France and England, from well known and responsible houses; some of the most prominent as named in our catalogues.

It has been the experience of our best gardeners as growers, and all others who plant seed, that seeds raised in California are not fully reliable and cannot be for a series of year, until more capital, experience and scientific knowledge shall be given to the business.

HAS FOR SALE

Alfalfa or Chile Clover; Hungarian Grass; Kentucky Blue-grass; Orchard Grass; Red-top Grass; Sainfoin Grass; English Rye-grass, Timothy Grass; Red Clover; White Dutch Clover; Crimson Clover, Lucerne, &c. &c. &c.

With many entire new varieties of Grass Seeds and prepared Lawn Grasses never before offered.

EVERY VARIETY OF

BEET, CABBAGE, CARROT, RADISH, TURNIP, CUCUMBER, MELONS, LETTUCE, ONIONS, TOMATO, EARLY AND LATE PEAS, BEANS, &c., &c., &c.

Tobacco Seed.

HAVANA, VIRGINIA, CONNECTICUT SEED LEAF, AND MARYLAND TOBACCO SEED.

COTTON SEED.

Guano from Johnston's Island.

FLOWER SEEDS (300 Varieties)

BULBS:

LILIES, Amaryllis, Narcissus, TULIPS, Anemones, Tuberoses, Gladiolus, HYACINTHS, Ranunculus, Peony-roots, Iris,

and in endless variety, imported direct from FRANCE and GERMANY.

From his long experience in the Seed Business (over thirteen years), and his very extensive stock of goods appertaining to an establishment of this kind, he is confident of his ability to satisfy his patrons.

Native California Evergreen

TREE AND SHRUB SEEDS,

FOR EXPORTATION

THE UNDERSIGNED, FROM HIS EXTENSIVE facilities and

Large Stock of Every Variety of Seed,

Can offer unusual inducements to

MERCHANTS IN THE TRADE, FARMERS AND LARGE RANCH OWNERS,

Who wish to be supplied in his line.

And would recommend that ORDERS FOR SEED be sent DIRECT to the undersigned, through the Express or by Mail, otherwise parties run GREAT RISK of being imposed upon, in case their Orders should be filled by some IRRESPONSIBLE ESTABLISHMENT.

☞ The Agents of Wells, Fargo & Co's Express are hereby authorized to act as Agents for the undersigned in taking Orders for Seeds and receipting for the same.

The undersigned is also permitted to refer to Dr. Warren, editor of California Farmer, who has had an experience of twenty years in the Seed and Nursery business, and is conversant with the high value of imported seeds, and their superiority to all other seeds.

☞ Send for a Catalogue.

THE OLDEST REPUBLIC.—San Marino is a small republic in Italy, between the Appenines, the Po, and the Adriatic. The territory of the State is only forty miles in circumference, and its population about seven thousand. The republic was founded more than fourteen hundred years ago, on moral principles, industry and equality, and has preserved its liberty and independence amid all the wars and discords which have raged around it. Bonaparte respected it, and sent an embassy to express his sentiments of friendship and fraternity. It is governed by a Captain-Regent, chosen every six months by the representatives of the people (sixty in number), who are elected every six months by the people. The taxes are light, the farm-houses are neat, the fields well cultivated, and on all sides are seen the evidences of comfort and peace, the happy effects of morality, simplicity, liberty and justice.

COOKING VEGETABLE OYSTER.—Wash and scrape them, cut them in pieces about half an inch in thickness, put them in cold water enough to cover them, and let them boil until tender. Then turn off the water, which extracts the bitter taste. Now turn over them sweet milk or cream, add a little butter, salt and pepper, also a little flour—stir them gently until they boil—then serve up. A handful of nice codfish picked up and put in at the same time the milk is put in, is a great improvement. It gives them more of the taste of the oyster. This is one of the finest vegetables now grown.

THE PIGEON ROOSTS.—Every now and then in the Western country some extensive tract of woods is discovered, which has been selected by the wild pigeons for a roosting and breeding place. Here they congregate in such vast numbers that in spite of all the modes invented and practiced for their destruction they increase and multiply. Such a breeding place is now established for the season at Hudson, Wisconsin, and millions of pigeons are clustered together. Great numbers have been killed and salted for winter use by the people of the neighborhood. No less than eighty-seven were killed by one man at one discharge of his double-barrelled gun;

A METAL called Vandadium, discovered in English pig iron, has been detected in varieties of iron ochre. Its most practical use is in the preparation of writing ink. To a solution of nutgalls is added a minute portion of vandadic acid, and the ink thus obtained is intensely black and indelible by the ordinary agents which destroy the color of the iron ink in common use. It also resists a high temperpture. The inference is that its use will prevent alteration or forgeries in writings of special importance.

TACT.—Never buy goods of any dealer that does not advertise. You can be sure that he is close, stingy, and lacks sufficient energy to take advantage of the markets and buy cheap. In fact it is a safe rule to set it down that you will have to pay 20 per cent more for goods to a merchant who does not advertise than to one who does.

ONE of the wonders of the age is the transformation of partially worn garments into point lace collars, and other attractive and costly articles of the lace family.

PICOLLO PIANOFORTES.

WE WOULD CALL PARTICULAR ATTENTION TO those beautiful instruments from our own manufactory in Paris, and which we can confidently recommend as equal in quality to those of any other European manufacturer. PICOLLO PIANOFORTES are now in universal use on the continent of Europe, having completely taken the place of the old style of Square Pianos. They possess all the merits ever claimed for the Square Piano, with many advantages that are peculiar to themselves.

Our assortment comprises six different styles varying in price from $275 to $400 each.

Iron-framed Picolio Pianofortes.

These instruments are a "specialité" of our manufacture, are constructed with a special view to withstand the peculiar climate of the interior of California, and are warranted to stand any change of temperature.

Price $400 to $450 each

STODART PIANOFORTES.

We have had the exclusive agency for the sale of these celebrated Pianos for the past twelve years, and refer with confidence, as to their quality, to the many hundreds of instruments themselves now in use throughout the whole extent of the Pacific Coast. A general assortment of these instruments will at all times be found in our warerooms, comprising Grand Action, Square, Upright, and Overstrung Pianos, in plain or richly carved cases. We offer them at the same prices at which they are sold at the manufacturers' warerooms in New York, thus saving to the purchasers here the cost of freight, insurance, interest, and attendant charges. Prices range from $240 to $500 each.

FRENCH HARMONIUMS.

In connection with our manufactory of Pianofortes at Paris, we have established a manufactory of FRENCH HARMONIUMS, suitable for parlors, music-halls and churches. These instruments, like our Pianofortes, are all in rosewood cases, and are made with the improved "transposition attachment," which enables the performer, in voice accompaniments, to adapt the instrument to any particular "key," thus entirely obviating the necessity of any transposition of the music. Nine varieties $100 to $1,000 each.

We beg to call attention to the fact that the Harmoniums of our manufacture possess many valuable improvements not to be found in any other instruments of this description, among which is the peculiar disposition of the reeds. This improvement is based upon purely scientific principles, rendering the reeds doubly sensitive and much less liable to become deranged or get out of order.

For full description of Picollo Pianofortes and Harmoniums send for descriptive catalogues.

PRINCE & CO'S

Melodeons, Doub reed School Organs, and Organ Melodeons.

Being the exclusive agents for the sale of these celebrated instruments in California we are prepared to furnish them at the catalogue prices, as sold at the warerooms of the manufacturer in the East. The assortment comprises twelve different styles of instruments, ranging from $60 to $425 each. Illustrated catalogues, with full description and price of each instrument annexed will be furnished on application. 12-3m

Opinions of Professors of Music on Jacob Zech's Pianos.

SAN FRANCISCO, December 29, 1863.

JACOB ZECH, Esq:

Dear Sir: We, the undersigned, musicians of the City of San Francisco, do hereby give our unbiased opinion as to the workmanship, purity, power, and brilliancy of tone, and perfectness and durability of action, of the Grand Piano manufactured and exhibited by you. We have no hesitation in pronouncing them far superior to any piano, ever placed before us for inspection. At the late exhibition of the State Agricultural Society, the Committee saw fit to denounce your instrument and award the first prize for an inferior *square piano*, which we pronounce a great injustice to you, and we do hereby give our names, and warrant your pianos to be superior to any in the State. With the greatest esteem, and the most fervent desire for your success, and a wish that the people of California may give you justice, and not be controlled by money or the opinion of any body of men who are not qualified to judge of the merits of a Piano.

We are truly yours, etc,

R. HEROLD, Professor of Music,
GEO. T. EVANS, Pianist and Organist,
GEO. F. PETTINOS, Pianist and Organist,
LOUIS SCHMIDT, Pianist and Organist,
CHAS. STADERMAN, Pianist,
STEPHEN W. LEACH, Artist,
L. T. PLANEL, Professor of Music,
A. LAPFGER, Pianist,
ALBERT STOHR, Musician,
JOSEPH B. SCHMITZ, Musician,
EMILE TOUSSIN, Pianist,
CHAS. SCHULTZ, Pianist and Organist,
J. D. KNELL, Pianist, and Organist at Cathedral,
H. HOLZHAUER, Pianist,
WM. CROOKER, Pianist.

Letter to Jacob Zech.

[The following notice of my Pianos was received by me from the gentlemen named, professors of music at Sacramento, and approving, in very flattering terms, my instrument.—J. ZECH.]

Your Grand Piano was an excellent and beautiful instrument, full and rich and tone, in with all the excellencies that are desired in a Grand Piano.

Your Square Piano was one of extraordinary excellence, and beyond question the best on exhibition, having a full and powerful tone, yet, with that soft and delicate expression so desirable to an artistic ear. We feel gratified to know of your success in this art, and hope your efforts will be duly appreciated.

Wishing you all success, we are your friends,
CHARLES WINTER, Pianist,
CHAS. STADDERMAN, Pianist.
CHRISTIAN STATFIELD, Pianist,
GEORGE GREINER, Piano Maker.

THE DAY SCHOOL BELL.

40,000 copies issued. A new Singing Book for Schools and Seminaries, called the Day-school Bell, is now ready. It contains about 200 choice songs, rounds, duets, trios, quartets, and choruses, many of them written expressly for this work, besides 32 pages of the Elements of Music, which are easy and progressive.

Among the large number of beautiful pieces may be found, "Uncle Sam's School," "Don't you hear the children coming," "Always look on the sunny side," "The little lass," and "Little Lad," "Oh, if I were a little bird," "Bird of beauty," "Pretty pair tree," "Anvil Chorus," "Meet me by the running brook," etc. It is compiled by Horace Waters, author of "Sabbath School Bell," Nos. 1 and 2, which have had the enormous sales of 325,000 copies. Prices—paper covers, 25 cents, $20 per 100, bound 30 cents, $25 per 100 cloth bound, embossed gilt, 40 cents, $35 per 100. 25 copies furnished at the 100 price. Mailed at the retail price.

SABBATH SCHOOL BELL, NO. 1,

contains 144 pages, and nearly 200 tunes and hymns, and is the most popular S. S. Book ever issued. Among the most popular pieces are "Kind Words," "Eden Above," "Christian Hero," "Beautiful Zion," "I ought to love my Mother," "The Angels told me so," "In the Light," "Rest for the Weary," etc. Prices—paper covers, 20 cents each, $15 per 100; bound 25 cents, $20 per 100; clothbound, embossed gilt, 30 cents, $25 per 100.

SABBATH SCHOOL BELL, NO. 2,

is an entire new work of 192 pages, and nearly two hundred and twenty-five tunes and hymns. One million of these Bells have been issued and are now ringing through this and other countries. Among the many choice pieces may be found, "Shall we meet beyond the River?" "There is a Beautiful World," "Sorrow shall come again no more," "Don't you hear the Angels coming?" "Thou, God, seest me," "Sabbath Bells chime on," etc. Prices of Bell No. 2. are same as Bell No. 1. Both numbers can be obtained in one volume, price, bound copy, 40 cents, $35 per 100, cloth bound, embossed gilt, 50 cents, $45 per 100, 25 copies furnished at the 100 prices. Mailed at the retail price.

WATER'S CHORAL HARP.

A new Sunday School Book of 160 pages of beautiful hymns and tunes. It contains many gems, such as "Shall we know each other there?" "Suffer little children to come unto me," "The Beautiful Shore," "Oh, 'tis glorious," "Leave me with my mother," "He leadeth me beside still waters," etc. Price, papers covers, 20 cents; $15 per 100. Bound, 25 cents, $20 per 100. Cloth bound, embossed gilt 35 cents, $30 per 100. Mailed at the retail price. It is edited by HORACE WATERS, author of "Sunday School Bells," Nos 1 and 2, which have had the enormous sale of over 800,000 copies.

Just published by

HORACE WATERS,
No. 481 Broadway, New York.

THE NEW PATRIOTIC SONG BOOK

contains 96 pages of songs, duets, and choruses, both sacred and secular, including 14 pages of prayers for sick and dying soldiers, and soldiers' Scripture Manual. It is well suited for social singing, as well as Sabbath worship. Among the many beautiful pieces may be found, "Where liberty dwells is my country," "The Christian Hero," "Three cheers for our Banner," "Come sing to me of Heaven," Columbia, the Gem of the Ocean," "Freeman's Gathering," "Columbia's King forever," "Marching Along," etc. Prices—paper covers, cents, $10 per 100. Mailed at retail prices.

THE HARP OF FREEDOM

contains 32 pages of songs, duets, and choruses for Freedom. Among the choice pieces we would name, "Fair Freedom's morn," "O let my people go," "Over the mountain," "They worked me all the day," etc. Price 5 cents single, 50 cents per dozen, $3 per 100, postage 1 cent each

RUTH: A SACRED CANTATA

contains 126 pages. Words by Rev. Sidney Dyer, music by Prof. Cult. This is an excellent book for concerts for the young. Prices—paper covers, 20 cents, $15 per 100; bound 25 cents, $20 per 100.

THE REVIVAL MUSIC BOOK

contains 73 pages of tunes and hymns, designed for revival prayer, and conference meetings. Price in paper covers single copies 10 cents, $8 per 100. Mailed at the retail price

THE ATHENÆUM COLLECTION

contains 512 pages of tunes and hymns, new and old of the choicest kinds, for church, Sunday school, revival, missionary, temperance, prayer, and conference, and all kinds of sacred and social meetings. The music in this book has life and animation in it, like "Shining Shore," "Rest for the Weary," "Shall we know each other there?" "Shall we meet beyond the River?" "There is a Beautiful World," "Kind Words," "Sweet Hour of Prayer," "There is a Land of Love," "Suffer little children to come unto me," "God save the Nation," etc. Prices—single copies, bound, 65 cents, $55 per 100; cloth bound, embossed gilt, 75 cents, $65 per 100 Mailed at the retail price.

S. D. & H. W. SMITH'S

American Organs.

SIBERIA OTT, Wholesale Agent,

748 Broadway, New York City.

THE

MOST PERFECT AND BEAUTIFUL

Musical Instrument

IN THE WORLD.

FOR THE

American Home Circle.

WITH THE MOST PERFECT CONFIDENCE, we call the attention of the public to the AMERICAN ORGAN, as an instrument long desired in the Family Circle, and with our patent improvements is adapted to all kinds of Music, more especially to Sacred Music, with its sustained tones and harmonies, so much desired and sought for in American homes.

The AMERICAN ORGANS are superior to all other instruments of the kind, in many important particulars.

They are superior in their greater fullness and completeness of tone, volume and power. They are superior in expression, quickness of action, and elasticity of touch, rendering them perfect in rapid movements

They are superior in quality and beauty of tone, and when controlled by the DOUBLE BELLOWS and BLOW PEDALS, Knee Swell, etc, the most charming effects can be produced, from the softest whisper of the Æolian harp to the full volume and power of the church Organ, thus enabling the performer to give expressions not to be found in any other instruments.

The TREMOLO stop has a pleasing and beautiful variety, sympathetic in quality, appealing to the tender emotions of the soul, producing effects the most charming and soothing; it is universally admired and appreciated. The KNEE SWELL gives the performer full control of the tone, enabling him to graduate from the *Pianissimo* to the *Fortissimo* at pleasure, and combines the effect of the Expression Stop of the French Organ in the AMERICAN ORGAN, more perfectly and easily managed.

With all these combinations and improvements of Double Bellows, Pedals and Swell, the AMERICAN ORGAN excels in Expression, Variety, and Power, and has all the quality and capacity of a full Orchestra, and in the hands of a master is capable of the most complete orchestral effects.

The AMERICAN ORGANS are superior in Mechanical finish of the action and interior portions of the Musical parts. The valves are of material expressly prepared to avoid all sticking, cracking, or decomposition, are thus durable and will be always in order.

The Keys, Reeds, etc, are perfect in their finish, and this gives the quickness and sprightliness of tone, brilliancy, etc, equal in every respect to the "percussion stop" of the French Organs, but not like them in danger of getting out of order.

The AMERICAN ORGANS are by far the most beautiful in interior finish, forming a handsome piece of furniture for the Parlor, Boudoir, or Sitting Room, occupying but little space, and perfect and complete in every particular.

THE

AMERICAN ORGAN

Makes Home Attractive; and Refines and Elevates the Minds of All.

Beautiful in its Appearance and Effects.

The AMERICAN ORGANS are finished in Rich Rosewood Cases, varnished and polished, forming an elegant piece of Furniture. Also, in Black Walnut Cases, and in Oak, finished in oil, and especially adapted for Churches, Lecture and Lodge Rooms.

They take but little room, are only 35 inches high, and from 34 to 47 inches wide. *They cost but a trifle more than Melodeons*, and yet possess many times their advantages in musical capabilities.

EDUCATIONAL.

NAPA

COLLEGIATE INSTITUTE.

For Young Ladies and Gentlemen.

NAPA CITY, CALIFORNIA.

NAPA CITY, IN POINT OF LOCATION AND Climate, is unsurpassed in the State. It is about four hours' ride by steamboat from San Francisco, and three by stage from Benicia. There will soon be a daily boat from the former place, and there are now two daily stages from the latter. There are extensive accommodations for Boarders in the College Building, with large and well-ventilated sleeping apartments. Teachers reside in the Building, and will have a constant oversight of the Students who are Boarders.

GOVERNMENT.

Young Ladies will receive no calls from any except Parents and Guardians. Ladies and Misses will not leave the College grounds, except in company with their Instructors. Young Men and Lads are not allowed to lounge about the Stores, Hotels, and Saloons of the village. All pupils are required to attend Church on the Sabbath. Parents will choose the place of worship for their children.

MILITARY DEPARTMENT.

This Department has been opened with a view to the permanent establishment of a Military Academy on this Coast. From three to four years will be requisite to complete the course in this Department. The State has furnished us the necessary equipments for such a school. The Drills will be attended to daily.

TUITION.

Spelling and Reading, per month	$3 50
Common English, with the above, per month	4 00
Higher English, with the above, per month	6 00
Latin and Greek, with the above, per month	8 00

Sword Exercises, twelve lessons	3 00

CALENDER.

The Collegiate year is divided into two Sessions of 21 weeks each. The first Session will begin July 25 and end December 16. The second Session will begin January 2 and end May 23. The Winter vacation will be two, and the Summer vacation eight weeks long.

☞ All articles of clothing should be plainly marked. Pupils will furnish their own Sheets, Pillow-cases, Towels, Napkins, and Lamps.

☞ Payments half-yearly in advance. Pupils can enter at any time, and be charged from the time of entering. No deduction will be made for absence, except in cases of protracted illness. The month consists of four weeks each.

For further particulars address

W. S. Turner, A. M.,
21-11 Principal.

THE COLLEGIATE INSTITUTE,

BENICIA—FOR MALES ONLY. The next session of the Institute will commence on the

Twelfth Day of July, 1864.

The Institute has lately increased its facilities both for the comfort of its Pupils and for their instruction. Persons wishing full particulars in regard to the course of study, etc., will receive a circular by applying to the Principal.

TERMS, PAYABLE THREE MONTHS IN ADVANCE:

Pupils under fourteen, for Board and Tuition per month	$30 00
Pupils over fourteen	32 50
Washing, per month	2 50

No extra charge is made for book-keeping nor for the Modern or Ancient Languages. No charge is made for bedding, rooms or lights. No Entrance Fee is charged.

19 C. J. FLATT, Principal.

The Benicia Law-School.

THE THIRD SESSION OF THE BENICIA LAW SCHOOL will commence on the

Twelfth Day of July,

And continue twenty-one weeks. A new class will be formed at the commencement of the term.

It is the design of the School, by a systematic and thorough course of instruction, to afford advantages for the study of the Law which cannot be obtained by the usual method of reading in an office.

For circular obtaining full information, address

J. R. ABBOTT, Benicia,
C. J. FLATT, for the Trustees.
Benicia, June 6, 1864. 20

Oakland College School.

THE NEXT TERM OF THE PREPARATORY AND Primary Department of the College of California will commence on Monday, the

First Day of August.

The Instruction is conducted by a large corps of experienced Teachers. Students from abroad board in the Institution. Expenses from thirty to thirty-five dollars per month. For further particulars apply to

Rev. I. H. BRAYTON,
23-1m Oakland.

Benicia Seminary.

....FOR....

YOUNG LADIES

THIS INSTITUTION WILL OPEN ITS THIRTEENTH Year on Wednesday, August 3d. Each Department will be supplied with

First Class Teachers and Professors,

For Instruction.

THE FRENCH LANGUAGE

Will be taught by a NATIVE, who will make it the common language of the family for her pupils.

Catalogues for further particulars may be had by addressing

Miss M. LAMMOND, Principal.
23

JACOB ZECH,

FIRST PREMIUM

Pianoforte Manufactory,

418 MARKET STREET,
Between Sansome and Battery streets,

I HEREBY GIVE NOTICE TO THE PUBLIC that I have now on hand a fine assortment of seven-octave over-strung, three-string Pianos, of my own manufacture, which cannot be excelled by any manufacturer in this or the United States.

Purchasers of Pianos will find it to their advantage to come and inspect my Pianos before they buy elsewhere. I guarantee every one of my Pianos for three years.

☞ Pianos tuned and repaired.

16 JACOB ZECH.

The California Farmer.

SAN FRANCISCO:

FRIDAY .....JULY 22, 1864

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address PUBLISHER CALIFORNIA FARMER, San Francisco.

THE CALIFORNIA FARMER READING-ROOM AND MUSEUM OF NATURAL HISTORY.

320 Clay street—Marble Building—Up Stairs.

The Farmer's Headquarters.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit attractive to those who take an interest in the productions of our State. Samples of all productions—grains, grasses, fruits, models, inventions, minerals, and specimens in Natural History innumerable, are constantly being added.

Farmer's Reading-room.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading-room and Museum, at the FARMER OFFICE. Members of the Press, and Strangers, are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

Immigration Office.

New comers to California can always obtain all needed information about Lands, Farms, etc, at the Farmer's Reading room, 320 Clay street. Most cheerfully we bid all welcome to our Sanctum.

Transactions of Agricultural Societies.

We would ask of those Societies in the Atlantic States and Europe, to whom we send our Journal, to send us the transactions of their several Societies, so that we may give the benefit of their perusal to visitors, from the several States, who are callers at our Reading-rooms. By this means we can lay before them the progress of Agriculture in their former homes, and thus advance the interest of both Atlantic and Pacific States.

TO AGRICULTURAL SOCIETIES ABROAD

Exchange of Seeds, Books, Etc.

HAVING established large and spacious Reading Rooms, in this city, which contain Libraries, Cabinets, and hundreds of Newspapers, all free to those who wish to enjoy the benefits thereof, we now ask coöperation from all Agricultural Associations in the Old States and Europe, for the *Exchange of Seeds, Specimens, Books, Etc.* We shall be happy to reciprocate any and all favors, and comply with any direction made to us connected with such an enterprise.

Times of Holding Fairs for 1864.

THE following are the times appointed for holding Fairs the present year, by the Agricultural and Mechanical Societies of California, so far as we have obtained them:

San Joaquin District—At Sockton, commencing September 13, and continuing four days.

Mechanic's Fair—will commence in this city, August 30, and probably continue as long as the interest is maintained.

The San Pablo District Fair—Will be held at Napa City, commencing

[Will the Secretaries of other Societies that have appointed Fairs, please notify us of the time, that we may complete the list for the State?]

VOLUME TWENTY-TWO.

Our next issue will be No. 1, Volume XXII. With that opening number we shall present No. 1 of a series of letters on *Agricultural Colleges*, to which we shall ask the special attention of all who feel an interest in the cause of Agriculture.

We believe that we shall be fully sustained by all thinking men, when we say that the *one great cause of the non-success of the cultivators of the soil* in this State particularly, is the want of a just conception of their employment, in other words, the want of an education for their own business.

It is an admitted fact, that while all other trades and employments require a regular apprenticship and study, any clodhopper may claim to be a "farmer;" and while all Europe, even among the most despotic governments, have Agricultural Colleges richly endowed, and schools without number, we, as Americans, the great mass of all who till the soil, are without a true scientific knowledge of the soil they cultivate, and, alas, too many do not understand its first principles, and thousands are engaged in it that cannot either read or write.

Our National Government, and our State Governments are awakening to a sense of duty in this respect, and liberal grants have been made to every State that will co-operate and establish colleges for educating their sons to that most honorable of all employments, Agriculture.

We have able aid now promised us on this subject, to which we shall give earnest attention. We have also an additional stimulus to our work, in promised aid from numberless pens, most able for the cause of education generally. We also have promised aid from many new friends, on every subject appertaining to the best interests of "home, health, and human happiness." These are most generally found in the rural districts and in rural employments, and may we not for our *New Volume* have the generous, nay liberal aid, of all the friends of the cause we plead? We leave it for them to respond.

TO READERS AND CORRESPONDENTS.

We think we cannot give our readers a better item for our Home Department, than the letter of our ever attentive correspondent, whose "Out-of-Town" sketch may stimulate others to *travel* a little during our summer months.

The conclusion of the able scientific paper of Dr. T. M. Logan, of Sacramento, will be read with interest. We regret the omission of his name at the head of the article. It was a oversight.

We have an interesting letter from our friend and corresponden t, M. A. S., which will appea next week.

The "Watchers," in our Poet's Corner, by Whittier, is one of those spirited pieces that will be read with interest now.

A letter on the "Culture of Tobacco," from our kind correspondent, J. D., will appear next week.

ARTICLES RECEIVED AT THE CALIFORNIA FARMER EXHIBITION ROOMS, No. 220 Clay Street.

From a lady friend, some valuable copper coins for our cases, for which we return thanks.

A box of teazles, raised from French seed, of remarkable length and brightness, superior to any imported, grown by Edwin Doak, Ione Valley.

We again refer to the very handsome samples of wool (of Spanish Merino) received from Messrs. Batchelder & Cotter, of Elk Grove. We invite wool-growers to call and see them. The style of their putting up samples of wool is worthy the attention of our wool-growers. The flocks of Messrs. B. & C. are an honor to them.

We have received the list of premiums of the New York State Agricultural Society, for their 24th Annual Fair, and of their Fair at Rochester, Sept. 20 to 23. The list of premiums are most comprehensive, and is strictly confined to the matter of the agricultural and stock interests. The rules and regulations are admirable, all evincing a true eye to the cause itself.

The American Pomological Society, which held their Fair previously, will exhibit their collection of fruits at this Fair. The Wool-growers' Convention of the State will convene at the same time.

We have the pamphlets of the committee of the Wool Manufacturers of Rhode Island, with their arguments presented to the Congressional Committee of Ways and Means, touching the high duties on wool. These documents present arguments to show that high duties on wool will lessen our financial ability without benefiting wool-growers. We shall give the arguments hereafter.

We have received pamphlets on the question of taxing the mines, entitled, "The Mines of the West. Shall the Government Seize them?" by Sylvester Mowry of Arizona. We shall review them soon.

We have received catalogues of the colleges of San Jose, Santa Clara, and St. Ignatius, College of San Francisco, and others, for distribution.

THE WOOLLY HEAD—PULU TRIUMPHANT.—One of the most curious specimens of Nature's plans to make a wig can be seen at our office. Nothing ever yet invented by the most gifted genius of a Parisian Frizzeur, ever equaled the handsome wig, ready blocked, that we have. Its handsome well rounded crown, its bright nut-brown curls, all conspire to make it a great curiosity. We invite the Frizzieurs of our city to come and see it. What is it? J. & C. Schreiber, the famous Pulu men have sent us the *head and crown* of a Pulu plant, called the "Hapoine Pulu," from the "Waipunakei Land," Sandwich Island group, which is simply a Sandwich Island "fern." And this is a perfect wig with curly hair, ready finished and blocked. It beats all the hair-dressers in the world.

New and very Choice Music.

We have received by the last steamer a very choice selection of new music, from the general headquarters Water's Musical Emporium, 481 Broadway, N. Y.

Among the very many superior pieces, we will name the following as appropriate to the feeling and sentiment of the times:

"General Grant's Grand March." This is a beautifully illustrated piece of music, with battle scenes by land and sea, and a striking likeness of the General himself, with the names of his principal victories. Music composed by Jos. Raff.

"Little Joe, the Contraband." This is a right splendid song:

"And who are you, my merry boy,
With blacking-brush in hand?
Oh, I's a happy darkey, sah!
I's Joe, de contraband."

And other melodies of this character full of music. This piece of music is illustrated with Joe himself professionally.

"The New Emancipation Song," as sung by the Hutchinson family. The words and song are excellent.

"The Pure, the Bright, the Beautiful!"—Song and music arranged to correspond with the title of the piece.

"Golden Dreams and Fairy Castles." This is also complete in song and sentiment.

These four have been very happily arranged in their melody by Mrs. Parkhurst, whose many songs are making melody everywhere.

"Golden Cross Polka"—A new and very choice piece, by J. Davenport Kerrison.

"Heart Chimings"—A waltz, sentimental, for the piano, by M. Keller.

"Peter the Great's March," and "Florence," two of Brierly Richard's favorites. These, with other pieces we received, are esteemed as among some of the best music we have ever published.

FROM KOHLER'S FOUNTAIN-HEAD OF MUSIC we have the following new and choice pieces:

"Dear Nora I'm waiting for Thee" (a companion for "Kate Avourneen"). This is a beautiful ballad.

"Silv'ry Moonlit Hill" (companion to "Moon behind the Hill"), is another beautiful ballad.

"Christabelle" is an excellent ballad. These three are the new compositions of P. R. Nichols, Esq., and recently published by Kohler.

"I Have so Much to Tell." This is a new song, the words of which were written by Mr. Downing Evans, and the music by J. R. Thomas.

"Luddy Fuddy, the Cracksman's Chant," as sung in the drama of Rosendale, by Lester Wallack, New York.

"The Song of all Songs," by S. C. Foster, "I'd Choose to be a Baby," by Fred Buckley, these and many other new pieces for all tastes, occasions, and purposes, can always be had now at Kohlers, so we need never want for music, while "Charlie" and his aids are ever ready and waiting to serve their friends.

Patent Rights.

It has been and will be one of our specialties to aid all who desire to secure "Patent Rights," and to give them information and assistance in preparing their papers. We know we can facilitate them greatly, in this matter, as we have all the Laws and Rules of Action touching these things Many models can be seen at our Office and Reading-rooms, where all are invited freely.

Poor Encouragement.

It has always been the aim of this journal to exert its influence, to the utmost, for the encouragement of all branches of "Home Industry," and we feel conscious that this was the true course to pursue in order to build up our State—but while we have been laboring for this interest it has been directly against our own *pecuniary interest* just in proportion as the wealth and influence of the Importers and dealers in foreign goods is greater than Domestic Manufacturers. The one has unlimited wealth at their command and are able to undersell and outbid almost any competition, while the new beginner is crippled to struggle against fearful odds, and while the one can herald their wares world-wide, and from their large profits, particularly now while exchange is largely in their favor, the "Home Manufacturer" has every thing to contend against and has not the means to make known his wares and merchandise, besides the opposition to his new manufactures is of the strongest kind, against which few can stand, and thus by reason of the wicked neglect of our Legislature to "Protect Home Interests," by careful and wise enactments, we see many branches that sometime since were prosperous, either wholly or partially abandoned.

There is also another evil which threatens to retard the prosperity of our State. There is no coöperation among *Home Manufacturers*. Each and all go for No. 1; no general combined interest; little or no sympathy for the cause of Home Industry. These things should not be; the manufacturer of brooms should coöperate with the maker of tubs, and the manufacturer of blankets and broadcloths should join the manufacturer of boots and shoes, their interests are one, and permanent success cannot come except by a union of interests and action. The success of our "Home Interests," depends upon our checking imports; this can only be done by combining together the manufacturers of every branch of industry, for the prosperity of one would then be the success of all.

Were the entire body of the manufactures of the Pacific to coöperate for their own protection, a new and surprising degree of prosperity would be made manifest at once, and until this is done the whole interest will be unstable and success spasmodic. Hundreds of enterprises in manufactures and the mechanic arts have been abandoned within a few years, for want of this kind of coöperation, and the whole interest seems afloat; every branch of them isolated, like trees and plants in a vast plain, instead of being connected as a beautiful whole—a very garden of fertility and fruitfulness.

We see, hear and feel the wrong done to many enterprises, by this want of a generous coöperation, among all who are interested in Home Manufactures. Why should tobacco-leaf be sent east and then re-shipped back here, only to add to its cost? Why will our own tobacconists give but 10 to 15 cents ℔ lb for the leaf, from the producer here, when they will give 50 cents for the same article after it has gone to New York and back again? Why should our wool-growers be compelled to sell to the factories here at 25 per cent cheaper than they can realize in New York? Why is it that the Pioneer Manufacturer of turpentine and resin is compelled to ship these articles to New York, when they are wanted here? Why is it the case that almost every article of *home product* meets with so little encouragement from those who are, in a measure, dependent themselves upon the public for support in similar enterprises?

Where shall we look for a proper encouragement to the growth of new products of the soil, if not to those whose business demands them, they of all others, we should suppose, would hail with delight the production of articles here at home, such as their business demands; but alas! do we find that this is the case? Do our own manufacturers step forward to encourage others in similar enterprises, is there a generous and hearty encouragement? Do our woolen manufacturers come forward and give the highest price for the wool of our sheep-raisers? Do our coopers and broom-makers give the highest price for hoops and staves for their barrels or the corn for their brooms? Do our cigar makers and dealers in tobacco come forward and offer full value for the leaf-tobacco, the growth of our own soil? We answer, emphatically, No! *No! NO!* On the contrary, there is often a combination to depress the value of each and every article, so that the greatest profit may be made by the manufacturer while the producer receives but a moiety of what he should receive.

We know this is so, and we deeply regret it, for we are aware that no permanent and abiding prosperity can come until there is a more just and liberal course pursued, for until the producer receives *his just share*, each and every branch of manufacture will be subject to fluctuation and ruin. We shall give facts by-and-by.

It is a fact, however, and we know hundreds of cases where measures have been adopted to undervalue and cry down our home products, in order to purchase them for less than their value. The result of this, however, will eventually work a great injury to these very parties, for before they are aware of it they will be cut off from home supply, and the new tariff will make them pay dearly for their short-sighted policy now. We sincerely hope a better action may be had and a wiser policy, so that each and all who are interested in building up our home interests may share the benefits that can only result from a general coöperation.

The San Francisco Postoffice.

NO. VII.

We can now only rejoice with the multitude that have been suffering, by reason of the derangement of our Postoffice affairs, in the hope that the *public voice* will demand a cure for the evil by the removal of the present Postmaster, and the appointment of one who will regard the public interest, and not let party spirit and personal pique destroy the value of an institution like the Postoffice. Any change will be for the better. Our first would be to restore one who was unjustly removed—but any change, only remove the evil, and have good, *efficient, loyal* men, to guard the correspondence and property entrusted to our mails.

Railroads Enrich our State.

It is a self-evident truth that every mile of railroad tends to develop some new resource and to enrich our State. It seems very strange that any intelligent man, or set of men should ever oppose the establishment of railroads, especially where they open up greater facilities of travel and intercommunication, or where they give the means of forwarding merchandise to the interior and at the same time to bring the produce of the new sections to a market.

Besides these advantages, they always increase the value of real estate along the entire route; increase the value of almost every product to the producer by lessening the cost of getting that product to market. Railroads are the "breath of life" to large sections of country that, without them, would lie dormant for years or centuries. Railroads are the electric flash, a touch and new life is breathed into waste places, and the wilderness is changed to a populous city. Were we to cite instances familiar: Look to the San Jose Railroad, look along that entire route and see the marked improvement, look to the largely increased value of land, look to the splendid buildings already erected and those about to be reared, some that will vie with the splendid Villas of Europe. Would these have been erected but for the San Jose Railroad? We say, No! Emphatically, *No!*

Besides this kind of improvement in lands and buildings, look at the Agricultural interests; see the rich products now brought daily to our city; see the bales of wool, the hay, the golden grain; see the live stock, and the thousands of boxes of fruit now coming, daily, as fresh and fine from San Jose and Santa Clara as if passed over the garden walls to your hands, and this by reason of the facilities of the railroad.

But, in addition to the facilities of business intercourse, an hour or two, and we fly from the city, its noise and its whirl of business, into the "Beautiful Country," there to luxuriate and enjoy a healthy and happy relief from care, or the citizen of the country may hie to the city on business or pleasure, pass the day and back again to the quiet "home spot."

What a benefit there results to us all from the completion of the San Jose Railroad! And surely, then, it should be appreciated, and for the great good accomplished, a due share of praise should be given to A. H. Houston, Esq., through whose energy and untiring enterprise so much has been done.

The Great Central Pacific Railroad, too. Who can estimate the immense wealth that will be revealed along the whole line? Who can look forward with the eye of a prophet and point out the cities and villages that must inevitably be the result of this great highway through the mountains? Already the travel and business along its route of only 31 miles swells, and swells, marking each day by some new development of prosperity, the results of which will be felt throughout all the avenues of trade like the rush of the pure life blood that gives activity and strength to the human body. Already the developments, along the line of the railroad, of quarries of valuable granite, hereafter to become a great source of wealth, with mineral discoveries, coal, and many other products, show the value of railroads in opening up and revealing the otherwise hidden resources of our State. We are confident that the Central Pacific Railroad, when it shall have sent its iron horse with flaming nostrils high up over the mountains, and through the rich mineral country where its route is marked out, the riches not only revealed, but gathered in, will astonish the world. The vastly increased taxable property will more than trebly repay the State for the aid she has given to this, the greatest enterprise of the age. When the first fifty miles shall be completed, there will be but few voices lifted against this important and mighty enterprise, and when 100 miles shall be traveled opposers will change to friends, and when 200 miles shall be traveled such will be the jubilant voice of praise awarded to those who, as the President and Directors of the present day, overcame the obstacles thrown in their path, that they will be crowned with chaplets of oak, as typical of living honors, while the memory of its opposers will have passed into oblivion almost. Perhaps it might be well to make a record of *present events* and to register them in the history of this great work.

And we would also suggest that a medal be struck off in memory of the Dutch Flat opposers, having on one side, a "Jolly Dutchman" upon a body of slippery ice, fallen on his back, hands and feet high in air, calling lustily for aid, while at the same moment the ice breaking away from the main land is sweeping him onward and downward over the cataract below; on the other side is seen a long train of cars sweeping through mountains and valleys, rich and fertile, loaded with passengers, and freight trains with the various products of the new country, while in the distance is seen the field of ice, with the *poor unfortunate still flat on his back*, solitary and alone, sweeping down the stream of time, helpless and forsaken, while over him, just as the sweeping triumphal cars pass on, there is seen on a scroll, these words: *"The Dutch Flat Wagon-road was a slippery place for me."*

What is Electricity? No. II.

THIS is a question easier asked than answered! Electricity is one of those mysteries in nature yet unrevealed, and still what would our world be without it? It pervades all space, and is linked inseparably with the life of all things. Without it, death would set its seal on all humanity, upon every living creation, both animal and vegetable. Without it, trees, plants, and flowers, would droop and die, and the earth become a great charnel house.

From Chamber's Natural Philosophy we take the following simple truths as worthy of thought and study:

All nature appears to be pervaded by a mysterious affection, which bears the name of Electricity, in consequence of its having been supposed by the ancients to reside exclusively in electron, or amber.

In its ordinary state, electricity is invisible; but when excited it assumes the appearance of a bright and subtile fluid. It is sometimes excited in very tremendous forms in the atmosphere; but it can be produced in less extent by mechanical means, particularly by the rubbing of amber, glass, silk, and a few other bodies.

When a piece of glass, or sealing-wax, is rubbed with the dry hand, or a piece of cloth, and held towards any light substance, such as a hair or thread, the light body will be attracted by it, and will adhere for a moment to the glass or wax. The influence which thus moves the light body is called Electrical Attraction. When the light body has adhered to the surface of the glass for a moment, it is again thrown off, or repelled, and this is called Electrical Repulsion.

It is the nature of electricity to remain in a state of equilibrium or balance in all substances; and when one body happens to have more than its natural proportion, while another has less, there is a tendency in the surplus, in the one body, if sufficiently near, to rush and make up the deficiency in the other.

The last paragraph will explain to those who have been wise enough to secure the aid of electricity as a *curative in disease*. By reason of sickness and disease, by derangement of circulation, portions of the working power of the human body have become powerless; and the overworking of the body or mind has exhausted the electricity, and there is no way by which it possibly can be restored save by quiet and rest, or by the application of the electric battery.

In California it is readily admitted by all scientific minds, that there is a great absence of natural electricity, and consequently every human being becomes as it were, a wrestler for his portion, so necessary for a healthy existence; and, according to Ohamber's Philosophy, when any one power that is weakened, and greatly needing electricity should approach another, they draw from it to balance the vacuum, even if it should take from one party to their injury. This, we believe, is the case in physical electricity, as has been shown clearly by the great injury to young and healthy children in sleeping with very aged persons, from whom electricity has departed. It is, therefore, one of the most important questions to every human creature who desires to enjoy a healthy constitution, to be sure that this vital principle is not wanting within themselves, and this can easily be learned by the simple experiment of the electric machine, either applied outwardly with a sponge, or by an electrical bath.

Let any person who is very much exhausted, so as to be hardly able to walk, go and receive a full charge of electricity, and the luxury of this bath and they will come from it almost new creatures. Some one who had tried it after a most exhausting day and night's incessant toil, said, "Why the machine has taken *all the tired out of me!*" For it had done this, because it had restored the electricity so thoroughly worked off. It had restored the balance of power, and made a vigorous man again. That such is the result, whether of fatigue or disease, there can be no question. *Electricity oils the machinery* of the human frame, and it works without injury or friction again.

Our own experience can attest to its efficacy and therefore we can most earnestly recommend it to all as the *great curative* and remedial agent. It is a life-saving power, and were we to turn the question at the head of this article, we would say, "Electricity is the breath of life," or its twin sister, the moving power of life.

We have spoken of electricity as a curative—we mean the Electropathic system—but if those all who treat on this subject that thoroughly understand the science, nor every operator that can work a cure. We know of only one complete apparatus, and this is the improved one, to which reference may be had in our columns, for we endeavor to give notice only to operators who understand what they profess. We have more to say on this subject.

Young Men's Christian Association.

One of the wisest and best Educational Institutions of our city, is this most excellent Association of Young Men, composed of members of the various religious denominations. They hold their meetings for social and religious intercourse and companionship, the result of which has been a vast amount of good to our community. Unostentatiously it has progressed, and having the leaven of good within, it has from small beginnings, become now a permanent and valuable aid to the moral and intellectual machinery of San Francisco, and its example will be extended to other cities.

Its meetings are regular, beneficial and of a high character; its annual meetings, other business meetings, and its social gatherings all evince a growing interest on the part of young men, and while there are so many attractions elsewhere, it is a happy thought to know that an institution of this kind has been established on a firm basis, and is in a very prosperous condition.

The annual social reunion took place at the new Hall, on Monday evening, and was a happy affair and largely attended. On Tuesday evening the Installation exercises of the "Social Union Society," connected therewith, took place, and formed a very pleasant feature of the working power of the Association. The new rooms of the Society are 526 California street, opposite the Mechanic's Institute, and consist of a neat Library Room, with a library of over 2,000 volumes, and papers, magazines, pictures, paintings, etc., and a very pleasant and highly creditable reception and business room; added to this a neat lecture room for the social, literary and religious meetings of the Society. The order of exercises on Tuesday evening, were addresses by J. Q. Adams, Recitation (Union), by C. F. Whitton, Song—Voice—Readings from Literary Papers—by Wm. M. Graham. After recess: Recitation—Miss ——, "Thanotopsis," T. Hanford; Lecture—Mountain Scenery of California, S. D. Woods. These various exercises were highly meritorious and gratifying to a very goodly number of friends present.

Other addresses and remarks were made connected with the meeting; one on the delivery of a Presidential Mallet to the new President by T. Hanford. Judge Wells, former President, addressed the meeting very happily, warmly eulogizing the Society, a letter was read from C. J. Flint, of Benicia. After some closing remarks of the presiding officer, this pleasant Society adjourned, after dispensing to the lady friends the bright flowers that were blooming on the tables.

The officers of the Literary Society are Wm. Cubery, President; C. H. Sanford, V. President; D. W. H. Bruce, Secretary and Treasurer, Wm. M. Graham, Editor Social Voice; E. Clough and J. Q. Adams, Executive Committee.

We are happy to make record of such associations; these are the *Trees of Knowledge* in the Agricultural Garden of God, that bring forth good seed and fruit. We return thanks for the courteous invitation to this happy festival and wish it success.

More of our Colleges.

We spoke last week of the Public Examinations at St. Catharine's Academy, at Benicia, and promised to refer to it again. We feel happy in doing so, as a matter of justice to the Institute. The Programme of the Day was arranged by Inspectory in music—a "March Triumph," which was very finely performed by the pupils, Misses Elizabeth and E Desmond; "A. Duett," or two pianos, by four young ladies; an Introductory Address—original—by Miss L. Hawkins, very happily spoken—the "Vacant Chair." La Traviata—duet on two Pianos, by four young ladies—admirably done. Then followed recitations of Fourth Class, in readings, followed by music. Examination of the Second Class, consisted of grammar, geography and natural philosophy, this was a thoroughly examined class—also with music. All these classes evinced a readiness and promptitude, showing well-trained pupils.

Examination of the first class. This class was examined in physical geography, and they were "ready." The examination was very thorough and complete, and the class won high encomiums; reference was had to the many prominent features of the geography of California, but we regretted that so little is ever said of our own mountains and waterfalls. We would have Shasta Peak, the Buttes of Yuba, Diablo and Yosemite—the beautiful and the grand placed over in the foreground of the studies of physical geography in California. "Home" first and other countries afterwards. Lieut. Maury and his theory of the winds was remembered, but the breath of "*Treason*," will waft his fair fame to the shades of oblivion, nearly.

Class No. 1, were honorably applauded; music of a high order followed this recital—two pieces exquisitely performed. "Fashionable Conversation," a Dialogue by little girls, was an admirable hit at the silly fashionable chat, too much in vogue now. The "Adopted Child," was spoken prettily by two sweet little ones; a Trio from Hayden's "Creation," and other Pieces, were performed finely; a March closed the morning exercises.

The Afternoon Exercises consisted in select music classes in "Anthetic" Astronomy and the "Use of the Globes." The examinations were highly creditable to the pupils and gratifying to all present. The music, interspersed, was very superior.

The closing exercises were the corronation and distribution of the premiums. This was a very pleasant and exciting scene. The happy young ladies crowned, for what? Good conduct, christian doctrine, excellence of deportment, and fine scholarship.

During these exercises, so happily interspersed with music, two original essays were spoken by young ladies. The one "Common Sense," by Miss S. Carrie, was a fine essay, and well delivered, for which she received hearty applause. The other, "Day Dreams," was also a fine essay, deserving, as it received, full applause.

It would be impossible to speak of the various pieces of music that were well executed; for when so many did nobly, it were invidious to name a few. There were, however, a few young ladies whose brows were crowned, and in whose hands the golden books and medals were placed, that evinced their high merit, and they were rewarded.

The "New York State Grand March" was finely played, and the pupils and audience marched away as from a pleasant and happy dream, yet it was a reality.

This exhibition has reflected high credit upon the Lady Superior, and the Sisters, who as teachers have won the public approbation. The audience were highly gratified and fully satisfied.

Fruit in Abundance.

Were we chronicle the fact that fruit is now very abundant, and promises to be more so, we regret to notice the *same great error* among our fruit-raisers, that of allowing too much fruit to hang on their trees. By this cause the fruit is small, it cannot perfect its juices; it becomes dry, shriveled, and almost worthless; in fact, it is not fit to eat, is unhealthy, and must be injurious to all who partake of it.

To buy or eat poor, half-ripened fruit, windfalls, etc., is the poorest economy in the world. It costs ten times as much to sweeten and prepare poor fruit for the table, as the cost of good fruit; and then the pains and aches, and the doctor's bills—what a waste of time and money to hunt up and buy cheap fruits

Fruit should be eaten freely, but in the early part of the day is the best time; and only full ripe and delicious fruit is the real cheap healthy fruit.

Our markets are liberally supplied now, and fruit is abundant in all our streets, but, we repeat fruit-growers do themselves great injury by permitting their trees to overbear—better shake off one-half, the balance would be better, and bring more money.

We can refer with pleasure to the market stall of Messrs. Addison, Martin & Co., where can always be found the very best fruit that comes to our market, pains being taken to secure the choicest always. San Francisco can boast of a market, for every variety of food, unsurpassed in the world; and we can boast too, of the greatest lot of *small fruit* that was ever seen in any market, and hundreds of cases where those who are so unwise as to try the experiment of sending such fruit to market, often *lose* their fruit and boxes too, the *cost* of transportation and sale eating up the whole product.

ST. IGNATIUS COLLEGE.—We passed a little time at this College this week, of which and its plans for the future and its prosperity, we shall speak in our next

NEW SUBSCRIBERS.—Now is the time to begin. Next week is No. 1 of Vol. XXII, and the FARMER is the cheapest paper in the State. See terms.

NEW AGRICULTURAL BOOKS.—We received by last steamer an invoice of new Agricultural Books, to which special attention is called.

Steamer Passengers.

It is always a pleasure to know how our friends fare in our ocean steamers, going and coming, for this journal will advocate every plan and measure that is adopted for the comfort of those who "travel on the deep"

We had a pleasant call from a passenger on the America, on her last trip, D. N. Dills, Esq., of Michigan, who comes to our shores for the first time.

Mr. D. informs us that the fare on the People's Line was most excellent; officers were courteous and obliging; and while they were delayed at the Isthmus, everything was done to make passengers comfortable, contented, and happy. Mr. D. informed us that the passengers were much pleased that they had taken this line—that the Illinois was the best steamer on the other side, and all were contented and happy, especially, when arriving here, to know that they had been so much the gainers by that line. Mr. D. also informed us that he and many others had written home to their friends to have them all take the People's Line.

Mr. Dills says that the crops in Michigan were improving very rapidly in April, and there were prospects of a great harvest. Our new comer was much pleased with our city, and what he had seen of the State, and says the people of the old States have no conception of California, or they would come by tens of thousands. This shows the necessity of sending them the news of our condition.

The Chilled Iron Safe Burglar Proof.—Next as to its Burglar Proof qualities. By refering to its structure it will be observed that this Safe, on account of its great thickness, strength and solidity, and from the hardness of the material, it is impenetrable to the drill or any Buglar implement. That it has sufficient strength to protect the Lock both against the sledge and the punch, and is entirely reliable against the Burglar, if protected by my Burglar Proof Lock. Lastly, I propose to show some facts and statistics, to sustain my several claims. I do not deem it necessary to do more at this time, than to present a few actual tests which may have a tendency to sustain my last proposition: verily believing that the intelligence of the American people will properly investigate and and fully appreciate the many advantages the Chilled Iron Safe possesses over all others.

Agents for Lillie's Safes "The Russell & Erwin Manufacturing Company," 106 and 108 Battery street, San Francisco.

"Suffer Little Children to Come unto Me."—Lovers of beautiful children also love to look upon pictures of beautiful children, or even any form of beauty that represents these angels of earth. To all such, especially to mothers, we would say, go and see the group of exquisitely molded children, at Grant & Divine's marble works, corner of Sansome and Sutter streets. There are several most superb busts of children done by that admirable artist, P. J. Divine, that we know cannot be equaled by any other artist in this State, nor excelled by any living artist. This is saying much we know, but go and see; all mothers should go. We are glad to know that Mr. Divine will exhibit them at the Fair. Were they in Europe they would create a furor.

The President has issued a proclamation for five hundred thousand men for military service. It is futher ordered that immediately after the 5th day of September, 1864, being fifty days from the date of his proclamation, a draft for troops to serve for one year shall be held in every town, township ward of the city, precinct election district, or country not subdivided, to fill its quota, which may be unfilled by volunteers by the fifth day of September.

Notice.

METROPOLITAN MARKET.

W. F. NORCROSS

WOULD RESPECTFULLY INFORM HIS FRIENDS, and the public that he has refitted Stalls Nos. 15 and 16 (Market street entrance) in the above Market, and will open the same on

Saturday Next, July 23, 1864.

When he will be prepared to supply CHOICE FRUITS IN ALL THEIR VARIETY; also Butter, Eggs, Cheese, Hams, Bacon, Lard, Honey, Jellies, Syrups, Sauces, Cranberries Pickles, and everything pertaining to a well-appointed Market.

W. F. NORCROSS
Nos. 15 and 16 Metropolitan Market
24 (Market street entrance), San Francisco.

San Jose Institute

AND

COMMERCIAL COLLEGE,

Located at San Jose, California.

Boarding Department

FOR

Ladies and Gentlemen.

THE NEXT SESSION OF THIS POPULAR INSTITUTION commences on MONDAY, July 25th. Professor Louden, of Eastman's Commercial College, Poughkeepsie, N. Y., and Professor Winn, a graduate of Harvard, have been added to the corps of teachers. The New Terms of Our Colleges.

As it will be our aim always to serve the cause of Education, we shall devote a space in our columns to the time of the new Terms of the various Colleges, Academies, and Seminaries of learning, and if the Principals of each will send us information of the same, the time of each will be placed in this column; and if they will send us their catalogues we shall be happy to distribute the same from our Reading-room, to which we invite all who are interested in the Cause of Progress in California.

We hope we shall have the earnest co-operation of all Principals and Teachers, and to receive communications for publication that will advance the cause of Education. Our journal having a wide circulation, we can thus give extended notice to our Colleges and Schools, and materially help the cause, we therefore hope a new interest in the work.

COLLEGE OF CALIFORNIA—
At Oakland, commences August 1. Also Oakland College School (Preparatory Department) commences August 1. *Rev. I. H. Brayton, Principal.*

SANTA CLARA COLLEGE, S. J.—
At Santa Clara, commences the last week in August.

UNIVERSITY OF THE PACIFIC—
At Santa Clara, commences July 21.
E. Bannister, President.

ACADEMY OF NOTRE DAME—
At San Jose, commences in August.

FEMALE COLLEGIATE INSTITUTE—
At Santa Clara, commences the second Wednesday in July. *Rev. D. Tuthill, Principal.*

BANK OF LONDON,

THE UNDERSIGNED GIVE NOTICE THAT THE above named Corporation has been organized for the purpose of carrying on the Banking and Exchange Business, in all its branches, in this City and in the interior of this State, the neighboring State and Territories, and with Mexico; also with the Atlantic Cities, Europe, China, and the East Indies; for which they are provided with ample facilities, and in conformity with articles of association will commence operations on the 5th day of July next, at the Banking House now occupied by DONAHUE, RALSTON & Co., Corner of Washington and Battery streets

With the view of giving to the business of the corporation all the efficiency and promptitude of a private banking firm, together with that confidential seclusion of private business matters so generally desired, the immediate management of its affairs is committed exclusively to D. O. MILLS and WM. C. RALSTON, as President and Cashier respectively, to whom, or either of them, the customers of the Bank will apply in business matters. The regular meetings of the Board of Trustees will take place monthly.

The undersigned deem it advisable to call particular attention to the following peculiarities of their organization, which are positively binding on all its members.

FIRST.—Sales of its Capital Stock can be effected only after due appraisement by Stockholders selected for that special purpose; and the Trustees of the corporation have, in all cases, the right to become purchasers of the Stock appraised at the appraisement, for the benefit of the remaining Stockholders. This restriction is printed upon each certificate of Stock.

SECOND.—Loans cannot be made to Stockholders, except upon collaterals other than their Shares in the Capital Stock of this Bank

Home Miscellany.

THE WATCHERS.

BY J. G. WHITTIER.

Beside a stricken field I stood;
On the torn turf, on grass, on wood,
Hung heavily the dew of blood.

Still in their fresh mounds lay the slain;
But all the air was quick with pain,
And gusty sighs, and tearful rain.

Two angels, each with drooping head
And folded wings and noiseless tread,
Watched by that valley of the dead.

The one, with forehead saintly bland,
And lips of blessing, not command,
Leaned, weeping, on her olive wand.

The other's brows were scarred and knit;
His restless eyes were watch-fires lit,
His hands for battle-gauntlets fit.

"How long!"—I knew the voice of Peace:
"Is there no respite?—no release?—
When shall the hopeless quarrel cease?

"Oh Lord, how long!—One human soul
Is more than any parchment scroll,
Or any flag the winds unroll.

"What price was Ellsworth's, young and brave?
How weigh the gift that Lyon gave?
Or count the cost of Winthrop's grave?

"Oh brother! if thine eye can see,
Tell how and when the end shall be;
What hope remains for thee or me."

Then freedom sternly said: "I shun
No strife nor pang beneath the sun,
When human rights are staked and won.

"I knelt with Zizka's hunted flock;
I watched in Toussaint's cell of rock;
I walked with Sidney to the block.

"The moor of Marston felt my tread;
Through Jersey snows the march I led;
My voice Magenta's charges sped.

"But now, through weary day and night,
I watch a vague and aimless fight
For leave to strike one blow aright.

"On either side my foe they own:
One guards through love his ghastly throne,
And one through fear to reverence grown.

"Why wait we longer, mocked, betrayed,
By open foes, or those afraid
To speed thy coming through my aid?

"Why watch to see who win or fall?—
I shake the dust against them all:
I leave them to their senseless brawl."

"Nay," Peace implored: "yet longer wait;
The doom is near, the stake is great;
God knoweth if it be too late.

"Still wait and watch; the way prepare
Where I, with fold wings of prayer,
May follow, weaponless and bare."

"Too late!" the stern, sad voice replied;
"Too late!" its mournful echo sighed;
In low lament the answer died.

A rustling as of wings in flight,
An upward gleam of lessening white,
So passed the vision, sound and sight.

But round me like a silver bell
Hung down the listening sky to tell
Of holy help, a sweet voice fell.

"Still hope and trust," it sang: "the rod
Must fall, the wine-press must be trod;
But all is possible with God!"

[New York Independent.

[For the California Farmer.]

Out of Town.

"Barnum—We are going into the country to spend 'the Fourth,' so tell our friends when they call that we are 'out of town.'" And so early on the morning of the 2d of July, encumbered by carpet-sacks and dusters, we embarked on board the steamer, for Napa.

"All aboard;" and we steamed out into the stream, on our way to Napa city. Our party was a small one, and Mr. A. complained of a head-ache, which was the nearest approach to sea-sickness, for the wind tossed the waters of the Bay into a perfect vortex of commotion.

After the lapse of a few hours we moored at the wharf of Vallejo—and steamed rapidly by the fortifications of Mare Island. We had no flag up, and it was with some trepidation that I saw the fortifications frowning down upon us. What an awe seizes upon us when we silently pass under the jaws of death, knowing that but a spark would launch us into eternity. On his eternal round paces the grim sentinel, who by a motion might awaken the slumbering guns to a destructive fire, from the silent walls of brick, and startle the listening hills into a frenzy of reverberations.

The ropes are thrown off, and on we pass through the gates of "the Valley." Slowly—like a smile—the mouth of the creek opens, with its verdant banks, and we pass into the gates of a rural Paradise. On the one side "the cattle on a thousand hills;" on the other, golden fields of shorn grain, such as Ruth must have gleaned, when Boaz lost his heart.

Upward—onward—over the narrowing waters, to Buscol, and we catch a glimpse of the vine-clad home of Mr. T——n. The smell of hay-fields, the odor of ripening fruit, the twitter of swallows, come to the nostril and ear like a sweetly rythmed poem. But we cannot linger; like the bee and the butterfly we must wander on to some newer, fresher delight. Up the crooked, lessening creek, we pass, smiling in our souls; the foot-prints of God, like a trail of peace and prosperity on every side until the shrill whistle announces our approach to the city of Napa; and quite a genial little city it is, with its mixed colors, formed in the hills—like a picture of delight, and its wayward creek winding like a ribbon in the distance.

There was now more bustle—waiting for baggage—encumbered stages—a babel of discord. If one could travel without baggage, what a great blessing it would be. There is foliage around here to make something like an apron of—fig leaves such as Adam wore long before the present fashionable age of clean shirts and spotless linen. I have often wondered if our primevil parents had been born on the San Francisco foot-hills, how they would have found leaves enough to hide their shame; but here we have foliage on every side. Napa is a quiet little city; it has one fine hotel, a postoffice, with a polite clerk at the window (a great and rare consideration), and a learned institution, whose brick walls tower over every other building (as they should everywhere in our land). First, education, and all things of good report will follow. At last passengers are rested, trunks are lashed behind, the whip is cracked and the six horses plunge forward, with brute courage, bearing their precious freight onward to the White Sulphur Springs.

But our party was broken up into fragments, the stage would not accommodate all, and we took private conveyances. On our way we passed Oak Knoll, the scene of the late lamentable tragedy, and Mr. Osborn's name was on every lip. Thence, over a plain of scattered oaks and harvest fields, to Sebastopol, a gloomy town, with a church and country school house, such as we used to attend in primitive times.

After refreshing ourselves with green apples, we took a winding road to the base of a hill and pushed forward to St. Helena—a town consisting of a church, a few dwellings and some of the finest old oak trees that ever sprang from acorns.

And now begins the entrance to the cañon, at the end of which is situated the White Sulphur Springs. The way is such an one as the Pilgrim must have found in Bunyan's Progress, increasing in beauty with every step. The wild roses were not all dead and the dust had not dimmed the foliage of the trees. After a ride of a few miles we halted at our destination and were kindly welcomed by our friend (for since then we esteem him as such), Mr. B——g.

Dusty—hungry—thirsty—he kindly took us in, and soothed us with hospitality. Ye who have been travelers in a strange land can give a definition of the word "hospitality." It is not like a friend, at the sick bed, who refreshes and pours balm into the heart.

A sunset—a twilight, and then a deep and forgetful slumber, rushes in the Sabbath day. In company with a friend, I went to Church, in a neighboring town; I had the consolation of hearing a real old-fashioned sermon. And as I remarked to Mr. G ——, afterwards, the preacher must have known to what creed we clung, for he denounced the doctrine of election with all the power of his unpolished elocution. But I believe he was an honest God-fearing man, and a man had better be in earnest in regard to what he believes than have no belief at all. His only text seemed to be "Dear Brethren and Sisters," which from its constant repitition made an indelible impression on my memory, and I was glad to get out into the audience-chamber of God, where the broad fields and giant oaks—the vast sky and benevolent sunshine preached a sermon whose text was "The Infinite." A dusty walk home, through the fine-scented groves—a wild-rose in the button-hole, a practice we abhor in the city, but here only the kindly and withering sun rebukes us.

The young grapes in the vineyards, the greening fruit in the orchards, spoke happily of peace. The lowing of cattle, the long cry of the dove for its mate—the lengthening shadows of the mountains—the soft, dreamy quietude that crept down like a veil over the valleys—tolled the Curfew of Nature. A drink of the "bitter waters" (for these sulphur springs are anything but sweet to taste or or smell), and we slumbered on the threshold of the world's greatest anniversary-day—the day when prophetic patriots visioned out a future for our beloved land.

Would they forget it, here, in this far off quiet little cañon? Nay, God forbid! Even here the din and the smoke brought me early from the arms of sleep, and Young America reigned triumphant. This was but a small vein of the great National heart—but its pulse beat loudly and I was glad. Here was no blood-shed—no groans—no shuddering—no conflict—but children at play with the weapons of war—and sunshine and laughter, for here was Peace.

On one of the highest peaks was a flag-staff, from which a beautiful emblem unfurled itself to the morning breeze. Might I have wept had I been alone? I will not answer, but I prayed deep down in my heart that it might wave as peacefully from every hill-top, in our land, before another return of America's birth-day.

I don't believe in duels, I think them remnants of barbarism, and if a man should challenge me, I think him too far beneath me for notice, he would not be my peer—my equal. But nevertheless I had sent a challenge to a certain person, the night previous; yes, a challenge—and to fight, too. Our ground was duly chosen and the time fixed; our weapons (alas for sentiment), were wooden stones, and our fighting-ground the sides of the mountain; and my opponent (alas for my gallantry), was a lady! Miss M——n (and if this should ever meet that young lady's eyes I hope she will pardon me for introducing her so unceremoniously), and myself had determined to scale the mountain and salute the American Flag with some packs of fire-crackers, and thanks to her indomitable courage, we done it, too. It has been said, by somebody, that American ladies are lazy, or the same thing—but thank fortune there are some notable exceptions, or I should have lost one of the pleasantest rambles it has ever been my fortune to enjoy. I am under everlasting obligations to Miss M——n, for she took me some six miles over the mountains in search of a lake (that does'nt sound well, I know, for I was the guide until we got entirely lost), and then we gave up the lake until the next day, and climbed down a wild gorge, where never man's or woman's foot had trod before.

It is astonishing how courageous some young ladies would like to be deemed. For instance my companion slipped and would have fallen many feet on the rocks and stones below had not a certain arm been suddenly stretched forth for her salvation—and she persisted in keeping the accident as silent and treating it as lightly as a scratch. But she was courageous, though, for while my bones ached and I was racked with pain, all the next day, she never said a word about fatigue.

A word about dress: Why do city people go into the country—to live in houses and dress so daintily that they cannot even take a walk in the nicely trimmed garden? I ask for information: For such toilets as I saw here, frightened me; I thought of the sanitary fund and the poor wounded soldiers; but, alas! miserable Vanity Fair trails her garments even here. And now a word about good breeding: Are good manners only a city dress that men can throw them off when they go into the country? It would seem so, for they were very ragged here. For instance: I saw a gentleman (?) at table ridicule a lady old enough to be his mother; but such a man, like Guppy, must have had no mother. To-be-sure she was a "quaker," but what of that, she was gray,—and age should have protected her. If "thou," Mr. P——n, should see this note by the wayside, take it and hug it close to "thee," good. Alas for the repute of the American gentlemen, if "thou" art a type.

Fire-works in the evening, and next morning a company of ladies, including Miss R. and Miss M., with the aforesaid "Quaker lady," made a journey to the lake, carved our names on a tree, christened the lake with due form and ceremony, and came home tired and dusty, for lunch. If any future traveler should happen along the route he need not be surprised at seeing huge sign-boards, with a skeleton hand, pointing to "Lake Bramburgh," named after the greatest man in the cañon, the worthy host at White Sulphur. But, enough, I am trying your patience and wasting my ink.

C. F. R.

A Beautiful Wail

WOMAN.—"Oh the priceless value of the love of a true woman! Gold cannot purchase a gem so precious! Title and honors confer upon the heart no such sincere happiness in our darkest moments, when disappointment and ingratitude, with corroding care, gather thick around, and even while gaunt poverty menaces with his skeleton finger it gleams around the soul with an Angel's smile. Time cannot mar its brilliancy; distance but strengthens its influence; bolts and bars cannot limit its progress; it follows the prisoner into his dark cell and sweetens the home-made bread that appeases his hunger; and in silence of midnight it plays in his heart, and in dreams he folds to his bosom the form of her who loves on, still, though the world has turned coldly from him. The couch made by the hands of a loved one is soft to the weary limbs of the sick sufferer, and the potion, administered by the same hand, loses half its bitterness. The pillow, carefully adjusted by her, brings repose to the fevered brain, and her words of kindness revive the sinking spirit. It would almost seem that *God* planted this jewel in her breast, whose heaven-like interest should cast into forgetfulness by building up in his heart another Eden, where perennial flowers forever bloom and crystal waters gush from exhaustless fountains."

The Mind and its Uses.

A MAN'S mind, like his body, strengthens by use, and this is specially true of the will. It is held by many very excellent philanthropists, that some men cannot control their appetites. They say, for example, that an individual may have such a special proclivity to intemperance that he cannot, despite the voice of his reason, his conscience and his interest, keep sober by the exercise of his will. If the inebriate be of unsound mind, this doctrine applies, but not otherwise. In any other case it is as false in logic as it is impolitic and mischievous. It is not that the debauchee's appetites are by nature too strong for this volition, but that he exercises and pampers his appetites, and prostitutes the restraining power which God has given for good purposes, to bad ones.

TO CLEAN GLOVES.—Have a little milk in a saucer and a piece of common yellow soap, wrap round the forefinger a piece of flannel, and dip it into the milk, taking care not to make the flannel very wet; rub it on the yellow soap and afterwards pass it up and down the glove until all the dirt be removed.

VOLATILE SOAP FOR REMOVING PAINT, GREASE SPOTS, ETC.—Four table-spoonfuls of spirits of hartsborn, four table-spoonfuls of alcohol, and a table-spoonful of salt. Shake the whole well together in a bottle, and apply with sponge or brush.

"A Lady" in the Providence Journal advises the ladies to make their dresses so as to escape the ground one inch, instead of trailing two inches, and thus save, by the 1,000,000 of adult females of the loyal States, one dollar each annually, in the first cost of the article.

[We think the saving would be nearer $10 each.—Editor Farmer.]

THE SUM OF $2,500 is wanted on Real Estate in San Francisco County, upon land of undoubted title, worth double the amount. Address A. B. C., Farmers Office.

ELECTRICITY

THE

GREAT REMEDIAL AGENT.

Electricity as a Remedial Agent has, until recently, been but little known. An Electric Battery gave a "start," and the child-hood up because a little Battery gave a "start," and the thunder storm killed by lightning. Now it is better understood, and is and will be the sovereign remedy for many diseases heretofore considered incurable. The following series of articles and statistics, with facts and proof of the virtue of Electricity are worthy of attention. When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulations of the poisons which constitute diseases. A great cry went up from the interested in the continued supremacy of the old system of one poison to cure another, that Electricity, as a Curative Agent, had been tried and had proved to be of but little if any value—thinking, poor souls, the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients there were those who were diving into the science of Electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the *Improved Instruments* of Dr. J. H. Josselyn, Resident Physician at the Electropathic Institute, 645 Washington street, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic System. From early morn till late at night, his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services.

The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed is Rheumatism; none has given the honorable practitioner more trouble to relieve, and no one has pretended to cure (if we except known empirics) permanently. But this subtle disease give way before the Electropathic System in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of a relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

We allude to that kind of disease paraded by quacks in the journals of the day, a trouble which was never cured by medicine, only a little strength imparted by the use of tonics. The poor victim is kept taking medicines and paying for them until his last dollar is gone and then, as soon as he undertakes to work to obtain more funds, the trouble comes back in all its loathsomeness. To this disease Electropathy is peculiarly applicable, its action being upon the spermatic nerve, strengthens the secretory organs, and at the same time, creating an equilibrium to the system, thereby preventing an elapse.

We dwell upon this disease because it is the bane of the youth of California, and one about which there has been more deception used than all others put together. It is not necessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present very few Instruments in the world that can be depended upon. A good Instrument costs very heavy, and cannot be purchased unless ordered, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only Instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous imposters in the bathing line. The pure Magnetic Bath is one of the most effective aids in the removal of disease from the system, but if given at the wrong time is likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this Bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unreasonably administered, and if not necessary, advise the requisite remedy.

To Females,

the Directors would say, Electropathy is particularly applicable to your delicate and fragile systems, and to the numerous troublesome and painful diseases to which you are liable. Should you be irregular, a few treatments will restore the functions to the proper state without pain or inconvenience. Should you be weak and enfeebled, either general or local, this system imparts strength and vitality, making the recipient feel buoyant and youthful, where before they were languid and unable to enjoy the pleasures of life. One great blessing connected with Electropathy is, it purifies the system so thoroughly that it beautifies the complexion, making the coarse and freckled skin as pure and fair as possible, giving the patient a fresh and healthful look.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil foreboding and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in issuing this pamphlet, do it in the hope that it may be the means of awakening the public, who have not studied into such things, to a sense of their duties, and if possible prevent those who have the care of a rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse the origin. Also, that those in need of remedial agents may know where they can find them without resorting to taking the thousand and one poisonous nostrums that are continually palmed off as sovereign panaceas for all the ills of humanity. Avoid them all, they are snares set to rob you, and to your bodily injury at the same time. The following is a list of the cases which have been successfully treated by the *Electropathic System*, at the Institute, during the first four years of its establishment. The record is good, and challenges admiration of the world:

Name of Disease.	No.
Rheumatism	1380
Neuralgia	1492
Dyspepsia	1467
General Debility	1410
Fever and Ague	1290
Dumb Ague	1210
Bronchial Affections	1106
Asthma	1049
Female Irregularities	1022
Mercurial	938
Scrofula—long standing	922
Paralysis	690
Disease of the Eye	672
Catarrh in the head	705
Catarrh in the lungs	608
Liver complaints	600
Incipient Consumption	522
Panama Fever	503
Deafness—total and partial	480
Mental Derangement	471
All other—and among which is almost every nameable	
	2,186
Total	21,373

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit. Let them go, they will not be missed.

Persons seeking remedial assistance, may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface, by its energy, while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon mercurial diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity forces itself out of the body. This result has been arrived at by testing the water after an Electro Magnetic Bath. After such tests have been found in the water the patient is not troubled any more with those pains peculiar to the diseases. In all other cases it forces to the surface and is washed off by the bath. The whole system in its application is a luxury, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure all the time. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES.

SAN FRANCISCO, April 18, 1860.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied with chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this eighteenth day of April, A. D., 1860.

P. BARRY, Notary Public.

The undersigned has this method of acknowledging pub-

licly the benefits he received from the treatment of him at the Electropathic Institute, while suffering under a terrible infliction:

This is to certify that I have been under treatment at the Electropathic Institute, 645 Washington street. When I applied to Dr. Josselyn I was afflicted with rheumatism, and also had the coast ague, and that, without relief, I don't think I could have lived one week. The Doctor, with his instrument, relieved me at first treatment from all pain, and perfectly cured me of the disease in twenty treatments, without the use of medicine. I cordially recommend all afflicted to patronize him, for he is truly a blessing to the afflicted, and the cure is very pleasant. I wish to thus publicly thank Dr. Josselyn for his care and sympathy.

JOSEPH SEGER, of [illegible]

September 19, 1860.

State of California, City and County of San Francisco—ss.

Subscribed and sworn to before me, this 19th day of September, A. D. 1860.

P. BARRY, Notary Public.

SACRAMENTO, Oct. [illegible]

DR. JOSSELYN—Dear and Honored Sir: You request me to let you know how I feel after being at the Institute a few weeks. Well, sir, I have been here a little over two weeks, and there is no return of that very unpleasant trouble; I sleep in sound, and there is no disturbance of the natural functions of nature. I feel as strong as I ever did before the disease had weakened my system. Not only is the general health entirely disappeared, but the local trouble has gone, and is so strong that there is no fear of its return. Considering that you only took one month to cure a disease of [illegible] years standing, I think your system almost miraculous. Please accept my sincere thanks, and publish this if you please, as I am sworn to it, as you will see.

C. BOWLES.

State of California, County of Sacramento—ss.

Subscribed and sworn to before me, this tenth day of [illegible], A. D., 1860.

CHAS. HART, Notary Public.

HORNITAS, Nov. [illegible], 1860.

Well, Doctor, I am at home, and have been to work in the water for several days; and there is no return of the pain, madam, as I call it; and Mercurial pains as you choose to be. I feel as gay as a lark, no pain or bad feeling of any kind, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to convince me believe before you commenced that you would cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my earnestness. Doctor, you have my thanks, and will do you all I can, by spreading your fame up in these parts.

Respectfully yours, GEO. PEEBLES.

To J. H. Josselyn, M. D., Resident Physician, at the Electropathic Institute.

NEVADA, Nov. [illegible], 1860.

DEAR DOCTOR: Pursuant to agreement, upon my return I sit down to pen you a few lines in acknowledgment of the great service you have rendered me, in relieving me of a painful case of neuralgia and rheumatism. When I look back and see the gallons of medicines I have swallowed to no purpose, and then to think how soon you cured me, I am astonished. You were only twelve days performing a cure of the trouble, for which I had taken medicine over six months. Dear Doctor, if you could see the wonder exhibited by my friends, who can hardly believe that a cure was performed without medicines, but here I have been cured, and have not taken a drop of medicine from you, or from any one else, while being treated by your splendid instrument, I shall try to show my gratitude by sending every invalid that I come across to you. Yours, till death,

FRANCIS GIRAUD.

To J. H. Josselyn, M. D., Resident Physician, Electropathic Institute.

State of California, County of Nevada—ss.

Subscribed and sworn to before me, this eighth day of November, A. D., 1860.

F. SPAULDING, Notary Public.

YREKA, Nov. [illegible], 1860.

DR. JOSSELYN—Dear Sir: Your letter, dated October [illegible], before me. You wish to know how my health and feelings are. Now, Doctor, that looks a great deal like a joke. I had such an affection of several years' standing, not to say your natural mode of treating disease, it has given me a horror of the things of the past. Since my arrival I have not felt the slightest trouble from it. When you promised me well I did not expect to ever hear from such. Any one who sits under treatment of that *Improved Instrument* yours will have the same feelings. It imparts vitality to the system so rapidly that confidence is at once established. I have to thank you that you did not refuse to treat me because I could not pay you the whole of your reasonable charge; inclosed is the balance due you, and God bless you for the kind treatment I received at your hands.

Yours, ever grateful, WM. GAUSE.

State of California, County of Siskiyou—ss.

Subscribed and sworn to before me, this tenth day of November, A. D., 1860.

B. F. WELLITS, Notary Public.

This is to certify that I, the undersigned, was troubled with dumb ague accompanied with rheumatism, very bad. The disease was taken in Washoe. After having exhausted medicines without benefit, I applied to Dr. Josselyn, at the Electropathic Institute, on the first day of November. After having twenty treatments with his improved Electropathic instrument I am perfectly cured, having been entirely free of all pain or inconvenience. I feel as strong as I ever did when in the best of health. I cheerfully recommend all afflicted to his care, as being the best physician I ever was acquainted with. One great advantage, he uses no mercury, but cures by a process which is perfectly natural. The cure was accomplished in my case was thirteen days.

D. O. HARRIS.

November 14th, 1860.

State of California, City and County of San Francisco—ss.

Personally appeared before me, D. O. Harris, subscriber, and sworn to the above certificate, on this fourteenth day of November, A. D., 1860.

P. BARRY, Notary Public.

SAN FRANCISCO, Aug. [illegible], 1860.

To the Directors and Resident Physician of the Electropathic Institute.

SIRS: You requested of me a certificate of the cure performed in my case. Below I append it:

This is to certify that I was troubled with a swelling commenced in my ankles, and gradually extended until it effected my whole body. I sought the best medical aid in New York and Boston, and they all pronounced me dropsy. Hoping to retrieve my health, I visited California in February last. I consulted the Resident Physician of the Electropathic Institute; and now, after five months treatment, and waiting to see its effects, I am pronounced by competent judges. It did not take but three months treatment to cure me, but I waited to see that it did not return. I feel perfectly assured from what I saw while under treatment that Electricity as applied at the Institute will cure any disease to which the human family is liable.

Now, gentlemen, you can make what use you please of this certificate. With my thanks to the Resident Physician for his kind attention, I subscribe myself,

Your thankful patient,

MRS. C. A. CILLEY.

Opinions of the Press.

The advantages of electricity as a remedial agent, is universally admitted by the medical and scientific world; it requires, however, experienced skill to apply it properly efficiently, and this skill of application is possessed in a eminent degree by Dr. J. H. Josselyn, of the Electropathic Institute. Particulars of his method of cure can be obtained by reference to his advertisement in another column. The Doctor is well known as a gentleman, and an ardent devotee to his profession. He is no pretender, but has conferred localeuble benefits on those who were so fortunate as to seek relief at his hands. To those who desire speedy and permanent relief from malic pains, so prevalent in this region, we can recommend no surer remedy, than a visit to Dr. Josselyn at 645 San Francisco, No. 645 Washington street.—[Pacific Republican.

ARE YOU SICK?—We wish to say a word to those who are sick. We have in this city an Institution known as the Electropathic Institute, situated at 645 Washington street. This establishment is under the charge of Dr. J. H. Josselyn, a physician who has no superior in the city. He has had charge of the Electropathic Institute for several years, and has been uniformly successful in his treatment of the various patients that have placed themselves under his care. The Electric treatment will cure many diseases that cannot be reached by any other mode. Dr. Josselyn gives personal attention to all of his patients, and is always ready to give advice to those that may call upon him. His charges are very moderate, and we cannot do the sick a greater favor than to recommend them to call on him before putting themselves in charge of another.—[San Francisco Daily Herald.

We call the attention of our readers to the advertisement of Dr. Josselyn's Electropathic Institute. Having been solicited we make the following statement, premising that recent effects, particularly in rheumatic cases. Some time since we were on an editorial trip, visiting certain places, and the stage-coach upset, and landed all the passengers, including the writer, below in the valley, where he was nearly overflowed by receiving the additional contents. For some hours exposed to the clothes, to night wind and weather, we soon knew the effects of the accident in the mountains—pains in the back and limbs, so much so, that for weeks we hardly could walk. Treatments of all kinds were applied but without avail. Finally our attention was called to the Electropathic Institute and the appliances of the above Institute. Thank God, after a few weeks we have been fully restored, and enjoy as perfect the use of our limbs and body, as fully as before the involuntary bath in Deer Creek.—[Dr. H. Sacramento Pacific Messenger.

ELECTROPATHY.—Electricity has long been considered the most effective medical agents. It possesses advantages over the systems of therapeutics heretofore in use, as it reaches more certainly the seat of disease, in all nervous or rheumatic complaints. The Electropathic Institute, No. 645 Washington street, under the charge of the Resident Physician, Dr. J. H. Josselyn, has already acquired merited celebrity for the many cases which have been treated favorably from the skillful application of this invaluable remedy.—[Daily Morning Star.

A GOOD INSTITUTION FOR THE SICK.—One of the best places in the city for the care of the sick is at the Electropathic Institute, 645 Washington street. The establishment is under the charge of Dr. J. H. Josselyn, a physician of long experience, and no one can do the sick no greater favor than to recommend them to give the Electropathic Institute a call.—[Weekly Journal.

AGRICULTURAL IMPLEMENTS.

NEW AGRICULTURAL INVENTION.

Sower for all Kinds of Grains.

A NEW SEED-SOWER of large capability is now offered for sale—the Right of Manufacture and Sale of it for the State of California, or for Counties.

The Machine can be made with

Three, Five, or Seven Tubes,

and arranged to sow any kind of grains at any given distance, and to sow a greater or less quantity, to seed thick or sparse, as may be desired.

By the construction of this Machine it can be made to sow on level ground or on ridges, and every variety of seed, from the smallest kind to Beans, Peas, Grain, Corn, etc.

THE SIMPLICITY,

as well as the accuracy, with which this Machine works, is wonderful. Every farmer can regulate it to suit every purpose and plan.

The Evenness and Precision

with which it sows the seed without wasting it, will secure great benefit to the farmer, as it makes a great saving of seed—enough in a short time to pay for the Machine.

These Machines can be made expressly for the sowing of

COTTON,
HIGHLAND RICE,
TOBACCO,
SUGAR-CANE,

and all the new crops, of which this State will, ere long, become famous.

For all particulars of the Machine, call at Farmer Reading Rooms, where the Machine can be seen, and where the price and terms of the Patent Right can be ascertained. 5-3

Literary Shrubbery.

STRAW BONNETS.

[In 1817, when straw bonnets first became general, it was common to trim them with artificial wheat or barley, in ears; on which custom the following lines were written:]

"Who now of threatening famine dare complain,
When every female forehead teems with grain!
See how the wheat sheaves nod amid the plumes;
Our barns are now transferred to drawing-rooms,
And husbands who indulge in active lives,
To fill their granaries, may thresh their wives."

[Perhaps this is *doubly* appropriate for California, by the fashions of the times.—Ed. Farmer.]

TROUT FISHING EXTRAORDINARY.—A partner of the firm of Messrs. Pritchard Bros., Fulton street, N. Y., fishing-tackle manufacturers, has just returned from fishing at Milford, Pike Co, Pa., where he captured the enormous amount of eight hundred and fifty trout, varying in weight from a quarter to one pound each. This extraordinary feat was accomplished in three days, from the 24th to the 27th inst., and with only three different flies.

A CARD.

YEARS HAVE ELAPSED SINCE THE Subscribers first invited public attention to the peculiar properties of their Patent Axle-grease. At first their invention made but slow progress, but thanks to the liberal and appreciative spirit of a large portion of the teamsters and coach proprietors of California, the demand for their manufacture has gradually increased, and notwithstanding the many spurious imitations which from time to time have been introduced from the Eastern States to compete with their article, the H & L AXLE-GREASE has now acquired an unrivaled reputation, extending throughout the length and breadth of California, Oregon, and the neighboring Territories,

The subscribers return their grateful acknowledgments to a discerning public, who have so largely patronized them in all their enterprises which they are now happy to say, are beginning to be justly appreciated as belonging to our California industry.

The supply of material from the East having, in consequence of the war, been cut off, the subscribers turned their attention to the substitution of COAL-OIL as a basis to their manufacture, but after applying every means suggested by the modern application of the science of chemistry, they were reluctantly compelled to the conclusion, that however fit COAL-OIL might be for illuminating purposes, and for which it stands unequaled, it was not at all adapted to make a permanently satisfactory Axle-grease. In this dilemma the subscribers turned their views to the native produce of California, believing that large quantities of natural resin might be collected from the noble pine trees of her boundless forests.

Having invited attention to this subject, they have, with steady progressive steps, advanced this interest until, at the present time, they have established a manufactory of Rosin and Turpentine at Forbestown, from which considerable quantities of both articles are daily manufactured, of such a quality as to find a ready market at fair prices.

It is hoped that increased efforts may continue to be put forth, and new discoveries made, so that California may soon be independent of all foreign supply, for we believe our lofty mountains and our mighty pine forests, will yet give us that supply. The subscribers are now receiving native resin in sufficient quantities to be able to sell their celebrated AXLE-GREASE at a LOWER PRICE than any of the spurious COAL-OIL varieties, which may hereafter be imported.

Wanted.—Improved Property.

A GENTLEMAN WANTS A HOUSE AND LOT IN the

CITY, OR OAKLAND,

Or a small Improved Farm, containing from 20 to 100 acres of land, within the influence of the sea-coast, and of easy access to the city; for which he offers to exchange

First-class Improved Lots in New York,

Within three miles of Wall-street Ferry, accessible by steam and horse cars; or will exchange

First-class Reese-River Mining Stock.

For further particulars inquire of the Editor of the California Farmer

The Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

Corrected weekly, by A. H. Todd & Co., corner of Clay and Drumm Streets.] July 21.

In the Grain and Produce Market high prices are now ruling. Receipts are rather on the increase, but there are no accumulations other than Barley, much of which, however, is light and shrunken, and not desirable. Wheat and Flour are both particularly active and the highest prices, for years, are now ruling. If one may judge from the current reports of the yield, our crops will be very light, with the exceptions of some portions of Napa county and the counties bordering on the coast the reports are very discouraging. We are advised and by very good authority that Napa Valley, or the upper part of it, will yield two-thirds of an usual crop, while the lower part of the Valley will scarcely yield one-third of a crop. One farmer, from San Mateo county, harvested, from 150 acres, 76 sacks, his usual crop being from two to three thousand sacks; this is but one of many cases. With this information before us we can but look for very high prices to rule. Exportation must be abandoned, except at high prices. We are advised and have been conversant, for some time, of the operations of speculators, through their agents, buying largely in the country at prices above those ruling in this market. Some argue that with a small crop and no export we shall have an amount more than sufficient for our own wants. We think a small crop can and will be controlled, and know there are those ready and willing to buy who have the means to operate.

The quantity of Cornmeal bought and shipped from the east, for feed purposes, is represented as very large and report also speaks of Flour on its way here; these things are calculated to have an effect on the market. Some of the Cornmeal and Flour may be expected to arrive sour, such was the case of much received here eight or ten years since, and had the effect to check, in a measure, very high prices. Souring, on the voyage, does not destroy but only damages to a nominal extent.

Potatoes are well sustained in price. All that offers finds ready buyers. The Hay market is well sustained.

Our receipts of Produce from around the Bay for the past week have been as follows: Wheat 10095 sks, Barley 14614 sks, Corn 1406 sks, Potatoes 718 sacks, Salt 1344 sks, Wool 34 bales, Hay 3978 bales, Beans 200 sks, Flour 1774 qr-sks, Oats 1172 sks, Bran 253 sks, Mustard Seed 24 sks.

Also Coastwise: Wool 611 bales, Wheat 1502 sks, Oats 500 sks, Beans 276 sks, Hay 38 bales, Corn 1464 sks, Barley 1048 sks, Potatoes 5 sks.

Prices at Pacific Fruit Market—July 21.

Messrs. Addison Martin & Co. report to us the following prices as the ruling rates for fruit:

New Apples 4@10cts ₱ lb. Apricots 4@5c ₱lb. Pears 2@5 ₱lb, do. Table, 4@15. Plums 3@15 ₱ lb. Gages 2@6. Peaches 4@10c ₱lb. California Grapes 10@25, Foreign do. 30@100, Strawberries 8@25c, Raspberries 8@15 ₱ lb. Blackberries 8@15c ₱ lb. Nectarines 3@8 ₱lb, Oranges $2 50@$4 ₱ 100.

It is very difficult to make sale of much of the Fruit that is sent in, at any price, it is so poor.

BY CONTINENTAL TELEGRAPH.

DATES TO JULY 19.

A dispatch of July 13th from Washington in speaking of the rebel invasion says: Skirmishing has been constantly going on, and our troops acted strictly on the defensive until yesterday evening, when rebel sharpshooters becoming annoying, it was determined to dislodge them from the front of Fort Stevens. This was effectually accomplished amid loud shouts of applause from those who witnessed the action. The rebels retired in hot haste, leaving at the house of F. P. Blair, at Silver Springs, one hundred of their wounded, including eleven officers and their dead, upon the field.

The Washington Chronicle, of Tuesday, has the following account of operations about Washington; "Our cavalry, under Major Fry, stubbornly contested the ground, the advance retiring only when flanked by superior numbers. On Sunday they fought from 3 to 9 P. M., driving the rebels back five miles. On Monday, the rebels were kept at bay two or three miles out of Tenallytown, the force in the front being estimated at several thousands, the President and Secretary of War being present encouraging the troops. About two P. M., the rebels advanced towards Fort Stevens, five miles from the city, and their sharp-shooters got within 30 or 40 yards of the Fort. The Twenty-fifth New York Cavalry dismounted, drove them out of the houses, the fortifications protecting them and the houses were then burned, as they obstructed the range of the guns. The other regiments then arrived and drove the rebels back half a mile. Towards six P. M., the veterans from the Sixth Corps advanced and drove the rebels a mile and a half. General Franklin escaped, and arrived at Baltimore this morning.

The army of the Potomac correspondence of the Press says the artillery fight of the 15th, at Petersburg, lasted two hours, when our shells burst directly in the rebel embrazure, destroying their cannon and forcing them to retire. They lost at least six guns, and the breastworks lately occupied by the enemy during our advance towards Petersburg, have been levelled.

The Richmond Enquirer of the 16th has the following from Atlanta the 14th: Two brigades of Yankee cavalry crossed the Chattahoochie at Moore's Bridge, nine miles from Noonan, last night. They were met by Armstrong's brigade of cavalry, driven back, and the bridge burned. The enemy are using artillery occasionally across the river.

General Sherman announces that on July 18th having previously crossed the Chattahootchie, his army advanced five miles south of the river, and crossed Beach Tree Creek. This advance was made without any resistance from the Johnston's forces except, a slight skirmish with his rear guard as he retired. This move necessarily forces Johnston into the defenses of Atlanta, and places the city in the range of Sherman's guns.

The World's special dispatch from Washington says it is reported in official circles, and generally believed, that Mr. Stanton has resigned his position as Secretary of War. The immediate cause of his resignation was a quarrel which grew out of the attack of the rebels on the city of Washington, Mr. Blair charging incompetency and cowardice upon Stanton and Halleck for their want of management during the raid. Among the candidates mentioned to succeed Stanton are Senator John Sherman and General Schenck.

An extra published at Washington July 14th., says: Information thus far accumulated strengthens the conclusion that the rebel force, was 35,000 strong, all under arms, with 34 pieces of artillery. Many of their troops were dismounted cavalry. The rebels are reported as crossing their main force at Seneca, and opposite Poolesville, yesterday, and their advance this morning along the roads in Loudon County leading in the direction of Ashby's Gap, commanding that neighborhood.

The Tribune's Washington special says that on Sunday evening our forces were seven miles beyond Leesburg, in pursuit of the rebels, who were making rapid time up the Shenandoah Valley towards Staunton. A number of stragglers were caught and sent to the rear. A provisional brigade was organized for the defense of Washington composed of the slightly wounded men from the various hospitals. It has since been disbanded, and most of the men sent to their regiments in the field. The rebel loss in killed, wounded and prisoners, in their demonstration on Washington, is said to be over 2,000. The prisoners taken represent sixty-three different regiments and belong to five different divisions.

CALIFORNIA MARBLE WORKS.

John Grant. P. J. Devine.

Grant & Devine,

Sutter street, bet. Montgomery and Sansome,

OFFER FOR SALE

MANTLES, GRAVE-STONES,

MONUMENTS, TOMBS,

TABLE-TOPS, GRATES, TILES,

And every description of Marble Work.

Sculpture, Carving, Lettering,

And all kinds of ORNAMENTAL WORK will receive special attention.

Grant & Devine are constantly in receipt, from their quarries in Tuolumne County, of the finest and purest Marble, which they manufacture into the above. They respectfully solicit the patronage of persons requiring any articles in their line.

Winchester's HYPOPHOSPHITES.

Act Promptly and Certainly in all Stages

....OF....

CONSUMPTION.

THEY IMMEDIATELY INCREASE the Strength, and deepen the color of the Pale Blood. They check the Night Sweats, always, in from seven to fourteen days; the appetite is at once invigorated, and the patient rapidly gains flesh; the cough and difficult breathing are speedily relieved; the sleep becomes calm and refreshing; the evacuations regular and uniform.

"In no instance," says Dr. Churchill, "have I found the Remedy fail to produce every thing that could be reasonably expected from it."

"I have no doubt whatever," says Dr. Townsend, of Chatham, Pa., "of the superior efficacy of the Hypophosites over all other medicines or methods hitherto discovered."

The Hypophosphites

Have a TWO-FOLD and SPECIFIC ACTION: On the one hand as a prompt and powerful

NERVOUS TONIC,

increasing the vital energy; and on the other as a generator of

New and Healthy Blood,

Invigorating the whole system. They should, therefore, be used in all cases of

Nervous and General Debility,

Wasting of Flesh, Loss of Strength or Appetite, Paleness or Deficiency of Blood, Languor or Listlessness, Cough, Night Sweats, Chronic Diarhea, Scrofulous Sores:

Also, in Chronic Bronchits, Asthma, the Debility or Weakness of Young Children, and as an INVIGORATOR to women of feeble vitality during gestation and the period of nursing.

WINCHESTER'S

Genuine Preparation of the Hypophosphites

Is the only reliable form of Dr. Churchill's Remedy, and is approved by the Medical Profession generally. USE NO OTHER, or any Remedy containing Iron.

CONCENTRATED SOLUTION in 7 oz Bottles, prepared expressly for California, $2 per Bottle—Three Bottles for $5 in coin. Circulars, free. Sold by all respectable Druggists, and by

OLD FRAMES RESET WITH SUITABLE GLASSES, or BRAZILIAN PEBBLES.

Having made the above particular Branch of business my Exclusive Study for many years, I have obtained a thorough knowledge of

The Eye and all its Changes,

together with ten years practical experience, I am enabled to decide with certainty on the mere inspection of the eye what sort of lens is best suited to correct the defected vision.

☞ Every Spectacle will be accurately adjusted to the eye, so as to enable the wearer to pursue the most minute employment, either by day or candle light, with perfect ease and satisfaction, without creating that sense of weakness or fatigue to the organ generally complained of.

P. S.—Citizens, and Strangers visiting the city, are respectfully requested to call and receive a Descriptive Circular of a most Valuable Improvement in SPECTACLES.

Coffee. Coffee.

MARDEN & FOLGER'S

CELEBRATED

FAMILY COFFEE

Is now used in every First-Class Hotel and Principal Restaurant in San Francisco. We have received the following certificates from the proprietors since we have introduced our NEW PATENT ROASTER:

The undersigned, having tested the quality from all the different manufacturers of Coffee in the city, cheerfully recommend MARDEN & FOLGER'S as

Superior to any Brand,

Either foreign or domestic.

HARDENBERG & DYER, Ross House.
L. LELAND & CO, Occidental Hotel.
ALSTROM & JOHNSON, Lick House.
J. W. SARGENT, American Exchange.
F. E. WEYGANT, International.
C. A. JAMES, Railroad.
STEVENS & OLIVER, Restaurant.
GREENE'S Restaurant.
UNITED STATES Restaurant.
NEW YORK Restaurant.
TEHAMA Restaurant.
PORTER & COLLINS, Restaurant.
ENGLEBERG & WAGNER, Restaurant.

We are putting up the above Coffee in Fancy Glazed Papers for the trade, and ask but a fair trial to substantiate the above recommendation.

Order MARDEN & FOLGER'S JAVA COFFEE from any of the Grocers, or from our own manufactory.

P. S.—The brand of Pioneer Mills Coffee is second quality, and has no reference to the above brand.

MARDEN & FOLGER,

Farms for Sale!

THAT VALUABLE TRACT OF LAND IN SONOma County lying between Sonoma and Petaluma Creeks, and bounded on the south by the San Pablo Bay, known as the property of G. P. Swift, Esq, containing 14,000 acres of land is offered for sale in Lots or farms to suit purchasers.

Most of this tract of land is suitable for cultivation, and has soil of the best quality. It is accessible to market, being adjacent both to Sonoma and Lakeville landings—is well watered, has an unexceptionable climate, and is not surpassed in any respect by any tract of the same size in the State.

The Petaluma Boat touches daily, each way, at the Lakeville landing, which is about a mile from the nearest point.

In addition to the regular Steamer landing places, there are numerous suitable landing places along the entire water front of the tract.

Persons desiring to purchase farms of any required size may apply to the undersigned, at the offices of Haight & Pierson, 622 Clay street, San Francisco or at the store of Mr. Paule, Sonoma.

17 WILLIAM BIHLER.

California Cider and Vinegar.

THE UNDERSIGNED INVITE THEIR Friends and the Public to call at their Manufactory, 708 MARKET STREET, Exactly opposite Third street, to see somewhat of a curiosity in California: A CIDER MILL. And, if you wish, we shall be pleased to furnish you with new sweet Apple Cider, dripping right from the Press, and in its season the juice of Grapes, or any other Fruit. Drinking new sweet Cider is known to be healthy, giving a ruddy glow to the complexion.

Nearly all the Vinegar sold in San Francisco is a manufactured imitation, made from corrosive acids, and people have provided their families with what was sold as Cider Vinegar, but which was in fact a poison. We mean to keep nothing but CIDER and VINEGAR, and that genuine.

If we are to succeed in our experiment of substituting pure Vinegar for the villainous fluid which has injured the health of thousands in California, it can only be done by a general patronage, and we trust to receive a call from you.

Lebaron & Thresher,

Cider Mill, No. 47 Metropolitan Market.

☞ We have an Order Box at C. E. Collins, 602 Montgomery street, and will deliver Older and Vinegar at any part of the City Free of charge. Orders sent through Wells, Fargo & Co., will be promptly attended to. 16-3m

A Miller Wants a Place.

A MILLER, WHO IS ALSO AN ENGINEER, wants a place where he can be permanently situated; he wants a good place in the country in preference; can bring the best references as to capacity and integrity. The advertiser is qualified, as a purchaser of Grain, and wishes a head position, if attainable, as that was his usual post. Apply at this office. n12
